Las contradicciones existentes entre las normas familiares y organizacionales que coexisten en una empresa familiar representan una fuerte presión para el dueño o director. En primer lugar, un negocio rentable que ha logrado posicionarse en el mercado es siempre atractivo para los miembros de la familia quienes inclusive, tratan de incorporar también a familiares, parientes políticos, amigos y personas con las que se sienten en deuda o deseen apoyar y a los que comúnmente se les denomina “recomendados”. En segundo lugar, la naturaleza del sistema familiar en México y su crecimiento a través de la inclusión de los parientes y del compadrazgo, ejerce una creciente y considerable presión sobre la empresa familiar. Finalmente, también están aquellos parientes que por estar poco calificados no logran colocarse en otras empresas y esperan que por ser parte de la familia se les apoye a través de un trabajo, independientemente de su capacidad y nivel de desempeño. Esto es también fuente de conflicto y sentimientos ambivalentes para el dueño o director, pues confronta el dilema de aceptarlos o rechazarlos. Si los acepta, pone en riesgo la rentabilidad del negocio lo cual es contrario a la lógica empresarial. Si los rechaza, estará violentando las normas de apoyo y solidaridad que rigen a la familia. Ante esta circunstancia frecuentemente inevitable, la familia empresaria debe estar consciente de la existencia de las contradicciones entre las normas que rigen a la familia y las que se manejan en la empresa. Y el dueño o director debe hasta donde resulte factible, establecerse un equilibrio entre las demandas de la familia y la rentabilidad de la empresa. Ya que por un lado, si no se cumple con las expectativas y normas que rigen a la familia, los conflictos familiares ponen en riesgo la continuidad de la empresa; y por otro, si únicamente se busca el bienestar de la familia a costa de la rentabilidad de la empresa se obtendría el mismo resultado: el cierre de la misma.

Una de las formas en las que se puede enfrentar este tipo de situación es creando las normas bajo las cuales los miembros de la familia deben conducirse en la empresa. En primer lugar, estas normas deben establecer claramente los lineamientos que regulan la incorporación de parientes en la empresa. Es recomendable ser exigentes en el cumplimiento de las condiciones de contratación, de tal manera que quien realmente desee ingresar se esfuerce por lograrlo y de esta manera la empresa garantice que solamente contará con elementos comprometidos. También debe incluirse las causas de separación. En segundo lugar, debe definirse una estructura organizacional de tal forma que el número de miembros de la familia que ingresen al negocio sea congruente con los puestos requeridos. Al asignar los puestos, debe tomarse en cuenta el perfil de cada uno de los miembros de la familia que deseen trabajar, su formación, experiencia y actitud. Asimismo es importante poseer un procedimiento que permita evaluar el desempeño de cada uno de los trabajadores, incluyendo aquellos que son familiares. En tercer lugar, con la participación de los miembros de la familia, es necesario proyectar lo que desean a futuro de la empresa y determinar la forma en que dichos miembros pueden contribuir a alcanzarlo. Habrá que preguntarse: ¿Cuántos familiares caben en este proyecto? ¿Quiénes serían capaces de aportar un valor significativo al proyecto? Finalmente, es recomendable crear el Protocolo Familiar. Este permite a la familia empresaria poner por escrito las reglas por las que se va a regir la relación entre la familia, la empresa y la propiedad; así como las políticas respecto a los procesos de selección, compensación, evaluación y capacitación.

6. Familia y empresa son dos sistemas que se rigen por normas de diferente naturaleza. Establecer un equilibrio entre las demandas de la familia y la rentabilidad de la empresa promueve: la reducción de conflictos interpersonales entre la familia, un trato es más equitativo, se minimiza la percepción de injusticia, se reduce la creencia de que existen favoritismos y finalmente, protege al empresario y a la empresa, pues podrá asegurarse en mayor grado la rentabilidad, sobrevivencia y consolidación de la empresa familiar.

CUADRO DE MANDO INTEGRADO CON LAS NORMAS INTERNACIONALES DE INFORMACIÓN FINANCIERA PARA PYMES

Santiago García Carvajal, Universidad La Gran Colombia
Mario Luis Perossa, Universidad Maimónides

RESUMEN

La economía a nivel mundial es transformada continuamente, lo cual crea la necesidad de llevar un mejor control en todos los movimientos de sus actividades financieras, ello conlleva a la necesidad de crear y diseñar procedimientos que tienen como fin el funcionamiento del sistema empresarial a nivel universal, de estos aumentos de normativas contables destaca mencionarse las Normas Internacionales de Contabilidad, siendo estas las más discutidas y de considerable aplicación en todo el ámbito empresarial internacional. El artículo plantea una revisión de los procesos de convergencia de las normas estándares de contabilidad a las Normas internacionales de Información financiera de tal forma que interprete las posibles consecuencias que podrían darse en la empresa en todas las disciplinas organizacionales sobre la plataforma de una cuadro de mando operativo

PALABRAS CLAVE: NIIF, Balanced Score Card, Management Applications Balanced Score Card as an Interface Tool for IFRS in Colombia

IMPACT OF INTERNATIONAL FINANCIAL REPORTING STANDARDS (IFRS) AND BALANCED SCORE CARD ON SMES

ABSTRACT

The global economy is transformed continuously, which creates the need for better control in all the movements of their financial activities, this leads to the need to create and design procedures that are aimed at the business operation of the system on a universal level, of these racking up to accounting regulations highlights include International Accounting Standards, these being the most discussed and considerable application in all the international business field. The article presents a review of the processes of convergence of the rules of accounting standards to international financial reporting standards in such a way that interpreter the possible consequences that might arise in the business in all the disciplines on the platform a Balanced Score Card

JEL: MGT30

KEYWORDS: Emerging Markets, IFRS Balanced Score Card

INTRODUCCIÓN

Se utilizaran como indicadores las 35 secciones de las NIIF para PYMES como modelo econométrico de análisis de desempeño por categorías, al momento de implementar las NIIF se debe tener en cuenta qué secciones se adoptan según las necesidades del cuadro de mando, siempre que existen cambios estos general resistencia, para lo cual se determina realizar capacitaciones y generar liderazgo activo, abordando el tema de Pymes hacia un patrón empresarial competitivo.

El concepto de Glocalización derivado de las disciplinas sociales internacionales, ha influenciado las políticas de internacionalización de la empresa, las teorías de la competitividad y las nuevas teorías del comercio internacional. Hoy es imperativa la necesidad de estandarizar los procesos de auditoría y control de gestión para homologar los procesos contables de distintos países, que facilite la penetración de Mercados multinacionales, la inversión extranjera y los procesos de auditoría internacional. El proyecto de investigación plantea la importancia y el desarrollo de una política de internacionalización de las PYMEs Colombianas que propenda por la eficiencia y la certeza de logro de objetivos organizacionales; sin embargo para la alta gerencia el paradigma de la complejidad siempre está presente. La complejidad es un enfoque que considera a la organización como un espacio donde coexisten el orden y el desorden, razón y sin razón las armonías y disonancias, por eso este proyecto se propone crear en las PYMEs un cuadro de mando estratégico integrado en las Normas Internacionales de Información Financiera (NIIF) que de importancia tanto a los sentidos comunes como al sentido emergente de las interacciones entre grupos, los intercambios en un ambiente incierto y cambiante, con una competencia agresiva, donde la innovación tecnológica lleva al acortamiento de los ciclos de renovación tanto en métodos y equipos de producción como en bienes y servicios finales.

REVISIÓN LITERARIA

Entorno y ámbito De Aplicación NIIF Y NICS: Contextualizar de forma global el marco de aplicación NIIF (Normas internacionales de información financiera) y establecer un cuadro de mando que permita guiar a los responsables de los informes de gestión y de la planeación financiera. (Especialmente NIIF a. Contexto legal y político de las NIIF

Decreto 1796 De 2008 – Aspectos Generales

Establece por primera vez en nuestro país un régimen normativo organizado, específico e integral para las operaciones con derivados y productos estructurados. Se autoriza de manera general para realizar operaciones sobre instrumentos financieros derivados y productos estructurados a todas las entidades sometidas a inspección y vigilancia de la Superintendencia Financiera de Colombia.

Todas las entidades sujetas a inspección y vigilancia por parte de la Superintendencia Financiera están autorizadas para otorgar garantías para la realización de operaciones con instrumentos financieros derivados y productos estructurados. Estas garantías pueden ser en valores, títulos o productos.

En virtud de esta nueva reglamentación la valoración, contabilización y clasificación de estas operaciones tendrá en cuenta, de forma generalizada, la exposición crediticia por instrumento financiero derivado por producto estructurado según la contraparte.

Inversión Extranjera: Se considera inversión extranjera en Colombia la inversión de capital del exterior en el territorio colombiano, incluidas las zonas francas colombianas, por parte de personas no residentes en Colombia (Decreto 2080 de 2000, art. 1). **Residentes:** Para efectos del régimen cambiario se consideran residentes todas las personas naturales que habitan en el territorio nacional. Asimismo, se consideran residentes las entidades de derecho público, las personas jurídicas, incluidas las entidades sin ánimo de lucro, que tengan domicilio en Colombia y las sucursales de sociedades extranjeras establecidas en el país (Decreto 1735 de 1993, art. 2).

En el ámbito económico hay que contextualizar la residencia, es por ello que la definición de residencia fiscal difiere de la definición migratoria. La residencia fiscal se refiere a unos requisitos o serie de condiciones respecto a la estadía física para efectos de inclusión o no de los contribuyentes de renta, mientras que la residencia migratoria hace referencia a una serie de condiciones con respecto a los derechos humanos.

Para efectos de contextualizar la inversión extranjera en Colombia es necesario comprender el art 10 del Estatuto tributario.

1. “Permanecer continua o discontinuamente en el país por más de ciento ochenta y tres (183) días calendario incluyendo días de entrada y salida del país, durante un período cualquiera de trescientos sesenta y cinco (365) días calendario consecutivos, en el entendido que, cuando la permanencia continua o discontinua en el país recaiga sobre más de un año o período gravable, se considerará que la persona es residente a partir del segundo año o período gravable.

2. Encontrarse, por su relación con el servicio exterior del Estado colombiano o con personas que se encuentran en el servicio exterior del Estado colombiano, y en virtud de las convenciones de Viena sobre relaciones diplomáticas y consulares, exentos de tributación en el país en el que se encuentran en misión respecto de toda o parte de sus rentas y ganancias ocasionales durante el respectivo año o período gravable.

3. Ser nacionales y que durante el respectivo año o período gravable:

- a) Su cónyuge o compañero permanente no separado legalmente o los hijos dependientes menores de edad, tengan residencia fiscal en el país; o,
- b) El cincuenta por ciento (50%) o más de sus ingresos sean de fuente nacional; o,
- c) El cincuenta por ciento (50%) o más de sus bienes sean administrados en el país; o,
- d) El cincuenta por ciento (50%) o más de sus activos se entiendan poseídos en el país; o,
- e) Habiendo sido requeridos por la administración tributaria para ello, no acrediten su condición de residentes en el exterior para efectos tributarios; o,
- f) Tengan residencia fiscal en una jurisdicción calificada por el Gobierno Nacional como paraíso fiscal.”

Esta reglamentación fiscal surgió como una necesidad del gobierno por controlar la evasión tributaria, ya que algunos extranjeros al llegar a territorio Colombiano realizaban negociaciones o transacciones, sobre las cuales no estaban obligados a declarar Renta en Colombia. Al no declarar en Colombia las autoridades del país de origen del extranjero no tenían herramientas para confrontar la información financiera del ciudadano. Evitando de esta forma el cumplimiento de sus obligaciones formales y pecuniarias en dos jurisdicciones. Por tal motivo no es coincidencia que la ley 1607 del 2012 sea coherente y posterior con la adopción NIIF, ya que el gobierno nacional estimó que las inversiones se incrementarían a causa de la adopción NIIF y de los nuevos tratados de libre comercio con otros países, en especial con Estados Unidos.

De esta forma se está homogenizando y armonizando la legislación Colombiana, ya que algunas normas, disponían de una presunción de independencia en su función jurisdiccional. Es así como el Decreto 2080 del 2000 en su art 53 determina que “Los asuntos tributarios relacionados con la inversión continuarán rigiéndose por el Estatuto Tributario y sus normas complementarias.” Como se observa en esta sección la ley 1607 armoniza con la definición de residencia fiscal según los lineamientos de la Organización para la cooperación y el desarrollo económico OCDE, es posterior al Decreto 2080 del 2000. En la cual se había dejado un vacío tributario que permitía eludir las obligaciones fiscales.

METODOLOGIA

Ho: ¿Cómo hacer de manera transversal en todas las disciplinas organizacionales, el proceso de aprendizaje y toma de consciencia de la importancia de la conversión a NIIF por parte de las pymes, siendo muy concretos en cuanto a las acciones a tomar, al alistamiento de la información, y los efectos que producen en la organización los procesos de conversión a NIIF?

Los cambios que genera la aplicación de las NIIF dentro de una organización no solo afecta al área contable-financiera, si no a todas las áreas, procesos y sistemas de la empresa, es decir que el Aprendizaje debe integrar a todo personal implicado con las operaciones y financiamiento de la organización.

Por tal motivo consideramos que se debe implementar un proceso de capacitación sobre las NIIF con el fin de que estas permeen en la estructura organizacional, logrando así los objetivos empresariales adecuándolos a las Normas Internacionales.

Para Iniciar este proceso se realizara una conferencia con todos los miembros de la organización para informar acerca de los cambios que va a sufrir la empresa con la implementación de estas Normas.

Por consiguiente nos enfocaremos en capacitar a:

Gerentes (Administrador) Esta persona es la encargada de dirigir la organización y tomar las decisiones más apropiadas teniendo siempre en cuenta el factor humano ya que las personas son el factor primordial en cualquier organización, brindarles la capacitación, los descansos y lo necesario para que se sientan augustos y cómodos con el trabajo que con lleva la implementación de las NIIF

Estará al tanto de La rentabilidad y la Capacidad financiera, ya que la financiación del desarrollo es como invierto el capital que poseo, como bien se sabe la implementación de las NIIF genera costos, los cuales el Administrados deberá estar al tanto para no invertir en estas normas más del capital que se posee, deberá adecuarse a todos los cambios que se generen en el entorno y así anticiparse a los problemas que pueden darse.

Contadores Es el contador quien lleva el procedimiento a cabo, es el encargado de llevar los hechos y transacciones económicos dentro de la organización, cumpliendo así las normas y reglas propuestas para este fin. Las nuevas normas internacionales exigen por tanto a todos los profesionales, conocer, estudiar, determinar su contenido, impacto, sus procesos y procedimientos para la manipulación de la información

¿Cuáles son las Competencias del Contador?

El papel de los contadores es fundamental ya que son ellos deben:

Interpretar la norma y mirar como la aplica a una empresa, dependiendo el sector productivo que esta maneje.

Analizar esos datos registrados emitiendo informes mucho más profundos y detallados sobre la realidad financiera y económica de la empresa.

Nivel de competencia amplio

Dominar técnicas cuantitativas de áreas como la econometría, la informática, el pronóstico, la gerencia y la dirección, entre otros.

Habilidad de:

Adaptación :Aplicar el conocimiento contable para resolver problemas del mundo real, dejando a un lado las prácticas tradicionales.

Comunicación tanto en la organización, como con personas de otras culturas y transferir conocimiento, manejo segundo idioma (Ingles).

Negociación en ambientes globales y otras culturas

Intelectuales Capacidad de investigación, encontrar soluciones, pensamiento lógico y razonable, entre otros.

Interpersonales Trabajo en equipo, resolver conflictos motivar

Personal Visionario, conducta ético, creativo, persistencia, etc.

Compromiso de aprendizaje para toda la vida

Audidores: En el caso de los auditores, estos deben conocer las NIIF debido a que si su intervención es en un tema contable específico es necesario adaptarse a las nuevas normas que la empresa se encuentra implementando, sin embargo debido a que los auditores son agentes ajenos a la empresa contratados bajo el régimen especial de prestación de servicios no influyen considerablemente en el proceso de permeabilidad de las NIIF en la estructura organizacional.

Abogados: En cuanto al rol que cumplen los abogados es necesario que estos tengan conocimiento acerca de la normatividad que rige las NIIF, que normas las cobijan y legalmente que ente las vigila, además de conocer en buena medida las NIIF debido a los procesos legales que podrían necesitar de dicho conocimiento.

Esta capacitación se llevara a cabo mediante:

Asesorías Los asesores tienen un alto conocimiento y experiencia en aspectos técnicos dependiendo del sector y las necesidades de la empresa.

Esta brinda los requerimientos necesarios para la adopción de las NIIF la primera vez, así mismo las estrategias para llevar a cabo la asimilación del cambio, la revisión de políticas, preparación de los estados financieros, entrenamiento y desarrollo de tareas sobre las NIIF aplicables a la compañía, y demás servicios. Cursos en línea Este método se lleva a cabo cuando el personal no tiene el tiempo necesario para acudir a un curso presencial y cuando no se desea intervenir en las horas laborales, este se realiza a través de internet utilizando una plataforma donde se le explica el proceso de implementación de las NIIF, utilizando ya sea videos, audio, gráficas y demás, así mismo poder desarrollar actividades que

evalúen el nivel de comprensión o conocimiento que se tiene de la Norma según el avance de cada sección. Asesorías por parte del estado Una de las entidades que brinda asesoría sobre las NIIF para empresarios es la Cámara de Comercio de Bogotá.

Diplomados La Cámara de Comercio de Bogotá igualmente ofrece diplomados para entender y adoptar las NIIF, preparar estados financieros, Analizar y comprender las diferencias que existen entre las normas Colombianas existentes y las que se deben aplicar, que cambios podría generar en las compañías, realizar igualmente el proceso de conversión y demás.

También se ha visto que en algunas Universidades se brinda este tipo de servicio dirigido a estudiantes y egresados de Pregrado.

Cursos de programación sistemática Como bien sabemos para implementar esta norma la empresa deberá instalar un nuevo software, por tal motivo el personal deberá tener el conocimiento necesario para el buen manejo del nuevo sistema.

Otra alternativa que la empresa contemplaría es la selección de nuevo personal teniendo en cuenta que los aspirantes tengan conocimientos sobre estas normas financieras.

MAPA ESTRATÉGICO

Es importante para el trabajo tener en cuenta el Modelo Europeo de Excelencia Empresarial, ya que es reconocido como Modelo EFQM está patrocinado por la EFQM y la Comisión de la UE, base del Premio Europeo a la Calidad, esto no llevara a tener un mejor control sobre el procedimiento y los beneficios que estos conllevan.

El señor Horacio Marcelo Canteros en su block nos menciona que: “Un conjunto de reglas para evaluar el comportamiento de la organización en cada criterio. Hay dos grupos de criterios:

Los Resultados (Criterios 6 al 9) representan lo que la organización consigue para cada uno de sus actores (Clientes, Empleados, Sociedad e Inversores).

Los Agentes (Criterios 1 al 5) son aspectos del sistema de gestión de la organización. Son las causas de los resultados. Para cada grupo de criterios hay un conjunto de reglas de evaluación basadas en la llamada “lógica REDER”.

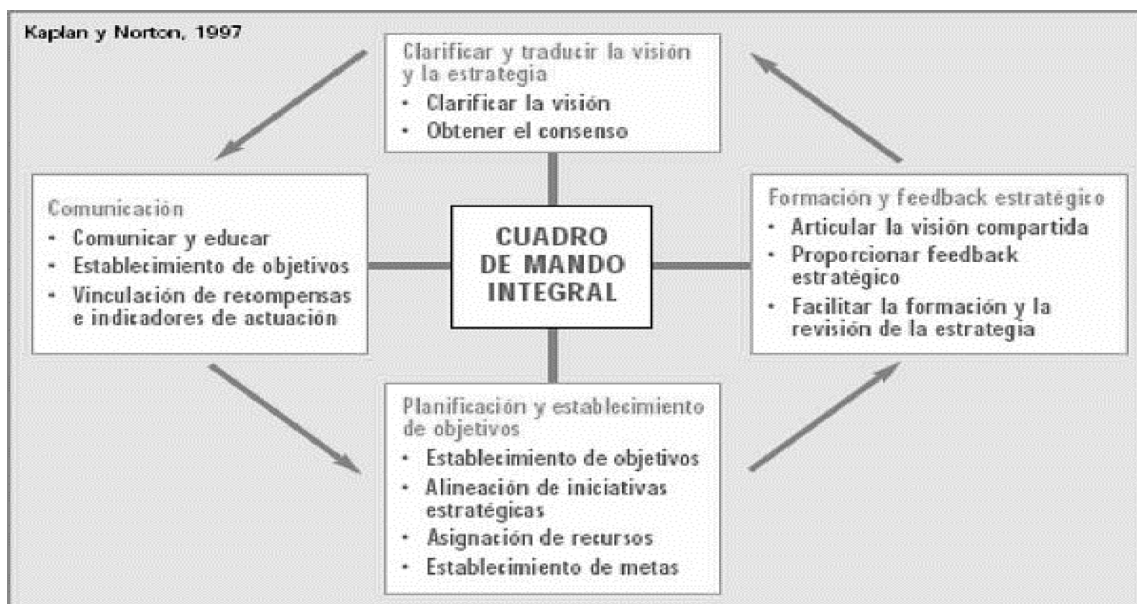

Los resultados han de mostrar tendencias positivas, compararse favorablemente con los objetivos propios y con los resultados de otras organizaciones, estar causados por los enfoques de los agentes y abarcar todas las áreas relevantes.”

Lo que lleva a trabajar este proceso innovador desde un punto de competitividad a un nivel mayor, queriendo alcanzar la mejora de procesos desde la prospectiva, toma de decisiones, y gerencia del talento humano.

RESULTADOS

Cuadro de mando: Es importante tomar como base el cuadro de mando de Koplán y Norton el cual se relaciona a continuación:

Figura 1: Cuadro de Mando de Koplán y Norton

En el blog sobre Business Intelligence anuncian algo muy importante sobre el cuadro de mando lo cual rescato para la ejecución del mismo y tener un concepto claro y específico dice que: “Es de suma importancia rescatar que se denomina Cuadro de Mando Integral (CMI) a aquella herramienta de gestión empresarial que es útil para medir la evolución de la actividad de una compañía y sus resultados, desde un punto de vista estratégico y con una perspectiva general. Gerentes y altos cargos la emplean por su valor al contribuir de forma eficaz en la visión empresarial, a medio y largo plazo.

Saber establecer y comunicar la estrategia corporativa para alinear los recursos y las personas en una dirección determinada no es tarea sencilla, y un Cuadro de Mando Integral resulta de gran ayuda para lograrlo. A través de sus indicadores de control, financieros y no financieros, se obtiene información periódica para un mejor seguimiento en el cumplimiento de los objetivos establecidos previamente, y una visión clara del desarrollo de la estrategia. Así, la toma de decisiones resulta más sencilla y certera, y se pueden corregir las desviaciones a tiempo.

El uso y aplicación de un Cuadro de Mando Integral es no sólo posible sino también aconsejable para empresas medianas y pequeñas. Su efectividad no depende del tamaño de la compañía, así que tanto las grandes organizaciones como las PYMES pueden aprovecharse de sus enormes beneficios.”

CONCLUSIONES

En la elaboración del trabajo se han analizado los procedimientos de la NIIF para las PYMES adoptando dicha norma para preparar estados financieros en un cuadro de mando; lo cual hace llegar a la conclusión de que es una herramienta de gran utilidad para cualquier compañía, el cambio contable que la adopción de la norma implica contempla criterios simplificados.

Mediante el proceso y desarrollo del trabajo, se concluye el beneficio de la aplicación de las Normas Internacionales de Información Financiera (NIIF), especialmente cuando se realiza la comparación de la aplicación de la Sección 9, la cual genera un alto impacto y a su vez siendo una de las secciones más importantes y relevantes en este trabajo; por el alto volumen de cuentas por cobrar, por ende el impacto de conversión se hace favorable para la empresa que se tomó como ejemplo. Por otra parte al revisar otra de las secciones presentando un impacto más bajo se encuentra la sección 1; ya que no es significativo a nivel de cifras en los procesos. Lo que si se resalta es que el contar con información útil, real y oportuna puede facilitar la toma de decisiones en un momento determinado.

Por otra parte para completar lo enunciado, cabe resaltar o mejor rescatar las NIC como impacto NIIF para las PYMES, ya que tienen una gran relevancia en este trabajo y se destacan, NIC 12, 16 y 36, con un impacto medio las NIC 7 y 20 y con menor influencia las NIC 2, 19,37,38,39.

Por consiguiente el Cuadro de Mando Integral es un medio que permite estimular y obtener beneficio, teniendo la capacidad de combinar recursos y talentos del personal, llevando a una motivación intrínseca desde el área de recursos humanos y que se verá reflejada en la organización y a su vez en la aceptación de los clientes que son los que al final estimulan la mejora de resultados económicos y los procesos.

RESÚMEN

La presente investigación tiene como propósito analizar la función pública del verificador aduanal en relación al ejercicio de las facultades de comprobación, al momento de la revisión de las mercancías, el impacto de la calidad de estos servicios para la correcta culminación del despacho, identificando las causas por las cuales se generan dichas afectaciones para poder proponer acciones para evitar la generación de las mismas y por consiguiente sus afectaciones. La obtención y búsqueda de la información se efectuó a través de una investigación documental y de campo sobre una muestra de los dependientes de los agentes aduanales pertenecientes a la Asociación de Agentes Aduanales del Puerto de Manzanillo Colima, A.C., en razón de que son quienes se encuentran en contacto directo con el verificador aduanal al realizar el reconocimiento aduanero y estos dependientes autorizados sufren de primera mano, cuando el servidor público es negligente. Se aplicó una encuesta, para obtener información a fin de conocer las afectaciones derivadas de las negligencias, cuando por alguna causa el verificador aduanal incumple con su función. Se pudo comprobar que existe un número de revisiones de mercancías que son afectadas, más no significa esto que este tipo de situaciones se presente con demasiada frecuencia en este proceso. Estas afectaciones, aunque no ocurridas siempre, tienen como resultado afectaciones hacia el agente aduanal y empresas importadoras y exportadoras, que genera el retraso en la entrega final de las mercancías por parte del agente aduanal hacia su cliente, que deriva en afectaciones operativas, económicas y jurídicas.

PALABRAS CLAVES: Revisión, Facultades de Comprobación, Administración Pública, Funcionario Público, Afectaciones

ABSTRACT

This research aims to analyze the role of public verifier customs relating to the exercise of the power of inspection, upon review of the goods, the impact of the quality of these services for the proper completion of the study, identifying the causes why those affectations to propose actions to avoid generating the same and therefore their affectations are generated. Obtaining and information search was conducted through desk research and field on a sample of dependent brokers belonging to the Customs Brokers Association of the Port of Manzanillo Colima, AC, because they are who they are in direct contact with the customs verifier to perform the customs inspection and authorized dependents suffer from these first hand, when the public servant is negligent. A survey was applied to obtain information in order to ascertain the damages resulting from negligence, when for some reason the customs verifier fails to function. It was found that there are a number of reviews of goods that are affected, but not this mean that such situations are too often present in this process. These effects, although not always occurred, result affectations to the broker and import and export companies, which generates the delay in the final delivery of the goods by the customs agent did his client, resulting in operational, economic disruption and legal.

KEYWORDS: Review, verification powers, public administration, public official, affectations.

INTRODUCCIÓN.

Hoy en día la calidad es un factor muy importante en todas las empresas y así mismo la administración pública no es la excepción, en específico la Aduana, toda vez que esta entidad gubernamental esta constantemente buscando eficientar sus procesos, para en consecuencia agilizar su despacho y ser cada vez más competitivo, aunado a las recomendaciones que realiza la Organización Mundial de Aduanas, “OMA” al gobierno mexicano. Por lo anterior, se puede sustentar que el eficiente desempeño del verificador aduanal influye de manera directa en el despacho de las mercancías y en esa misma tesitura la agencia aduanal pueda ofrecer un mejor servicio a sus clientes. De esta manera, si la función pública de este servidor público se desempeña con la calidad que exigen los usuarios, se podría obtener una eficaz realización del despacho, un desaduanamiento ágil de mercancías, un correcto manejo de las mismas, una reducción de costos en el despacho, además de la facilitación del almacenamiento de carga.

De lo anterior, surge la incertidumbre de analizar las afectaciones que se derivan de la función pública que presta la aduana, por conducto del verificador a los agentes aduanales de Manzanillo, Colima, México, identificando las causas por las cuales se generan dichas afectaciones para así proponer acciones que eviten la generación de las causas y por consiguiente sus afectaciones. Asimismo, sean beneficiados los actores del comercio exterior que utilizan dicho servicio público, en especial los agentes aduanales, y de esta forma puedan agilizar el despacho de las mercancías en condiciones óptimas. Considerando que el verificador aduanal representa una figura de vital importancia para llevar a cabo el proceso de importación y exportación de las mercancías en el país, cuando éste ejecuta dicho proceso, se ve involucrado con diferentes actores que contribuyen durante el proceso para una fácil y rápida realización del comercio. Como en todo proceso, se presentan sucesos que generan afectaciones, como: el exceso de carga de trabajo, falta de espacio en las instalaciones, falta de tiempo para la revisión de las mercancías, el horario de trabajo, deficiente organización, entre otras. Mismas que pueden retardar la conclusión de una importación o exportación de mercancías, influyendo estos en el término del despacho de las mismas.

Derivado del proceso del reconocimiento aduanero, el agente aduanal sufre afectaciones por parte de la función pública que desempeña el verificador aduanal, como son principalmente: la duración en el tiempo del despacho; incumplimiento con el cliente; demoras entre otras. Todo esto genera consecuencias económicas, operativas y hasta jurídicas, como una incidencia o hasta un procedimiento administrativo en materia aduanera, “PAMA”, que define Reyes, R. (2009) “conjunto de actos previstos en la ley, ligados en forma sucesiva, con la finalidad de emitir una resolución definitiva, ya sea condonatoria o absolutoria respectándole al particular su garantía de audiencia al considerarle las probanzas y argumentaciones que pretendan justificar la legal estancia de las mercancías de procedencia extranjera en territorio nacional” (p.563), mismas que se suscitan cuando el verificador incumple con su función al momento de la revisión de las mercancías. En el presente artículo se muestran los resultados obtenidos de la investigación de campo, tanto en las encuestas que se aplicaron a los dependientes autorizados, así como las respuestas que arrojó la entrevista con el verificador aduanal, fuentes bibliográficas y anexos. Algunos de los aspectos que podemos enunciar de las conclusiones, es que entre más trabajadores contraten y mayormente estén capacitados se podrán optimizar los tiempos e incurrir en el menor número de incidencias posibles.

REVISIÓN LITERARIA

La presente investigación versa sobre la capacidad y facultad que tiene el gobierno del estado mexicano, a través de la administración general de aduanas, como menciona Carbajal, M. (2002), dentro de una de las funciones, que son: “... reconocimiento aduanero derivado del mecanismo de selección automatizado y comprobación del cumplimiento de obligaciones fiscales ...” (p.149). Es menester la importancia que juega esta dependencia gubernamental, en el contexto de lo que es el comercio exterior, que para Quintana E. (2003) “provee una connotación más bien de un expectador que habla de este tipo de relaciones entre dos

diferentes entes, pero enfocándolas desde el punto de vista del lugar, o país, en el que él se encuentra, hacia los otros entes” (p.7). Por eso, es que esta actividad comercial que se lleva a cabo entre México y otros países ha tomado especial importancia para el desarrollo económico de la entidad federativa de Colima, la región y el países. El escenario sobre el cual se lleva a cabo esta investigación, es en el puerto marítimo dentro de la circunscripción del municipio de Manzanillo del estado de Colima, México, que define la Ley de Puertos:

El lugar de la costa o ribera habilitado como tal por el ejecutivo federal para la recepción, abrigo y atención de embarcaciones, compuesto por el recinto portuario y, en su caso por la zona de desarrollo así como por accesos y áreas de uso común para la navegación interna y afecta a su funcionamiento; como servicios, terminales e instalaciones, públicos o particulares para la transferencia de bienes de transbordo de personas entre los modos de transporte que enlaza (Pacheco F. 2005).

El citado puerto es considerado como un puerto de clase mundial y a su vez el puerto número uno en movilización de carga contenerizada a nivel nacional, este crecimiento se ha fortalecido gracias a la excelente situación geográfica que tiene este puerto natural en el pacífico mexicano y con esto la puerta al continente asiático aunado al boom económico que han alcanzado estas economías, así mismo la cercanía con el centro occidente del país. Otro elemento, es el apoyo directo por parte del gobierno federal en las Instalaciones portuarias, como la define Pacheco F. (2005) “las obras de infraestructura y las edificaciones o superestructuras, construidas en un puerto o fuera del, destinadas a la atención de embarcaciones, tierra u otros modos de transporte. Aunado a los servicios portuarios y la ampliación de la zona norte del puerto y con esto la nueva sección aduanera” (p.140). Cabe destacar que el crecimiento vertiginoso que ha tenido el puerto de Manzanillo en el movimiento de carga contenerizada ha contribuido a que la aduana de este municipio sea la segunda en recaudación de todo México, ya que más de 100 agentes aduanales realizan operaciones de comercio exterior con buenos estándares de calidad. Que define el artículo 10 de la Ley Aduanera, como:

la entrada o salida mercancías del territorio nacional, las maniobras de carga, descarga, transbordo y almacenamiento de las mismas, el embarque o desembarque de pasajeros y la revisión de sus equipajes, deberá efectuarse por lugar autorizado, en día y hora hábil. La administración portuaria integral de Manzanillo(<http://www.puertomanzanillo.com.mx>), que administra un recinto portuario que se compone de 437 hectáreas, mismas que incluyen zonas de agua, muelles y almacenamiento. Actualmente tiene 19 posiciones de atraque (14 comerciales, 3 para hidrocarburos y 2 para cruceros) dividido en dos polígonos, siendo su polígono 2 el de mayor desarrollo. Para el desalojo de las mercancías que se mueven por el Puerto, Manzanillo cuenta con 6.20 kilómetros de vialidades internas y 24.70 kilómetros de vías férreas, lo que le permite el desalojo adecuado y seguro de la carga que transita por esas áreas.

Ademas tiene un canal de navegación de 600 metros de longitud y una profundidad de 16 metros que le permiten recibir buques de mayores dimensiones El puerto de Manzanillo es considerado un puerto multipropósitos, por no solo manejar carga contenerizada, además de tener una posición estratégica en el corredor comercial e industrial al centro y bajío del país, es puerta natural al continente asiático por su posición en el océano pacífico. A la fecha se encuentra realizando un túnel y un segundo nivel de carretera, con el objeto que el tránsito del tren no afecte a la ciudad, pero también con el objetivo de que agilice el movimiento de carga contenerizada, entre otros. Enfocándose al estudio, sin duda no se puede pasar por alto la participación conjunta de los distintos actores del comercio exterior, quienes contribuyen con sus operaciones de una manera más ágil dentro del despacho aduanero de las mercancías, que de conformidad a lo dispuesto con el artículo 35 de la Ley Aduanera, es el conjunto de actos y formalidades relativos a la entrada de mercancías al territorio nacional y a su salida del mismo, que de acuerdo con sus diferentes tráficos y regímenes aduaneros establecidos deben de realizar en la aduana las autoridades aduaneras y quienes introducen o extraen mercancías al territorio nacional, ya sea los consignatarios, destinatarios o propietarios, poseedores o tenedores en las importaciones o remitentes en las exportaciones, así como los

agentes aduanales empleando el sistema electrónico aduanero. El Servicio de Administración Tributaria establecerá mediante reglas, lo procedente en relación al uso del sistema electrónico aduanero en los casos de contingencias derivadas de caso fortuito o fuerza mayor.

Por lo cual, se puede apreciar desde el inicio de una operación de comercio exterior con la participación de un agente aduanal, que: es la persona física autorizada por la Secretaría de Hacienda Crédito Público, "S.H.C.P"., mediante una patente para promover por cuenta ajena el despacho de las mercancías, en los diferentes regímenes aduaneros previstos en la Ley Aduanera, como menciona Guerrero J. (2012), "el es contratado por un importador o exportador para que en su nombre y representación dirija dicho proceso" (p.137). En el momento del reconocimiento aduanero, que define Tosi. J. (2006) "es una de las más importantes, entre otras, de las que le corresponde el servicio aduanero, y se trata de la verificación de la mercadería declarada en una destinación de importación y exportación", como lo define (p.155). En la revisión de mercancías participa este servicio público federal, denominado verificador aduanal, que es el encargado de la revisión de las mercancías por parte de la Aduana y que la función que cumple es de gran importancia para la legal internación de las mercancías.

El verificador de la Aduana es un servidor público de la administración pública federal como lo menciona Serra. A. (2010) citando el artículo 108 de la Constitución Política de los Estados Unidos Mexicanos, que dice, "...se reputarán como representantes de elección popular, a los miembros del poder Judicial Federal y Judicial del Distrito Federal, a los funcionarios y empleados, y, en general, a toda persona que desempeñe un empleo, cargo o comisión de cualquier naturaleza en la administración pública federal..."(p.878). Una vez que ha quedado definido que es un servidor público y lo primordial es, que la constitución mexicana nos da la definición en extenso, de que no nada más en la administración pública federal dependiente del ejecutivo federal; sino de los otros dos poderes y en los tres órdenes de gobierno. Aunque la investigación nada más se centre en la administración pública federal. En el artículo 113 de la constitución política de los Estados Unidos Mexicanos menciona que las leyes sobre responsabilidades administrativas de los servidores públicos, determinarán sus obligaciones a fin de salvaguardar la legalidad, honradez, lealtad, imparcialidad y eficiencia en el desempeño de las funciones, empleos, cargos y comisiones y en el artículo 8 de la Ley Federal de Responsabilidades Administrativas de los Servidores Públicos en 24 fracciones establece las obligaciones de los servidores públicos.

En el artículo 13 de esta Ley de Responsabilidades Administrativas de los Servidores Públicos, en donde se mencionan las sanciones, como son: I.- Amonestación Privada o Pública; II.- Suspensión del empleo; cargo o comisión por un periodo no menor de tres días ni mayor a un año; III.- Destitución del puesto; IV.- Sanción Económica, e V.- Inhabilitación temporal para desempeñar empleos, cargos comisiones en el servicio público. Cabe mencionar que con fundamento en el 109, fracción II, dice, que: La comisión de los delitos por parte de cualquier servidor público será perseguida y sancionada en los términos de la legislación penal. En este mismo orden de ideas, se hace necesario especificar que las facultades regladas, que define el maestro Rohde Ponce en la obra que se cita, en la que menciona de manera muy clara, que son: Las facultades o poderes que se encuentran investidos por el órgano administrativo y se hayan establecido en ley, no sólo señalando la autoridad competente para obrar sino también su obligación de obrar y como hacerlo, en forma que no se deja margen alguno para la apreciación subjetiva de funcionario sobre las circunstancias del acto, se esta en presencia de facultades o poderes totalmente reglados, vinculado su ejercicio por completo a la ley (Trejo, V. 2006).

Por tanto los servicios que presta la aduana, deben de ser de calidad, refiriéndose a que cuenten con lo siguiente: infraestructura adecuada para llevar a cabo las operaciones competentes, personal capacitado, equipo especializado para cumplir con la demanda de los servicios, seguridad, tarifas adecuadas al servicio que ofrecen, así como tiempos ágiles para las operaciones. Una vez que el recinto fiscalizado cumple con su participación en el despacho se procede a consignar las mercancías a un transportista para que éste ingrese a la ruta fiscal para presentarse al mecanismo de selección automatizada, para que de acuerdo con

el resultado que éste arroje, las mercancías continúen el proceso para poder ser introducidas al territorio nacional de manera legal. Por tanto el verificador aduanal debe ser un funcionario calificado, que cuente con el perfil para trabajar para la Aduana, y debe de desempeñar una función de vital importancia en el despacho aduanero. Asimismo la Aduana debe de cuidar los procesos, en cuanto a los tiempos que se les asigna al verificador aduanal para ejercer las facultades de comprobación y no saturarlos de trabajo. Ya que eso puede ser un factor que genere causas que puede derivarse en afectaciones, como: incidencias o procedimientos administrativos aduaneros que causen perjuicios operativos, económicos y jurídicos.

METODOLOGÍA.

La investigación se centra en analizar la función pública del verificador aduanal en relación al ejercicio de sus facultades de comprobación sobre las mercancías al momento del reconocimiento aduanero, describiendo las afectaciones jurídicas y económicas de los importadores y agencias aduanales cuando el verificador aduanal no cumple correctamente con el cumplimiento de su función. El mencionado reconocimiento aduanero, que corresponde a este importante servidor público federal, que tiene la facultad para llevar a cabo la revisión de las mercancías ya sea en una importación como en una exportación. Dicha función puede verse afectada por varios factores, dentro de los que destacan la carga de trabajo, motivo por el cual tiene un tiempo reducido para realizar el reconocimiento, principalmente en aduanas con gran flujo de importaciones y exportaciones. Derivado de la revisión de las mercancías por parte del verificador aduanal, hay situaciones que se presentan, que hacen que verificador incumpla con su función adecuadamente y en consecuencia sea negligente su desempeño.

Por lo expuesto, surgen las siguientes interrogantes: ¿Cuáles son las principales afectaciones que se ocasionan cuando el verificador aduanal incumple en el ejercicio de sus facultades? ¿Cuáles son las causas que generan las afectaciones derivadas del incumplimiento de la función del verificador aduanal?, ¿Cuáles son las principales dificultades a que se enfrenta el verificador aduanal en el desempeño de su función? y ¿Cuáles son las áreas de oportunidad para mejorar la función del verificador aduanal?, y que se puede proponer para evitar las afectaciones operativas, económicas y jurídicas que generan la función del verificador aduanal. Se pueden mencionar cada uno de los objetivos específicos que se plantearon en la presente investigación, como son: Analizar la función pública del verificador aduanal en relación al ejercicio de sus facultades de comprobación sobre las mercancías en el puerto de Manzanillo, Colima, México; Identificar las principales afectaciones que se ocasionan derivado del ejercicio de la función pública del verificador aduanal en el puerto de Manzanillo, Colima, México; determinar las principales dificultades a que se enfrenta el verificador aduanal en el desempeño de su función en el puerto de Manzanillo, Colima, México y determinar las áreas de oportunidad, para mejorar la función del verificador aduanal en el puerto de Manzanillo, Colima, México. En lo que respecta al cumplimiento de los objetivos planteados, así como la respuesta a las preguntas elaboradas para la investigación, llevan a una hipótesis general, que es: Si el verificador aduanal incumple en el ejercicio de sus facultades de comprobación en el momento del reconocimiento aduanero, se generan principales afectaciones en el puero de Manzanillo, Colima, México.

En el desarrollo de la investigación se determinó la cantidad agencias aduanales ubicadas en el municipio de Manzanillo, Colima, México que son usuarios a través de la figura del dependiente autorizado para tenerlas identificadas, ya que se planteo, que en el momento de la revisión de las mercancías en el proceso del reconocimiento aduanero, el verificador aduanal en el ejercicio de sus facultades de comprobación, se provocan afectaciones negativas a las agencias aduanales cuando este servidor público federal incumple en su función. Que no pasa repetidamente, pero cuando se genera impacta negativamente: generando afectaciones operativas, económicas y derivando finalmente en consecuencias jurídicas.

Para comprobar la hipótesis, el estudio se basará en un instrumento de medición aplicado, el cual es un cuestionario que se podrá tabular de manera estadística, a través de herramientas informáticas como el Excel. Es importante mencionar que la información analizada fue obtenida de una encuesta que se aplicó a

una muestra constituida por las agencias aduanales ubicadas en el municipio de Manzanillo, Colima, México. La población a la que se le aplicó la encuesta se determinó en base al padrón de Agencias Aduanales que se encuentran asociadas a la Asociación de Agentes Aduanales del Puerto de Manzanillo, Colima, por sus siglas AAAPUMAC, A.C. de lo anterior se desprende una población de 101 Agencias Aduanales asociadas a esta organización y que se encuentran ubicadas en el puerto de Manzanillo, Colima, México, de las cuales nuestra muestra constó de 81 entidades a aplicarles la encuesta de los cuales se realizó un estudio estadístico.

A los individuos que se aplicó la encuesta fueron a los dependientes autorizados, de cada una las 81 agencias aduanales, estas personas participan de manera directa en las operaciones de comercio exterior que se realizan en el puerto de Manzanillo, Colima, México. Con la intención de que tuviera un rigor científico el presente artículo de investigación y con la intención que la tabulación de resultados fuera más exacta, se utilizó la fórmula de muestra de poblaciones finitas, considerando un universo finito cuando la población objeto de estudio es menor a 500000. La investigación de campo se realizó durante el 2014. El instrumento de recopilación que se utilizó fue el cuestionario, que lo define Lourdes Munch y Ernesto Ángeles (2005), como: “es un formato redactado en forma de interrogatorio en donde se obtiene información acerca de las variables que se van a investigar” (p.55). Dicho instrumento contiene 10 reactivos. Lo anterior en razón, que la investigación tiene un enfoque cuantitativo, y se hizo necesario conocer cuales son las afectaciones que se generan cuando el verificador aduanal incumple en el ejercicio de sus facultades de comprobación cuando lleva a cabo el reconocimiento aduanero sobre las mercancías, para luego conocer las dificultades a las que se enfrenta y estar en oportunidad de detectar las causas que dieron origen. Y en base a estos detectar las áreas de oportunidad para poder proponer soluciones. Cabe hacer mención que la presente investigación tuvo un enfoque cuantitativo y utilizando el metodo inductivo.

RESULTADOS

Se aplicaron un total de 81 cuestionarios a dependientes autorizados, de la muestra de agencias aduanales, que se encuentran incorporadas a la Asociación de Agencias Aduanales del Puerto de Manzanillo, por sus siglas AAAPUMAC, A.C. con base en la investigación de campo realizada, respecto de las afectaciones que se generan cuando el verificador aduanal incumple en su función pública del ejercicio de sus facultades de comprobación en el momento de la revisión de las mercancías del reconocimiento aduanero. Una vez realizada la investigación correspondiente, de haber tabulado y graficado los datos y finalmente haber realizado el análisis y la respectiva interpretación de los datos se han obtenido los siguientes resultados: Con relación al plantamiento, de los problemas derivados de la revisión de mercancías que realiza el verificador aduanal hacia las agencias aduanales, se puede observar que de acuerdo de las 81 encuestas que se realizaron, en su mayoría, el 59% opina que la agencia en la que labora tiene problemas a veces, derivados de la revisión de mercancías que realiza el verificador aduanal hacia las agencias aduanales, mientras que la minoría, refiriéndose a ésta, un 9% regularmente y un 4% siempre, reconociendo entonces que efectivamente esto es muy común.

Con relación a la cuestión que dice: respecto al desempeño del verificador aduanal, de los 81 dependientes autorizados de las agencias aduanales encuestados, referente a como considera el desempeño de la función pública del verificador aduanal, el 9% considera que muy bueno, el 44% considera que bueno, el 43% que regular, el 3% malo y el 1% pésimo. Con relación al cuestionamiento, que dice: de 10 operaciones con reconocimiento aduanero por parte del verificador aduanal, subraya cuantas sufren alguna afectación por parte de los mismos. Arrojo que el 59% de 1-2, el 16% de 3-4 y sólo el 15% ninguna. Por cual manifiesta que el 85 % restante tiene alguna afectación aunque el rango de afectación más votado fue del de 1-2 con un 59% y sólo un 15% no tiene ninguna afectación. En cuanto a la principal causa de afectación, que se da cuando el verificador aduanal incumple en el ejercicio de sus facultades de comprobación, arrojo como resultado que el 38% es por mucha carga de trabajo, el 21% por falta de espacio en las instalaciones del

recinto fiscalizado y la tercera por falta de tiempo para la revisión de las mercancías, con un 14% seguida del 11% con la que refiere al horario establecido.

En lo que respecta a las principales afectaciones que causan los verificadores a los agentes aduanales al momento de la revisión de las mercancías, la que prácticamente fue la más votada con el 81%, que especifica la duración en el tiempo del despacho y la dos últimas, con rango muy bajo, fue, con un 9% incumplimiento con el cliente y 5% el denominado otro. En cuanto al cuestionamiento que refiere a la principal dificultad por la que no se cumple adecuadamente la función del verificador, arrojó con una mayoría bastante amplia, de un 71% señaló que la carga de trabajo y en un segundo lugar con un 20% fue la falta de capacitación y en una escala muy menor fue la falta de preparación académica y la falta de equipamiento y herramienta. Se llegó a la conclusión, que el promedio del tiempo de parte de los dependientes, en que se lleva a cabo la revisión de las mercancías por parte del verificador aduanal es de 30 minutos a una 1 hora, según el 24% de encuestados que así lo estipularon, en un segundo lugar, con un 23% los que mencionaron que otro, muy seguido de un tercer lugar 2:30 a 3:00 horas y un cuarto lugar con un 16% de rango de tiempo de 1:30 a 2:00 horas.

De los 81 dependientes de las agencias aduanales encuestadas manifestó, con una fuerte mayoría de un 65%, que no está conforme con el tiempo en que el verificador aduanal emplea usualmente para la revisión de las mercancías, dejando solamente a un 35% de los encuestados que dijeron que están conformes con el tiempo en que el verificador aduanal emplea usualmente para la revisión de mercancías. Asimismo, en una paridad muy similar al anterior cuestionamiento, que habla de la conformidad con la revisión, aparece este otro, que dice textualmente: estima que es adecuado el tiempo en que se llevaban a cabo la revisión de las mercancías; por lo cual la mayoría de los encuestados señaló que el 63% considera que no es adecuado el tiempo que se emplea para la revisión de las mercancías y un 37% considera que si es adecuado. Por lo anterior se manifiesta que más de dos terceras partes ni están conformes ni consideran adecuado el tiempo para la revisión de las mercancías. Para cerrar este informe de resultados, que se realizó en el puerto de Manzanillo, Colima, México, se tuvo la oportunidad de indagar cuáles eran las áreas de oportunidad más importantes para los verificadores aduanales, arrojando una mayoría con un 49% respecto a la cantidad de personas, o sea, el número de verificadores que hay para realizar la revisiones de mercancías es una debilidad, en un segundo lugar significativo con un 36%, la capacitación y el tercero, cuarto y quinto lugar en una escala muy menor del 5% para bajo y en ese orden, los rubros: otro, remuneración de sueldo y equipo y herramientas para la revisión.

CONCLUSIONES

La globalización, como la define Hill Ch. (2007) “se refiere al cambio hacia una economía mundial más integrada e interdependiente” (p.5). Este fenómeno de carácter internacional al que México se ha subido, como lo dicta el artículo 1 de la Ley de Comercio Exterior, en el que menciona, como uno de los objetivos, integrar adecuadamente la economía mexicana con la internacional y en razón de esto, es que nuestra entidad federativa de Colima y en particular el municipio de Manzanillo, se ha consolidado como un puerto en constante crecimiento por los niveles tan altos que mueve en carga contenerizada y en consecuencia el sector de servicios logístico. Esto ha traído consigo que flujo comercial este aumento y genera una serie de situaciones en despacho de las mercancías en particular en el reconocimiento aduanero. Por tal motivo, la presente investigación tuvo como objetivo general analizar las afectaciones económicas derivadas del ejercicio de las facultades de comprobación a cargo del verificador aduanal en Manzanillo, Colima, México, identificando las causas por las cuales se generan dichas afectaciones para así proponer acciones que eviten la generación de las causas y por consiguiente sus afectaciones. Se hace constar que las afectaciones que sufren las agencias aduanales y las empresas importadoras, de la función pública que ofrece el verificador aduanal, a efecto el buen desempeño con que se ejercen las facultades para el reconocimiento aduanero y consecuencia los servicios que los agentes aduanales ofrecen a las empresas. Es necesario mencionar que se registró en la investigación, las principales afectaciones, que son: duración en el tiempo del despacho,

incumplimiento con el cliente, pago por demoras, todas estas fueron las más seleccionadas en las encuestas, provocando una función pública negligente a los dependiente autorizados, todas estas originadas principalmente por carga excesiva de trabajo, la falta de capacitación a los verificadores aduanales, y por la falta de un mayor número de verificadores aduanales que realicen los reconocimientos aduaneros.

Por lo cual se indagó, a través de un cuestionario dirigido a los dependientes autorizados, con preguntas, como: cuál es la frecuencia con que las agencias tienen problemas al momento de la revisión de mercancías; contestando un 59% que a veces; así como la percepción que se tienen del desempeño del verificador aduanal, obteniendo un desempeño bueno con el 44% de los encuestados, cabe hacer mención que en la pregunta cuarta de la entrevista realizada al verificador aduanal, se catalogó con un desempeño como bueno. Asimismo, se logró conocer la principal causa de afectación, cuando el verificador aduanal incumple en el ejercicio de sus facultades de comprobación, con un 38% votada la excesiva carga de trabajo, seguida con un 21% por falta de espacio en un recinto fiscalizado; datos que se confrontan con la respuesta de la primer pregunta al verificador aduanal, respecto de las situaciones o causas que se presentan en el desarrollo de su función, a lo cual contesto que la excesiva carga de trabajo, y la falta de contratación de más verificadores aduanales entre otras. Además, se logró conocer el tiempo que se llevan a cabo la revisión de las mercancías por parte del verificador aduanal, siendo escogida la opción de 3:30 a 4:00 horas con un 24% seguida en segundo lugar con un 23% la opción de otro y en un tercer lugar con un 21% la opción de 2:30 a 3:00 horas.

El objetivo de investigación, de determinar las principales dificultades que se encuentra en verificador aduanal en el desempeño de su función, arrojó como resultado dentro de la pregunta del cuestionario aplicado, con un 71% la carga excesiva de trabajo, con un 21% la falta de capacitación, seguida de la falta de preparación académica con un 5% y en un 4% la falta de equipamiento o herramienta. Por lo tanto, se realizan las siguientes recomendaciones: contratar un mayor número de verificadores aduanales para la realización de los reconocimientos aduaneros; brindarles una capacitación constante a los verificadores aduanales. Evaluar constantemente la satisfacción de las agencias aduanales y las empresas que hacen uso de la aduana, respecto la función pública que desempeña el verificador aduanal y así como apegarse a los tiempos acordados que estipula la Legislación Aduanera para los reconocimientos aduaneros. Por todo lo anterior y la investigación en su totalidad, los dependientes autorizados encuestados y la entrevista con el verificador aduanal se propone a la administración general de aduanas y a las aduanas en lo particular tomar las siguientes sugerencias para que puedan ofrecer un buen desempeño en la función pública: Se contraten un mayor número de verificadores aduanales, se impartan cursos a los verificadores aduanales así como un mayor número de espacios para que se realicen los reconocimientos aduaneros. De acuerdo con los resultados obtenidos en la investigación se comprueba la hipótesis que se plantea, en la cual se afirma que si el verificador aduanal incumple el ejercicio de sus facultades de comprobación en la revisión de mercancía del reconocimiento aduanero, luego entonces, se generan las principales afectaciones en el que un 59% ha tenido problemas a veces al momento que se realiza el reconocimiento aduanero.

RESUMEN

El transporte marítimo internacional es un elemento clave sobre el que se sustenta el proceso de globalización económica y comercial, además de ser esencial dentro de la cadena de suministro. En este sentido, la tendencia hacia la concentración en el transporte marítimo de líneas regulares es inevitable. La presente investigación tiene como propósito determinar los factores que las líneas navieras consideran importantes para que se facilite la integración del puerto de Manzanillo, Colima, México a la cadena de suministro global. La búsqueda y obtención de la información se efectuó a través de una investigación de campo que se realizó sobre una muestra de poblaciones finitas aplicada a las líneas navieras establecidas en el puerto de Manzanillo, Colima, México, utilizando el método hipotético deductivo. En orden de importancia para los encuestados las alianzas estratégicas, el uso de tecnologías de información, la capacitación y eficacia de los recursos humanos y los servicios a la medida del cliente son de suma importancia para que dicho puerto se integre cada vez más a la cadena de suministro global.

PORT INTEGRATION IN MANZANILLO, MEXICO TO GLOBAL SUPPLY CHAIN: THE CASE OF SHIPPING LINES

ABSTRACT

International shipping is a key element on which the process of economic and commercial globalization is based, as well as being essential within the supply chain. In this sense, the trend towards concentration in liner shipping is inevitable. This research aims to determine the factors that the shipping lines consider important for facilitating the integration of the port of Manzanillo, Colima to the global supply chain. The search and retrieval of information is performed through a field research was conducted on a sample of finite populations applied to shipping lines established in the port of Manzanillo, Colima, Mexico, using the hypothetical deductive method. In order of importance to respondents the partnerships strategies, the use of information technology, the training and effectiveness of human resources and the services tailored to the customer are very important for global supply chain integration.

INTRODUCCIÓN

Considerando que la mayor parte del comercio internacional se realiza por vía marítima, el transporte marítimo internacional es un elemento clave sobre el que se sustenta el proceso de globalización económica y comercial, además de ser esencial dentro de la cadena de suministro. En este sentido, la tendencia hacia

la concentración en el transporte marítimo de líneas regulares es inevitable. Las principales empresas navieras no sólo están aumentando su tamaño y capacidad de participación en el mercado mediante la introducción de buques más grandes, que les permiten mover mayor volumen de carga a menor costo, sino que también lo hacen mediante la formación de alianzas estratégicas o mediante la adquisición o fusión de las empresas competidoras. Sin duda, las alianzas estratégicas y las fusiones de los llamados *mega-carriers* (grandes consorcios de transporte marítimo y multimodal) representan una nueva y sólida tendencia que modifica notablemente la organización del transporte marítimo internacional y la posición de los puertos. La proliferación masiva de alianzas parece ser una respuesta de los transportistas a las demandas de la producción globalizada, a la integración de una cadena de suministros más eficiente y a la creciente desregulación del sector marítimo. Por su función, el transporte se concibe como un elemento importante para la adecuada articulación de la cadena de suministro, por ejemplo, localizado entre los clientes y los proveedores en un proceso mercantil.

Para Jiménez y Hernández (2002), la cadena de suministro se define como el conjunto de empresas integradas por proveedores, fabricantes, distribuidores y vendedores (mayoristas o detallistas) coordinados eficientemente por medio de relaciones de colaboración para colocar los requerimientos de insumos o productos en cada eslabón de la cadena en el tiempo preciso al menor costo, buscando el mayor impacto en la cadena de valor de los integrantes con el propósito de satisfacer los requerimientos de los consumidores finales. El adecuado desempeño de la cadena de suministro depende en gran parte del transporte. El puerto de Manzanillo es considerado como el puerto número uno a nivel nacional en cuanto al movimiento de carga contenerizada además del crecimiento acelerado de la infraestructura que se manifiesta actualmente, por lo que se ha convertido ya en un requisito que cada uno de los actores del comercio exterior desempeñe sus actividades en condiciones de máxima calidad, debido a estas exigencias ha surgido la necesidad de cooperación entre estos actores involucrados para agilizar procesos y seguir en la competencia global (API, 2013). Por lo anterior la presente investigación es necesaria e importante para determinar los factores que las líneas navieras consideran importantes para que se facilite la integración del puerto de Manzanillo, Colima, México a la cadena de suministro global.

REVISIÓN DE LITERARIA

A medida que va pasando el tiempo las actividades relacionadas con el comercio internacional van creciendo y por consecuencia se va incrementando las transacciones comerciales (exportaciones e importaciones) entre diversos países. Varios de ellos se encuentran inmersos en bloques comerciales. Para llevar a cabo las actividades propias del comercio internacional participan diferentes compañías que hacen posible el movimiento de mercancías, formando una cadena en la cual todas las empresas están conectadas unas con otras y con esto se pueda alcanzar la eficiencia en toda la cadena y así lograr que los bienes lleguen en tiempo y forma a los clientes/consumidores. Las líneas navieras son compañías que forman parte de dicha cadena, es decir son sólo un eslabón de ésta.

De acuerdo con Porter (2008), la ventaja competitiva es una superioridad que posee una empresa ante otras empresas del mismo sector o mercado, que le permite destacar o sobresalir ante ellas, y tener una posición competitiva en mencionado sector o mercado. Por lo que, los eslabones afectan las actividades de desempeño y costo del otro e influyen en su ventaja competitiva. Por ejemplo: (i) no se puede pensar en brindar un producto de calidad superior si sus componentes no lo son, (ii) el costo de un bien está afectado por el costo de sus materias primas, materiales y otros insumos adquiridos a los proveedores, (iii) la velocidad de llegada al mercado depende de la rapidez de respuesta de los proveedores, ya que el tiempo de ciclo de éstos limita el del productor. Para Beamon (1998), una cadena de suministro es un proceso de fabricación estructurado donde los materiales crudos son transformados a bienes acabados, entonces son entregados para acabar en las manos de los clientes. Según Chow y Heaver (1999) una cadena de suministro es el grupo de fabricantes, proveedores, distribuidores, detallistas, transporte, información y otros proveedores de servicio de administración logística que están comprometidos en proporcionar bienes a

consumidores. Ayers (2001) define la cadena de suministro como procesos de ciclo de vida involucrando bienes físicos, información, y flujos financieros cuyo objetivo es satisfacer al consumidor final que requiere bienes y servicios de proveedores diversos, conectados. En tanto, Pienaar (2009), citado por Assey (2012), define la cadena de suministro como una descripción general de la integración de proceso que implica organizaciones para transformar materiales crudos a bienes acabados y para transportarlos al usuario final.

A raíz de la liberalización y la globalización, cada vez se hace más relevante la interdependencia entre productores y mayoristas en las cadenas de suministro internacional (Fourie, 2006). La cadena de suministro se refiere a la red de organizaciones que están implicadas en los procesos diversos y actividades que generan valor en bienes y servicios del productor hasta el cliente final. Además de ser una coordinación estratégica y eficaz de las funciones de los negocios convencionales dentro de una corporación específica y a lo largo de los negocios dentro de una cadena de suministro, con el objetivo de desarrollar un rendimiento a largo plazo de la cadena de suministro y de la corporación, como una entidad (Christopher, 1998). Para Grant, Lambert, Stock y Ellram (2006), la administración de la cadena de suministro se refiere a la integración de procesos empresariales desde el usuario final hasta los proveedores de información, bienes y servicios que adicionan valor a los consumidores. En tanto que para Panayides (2006) la integración puede proporcionar agilidad a lo largo de la cadena de suministro.

Una estrategia orientada a sumar capacidades se lleva a cabo con el fin de competir en mejores condiciones. En las organizaciones que asumen este tipo de estrategia, la misma se le conoce como alianza. Las alianzas entre las organizaciones, a su vez, asumen diferentes formas como: las licencias, acuerdos de mercadeo conjunto, consorcios, integración de estándares, investigación conjunta, acuerdos especiales para acceso a tecnología o mercados y franquicia. En general, se reconoce que la integración entre organizaciones es una forma de unión total o parcial para enfatizar el desarrollo de fortalezas especiales. Donde ambas formas procuran incrementar la capacidad competitiva de los negocios u organizaciones y por supuesto mejorar el rendimiento o incrementar el beneficio de las mismas (Da Silva, 2002). El transporte es uno de los elementos más críticos, de los más importantes pero de los menos entendidos en la cadena de suministro. Por lo anterior, la administración de transporte es un aspecto crítico y se concibe como un elemento clave para la adecuada articulación de la cadena de suministro. Para una empresa, la capacidad de entregar constantemente productos a tiempo, al precio correcto y con la calidad adecuada, afecta favorablemente la opinión del cliente sobre el servicio. En tal virtud, el transporte requiere ser un servicio de calidad en términos de seguridad, regularidad, oportunidad, entregas a tiempo y costos, para ambas partes del proceso (Jiménez y Hernández, 2002).

Las cadenas de suministro generan fuertes obligaciones entre los participantes de la estructura de la cadena con el fin de lograr ventajas competitivas en algún diseño explícito. Tal condición permite observar la necesidad de establecer vínculos más estrechos entre las unidades productivas participantes que las obliga a mantener sistemáticamente interacciones (Durango, 2008). Los puertos hoy en día juegan una función importante como miembros de una cadena de suministro. En esta función, el puerto está considerado como parte de un grupo de organizaciones en que la logística y diferentes operadores de transporte están implicados en traer valor a los consumidores finales. Para lograr el éxito es necesario conseguir un grado más alto de coordinación y cooperación (De Souza, Geraldo, Beresford y Pettit, 2003). La competencia entre puertos, particularmente aquellos en el mismo rango geográfico se ha intensificado. Por lo que en la actualidad, la competitividad de un puerto depende en gran medida en la habilidad de puertos para integrarse en cadenas de suministro global. La identificación de los parámetros que contribuyen a la integración del puerto/terminal en cadenas de suministro habilita operadores del puerto para establecer estrategias con la finalidad de aumentar la integración y conseguir ventajas competitivas (Panayides y Song, 2009). El contexto de una cadena de suministro integrada es una colaboración de varias firmas que consideran un sistema de flujos y restricciones de recursos importantes. Dentro de este contexto, la estructura y la estrategia de una cadena de suministro se producen a partir de los esfuerzos que permiten cumplir el compromiso operativo de una empresa con sus clientes, al mismo tiempo que apoyan las redes de

distribución y de proveedores para obtener una ventaja competitiva (Bowersox, Closs y Cooper, 2007). Los puertos marítimos pueden considerarse como un eslabón de la cadena de suministro, en él confluyen una gran cantidad de actores que conforman entre otros aspectos la especialización, lo que permite ser más eficiente bajo el concepto de economías de escala que impactan en la competitividad (Moreno, 2012).

Tradicionalmente las autoridades portuarias jugaron el papel de facilitadores, enfocándose en la provisión de superestructura e infraestructura para las operaciones de embarque, carga y descarga, almacenaje temporal y operaciones en el interior del puerto (Cullinane, Song y Gray, 2002; Tongzon y Heng, 2005). Kalwani y Narayandas (1995) comentan que las relaciones entre proveedores y clientes/consumidores permiten retener o incluso mejorar los niveles de rentabilidad entre ellos más que aquellas compañías que emplean un enfoque tradicional. Para alcanzar una sincronización entre las operaciones intermodales es esencial tener una adecuada estructura de gobernanza en las relaciones entre puertos y líneas navieras (Panayides, 2002). Los puertos que construyen relaciones de cooperación a largo plazo se consideran que tienen altos niveles de integración en la cadena de suministro (Song y Panayides, 2007).

Desde 1994 en México, los puertos se especializan en carga contenerizada, desarrollan un departamento de manejo comercial, tratan de convertirse en plataformas logísticas y se organizan para desarrollar espacios de flujos. Tratan de incorporar a la carga alto valor agregado y priorizan el manejo tecnológico y el conocimiento buscando emular a los puertos del mundo desarrollado (Ojeda, 2008). El puerto de manzanillo se encuentra en una buena situación en lo que ha conectividad se refiere; la oferta de servicios marítimos es una de las más amplias de todo México y es la más importante en la línea de negocio de los contenedores. Actualmente el puerto tiene relaciones comerciales con más de 57 puertos en exportación y 67 en importación, además de 6 destinos nacionales y cuenta con un total de 33 líneas navieras prestando los servicios marítimos en el puerto. La mayoría de las rutas marítimas que tienen recalada en el puerto son regulares. Entre ellas destacan: APL, CSAV, MSC, Hanjin Shipping, Hapag Lloyd, Hamburg Sud, Hyundai Merchant Marine, K Line, NYK, CSCL, CMA CGM, Maruba, Maerks line, CCNI, MOL, Höegh, TBS, Star Shipping, AKO Line, Pan Ocean Shipping, Daichi Shipping, Baja Ferrries, Carnival Cruises Line, Norweigan Cruises Line, Pullmantur Cruises, Eukor Car Carries, Gear Bulk Shipping, SK Shipping, Evergreen, Wan Hai Line, PIL, Cosco, y Daewo Shipping (Administración Portuaria Integral de Manzanillo, 2013).

METODOLOGÍA

El método de investigación a seguir es el método hipotético deductivo planteando la hipótesis en la que se establece que las alianzas estratégicas, el uso de tecnologías de información, la capacitación y eficacia de los recursos humanos y los servicios a la medida del cliente que ofrecen las líneas navieras son factores de cooperación que permiten integrar al puerto de Manzanillo, Colima, México a la cadena de suministro global. Con respecto a la recopilación de los datos, el instrumento utilizado fue el cuestionario, el cual es el conjunto de preguntas preparadas cuidadosamente sobre hechos y aspectos que interesan en una investigación para su contestación por la población o su muestra. En el presente estudio se utilizará la investigación mixta, que es aquella que participa de la naturaleza de la investigación documental y de la investigación de campo (Zorrilla, 1993). Esta investigación se llevó a cabo en la ciudad-puerto de Manzanillo, Colima, México, el objeto de estudio fueron las líneas navieras, las cuales forman parte de la Asociación Mexicana de Agentes Navieros (AMANAC). En este puerto operan cerca de 33 líneas navieras, entre carga contenerizada y carga general, sin embargo no todas cuentan con una oficina propia en este lugar. Sólo 20 de ellas tienen una oficina física en este espacio geográfico. Por lo que, a éstas se aplicó la encuesta.

RESULTADOS

El total de las empresas encuestadas está totalmente de acuerdo en que los recursos humanos capacitados en la prestación de servicios ayudan a que el puerto de Manzanillo se integre a la cadena de suministro global. El trabajo en equipo y el conocimiento de los trámites ante las autoridades son temas de capacitación importantes para las líneas navieras en un 67%. El 70 % de dichas compañías ofrecen capacitación a su personal de manera semestral Otro elemento importante, según las líneas navieras, para que el puerto de Manzanillo se integre a la cadena de suministro global es proporcionar servicios a la medida del cliente (personalizados) en un 75%. Además de que el 70% considera que ese tipo de servicios representan ganancias significativas. En el mismo sentido, el 90% de las líneas navieras considera que el uso de las tecnologías de información, mejoran la prestación de sus servicios. El 100% de los encuestados afirman que cuenta con las tecnologías de información adecuadas para la prestación de sus servicios y consideran que es un factor determinante para que el puerto de Manzanillo se integre a la cadena de suministro global. El perfil y la cantidad de los recursos humanos que laboran en las líneas navieras es el adecuado para la prestación de servicios. El 100% de las líneas navieras considera que las alianzas estratégicas son un factor clave que mejora la prestación de sus servicios y les genera importantes beneficios como: operativos, financieros y administrativos. Además, de que es una acción que permite que el puerto de Manzanillo se integre a la cadena de suministro global. De manera similar, el total de las empresas encuestadas considera relevante realizar las alianzas estratégicas entre miembros de la cadena de suministro: con el transporte marítimo (32%), y con un 18% con los transportes ferroviario y carretero.

CONCLUSIONES

Las principales empresas navieras no sólo están aumentando su tamaño y capacidad de participación en el mercado mediante la introducción de buques más grandes, que les permiten mover mayor volumen de carga a menor costo, sino que también lo hacen mediante la formación de alianzas estratégicas o mediante la adquisición o fusión de las empresas competidoras. Los puertos mexicanos se han visto inmersos en un proceso de reestructuración y modernización de gran relevancia durante la última década. Con la apertura comercial y las tendencias globalizadoras de la economía mundial, el sector marítimo-portuario requirió de cambios substanciales para mejorar tanto su eficiencia operativa, como su integración territorial con regiones interiores donde se encuentran localizados los principales centros de producción, distribución y consumo del país. Las líneas navieras y las rutas marítimas determinan la importancia de un puerto en dos sentidos. Por una parte, evidencian sus conexiones a nivel global y, por otra, posibilitan la diversificación de los vínculos del puerto con las regiones del interior del país.

Existe una relación directa entre la presencia de líneas navieras regulares y el hinterland del puerto (zona de influencia al interior del país). La presencia o ausencia del primer elemento determina la expansión o contracción de la zona de influencia de los puertos. El puerto de Manzanillo es un punto de transbordo (puerto hub) ideal para los países de Centro y Sudamérica, así como para la costa oeste de los Estados Unidos de Norteamérica y Canadá. Se identificó que la integración proviene desde la capacitación de los recursos humanos involucrados, la cual es determinante y los encuestados la consideran un factor que ayuda a facilitar la integración del puerto a la cadena de suministro, de la misma manera, tal como se registraron en la investigación los principales factores que ayudan a facilitar la integración del puerto son: los servicios a la medida de los clientes, las tecnologías de información con las que cuenta la empresa, recursos humanos adecuados y eficaces, y contar con alianzas estratégicas con otras empresas, ya sean líneas navieras, empresas de autotransporte o algún otro medio de transporte involucrado en la cadena de suministro, así como los beneficios que conlleva el contar con estas alianzas.

Sin duda, las alianzas estratégicas y las fusiones de los llamados *mega-carriers* (grandes consorcios de transporte marítimo y multimodal) representan una nueva y sólida tendencia que modifica notablemente la

organización del transporte marítimo internacional y la posición de los puertos dentro de la cadena de suministro. Las navieras, los operadores de transporte multimodal y los agentes de carga se han concentrado en los puertos selectos y han propiciado y presionado para mejorar los enlaces terrestres y expandir el hinterland, entre otras cosas, porque el tiempo es prioritario para las cadenas productivas de alto valor manejadas por ellos. Las alianzas, mientras mayor sea la amplitud de alcance, tienen la posibilidad de crear verdaderas redes mundiales de transporte y distribución, cuya cobertura no sólo aumenta, en grado y en frecuencia, por los océanos, sino también a través de las regiones o los fragmentos territoriales conectados a los procesos de producción global. En este sentido, lo fundamental de las alianzas estratégicas globales es la dimensión geográfica de su implantación.

CONDICIONES COMPETITIVAS DE LAS PYMES EN LA COSTA CARIBE COLOMBIANA: EL CASO DE SANTA MARTA

Carlos Alberto Cano Plata, Universidad De Bogotá Jorge Tadeo Lozano

RESUMEN

La presente ponencia permite determinar la competitividad en la PYME de la costa Caribe colombiana particularmente en la ciudad capital de Santa Marta.; corresponde a un trabajo de largo alcance financiado por la Universidad Jorge Tadeo Lozano correspondiente a convocatoria interna No. 8; Comprende un estudio inscrito en el campo de trabajo de teorías y prácticas de la administración, que adelanta el grupo de investigación GleAgt con el fin de robustecer la línea de investigación en estudios de la organización definida en la Facultad de Ciencias Económico-Administrativas de la Universidad y que dio inicio en el año 2012. El objetivo consistió en aplicar una metodología uniforme que permitió determinar el nivel de competitividad de la PYME, considerando criterios tanto internos como externos, que se constituyó en una herramienta de análisis comparativo en diferentes aspectos. El marco teórico-conceptual de la investigación se fundamentó en las investigaciones que han intentado medir la competitividad empresarial generando indicadores para tal fin, así también se analizó una herramienta llamada el Mapa de Competitividad del BID la cual mide los aspectos internos de las empresas con lo que permitió formarse una idea del nivel de competitividad de las mismas, constituyéndose en un indicador de competitividad interno. De otro lado, se analizó la teoría de competitividad sistémica la cual enfocó la competitividad en cuatro niveles: macro, meso, meta y micro.

COMPETITIVE CONDITIONS OF SMEs IN THE COLOMBIAN CARIBBEAN COAST: THE CASE OF SANTA MARTA

ABSTRACT

This paper determines the competitiveness of SMEs in the Colombian Caribbean coast particularly in the capital city of Santa Marta .; corresponds to a long-range work funded by the Universidad Jorge Tadeo Lozano corresponding to internal notice No. 8; Includes a study written in the working field theories and practices dministration, being conducted by the research group GleAgt in order to strengthen the research in organization studies defined in the Faculty of Economic and Administrative Sciences, University which began in 2012. The goal was to apply a uniform methodology that allowed us to determine the level of competitiveness of SMEs, considering both internal and external criteria, which constituted a tool for comparative analysis in different aspects. The theoretical and conceptual framework of the research was based on studies that have attempted to measure generating business competitiveness indicators for this purpose, and a tool called also analyzed Competitiveness Map IDB which measures the internal aspects of the companies with allowing an idea of the level of competitiveness of the same, becoming an indicator of internal competitiveness. Macro, meso, and micro goal: On the other hand, the theory of systemic competitiveness competitiveness which focused on four levels was analyzed.

INTRODUCCIÓN

Las PYME (pequeñas y medianas empresas) Conforman parte sustancial de la economía Colombiana. Estas representan el 96,4 % del número de organizaciones en Colombia y aportan con el equivalente al 63% de fuentes de empleo en la Nación; con el 45% de la producción manufacturera, el 40% de los salarios y el 37% del valor agregado. Son más de 650.000 empresarios cotizando en el sistema de seguridad social. Este estudio empírico en un grupo de pymes en Santa Marta, muestra el estado en la gestión direccionada de su impacto en diferentes variables, como innovación y conocimiento, gestión humana, comunicación e información y gerencia estratégica, que son manejadas obligatoriamente por la alta gerencia de las organizaciones, así como su impacto con la utilidad operacional como medida fundamental al aporte de riqueza.

REVISIÓN LITERARIA

De acuerdo con los planteamientos de Porter (1990) y Krugman (1994) los que compiten son las empresas no las naciones, a un país lo hace competitivo las empresas que hay en este. A continuación revisaremos algunos conceptos de competitividad empresarial. La competitividad es la capacidad de una empresa para que rivalizando con otras, alcance una posición competitiva favorable que permita la obtención de un desempeño superior a las empresas de la competencia. Para Lall, Albadalejo y Mesquita (2005), el concepto de competitividad proviene de la bibliografía sobre administración de empresas, y viene a ser la base para el análisis estratégico empresarial; las compañías compiten para captar mercados y recursos, miden la competitividad según su participación relativa en el mercado o su rentabilidad y utilizan la estrategia de la competitividad para mejorar su desempeño con base en la rentabilidad el cual es requisito para ser competitiva, lo señala también la industria de Canadá como se ve a continuación:

Una empresa es competitiva si es rentable: Lo cual implica que su costo promedio no excede del precio de mercado de su producto. Así también, su costo no excede del costo promedio de sus competidores. Si no es así, entonces implica que tiene una productividad más baja o paga precios más elevados por sus insumos, o por ambas razones (*Industry* Canadá 1995, citado en Solleiro at el, 2005). También señalaron que la competitividad es la capacidad de una organización para mantener o incrementar su participación en el mercado basada en nuevas estrategias empresariales, en un sostenido crecimiento de la productividad, en la capacidad inter empresarial para participar en negociaciones con diferentes instituciones y otras compañías dentro de su ambiente, en la existencia de un ambiente competitivo determinado por el sector y el mercado de los consumidores en políticas introducidas por los gobiernos nacionales y alianzas económicas regionales. La competitividad de las empresas depende de factores en tres niveles: el primer nivel es la competitividad del país, que incluye variables como la estabilidad macroeconómica, la apertura y acceso a mercados internacionales o la complejidad de la regulación para el sector empresarial; el segundo nivel se refiere a la infraestructura regional; un tercer nivel que explica la competitividad de las empresas tiene que ver con lo que ocurre dentro de la propia empresa para Cervantes, la competitividad empresarial se deriva de la ventaja competitiva que tiene una empresa a través de sus métodos de producción y de organización (reflejados en precio y en calidad del producto final) con relación a los de sus rivales en un mercado específico (Abdel y Romo, 2004). Cuando nos referimos a competitividad no podemos dejar de lado el trabajo de Porter (1990), quien se refiere a la Ventaja competitiva como la clave de la competitividad.

El marcó la separación de los enfoques tradicionales basados en el concepto de ventajas comparativas, haciendo énfasis en que mientras que las ventajas comparativas se heredan, las ventajas competitivas se crean. A este respecto, estudios empíricos, señalan que rara vez se ha dado un crecimiento sostenido basado puramente en factores heredados; este se ha dado más bien por: la vinculación de factores y actividades tales como las estrategias empresariales y la estructura del rival; la existencia o inexistencia de industrias de apoyo; las condiciones de los factores mismos como la disponibilidad de mano de obra calificada o

infraestructura adecuada, y las condiciones de la demanda Sin embargo, el diamante de Porter (1990) sigue vigente y es usado hoy en día por corporaciones y organismos internacionales, más cuando se refuerza con su nueva extensión de competencia ambiental, el cual ha sido incluso estilizado por quienes forjan las políticas de la Pyme (Paz, 2002). De este modo, hemos pasado de la ventaja comparativa a la ventaja competitiva (aunque estos no son mutuamente excluyentes sino que se complementan), a la cadena productiva y la revisión del entorno, a la noción de competitividad sistémica, de regionalización, clústers y territorios competitivos. Esta evolución nos permite enfrentar nuevos retos: globalización, internacionalización y desregulación de mercados. Aplicar nuevas estrategias basadas en la gestión tecnológica, la gestión del conocimiento, la cooperación. A ver el mercado no sólo como local sino también aventurarse al mercado internacional y sus exigencias (Martínez y Álvarez, 2006).

METODOLOGÍA

Se trató de una investigación de carácter descriptivo, en la que se realizó una investigación documental y de campo. La población objetivo que fue considerada corresponde a las pequeñas y medianas empresas (PYMES) que operan en la costa Caribe colombiana particularmente en Santa Marta.

Tipo de Investigación: Para analizar los factores externos de la competitividad (niveles macro, meso, meta) se aplicó un diseño de investigación documental, con revisión bibliográfica pertinente para el estudio de estas variables y su efecto en el desempeño de las Pymes. Para la determinación del nivel de competitividad y factores internos, se empleó un diseño de investigación de campo, toda vez que los datos que se analizaron fueron recopilados a través de visitas a las empresas y aplicación de cuestionarios por vía web y personal acorde con lo propuesto por Balestrini, (2006).

Procedimientos y Técnicas: Se seleccionó de manera aleatoria la muestra piloto para verificar la claridad y pertinencia de las preguntas, esta se llevó a cabo en 10 empresas de los diferentes sectores de Santa Marta y en las condiciones y características que la legislación colombiana establece con respecto a su tamaño, lo que permitió ubicarla en una tipología particular: De 5 a 10 empleados = Microempresa; De 11 a 50 empleados = Pequeña empresa; De 51 a 250 empleados = Mediana Empresa. Para todos los sectores: Industria, Comercio y Servicios. (Ley 905 de 2004).

Determinación del tamaño de la muestra: Una vez organizadas las bases de datos, se procedió a utilizar un modelo estadístico para población finita, que permitió trabajar con margen de error mínimo. En este caso, el tamaño de la población fue de 399 empresas, escogidas mediante base de datos suministrada por la Cámaras de Comercio de Santa Marta en forma aleatoria, una vez seleccionado el tamaño de la muestra se procedió a hacer la estratificación correspondiente a los tres sectores objeto de estudio los cuales fueron: Industrial, Comercial y Servicios con un porcentaje de clasificación de acuerdo con la base de datos suministradas, donde el 10% son empresas del sector industrial, el 50% son del sector servicios y el 40 % restante corresponden al sector Comercial.

RESULTADOS

Departamento del Magdalena: El departamento del Magdalena tiene una extensión de 23.188km que corresponden al 2% del territorio nacional. De acuerdo con el DANE, la población proyectada a 2011 es de 1.212.559 habitantes, lo que representa el 2,6% de la población del país y el 12,3% de la Región caribe. En el 2010 el PIB del Magdalena fue de \$7.324 miles de millones y representó el 1,3% del PIB nacional y el 8,9 del PIB de la región Caribe, con ingresos per capita en el orden de \$6.095.709 anuales. En el departamento habitan las etnias Arhuaco, Wiwa y Chimila.

Descripción Física: El Distrito de Santa Marta está conformado por un mar territorial, una área montañosa correspondiente a la Sierra Nevada, cuerpos de agua interiores, las islas y bahías localizadas en el mar

territorial y en los cuerpos de agua, el suelo consolidado constituido por una zona costera y una zona continental, el suelo no consolidado constituido por la zona de Bajamar, el subsuelo y el espacio aéreo asociado. Parágrafo. Los suelos consolidados por acciones antrópicas o naturales y que no constituyan reserva ambiental pertenecen al Distrito, en virtud del artículo 123 de la Ley 138-97, sobre terrenos baldíos que se encuentren en terreno urbano.

Actividad Empresarial en Santa Marta. La micro, pequeña, mediana y grande empresa en Santa Marta La estructura Empresarial de Santa Marta durante el 2010, registra el siguiente comportamiento; el ciudad de Santa Marta cuenta con 15.767 unidades económicas, de las cuales *el 95.47 % son microempresas, el 4.14% constituyen pymes, y el 0.39% grandes empresas*. Del total de las unidades económicas, el 99.61% son Mipymes y el 0.39% son grandes empresas. *Las Mipymes generan el 95.20% del empleo y 4.80% las grandes empresas, dentro de las Mipymes el 75.67% del empleo lo generan las microempresas, y el 23.16% las Pymes.*

Análisis

Los resultados obtenidos en el trabajo realizado en la costa caribe colombiana, Santa Marta van ligados al diseño de la encuesta, información correspondiente al trabajo de campo, la selección de la muestra, diseño de la metodología y recolección de la información de la muestra.

Desarrollo Regional

Uno de los aspectos que contribuye al crecimiento y desarrollo de un país es el nivel de competitividad de su sector productivo, considerando no solo variables de alcance nacional sino también condiciones regionales; en Colombia a partir del año 2007, el Consejo Privado de Competitividad - CPC - ha venido elaborando año tras año los informes anuales de competitividad con los cuales se ha hecho un seguimiento a la evolución que ha tenido la economía colombiana en cuanto al tema competitivo, tanto a nivel país como a nivel región. Nivel microeconómico –Santa Marta. Resumen de las Características de las Mipymes en Santa Marta.

Predominio de género masculino en los empresarios – directivos.

Edad promedio directivos: 39,1 años.

Nivel de estudios: secundaria.

Antigüedad promedio de la empresa: 10,6 años.

Se conforman personas naturales en su mayoría, excepto en el sector servicios.

Distribución similar en empresas familiares y no familiares en industria y servicios. Predomina la empresa familiar en comercial.

FIGURA No 3 COMPETITIVIDAD de EMPRESAS MYPIMES EN la COSTA CARIBE _SANTA MARTA

Fuente: Elaboración propia

FIGURANO. 4: COMPETITIVIDAD GLOBAL de EMPRESAS POR TAMAÑO EN la COSTA CARIBE _SANTA MARTA

Fuente: Elaboración propia

En los figura 4 se ve reflejado el nivel de competitividad de la Mypyme en Santa Marta, entre los rangos de muy alto y alto se concentre el 80% de acuerdo con la percepción de los encuestados. Por otra parte en el análisis global sobre el rango de competitividad de las empresas encuestadas el grafico 26 podemos observar que las medianas empresas consideran tener un nivel muy alto de competitividad con un 48,57%, mientras que las pequeñas empresas representan el 41,18 en el nivel alto de competitividad. Ninguno de los encuestados considera que sus empresas tengan un nivel muy bajo de competitividad.

Tabla No 4: Competitividad Global de las Empresas Por Sector En la Costa Caribe (Santa Marta)

Competitividad de Empresas Por Sectores			
Rango De Competitividad	Sectores		
	Industrial	Comercial	Servicios
Muy Alto De 81- 100	25	22,49	71,43
Alta 61-81	39,66	53,11	26,09
Media 41 - 60	31,03	22,49	2,48
Baja 21-40	4,31	1,91	0
Muy Baja 0 -20	0	0	0
	100	100	100

Fuente: elaboración propia

En la clasificación por sectores, se puede observar la misma tendencia, las empresas del sector servicios, son las que se perciben con un mayor nivel de competitividad con el 71,43%, mientras que el nivel más bajo lo presenta el sector industrial con un 4,31% de percepción de competitividad.

CONCLUSIONES

En este trabajo se intentó establecer la caracterización de la Mypyme en la Costa caribe (Santa Marta). Los principales hallazgos nos permiten concluir que: Existe una relación directa entre la competitividad de la Mipyme y la infraestructura educacional, lo que permite determinar que el nivel educativo es fundamental para el desarrollo de una región. Además, dicha relación también podría estar indicando el impacto de la infraestructura educativa para el desarrollo y permanencia de la Mipyme en una región. En la región caribe el factor educativo es una de las variables con menor desarrollo y debe ser intervenida, dentro de las propuestas que tiene la región este es uno de los principales pilares que han previsto.

La competitividad de la Mipyme y el desarrollo económico en Santa Marta tienen una relación positiva en cuanto a empleo y remuneraciones. Lo anterior, nos permite decir que las Mipymes, desempeñan un importante papel en el mercado laboral. Esto es, pese a los problemas de financiación, y las demoras en el pago de su deuda, junto con otras barreras como la creciente presión impositiva, las Mipymes siguen siendo capaces de crear empleo. La relación entre la competitividad de la Mipyme y la capacidad económica a nivel nacional y regional es altamente representativa, lo que significa que la Mipyme tiene una incidencia importante en la generación del PIB, la producción bruta, el consumo intermedio, valor agregado y total activos de una región. De acuerdo con los resultados anteriores sigue siendo prioritario mantener el desarrollo de las Mipymes con políticas públicas que permitan su apoyo, por ser fuente en la economía del país. En la distribución geográfica y sectorial de los establecimientos clasificados como Pymes se evidencia que el 62,2% de las empresas de la ciudad capital, así como el predominio de los sectores comercio y servicios. Sobre su antigüedad, algunos autores las han clasificado en empresas en jóvenes (menos de 6 años de antigüedad), en proceso de consolidación (entre 6 y 15 años de haber sido creadas), en proceso de estabilización o maduras (entre 15 y 22 años), y tradicionales (más de 22 años). En el gráfico 2 se resume la distribución de empresas según su edad.

ANÁLISIS DEL MARCO JURÍDICO DEL OTORGAMIENTO DE LICENCIAS DE CONDUCIR EN EL ESTADO DE JALISCO: INGRESOS NO FISCALIZABLES

Mónica Marsela López García, Universidad de Guadalajara
Roberto Romero Paz, Universidad Autónoma del Estado de México
Ma. Guadalupe Miranda Medina, Instituto Tecnológico de Tepic

RESUMEN

La gran cantidad de accidentes viales que se presentan actualmente en las ciudades consideradas con mayor número de habitantes en la república mexicana, hace necesario ingresar al estudio de las causas que pueden estar incidiendo para que esto suceda, el Estado de Jalisco, considerado como uno de los estados más importantes en México, conducir un automóvil no se encuentra condicionado a contar con una escolaridad mínima, por lo que si un automovilista desconoce o no las leyes o reglamentos parece ser ignorado por las autoridades lo importante es contar con las condiciones necesarias para implementar medidas correctivas las cuales se traducen en ingresos para el estado, sin que estos sean fiscalizados por alguna autoridad superior, permitiendo que cada vez sean más estas acciones. La falta de coordinación entre las autoridades federales para lograr leyes y reglamentos de aplicación nacional y establecer las herramientas para el conocimiento, el respeto y la observancia de las mismas sigue permitiendo que los ingresos en este renglón sigan creciendo.

ANALYSIS OF THE LEGAL FRAMEWORK OF DRIVER LICENSING IN THE STATE OF JALISCO: NO AUDITED INCOME

ABSTRACT

The large number of road accidents occur in cities currently considered with the greatest number of inhabitants in the Mexican Republic, necessary to enter the study of the causes that may be advocating for this to happen, the State of Jalisco, considered one of the most important states in Mexico, driving a car is not conditioned on having a minimum education, so if a motorist unknown or not laws or regulations seems to be ignored by the authorities the important thing is to have the conditions necessary to implement corrective measures which translate into revenue for the state, without these are supervised by some higher authority, allowing increasingly more such actions. The lack of coordination between federal laws and regulations to achieve national implementation and establish tools for knowledge, respect and compliance therewith income continues to allow further growth in this line

JEL: M10

KEYWORDS: No Audited Income, Driver Licenses, Jalisco, Legal Framework

INTRODUCCIÓN

La forma de transportarse de los grupos sociales en las grandes urbes del mundo son ampliamente conocidas estas pueden ser en transporte urbano, en bicicleta, a pie o en automóvil y es esta ultima la que provoca

mayores problemas como lo son los accidentes viales es decir coalición entre automóviles, generando esta un sinnúmero de lesionados y otros tantos de víctimas mortales. En la ciudad de Guadalajara como en cualquier lugar de México, el manejar un automóvil implica derechos y obligaciones, una de las principales responsabilidades de un automovilista es tramitar la licencia de conducir, ya que para realizar este proceso el conductor debe de conocer el Ley de los Servicios de Vialidad, Tránsito y Transporte del Estado de Jalisco (en adelante LSVTyTEJ), *documento legal que tiene por objeto regular la seguridad vial y el tránsito* (Justia México.com, 2009), sin embargo la mayoría de las personas lo desconocen por diferentes razones, como puede ser:

Cuando aprendieron a manejar un auto, lo hicieron guiados por el papá, un amigo o los hermanos pero se olvidaron de consultar el reglamento o leyes de tránsito. Porque no existen organismos oficiales es decir dependencias gubernamentales que capaciten a quienes quieren obtener una licencia de conducir. La falta de educación y cultura vial, la cual debe de ser atendida en las escuelas de educación básica. En las escuelas de manejo solo instruyen en el manejo operativo del auto y solo algunas ven el reglamento de manera superficial sin explicar de forma detallada su contenido. Porque en México no existe un hábito de lectura lo que provoca que las personas sean renuentes al leer una ley que resulta ser más complicado de entender. Además de los puntos anteriores existen algunas otras situaciones que se han manejado igual durante mucho tiempo y que la sociedad llega a considerarlas como normales, y en ocasiones en el afán de obtener el documento en cuestión llegan a tramitarlo utilizando procesos de forma ilícita, es decir, corrompiendo a un burócrata de la dependencia en cuestión. De primordial importancia considerar que la sociedad al no contar con el hábito de la lectura, es un obstáculo para quienes manejan un automóvil el desconocer el contenido de la LSVTyTEJ, además de que los contenidos son poco claros para la mayoría de la población, debido a que utiliza un lenguaje especializado, como se muestra en el siguiente ejemplo:

Artículo 196. Las resoluciones y acuerdos administrativos, así como las sanciones por infracciones a esta Ley y su reglamento, que los interesados estimen antijurídicos, infundados o faltos de motivación, podrán ser impugnados mediante el recurso de inconformidad que deberán hacer valer por escrito, dentro de los 15 días hábiles contados a partir de aquél en que sean notificados o del que tengan conocimiento de la resolución, acuerdo o infracción de que se trate; o bien, mediante juicio ante el Tribunal de lo Administrativo del Estado. (Biblioteca Virtual del Poder Legislativo del Estado de Jalisco, 2012)

Por lo que no es extraño la identificación de vocablos que son propios del lenguaje jurídico tales como: resoluciones, acuerdos administrativos, antijurídicos, infundados, impugnados y recurso de inconformidad, llegan a ser complejos de entender considerando que quienes operan los vehículos no necesariamente son personas vinculadas a la actividad jurídica y por lo tanto desconocen el significado de los mismos, lo que dificulta la comprensión de la LSVTyTEJ, ya que las autoridades encargadas de diseñar dicha normatividad lo contemplan en términos jurídicos especializados, sin considerar que la reglamentación en cuestión va dirigida a la sociedad en general incluso en algunos casos a menores de edad. Esta situación hace evidente la necesidad de contar con organismos educativos que capaciten al interesado en manejar un automóvil, incluso a quien pretende conducir cualquier tipo de motor que lo transporte, aun los ciudadanos conocidos como peatones de contar con una amplia capacitación en el renglón de vialidad, o lo que se puede denominar educación vial. La siguiente grafica muestra como el 17% de la población mayor de 18 años cuenta con un nivel de escolaridad de licenciatura, es decir, menos de una cuarta parte de la población económicamente activa, y con edad para conducir automóvil, tiene una preparación académica que le puede ayudar a comprender mejor los conceptos jurídicos manejados en la LSVTyTEJ, el 83% de la población restante tendría dificultades para entenderla por las razones ya mencionadas.

Figura 1: Nivel de Educación de la Población de Jalisco En 2011

En esta figura se muestra el nivel de educación que tiene la población del estado de Jalisco como referencia para conocer la preparación con que cuenta la sociedad en relación al conocimiento del marco jurídico propio para conducir un vehículo. Elaboración propia con datos del INEGI (2011).

Problemática

Se considera que la falta de conocimiento de la LSVTyTEJ, es tan solo uno de los elementos que incide en el número de accidentes que se registran cada año en el Estado de Jalisco. La respuesta que dan las autoridades ante el aumento de estas cifras, es que *es causado por el incremento en el parque vehicular* (Gobierno del Estado de Jalisco, 2013), este aunado a la falta de capacitación vehicular adecuada, además de la escasa o nula cultura vial la cual incide en el alto número de accidentes viales sin que hasta el momento los gobiernos de los estados principalmente el del Estado de Jalisco, objeto de estudio del presente documento, hayan dado los primeros pasos hacia el cambio de redacción de su legislación vial.

Figura 2: Accidentes Anuales Registrados en el Estado de Jalisco

La figura muestra la cantidad de accidentes anuales tan solo en el Estado de Jalisco en los últimos años la información incluida en la figura se encuentra publicada en la página del Instituto Nacional de Estadística y Geografía por lo que solo está actualizada al años 2011. Elaboración propia con datos tomados del Instituto Nacional de Estadística Geografía e Informática.

Figura 3: Accidentes anuales registrados en el Estado de Puebla

La figura anterior muestra la cantidad de accidentes anuales tan solo en el Estado de Puebla, en los últimos años la información incluida en la figura se encuentra publicada en la página del Instituto Nacional de Estadística y Geografía por lo que solo está actualizada al años 2011. Elaboración propia con datos tomados del Instituto Nacional de Estadística Geografía e Informática.

Figura 4: Accidentes Anuales Registrados en el Estado de Nuevo León

La figura anterior muestra la cantidad de accidentes anuales en el Estado de Nuevo León, en los últimos años la información incluida en la figura se encuentra publicada en la página del Instituto Nacional de Estadística y Geografía por lo que solo está actualizada al años 2011. Elaboración propia con datos tomados del Instituto Nacional de Estadística Geografía e Informática.

Comparando las gráficas anteriores se puede apreciar claramente que en el Estado de Jalisco, se presenta una alta cifra de accidentes automovilísticos en comparación con Puebla gráfica No. 3 ya que en este último, el reglamento de tránsito es más comprensible, si se observa la gráfica No. 4 perteneciente a Nuevo León, se encuentra una alta cantidad de percances viales registrados al año casi parecida a la gráfica No. 2

correspondiente al estado de Jalisco, de igual forma se puede observar que en las gráficas de los tres estados objeto de estudio los resultados se presentan de forma descendentes y ascendentes. Importante considerar porque el comparativo de accidentes se efectúa entre los estados de Jalisco, Puebla y Nuevo León, la razón es porque el número de habitantes es similar entre sí, según datos del censo de población del año 2010 del INEGI:

1,495189 Guadalajara

1,539819 Puebla

1,123163 Monterrey

En el Estado de Jalisco, la proporción de este tipo de sucesos disminuye anualmente, sin embargo el porcentaje no es significativo con relación al número de habitantes y parque vehicular, las autoridades correspondientes deben dar el primer paso generando reformas a la LSVTyTEJ. Educar la población en materia de cultura vial como medida preventiva, los costos económicos erogados anualmente en este renglón disminuirían considerablemente tanto para la sociedad como para el Estado. Los datos plasmados en la gráfica No. 5 son alarmantes, Jalisco se encuentra en el segundo lugar como uno de los estados con mayor número de accidentes viales, se reportan 54,691 al año mientras que Nuevo León, se posiciona como el estado con mayor número de siniestros en el país registrando 57,529 anualmente, estas dos áreas metropolitanas de similar población, son los primeros a nivel nacional en este rubro, en comparación con Puebla, se observa que a pesar de la similitud de la metrópoli con las anteriores en esta ocurren 10,254 accidentes que demuestra ser una cantidad menor a diferencia de Jalisco y Nuevo León, ¿Es la forma de presentación del documento en Puebla, reglamento y no Ley lo que permite su fácil comprensión y entendimiento? ¿En el Reglamento de Tránsito del Estado de Puebla, los artículos son más claros y específicos que permiten su fácil adopción? ¿Existen similitudes entre las leyes de vialidad de los tres estados en cuestión? Como medida de prevención de accidentes el Congreso del Estado de Jalisco, crea la *Ley Salvavidas* (en adelante LS) (Congreso del Estado de Jalisco Sexagésima Legislatura, 2010), una iniciativa de los congresistas locales que pretende disminuir los accidentes viales provocados por conductores en estado etílico, al parecer a los legisladores les gusta que haya un reglamento por cada tipo de problema específico. De acuerdo a las interrogantes aquí presentadas se tiene como objetivo efectuar un análisis del marco jurídico correspondiente a la vialidad para determinar su fácil comprensión y entendimiento.

MÉTODOS

El tipo de investigación considerada para este documento es cualitativa, considerando que *es aquella donde se estudia la calidad de las actividades, relaciones, asuntos, medios, materiales o instrumentos en una determinada situación o problema. Esto es, que intenta analizar exhaustivamente, con sumo detalle, un asunto o actividad en particular* (Vera, s/f). Toda vez que se analizan las reglamentaciones de vialidad de tres estados y su posible relación entre sí.

Para llevar a cabo el proceso metodológico es necesario apoyarse de la investigación documental en el cual se recolectaron fuentes de información primarias y secundarias en las primeras las fuentes fueron las leyes reglamentos de tránsito y vialidad de los estados de Jalisco, Puebla y Nuevo León, la razón por la que se han seleccionado estos tres estados es porque en sus respectivas áreas metropolitanas tiene una similar población que habitan en ellas y que por consiguiente se concluye que el parque vehicular de estos es relativamente similar, y en el caso de fuentes secundarias las cuales apoyan para el dato estadístico y de considerar la muestra de datos del INEGI, ya que estos son verídicos y seguros. El método de investigación a aplicar en este es descriptivo y correlacional pues como su definición lo indica *la investigación descriptiva se ocupa de la descripción de datos y características de una población. El objetivo es la adquisición de datos objetivos, precisos y sistemáticos* (Valdez, s/f). Y que los resultados se presentaran describiendo los cualitativos encontrados producto del análisis.

Considerando que la recolección de información corresponde a fuentes de tipo secundarias, ya que para dar cumplimiento a su conceptualización se recaba información de artículos de periódicos y revistas. Por lo anterior esta investigación es considerada de tipo cualitativo pues utiliza los siguientes instrumentos y técnicas: revisión de documentos oficiales y archivos, para realizar un análisis detallado efectúa una comparación de cada ley, y se hace un análisis comparativo de la diferencias en los altos índices de accidentes viales. Para tal efecto se consideran la LSVTyTEJ, el Reglamento de Tránsito del Estado de Puebla, Reglamento de vialidad y tránsito del municipio de monterrey los cuales en total suman 507 artículos los que serán consideradas como el universo a estudiar, posterior a esto se aplica la fórmula de muestreo probabilístico:

$$\text{Formula: } n = \frac{y^2 \times p \times q \times N}{E^2(N-1) + y^2 \times p \times q} \quad (1)$$

Substituyendo valores:

$N = \text{Universo} = 507$ artículos

$y = \text{Valor Promedio de una Variable} = 1$ artículo por Ley

$se = \text{Error estándar} = .015$

$V^2 = \text{Varianza de la población} = \text{Cuadrado del error estándar}$
 $= se (se) = .015 (.015) = .000225$

$S^2 = \text{Varianza de la muestra expresada como la probabilidad de ocurrencia de } y.$
 $= p (1-p) = .9 (1-.9) = .09$

$n' = \text{Tamaño de la muestra sin ajustar}$

$n = \text{Tamaño de la muestra}$

Sustituyendo aplicando la fórmula:

$$n' = S^2 / V^2 = .09 / .000225 = 400$$

$$n = n' / 1 + n' / N = 400 / 1 + 400 / 507 = 400 / 1.788954635 = 223.6$$

$$n = 22$$

Posterior a esto se aplica la fórmula de muestreo probabilístico, para lo cual se decide otorgar un porcentaje de error estándar de .015, se hace la conversión en la formula correspondiente y se obtiene un total de 22 artículos que se convierten en el objeto de estudio. Para efectuar la selección de cuantos artículos por ley son los que se tienen que analizar, se aplica la fórmula de muestro estadístico estratificado de la siguiente manera:

Tabla 6: Artículos Por Ley Que Serán Considerados Para el Análisis

Estrato	Leyes Y/O Reglamentos	Total No. de Arts. (Fh)= .0433 Nh (Fn)=Nh	Muestra
1	Ley de Servicios Viales y Transito de Jalisco	204	9
2	Reglamento de Tránsito del Estado de Puebla	242	10
3	Reglamento de vialidad y tránsito del municipio de monterrey	61	3

La tabla anterior presenta el número de artículos que serán analizados por ley o reglamento que son el objeto de estudio de cada uno de los estados seleccionados. Fuente propia

Para proceder a la selección de los artículos de forma aleatoria sin que influya la preferencia por alguno de los contenidos de las leyes objetos de estudio, se procede a aplicar la tabla de números Random, estos

números fueron diseñados para funcionar como un tipo de ruleta electrónica. Una vez efectuada la selección se diseña un formato que consiste en tres columnas las cuales se organizan de la siguiente

manera: Primera Columna: Los artículos seleccionados se vacían en esta.

Segunda Columna: Aquí se maneja una marca que indica la condición del artículo en el momento del análisis aplica o no aplica.

Tercera Columna: En esta se procede a redactar el comentario, observación o punto de vista para proceder posteriormente a presentar el resultado. Los resultados obtenidos son los siguientes:

Durante el análisis de los artículos se corroboró que en los municipios de la Zona Metropolitana de Guadalajara (ZMG), se aplica la misma ley de tránsito, no existe una específica por municipio. Durante la revisión a los artículos de la LSVTyTEJ, se comprueba que cuenta con palabras y/o términos que no son comunes a la sociedad pues al ser términos de tipo jurídico no es un área que domine la mayoría de acuerdo con los datos de la gráfica No.1 de este documento, entre estas se encuentran: *coordinada, instancias, flagrantes, expresamente, internación, posterioridad, acreditar, procedencia, conexos, disposiciones, sujetaran, adyacentes, dictamen, garantía, constituidas, insumos, arrendamiento, bienes muebles y enseres* (Biblioteca Virtual del Poder Legislativo del Estado de Jalisco, 2012).

En el Estado de Jalisco, la LSVTyTEJ, estipula que se puede levantar infracción de tránsito a aquel automovilista que hubiere incurrido en una falta al documento en cuestión, cuente este o no con licencia de conducir expedida en el estado de Jalisco, o en cualquier otro incluso en el extranjero, pero no es obligatorio y no lo considera la LSVTyTEJ, que el automovilista infraccionado tenga que conocer esta ley, ya que se rigen por el principio jurídico que dicta *la ignorancia de la ley no exime de su cumplimiento* (Enciclopedia jurídica, 2014). Al efectuar el análisis al del RTEP, la primera diferencia encontrada con respecto a la de Jalisco, es que mientras Puebla tiene un Reglamento de Tránsito, en el Estado de Jalisco se cuenta con una Ley. Otra de las diferencias encontradas es que el RTEP, cuenta con varias restricciones relacionadas con la prohibición a los transportes con el traslado de material peligroso dentro de zonas de bastante tránsito, usar anteojos las quienes por disposición del servicio médico así lo requieran, entre otras más, en caso de incumplimiento de estas el gobierno mediante personal autorizado por el RTEP, debe levantar una infracción al conductor. Con todo y esta obligación el Estado de Nuevo León ocupa el primer lugar en accidentes viales. Dentro del mismo se estipula el pago de derechos correspondientes, que es el ingreso percibido por el Estado por la generación de este documento legal. La principal diferencia encontrada entre la RVyTM, y los ya mencionados sigue siendo que uno el de Monterrey es reglamento y es a nivel municipal, y los otros dos son estatales

CONCLUSIONES

En base al análisis efectuado se encontró que las autoridades deben considerar como un problema de salud la gran ignorancia que existe en cuestión de educación vial, de vital importancia es que las autoridades tomen cartas en el asunto y no descartar que un futuro pueda considerar como obligatorio conocer el marco jurídico al respecto, lo que sin duda puede disminuir la cantidad de accidentes ocasionados por la falta de conocimiento de este. Considerando los datos proporcionados por INEGI, donde tan solo el 17% de la población cuenta con educación superior y no necesariamente la preparación se encuentra relacionada al área legal y como punto de referencia no es este mismo porcentaje el único que conduce un automóvil en el Estado de Jalisco, es comprensible entender porque un reglamento o ley está fuera de su comprensión y entendimiento. Y como las autoridades pueden estar aprovechándose de esto para implementar medidas correctivas las cuales se traducen en ingresos para el estado, y lo más conveniente para las autoridades estatales sin que exista una fiscalización o restricción al respecto. De igual manera se propone lo siguiente:

Las leyes se han creado para regular la convivencia social pero en las relacionadas a la vialidad parece que se crearon con objetivo recaudatorio más que para prevenir y evitar accidentes que es su verdadero objetivo, el gobierno hace más hincapié en cuanto a las multas porque está enfocado en las sanciones y no en la prevención.

Aunque la LSVTyTEJ, incluye aspectos relacionados con las medidas preventivas parece que es mucho más rentable para el estado establecer acciones correctivas. Es indispensable que una reglamentación como esta que debe ser comprensible por toda la sociedad puesto que no elimina la posibilidad de desconocimiento para quienes apenas saben leer y escribir, pueda ser rediseñada que se redacte de forma sencilla ya que la LSVTyTEJ, es para todas las personas aun siendo estos peatones.

Es necesario la existencia de una coordinación entre los 31 estados de la república para que se unifiquen en una sola ley de tránsito para todo el país, ya que la existencia de una ley o reglamento para cada estado complica aún más para el conductor el conocimiento y saber a qué tipo de multas está expuesto.

Una de las prioridades del ejecutivo federal es cuidar la vida de sus conciudadanos, dentro de estas es evitar los accidentes viales en un gran porcentaje sin distinción de estado, al contar cada estado con una ley que difiere una de otra se percibe como un instrumento para captar ingresos adicionales sin restricción.

Es imprescindible generar escuela para la capacitación no solo del automovilista sino del peatón, del ciclista y en general de la sociedad, de esta manera se elimina el desconocimiento de la normatividad al respecto. De igual forma al no existir conocimiento de la norma se crean abusos de poder ya que en lugar de establecer medidas preventivas las acciones correctivas se traducen en el pago en efectivo por falta cometida.

RESUMEN

En los procesos de globalización donde el Estado busca apoyar a las Unidades de Producción (UP) con el propósito de lograr un Desarrollo Rural (DR). México no es la excepción, por lo que establece en sus planes nacionales, estatales y municipales de desarrollo, lograr darle apoyo y fortalecer el desarrollo de sus Estados mediante las UP. Por lo que en el Estado de México se está llevando a cabo la ejecución de la política de desarrollo local mediante organismo gubernamentales tales como: Secretaría de Desarrollo Agropecuario (SEDAGRO) y los Centro de Apoyo al Desarrollo Rural (CADER) apoyados por los Comités de Desarrollo Municipal. Para ello se identifican las necesidades de las UP Hortícolas, donde por medio de los Prestadores de Servicios Profesionales (PSP) adscritos a SEDAGRO que realizan la tarea del levantamiento de información para la identificación de necesidades y poder realizar un diagnóstico de la situación, que le permita bajar los apoyos gubernamentales para su potencialización, por lo que el objetivo de esta investigación es determinar cómo participa el apoyo de la política pública bajo el esquema de los planes de desarrollo y que permitan lograr el crecimiento de las UP hortícolas en la zona sur-oriente del Estado de México.

PALABRAS CLAVES: Política Pública Estatal, Desarrollo Rural

STATE PUBLIC POLICY AS A SUPPORT MECHANISM FOR RURAL DEVELOPMENT

ABSTRACT

In globalization processes, where the State support the Production Units (PU) in order to increase rural development (RD). Mexico is not an exception, so set in their national, state and municipal development plans, achieve provide support and strengthen local development in their states by the UP. So in the State of Mexico is being carried out the execution of local development policy through government agency such as Center for Rural Development Support (CADER), Ministry of Agricultural Development (SEDAGRO) and supported by the Municipal Development Committees. To do the needs of UP Horticultural identify where through Professional Service Providers PSP SEDAGRO assigned to performing the task of gathering information to identify needs and to make a diagnosis of the situation, which allows lower government support for potentiation, so the objective of this research is to determine how involved the support of public policy under the scheme of development plans that will achieve growth of horticultural UP in the south-eastern State of Mexico.

INTRODUCCIÓN

Los grandes retos que se presentan en la actualidad para poder tener un futuro prometedor y sostenible son la erradicación de la pobreza extrema y el hambre, mejorar la educación, equidad de géneros, y la reducción la pérdida de biodiversidad y otros recursos medioambientales exigen una atención prioritaria al DR. Es por eso que México implementa Políticas Públicas (PP) que contribuyen al mejoramiento de nivel de vida de la población. El DR hace referencia a acciones e iniciativas llevadas a cabo para mejorar la calidad de vida de las comunidades no urbanas. Estas comunidades abarcan casi la mitad de la población mundial, tienen en común una densidad demográfica baja. Las actividades económicas más generalizadas son las agrícolas y ganaderas aunque hoy pueden encontrarse otras muy diferentes al sector primario, Madrid (2014). México, cuenta con un territorio nacional de 198 millones de hectáreas de las cuales 145 millones se dedican a la actividad agropecuaria y cerca de 30 millones de hectáreas son tierras de cultivo, los bosques y selvas cubren 45.5 millones de hectáreas.

La agricultura en México es más que un sector productivo importante. Más allá de su participación en el PIB nacional, que es de apenas 4%, las múltiples funciones de la agricultura en el desarrollo económico, social y ambiental determinan que su incidencia en el desarrollo sea mucho mayor de lo que ese indicador implicaría, FAO (2010). En México el gobierno por su alta capacidad administrativa tiene la obligación de resolver problemas trascendentales para la sociedad, como pueden ser, el empleo, salud, vivienda, abastecimiento de agua, seguridad, etc., para resolver o incluso prevenir estos problemas es necesaria la eficiente implementación de las PP, las cuales cuentan con un aparato administrativo adecuado podrán dar satisfacción a los ciudadanos en el cumplimiento a sus demandas y con esto la sociedad tendrá elementos para catalogar al gobierno de efectivo o no. Recuperado en <http://www.tuobra.unam.mx/publicadas/040609095627.html>.

Para ello cada sexenio desarrolla un plan de desarrollo que es una herramienta de gestión que promueve el desarrollo social en un determinado territorio. De esta manera, sienta las bases para atender las necesidades insatisfechas de la población y para mejorar la calidad de vida de todos los ciudadanos, El Plan Nacional de Desarrollo (PND) 2012-2018 es el resultado de un amplio ejercicio democrático que permitirá orientar las políticas y programas del Gobierno de la República durante los próximos años. El PND también destaca la importancia de acelerar el crecimiento económico para construir un México Próspero. Detalla el camino para impulsar a las pequeñas y medianas empresas, así como para promover la generación de empleos. También ubica el desarrollo de la infraestructura como pieza clave para incrementar la competitividad de la nación entera.

REVISIÓN LITERARIA

La Secretaría de Agricultura, Ganadería, Desarrollo Rural, Pesca y Alimentación (SAGARPA), es una Dependencia del Poder Ejecutivo Federal, que tiene entre sus objetivos propiciar el ejercicio de una política de apoyo que permita producir mejor, aprovechar mejor las ventajas comparativas de nuestro sector agropecuario, integrar las actividades del medio rural a las cadenas productivas del resto de la economía, y estimular la colaboración de las organizaciones de productores con programas y proyectos propios, así como con las metas y objetivos propuestos, para el sector agropecuario en el Plan Nacional de Desarrollo. SAGARPA (2014) y esta trabaja en conjunto con la SEDAGRO que se encarga de promover y regular el desarrollo agropecuario, acuícola, infraestructura hidroagrícola, desarrollo rural e investigación, así como el establecimiento de agroindustrias y la comercialización de la producción, a fin de coadyuvar en la atención y solución de los problemas del campo en beneficio de los productores en la entidad. SEDAGRO (2014). Es por ello, que al participar la SEDAGRO que está ligado al Plan Estatal de Desarrollo (PED), donde este integra a las Políticas Públicas Estatales (PPE), que tienen la responsabilidad de gestionar los recursos para las UP hortícolas para los municipios.

Para hablar de las UP hortícolas las cuales tienen como actividad principal la agricultura, basada en hortalizas con la producción de lechuga, tomate verde, calabaza y papa, de la misma manera tienen como actividad secundaria la producción de granos básicos como maíz y trigo, entre otros. La mayor parte de las UP hortícolas cuentan con promedio de 3 hectáreas de superficie propias y algunas más son rentadas. La mayor parte de tenencia es ejido y todas sin excepción son de temporal, el 50 % de sus ingresos dependen de esta actividad, y la mayor mano de obra que se emplea para trabajar es familiar, siendo este eventual, por lo que es importante mencionar que es la principal fuente de sustento económico. En cuanto a la comercialización de sus productos estos realizan su venta a nivel local y regional, principalmente atendiendo la central de abastos del Estado de Morelos y D.F., la mayor parte del acopiador del producto es captado por el intermediado. El precio del producto varía dependiendo de la oferta y la demanda además de la clase y calidad del producto. Es importante resaltar que ninguno de los productores le da valor agregado a su producto todo lo que generan lo venden en agranel. El promedio por cada UP de hortalizas en toneladas es de 3 ton/ha. El principal problema identificado en este eslabón de la cadena son los altos costos de producción y no cuentan con sistemas de riego para ampliar los ciclos productivos, pues dependen totalmente del clima. La mayoría de las UP carecen de maquinaria de punta, solo tiene equipo básico y ocasionalmente rentan los equipos, por lo que este factor eleva sus costos de producción y la ausencia de adopción de tecnología.

METODOLOGÍA

La investigación es de tipo cualitativa ya que ha sido llevada a cabo mediante la recolección de datos que permiten conocer el significado y características primordiales de 20 productores hortícolas en la zona sur-oriente del Estado de México y con la política pública se ha contribuido con el desarrollo rural siendo un mecanismo de apoyo. Es descriptiva ya que el objetivo primordial es llegar a situaciones predominantes a través de la descripción del porque la política pública puede ser considerada como un mecanismo de apoyo para los productores hortícolas. También es de tipo no experimental ya que se basa fundamentalmente en la observación de hechos ya existente, su diseño es transversal ya que las observaciones y análisis del fenómeno se llevan a cabo en un momento determinado del tiempo.

RESULTADOS

Realizando un análisis de la problemática que presentan las UP hortícolas y conociendo el significado y características primordiales de los 20 productores hortícolas en la zona sur-oriente del Estado de México, se realizó una detección de situación críticas basadas en análisis PEST y FODA, encontrando que las restricciones son primordialmente por la deficiencia en la comunicación de la PPE, a través de la SEDAGRO, los CADER y los Comité de Desarrollo Municipales.

Detección de Restricciones Críticas

Se realiza un análisis PEST para identificar los factores del entorno general que los afectan. Se trata de una herramienta estratégica útil para comprender los ciclos de un mercado, la posición de una empresa, o la dirección operativa.

Priorización de Restricciones Críticas

Para identificar los puntos prioritarios en las restricciones críticas se ejemplificara una matriz FODA que es una herramienta de análisis que puede ser aplicada a cualquier situación, individuo, producto, empresa, etc., que esté actuando como objeto de estudio en un momento determinado del tiempo.

POLITICOS	ECONOMICOS
<p>El Gobierno Mexicano emprende programas con apoyos hacia el sector agrícola. Programas del Gobierno que impulsan a proyectos del campo. Políticas económicas que fomentan el crecimiento del campo en el país. Leyes que protegen a los productores y a sus productos.</p> <p>socio-culturales nuevos hábitos de consumo el cambio en los estilos de alimentación en prácticamente toda la población, orientado a un cada vez mayor consumo de alimentos procesados de alta densidad energética, ricos en grasas, grasas saturadas, azúcar y sal y bajos en fibra dietética consumo de productos orgánicos en solo un selecto grupo de personas. el consumo de productos hortícolas no distingue edad, sexo ni clase social. muchos pequeños productores</p>	<p>La producción de granos, oleaginosas, frutas, hortalizas y caña de azúcar fue de 102 millones de toneladas en los primeros ocho meses del año, lo que significa un crecimiento de 21.5% más que en el mismo periodo del año pasado. Alza de los precios de los productos de la canasta básica Pérdida del poder adquisitivo Desempleo Rezago económico El poder de negociación de los agricultores es mínimo frente a los grandes compradores Gran cantidad de productores y muy pocos compradores Muchos pequeños productores Hortalizas susceptibles problemas climáticos</p> <p>tecnológicos rezago tecnológico nuevas tecnologías surgen a diario que optimizan los procesos de producción y comercialización. acceso limitado a herramientas tecnológicas. altos precios en nueva tecnología</p>

Análisis FODA

FORTALEZAS	OPORTUNIDADES
<p>Cuentan con tierras propias para la siembra Conocimientos sobre el cultivo de hortalizas Condiciones naturales favorables para la producción hortícola Capacidad para la implementación y mejoramiento de sus procesos de producción Existe la comercialización de sus productos en mercados locales y regionales Autoempleo Producto de calidad</p> <p>DEBILIDADES Poco nivel de organización Carencias de técnicas de mercadología No cuentan con una cartera de clientes ni proveedores Registros contables de manera informal Baja capacidad de inversión Escaso conocimiento tecnológico para la comercialización Miedo al cambio</p>	<p>Fuerte demanda en mercados hortícolas Programas y proyectos gubernamentales Mercado de productos orgánicos Nuevos mercados para la comercialización Mercado nacional e internacional Asociación con el entorno público y privado para la comercialización</p> <p>AMENAZAS Barreras arancelarias Factores climáticos Intermediarios Competencia con grandes industrias Pérdida del poder adquisitivo</p>

CONCLUSIONES

Se puede concluir de la investigación que la PPE, está realizada bajo un esquema de ciertos sectores que influyen en las decisiones de la propuesta de intereses propios, donde los grupos protegidos por haber colaborado con los diversos elementos políticos, no permiten permear los recursos para las UP que necesitan ser apoyadas con una variedad de recursos que permitan lograr su desarrollo local y mejorar las condiciones de vida de las comunidades. Es por ello, que el DR basados en la PPE de dichas comunidades no colaboran de manera directa en dicho desarrollo.

RESUMEN

Se presenta en este trabajo una propuesta para el desarrollo e implementación de un modelo de portafolios electrónico docente a partir de la concepción del mismo como un trabajo teórico y una colección razonada de evidencias que dan cuenta del quehacer docente. Se describe la propuesta de formación con el propósito de que los profesores desarrollen sus propios portafolios. Se propone la impartición de un Taller que aborde las competencias clave: las requeridas para la reflexión de la acción docente, la construcción de secuencias didácticas y el uso de las Tecnologías de Información y Comunicación con fines educativos. Las evidencias sobre la reflexión docente se recuperarán a través del trabajo en los foros y actividades del taller y en el desarrollo de los portafolios personales de los docentes universitarios, mientras que el uso de las Tecnologías de información y comunicación serán planteadas por el profesional propuesto para la impartición del Taller.

Palabras clave: Portafolio electrónico, competencias docentes, Tic's

DEVELOPMENT AND PRODUCTION OF CONTENTS FOR HIGHER EDUCATION; PROPOSED ELECTRONIC PORTFOLIO

ABSTRACT

A proposal for the development and implementation of an electronic portfolio faculty model from the conception of it as a reasoned theoretical work and collection of evidence that show the teaching work is presented in this paper. The proposal for the purpose of training teachers to develop their own portfolios is described. Required for reflection of teaching activities , the construction of teaching sequences and the use of Information and Communication Technologies for education: teaching a workshop that addresses the core competencies is proposed . The evidence on teacher reflection is recovered through work in forums and workshop activities and the development of personal portfolios of university teachers , while the use of Information Technologies and Communication will be raised by the professional proposed the delivery of the workshop.

INTRODUCCIÓN

El modelo de portafolios electrónico surge como un proyecto de investigación sobre esta estrategia y como una acción de formación docente cuyo propósito es desarrollar el autoanálisis y reflexión sobre el trabajo

didáctico de docentes para su mejora. La implementación de esta propuesta contará con la participación de 25 docentes de la Facultad de Contaduría y Administración Campus San Juan del Río de la Universidad Autónoma de Querétaro, en el marco de este modelo y con la finalidad de responder a las necesidades actuales y los retos futuros de la educación superior en nuestro país.

Nuevos Roles Para Docentes y Estudiantes

En el contexto de una modalidad influenciada por un marco virtual, se puede mencionar a García Aretio (2009) quien se detiene en los nuevos roles que surgen tanto para el docente como para el alumno. Por un lado el docente se convierte en mediador, en guía, entre el alumno y los contenidos a desarrollar. Por otro lado el alumno que controla de forma activa esos recursos, ya que debe manipular activamente la información, de tal manera que sea capaz de organizarla y convertirla en conocimiento para aplicarlo en los diferentes ámbitos en los que actúa. Para que todo esto ocurra, el alumno deberá adquirir y ejercitar paulatinamente una serie de competencias básicas que posibiliten en él la acción de “estudiar” descrita por Fenstermacher (1999). Así, es de suponer que en estos nuevos escenarios educativos los estudiantes se responsabilizarán de su aprendizaje, ingresarán regularmente al entorno virtual y seguirán las distintas propuestas de modo regular, participando activamente en las instancias individuales y colaborativas programadas, tanto presenciales como virtuales. Es de esperar que los alumnos logren alcanzar las características propuestas por Borges (2004) para los buenos estudiantes en entornos virtuales: interrelacionar el material con su actividad profesional, organizar adecuadamente sus tiempos, manejar adecuadamente las ambigüedades e incertidumbres, construir su propio conocimiento a partir del material de estudio y en relación con sus compañeros y profesor, mostrar motivación y autodisciplina, utilizar los canales adecuados para solicitar ayuda, asistir a sus compañeros, tener una actitud proactiva y ser autónomos, y comunicarse con su profesor ante cualquier inconveniente o duda.

Capacitación Docente En el Nivel Universitario

La propuesta de un portafolio electrónico permitirá que lo presencial y lo virtual se entremezclen, la mayoría de los estudiantes que hoy se encuentran integrados al nivel educativo se encuentran inmersos en este continuo de manera natural. Ahora bien, ¿están los docentes universitarios preparados para esta nueva realidad? En muchos casos se han realizado capacitaciones, y también depende de un gran número de factores entre los que no se descarta una fuerte resistencia al empleo de tecnología en el aula, ajena a la específica de cada carrera, y como complemento de la actividad fuera del aula.

Definición de Portafolios

El diseño y desarrollo del portafolios, es en palabras de Lee Shulman (2003) un acto teórico, en el entendido de que su construcción implica sostener una postura frente al acto de enseñanza-aprendizaje, la selección de evidencias y la reflexión posterior a su ejecución, derivado de una idea clara sobre el trabajo del profesor, del estudiante, del abordaje de los contenidos y su evaluación. El portafolios es una “amplia metáfora que cobra vida cuando comenzamos a formular la orientación teórica para la docencia que nos resulta más valiosa” (Lee Shulman, 2003:46). De acuerdo con Barberà (2006), Morán (2006), Arbezú y Argumedo (2010), Brubacher, Case y Reagan (2005) se concibe el portafolios docente como una colección estructurada de evidencias realizada por los profesores de acuerdo a un período de tiempo y objetivo determinados; producto de la reflexión individual y colectiva *sobre la* propia práctica enriquecida por la colaboración, que cuenta la historia de sus esfuerzos, su progreso y logros en un área determinada del currículo vivido e involucra un cambio de conducta, permite reconocer las categorías del conocimiento, una formación ética y tomar decisiones racionales sobre una base sólida de conocimiento.

Modelo de Portafolios Docente

Se propone la construcción, análisis y evaluación del portafolios docente mediante el desarrollo interrelacionado de:

Competencias relacionadas con el desarrollo de una secuencia didáctica: Trata de la elaboración de una secuencia que logre ser significativa y constructiva del aprendizaje y que parta de un proceso reflexivo (de autoconocimiento) de la práctica docente. Por lo tanto comprende la fase de diseño preliminar y de su puesta en práctica. Comprende las competencias específicas e interrelacionadas: (a) plantear objetivos de aprendizaje con vinculación a contenidos organizados desde la disciplina y profesión, (b) construir y planificar la estrategia de enseñanza para llevar a cabo una secuencia didáctica y (c) evaluar a los alumnos en situaciones de aprendizaje según un enfoque formativo.

Competencias relacionada con la reflexión de la práctica docente: La reflexión docente es una práctica renovadora autoformativa que trata de la capacidad del docente para autoevaluar su propia acción al determinar de forma crítica avances, limitaciones y ausencias en el desarrollo de su función educativa. Incluye, por una parte, el análisis del conocimiento experiencial antes, durante y después de realizado el trabajo didáctico; por otra, ser un medio movilizador para la ejecución de cambios y toma de decisiones sobre la propia labor docente. Abarca las competencias específicas e interrelacionadas: (a) conciencia de uno mismo y del proceso, (b) comunicación crítica del trabajo docente y (c) orientación del desempeño hacia metas educativas.

Competencias relacionadas con el manejo de Tecnologías de Información y Comunicación (TIC): Trata de la capacidad para usar estas tecnologías como herramientas educativas, que favorezcan el carácter constructivo del conocimiento, la significatividad del aprendizaje y sean integrales al trabajo didáctico del profesor.

CONCLUSIONES

Las Tecnologías de Información y Comunicación son ya materia corriente en la sociedad actual, y el ámbito educativo en todos sus niveles no puede estar ajeno a ellas. El ámbito universitario en particular requiere replantear sus formas de enseñanza, sus modelos y metodologías, a fin de adaptarse al nuevo contexto. A pesar de que persiste mucha resistencia entre académicos, muchos de ellos aún no han experimentado el empleo de las TIC's en educación por el desconocimiento de la amplia variedad de herramientas disponibles, cuyo empleo es cada vez más simple e intuitivo, favorecido por dispositivos cada vez más adaptados a las necesidades de sus usuarios. Por ello, resulta esencial generar espacios de capacitación en los cuales los propios docentes sean quienes exploren su uso, reflexionando de manera conjunta respecto de las ventajas y desventajas de implementar modalidades, y valerse de sus potencialidades para mejorar los procesos de enseñanza y favorecer el paso de sus estudiantes de la vida académica a la vida profesional, en una sociedad cada vez más franqueada por la tecnología.

Por lo anterior, los procesos de aprendizaje actuales reclaman el desarrollo de inteligencias múltiples: aprender a conocer (inteligencia cognitiva), aprender a ser persona (inteligencia emocional), aprender a vivir entre personas (inteligencia social) y aprender a hacer cosas con computadoras (inteligencia tecnológica). Esta última inteligencia, dota a los alumnos de las habilidades necesarias para su inserción en la sociedad de la comunicación.

Los modelos tradicionalistas y constructivistas siguen manejándose en los centros educativos actuales y, ante el objetivo de enseñar los conocimientos bajo cualquier modelo pedagógico, las TIC's ofrecen un medio para acercar esos conocimientos a los alumnos así como también las herramientas para el desarrollo de trabajo colaborativo. La propuesta de formación para la construcción de portafolios electrónicos docentes ha resultado novedosa en el contexto de la Universidad, pues pone en el centro de la acción al profesor no solo desde su didáctica, sino desde su concepción de la profesión y el proceso de enseñanza

aprendizaje, así como implicaciones éticas y sociales. El análisis y mejora de la acción docente, se vuelve un continuo cuando el proceso formativo vincula la recuperación de su práctica con elementos teórico-metodológicos, que le permiten reinterpretar su desempeño en el aula y la relación con sus estudiantes, en este sentido el enfoque sociocognitivo en el cual se retoma el concepto de competencia resulta pertinente para un cambio integral de las prácticas educativas.

Los docentes tienen ideas previas sobre los portafolios, concibiéndolos en términos de repositorios de información curricular o muestrario de evidencia para el empleo. A partir de las preguntas problematizadoras que llevarán a la revisión de los materiales de análisis conceptual, los docentes ampliarán su perspectiva del portafolios como herramienta orientada al aprendizaje y la enseñanza, que los obliga a revisar su trabajo, recuperarlo y mejorarlo. En lo referente al diseño del entorno de enseñanza a distancia, la plataforma es una herramienta muy amigable para los docentes participantes del taller, permitirá el manejo sencillo de las distintas aplicaciones, con lo que se minimizará el impacto de la barrera del manejo de las TIC's como una de las limitaciones para la construcción e-portafolios.

FLUJOS TURÍSTICOS EN COLOMBIA: PERSPECTIVAS Y DETERMINANTES

Juan Gabriel Vanegas, Fundación Universitaria Autónoma de las Américas
Jorge Aníbal Restrepo Morales, Fundación Universitaria Autónoma de las Américas
Santiago Medina Hurtado, Universidad Nacional de Colombia

RESUMEN

La demanda turística tiene que ver no sólo con los movimientos de viajeros, sino también con las relaciones intervinculantes de los orígenes y destinos. El movimiento internacional de viajeros ha crecido exponencialmente en las últimas décadas, y Colombia no ha sido ajena a estas dinámicas. El objetivo de este trabajo se centra en estimar los determinantes de los arribos de turistas internacionales hacia Colombia en los últimos años. Un modelo gravitacional se propone para este fin considerando factores desde diferentes posturas teóricas y empíricas, en particular, aquellos propuestos desde la teoría del consumidor como aquellos abordados desde la nueva geografía económica. Estos factores incluyen el nivel de ingresos, tamaño del mercado, distancia, precios relativos, instituciones, entre otros. Se pretende cuantificar los efectos de estas variables en la entrada de viajeros, sus determinantes y las perspectivas futuras. La estimación de los flujos turísticos servirá como herramienta de diagnóstico y planificación en el desarrollo de propuestas de atractividad turística con base en distintos factores del entorno que permiten su explicación desde la Nueva Geografía Económica

PALABRAS CLAVE: turismo, arribo de viajeros, modelo gravitacional, panel de datos, Colombia

TOURIST FLOWS IN COLOMBIA: PERSPECTIVES AND DETERMINANTS

ABSTRACT

Tourism demand is concerned not just through the traveler's motions, but also with relations interlinking of the sources and destinations. The international movement of travelers has grown exponentially over the past decades, and Colombia has not been far to these dynamics. This paper's purpose is to estimate the determinants of international tourist arrivals to Colombia over recent years. A gravity model is proposed for this purpose by considering factors from different theoretical and empirical positions, particularly those proposed from consumer theory as those addressed from new economic geography. Such factors include income levels, market size, distance, relative prices, and institutions, among others. It aims to quantify the effects of such variables on the input rating, their determinants and future prospects. Estimation tourist flows will serve as diagnostic tools on the planning and development tourism attractiveness proposals based on various environmental factors which allow their explanation from New Economic Geography.

INTRODUCCIÓN

La industria de los viajes y el turismo es una actividad de enclave significativa en gran parte de los países del mundo, con incidencias directas e indirectas en el aparato productivo (WTTC, 2014). Su contribución a la economía colombiana ha exhibido uno de los comportamientos más dinámicos con aportes significativos a la generación de empleo y riqueza. La dinámica de los flujos de viajeros, así como el gasto

que éstos realizan en los destinos que visitan, en los últimos veinte años muestran, no sólo un crecimiento sostenido sino también un aporte económico significativo. Estos movimientos, de personas y de recursos financieros han exhibido un crecimiento promedio anual de 8,2% y 7,1%, respectivamente el cual se ralentizó un poco durante la crisis financiera, pero una vez corrigió tendencia, se ha recuperado y alcanzado máximos históricos de mediados de década en los 2000 (Figura 1).

Figura 1: Colombia: Entradas de Viajes y Gastos de Éstos, 1995-2012

Fuente: elaboración propia con datos del WTTC (2014).

El comportamiento anterior contextualiza la importancia del estudio de los principales factores que explican los flujos turísticos. En ese orden de ideas, el objetivo central de este trabajo será modelar los factores determinantes de la atracción de turistas internacionales, tanto desde la óptica de la perspectiva teórica del comportamiento del consumidor como de la nueva geografía económica, es decir, con base en la importancia que tiene sobre la demanda turística tanto la toma de decisiones de los agentes económicos como las condiciones geográficas y la distancia. En síntesis, el interrogante central se circunscribe a responder: ¿cuál ha sido la influencia de la geografía sobre los flujos turísticos internacionales?, ¿se encuentran diferencias espaciales en la configuración de la determinación de viajeros? Además, salen a relucir otros interrogantes subyacentes de la pregunta central y que tendrán cabida a lo largo del desarrollo del proyecto, a saber, ¿qué factores inciden en la decisión y determinan que las personas elijan determinado destino para vacacionar o hacer negocios?

Teóricamente subyacen dos argumentos esenciales intervinculados entre sí y que muestran tanto la importancia de las decisiones de los agentes económicos como los asuntos geográficos en la configuración de los flujos turísticos. En primera instancia la naturaleza del turismo se fundamenta en como un potencial visitante que se encuentra ubicado a una distancia física donde efectúa la decisión de consumo, debe desplazarse para disfrutar de su elección hacia el destino final seleccionado (Swarbrooke y Horner, 2007). Adicionalmente, existen factores estructurales predeterminados que impactan y desbalancean las dotaciones factoriales de las naciones, lo cual genera desventajas absolutas (Venables, 1998). En el contexto de los flujos de mercancías, recursos financieros y viajeros la temática de la geografía económica ha sido reconsiderada en los estudios y simulaciones a nivel regional, dando cuenta del papel que juegan los factores geográficos en la configuración de los patrones de desarrollo tanto regional como nacional (Yang et al., 2012). Por ello, considerar la relación flujos de viajeros y geografía económica encuentra asidero, en el sentido de que la investigación permitirá examinar sistemáticamente las deficiencias y fortalezas de las

unidades territoriales de la región, en cuanto a su capacidad de atracción de visitantes que permitan dinamizar los diferentes enclaves económicos de sus aparatos productivos.

REVISIÓN LITERARIA

Una de las preguntas centrales en la determinación de los flujos turísticos tiene que ver la elección de un destino por parte de un viajero. El extenso grupo de trabajos que estiman estos flujos a nivel de países específicos se centra en examinar los determinantes en el marco de modelos de equilibrio parcial o general, panel de datos, ecuaciones simultáneas, modelos probabilísticos, vectores autorregresivos, entre otros. Estos estudios típicamente han examinado como factores macroeconómicos exógenos afectan la decisión de un turista, enfocándose en los ingresos, los movimientos de la tasa de cambio. En el caso particular de las aplicaciones gravitacionales, Morley *et al.* (2014), propone un marco teórico para el modelo de gravedad y su aplicación para los flujos turísticos bilaterales derivados de la teoría de la utilidad individual. Se rescata la utilidad de los modelos de gravedad para el modelado de la demanda turística, cuando se requiere modelar el papel de los factores estructurales en el turismo. Su trabajo muestra los problemas para distinguir las versiones recientes de los modelos de gravedad de los modelos de demanda agregada y la idoneidad de esta metodología cuando se discuten los factores estructurales tienen que ser evaluados y cuantificados en el contexto de la demanda turística.

Trabajos aplicados para el caso colombiano se encuentran pocos. El efecto de la seguridad y el comercio fueron abordados por Bonilla & Moreno (2010) mediante un modelo de datos de panel encuentran que los arribos de viajeros extranjeros están inversamente relacionados con los secuestros, y el índice de intercambio comercial lo hace de forma positiva. Otros trabajos han analizado las dinámicas locales de los movimientos de viajeros. Cerda y Leguizamón (2005), encuentran por medio de modelos hedónicos que la demanda interna de agentes nacionales por consumo de un bien turístico depende en gran manera del perfil del jefe de hogar, su poder adquisitivo y la composición familiar. A nivel de municipalidades o locaciones específicas, por ejemplo el caso de Cartagena, se centran en observar el impacto de las fluctuaciones cambiarias en la demanda turística (Galvis & Aguilera, 1999; Paredes & Ordoñez, 2010); así como, las elecciones turísticas en Risaralda (Romero & Salazar, 2013).

A nivel internacional, flujos mundiales sin puntualizar en países específicos, la literatura es mucho más amplia estimando los determinantes mundiales, continentales, o a nivel de países de los flujos turísticos. Eilat & Einav (2003), encuentran mediante modelos de elección discreta que el riesgo político es un factor muy importante para el turismo, y que las tasas de cambio son representativas en los países desarrollados. Por su parte, Vargas, Holim & Homsy (2007), haciendo uso de datos de paneles estiman que la renta constituye la variable preponderante en la emisión de turistas, mientras que en la atracción la seguridad y el nivel de desarrollo del país destino son relevantes en la explicación de la dirección de los flujos turísticos. En el caso de trabajos aplicados a nivel de países existe una literatura creciente. Garin-Munoz & Amaral (2000), estiman que el ingreso, los precios, la tasa de cambio y la Guerra del Golfo fueron significativos a la hora de explicar los flujos turísticos internacionales hacia España. Para el caso del continente africano en su conjunto, los resultados Naudé & Saayman (2005) sugieren que la llegada de viajeros depende de la estabilidad política, la infraestructura turística, el marketing e información, y el nivel de desarrollo en el destino. Vale la pena decir que, Ibrahim (2011) para el caso de Egipto estima que las condiciones económicas del país, así como los precios y el costo de vida importan a la hora de atraer viajeros.

En el caso de países asiáticos, Hanafiah & Harun (2010) encontraron hallazgos similares a éste último para Malasia, mientras que Webb & Chotithamwattana (2013) evaluaron como el poder adquisitivo, y factores exógenos como crisis económicas y políticas afectan el flujo de visitantes hacia Tailandia. Asimismo, en los países latinoamericanos, como los del bloque de la Comunidad Andina de Naciones (Gardella & Aguayo, 2002), muestran una dependencia marcada del desempeño económico de EEUU y de la promoción del destino como las variables explicatorias de llegada de turistas, resultados similares se observan para

México (Soria *et al.*, 2011), donde adicional a éstos, el costo de vida tiene un peso considerable en la explicación de esas llegadas.

Ahora bien, a la hora de relacionar el turismo con alguna variable de actividad económica, se encuentra como, Lee & Chang (2008), indagan sobre los movimientos conjuntos de largo plazo y las relaciones causales entre el desarrollo del turismo y el crecimiento económico de los países de la OCDE y miembros de OCDE (incluyendo los de Asia, América Latina y África Subsahariana) para el periodo 1990-2002. En la escala global, después de considerar el efecto de país heterogéneo, se fundamenta una relación de cointegración entre el PIB y el desarrollo del turismo e igualmente se determinó que el desarrollo del turismo tiene un mayor impacto en el PIB en los países miembros de OCDE que en los países de la OCDE, y cuando la variable explicativa son los ingresos por turismo, el mayor impacto se haya en los países del África Sub-Sahara. Además, el tipo de cambio efectivo real tiene efectos significativos en el crecimiento económico. Por último, en el largo plazo, la prueba de panel de causalidad muestra relaciones de causalidad unidireccional entre el desarrollo del turismo y el crecimiento económico en los países de la OCDE, mientras que en los países miembros de la OCDE las relaciones son bidireccionales, y sólo en

Asia se concluye que las relaciones son débiles. Estos resultados empíricos tienen importantes implicaciones políticas. Por su parte, Su & Lin (2014) estudian el impacto en el turismo receptor causado por la presencia de sitios del patrimonio mundial. Para ello, usan estadísticas derivadas de datos de panel para 66 países en el período 2006-2009. Los resultados mostraron una relación positiva entre la presencia de esos sitios del patrimonio y el número de turistas, y existe una relación más fuerte con los recursos naturales en lugar de los sitios del patrimonio cultural. La evidencia también indica la presencia de una relación en forma de U entre el número de sitios del patrimonio mundial en un número de países y los destinos turísticos. Estas relaciones halladas son robustas a pesar de las diferencias en los patrones encontrados en diferentes regiones. Poprawe (2014), pone a prueba empírica la hipótesis de que la corrupción tiene un efecto negativo sobre el turismo. Pagar sobornos durante sus vacaciones o viajes de negocios aumenta los costos de viajar a un país donde la corrupción es prevalente.

Los turistas son por lo tanto más propensos a viajar a países donde no sea necesario incurrir en este tipo de costos adicionales. Esta hipótesis se puso a prueba sobre un conjunto de datos de panel de más de 100 países y 16 años. Los resultados reflejan como un aumento de 1 punto en el Índice de Percepción de la Corrupción (lo que implica una disminución de la corrupción) resulta en un incremento del 4% al 7% en el flujo de turistas. Además, el flujo de turistas aumenta con el PIB per cápita, la apertura y el crecimiento y son mayores en los países con un clima templado. En síntesis, se observa que los factores que determinan la atracción de turistas a un destino depende en el mundo desarrollado de las condiciones de desarrollo del país, los ingresos, los precios relativos, así como los costos de viajar son altamente significativos; mientras que en el mundo en desarrollo, a parte de estas condiciones aparecen la distancia, las condiciones geográficas, y condiciones institucionales.

Estrategia Empírica

Por medio de un modelo econométrico tipo panel de datos (Baltagi, 2001) de los flujos viajeros internacionales, se pretende establecer los factores que desde el consumidor y del territorio determinan los movimientos de viajeros. Dada la heterogeneidad de países a nivel mundial, que se incrementa a la hora de la comparación con sus socios turísticos, es necesario realizar una depuración exhaustiva de datos para proceder con las estimaciones específicas. La forma funcional sugerida contará con información en dos dimensiones: un país de partida y el tiempo. Matemáticamente, la forma estándar de plantear esta relación será:

$$FV_{cpt} = f(\beta_0, \beta_1 CC_{ct}, \beta_2 CG_{pt}, \beta_3 VC_{cpt})$$

Los índices inferiores c y p hacen referencia a Colombia como país de arribo de viajero y a los países origen, respectivamente, y el sufijo t es la observación en el año específico de análisis. La variable independiente FV son los flujos de viajeros internacionales entre dos países. Las variables independientes hacen alusión a: CC , un vector de características del consumidor del país de partida, CG un vector de características geográficas del país de arribo, y VC un vector de control de características comunes que comparten el país de partida y el país de arribo. Los datos utilizados son de corte transversal y series de tiempo con observaciones las llegadas de turistas internacionales hacia Colombia originados desde 173 distintos países para el periodo 2008-2012. El modelo usado para estimar los determinantes y evaluar las hipótesis presentadas en la literatura revisada consiste de una regresión multivariada tipo panel de datos, bajo la aproximación teórica de un modelo gravitacional. De esta forma, la heterogeneidad entre países es capturada de una forma más adecuada al permitir formas más flexibles de control mediante efectos pareados de países y efectos temporales en modelos de efectos aleatorios y efectos de agrupamiento. La forma funcional estimada es del tipo:

$$\ln (LLEGADAS)_{COL-Ot} = \beta_0 + \beta_1 \ln (PIB-PERCAPITA)_{Ot} + \beta_2 \ln (TASA\ CAMBIO)_{Ot} + \beta_3 \ln (PRECIOS\ RELATIVOS)_{COL-Ot} + \beta_4 \ln (DISTANCIA)_{COL-O} + \epsilon_{COL-Ot}$$

donde las convenciones denotan:

Subíndices: COL : se refiere a Colombia como país destino turístico, O : se refiere al país origen del viajero, y t : al tiempo de la observación, 2008-2012.

Llegadas: llegadas de viajeros internacionales

β_i : son los coeficientes a estimar para cada una de las variables dependientes

Pib-Percapita: producto interno bruto per-cápita del país del viajero

Tasa De Cambio: tasa de cambio efectiva real basada en el índice de precios al consumidor basado en 172 socios comerciales de cada país (REER172)

Precios Relativos: índice de precios al consumidor en Colombia en el año t dividido el índice de precio al consumidor del país origen del viajero en el año t .

Distancia: distancia ponderada entre los principales centros económicos de Colombia y el país del viajero.
 ϵ (error): término de perturbación que se supone es independiente e idénticamente distribuido (iid).

Las fuentes de información son las bases de datos internacionales que compilan información específica. Para los flujos bilaterales de viajeros la información modelada proviene del World Travel & Tourism Council (WTTC, 2014). En el caso del PIB per cápita se tomaron dos fuentes: World Development Indicators del World Bank (2014) y Economic Research Service del USDA (2014). El indicador de tasa de cambio se tomó de Bruegel (2014). Los precios relativos fueron calculados usando los datos de World Bank (2014). Por último, la distancia ponderada corresponde aquella calculada por CEPPII (2014).

PRESENTACIÓN DE RESULTADOS

Esta sección presenta el ejercicio estimativo como se especificó antes. Es de aclarar que este documento es una primera aproximación de modelación con algunas variables cuantitativas, la cual será ajustada en futuros ejercicios incluyendo otras adicionales, así como otras de corte categórica. La Tabla 1 resume las estadísticas descriptivas del panel desbalanceado.

Tabla 1: Estadísticas Descriptivas

Variable	Obs.	Media	Desv. Estánd.	Mín.	Máx.
Arribos (número de personas)	842	5,072	3,005	0,000	12,787
PIB per cápita (dólares 2010)	855	8,548	1,504	5,399	11,609
Tasa cambio (índice base 2010)	830	4,653	0,113	4,153	5,330
Precios relativos (índice)	860	-0,002	0,081	-0,826	0,681
Distancia (km)	860	8,953	0,775	6,555	9,871

Todos los valores están expresadas en logaritmo natural. Fuente: elaboración propia utilizando el software R.

Los resultados preliminares de las estimaciones, tomando en cuenta solo variables cuantitativas, muestran que la relación clásica como punto de partida de la ecuación gravitacional, expresa que las llegadas de viajeros extranjeros al país son función del tamaño de mercado y la distancia geográfica. Como se aprecia en la Tabla 2, tres de las cuatro variables modeladas son estadísticamente significativas y presentan los signos correctos.

Tabla 2: Resultados de las Estimaciones

Coefficientes	Variable	Between	Within	Random
β_0	Constante	5,9756*	5,1646	9,6989***
β_1	PIB per cápita	1,0060***	1,0259***	0,6487***
β_2	Tasa cambio	0,9820*	1,0740	0,8943*
β_3	Precios relativos	0,1051	0,2266	0,0292
β_4	Distancia	-1,5653***	-1,54489***	-1,5988***
			n=166, t=4-5, N=814	
Observaciones	R ² ajustado	0,4213	0,4459	0,1057

Significancia estadística: 0 ****, 0,001 ***, 0,01 **, 0,1 *. Fuente: elaboración propia utilizando el software R.

De esta forma, la versión simple del modelo estimado captura el efecto del tamaño de las economías entre los destinos turísticos colombianos y sus 173 orígenes específicos, lo que significa que un aumento en el PIB eleva la atracción de foráneos hacia el país, dado que el coeficiente es elástico en ingresos. Ahora bien, para visualizar mejor los resultados anteriores de una forma desagregada por país de origen del visitante, el Gráfico 2 muestra que el 90% de las entradas de visitantes se concentra en 10 nacionalidades, donde la cercanía geográfica al destino es el rasgo distintivo.

Gráfico 2: Principales Países de Origen de Visitantes Hacia Colombia, 2008-2012

Fuente: elaboración propia con base en datos de WTTC (2014).

El Mapa 1 sintetiza más claramente estas tendencias en la relación existente de llegadas de turistas internacionales y la distancia física a los principales destinos en Colombia desde los distintos orígenes. Así, las burbujas más grandes (tonalidades verdes) representan el mayor volumen de visitantes hacia Colombia, donde el 71,8% se concentra en países dentro un promedio de 2.739 kilómetros de distancia lineal; relación consistente con el modelo de gravedad que señala un mayor flujo turístico mientras más mínima sea distancia existente entre el origen y el destino. El Gráfico 3 recogen las relaciones presentadas en las estimaciones, pero ahora se categorizan por grupos países: i) según el nivel de poder adquisitivo por habitante y ii) la distancia física entre origen-destino. De esta forma, se aprecia claramente los planteamientos de atracción gravitacional en relación con los postulados de tamaño y distancia en relaciones económicas. Con el fin de controlar por otros factores determinantes de la demanda turística, una vez se tenga consolidada una base de datos con más completa, se incluirán otras variables cuantitativas como la dinámica comercial y de inversión, y cualitativas que permitirán crear categorías de análisis alrededor de si: comparten vínculos coloniales, fronteras marítimas o terrestres, idioma común, tratados bilaterales de inversión o de comercio, existen vuelos directos entre los destinos.

REFLEXIÓN FINAL

Este artículo testeó algunas hipótesis encontradas en la literatura relacionada con la entrada de turistas proveniente del exterior para el caso colombiano. La técnica econométrica de datos de panel es conveniente para este tipo de trabajos dada la heterogeneidad de viajeros que visitan el país, lo cual permite controlar no solo individualmente estos efectos sino aquellos que se registran en el tiempo. Los hallazgos van en la dirección de los resultados generales de la literatura: conforme el tamaño económico es mayor es más probable que más foráneos ingresen al país, y a medida que los orígenes son más distantes estos flujos tienden a reducirse. También se encuentra que la variable que mide los precios de una moneda en términos de otra es estadísticamente relevante en la explicación de la configuración del movimiento internacional de personas.

RESUMEN

El presente trabajo de investigación se realizó con el fin de consolidar el fomento de una Cultura Tributaria, donde cada estudiante universitario tenga oportunidad de disertar acerca del compromiso que debe tener con el desarrollo del país y así poder corregir conductas arraigadas de evasión de impuestos que se han hecho presentes continuamente en un número significativo de individuos para escaparse de los deberes con el Estado. Por ello el propósito fue analizar si la Cultura Tributaria es competencia esencial en la estructura curricular del Programa Educativo de la Licenciatura en Comercio Internacional de la Universidad Estatal de Sonora, se desea que los estudiantes entiendan la existencia de la Cultura Tributaria y sean agentes multiplicadores en sus hogares para el fortalecimiento y crecimiento del país. También como resultado de esta investigación se sugirió a la Universidad, se incluyan programas de enseñanza en Cultura Tributaria para fortalecer los valores ciudadanos en los estudiantes. La metodología utilizada fue de carácter descriptivo constituido por una aplicación de cuestionario a doscientos treinta y seis alumnos. Las conclusiones obtenidas fueron: Inexistencia de Cultura Tributaria en más de la mitad población universitaria y además no se imparte conocimiento formalmente en materia de impuesto en la carrera.

"TAX CULTURE: ESSENTIAL COMPETITION IN THE EDUCATIONAL PROGRAM MASTER'S DEGREE IN INTERNATIONAL TRADE STATE UNIVERSITY OF SONORA"

ABSTRACT

The present research work was carried out in order to consolidate the development of a tax culture, where University students have opportunity to speak about the commitment that must be with the development of the country and thus to correct ingrained behavior of tax evasion that have been present continuously in a significant number of individuals to escape from the duties with the State. The purpose was to analyze if the tax culture is essential in the curricular structure of the educational program of degree in international trade from the State University of Sonora, you want students to understand the existence of tax culture and are multiplying agents in their households for the strengthening and growth of the country. Also because of this research, it was suggested to the University, teaching programs to be included in tax culture to strengthen the values citizens in students. The methodology used was composed of a questionnaire application descriptive to two hundred and thirty-six students. The conclusions reached were absence of tax culture in more than half University population and not taught knowledge formally in tax matter on the race.

INTRODUCCIÓN

El pago de contribuciones a nivel mundial, se deriva de la necesidad que tienen los países de captar ingresos para ser reinvertidos en el bienestar social. Durante las últimas décadas en nuestro país la fuente principal de los ingresos provenían del petróleo, esto le permitió sostener un enorme gasto público sin la necesidad de implantar una política tributaria eficiente que le permitiera equilibrar los ingresos y los egresos. Esta situación comienza a cambiar a partir de los años noventa con la disminución de estos ingresos derivados del petróleo, es por ello que ante esta situación el Estado procede a redimensionar sus fuentes de ingreso, recurriendo a mejorar la recaudación tributaria y por ende el fomentar una mayor y mejor Cultura Tributaria por parte de los ciudadanos, ya que por sí solos los instrumentos fiscales aplicados han sido mal implementados y controlados, agravando el déficit y aumentando la evasión fiscal.

Diep (1999), menciona que desde sus orígenes la obligación de tributar fue producto de la dominación, es decir, de la imposición del dominador sobre el dominado, así fuera en su carácter de gobernante, conquistador o simple opresor, siempre que se valiese de la fuerza en cualquiera de sus múltiples formas convencionales e históricas, incluyendo la magia y el dominio de la mujer sobre el hombre o de este sobre aquella, del mayor sobre el menor, del viejo sobre el joven o viceversa, del rico sobre el pobre, del sano sobre el enfermo, etc. La conducta humana no está totalmente determinada genéticamente, sino que esta se puede modificar y educar transformando los aspectos indeseables en productivos y aceptables para el conjunto de la sociedad (Velarde 2006). Es necesario el inducir la conducta del contribuyente, para lograr que este adopte la decisión de cumplir voluntariamente con sus obligaciones tributarias. Por ello es necesario profundizar la relación que debe darse entre el ciudadano y el Estado para que se desarrolle una cultura necesaria que incida en el ciudadano en concebir las responsabilidades tributarias como un deber primordial y en concordancia con los valores de una sociedad inspirados en la supremacía del bien común. Velarde (2006), menciona que desarrollar dicha cultura no es, sin embargo una tarea fácil, pues requiere de una convergencia de políticas de control con políticas de carácter educativo. Ante esta situación nace la importancia del presente trabajo de investigación, lo cual consiste en estudiar y determinar la existencia de una Cultura Tributaria en los futuros contribuyentes, siendo esta una de las soluciones tendientes a disminuir la evasión fiscal que resulta en parte como consecuencia de la inexistencia de una Cultura Tributaria en la población.

Para consolidar el fomento de la Cultura Tributaria desde tempranas edades, donde cada estudiante tenga oportunidad de disertar acerca del compromiso que debe tener con el desarrollo del país y así poder corregir conductas arraigadas de evasión de impuestos que se han hecho presentes continuamente en un número significativo de individuos para escaparse de los deberes con el Estado. Se desea que los estudiantes entiendan la existencia de la Cultura Tributaria y sean agentes multiplicadores en sus hogares para el fortalecimiento y crecimiento del país. En este orden de ideas, el propósito de esta investigación se centra en sugerir a la universidad, se incluyan programas de enseñanza en Cultura Tributaria para fortalecer los valores ciudadanos en los estudiantes. Pero no solo el conocimiento, sino también la subsiguiente práctica de una ética fiscal en determinada comunidad universitaria concreta es, por si sola, indicador para juzgar el nivel de la moral pública y social de tal agrupación humana. El gobierno tiene la imperiosa necesidad de redimensionar las fuentes de ingresos, planteándose la mejora de la recaudación tributaria interna y la reducción de la evasión fiscal, para lo cual es importante cambiar la visión acerca del contribuyente y fomentar la Cultura Tributaria para coadyuvar a solventar las necesidades de financiamiento del gobierno, para lo cual se crearon y se han reformado las leyes en materia tributaria de tal manera que quedan obligadas las personas a pagar tributos.

REVISIÓN DE LITERATURA

Para tener un basamento con cual profundizar el tema de investigación, se revisaron los siguientes antecedentes que de una u otra manera se relacionan con el tema planteado: Lugo, Zabaleta y Ruiz (2010), en su investigación titulada: “Análisis del método de recaudación de tributos que utiliza la Alcaldía del Municipio Bermúdez en el mercado municipal de Carúpano Estado Sucre, a través de su administración para el primer trimestre del año 2010”. Este trabajo se relaciona con el tema de investigación porque los procedimientos empleados aplican a que la Cultura Tributaria resulto estar inmersa en todas las fuentes de recaudación de ingresos con la finalidad de mejorar las condiciones sociales aportando para sufragar el gasto público. Díaz y Guerra (2009), efectuaron un trabajo de investigación titulado “Análisis de la Cultura Tributaria en el cumplimiento de los deberes formales en la Clínica ubicada en el Municipio Bermúdez, Carúpano- Estado Sucre, (2010)” este trabajo se relaciona con el tema de investigación porque tuvo como objetivo analizar la Cultura Tributaria en el cumplimiento de las obligaciones y se llegó a la conclusión que las Clínicas poseen conocimiento de la Cultura Tributaria.

Mendoza L. (2002), en trabajo titulado: “Cultura Tributaria en la Población Estudiantil del Instituto Diocesano Barquisimeto” tuvo como objetivo principal: estudiar el nivel de conocimiento en materia tributaria que poseen los estudiantes del Instituto Diocesano Barquisimeto del primer año diversificado. La metodología utilizada fue de carácter descriptivo; constituida por una muestra aleatoria simple de treinta y seis alumnos. Las conclusiones obtenidas fueron: Inexistencia de Cultura Tributaria en la población estudiantil. No se imparte conocimiento formalmente en materia de impuesto a ningún estudiante de educación en dicho Instituto. Armas y Colmenares (2009), en trabajo titulado: “Educación Sobre Cultura Tributaria” tuvo como objetivo principal evaluar las estrategias aplicadas por la Gerencia de Tributos Internos de la Región Zuliana para desarrollar la educación y Cultura Tributaria de los contribuyentes. La metodología utilizada se enmarcó en modalidades de investigación descriptiva, y documental. Los resultados arrojados revelan que el Estado es responsable por intermedio de la Administración Tributaria, de la divulgación de los deberes y derechos de los contribuyentes y existe un verdadero rechazo a la idea de que la Cultura Tributaria sea desarrollada únicamente por el contribuyente.

La Educación Tributaria

La educación tributaria es la transmisión de valores dirigidos al cumplimiento cívico de los deberes de todo ciudadano a contribuir con los gastos públicos, lo cual se logra al aceptar las responsabilidades que nos corresponden como ciudadanos partícipes de una sociedad democrática. Herrero y Monge (2002) aseveran que el pagar impuestos es un deber ciudadano, como lo es también hacer de ellos un uso adecuado, pues su origen es sagrado el autor asevera que la Cultura Tributaria es un mecanismo de doble intención: por un lado están los contribuyentes cumpliendo con la obligación y por el otro el Estado haciendo el uso más honrado y claro de los dineros con los que el pueblo aporta de la manera más noble y desinteresada de su vocación de solidaridad. Por lo tanto la mejor manera de incentivar la Cultura Tributaria será exhibiendo al público el mejor uso de los ingresos que sacrifica en aras del bien común. La mejor manera del ahuyentar al contribuyente será dejándole dudas sobre el verdadero destino de sus aportes.

La capacidad de entendimiento del deber del cumplimiento depende a veces en gran medida del desarrollo profesional de los ciudadanos, es decir, que los contribuyentes entienden a medida de su desempeño laboral que tienen un sacrificio monetario que realizar en aras del bien común y así lograr la evolución social del Estado, que conllevaría a la difusión de la Cultura Tributaria en todos los entornos. La educación, según Burgos (2003), nace como la necesidad del ser humano de ayudar a sus semejantes al desarrollo o a formarse, aunque el ser humano no se percatara de inmediato de ese fenómeno o proceso, a partir del momento en el cual comienza a notar su existencia, empieza el proceso de conceptualizar o a definir las características que lo componen o constituyen, para luego hallarle una definición.

Otro autor que se puede mencionar en esta parte es a Ausubel (1973), quien describe que durante mucho tiempo el aprendizaje era sinónimo de cambio de conducta; esto, porque dominó una perspectiva conductista de la labor educativa; sin embargo, se puede afirmar con certeza que el aprendizaje humano va más allá de un simple cambio de conducta; conduce a un cambio en el significado de la experiencia. La experiencia humana no sólo implica pensamiento, sino también efectividad y únicamente cuando se considera en conjunto se capacita al individuo para enriquecer el significado de su experiencia. Este autor afirma además que las personas, tanto individual como colectivamente, construyen sus conocimientos, saberes y aprendizajes como consecuencia de su interacción con su medio físico, social y cultural. Es decir, el conocimiento es el resultado de un proceso de construcción de la realidad que tiene su origen en la interacción de las personas y el mundo que nos rodea, de tal forma que la elaboración del conocimiento, más que la elaboración del conocimiento, constituye una modelación de la misma realidad.

Por su parte, Vygotsky (1984) presenta dos tópicos: uno referido a las interacciones existentes entre el desarrollo y el aprendizaje y otro referido a las vinculaciones relevantes que produce el vínculo alumno-docente. Expone en su análisis sobre el desarrollo y el aprendizaje que el lenguaje es un medio que fortalece el proceso natural y pone a su disposición los instrumentos creados por la cultura que amplían las posibilidades naturales del individuo y reestructuran sus funciones mentales. De acuerdo a este autor, al analizar el papel de la cultura en el desarrollo y la educación, la cultura parece controlar los procesos mentales y la conducta del hombre, mediante herramientas como el lenguaje, el lenguaje escrito y hablado. Entonces se infiere que la educación que el ser humano percibe en una primera instancia la obtiene de su entorno y que esta se perfecciona a través de la cultura.

De allí que la cultura forma desde muy temprana edad a las personas y que el ser humano fija sus conocimientos debido a las experiencias de su entorno social. Pero es el Estado el garante de la transmisión de los valores culturales, sociales de todos los habitantes, además que debe promover y suministrar las herramientas para la transmisión de la misma. Para lograr una comprensión más efectiva se debe analizar lo que expone Brenes (2000) sobre la Cultura Tributaria. Este autor opina que la cultura debe verse como un conjunto de condiciones de creación y recepción de mensajes y de significaciones mediante los cuales el individuo se apropia de las formas que le permiten estructurar su lenguaje y su visión de mundo. De acuerdo con este autor, debe existir una reciprocidad entre los alumnos y el Estado, a través de la disposición de los jóvenes al pago e importancia de los tributos, para el desarrollo económico y bienestar social de los ciudadanos, es decir, la diseminación de la Cultura Tributaria.

Estas observaciones concuerdan con lo expresado por Méndez (2004) cuando afirma que la Cultura Tributaria es un campo de las representaciones sociales sobre el ambiente de la relación Estado-Sociedad que ha sido poco explorado por las ciencias sociales. La confianza en las instituciones es vital para la construcción de un vínculo positivo entre los ciudadanos que paguen impuestos y quienes administran y utilizan los recursos. La Cultura Tributaria se mueve en medio de una tensión entre el acto penalizado de evasión y la formación de órdenes múltiples de circunstancias atenuantes. La solidaridad en abstracto entra en conflicto con la evasión en concreto. Por tanto, se entiende que la Cultura Tributaria abarca un conjunto de valores, creencias o representaciones sociales que los individuos atribuyen a la acción tributaria del Estado, connotando su conducta como contribuyente dentro de la sociedad, siendo interesante a los efectos de este trabajo considerar los planteamientos de Cortázar (2005) en cuanto se ajusta a considerar la misma como formativa en el ámbito educacional.

Fundamento Constitucional del Pago de Contribuciones

Los mexicanos tienen la obligación de contribuir con el gasto público de acuerdo con el artículo 31 párrafo primero fracción IV de la Constitución Política de los Estados Unidos Mexicanos que dice: “Son obligaciones de los mexicanos: contribuir para los gastos públicos, así de la Federación como del Distrito

Federal o del Estado y Municipio en que residan, de la manera proporcional y equitativa que dispongan las leyes fiscales”.

Efectos de los Impuestos: la Evasión Fiscal

Los impuestos se establecen para proporcionar al Estado los recursos económicos y materiales que requiere para satisfacer los servicios públicos y realizar las tareas de interés general. El impuesto es una obligación que tienen las personas físicas y morales, dichas personas en ocasiones consideran que el pago es un sacrificio del que no pueden huir, lo que origina que se recurra a la evasión. Diep (1999), tributo e impuesto son lo mismo, ambos representan servidumbre, carga o gravamen donde esta última significa carga, obligación, imposición. En suma, entonces, tributo e impuesto se caracterizan, prioritariamente, por ser una obligación inexcusable, un gravamen, una carga y una imposición. De ello debe concluirse que tributo e impuesto entrañan fuerza, coerción, coacción y hasta agresión, ya que de otro modo, sería difícil que quienes sufren tales servidumbres los cumplan alegremente. Para Tapia (2000), evadir es eludir o evitar, y esa acción desplazada al terreno de las contribuciones, es eludir una obligación establecida constitucionalmente con el fin de que todos contribuyan al pago de tributo que la ley determina. Tapia (2000), opina que la doctrina coincide en señalar como causas de evasión del contribuyente universal las siguientes:

Desequilibrio entre la carga tributaria y la capacidad económica del contribuyente. Régimen impositivo demasiado gravoso, originado por la multiplicidad de tributos o lo elevado de las tasas. Aversión natural del sujeto a desprenderse de parte de sus ingresos, los que desearía mantener en su integridad. Falta de racionalidad en el sistema de franquicias tributarias. Desconfianza en el acierto con que se administran los fondos fiscales por el gobierno. Las leyes de “amnistía tributaria” o de “condonación”, que provocan desaliento en los contribuyentes que han cumplido con sus obligaciones fiscales en forma oportuna. La complejidad de la legislación tributaria, en cuanto da posibilidad de legalizar, mediante interpretaciones forzadas, una evasión que no estaba en el ánimo de la ley permitir. Falta de una conciencia tributaria en el medio social, que considere reprochable y moralmente condenable la burla de los intereses fiscales. La inflación, en cuanto origina una subestimación de la base imponible en algunos impuestos y en cuanto a reducción, hace perder la efectividad de las sanciones monetarias que no comprenden un recargo adicional que compense la pérdida de la desvalorización monetaria. Sistemas de presunciones de renta, que en determinados casos, contribuyen a legalizar la evasión, cuando son bajas en relación con los ingresos efectivamente percibidos. Falta de una tradición tributaria. Falta de sanciones drásticas y ejemplares para los infractores.

Causas de la Evasión de Impuestos en México

El término evasión fiscal significa fuga, evasión, despacho de un negocio, evasor es el que se evade y evasivo de lo que sirve para eludir o evitar. Según Tapia (2000), es un fenómeno social y de moral pública que se ha dado en todos los tiempos, el cual ha tenido lugar tanto en países desarrollados como en países en vías de desarrollo donde también la evasión fiscal la tipifica como la ocultación o simulación de cuentas de ingresos o gastos con el fin de pagar montos menores de impuestos. Señala que el mayor o menor grado de evasión y rechazo al pago de los impuestos depende de (en orden de importancia): La Cultura Tributaria. La conciencia del contribuyente de declarar correctamente (sobre todo en un sistema como el nuestro de autodeterminación), implica que en la sociedad no se ha desarrollado el sentido de cooperación de los individuos con el Estado. Se considera que el Estado lo conformamos todos los ciudadanos y que el vivir en una sociedad organizada, implica que todos debemos contribuir a otorgarle los fondos necesarios para cumplir la razón de su existencia. La política tributaria como presión directa a la capacidad de pago, sus impuestos y sus tasas. La cantidad y calidad de los servicios públicos de orden colectivo e individual que recibe el ciudadano. El sistema jurídico tributario o seguridad jurídica, que haga percibir en el contribuyente que se tomó en cuenta su capacidad tributaria. El esquema de control administrativo que facilite el cumplimiento espontáneo y oportuno en el pago de las contribuciones, ya que un sistema poco transparente

contribuye al incremento de una mayor evasión impositiva, se debe básicamente al incumplimiento de los requisitos indispensables para la existencia de un sistema como tal. Este principio exige que las leyes tributarias, los decretos, reglamentos, etc., sean estructurados de tal manera que el contenido de las mismas sea tan claro y preciso, que no permitan la existencia de ningún tipo de dudas para los contribuyentes.

De las medidas represivas del Estado a través de sanciones y casos penales. Administración tributaria poco flexible, ya que es la herramienta idónea con que cuenta la política tributaria para el logro de sus objetivos, razón que conlleva a la exigibilidad de la condición de flexibilidad de la misma. Uno de los otros inconvenientes que se plantea, es que en la medida en que el sistema tributario busca la equidad y el logro de los objetivos sociales y económicos, la simplicidad de las leyes impositivas es una meta difícil de lograr. Así mismo el autor señala que en México, además de todas las causas mencionadas existe en especial una que está muy arraigada en nuestro pueblo, esta es la idiosincrasia, que “por razones antropológicas y genealógicas han heredado en la gran mayoría de nuestra gente, una forma atávica de pensar del pueblo a través de generaciones, con la creencia aún persistente de que se roban los impuestos, en la aseveración de que para qué pago si se los van a robar”. Situación que se confirma de otra manera, por algunos hechos que aunque lejanos a los impuestos, constituyen ejemplos de corrupción en todos los niveles del gobierno y sin importar la jerarquía de sus funcionarios hechos que demuestran cómo se aprovechan los puestos públicos para hacer negocios personales en un abuso de influentismo y prepotencia; siendo esta una de las razones más importantes para el rechazo en el pago de los impuestos, (Tapia 2000).

Los controles de la Administración Tributaria son insuficientes en su aparato recaudatorio y fiscalizador, lo que facilita la evasión fiscal. El autor de La Evasión Fiscal Tapia (2000), encuentra una causa más de la evasión, propagada en el sentir de la gente y es el excesivo costo de las tarifas y precios públicos a los particulares. Esto sirve de pretexto a los contribuyentes para no querer pagar impuestos ya que no se paga porque no hay servicios o éstos son deficientes. La evasión reconocida en México de forma oficial en 1998 era de un 37% y para 1999 se reconoció un 45% Tapia (2000). Al respecto, opina que la evasión en México es alarmante y que para acabar con el problema se requiere de voluntad política: “La autoridad sabe en dónde se encuentran los evasores fiscales”. Por otra parte, resulta apremiante hacer el sistema tributario menos complicado, que sea cierto y seguro desde el punto de vista jurídico. Que rebase políticas sexenales, y que la educación tributaria se inicie desde la educación primaria, para que se tome conciencia de que tenemos que contribuir al gasto público pagando nuestros impuestos. La corriente de análisis de la evasión considera aspectos relacionados con el comportamiento del gobierno en el gasto como determinante de la disposición a pagar impuestos deriva de la idea del Estado como comunidad alentada por la confianza entre ciudadanos y quizá también por la confianza en el gobierno apuntada por uno de los hacendistas más destacados, (Slemrod 2003).

La Cultura

Como tal incluye costumbres, prácticas, códigos, normas y reglas de la manera de ser, vestimenta, religión, rituales, normas de comportamiento y sistemas de creencias. Es el conjunto de toda actividad transformadora del hombre y la sociedad, así como los resultados de esa, (Blauberg 1977). En tal sentido la cultura es aprendida y compartida, el hombre no hereda la mayor parte de sus modos habituales de comportamiento, lo adquiere en el curso de su vida. Los hábitos adquiridos en la niñez siguen las pautas de niños, los padres, maestros y demás responsables de la educación y formación de los nuevos miembros de la sociedad les transmiten sus propias pautas de conducta, trasladando a cada nueva generación los conocimientos, habilidades, valores, creencias y actitudes.

La Cultura Tributaria

La Cultura Tributaria se entiende como un conjunto de valores, conocimientos y actitudes compartidos por los miembros de una sociedad respecto a la tributación y la observancia de las leyes que la rigen, esto se

traduce en una conducta manifestada en el cumplimiento permanente de los deberes tributarios con base en la razón, la confianza y la afirmación de los valores de ética personal, respeto a la ley, responsabilidad ciudadana y solidaridad social, tanto de los contribuyentes, como de los funcionarios de las diferentes administraciones tributarias. Cabe considerar que la falta de Cultura Tributaria es la principal causa de la evasión y los ilícitos tributarios, dentro de la cual está inmersa la administración tributaria en general, trayendo como consecuencia el desmejoramiento, principalmente del sistema de recaudación tributaria, y los altos índices de evasión y fraude fiscal, así como el desconocimiento, por parte del ciudadano, del cumplimiento de los deberes formales establecidos en las distintas leyes que rigen los tributos.

Cultura Tributaria Estudiantil

Entendemos por “educación formal” el sistema educativo de cada país. Es decir el conjunto de enseñanzas que conducen a la obtención de un título oficial, según la normativa vigente en cada país. Por ejemplo: la existencia de una asignatura que se denomine “Educación Fiscal” en la educación Universitaria cuya calificación forme promedio con otras asignaturas como “Matemáticas Financieras”, “Economía”, etc. para obtener el título correspondiente. Estamos hoy en convivencia de una sociedad donde el poder se sustenta en el conocimiento y sobre estos hay que crear la nueva Cultura Tributaria. No hay otro camino. Conocimiento significa información completa, un riguroso análisis, planteamiento de todos los escenarios posibles. Los aspectos tributarios que pudieran incorporarse a los planes de formación de los estudiantes de las Universidades serían los aspectos tributarios que conforman al Sistema Tributario, es decir, los tributos, los sujetos tributarios, la relación jurídica tributaria, el hecho imponible y la obligación jurídica tributaria, son necesarios incorporarlos a través de la Educación Tributaria. Robles (2002). Partiendo de los análisis efectuados a través de estudios de campo, a partir del cuestionario dirigido a los estudiantes, la autora expuso que se puede evidenciar rasgos generales que los alumnos poseen un conocimiento bajo sobre los aspectos tributarios, por lo cual se proponen incluir a los programas educativos aquellos aspectos importantes de la legislación tributaria vigente, como lo son: Tributo, Clases de Tributos, Sujetos Tributarios, la Relación Jurídica Tributaria, la Obligación Jurídica Tributaria, entre otros, para inculcar a los estudiantes una conciencia cívica y tributaria y lograr el objetivo de la Administración Tributaria que es modificar la conducta del contribuyente.

METODOLOGÍA

El nivel de la investigación fue descriptivo, por cuanto se recolectaron datos que permitieron el análisis de hechos descritos en el problema planteado, y que conllevaron al cumplimiento de los objetivos propuestos. La investigación se enfocó principalmente a todos los estudiantes del último semestre de la carrera de Licenciado en Comercio Internacional de la Universidad Estatal de Sonora. Es también una investigación de campo, pues se basó en la recolección de datos directamente de la realidad donde ocurren los hechos, sin manipular o controlar variable alguna. En este caso se justifica, pues se desea conocer las estrategias que permiten desarrollar la Cultura Tributaria en los alumnos de la carrera de Licenciado en Comercio Internacional de la Universidad Estatal de Sonora. En la presente investigación, la población estuvo constituida por: 236 Alumnos de los cuales 169 son la totalidad del séptimo (último semestre en el momento de la encuesta), 55 alumnos correspondían al quinto semestre y 12 alumnos al tercero de la carrera de Licenciado en Comercio Internacional de la Universidad Estatal de Sonora.

RESULTADOS

Resultados de cuestionario aplicado a 236 Estudiantes de la Carrera de Comercio Internacional de la Universidad Estatal de Sonora del 12 al 16 de noviembre del 2012 en Hermosillo, Sonora: El 44% de los Estudiantes trabaja. El 72% de los Estudiantes son del séptimo semestre, 23% del quinto semestre y el 5% del tercero. El 33% de los Estudiantes tiene 21 años, el 28% 22 años, el 19% 23 años, 9% 20 años, 6% 24 años, 3% 25 años, y 2% 27 años. El 52% de los Estudiantes son del sexo femenino y el 48% del sexo

masculino. El 53% de los Estudiantes manifiesta no haber recibido formación en Cultura Tributaria y el 47% manifiesta que sí. El 43% de los Estudiantes manifiesta que los Profesionistas son poco cumplidores de las leyes fiscales, el 35% que son bastante cumplidores, un 15% que son muy cumplidores y el 7% que son nada cumplidores de las leyes fiscales. El 42% de los Estudiantes manifiesta que los Profesionistas son poco responsables en el pago de sus impuestos, el 37% que son bastante responsables, el 14% son muy cumplidores y otro 7% que son nada responsables del pago de sus impuestos. El 70% de los Estudiantes manifiesta que la información recibida hasta ahora en la Universidad sobre el tema de pago de impuestos no ha sido suficiente, y el 30% dice que sí. El 45% de los Estudiantes opina que los servicios públicos en México son malos, el 44% opina que son buenos, el 11% opina que son muy malos, y el 1% que son excelentes. El 85% de los Estudiantes manifiesta estar dispuesto a pagar impuestos si se le informa en que se gastan estos. El 92% de los Estudiantes manifiesta estar dispuesto a pagar impuestos si se facilita el pago de estos. El 51% manifiesta recibir información por televisión, radio y periódicos sobre el tema de impuestos, el 35% recibió información en clases en la Universidad y el 14% recibió información por visitas del personal del Servicio de Administración Tributaria a la Universidad.

El 39% de los Estudiantes manifiesta que el pago de impuestos sirve para financiar el gasto del gobierno, y el 61% para financiar los servicios que los ciudadanos reciben. El 44% recuerda que tiene que pagar impuestos por anuncios en televisión, el 40% lo recuerda por avisos en casa, el 6% por avisos en la Universidad, y el 10% por periódicos. El 35% considera que el Servicio de Administración Tributaria debe difundir en los medios de comunicación temas sobre Cultura Tributaria para mejorar la recaudación, el 30% que se debe sancionar al evasor, el 29% que se debe dar una educación tributaria en las Universidades, y el 6% que se debe realizar una fiscalización masiva. El 39% menciona que es un deber ciudadano el pagar impuestos como razón para pagarlos, mientras que el 21% dice porque se contribuye al gasto público, un 20% porque lo retienen de sus salarios, un 15% porque si no lo hace comete un delito y el 5% porque la mayoría de la gente los paga.

Tabla 1: Valoración de respuestas de Estudiantes de la Universidad Estatal de Sonora

Escala de medición	Porcentaje
Recibieron formación en cultura tributaria	46.0%
Recibieron insuficiente formación en cultura tributaria	70.0%
Los servicios públicos en México son malos	45.0%
Están dispuestos a pagar impuestos si se informa en que se gastan estos	84.0%
Están dispuestos a pagar impuestos si se facilita el pago de ellos	92.0%
Recibió información por televisión, radio y periódico sobre el tema de pago de impuestos	50.0%
Recibió información en clases en la Universidad sobre el tema de impuestos	35.0%
Recibió información por visitas de personal del S.A.T. a la Universidad sobre el tema de impuestos	14.0%
Recuerda que tiene que pagar impuestos por mensajes en televisión	44.0%
Recuerda que tiene que pagar impuestos por avisos a domicilio	43.0%
Recuerda que tiene que pagar impuestos por avisos en la Universidad	6.0%
Recuerda que tiene que pagar impuestos por avisos en periódico	10.0%
Considera que el S.A.T. debe mejorar la educación tributaria en Universidades	29.0%
Considera que el S.A.T. debe mejorar la educación tributaria en los medios de comunicación	35.0%
Considera que el S.A.T. debe realizar una fiscalización masiva	6.0%
Considera que el S.A.T. debe sancionar al evasor	30.0%
La razón para pagar impuestos es deber ciudadano	39.0%
La razón para pagar impuestos es para contribuir al gasto público	22.0%
La razón para pagar impuestos es porque lo retienen del salario	20.0%
La razón para pagar impuestos es porque hay castigos	0.0%
La razón para pagar impuestos es porque si no lo hace comete un delito	15.0%

En esta tabla se muestra que el 70% de los Estudiantes de la Universidad Estatal de Sonora considera insuficiente la formación en cultura tributaria, y solo el 35% recibió información en clases en la Universidad sobre el tema de impuestos. Fuente: Elaboración propia 2014.

Materias Que Comprende el Programa Educativo de la Licenciatura En Comercio Internacional de la Universidad Estatal de Sonora

Primer semestre:

1. Matemáticas Básicas.
2. Aprendizaje y Gestión del Conocimiento.
3. Tecnologías de la Información y Comunicación.

Introducción al Campo Profesional del Licenciado en Comercio Internacional.
Comunicación Oral y Escrita.
Inglés Básico.

Segundo semestre:

Estadística.
Mercadotecnia.
Economía.
Derecho del Comercio Exterior.
Administración.
Inglés Pre-intermedio.

Tercer semestre:

Investigación de Operaciones.
Investigación de Mercados.
Ambiente del Comercio Internacional.
Clasificación Arancelaria.

1. Tratados y Organismos Internacionales.
2. Inglés Intermedio Bajo.

Cuarto semestre:

1. Programas de Apoyo al Exportador.
2. Mercadotecnia Internacional.
3. Contabilidad y Costos.
4. Contribuciones al Comercio Exterior.
5. Tráfico Internacional.
6. Inglés Intermedio.

Quinto semestre:

1. Economía Internacional.
2. Logística Internacional.
3. Diseño de Exportación.
4. Estados Financieros.
5. Operación Aduanera.
6. Inglés de Negocios.

Sexto semestre:

1. Desarrollo Sustentable
2. Promoción y Ventas
3. Sistemas de Calidad
4. Inteligencia de Mercados
5. Presupuestos
6. Administración Financiera

Séptimo semestre:

1. Compras Internacionales.
2. Promoción Internacional.
3. Mercados Financieros Internacionales.
4. Proyectos de Inversión.
5. Contratos Internacionales.
6. Taller de Investigación.

Octavo Semestre:

1. Negocios Internacionales.
2. Plan de Negocios.

Materias Optativas:

1. Trámites y Documentos en Materia Aduanera.
2. Seminario de Clasificación Arancelaria.
3. Mecanismos de Defensa.
4. Cadena de Suministro.
5. Seminario de Negocios.
6. Programa IMMEX.
7. Producción.
8. Ética, Responsabilidad Social y Transparencia.
9. Administración Estratégica.

Comentarios: En el Programa Educativo de la Licenciatura en Comercio Internacional de la Universidad Estatal de Sonora no contempla contenidos en Formación de Cultura Tributaria.

CONCLUSIONES

De la investigación realizada, cuyo objetivo general fue analizar si la Cultura Tributaria es competencia esencial en la estructura curricular del Programa Educativo de la Licenciatura en Comercio Internacional de la Universidad Estatal de Sonora, puede señalarse que de la revisión documental, así como del cuestionario aplicado se concluye: En primer término se recomienda insertar contenidos que den Formación en Competencias sobre Cultura Tributaria en la Licenciatura en Comercio Internacional de la Universidad Estatal de Sonora. A pesar de los cambios en las leyes y sanciones que obligan a los sujetos de impuesto por ley, los futuros Profesionistas no se han concientizado de la importancia del pago de impuestos situación que refleja una falta de conciencia y Cultura Tributaria, por lo que si esto sucede con el nivel de Educación Superior se presume que los resultados en otros niveles educativos serían mucho más negativos y sería materia de estudios posteriores. Resulta de vital importancia el que se fortalezcan los Programas de Educación Fiscal en todos los medios de comunicación disponibles de una manera eficaz promoviendo la sensibilización de los contribuyentes, haciendo énfasis en el tipo, uso y destino de los ingresos obtenidos por concepto de recaudación de impuestos.

Es muy recomendable que se implemente que todos los alumnos del nivel superior cumplan con una práctica de elaboración de declaración de impuestos para asegurar de que tengan la competencia, es decir el conocimiento del saber y del saber hacer en materia de las obligaciones fiscales, y que al momento de estarse desempeñando en su campo laboral ya sepa que formularios y como llenarlos para por decirlo así que pierda el miedo. También se concluye que el entendimiento de las leyes en materia fiscal son

complicadas y poco entendibles por el usuario, Mendoza F. (2013). El Servicio de Administración Tributaria en coordinación con la Secretaría de Educación requiere de crear una sólida Cultura Tributaria y promover de manera permanente el cumplimiento voluntario de las obligaciones tributarias. Se debe de generar Cultura Tributaria implementando estrategias como el de insertar en el diseño curricular de la educación superior, asignaturas relacionadas con la tributación dando a conocer los beneficios del pago de los tributos, propiciando de esa manera en los futuros profesionistas conciencia tributaria, otorgándoles sentido de responsabilidad y civismo; ya que ellos serán los contribuyentes del futuro.

ANÁLISIS DE PROGRAMAS DE APOYO FINANCIERO PARA ACADEMICOS EN LAS UNIVERSIDADES PÚBLICAS EN MÉXICO

Mónica Marsela López García, Universidad de Guadalajara

Alejandro López García, Universidad de Guadalajara

Ana Bertha Hernández Lozano, Universidad de Guadalajara

RESUMEN

Las instituciones de educación superior públicas en México, tiene que dar cumplimiento a una serie de mandatos que su marco jurídico les establece en relación al uso y destino de los recursos económicos que le son asignados, es por ello que para establecer un control en la distribución de estos en el renglón que corresponde a los académicos, lo hace a través de convocatorias las cuales apoyan el trabajo que los profesores tiene que desarrollar, motivo de sus obligaciones contractuales y que el mismo ejercicio profesional como maestro les requiere, pero por la diversidad de actividades que las universidades desarrollan se considera existen renglones que se dejan fuera de los controles internos, lo que en un momento dado los pueden hacer débiles y carentes de información dejando de cumplir con la transparencia y rendición de cuentas a la sociedad.

PALABRAS CLAVE: Control Interno, Académicos, Educación Superior, Transparencia

ANALYSIS OF FINANCIAL SUPPORT PROGRAMS FOR ACADEMIC IN PUBLIC UNIVERSITIES IN MEXICO

ABSTRACT

The public higher education institutions in Mexico, must comply with a series of commands that will set the legal framework regarding the use and allocation of financial resources allocated to it, is why to establish control in the distribution of these in the line corresponding to the academic, does through calls which support the work that teachers must develop, because of their contractual obligations and that the same practice as teacher requires them, but the diversity of activities that are considered universities develop lines that are left out of internal controls, what at any given time can make them weak and uninformed failing to comply with transparency and accountability to society.

INTRODUCCIÓN

La Ley de Contabilidad Gubernamental (en adelante LCG), es de aplicación obligatoria para los entes federales, estatales y municipales y en general para todas las instituciones de gobierno en México, lo que genera cambios dramáticos en las formas de trabajo que por muchos años se observan a través del tiempo en estos organismos, lo que ha dado lugar al desarrollo e implementación de una cantidad de reformas incluyendo a las instituciones de educación pública, generando con ello un cambio en la manera como realizan sus procesos administrativos, entre ellos los relacionados con los maestros o docentes, es importante considerar que se deben tomar en cuenta el rubro de la evaluación del desempeño o dicho en otros términos la productividad de estos en varios rubros como son horas frente a grupo, vinculación,

investigación y extensión, los cuales influyen fuertemente en el cumplimiento de los objetivos de una institución de educación pública como es la de ofrecer educación superior de calidad.

Todas las disposiciones contenidas en la Constitución Política de los Estados Unidos Mexicanos, del Estado de Jalisco y del resto de los Estados, son derecho positivo y forman parte del orden jurídico nacional, por lo que podrían resultar aplicables a y/o la Universidad de Guadalajara, sin embargo, tomando en consideración que en el presente inciso se solicitan disposiciones específicas, a continuación se señalan de manera enunciativa y no limitativa, las disposiciones de la Constitución Política de los Estados Unidos Mexicanos y de la Constitución Política del Estado de Jalisco, que son utilizadas con mayor frecuencia en las actividades que realiza la Universidad de Guadalajara: Constitución Política de los Estados Unidos Mexicanos Arts. 1, 3, 5, 6, 8, 14, 16, 23, 24, 27, 28, 30, 32, 103, 107, 108, 109, 113, 121, 123, 126, 133 y 134. Constitución Política del Estado de Jalisco Arts. 2, 4, 5, 9, 15, 28, 35, 89, 92, 99, 106, 107, 108, 111, 114 y 115. Por lo antes señalado, y en relación con las Constituciones del resto de los Estados, las mismas pueden ser consultadas en la siguiente página de internet: <http://www.ordenjuridico.gob.mx/>. La página de internet es tomada como referencia en virtud de lo establecido en la fracción XXXI del artículo 27 de la Ley Orgánica de la Administración Pública Federal y artículo 22 del Reglamento Interior de la Secretaría de Gobernación” (Universidad de Guadalajara, 2014)

La existencia de excesivas normas, regulaciones, decretos, reformas y acuerdos los cuales deben ser atendidos y cumplidos en tiempo y de forma obligatoria por organismos públicos dedicados a la enseñanza superior, crea la necesidad de contar con modelos de control interno óptimos y acorde a sus necesidades, tanto para dar cumplimiento a su marco jurídico regulatorio como para cumplir con los indicadores de calidad que se ha trazado el organismo en cuestión, lo que le permite a los responsables dar cumplimientos a los objetivos planteados, aún si estos generan cambios radicales en los procesos cotidianos del desarrollo de las actividades normales. Sin importar si se esté tratando de procesos que sean totalmente conocidos y definidos, o de actividades sobre las cuales no se tenga un total control debido a diferentes factores, debe de ser posible evaluar satisfactoriamente el rendimiento que tenga el desempeño y la productividad al interior de cada una de las diferentes instituciones, para este caso en específico se tratan aquellos factores que se relacionan con el nivel superior, es decir con las universidades públicas, por tanto, debe entenderse que las funciones administrativas obedecen primeramente a las disposiciones federales y en segundo término a los decretos de cada estado, para este caso se están estudiando lo dispuesto para el Estado de Jalisco.

“Gestión y gobierno. La gestión garantiza la sustentabilidad de las funciones de la Red Universitaria: administración, manejo, custodia y aplicación de los ingresos, egresos y fondos disponibles, ajustándose a las disposiciones fiscales, reglamentarias y administrativas aplicables en el cumplimiento de los programas. El gobierno institucional actualiza, aplica y asegura el cumplimiento de las reglas, normas y disposiciones jurídicas de observancia obligatoria, al realizar las funciones institucionales recurriendo a la participación democrática” (Universidad de Guadalajara, s/f)

Problemática. La Reforma Educativa anunciada a principios del presente sexenio siendo presidente de la republica el Mtro. Enrique Peña Nieto, no solo viene a evaluar los procesos de enseñanza aprendizaje sino todo lo que lo rodea, ello incluye los controles internos que determinen las formas correctas con las cuales es posible mantener un eficiente sistema administrativo y contable, los cambios a partir de la implementación de la LCG, permite detectar detalles que se relacionan con deficiencias o errores en el establecimiento de medidas para el Control Interno (en adelante CI), por tanto la propuesta de investigación está dirigida a:

La identificación de los criterios para el diseño de un modelo de control interno acorde con los requerimientos actuales que efficienten los procesos sin perder información que ayude en el logro de los objetivos planteados.

Conocer los objetivos de los programas de apoyo financieros a los académicos así como sus requerimientos para entender los procesos que generan Delimitar el alcance y la distribución de responsabilidades, según los criterios para el diseño del modelo de control interno.

Evaluar los procesos de mayor riesgo para considerar el establecimiento de controles que eviten la posibilidad del peligro en el proceso en cuestión.

Teniendo como principales ideas de investigación los anteriores puntos, sirven como espacio de partida ya que es necesario primeramente determinar los criterios para construir el instrumento que evalúa el CI, actual y construir al mismo tiempo una propuesta que sea viable para su implementación dentro de los diferentes centros universitarios de tipo público. La propuesta para llevar a cabo el presente análisis, se basa en la detección de una necesidad claramente visible dentro del sistema de manejo y control que internamente desarrollan las instituciones educativas públicas dentro del Estado de Jalisco, ya que en el momento en que se hacen públicas las convocatorias de apoyo económico para que el personal académico de una institución de educación superior participe, lo único que se conoce es eso el documento en cuestión y las políticas de control se transmiten de forma verbal sin que exista un documento publicado o socializado en el organismo Por lo tanto, se aplican métodos de auditoría y control, desarrollados a partir de diferentes conceptos que van a ser tomados como base de acuerdo a lo que las literaturas de apoyo destinadas al campo de estudio del CI, pueden aportar para beneficio de la investigación, al mismo tiempo que enriquecen los conocimientos y habilidades a nivel profesional de quien la realiza, creando un beneficio a futuro con el cual le sea posible desarrollarse.

Por lo anterior se presentan los siguientes cuestionamientos: ¿Cómo seleccionar los criterios para el diseño del modelo de control interno contable en una universidad pública? ¿Es posible evaluar los riesgos a partir de los objetivos del programa? ¿Los resultados obtenidos ayudan a determinar los criterios a incluir para el desarrollo del modelo de control interno? Teniendo como objetivo general: La identificación de los elementos que forman parte del modelo de control interno en el área administrativa dentro de las Universidades Publicas, de acuerdo a las normas y regulaciones aplicables por la Federación y por la gestión gubernamental estatal. Objetivos específicos:

Identificar los riesgos a partir del análisis de los objetivos del programa de apoyo a evaluar.

Presentar los componentes básicos del modelo de control interno.

Considerar los riesgos como base de la elaboración de la propuesta

REVISION DE LITERATURA

Existen actividades de control en toda la organización, a todos los niveles y en todas las funciones, las cuales incluyen una gama de actividades muy diversa como son autorizaciones, verificaciones, conciliaciones, revisiones de rentabilidad operativa, salvaguarda de activos y segregación de funciones. Estas pueden dividirse en tres categorías, según el tipo de objetivo de la entidad con el que están relacionadas: las operacionales, la confiabilidad de la información financiera y el cumplimiento de la legislación aplicable. Las actividades de control son las políticas y los procedimientos que ayudan a asegurar que se llevan a cabo las instrucciones de la dirección, así como que se tomen las medidas necesarias para controlar los riesgos relacionados con la consecución de los objetivos de la entidad. La UPEJ, institución en donde se realiza la investigación crea el Consejo Técnico de Finanzas el 4 de Junio de 2004, teniendo como funciones y atribuciones:

Analizar el sistema de control interno; Proponer a las autoridades competentes, acciones que permitan mejorar el sistema de planeación, programación, presupuestación y evaluación del ejercicio del gasto universitario; Proponer las acciones necesarias para que la Universidad cuente con una contabilidad actualizada, en orden, confiable, que emita en forma veraz y oportuna información financiera; Opinar sobre el diseño y desarrollo del SIIAU en el módulo de finanzas; Promover todo aquello que contribuya a crear un eficiente sistema de control interno de la Universidad de Guadalajara (Rectoría General, 20004)

Es importante considerar que la institución en cuestión ve al CI, como una fase del proceso administrativo el cual tiene que ir de la mano del resto de los componentes de este, razón por la cual se considera queda débil en muchos aspectos. Lo plasmado en el documento llevándose a la práctica, otorga a la institución una seguridad razonable de los resultados de sus estados financieros, mas sin embargo es importante no dejar de lado la creación de políticas adheribles pues por el tamaño de la institución es necesario establecerlas. El conocimiento y evaluación del CI, debe permitir al auditor cuando la organización requiera de un examen por parte de este profesional, establecer una relación específica entre la calidad de este dentro de la entidad y el alcance, oportunidad y naturaleza de las pruebas de auditoría.

“La evaluación preliminar del control interno suele influir en la identificación de las principales deficiencias visibles de control. También durante el curso de su trabajo el auditor debe estar al tanto de los asuntos relacionados con el control interno, que puedan ser de interés para el cliente (situaciones a informar). Sin embargo, debe estar al tanto de ellas, a través de la evaluación de los elementos de la estructura del control interno, de la aplicación de procedimientos de auditoría sobre saldos o transacciones de alguna otra manera dentro del curso de la revisión. Como parte de su trabajo, el auditor debe además, proporcionar sugerencias que permitan mejorar la estructura de control interno existente. Violación intencional de los controles establecidos, por parte de personal de alto nivel jerárquico, en detrimento de los objetivos de control. Fallas en la protección de los activos, contra pérdidas, daños o uso indebido de los mismos. Fallas en la ejecución de funciones que son parte de la estructura del control interno, tales como preparación o revisión oportuna de conciliaciones. Faltas de adhesión a las políticas y procedimientos establecidos por el administrador. Otras deficiencias Fallas en el seguimiento y corrección de deficiencias de control interno previamente reportadas.

(Instituto Mexicano de Contadores Públicos A.C., 2013) En sentido amplio, el CI, se define como: un proceso efectuado por el Consejo de Administración, la dirección y el resto del personal de una entidad, diseñado con el objeto de proporcionar un grado de seguridad razonable en cuanto a la consecución de objetivos dentro de las siguientes categorías:

Eficacia y eficiencia de las operaciones.
Confiabilidad de la información financiera.
Cumplimiento de las leyes y normas aplicables.

Consta de cinco componentes relacionados entre sí, se derivan de la manera en que la dirección dirige la empresa y están integrados en el proceso de dirección, cuyos componentes son:

Ambiente de Control
Evaluación de Riesgos
Actividades de Control
Información y Comunicación
Supervisión.

Dado que cada entidad tiene sus propios objetivos y estrategias de implantación, surgen diferencias en la jerarquía de objetivos y en las actividades de control correspondientes, incluso en el caso de que dos

entidades cuenten con los mismos objetivos y rango, sus actividades de control son diferentes; en efecto, cada una está dirigida por personas diferentes que aplican sus propias ideas sobre el CI, además los controles reflejan el entorno de la entidad y el sector en el que opera, así como la complejidad de su organización, su historia y su cultura, influye en los riesgos a los que está expuesta, en particular, puede estar sujeta a requerimientos de información a terceros particulares o a cumplir exigencias legales o normativas específicas.

“En Estados Unidos de América, el Informe COSO ha permitido que académicos, legislativos, directores de empresas, auditores internos y externos y líderes empresariales tengan una referencia conceptual común de lo que significa el Control Interno, no obstante las diferentes definiciones y conceptos que sobre este tema existen. El estudio ha tenido gran aceptación y difusión en los medios financieros y en los Consejos de Administración de las organizaciones, resaltando la necesidad de que los administradores y altos directores presten atención al Control Interno, tal como COSO lo define, recalcando la necesidad de que el Control Interno forme parte de los diferentes procesos y no de mecanismos burocráticos”. (Committee of Sponsoring Organizations of the Treadway Commission, 2013)

El CI, ayuda a que una entidad consiga sus objetivos de rentabilidad y a la prevención de pérdida de recursos, incluyendo la obtención de información financiera confiable, refuerza la confianza de que la empresa cumple con la normatividad aplicable. No importa lo bien concebido que esté y lo bien que funcione, únicamente puede dar un grado de seguridad razonable, no absoluta, a la dirección y al consejo en cuanto a la consecución de los objetivos de la entidad. Importante considerar que el CI, no puede hacer que un gerente malo se convierta en un buen ejecutivo, los cambios en la política o en los programas gubernamentales, las acciones que tomen los competidores o las condiciones económicas pueden estar fuera de control de la dirección, este. El CI, funciona a diferentes niveles con respecto a los diferentes objetivos. En el caso de los relacionados con la eficacia y eficiencia de las operaciones ayuda a asegurar que la dirección sea consciente del progreso o del estancamiento de la entidad.

METODOLOGÍA

Tipo de Investigación: De acuerdo a lo que marca la literatura de Metodología de la Investigación, de Roberto Hernández Sampieri (, existen diferentes tipos de alcance para definir la investigación, para el caso en específico de esta propuesta, y según las descripciones que se brindan en la literatura es una investigación eminentemente cualitativa debido a que como resultado del análisis del programa seleccionado se presentan como resultado únicamente los criterios a incluir para el diseño del modelo de CI. Se considera de tipo exploratorio porque al efectuar el examen a la vez apoya a la preparación para el establecimiento de nuevos modelos que puedan hacer más viable el cumplimiento de indicadores, a través de la investigación de problemas que son poco estudiados o de los que se tiene un limitado conocimiento.

Tipo de Estudio: Para definir el tipo de estudio, debe entenderse que para poder describir el control interno de un organización, entran en juego diferentes factores en los cuales se basa el análisis de los resultados, basándose en una descripción más cualitativa de las variables que dan lugar a cada uno de los puntos de vista.

Delimitación: El alcance y la limitación que tiene el presente documento, se basa en la atención a una propuesta para el desarrollo de un nuevo modelo de control interno para el funcionamiento del área administrativa de las universidades públicas dentro del Estado de Jalisco, por lo que el principal marco de acción, es el análisis de un programa de apoyo financiero a académicos de la Universidad de Guadalajara, el cual sirve de base ya que este tipo de organismos deben dar cumplimiento a una norma igualmente de aplicación para ellas en la república mexicana. Se considera que igualmente impacta a las instituciones de educación privada pues en algunas de las ocasiones se llega a tomar como modelo a las públicas.

Viabilidad: La viabilidad de esta investigación está en relación a que las diferentes instituciones educativas de orden público en el estado de Jalisco, actualmente no tienen un sistema o modelo de control interno que cumplan totalmente con lo estipulado en los requisitos de la normativa y legislación pertinente exigidos

obligatoriamente para poder determinar el funcionamiento completo y correcto del área administrativa de dichas instituciones.

RESULTADOS

Para determinar los componentes del modelo de CI, se analizan los objetivos de la Convocatoria para el Fortalecimiento de los Cuerpos Académicos del Centro Universitario de Ciencias Económico Administrativas de la UdeG, debido a que es la única universidad de la cual se encuentra disponible el documento en internet, es importante considerar los objetivos de la convocatoria para la identificación de los riesgos por lo que se procede a efectuar el análisis en una tabla de la siguiente manera, tomando como base los componentes de un modelo de control en general los cuales ya fueron presentados con anterioridad:

Tabla 1: Análisis de los Objetivos del Programa Objeto de Estudio

Elementos del Modelo de Control Interno	
Objetivos Del Programa:	Fortalecer las funciones sustantivas de docencia, investigación y extensión de los profesores miembros de un Cuerpos Académico (CA).
Convocatoria Para El Fortalecimiento De Cuerpos Academicos	Disminuir las brechas de calidad entre los Cuerpos Académicos (CA) y las Líneas de Generación y Aplicación del Conocimiento (LGAC). Apoyar la socialización de sus proyectos y resultados de investigación para el análisis y evaluación crítica de sus pares académicos.
Ambiente De Control	Las autoridades del departamento de finanzas, así como los miembros del consejo que aprueban las bases de la convocatoria son quienes deben apoyar la observación y cumplimiento de los CI.
Evaluación De Riesgos	El documento en cuestión no establece los criterios para evaluar a una institución como de prestigio y autorizar la estancia del profesor. No existe una base para disminuir las brechas entre un CA, y otro debido a que no se limita acceso a los recursos financieros por parte de los mismos. Existe un riesgo en el documento que se presenta en un congreso ya que no se supervisa que este cumpla con las líneas de generación y aplicación del conocimiento (LGAC) del CA. No se socializan y los favorecidos por el programa desconocen los requisitos de comprobación una vez que se otorgan los recursos.
Actividades De Control	Se hace referencia a un manual de control interno que los profesores beneficiados nunca ven o conocen. Es importante elaborar objetivos adherentes a los ya existentes en relación a: Criterios para considerar una institución como de prestigio para hacer una estancia académica. Establecer límites de participación para los CA, que ya se encuentran consolidados. Establecer límites de participación para los miembros de CA, que no es encuentran consolidados pero que estos son miembros del Sistema Nacional de Investigadores (SNI). Otorgar atribuciones a los miembros de la comisión para rechazar un documento o ponencia cuando este no va a acorde con LGAC. Establecer políticas de difusión del marco normativo acorde a las convocatorias de apoyo financiero para maestros.
Información Y Comunicación	Se recomienda diseñar estrategias de comunicación de los controles internos en relación a las convocatorias en donde participan los maestros, de igual forma para que cambios, modificaciones o adherencias se den a conocer inmediatamente.
Supervisión	Establecer una comisión que supervise dentro del mismo centro universitario la difusión y cumplimiento de los CI establecidos y que evalúe su acatamiento periódicamente.

Se encuentran los objetivos del programa a analizar y se aplican los componentes que todo modelo de control interno establece efectuando un análisis de riesgos para hacer la propuesta en cuestión y que en el siguiente documento de investigación se aplique un marco jurídico y se efectúe la propuesta correspondiente. Fuente propia con datos tomados de (Centro Universitario de Ciencias Económico Administrativas, 2013)

CONCLUSIONES

Las instituciones educativas juegan un papel muy importante en la economía de cualquier nación y México no es la excepción, existe una gran cantidad de instituciones educativas a nivel superior en proporción una por cada estado las cuales viven a base de recursos monetarios que le son asignados por las autoridades federales, por lo cual están obligadas a transparentar el uso y manejo adecuado de sus recursos financieros, lo que hace necesario establecer CI, en todos los procesos y en la totalidad de las áreas. Los riesgos para los cuales deben elaborarse políticas adherentes y que son identificados después del análisis son:

La falta de políticas para identificar a una institución como de prestigio pueden provocar que una vez que el académico asiste a un congreso o estancia se efectuó el gasto y posteriormente se le informe que no se le autoriza.

La falta de controles para eliminar las brechas entre un Cuerpo Académico (en adelante CA) consolidado y uno en consolidación provoca que estos últimos por su estatus tienen acceso a la mayor parte de los recursos económicos del programa, dejando a los CA que se encuentran en proceso de consolidación en desigualdad de circunstancias lo que a la larga generará disminución de la calidad en el apartado de investigación y extensión.

Importante establecer controles a los que se tiene que adherir quienes presentan documentos resultados de investigación en un foro nacional o internacional asegurando la producción de productos de calidad.

Crear un programa de socialización del manual de CI, respecto a la convocatoria el desconocimiento genera que los involucrados al no comprobar en tiempo y forma no se dé cumplimiento a la Ley de Transparencia y a los organismos y grupos sociales que así lo requieren por tratarse de una institución pública.

La entrada en vigor de la Ley de Contabilidad Gubernamental, el pasado 1 de enero de 2009, aunado a los procesos de evaluación de la educación en México hacen necesario establecer CI, más rígidos y socializados, el desconocimiento de los procesos administrativos que impactan a los estados financieros de las instituciones en cuestión se verá reflejado en los números de los estados financieros, y en la oportunidad con que se presenten los resultados. La publicación de las convocatorias para los académicos asociadas a un documento de CI, facilita el entendimiento y el cumplimiento de los requerimientos por parte de los académicos y cualquier otro que pudiera ser candidato a participar en las convocatorias publicadas por las instituciones educativas.

De acuerdo a la Ley de Federal de Transparencia y Acceso a la Información Pública Gubernamental, artículo tres fracciones XIV las universidades públicas en México son consideradas como sujetos obligados, que deben de poner a disposición de la sociedad la información relacionada al conocimiento de toda su estructura organizacional, salarios por puesto así como el manejo relacionado con sus finanzas, el dar cumplimiento a esta ley obliga a los organismos aquí citados a poner especial atención en el control de sus números, y por tratarse algunas de ellas de organismos públicos bastante grandes en los que un consejo o dirección se le imposibilita ejercer una supervisión constante de forma personal tiene que recurrir a delegar autoridad mediante establecimiento de CI. Socializar los CI, no debe dejarse de lado esto apoyará a las universidades públicas a dar cumplimiento a los ordenamientos jurídicos que le aplican y de igual forma a rendir cuentas a la sociedad que es a la que se debe permitiendo que quienes participan en un programa de apoyo se sientan con la tranquilidad de comprobar en tiempo y forma el gasto que se halla ejecutado con el pleno conocimiento de lo que se debe de presentar. Minimizar o evitar los riesgos de toda institución es uno de sus objetivos contables y es a través de los modelos de control interno diseñados para estas que puede lograrlo.

COOPERACIÓN Y CAPACIDAD DE RESPUESTA: SU IMPACTO EN EL DESEMPEÑO OPERATIVO Y EN LA VENTAJA COMPETITIVA DE LA INDUSTRIA MAQUILADORA MEXICANA

Judith Cavazos-Arroyo, Universidad Popular Autónoma del Estado de Puebla

Aurora Irma Máynez-Guaderrama, Universidad Autónoma de Ciudad Juárez

María Teresa Escobedo-Portillo, Universidad Autónoma de Ciudad Juárez

Salvador Noriega-Morales, Universidad Autónoma de Ciudad Juárez

RESUMEN

La perspectiva estratégica de la teoría de recursos y capacidades subraya el papel de éstas como fuentes de desempeño y ventaja competitiva. En este trabajo se analiza si las capacidades operacionales de cooperación y de respuesta, influyen sobre el desempeño operativo y la ventaja competitiva de empresas maquiladoras del norte de México. Para ello, se desarrolla una investigación cuantitativa y transversal. El análisis de los datos se realiza desde una perspectiva confirmatoria, a través de un Modelo de Ecuaciones Estructurales. Los resultados evidencian que la Capacidad Operacional de Cooperación con proveedores incide sobre la Capacidad Operacional de Respuesta, y que ésta influye indirectamente a la Ventaja Competitiva de las organizaciones, a través de la mediación del Desempeño Operativo. Se recomienda profundizar en el impacto que ejercen las Capacidades de Cooperación y Respuesta, sobre otros tipos de capacidades operacionales.

PALABRAS CLAVE: Capacidad Operacional de Cooperación, Capacidad Operacional de Respuesta, Desempeño Operativo Percibido, Ventaja Competitiva Percibida

COOPERATION AND RESPONSIVENESS: THEIR IMPACTS ON THE PERFORMANCE AND THE COMPETITIVE ADVANTAGE OF THE MEXICAN MAQUILADORA INDUSTRY

ABSTRACT

The strategic perspective of the resource-based theory stresses the role of capacities as sources of performance and competitive advantage. This research studies if operational cooperation and operational responsiveness capabilities, affect the operative business performance. A quantitative and transversal research was developed, analyzing data with Structural Equation Modeling. The results show that the operational cooperation with supplier's capability affects operational responsiveness capability, and latter influences indirectly the competitive advantage of organizations through the mediation of the operative performance. It is recommended to perform an in depth investigation regarding the impact that the operational cooperation and operational responsiveness capabilities have on other kinds of capabilities.

Códigos JEL: M00, M11, L20.

KEY WORDS: Operational Cooperation Capability, Operational Responsiveness Capability, Perceived Operational Performance, Perceived Competitive Advantage

INTRODUCCIÓN

La toma de decisiones estratégica pretende que las organizaciones alcancen un mejor desempeño y desarrollen una ventaja competitiva sostenible en el tiempo. En el campo de la gestión, el enfoque basado en los recursos ha buscado que las firmas desarrollen capacidades valiosas y suficientemente diferenciadas, que les permitan superar el desempeño de sus competidores (Allred, Fawcett, Wallin, & Magnan, 2011). Sin embargo, el desempeño de las capacidades y su incidencia sobre indicadores que evidencien el desempeño superior de las organizaciones, varía entre industrias y contextos. Muchas organizaciones buscan un desarrollo más pleno de sus capacidades, porque son una fuente probada de la mejora del desempeño y de la generación de la ventaja competitiva (Newbert, 2007). Flynn, Wu y Melnyk (2010) señalan que son seis las capacidades operativas clave: mejoramiento, innovación, personalización, cooperación, capacidad de respuesta y reconfiguración. En esta investigación se indaga sobre la influencia de la capacidad de cooperación inter-organizacional con los proveedores y la capacidad de respuesta, sobre el desempeño operativo y la ventaja competitiva percibidos.

REVISIÓN DE LA LITERATURA

La *Capacidad Operacional de Cooperación Inter-organizacional*: con los proveedores implica la disposición, tanto de la compañía como de sus proveedores, para realizar los cambios necesarios y así adaptarse a las necesidades de los clientes (Lai, 2009). La cooperación formal se reconoce como un mecanismo clave para fortalecer la capacidad de innovación (Trigo & Vence, 2012), ya que las redes de relaciones brindan oportunidades a las firmas para transferir conocimiento, intercambiar información técnica y así ajustar productos y procesos, además de que mejoran la tasa de adopción de nuevas tecnologías (Tomlinson & Fai, 2013). Por su parte, la *Capacidad Operacional de Respuesta* incluye las habilidades, procesos y rutinas, necesarias para responder a cambios de programación, procesar pedidos de forma oportuna, entregar rápidamente y cumplir con las fechas de entrega programadas (Handfield & Bechtel, 2002). Finalmente, el *Desempeño Operativo y Ventaja Competitiva* percibidos se encuentran relacionados. En su caso, la ventaja competitiva puede emerger de procesos más productivos, innovadores e integrados, que lleven a un mejor desempeño y por tanto a una mayor productividad de los empleados (Koufteros, Verghese, & Lucianetti, 2014). Así, la transformación de habilidades y recursos para lograr una posición estratégica, solamente puede lograrse bajo condiciones que provean beneficios para los clientes, por ello se requiere de una transformación de procesos y la habilidad para desarrollar el conjunto de métodos competitivos que sienten las bases para el logro de un desempeño, por encima de la media de la industria (Powers & Hahn, 2004). Luego, por lo anteriormente expuesto, se plantean las siguientes hipótesis:

H1: La Capacidad Operacional de Cooperación Inter-organizacional con los proveedores impacta positiva y directamente sobre la Capacidad Operacional de Respuesta.

H2: La capacidad de respuesta influye positiva y directamente sobre el desempeño operativo.

H3: La capacidad de respuesta influye directa y positivamente sobre la ventaja competitiva percibida.

H4: El desempeño operativo percibido incide directa y positivamente sobre la ventaja competitiva percibida.

METODOLOGÍA

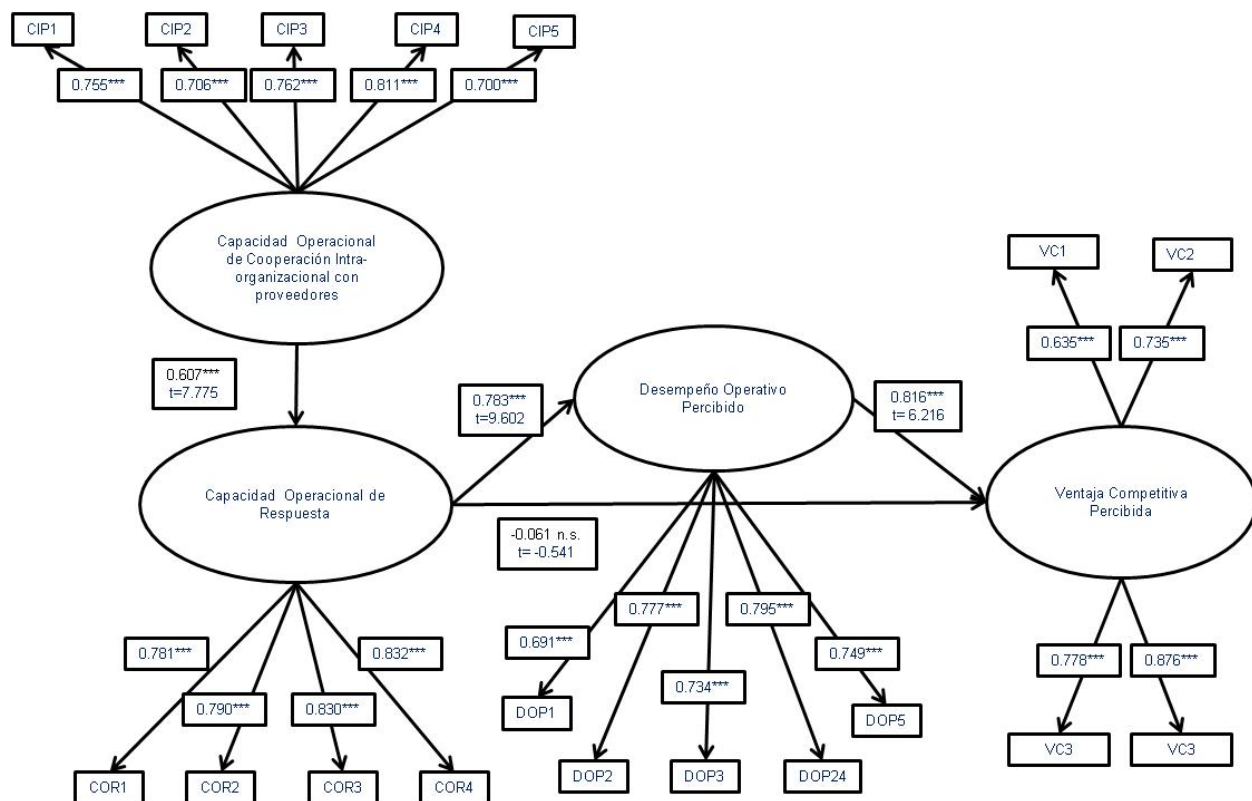

El estudio se desarrolló en empresas maquiladoras ubicadas en Ciudad Juárez, Chihuahua, México. Se diseñó una investigación cuantitativa, de naturaleza empírica y de sección transversal, basada en la revisión de la literatura realizada de las variables Capacidad Operacional de Cooperación Inter-organizacional con proveedores, Capacidad Operacional de Respuesta, Desempeño Operativo Percibido y Ventaja Competitiva Percibida. La contrastación de hipótesis del modelo teórico propuesto, se realizó con un sistema de ecuaciones estructurales basado en covarianzas [CBSEM], dada su utilidad para investigar la plausibilidad de modelos teóricos que expliquen las interrelaciones entre un grupo de variables (Hu & Bentler, 1999). Se

realizó un muestreo fue de tipo no probabilístico selectivo, que buscó acceder a casos representativos de la población de estudio (Rojas Soriano, 2010). En los participantes se incluyó a mandos medios y superiores, laborando en el contexto descrito. Como técnica de recolección de datos se utilizó la encuesta, a partir de un cuestionario auto-administrado, aplicado de mayo a septiembre del año 2012. Se recibieron 330 cuestionarios, de los cuales 19 se desecharon. Luego, el total de instrumentos utilizables fue 311 [94.24% de los recibidos]. Los resultados del análisis factorial confirmatorio evidenciaron que el modelo de medición tiene un buen ajuste, cumpliendo con los criterios de corte convencionales (CFI=0.942, IFI=0.943, MFI=0.807, RMSEA= 0.058); asimismo, los test realizados al modelo de medición muestran que existe validez convergente y discriminante.

RESULTADOS

Los indicadores de bondad del Modelo Estructural mostraron un ajuste adecuado (BBNNFI=0.929, CFI=0.939, IFI=0.940, MFI=0.799, RMSEA=0.059) y se encontró significancia estadística ($p < 0.001$) en las siguientes relaciones [positivas y directas]: H1: Capacidad Operacional de Cooperación Interorganizacional con Proveedores y Capacidad Operacional de Respuesta ($\lambda=0.607$, $t=7.775$); Capacidad Operacional de Respuesta y Desempeño Operativo Percibido ($\lambda=0.783$, $t=9.602$), y H4: Desempeño Operativo Percibido y Ventaja Competitiva Percibida ($\lambda=0.816$, $t=6.216$). Solo en el caso de H3: Capacidad Operacional de Respuesta y Ventaja Competitiva Percibida, la hipótesis se rechazó en virtud de la relación resultó no estadísticamente significativa ($\lambda=-0.061$, $t=-0.541$). El modelo contrastado se presenta en la figura 1.

Figura 1: Modelo Contrastado

En esta figura se exhibe el modelo contrastado. De las cuatro hipótesis planteadas, tres resultaron significativas a un nivel de $p < 0.001$. Con base en la evidencia empírica, se rechaza la relación directa y significativa entre la Capacidad Operacional de Respuesta y la Ventaja Competitiva Percibida. Fuente: Elaboración propia.

En virtud de los resultados obtenidos, se realizó un análisis de mediación, y se encontró que Capacidad Operacional de Respuesta no influye de forma directa sobre la Ventaja Competitiva Percibida (H3, valor path -0.061 n.s., valor $t=-0.541$), sino que solo la incide de forma indirecta, a partir de la mediación completa del Desempeño Operativo Percibido.

CONCLUSIONES

Los resultados de este trabajo evidencian que la Capacidad Operacional de Cooperación Inter-organizacional con los Proveedores y la Capacidad de Respuesta de las empresas maquiladoras de exportación localizadas en Ciudad Juárez, Chihuahua impactan tanto al Desempeño Operativo Percibido como a la Ventaja Competitiva Percibida. Se evidenció que la Capacidad Operacional de Respuesta no impacta de forma directa a la Ventaja Competitiva Percibida, y solamente lo hace a través de la mediación completa del Desempeño Operativo Percibido. Por otra parte, la evidencia empírica de este trabajo confirma que el Desempeño Operativo antecede a la Ventaja Competitiva. Es decir, la Ventaja Competitiva deriva del mejor aprovechamiento de los recursos que permiten desplegar procesos productivos más eficientes, los cuales a su vez generan un mejor desempeño operativo e impactan favorablemente a la posición estratégica de las empresas; en ese sentido, este trabajo coincide con planteamientos realizados por Powers y Hahn (2004), así como con los de Koufteros et al. (2014). Como limitaciones del trabajo se reconoce la imposibilidad de generalizar los resultados, en virtud de que solo son aplicables en el contexto estudiado y que el trabajo se realizó con base en un muestreo no probabilístico. Se recomienda replicar este estudio en otros contextos, con muestras probabilísticas, y profundizar en el impacto que ejercen las Capacidades de Cooperación y Respuesta, sobre otros tipos de capacidades operacionales.

ANÁLISIS DE LA COHERENCIA DE LOS INFORMES DE SOSTENIBILIDAD DE LAS EMPRESAS ECOPETROL Y META PETROLEUM LIMITED (PACIFIC), CON LOS PRINCIPIOS TEÓRICOS DE LA RESPONSABILIDAD SOCIAL

Ángela María Cortés Sánchez, Universidad de San Buenaventura, Bogotá

RESUMEN

El sector hidrocarburos es uno de los más importantes sectores en la economía colombiana, su explotación genera un alto impacto ambiental y social, principalmente por el agotamiento de los recursos no renovables. En los últimos años, Ecopetrol y Meta Petroleum Limited elaboran informes de sostenibilidad mostrando su compromiso con la sociedad. Ante esta situación la presente investigación de tipo cualitativo con enfoque de análisis descriptivo, tiene por objeto contrastar los resultados de estos informes con los principales ejes teóricos de la responsabilidad social Empresarial. En esta ponencia expondremos a manera de informe parcial los siguientes apartados: I. Descripción del Sector de Hidrocarburos en Colombia. II. Ejes Conceptuales de la RSE y de la Sostenibilidad. III. Perspectivas.

META PETROLEUM LIMITED (PACÍFICO), CON LOS PRINCIPIOS TEÓRICOS DE LA RESPONSABILIDAD SOCIAL

ABSTRACT

The sector hydrocarbons is one of the most important sectors in the Colombian economy, his exploitation generates a high environmental and social impact, principally for the depletion of the not renewable resources. In the last years, Ecopetrol and Meta Petroleum Limited elaborate reports of sustainability showing his commitment with the company. Before this situation the present investigation of qualitative type with approach of descriptive analysis, has for object confirm the results of these reports with the principal theoretical axes of the social Managerial responsibility. In this paper we will expose like partial report the following paragraphs: I. Description of the Sector of Hydrocarbons in Colombia. II. The Conceptual axes of the RSE and Of the Sustainability. III. The Perspectives.

PALABRAS CLAVES: Responsabilidad Social, Sostenibilidad, Sector de Hidrocarburos, Políticas gubernamentales, Impacto Ambiental.

Descripción del Sector de Hidrocarburos En Colombia

En la economía colombiana, es relevante el aporte presupuestal que realiza el sector minero energético al Producto Interno Bruto (PIB) en el país, destacando el vertiginoso crecimiento de este sector, el cual ocupa el cuarto lugar de participación en el PIB. (Otero. 2012). El 54% de las exportaciones colombianas son por petróleo, productos derivados del petróleo y productos conexos, ratificando la importancia del sector hidrocarburos en la economía Colombiana. (Proexport Colombia). El sector de hidrocarburos ha presentado en los últimos años un crecimiento significativo presentado principalmente por la explotación de crudo y su exportación, con un crecimiento promedio en los últimos 5 años del 14%. Ya que es uno de los más importantes sectores en la economía colombiana, se da la razón del apoyo que ha tenido a través de las políticas gubernamentales, principalmente a través del Plan Nacional de Desarrollo 2010-2014 donde

ratifica el impulso a la locomotora minero energética. A pesar que es un sector que impulsa la economía colombiana, su explotación genera un alto impacto ambiental y social, siendo más visibles los impactos ambientales por el agotamiento de los recursos no renovables. En el Plan Nacional de Desarrollo 2010 - 2014 indica que es posible aprovechar responsablemente la riqueza que posee el país cuantificada en recursos naturales, buscando generar un crecimiento sostenible y una mayor equidad social, pero no son claros los mecanismos para lograrlo a través de la locomotora minero energética. Por ello se debe partir de definir la Responsabilidad Social (RS), ya que esté es un tema de auge pero no nuevo; siendo entonces, oportuno analizar las empresas del sector de hidrocarburos que tienen la mayor extracción de petróleo en Colombia, examinando si la RS de las empresas propende por responder a las realidades, culturas y propósitos de las colectividades donde desarrollan su actividad.

Procesos de Extracción

Las empresas de extracción se dedican a: la perforación de pozos, cuya finalidad es llegar hasta la capa de roca donde posiblemente se pudieron acumular los hidrocarburos (petróleo y gas). Esta etapa inicial, por lo general, se implementa después de que se obtiene la información del estudio sísmico. Las empresas de producción se encargan de extraer los hidrocarburos (petróleo y gas) desde la capa de roca hasta la superficie. Las empresas refinadoras de petróleo se dedican a transformar el petróleo sometándolo a altas temperaturas, que alcanzan los 400 grados centígrados, con el fin de obtener productos derivados. Las empresas distribuidoras se encargan de transportar los hidrocarburos desde la boca del pozo hasta los sitios de almacenamiento y procesamiento, como son las estaciones de bombeo, refinerías y centros de comercialización (puertos).

Rasgos de las Empresas Seleccionadas En la Investigación

La cadena productiva de los hidrocarburos está conformada por varias empresas a lo largo de sus cuatro grandes actividades: la extracción, producción, refinación y distribución. Por ello se considera relevante realizar una muestra por conveniencia que permite realizar interpretaciones en el sector de hidrocarburos a través de los hallazgos. Teniendo en cuenta el ranking de las 10 empresas petroleras que realizan una mayor producción de petróleo en Colombia a noviembre del 2011 según la revista Dinero, se seleccionó las dos primeras empresas como representantes de la cadena productiva de hidrocarburos.

Ecopetrol: (primera empresa según el ranking) siendo la única empresa oficial dedicada a: la exploración, producción, transporte, refinación y suministro de Hidrocarburos.

Meta Petroleum Limited: (segunda empresa según el ranking) cuya actividad está enfocada a la exploración y producción de hidrocarburos.

En coherencia con la descripción anterior adentremos en algunos aspectos de la explotación en el Departamento del Meta como correlato referencial fáctico sobre el tema en cuestión. El Meta es uno de los departamentos más prolíficos en su economía y sus ingresos en toda Colombia, los recursos naturales tanto renovables como no renovables que están presentes en este departamento lo hacen ser considerado la despensa de Colombia lo cual nos muestra la importancia que este departamento es para toda Colombia. Su principal y casi única especialización es la extracción de los recursos naturales, donde su producción es casi nula y el sector servicios es únicamente el prestado a sus habitantes pero no es exportable a otras regiones o países. El producto interno bruto de este departamento es de US\$ 17.850 millones de dólares siendo el quinto departamento con más alto PIB pero con un PIB per cápita de 19.684 dólares convirtiéndose en el departamento con mejor PIB per cápita siendo mucho mayor al Nacional que es de US\$ 6.270.

Petróleo

El Petróleo se puede catalogar como el pilar de toda nuestra sociedad al ser la fuente de trabajo y energía, por esta importancia la exploración, explotación y venta de petróleo se ha convertido en el uno de los negocios más rentables que pueda haber en el mundo. Colombia no ha sido catalogada como gran productor de petróleo pero en los últimos años su producción petrolera está llegando a los niveles más altos alguna vez registrados, donde en el 2011 se llegaron a producir en promedio 915.161 barriles diarios mientras que 5 años antes en 2007 solo se había logrado producir 531.093 con lo cual podemos encontrar una variación de un 72.31% y se espera que en los próximos años se siga aumentando esta cifra (ministerio de minas, 2012). El Meta es el mayor productor de petróleo en todo Colombia teniendo más 50% de aportaciones a los barriles diarios producidos en toda Colombia, siendo seguido únicamente por el departamento del Casanare que produce el 17.47% de toda la producción diaria nacional.

Crítica a la Explotación Petrolera

Antes de exponer la descripción crítica de los impactos causados en materia de desigualdad social y daño ambiental de la explotación petrolera en el Departamento del Meta. Recordemos a modo de marco referencial de la problemática en cuestión que al decir de autores como (Aguilar, Galeano & Pérez, 2011) América Latina al extenderse desde los 30 grados de latitud norte hasta el polo sur cobija la mayor biodiversidad del planeta esta riqueza universal debe generar en todos una conciencia eco-planetaria en donde los intereses comunes primen sobre los interés particulares de un capitalismo salvaje. En esta perspectiva encontramos que si bien es líder en la producción petrolera es al mismo tiempo el mayor consumidor del mismo. Esta es una de las razones por las cuales los Vicepresidente de varias empresas petroleras, de la industria nuclear y del carbón, han venido desarrollaron una estrategia a largo plazo en materia energética. Ellos determinaron que en los próximos años, aumentará su dependencia del petróleo extranjero; prevén que ésta pasará del 52% en el año 2002, al 66% en el año 2020.

El consumo subirá de 10,4 mil millones de barriles al día de 2001, a 16,7 mil millones de barriles al día en el año 2020. Para alcanzar esta meta, según el gobierno de Estados Unidos tendrá que convencer a sus aliados proveedores extranjeros para incrementar la producción; sin embargo, la única región que puede incrementar sustancialmente los volúmenes de explotación de crudo es el Golfo Árabe. Pero esta es una región inestable políticamente hablando, por lo que se ha propuesto aumentar la diversidad geográfica de sus proveedores, poniendo su mira en zonas tales como el Mar Caspio –especialmente Azerbaijan y Kazakastán, el África Sub-Sahariana con énfasis en mares profundos de Angola y Nigeria– y América Latina, especialmente Colombia, Venezuela y México (Aguilar, Galeano & Pérez,

Ejes Conceptuales de la RSE y de la Sostenibilidad

Una vez expuesta la descripción sobre los rasgos más sobresalientes de la explotación de hidrocarburos en Colombia presentaremos una síntesis de las teorizaciones sobre Responsabilidad Social Empresarial articulada con los principios teóricos fundamentales de la sostenibilidad a modo de marco conceptual de la investigación en cuestión.

Teoría de los Grupos de Interés: Donde se remite a los Stakeholders Theory que a decir de algunos estudiosos de la Responsabilidad Social Empresarial (RSE) ha adquirido singular relevancia (Ullman, 1985) la definición más generalmente aceptada sobre el concepto de stakeholders es precisamente la que proporciona (Freedman, 1984) que, con la publicación de su estudio “Strategic management: A stakeholder approach”, señala que los “partícipes son cualquier grupo o individuo que influye o es afectado por la actividad o los objetivos de la compañía, los que pueden tener un sin fin de formas y clasificaciones y que además, estarán determinados en buena parte por las propias características y dimensiones de la empresa”.

Teoría de la Legitimidad: Expuesta por Carlos Marx, ésta teoría cuyo origen estriba en la existencia de un contrato social entre la empresa y la sociedad, siendo el resultado de la aplicación del estudio de los negocios éticos, subsistiendo en la organización cuando los objetivos y modos de operar son acordes con las normas sociales y la protección de la comunidad (Celis, 2004). La empresa en esta idea se configura y expresa con un enfoque institucional considerada como organización social coordinadora de recursos y con capacidad de influencia, incluso en la legislación, los gustos y preferencias de los consumidores y en la opinión pública, yendo más allá que la teoría de los Grupos de Interés.

Teoría de la Política Económica: Ésta concibe a las corporaciones desde un horizonte más trascendente, influido desde la complejidad de un gran sistema social, económico y político de la existencia de entes en las que se contempla principalmente, las relaciones sociales de producción vinculadas con las partes afectadas dentro del sistema de intercambio productivo (Celis, 2004). Como sucede con la teoría de la legitimación, ésta también se enfoca institucionalmente, pero a un nivel más vasto y legislado, en el que la política económica de los gobiernos lleva a cabo un papel protagónico, en tanto que, los intereses de los participantes se benefician mediante los mecanismos del mercado que los vinculan, siendo muy relevante la injerencia que las empresas pueden tener en las propias normas establecidas.

Teoría Institucional: Procediendo a un sistema de valores sociales, reglas, creencias y definiciones en sintonía con la sociedad, llevando a la conformidad con el sistema y respondiendo a la aceptación social, es decir, para percibir como legítima a una organización, el modelo de estructuras, organizaciones y acciones que asume y seguirá la prescripción de las normas y principios sociales (Ruiz, 1994). La perspectiva de la teoría institucional es más amplia que la teoría de la legitimación. En lugar de explorar directamente el sistema de baluartes de la sociedad, contempla el patrón de las instituciones establecidas como representación simbólica del sistema de valores sociales.

Teoría de la Dependencia de Recursos: Para que exista una dependencia de los recursos, debe haber un actor que suple a otro con un recurso que cumple con por lo menos una de las siguientes características: concentración (transacciones por pocas organizaciones), control (posesión, acceso, uso, capacidad de fijar las reglas), no movilidad (cambiar de proveedor), no sustituible (no hay sustituto), esencial (la organización no puede funcionar sin el producto). Por último veamos lo relativo al concepto de sostenibilidad. En este ámbito exponemos una sucinta definición del mismo y las teorizaciones más importantes en torno al mismo.

Concepción de Sostenibilidad

La sostenibilidad es un marco de referencia, un cúmulo de valores, un conjunto de principios, que dan lugar a un proceso abierto en pos de la perdurabilidad. Esta búsqueda de la perdurabilidad, se aplica tanto al diseño del modelo de desarrollo, como al entorno natural, con la finalidad de mantener y mejorar las condiciones de vida de las generaciones que ahora viven y de las que lo harán en el futuro, al tiempo que se salvaguardan las formas de vida no humanas. La sostenibilidad es, de esta manera, una apuesta rotunda de futuro. (González. 2010).

Teoría de la Modernización: La teoría de la modernización establece que las sociedades modernas son más productivas, los niños están mejor educados, y los necesitados reciben más beneficios. El análisis de Smelser afirma que las sociedades modernas tienen el aspecto particular de la diferenciación estructural particular, es decir, una definición clara de las funciones y papeles políticos de las instituciones. Smelser argumenta que aunque la diferenciación estructural ha aumentado la capacidad funcional de las instituciones modernas, pero a la vez también ha creado un problema de integración, y de coordinación de las actividades de diferentes nuevas instituciones. En el sentido político, Coleman resalta 3 aspectos fundamentales de las sociedades modernas: a) diferenciación de la estructura política; b) secularización de

la cultura política (con la ética de la igualdad); c) aumento de la capacidad del sistema político de una sociedad.

Teoría de la Dependencia

Las bases de la teoría de la dependencia surgieron en 1950 como resultado, entre otros, de las investigaciones de la Comisión Económica para América Latina y el Caribe (CEPAL). Uno de los autores más representativos fue Raúl Prebisch. El punto principal del modelo Prebisch es que para crear condiciones de desarrollo dentro de un país es necesario:

Controlar la tasa de cambio monetario, poniendo mayor énfasis en políticas fiscales que en políticas monetarias.

Promover un papel gubernamental más eficiente en términos de desarrollo nacional;
Crear una plataforma de inversiones, dando prioridad al capital nacional;
Permitir la entrada de capitales externos siguiendo prioridades ya establecidas en planes de desarrollo nacionales;

Promover una demanda interna más efectiva en término de mercados internos como base para consolidar el esfuerzo de industrialización en Latinoamérica en particular y en naciones en desarrollo en general;
Generar una mayor demanda interna incrementando los sueldos y salarios de los trabajadores.

Teoría De Los Sistemas Mundiales

Al comienzo de la década de los sesentas, los países del Tercer Mundo desarrollaron nuevas condiciones sobre las cuales intentaron elevar sus estándares de vida y mejorar sus condiciones sociales. Estas nuevas condiciones estaban relacionadas con el hecho de que los sistemas internaciones financieros y de intercambio tenían cada vez menos influencia. Básicamente estas nuevas circunstancias económicas internacionales hicieron posible que un nuevo grupo de investigadores radicales bajo el liderazgo de Immanuel Wallestein llegaran a la conclusión de que habían nuevas actividades en la economía capitalista mundial que no podían ser explicadas dentro de los confines de la teoría de la dependencia.

Teoría de la Globalización: La teoría de la globalización surge del mecanismo global que presenta una mayor integración con énfasis particular en la esfera de las transacciones económicas. En este sentido esta perspectiva es parecida al enfoque de los sistemas mundiales. Sin embargo, una de las características fundamentales de la teoría de la globalización es que se centra y enfatiza aspectos culturales y económicos así como de comunicación a escala mundial. Esta escuela argumenta que los principales elementos modernos para interpretar los procesos de desarrollo son los vínculos culturales entre los países, además de los vínculos económicos, financieros y políticos. En esta comunicación cultural, uno de los factores más importantes es la creciente flexibilidad de la tecnología para conectar a la gente alrededor del mundo.

Principales Rasgos o Características de la Sostenibilidad: El sistema económico basado en la máxima producción, el consumo, la explotación ilimitada de recursos y el beneficio como único criterio de la buena marcha económica es insostenible. Un planeta limitado no puede suministrar indefinidamente los recursos que esta explotación exigiría. Por esto se ha impuesto la idea de que hay que ir a un desarrollo real, que permita la mejora de las condiciones de vida, pero compatible con una explotación racional del planeta que cuide el ambiente. Es el llamado desarrollo sostenible. La más conocida definición de Desarrollo sostenible es la de la Comisión Mundial sobre Ambiente y Desarrollo (Comisión Brundtland) que en 1987 definió Desarrollo Sostenible como:

"El desarrollo que asegura las necesidades del presente sin comprometer la capacidad de las futuras generaciones para enfrentarse a sus propias necesidades". Según este planteamiento el desarrollo sostenible tiene que conseguir a la vez:

Satisfacer a las necesidades del presente, fomentando una actividad económica que suministre los bienes necesarios a toda la población mundial. La Comisión resaltó "las necesidades básicas de los pobres del mundo, a los que se debe dar una atención prioritaria".

Satisfacer a las necesidades del futuro, reduciendo al mínimo los efectos negativos de la actividad económica, tanto en el consumo de recursos como en la generación de residuos, de tal forma que sean soportables por las próximas generaciones.

Características de un Desarrollo Sostenible: Las características que debe reunir un desarrollo para que lo podamos considerar sostenible son:

Busca la manera de que la actividad económica mantenga o mejore el sistema ambiental.
Asegura que la actividad económica mejore la calidad de vida de todos, no sólo de unos pocos selectos.

Usa los recursos eficientemente.
Promueve el máximo de reciclaje y reutilización.

Para conseguir un desarrollo sostenible:

Un Cambio de Mentalidad

En la mentalidad humana está firmemente asentada una visión de las relaciones entre el hombre y la naturaleza que lleva a pensar que:

Los hombres civilizados estamos fuera de la naturaleza y que no nos afectan sus leyes.
El éxito de la humanidad se basa en el control y el dominio de la naturaleza.
La Tierra tiene una ilimitada cantidad de recursos a disposición de los humanos.

Estos planteamientos se encuentran firmemente asentados en el hombre, especialmente en la cultura occidental que, desde hace unos cuatro siglos, ha visto el éxito de una forma de pensar técnica y centrada en el dominio de la naturaleza por el hombre. El punto de vista del desarrollo sostenible pone el énfasis en que debemos plantear nuestras actividades "dentro" de un sistema natural que tiene sus leyes. Debemos usar los recursos sin trastocar los mecanismos básicos del funcionamiento de la naturaleza. Un cambio de mentalidad es lento y difícil. Requiere afianzar unos nuevos valores. Para hacerlo son de especial importancia los programas educativos y divulgativos. Tiene mucho interés dar a conocer ejemplos de actuaciones sostenibles, promover declaraciones públicas y compromisos políticos, desarrollar programas que se propongan fomentar este tipo de desarrollo.

Perspectivas

En este primer avance de la investigación en cuestión expondremos a modo de tesis las inferencias de las posibles implicaciones de naturaleza ética que las directrices de la RSE y de los fundamentales principios de la Sostenibilidad aportan a las prácticas de las empresas explotadoras de hidrocarburos:

- La RSE, lejos de ser una práctica empresarial sin fundamento, tiene fuertes raíces teóricas y en ellas se puede fundamentar sólidamente las acciones que los entes económicos lleven a cabo. Por un lado, están aquellas teorías que las promueven a través de las relaciones con los demás agentes sociales o Grupo de Interés, en alineamiento con lo que la sociedad les exige, según la Teoría de la Legitimación; así como las

que, de una forma más pragmática acuden a la justificación de la necesidad de recursos como los es la Teoría de la Dependencia de los Recursos. Estas orientaciones se deben materializar en acciones concretas de prácticas integrales que articulen en el quehacer de las empresas explotadoras de hidrocarburos los tres factores fundamentales de la RSE (lo económico, lo ambiental y lo social). Existe una fuerte ausencia de políticas responsables empresariales, en las que, por la falta de diálogo con la dimensión social del contexto en donde las empresas realizan su trabajo, no se ejecutan de manera integral las perspectivas teóricas de las RSE. La articulación de la perspectiva teórica de la RSE y los principios fundamentales de la sostenibilidad constituyen un nuevo **ethos** que posibilitaría la implementación de una ética-social integral en la proyección de las empresas que explotan recursos no renovables. Por último, concluye que todas estas teorías son complementarias y nos permiten dar un adecuado marco teórico acerca del comportamiento responsable de las empresas, se dará seguimiento a estas reflexiones para hacer otras valoraciones que aquí quedaron sólo plasmadas a nivel documental.

ANÁLISIS DE COINTEGRACIÓN ENTRE EL ÍNDICE DE PRECIOS DEL PRODUCTOR Y DEL CONSUMIDOR INCORPORANDO CAMBIOS ESTRUCTURALES: EL CASO DE MÉXICO

Mario Gómez Aguirre, Universidad Michoacana de San Nicolás de Hidalgo
José Carlos Rodríguez Chávez, Universidad Michoacana de San Nicolás de Hidalgo

RESUMEN

En este artículo se analiza si existe una relación de largo plazo entre el índices de precios del productor y consumidor para el caso de México, permitiendo un cambio estructural, durante el periodo 1994:01 - 2013:10. Para ello, se utilizan pruebas de raíz unitaria (Lee y Strazicich, 2003) y de cointegración (Gregory y Hansen, 1996a, 1996b). Los resultados muestran que las series tienen raíz unitaria y que existe una relación de equilibrio de largo plazo entre los precios. Lo anterior es de gran utilidad para el banco central, ya que en el largo plazo ambos precios convergen a una tendencia común, y la inflación alcanzada con uno de precios, también se alcanzará con el otro.

PALABRAS CLAVE: precios; cointegración; cambio estructural; México.

COINTEGRATION ANALYSIS BETWEEN PRODUCER PRICE INDEX AND CONSUMER PRICE INDEX INCORPORING STRUCTURAL CHANGES: THE CASE OF MEXICO

ABSTRACT

This article examines whether there is a long run relationship between the price indices of producer and consumer in the case of Mexico, allowing for structural change over the period 1994:01 -2013:10. To do this, unit root tests (Lee and Strazicich, 2004) and cointegration (Gregory and Hansen, 1996a y 1996b) are used. The results show that the series have a unit root and that there is a relationship between long-run equilibrium prices. This is useful for the central bank, since in the long run both prices converge to a common trend, and inflation rates achieved with one, also be achieved with the other.

INTRODUCCIÓN

Uno de los objetivos más importantes de los Bancos Centrales es la estabilidad del poder adquisitivo de la moneda nacional (Moreno, 2009), debido a que una inflación baja y predecible puede contribuir al ahorro, la inversión, al crecimiento de la actividad económica y a la creación de empleos. Para alcanzar el objetivo, suelen utilizarse diferentes índices, como el índice de precios del productor y el índice de precios del consumidor, sin embargo, es muy importante saber si existe una desviación persistente o transitoria entre ellos, debido a que pueden dar como resultado diferentes tasas de inflación si no existe una relación de largo plazo entre los índices (Roa y Sayed, 2010). En esta investigación se analiza la relación de cointegración entre los precios del productor y del consumidor para el caso de México, durante el periodo 1994:01 -2013:10. Para ello, se utilizan pruebas de raíz unitaria (Lee y Strazicich, 2004) y de cointegración (Gregory y Hansen, 1996a y 1996b). Los resultados muestran que las series tienen raíz unitaria y que existe

una relación de equilibrio de largo plazo entre los precios. Lo anterior es de gran utilidad para el banco central, ya que en el largo plazo ambos precios convergen a una tendencia común, y si el objetivo de inflación se alcanza con uno de precios, también se alcanzará con el otro.

En términos econométricos, la estabilidad de los parámetros de un modelo de regresión es una de las hipótesis básicas en econometría, la cual es necesaria para la predicción y la inferencia econométrica. Cambio estructural o inestabilidad estructural ha sido interpretada comúnmente como cambios en los parámetros de un modelo de regresión (Maddala y Kim, 1998). En este sentido, si existen cambios estructurales y no son incorporados en los modelos pueden afectar los resultados de los pruebas de raíz unitaria y de cointegración. Por ejemplo, algunas pruebas de raíz unitaria que permiten cambio estructural son la de Zivot y Andrews (1992), Perron (1997) y Lumsdaine y Papell (1997). Aunque estas pruebas han sido criticadas porque suelen determinar incorrectamente el periodo de cambio estructural, y realizan rechazos espurios de la hipótesis nula de raíz unitaria, ya que sólo incorporan los cambios estructurales en la hipótesis alternativa y no en ambas (hipótesis nula e hipótesis alternativa). Erróneamente se puede rechazar la hipótesis nula de raíz unitaria en una serie y aceptar que es estacionaria cuando en realidad puede tener raíz unitaria con cambio estructural. Esta desviación y rechazo espurio, aumentan con la magnitud del cambio estructural (Lee y Strazicich, 2001 y 2003). En este mismo sentido, Lee y Strazicich (2004) y Kim y Perron (2009) desarrollan una prueba de raíz unitaria que permite un cambio estructural en la función tendencia en un periodo de tiempo desconocido. Este cambio estructural se incorpora bajo las hipótesis nula y alternativa.

Para el caso de México no se encontró ningún estudio sobre la relación de cointegración entre los dos precios que tome en cuenta la presencia de cambio estructural. Conocer si existe una relación de equilibrio a largo plazo o una desviación persiste es muy importante para la conducción de la política monetaria para la estabilidad de precios, ya que es uno de los objetivos más importantes de la política monetaria. El artículo está estructurado como sigue: después de la introducción, en la siguiente sección, se analiza la revisión de literatura; posteriormente, se describen las metodologías econométricas que se utilizan en el estudio; ken seguida se presentan y analizan los resultados; para finalmente, terminar con una sección de conclusiones.

REVISIÓN DE LITERATURA

En esta sección, se describe brevemente la revisión de literatura empírica sobre la relación de causalidad y cointegración entre el IPC y el IPP. Por mencionar algunos: Colclough y Lange (1982); Jones (1986); Caporale *et al.* (2002); Ghazali *et al.* (2008); Sidaoui *et al.* (2009); Aviral y Shahbaz (2010); Shahbaz *et al.* (2010); Akcay (2011); Shahbz *et al.* (2012); Gómez y Navarro (2014). Los resultados de esta literatura son mezclados, algunos los resultados proveen evidencia de que existe una relación de cointegración de largo plazo entre los precios y que existe evidencia de relación de causalidad de los precios que puede ir en uno u otro sentido o en ambos. Específicamente, el único estudio que se encontró en relación al análisis de cointegración para el caso de México es el de Sidaoui *et al.* (2009), quienes encuentran evidencia de que existe una relación de cointegración de largo plazo entre ambos precios, sin embargo, en este estudio no se contempla la posibilidad de una análisis de cointegración con cambio estructural en la metodología econométrica.

METODOLOGIA

Para realizar el análisis de cointegración, primeramente debemos conocer el orden de integración de las variables. Para ello, utilizamos la prueba de Lee y Strazicich (2004) que considera el siguiente pgd:

$$y_t = \delta' Z_t + X_t, \quad X_t = \beta X_{t-1} + \varepsilon_t \quad (1)$$

Donde Z_t contiene variables exógenas. La hipótesis nula de raíz unitaria se representa por el parámetro $\beta = 1$. Si $Z_t = [1, t]$, entonces pgd es equivalente al de la prueba de raíz unitaria LM (*Lagrange Multiplier*) de Schmidt y Phillips (1992, SP). Lee y Strazicich (2004) consideran para la prueba solamente el Modelo “*Crash*”, que permite un cambio estructural en el intercepto y el Modelo “*Mixed*” que permite un cambio estructural en el intercepto y la pendiente, ya que la mayoría de las series de tiempo económicas se describen adecuadamente con estos dos modelos. Para el caso del primer modelo $Z_t = [1, t, D_t]$, donde $D_t = 1$ para $t \geq T_b + 1$, y 0 de otra forma, T_b es el periodo de tiempo del cambio estructural y $\delta' = (\delta_1, \delta_2, \delta_3)$. Para el Modelo “*Mixed*”, que permite un cambio estructural en el intercepto y pendiente de la tendencia bajo la hipótesis alternativa $Z_t = [1, t, D_t, DT_t]$, donde $DT_t = t - T_b$ para $t \geq T_b + 1$, y 0 de otra forma. El pgd incorpora el cambio estructural bajo la hipótesis nula y alternativa, y se determina endógenamente.

De acuerdo al principio LM, la prueba estadística de raíz unitaria se obtiene de la siguiente regresión:

$$\Delta y_t = \delta' \Delta Z_t + \phi \tilde{S}_{t-1} + u_t \quad (2)$$

Donde $\tilde{S}_t = y_t - \varphi_x - Z_t \tilde{\delta}$, $t = 2, \dots, T$; $\tilde{\delta}$ son los coeficientes de la regresión de Δy_t sobre ΔZ_t ; y φ_x es el *maximum likelihood estimation (MLE)* restringido de $\varphi_x (= \varphi + X_0)$ dado por $y_1 - Z_1 \tilde{\delta}$. Es importante considerar que la prueba de regresión (2) toma en cuenta a ΔZ_t en lugar de Z_t . Por lo tanto, ΔZ_t es descrita por $[1, B_t]$ en el Modelo “*Crash*” y $[1, B_t, D_t]$ en el Modelo “*Mixed*”, donde $B_t = \Delta D_t$ y $D_t = \Delta DT_t$. De esta manera, B_t y D_t corresponden a un cambio en el intercepto y en la tendencia bajo la hipótesis alternativa. La hipótesis nula de raíz unitaria es descrita por $\phi = 0$. Para corregir la autocorrelación en los errores, se incluyen términos de $\Delta \tilde{S}_{t-j}$, $j = 1, \dots, k$ en la regresión (2) como en la prueba de DFA estándar.

Para el caso de la prueba de cointegración que permite un cambio estructural en la relación de largo plazo, se utiliza la metodología sugerida por Gregory y Hansen (1996a, 1996b). El procedimiento considera cuatro posibles modelos para incorporar el cambio estructural: 1) el modelo con cambio de nivel; 2) el modelo con cambio de nivel y tendencia; 3) modelo cambio de régimen (ambos nivel y tendencia puede cambiar); y 4) modelo con cambio de régimen y con cambio de tendencia. Se define la variable dummy $D_t(T_b) = 0$ si $t \leq T_b$ y 1 de otra forma, donde T_b denota el periodo de tiempo del cambio estructural. En esta investigación se considera que el modelo más adecuado puede ser el 4, ya que ambas series de precios muestran claramente una tendencia (que puede ser determinística y/o estocástica) en el periodo de análisis, el cual se describe a continuación:

$$IPC_t = \alpha_1 + \alpha_2 D_t(T_b) + \beta_1 t + \beta_2 t D_t(T_b) + \delta_1 IPP_t + \delta_2 IPP_t D_t(T_b) + e_t \quad (3)$$

Donde: IPP_t y IPC_t son el índice nacional de precios del productor y del consumidor respectivamente, expresadas en logaritmos naturales; α_1 es la constante, β_1 es el coeficiente de pendiente y δ_1 es el coeficiente de tendencia, antes del cambio estructural respectivamente; mientras α_2 , β_2 y δ_2 son los parámetros después del cambio estructural; y finalmente, ϵ_t son los errores ruido blanco.

RESULTADOS

Los datos de precios fueron tomados del Instituto Nacional de Estadística y Geografía (INEGI) para el periodo 1996:01-2013:10. En la Figura 1 se muestra el índice de precios del consumidor y del productor, con una tendencia positiva muy similar en ambos índices después de la crisis de 1994-1995, que tiende a disminuir (relativamente) dicha pendiente a partir de 1999. Esta tendencia puede ser determinística o estocástica, por lo que es necesario determinar el orden de integración de las series a través de la prueba de raíz unitaria de Lee y Straciczich (2004), para ver si existen las condiciones estadísticas para llevar a cabo la prueba de cointegración de Gregory y Hansen (1996a y 1996b).

Figura 1: Comportamiento del Índices de Precios del Productor y del Consumidor

En esta figura se representa el comportamiento del índice de precios del consumidor y del productor para el caso de México durante el periodo 1995:01-2013:10. Fuente: elaboración propia.

Los resultados en el Tabla 1 indican que ambas variables tienen la raíz unitaria en niveles y son estacionarias en primeras diferencias a un nivel de significancia del 5% para el IPP y del 10% para el IPC. Con esta información, podemos señalar que existen las condiciones para realizar el análisis de la relación a largo plazo de los precios con la metodología de Gregory y Hansen (1996a, 1996b).

Tabla 1: Resultado de la Prueba de Raíz Unitaria.

Variable En Nivel	Parámetros Determinísticos	LS
IPC	CT	Nivel -0.797 (1999:01)
IPP	CT	-3.689 (1998:11)
IPC	C	1ra diferencia -4.280 (2003:11)*
IPP	C	-4.644 (1999:06)**

***, ** y * significativo al 1, 5 y 10 % respectivamente; los valores críticos para los niveles de significancia del 1, 5 y 10% del estadístico LM son -5.11, -4.50 y 4.21 (Lee y Straciczich, 2004). Fuente: resultados en base a la muestra analizada. Los cálculos de las pruebas de raíz unitaria sin cambio estructural se realizaron en el programa Eviews 7.0. y la que permite cambio estructural en RATS 6.0.

Los resultados de la prueba de cointegración se presentan en la Tabla 2, en donde se puede rechazar la hipótesis nula de no cointegración, tomando en cuenta un cambio estructural en 2002:10, a un nivel de significancia del 1%. Con este resultado podemos decir, que existe una relación de equilibrio de largo plazo entre los precios, por lo que es importante saber que no existe evidencia estadísticamente significativa de desviaciones persistentes en los precios, sino transitorias de corto plazo y que convergerán en el largo plazo. Por lo que las tasas de inflación en el largo plazo alcanzada por un índice, también será la del otro índice. Este resultado es similar al de Sidaoui *et al.* (2009) quienes encuentran que existe una relación de cointegración de largo plazo entre ambos precios pero sin considerar la posibilidad de un cambio estructural en la prueba de cointegración para el periodo de junio de 2000 a junio de 2009.

Tabla 2: Prueba de Cointegración de Gregory y Hansen

Hipótesis Nula	Estadístico Gregory-Hansen
No cointegración	-6.22*** (2002:10)

*** y ** significativo al 1 y 5% respectivamente. Los valores críticos son -5.50 y -6.02 para el 1 y 5% de significancia (Gregory y Hansen, 1996b). Fuente: resultados en base a la muestra analizada. Los cálculos de las pruebas se realizaron en el programa RATS 6.0.

Para ver la relación de corto plazo y de largo plazo se estimó el Modelo de Corrección de Errores, tomando en cuenta la posibilidad de la presencia de autocorrelación y heteroscedasticidad. Los resultados muestran que el error rezagado es estadísticamente significativo al 5% de significancia y con signo negativo, lo cual quiere decir que el 6.9% de la discrepancia entre el IPC de largo y corto plazo se corrige dentro de un mes.

Tabla 3: Modelo de Corrección del Error

Variables	Coefficiente	T- Estadístico
constante	0.000	3.024***
ΔIPP_t	0.847	22.953***
e_{t-1}	-0.069	-1.946**

***, ** y * significativo al 1, 5 y 10 % respectivamente. Fuente: resultados en base a la muestra analizada. La estimación del modelo se realizó en el programa Eviews 7.0.

CONCLUSIONES

Uno de los objetivos más importantes de los Bancos Centrales es la estabilidad del poder adquisitivo de la moneda nacional (Moreno, 2009), debido a que una inflación baja y predecible puede contribuir al ahorro, la inversión, al crecimiento de la actividad económica y a la creación de empleos. Para ello, los bancos centrales utilizan índices para medir la inflación en base a su crecimiento. Específicamente, el objetivo de la presente investigación es analizar si el índice el índice de precios del productor y el índice de precios del consumidor tienen una relación de equilibrio en el largo plazo o convergen a una tendencia en común para el caso de México, durante el periodo 1994:01 -2013:10. Es muy importante saber si exista una desviación persistente o transitoria entre ellos, debido a que pueden dar como resultado diferentes tasas de inflación (Roa y Sayed, 2010). Para ello, se utilizaron pruebas de raíz unitaria (Lee y Strazicich, 2004) y de cointegración (Gregory y Hansen, 1996a y 1996b). Los resultados muestran que las series tienen raíz unitaria y que existe una relación de equilibrio de largo plazo entre los precios. Lo anterior es de gran utilidad para el banco central, ya que en el largo plazo ambos precios convergen a una tendencia común, y la tasa de inflación alcanzada con uno de los precios, también se alcanzará con el otro.

DIAGNÓSTICO DEL ACERVO BIBLIOGRÁFICO DE LA BIBLIOTECA DE UNA UNIVERSIDAD PÚBLICA MEXICANA

Ma. Del Carmen Toledo Sánchez, Universidad Autónoma de Baja California
Sonia Elizabeth Maldonado-Radillo, Universidad Autónoma de Baja California
Lourdes Evelyn Apodaca Del Ángel, Universidad Autónoma de Baja California

RESUMEN

El objetivo de esta investigación fue identificar qué porcentaje de títulos requeridos para los programas educativos se localizan en el acervo bibliográfico de la biblioteca del campus de una universidad pública. El diseño de la investigación fue no-experimental y consistió en diagnosticar el acervo bibliográfico de la biblioteca de una universidad pública, para ello se empleó una muestra no probabilística de los programas educativos; la muestra está compuesta por 19 de los 33 programas educativos. Se utilizó el análisis de contenido para analizar la bibliografía de ellos. Los principales resultados nos indican que únicamente se localizan en las bibliotecas del campus, el 66.30% de los títulos sugeridos por el organismo evaluador de la calidad y eficiencia de los planes de estudio; esta información que servirá para fortalecer el desarrollo del acervo bibliográfico de la biblioteca universitaria.

PALABRAS CLAVES: Evaluación de Colecciones, Bibliotecas Universitarias, Universidades Públicas Mexicanas

BIBLIOGRAPHICAL HEAP DIAGNOSIS OF A LIBRARY MEXICAN PUBLIC UNIVERSITY

ABSTRACT

The research purpose was to identify what percentage of the required titles for the education programs are in the library of a public university. This study was non-experimental research designed to diagnose bibliographic heap of a library, for do it we used a non-probabilistic sample of educational programs; the sample is composed by 19 of the 33 educational programs. The content analysis was used to analyze the literature from them. The main results indicated that uniquely 66.30% of the titles suggested by evaluator of quality and efficiency of the curriculum are located at library; this information will serve to enhance development of the bibliography of university library.

INTRODUCCIÓN

Hoy en día no existen elementos para determinar si la colección bibliográfica de las bibliotecas universitarias satisface las necesidades de los programas educativos y si ésta alcanza los indicadores señalados por los organismos evaluadores de la calidad académica. Surgen las preguntas: ¿Cuántos de los libros incluidos en las cartas descriptivas se localizan en la biblioteca universitaria? ¿Los títulos existentes en la biblioteca cumplen con los requerimientos de los Comités Interinstitucionales de la Educación Superior (CIEES)? A fin de responder a las interrogantes se plantea el objetivo de este trabajo que consiste en identificar qué porcentaje de títulos requeridos, por CIEES, para los programas educativos se localizan

en el acervo bibliográfico de la biblioteca del campus de una universidad pública. Este estudio dará a conocer el nivel de existencia del acervo en cantidad y accesibilidad de tal manera que se ajuste a las necesidades de los programas educativos (número de títulos de la bibliografía básica recomendada y su disponibilidad).

REVISIÓN DE LA LITERATURA

Las bibliotecas universitarias proporcionan servicios de información y forman parte de una institución de educación superior integrada por estudiantes, profesores, investigadores y personal de la institución. Por lo tanto para que una universidad se aprecie de ser buena institución, debe contar con una biblioteca que tenga una colección que ayude a los usuarios en transformar la información en saber (Zavala, 2009). Baunocore (1976) expresó “en la actividad bibliotecaria debemos distinguir dos fases o momentos: uno que determina los fines específicos que la biblioteca propone de conformidad con los intereses, necesidades y aspiraciones de la comunicad (política bibliotecaria), y otro que establece las formas, modos y medios para alcanzar adecuadamente los fines y directivas que la política traza a la institución (administración bibliotecaria)” p.34. Una buena biblioteca debe contar con una amplia variedad de recursos bibliográficos o colecciones; en términos generales, una colección se integra por todos los documentos que una biblioteca proporciona a sus usuarios (documentos en papel o bases de datos accesibles en línea), por lo que evaluarla constituye todo un reto.

Pero definir qué es una colección de materiales de una biblioteca supone un proceso complejo y complicado debido a la creciente diversidad de soportes y formatos. La *Enciclopedia of Library and Information Science* la define como: “la suma total de materiales bibliotecarios –libros, manuscritos, publicaciones seriadas, [...], folletos, catálogos, ...- que constituyen los fondos de una colección particular” (Fuentes, 2007:92). En resumen, una colección se integra por todos los documentos que una biblioteca proporciona a sus usuarios (documentos en papel o bases de datos accesibles en línea), por lo que evaluarla constituye todo un reto. La literatura especializada revela dos enfoques para la evaluación de colecciones: (1) El enfoque centrado en los usuarios: comportamiento de la colección y (2) El enfoque centrado en los materiales: características de las colecciones (Pérez, 2002). En México, estudios sobre el particular reportan una evaluación de la colección (acervo) normada por los CIEES, organismo que surge a partir de la CONAEVA (Comisión Nacional para la Evaluación de la Educación Superior), como un acuerdo de universidades cuya función principal es la evaluación del sistema educativo. CIEES es el conjunto de comités conformado por grupos de académicos colegiados que pertenecen a las diferentes universidades de México con el propósito común de fortalecer la calidad y eficiencia de la educación superior (Cházaro, 2005) a través de la evaluación diagnóstica de los programas académicos y funciones institucionales

METODOLOGIA

La investigación trata de un estudio transversal con diseño no experimental, caracterizado como descriptivo. El universo se constituye por el acervo bibliográfico de la biblioteca de una universidad pública (multicampus) del estado de Baja California perteneciente a la región noroeste de la República Mexicana. Se trabajó con un muestreo no probabilístico y el análisis incluyó solamente 19 programas educativos (planes de estudio) de los 33 existentes en el campus lo que equivale al 57.58% y los datos se trabajaron durante los meses de enero a junio de 2014.

La ayuda metodológica para la consecución de los objetivos se basa en el método de la observación, concretamente en el Análisis de Contenido que puede aplicarse a cualquier forma de comunicación. De acuerdo con Martínez, et al., (2008:125) es una “técnica que obtiene información mediante la observación sistemática y descripción cuantitativa del contenido manifiesto en comunicaciones escritas...”, el objetivo del análisis es identificar determinados componentes de los documentos escritos (Fernández, 2002), en el

caso de este estudio se utiliza para analizar el contenido de la bibliografía reportada en las cartas descriptivas de los programas educativos y compararla contra los libros existentes en la biblioteca.

El procedimiento se llevó a cabo en tres etapas: (1) Revisión de la bibliografía indicada en las cartas descriptivas de los programas educativos de las licenciaturas se ofertan en el campus de la universidad pública referida, (2) Revisión del acervo existente en el OPAC (*On line Public Access Catalog*) de la biblioteca, (3) Comparación entre el listado de la bibliografía de las cartas descriptivas contra el listado del acervo existente en la biblioteca, (4) Determinación del porcentaje de cumplimiento en títulos existente en la biblioteca, tomando como referencia el requerimiento señalado por CIEES para cada plan de estudios plan de estudio. Los requerimientos establecidos por CIEES se determinaron considerando que se sugiere como mínimo 5 títulos por cada asignatura del plan de estudios (CIEES, 1994), por lo que para su cálculo se multiplicó el número de asignaturas del plan de estudio de la carrera por 5.

RESULTADOS

Los requerimientos de CIEES para los 19 programas educativos (planes de estudio) incluyen 4,015 títulos, éstos fueron comparados con el listado de títulos que arrojó el acervo existente en el OPAC, encontrado que únicamente aparecen 2,662 títulos lo cual significa que en la biblioteca solo existe el 66.30% del acervo sugerido por el organismo evaluador.

Diagnóstico de la Colección Por Biblioteca Tomando Como Referencia el Indicador de CIEES

Biblioteca de la Unidad San Quintín: Respecto a las Dependencias académicas de la unidad San Quintín, se evaluó un plan de estudios detectando que para la carrera de Ingeniero agrónomo el porcentaje de cumplimiento en títulos en del 68.7%. En esta unidad, de los 230 títulos que como mínimo deben encontrarse en la biblioteca para la carrera de Ingeniero agrónomo solo se encontraron 158 equivalente al 68.70% del total; esto indica que 6.9 de cada 10 títulos requeridos se ubican en la biblioteca, cifra que no cumple con los indicadores establecidos por CIEES.

Biblioteca de la Unidad Valle Dorado: Por lo que refiere a las Dependencias académicas de la unidad Valle Dorado, se evaluaron 8 planes de estudio encontrando que las carreras de Contaduría, Administración de empresas e Informática son las más favorecidas en lo que refiere al acervo bibliográfico existente en biblioteca, ya que cumplen con el 86.57% del indicador requerido por CIEES mientras que el programa menos favorecido es el de la carrera de médico con apenas el 32.79% de cumplimiento. En esta unidad, de los 1,745 títulos que como mínimo deben encontrarse en la biblioteca solo se encontraron 1,166 equivalente al 66.82% del total; esto indica que 6.6 de cada 10 títulos requeridos se ubican en la biblioteca, cifra que no cumple con los indicadores establecidos por CIEES, el cual debe alcanzar el 100%. También el análisis reveló que la Escuela de Ciencias de la Salud es la dependencia académica con un porcentaje menor de cumplimiento y de sus planes de estudios, la carrera de médico con un cumplimiento solo del 32.79% es quien requiere mayor atención en las adquisiciones de material bibliográfico de manera que logre cumplir con los estándares del organismo evaluador.

Biblioteca de la Unidad Ensenada (El Sauzal): En el caso de las Dependencias académicas de la unidad Ensenada, se evaluaron 10 planes de estudio encontrando que los programas educativos de Ingeniería en computación, Biología e Ingeniería industrial son los más favorecidos en lo que refiere al acervo bibliográfico existente en biblioteca, ya que cumplen con el 100%, 95.59% y 93.33% respectivamente del indicador requerido por CIEES mientras que el programa menos favorecido es el menos favorecido el de Ciencias ambientales con apenas el 15.26% de cumplimiento.

En esta unidad, de los 2,040 títulos que como mínimo deben encontrarse en la biblioteca solo se encontraron 1,338 equivalente al 65.59% del total; esto indica que 6.6 de cada 10 títulos requeridos se ubican en la biblioteca, cifra que no cumple con los indicadores establecidos por CIEES. También el análisis reveló que la Facultad de Ciencias Marinas es la dependencia académica con un porcentaje menor de cumplimiento; y, de sus planes de estudios, la carrera de Ciencias ambientales con un cumplimiento solo del 15.26% es quien requiere mayor atención en las adquisiciones de material bibliográfico de manera que logre cumplir con los estándares del organismo evaluador.

CONCLUSIONES

En este estudio se planteó como objetivo identificar qué porcentaje de títulos requeridos, por CIEES, para los programas educativos se localizan en el acervo bibliográfico de la biblioteca del campus de una universidad pública, para lo cual se utilizó el análisis de contenido comparando el indicador de los CIEES para la bibliografía de los planes de estudio contra el listado del acervo existente en la biblioteca. El examen de la información se reveló que en la biblioteca del campus Ensenada solo existe el 66.30% del acervo sugerido por el CIEES (organismo evaluador de la calidad y eficiencia de los planes de estudio). La realización de este diagnóstico pone de manifiesto que, aun con todos los esfuerzos, la gestión de los recursos de la biblioteca no ha alcanzado las metas previstas por lo cual es necesario un mayor apoyo para fortalecer el desarrollo de su acervo bibliográfico ya que no se está cubriendo las necesidades de los programas de educativos en cuestión de material bibliográfico.

RESUMEN

Como es bien sabido, las industrias son esenciales para cada país puesto que representan la base principal de la economía mundial. Hoy en día son indispensables, incluso, para la vida cotidiana ya que -entre otras cosas- nos brindan satisfactores para nuestras necesidades básicas. A nivel mundial, la industria electrónica es una de las industrias de mayor dinamismo y se encuentra estrechamente vinculada a la continua innovación y al desarrollo de nuevas tecnologías de vanguardia contribuyendo, de manera relevante, al desarrollo económico y social de los países con alta participación. Para México, la industria electrónica es prioritaria para el gobierno no solamente por su contribución a las exportaciones, sino también porque es una importante generadora de empleos. Así, en un mundo tan competitivo y globalizado como el actual, donde la oferta de bienes y servicios se desborda a la orden del día y, donde las descargas publicitarias son cada vez más fuertes, las empresas buscan valores agregados que constituyan un beneficio diferencial para que su personal este mayormente motivado y sea más productivo obteniendo, así, cierto margen de distinción con relación a la competencia.

MOTIVATION AND ITS RELATIONSHIP WITH THE LABOUR PRODUCTIVITY OF ADMINISTRATIVE STAFF THE COMPANY ELECTRIC S.A. DE C.V. IN TIJUANA, B.C., MÉXICO

ABSTRACT

As we know, industries are essential for every country. It represents the main base of the world economy furthermore they are essential in everyday life because they provide our basic satisfactors. At a global level, the electronic industry is one of the most dynamic industries and is closely related to the continuous innovation and development of new advanced technologies contributing relevantly to economic and social development of countries with high participation. In Mexico, the electronics industry is a priority for the government not only for its contribution to exports, but also because it is an important generator of jobs In a competitive world, where the demand of goods and services overflows the agenda, companies should look for added values that constitute a benefit and differentiate themselves to have personal largely motivated and more productive getting obtained a margin of distinction between their competitors.

KEYWORDS: Motivation, Productivity, Electronic Industry

INTRODUCCIÓN

La motivación de personal es un tema relativamente añejo, aunque indudablemente vigente. Nace con la transformación de los talleres artesanales en fábricas industriales y, llega hasta nuestros días en los que el potencial del talento humano se pondera como el elemento central de la competitividad de las empresas. El papel de las personas en la organización empresarial se ha transformado a lo largo del siglo XX. En sus inicios, se hablaba de un concepto de mano de obra; posteriormente se introdujo el concepto de recursos humanos, que consideraba al individuo como un recurso más a gestionar en la empresa. Sin embargo, en la actualidad se habla de personas, motivación, talento, conocimiento, creatividad. Se considera que el factor clave de la organización son las personas ya que en éstas reside el conocimiento y la creatividad. Dentro de la administración, pudiésemos pensar en la motivación como un tema demasiado trillado; no obstante, su importancia es tal que, no deja de representar un elemento clave para que el recurso humano alcance su pleno desarrollo y, por ende, logre los objetivos de la empresa. En ese sentido, en una sociedad cada día más compleja en donde la competencia es una constante cotidiana, el alentar la disponibilidad continua de las personas hacia el trabajo productivo puede tener consecuencias muy provechosas al procurar que estas se sientan estimuladas.

En palabras concretas, las empresas deben preocuparse por mantener motivados a sus trabajadores en beneficio de toda la organización. (De la Cruz, 2009). En la actualidad, las organizaciones pueden llegar a sufrir una serie de problemas relacionados con el desempeño humano. Esta anomalía se puede medir con el alarmante incremento de los índices de rotación y ausentismo del personal, así como de una baja en la calidad de la producción que presentan las empresas. Una de las causas del problema pudiera ser que los trabajos no se han diseñado en forma tal que desarrollen la motivación y la satisfacción en el ejecutor. Debemos estar conscientes de que los tiempos cambian y la competencia por el mercado, en consecuencia, modifica los patrones para retener al capital humano, capacitarlo, desarrollar sus habilidades en pos -desde luego- de lograr las metas de producción y productividad que se traduzcan en ventas y números negros. (Jaramillo, 2011).

Por eso la importancia de analizar la importancia de la motivación y su relación con la productividad laboral en la industria electrónica ya que esta opera en un mercado altamente globalizado y cada vez más especializado, por lo cual las empresas deben competir fuertemente a fin de encontrar los medios que les permitan satisfacer las necesidades de los clientes, quienes -de más está decir- cada vez son más exigentes y, en consecuencia, los países sedes de las grandes inversiones son aquellos capaces de ofrecer las condiciones que las empresas requieren a través -y, sólo por mencionar- de la promoción de políticas agresivas. (DGIPAT, 2013).

REVISIÓN LITERARIA

Actualmente, la industria electrónica opera en un mercado altamente globalizado y cada vez más especializado, por lo cual las empresas deben competir fuertemente a fin de encontrar los medios que les permitan satisfacer las necesidades de los clientes, quienes -de más está decir- cada vez son más exigentes y, en consecuencia, los países sedes de las grandes inversiones son aquellos capaces de ofrecer las condiciones que las empresas requieren a través -y, sólo por mencionar- de la promoción de políticas agresivas. (DGIPAT, 2013). Bajo las consideraciones anteriores, encontramos que la industria electrónica en México se conforma de dos ramas principales, mismas que provienen del subsector de productos metálicos, maquinaria y equipo, dentro del sector de la manufactura. Así, en el país, la Industria Electrónica se constituye por dos grandes grupos industriales; el primero y de mayor importancia en el nivel de empleo es el que opera como Industria Maquiladora y el segundo grupo se conforma por empresas asociadas a la Cámara Nacional de la Industria Electrónica de Telecomunicaciones y Tecnologías de la Información (CANIETI) con mayoría del capital Nacional. La industria electrónica captó 5,493 millones de dólares por Inversión Extranjera Directa (IED) del 2007 al 2012, de los cuales, 78.8% se canalizó en cinco estados, de

acuerdo con datos de la de la Dirección General de Industrias Pesadas y de Alta Tecnología de la Secretaría de Economía. Se trata de Jalisco, el cual concentró 19.8%; Estado de México, con 17.7%; Chihuahua, con 17.3%; Baja California, con 13.4%, y Tamaulipas, con 10.6 por ciento. (DGIPAT, 2013).

La Motivación y Su Relación con la Productividad

La motivación es un concepto fundamental explicativo relacionado con él "por qué" del comportamiento. Los organismos experimentan, constantemente, necesidades o deseos que les impulsan a actuar. Cuando un individuo se ve impedido a alcanzar una meta o evitar alguna consecuencia indeseable, entonces tenemos evidencia de necesidad de motivación. Así pues, para alcanzar mejores niveles de productividad se requiere que los empleados deseen hacer el trabajo (motivación), posean la capacidad para hacer el trabajo (habilidad) y, cuenten con los recursos necesarios (materiales, métodos, equipo, etc.) para poder realizarlo. De esta manera, la importancia del proceso de motivación radica en volver perceptible la deficiencia en la satisfacción de la necesidad que experimentan los trabajadores, y de cómo buscan maneras de satisfacerla, dando lugar a la elección de un comportamiento específico que va dirigido a una meta y que, por ende, en ocasiones afecta el alcance de la misma.

Diversos autores han escrito acerca del tema de la motivación, entre ellos podemos mencionar los siguientes: (Robbins, 2005), dice que es la voluntad de ejercer altos niveles de esfuerzos hacia las metas organizacionales, condicionados por la habilidad del esfuerzo de satisfacer alguna necesidad individual como la motivación general que concierne al esfuerzo hacia cualquier meta. (Reeve, 2010), la define como la necesidad o impulso interno de un individuo que lo mueve hacia una acción orientada a un objetivo. El grado del impulso dependerá del nivel percibido de satisfacción que pueda lograrse por el objetivo, asimismo De la Cruz (2009), como un punto a considerar siempre es que la motivación requiere del descubrimiento y comprensión de los impulsos y necesidades de los empleados, los cuales tienen origen en los individuos, por ello es preciso reforzar los actos positivos realizados a favor de la organización.

La motivación no solo es el pago justo, o un salario grande, tampoco son acciones mágicas de formadores especializados en motivación para que lleguen con formulas mágicas intentando que la gente cambie la percepción de una realidad negativa. La motivación es básica en la productividad, pero no llegan en píldoras ni tampoco con mensajes de internet, solo se logra cuando una empresa se atreve a enfrentar los obstáculos y elementos dañinos de su cultura organizacional. (González, 2010). Por lo tanto de acuerdo a (González, 2010), por más que se le hable al personal de la necesidad de estar motivado, por más que lo exija la gerencia, que se realicen campañas en el interior de la misma, si el personal no cuenta con los factores higiénicos de la empresa, es decir, que tenga un ambiente agradable libre de tensiones, una cultura organizacional que estimule la participación y la opinión, que incite al aporte, si el gerente o algunos de sus directivos son odiosos o repulsivos, si el personal en pocas palabras hace lo que debe hacer pero no hay ese ambiente favorable que lo incite a hacerlo con amor, la motivación estará afectada, y esto se reflejará en la productividad, presentándose indicadores bajos de productividad y por ende de ventas e ingresos, y pueden aumentar las reclamaciones de clientes, ausentismos de personal y re-procesos.

De acuerdo con Mora (2010), para aumentar la productividad de la empresa, entra a jugar un rol especial la implementación de estrategias básicas de motivación entre jefes y empleados que se basa en cuatro pilares esenciales; fraternidad, contexto, compartir triunfos y ser valorados. Demostrar que la vida personal de sus trabajadores importa y el transmitir apoyo personal, logrará hacer que el empleado encuentre en la oficina más que un lugar de productividad un segundo hogar. Al sentirse el empleado valorado y respaldado, con seguridad responderá positivamente y asumirá una mayor responsabilidad frente a la empresa. Asimismo (Mora, 2010), hace mención de que todos conocen como son los niveles de productividad con una relación formal entre jefe y empleado en la cual exista una buena relación entre jefe y empleado puesto conllevará a que el empleado realice mejor su trabajo y se sienta mejor. Asimismo el compartir los objetivos con los empleados para hacerlos sentir parte de sus triunfos es otra manera de que los empleados

formen parte de algo superior a ellos como individuos, por lo que es trascendental que las organizaciones hagan partícipes a los empleados de los triunfos corporativos, para que cada uno sienta como propia la victoria general de la compañía y así, se esfuerce cada vez más por aportar su granito de arena para cumplir los objetivos plasmados. (Mora, 2010)

Instrumentos del Clima Organizacional

De acuerdo con (Lam y Flores, 2010), hacen referencia en una investigación que Instrumento de medición WES. La evaluación del clima se realizará usando la *Work Environment Scale* (WES) de Moos (1974). Este instrumento con respuesta dicotómica verdad/falso, evalúa las siguientes dimensiones del clima organizacional: Implicación. Esta dimensión mide hasta qué punto los empleados se sienten implicados en su trabajo. Cohesión. Esta dimensión se basa en las relaciones de amistad y apoyo en que viven los trabajadores entre sí. Apoyo. Esta dimensión se refiere al apoyo y el estímulo que da la dirección a sus empleados. Autonomía. Este factor se refiere al grado en que la organización anima a sus trabajadores a ser autónomos y a tomar sus decisiones. Organización. Este elemento se refiere al punto en que el clima estimula la planificación y la eficacia en el trabajo. Presión. Esta dimensión se basa en la presión que ejerce la dirección sobre los empleados para que se lleve a cabo el trabajo. Claridad. Esta dimensión mide hasta qué punto los reglamentos y las políticas se explican claramente a los trabajadores. Control. Este factor se refiere a los reglamentos y a las presiones que puede utilizar la dirección para controlar a los empleados. Innovación. Este rasgo mide la importancia que la dirección puede dar al cambio y a las nuevas formas de llevar a cabo el trabajo. Comodidad. Esta dimensión hace referencia a los esfuerzos que realiza la dirección para crear un ambiente físico sano y agradable para sus empleados.

Las dimensiones de implicación, cohesión y apoyo conforman el factor de relaciones interpersonales; las dimensiones de autonomía, organización y presión se agrupan en el factor de autorrealización; y, finalmente, las dimensiones de claridad, control, innovación y comodidad dan lugar al factor de estabilidad/cambio. Para el presente trabajo se realiza una adaptación al instrumento de medición WES para poder aplicarse a la empresa Electric, S.A., al ensamble de productos electrónicos, en la cual solo se utilizan las variables independientes de satisfacción laboral, condiciones de trabajo, relaciones interpersonales y políticas de la organización.

MÉTODO

Mediante técnicas específicas es posible medir la motivación del personal de una empresa en un determinado tiempo y lugar. En este proyecto se aplica el modelo *Work Environment Scale* (WES) para medir la motivación de personal en una empresa dedicada al ensamble de productos electrónicos. El enfoque de este estudio es de tipo cuantitativo, con un alcance descriptivo y correlacional.

JUSTIFICACIÓN

El proceso de motivación en el que los trabajadores experimentan la deficiencia en la satisfacción de una necesidad, y de cómo buscan maneras de satisfacerla, dando lugar a la elección de un comportamiento específico que va dirigido a una meta, representan la justificación del presente trabajo de investigación. Se pretende corroborar el hecho de que para determinar que la motivación tiene relación con la productividad laboral del personal administrativo de la empresa "ELECTRIC S.A. de C.V." en Tijuana Baja California, México, se requiere que los empleados deseen hacer el trabajo, es decir que se encuentren motivados, que tengan la capacidad y habilidad para hacer el trabajo contando con los recursos necesarios tales como materiales, métodos y equipo para poder realizarlo.

Objetivos

Objetivo General: Determinar los factores motivacionales y analizar su relación con la productividad laboral del personal administrativo de la empresa “ELECTRIC S.A. de C.V.” en Tijuana Baja California.

Objetivos específicos
 L Determinar la relación que existe entre motivación y la productividad.
 Establecer los indicadores que permitan evaluar la motivación del personal en función de la productividad.

Operacionalización de las Variables

Tabla 1: Se Muestra la Operacionalización de las Variables a Nivel Conceptual

Variable Dependiente	Definición Conceptual	Variables Independientes	Definición Conceptual	Indicadores	Instrumento
Motivación y su relación con la productividad laboral.	Motivación. (Robbins, 2005), dice que es la voluntad de ejercer altos niveles de esfuerzos hacia las metas organizacionales, condicionados por la habilidad del esfuerzo de satisfacer alguna necesidad individual como la motivación general que concierne al esfuerzo hacia cualquier meta. (Reeve, 2010), la define como la necesidad o impulso interno de un individuo que lo mueve hacia una acción orientada a un objetivo. Productividad. Mora (2010), para aumentar la productividad de la empresa, entra a jugar un rol especial la implementación de estrategias básicas de motivación entre jefes y empleados que se basa en cuatro pilares esenciales; fraternidad, contexto, compartir triunfos y ser valorados. Demostrar que la vida personal de sus trabajadores importa y el transmitir apoyo personal, logrará hacer que el empleado encuentre en la oficina más que un lugar de productividad un segundo hogar. Al sentirse el empleado valorado y respaldado, con	Satisfacción en el trabajo	Robbins, (2004). Hace mención que es la actitud general del individuo hacia su trabajo. Una persona con gran satisfacción con el trabajo tiene actitudes positivas, mientras que aquella que se siente insatisfecha alberga actitudes negativas.	Claro entendimiento respecto a las funciones y competencias requeridas para la ejecución del puesto, así como de la flexibilidad que en éste se tiene para incrementar su desempeño a través de la capacitación.	Cuestionario
		Condiciones de trabajo	Las condiciones de trabajo inciden especialmente sobre la calidad de vida laboral en general y sobre la salud y el bienestar psicológico en particular; sobre la motivación y la satisfacción laborales y sobre la implicación con el trabajo; sobre patologías profesionales (desgaste físico y psicológico); sobre el rendimiento laboral y sobre disfunciones organizacionales (Blanch et. Al, 2003)	La distribución física y geográfica del área, así como las herramientas necesarias para el flujo de trabajo e información.	Cuestionario
		Relaciones interpersonales de trabajo	Las relaciones conforman una parte esencial del sentido que el ser humano le da a su propia existencia. Es difícil imaginar una vida carente de cualquier tipo de relación. La percepción del mundo y la del propio individuo pasa inevitablemente por el filtro de la interacción que se mantiene con los demás. Eso no significa que la soledad también pueda constituirse como una	Conocimiento y percepción sobre las responsabilidades, funciones y relaciones interpersonales entre los diferentes empleados que conforman el equipo de trabajo.	Cuestionario

seguridad responderá positivamente y asumirá una mayor responsabilidad frente a la empresa.

alternativa tan deseada como deseable, pero nunca de un modo excluyente, sino complementario. (Lozoya, 2013)

Políticas de organización	de	Le dan a las organizaciones el marco bajo el cual se espera que sus colaboradores ejecuten su trabajo, definiendo los límites de autoridad, responsabilidad, las conductas tanto permitidas como no permitidas para el cumplimiento de las metas, así como reflejan el apetito de riesgo de la organización en las actividades que desarrolla, pues de las mismas parten los procedimientos implementados y ejecutados en todos los niveles, reduciendo así la exposición al riesgo de que los individuos tomen las acciones que a su criterio consideran a bien desarrollar y las cuales pueden atentar contra los intereses de la organización.	Interés de la organización por el desarrollo y trayectoria personal en la organización.	Cuestionario

La tabla muestra la operacionalización de las variables a nivel conceptual. Fuente elaboración propia (2014)

Muestra

Se realizó un censo a 50 empleados, en los distintos departamentos en relación al número total de empleados de la empresa Electric S.A. de C.V. en la ciudad de Tijuana, Baja California, México, hasta el momento se encuentran encuestados en su totalidad. A los empleados se les aplicará un cuestionario de 40 preguntas para identificar el sentido de compromiso como estrategia de la motivación, utilizando el instrumento *Work Environment Scale* (WES) de Moos (1974), utilizando una escala de *lickert*. Se elaboró una base de datos en SPSS y se están aplicando las encuestas para realizar la prueba piloto y validar el instrumento a través del *alpha de cronbach*. Una vez validado el instrumento se iniciará con las encuestas a todos los sujetos de estudio y posteriormente se realizará el respectivo análisis y su interpretación. Se procederá con la realización de los cuadros y gráficos que permitirán determinar si la motivación incide de manera directa en la con la productividad laboral del personal administrativo de la empresa Electric S.A. de C.V. de Tijuana B.C., México.

Validación del Instrumento

A los empleados se les aplicó un cuestionario conformado de 40 preguntas, el cual fue validado relacionado al tema de estudio. Se utilizó una escala de medición de *likert*. Se elaboraron los cuadros que permiten un

análisis de los factores que inciden en la competitividad de las franquicias de comida rápida. La validez del cuestionario se determinó mediante el coeficiente de confiabilidad de *Alfa-Cronbach*, por medio del programa SPSS: el resultado arrojado por dicho programa fue de .810, un grado de confiabilidad aceptable (ya que esta por arriba .60 y de 0.70, puntuación mínima aceptable). A continuación se muestra en la Tabla 2.

Tabla 2: Análisis de Fiabilidad

Alfa de Cronbach	No. De Elementos
0.810	40

En la tabla se muestra la validez del cuestionario se determinó mediante el coeficiente de confiabilidad de Alfa-Cronbach, por medio del programa SPSS: el resultado arrojado por dicho programa fue de 0.810, un grado de confiabilidad aceptable (ya que esta por arriba .60 y de 0.70, puntuación mínima aceptable.). Fuente: elaboración propias con datos del spss (2014)

RESULTADOS

Correlaciones Bivariadas (Matriz De Pearson) de las Variables Independientes

Para determinar las variables en las que existe correlación se utilizó la Matriz de Correlación de *Pearson*. Los resultados de las correlaciones permiten concluir que las variables están relacionadas con entre sí: Se propone como estrategia de investigación que, a partir de la evidencia empírica que arroja la matriz de coeficientes de correlación de *Pearson*, considerar sólo aquellas correlaciones significativas al rango de 0.01 y 0.05 y de una magnitud igual o mayor a 0.50, lo cual representa una correlación positiva de moderada a fuerte. Como se muestra en la Tabla 3. Resultando las variables independientes con una correlación más alta de acuerdo al criterio establecido con anterioridad los factores que inciden de manera directa en la motivación y su relación con la productividad laboral del personal administrativo de la empresa Electric S.A. de C.V. de Tijuana B.C., México.

Tabla 3: Correlaciones Bivariadas (Matriz de *Pearson*) de las Variables Correlaciones Bivariadas (Matriz de *Pearson*) de las Variables

Correlación entre variables	
Satisfacción Laboral	0.715
Condiciones de Trabajo	0.623
Relaciones Interpersonales	0.676
Políticas de la Organización	0.635

*En la tabla se observan las correlaciones que resultaron del análisis estadístico a través del SPSS 15. Se muestran las correlaciones más altas con respecto a las variables independientes, dando como resultado que la que la satisfacción laboral incide de manera directa en la motivación y su relación con la productividad en un 0.715, las condiciones de trabajo inciden en un 0.623, las relaciones interpersonales en un 0.676 y las políticas de la organización en un 0.635 presentando correlaciones significativas en el nivel de 0.01. Fuente: elaboración propia (2014) **La correlación es significativa en el nivel 0.01 * La correlación es significativa en el nivel 0.05*

Los resultados de las correlaciones anteriores permiten concluir que las variables de satisfacción laboral, condiciones de trabajo, relaciones interpersonales y políticas de la organización, inciden de manera directa en la motivación y su relación con la productividad laboral del personal administrativo de la empresa Electric, S.A. de C.V. de Tijuana, B.C., México. Dando como resultado una correlación de 0.715 en la satisfacción laboral ya que los empleados tienen definidas claramente sus funciones de su puesto y los límites de sus responsabilidades, asimismo para desempeñar las funciones de su puesto tienen que hacer un esfuerzo adicional y retador en el trabajo, les gusta su trabajo, tienen las competencias que el puesto

requiere, la flexibilidad de cómo hacer su trabajo siempre y cuando alcancen los mejores resultados, le gustaría seguir trabajando en su área de trabajo, consideran justa la remuneración económica y los beneficios que reciben dadas las funciones del puesto y por último consideran que necesitan capacitación en alguna área de su interés que formen parte de su desarrollo dentro de la empresa. En cuanto a las condiciones de trabajo la correlación es de 0.623, siendo la más alta de las variables porque los empleados consideran que la distribución geográfica del área de trabajo contribuye al flujo de sus actividades e información, cuentan con el equipo necesario para ejecutar sus labores y las bases de datos existentes en sus departamentos facilitan el trabajo. La correlación de las relaciones interpersonales tiene como resultado 0.676, porque las relaciones interpersonales son cordiales y abiertas entre los miembros de su equipo de trabajo o departamento y entre los miembros de la organización, asimismo conocer las responsabilidades y funciones de sus compañeros de trabajo en su área o centro, de su jefe y del personal de otras áreas o departamentos.

Hay evidencia de que la falta de conocimiento sobre las funciones del personal de algún departamento ha provocado quedar mal con los clientes, por lo mismo bajo las mismas circunstancias y condiciones se perciben diferencias en las cargas de trabajo, reciben la información de manera oportuna que requieren para su trabajo, existe evidencia de que en su área se trabaja en equipo exitosamente, sus compañeros y el empleado saben quien es el cliente final y se apoyan para servir al cliente, por lo tanto consideran que sus compañeros de trabajo necesitan capacitación en ciertas áreas importantes para desempeñar ese trabajo. Por último sobre las políticas de la organización que tiene como resultado 0.623, los empleados consideran que los eventos de convivencia que lleva a cabo la empresa cumplen con el objetivo de lograr el acercamiento entre el personal de la empresa, por lo tanto la dirección se interesa por su futuro profesional al definir capacitaciones y planes de vida y carrera, las promociones se otorgan a quien cubre con los requerimientos del puesto, cuando se presenta una vacante, primero se busca dentro de la misma organización al posible candidato, los empleados rara vez han pensado en dejar la empresa. Las metas de la planta se establecen en sus áreas de trabajo y constituyen un incentivo alcanzable y se sienten comprometidos para alcanzarlas dentro de los periodos fijados. La dirección manifiesta sus objetivos de tal forma que crea un sentido común de misión e identidad entre sus empleados, existe comunicación que apoya el logro de los objetivos de la empresa y por último existe el reconocimiento de la dirección para los empleados por sus esfuerzos y aportaciones al logro de los objetivos y metas de la organización.

CONCLUSIONES

En base a la literatura revisada y de acuerdo con los resultados obtenidos a raíz de la aplicación del instrumento de medición, podemos concluir que –en definitiva– es difícil comprender las relaciones con y entre las personas sin un conocimiento mínimo de la motivación y de su comportamiento. La motivación es un concepto fundamental explicativo relacionado con él "por qué" del comportamiento. Los organismos experimentan, constantemente, necesidades o deseos que les impulsan a actuar. Cuando un individuo se ve impedido a alcanzar una meta o evitar alguna consecuencia indeseable, entonces tenemos evidencia de necesidad de motivación. Así pues, para alcanzar mejores niveles de productividad se requiere que los empleados deseen hacer el trabajo (motivación), posean la capacidad para hacer el trabajo (habilidad) y, cuenten con los recursos necesarios (materiales, métodos, equipo, etc.) para poder realizarlo. De esta manera, la importancia del proceso de motivación radica en volver perceptible la deficiencia en la satisfacción de la necesidad que experimentan los trabajadores, y de cómo buscan maneras de satisfacerla, dando lugar a la elección de un comportamiento específico que va dirigido a una meta y que, por ende, en ocasiones afecta el alcance de la misma.

Los resultados de las correlaciones permiten concluir que las variables de satisfacción laboral, condiciones de trabajo, relaciones interpersonales y políticas de la organización, inciden de manera directa en la motivación y su relación con la productividad laboral del personal administrativo de la empresa Electric, S.A. de C.V. de Tijuana, B.C., México. Debido a que la que la satisfacción laboral incide de manera directa

en la motivación y su relación con la productividad en un 0.715, las condiciones de trabajo inciden en un 0.623, las relaciones interpersonales en un 0.676 y las políticas de la organización en un 0.635. Por lo tanto dando como resultado una correlación de 0.715 en la satisfacción laboral ya que los empleados tienen definidas claramente sus funciones de su puesto y los límites de sus responsabilidades, asimismo para desempeñar las funciones de su puesto tienen que hacer un esfuerzo adicional y retador en el trabajo tienen las competencias que el puesto requiere. En cuanto a las condiciones de trabajo la correlación es de 0.623, ya que los empleados consideran que la distribución geográfica del área de trabajo contribuye al flujo de sus actividades e información, cuentan con el equipo necesario para ejecutar sus labores y las bases de datos existentes en sus departamentos facilitan el trabajo. La correlación de las relaciones interpersonales tiene como resultado 0.676, porque las relaciones interpersonales son cordiales y abiertas entre los miembros de su equipo de trabajo o departamento y entre los miembros de la organización, asimismo conocer las responsabilidades y funciones de sus compañeros de trabajo en su área o centro, de su jefe y del personal de otras áreas o departamentos.

Por último sobre las políticas de la organización que tiene como resultado 0.635, los empleados consideran que los eventos de convivencia que lleva a cabo la empresa cumplen con el objetivo de lograr el acercamiento entre el personal de la empresa, por lo tanto la dirección se interesa por su futuro profesional al definir capacitaciones y planes de vida y carrera, las promociones se otorgan a quien cubre con los requerimientos del puesto, cuando se presenta una vacante, primero se busca dentro de la misma organización al posible candidato, los empleados rara vez han pensado en dejar la empresa. En ese sentido, ELECTRIC S.A. DE C.V. deberá poner especial atención a los hallazgos que refieren primordialmente a cuestiones de capacitación y desarrollo profesional de su personal, ello, a través del uso oportuno de herramientas tales como los planes de carrera (lo que para efectos de la empresa se considera como “*Development review*” a fin de asegurar la satisfacción y pleno desarrollo de su gente. Si bien, en términos generales existe un equilibrio entre las condiciones de trabajo y, entre las relaciones interpersonales que en el ir y venir de su operación se manifiestan, habrá de considerarse el apego a aquellas dinámicas que permitan a la organización interactuar con mayor fluidez en el desarrollo y validación de la satisfacción de su plantilla. En otras palabras, se debe trabajar estrechamente con los distintos públicos internos (empleados), con el objeto de conocerlos más profundamente y poder verificar que cada uno de los empleados transpire el bienestar de su de la organización. Finalmente, podemos precisar que ELECTRIC SA DE CV, deberá continuar trabajando en motivar a su personal proveyéndoles ciertos estímulos para que, aquellos, adopten un determinado comportamiento deseado y, creen entonces las condiciones adecuadas para que aflore un determinado comportamiento en toda la organización y por ende, se logre el fin común: productividad.

FACTORES DETERMINANTES EN LOS PROCESOS DE DESARROLLO DE NUEVOS PRODUCTOS EN LA INDUSTRIA AUTOMOTRIZ EN TIJUANA, B.C., MÉXICO

Fernando Urrea-García, Universidad Autónoma de Baja California
María Virginia Flores-Ortiz, Universidad Autónoma de Baja California

RESUMEN

El presente trabajo de investigación se busca determinar los factores para el desarrollo e introducción de nuevos productos en la industria automotriz en Tijuana B.C. México, así como aplicar y desarrollar la administración de nuevos productos de audio de metal, con el menor error o pérdidas para conservar la fuente de trabajo y la industria automotriz que puedan generar nuevos negocios cumpliendo con calidad, entrega en tiempo y forma y costos competitivos en la industria automotriz en Tijuana. Asimismo muestra la administración y plan en la modificación o introducción de nuevos productos que para la industria automotriz se tiene que cumplir con el estándar ISO/TS16949 en el cual tiene establecido seguir el plan y administrar el APAQ "Advanced Product Quality Planning" observando el cumplimiento de la cinco fases desde el plan, revisión, validación, aprobación y mejora continua, así como las etapas y directrices de la organización para la administración de nuevos productos con el propósito de comunicar y cumplir con los requerimientos de los clientes como método estructurado que tiene el propósito definir y establecer las medidas necesarias con el compromiso de la alta dirección.

PALABRAS CLAVES: desarrollo, nuevos productos, industria automotriz

FACTORS IN THE PROCESS OF NEW PRODUCTS DEVELOPMENT IN THE AUTOMOTIVE INDUSTRY IN TIJUANA, BC, MEXICO

ABSTRACT

This research seeks to determine the factors in the development and introduction of new products in the automotive industry in Tijuana BC Mexico, as well as develop and implement new management audio products metal, with the slightest error or loss to preserve the labor supply and the auto industry that can generate new business in compliance with quality and timely delivery and competitive costs in the automotive industry in Tijuana. It also shows the administration and plan modification or introduction of new products for the automotive industry has to comply with the ISO/TS16949 standard which is set to follow the plan and manage the APAQ "Advanced Product Quality Planning" observing compliance the five phases from the plan, review, validation, approval and continuous improvement, as well as the steps and guidelines of the organization for the administration of new products in order to communicate and meet customer requirements as a method structured having in order to define and establish the necessary measures with the commitment of senior management.

KEYWORDS: Development, New Products, Automotive Industry

INTRODUCCIÓN

El presente trabajo muestra las etapas y directrices de la organización para la administración de nuevos productos con el propósito de comunicar y cumplir con los requerimientos de los clientes como método estructurado que tiene el propósito definir y establecer las medidas necesarias con el compromiso de la alta dirección. La planificación considera en las cuatro primeras etapas la validación del producto y proceso para continuar con la aplicación en la quinta etapa y revisar si los clientes están satisfechos y en la búsqueda de la mejora continua, aplicando los conocimientos en los siguientes programas. Este trabajo se realiza en la Ciudad de Tijuana, Baja California, en donde se observa que la industria automotriz participa en la economía de la ciudad, estado y en el país, por tanto es importante lograr el desarrollo de nuevos productos como parte fundamental dentro de la organización. Inicialmente los antecedentes nos llevan a plantearnos la posible problemática existente, por lo que se han establecido los objetivos tanto para describir y analizar las herramientas clave y su uso para la calidad y métricos para la mejora continua, así como los factores para lograr el desarrollo y validación de la introducción de los mismos, analizando la importancia de la administración de nuevos productos de metal para audio, para conservar la industria manteniendo los empleos actuales y promocionando nuevos negocios.

La metodología desarrollada específicamente para la industria automotriz en la introducción de un nuevo producto representa un costo de miles de dólares, tanto para el desarrollo de la herramienta, producto y proceso como para lograr un seguimiento ordenado, con un mínimo de error y participación de todos los departamentos o funciones involucrados dentro de la organización, por tanto es necesaria la inversión y su uso adecuado. Por lo anterior, el reto más apremiante que la Industria Automotriz en Baja California enfrenta es la actualización de sus plantas con ciclos de producto cada vez más cortos, un sistema flexible, de manufactura esbelta, debe motivar a sus colaboradores para el logro de los objetivos, con un grupo de personal altamente preparado para conseguir un lanzamiento exitoso que las puedan mantener vigentes en el mercado nacional e internacional (Daft, 2011), que permita aumentar el nivel competitivo en sus tres vertientes nacional, estatal y local. La vertiginosidad de los negocios requieren alternativas de estudio para lograr resultados óptimos, por eso es de vital prioridad que las organizaciones logren mantenerse y/o insertarse en la vanguardia tecnológica. Hay un patrón distintivo de ajustar las innovaciones a las necesidades del cliente, utilizando la tecnología de forma más eficaz y contando con el apoyo para el proyecto de los gerentes de influencia en el nivel superior (Daft, 2011). Las innovaciones tecnológicas en la industria automotriz, incluyendo las generadas en las instituciones educativas y académicas y la asociación entre estas instancias deben considerar factores relevantes de ambas partes que les permita una retroalimentación y logren aumentar el nivel de competitividad del país.

REVISIÓN LITERARIA

De acuerdo a los Indicadores Clave Globales correspondientes al 2011, la producción mundial de autopartes fue de \$ 1, 208,267 millones de dólares (md), con un consumo mundial de \$1,175,853 md; el resto está distribuido entre Asia-Pacífico 58 por ciento con 697,507 md, Unión Europea 16 por ciento con 199,280 md, América del Norte 14 por ciento con 173,174, América Latina 5 por ciento con 60,125 md, y el resto del mundo 6 por ciento con 78,181 md, sin embargo, sólo el 5.6 por ciento de la producción de esta industria lo produce México representando exportaciones de \$45,587 md, e Importaciones de \$32,332 md con más de 1,100 empresas dedicadas a la manufacturas de autopartes (ProMéxico, 2012). En este mismo orden y dirección, la participación en la producción por países de América en 2011 queda en Estados Unidos con un 7.4 por ciento, México con un 5.6 por ciento, Brasil con un 4.2 por ciento y Canadá con un 1.3 por ciento (ProMéxico, 2012). La industria automotriz en México Las empresas mexicanas deben ser innovadoras y evolucionar ante los grandes retos que requiere la industria actual, ya que sólo el 5.6% de la producción mundial de esta industria lo produce México representando exportaciones de \$45,587 md, e importaciones de \$ 32,332 md con más de 1,100 empresas dedicadas a la manufactura de autopartes (ProMéxico, 2012). De acuerdo a los datos que arroja el boletín de prensa número 427/12 del INEGI nos informa que el Producto

Interno Bruto (PIB) creció 0.45 por ciento durante el tercer trimestre julio-septiembre del año 2012 respecto al trimestre previo, con cifras desestacionalizadas por componentes que muestra dentro de las actividades secundarias un ascenso del 3.6 por ciento, en donde la industria manufacturera participa con un incremento del 4.1 por ciento, asimismo el Producto Interno Bruto (PIB) al tercer trimestre de 2012 publicado por INEGI en el boletín de prensa número 427/12 informa que el PIB creció 0.45 por ciento durante el tercer trimestre julio-septiembre del año 2012 respecto al trimestre previo, con cifras desestacionalizadas por componentes que muestra dentro de las actividades secundarias ascendió 3.6 por ciento, en donde la industria manufacturera participa con un incremento del 4.1 por ciento (INEGI, 2012). Además los indicadores sectoriales muestran que la industria automotriz contribuye con el 17.2 por ciento del PIB manufacturero, con el 28.2 por ciento de las exportaciones manufactureras y con el 15.9 por ciento del personal ocupado que representan 584,826 mil personas, de las cuales 80,000 son empleos directos de distribuidores, 438,158 para autopartes y 66,668 son terminal. (Secretaría de Economía, 2012).

La Industria Automotriz En Baja California.

El reto más apremiante que la Industria Automotriz en Baja California enfrenta es la actualización de sus plantas con ciclos de producto cada vez más cortos, mantener motivada a la fuerza laboral para evitar, tanto la rotación de personal como la falta del logro de los objetivos, por lo que requiere aumentar el nivel competitivo estatal y local. La actualización de las organizaciones en este rubro implica diversos factores como los que se requieren para el desarrollo de nuevos productos, con un sistema flexible, de manufactura esbelta y un grupo de personal altamente preparado para conseguir un lanzamiento exitoso que las puedan mantener vigentes en el mercado nacional e internacional (Daft, 2011). Pese a que empresas multinacionales automotrices enfrentan una fuerte crisis, el impacto difiere para todos los países, mientras que India y China registran un aumento de vehículos, Estados Unidos de Norteamérica sufre serias consecuencias. Lo que para un país puede representar una ventaja para otro implica lo contrario; México en este rubro considera que es una oportunidad la cooperación de México con China en este sector, aunque actualmente es poca, podría generar un considerable incremento en la producción de vehículos y en la diversificación de exportaciones. (Gachúz, 2011).

La Industria Automotriz En Tijuana, B.C.

Considerando el mundo vertiginoso de los negocios y sus requerimientos, las alternativas de estudio para lograr resultados que exige la actualidad son vitales y deben ser una prioridad de las organizaciones para mantenerse y/o insertarse en la vanguardia tecnológica, por lo que este proyecto busca identificar los factores para el desarrollo de nuevos productos específicamente de metal para audio en la industria automotriz en Tijuana. La competitividad deberá entenderse como la capacidad de producir, ofrecer y comercializar productos o servicios innovadores y de alto valor agregado, en las condiciones, cantidad y calidad que el mercado, en México y en el extranjero, demanda. (Canales, 2007). Las innovaciones tecnológicas en la industria automotriz incluyendo las generadas en las instituciones educativas y académicas y la asociación entre estas instancias deben considerar factores relevantes de ambas partes. Particularmente tratándose de la propiedad intelectual y las regalías que provengan de las innovaciones que aumenten el nivel de competitividad del país. (Canales, 2007). Hay un patrón distintivo de ajustar las innovaciones a las necesidades del cliente, utilizando la tecnología de forma más eficaz y contando con el apoyo para el proyecto de los gerentes de influencia en el nivel superior (Daft, 2011).

El desarrollo de nuevos productos de metal para audio en la industria automotriz Esta industria se encuentra organizada en tres niveles de producción, de acuerdo a la Secretaría de Economía, como sigue:

Nivel "Tier" 1: Proveedores directos de las empresas armadoras. Entre los componentes que desarrollan encontramos partes del motor, sistemas de dirección y suspensión, sistemas de aire acondicionado, componentes electrónicos, entre otros. Nivel "Tier" 2: Empresas proveedoras de los Nivel 1, fabrican equipos y productos utilizados en los componentes más avanzados y especializados de la industria

automotriz: partes forjadas, estampadas, partes de inyección de aluminio, partes fundidas, plásticas, maquinadas, etc. Nivel “Tier” 3: Empresas proveedoras de insumos de los Nivel 2, que cumplen los requerimientos de calidad necesarios que demanda la industria automotriz. Este estudio se enfoca en el Nivel 2, en la búsqueda de los factores para el desarrollo de nuevos productos de metal para audio, que permitan definir un programa, diseñar y desarrollar el producto, así como su proceso, validar ambos, y fabricar el producto con la expectativa de cumplir con la calidad requerida, ser rentable para la empresa y generar fuentes de empleo.

Planeación Avanzada de la Calidad del Producto y Plan de Control

El APQP es un proceso definido para el desarrollo de un sistema de producción de un producto existente o un nuevo producto en la compañía, con el propósito de sincronizar y mostrar un método único de las actividades para la comunicación interna para continuar con el cliente y proveedores. Para el desarrollo e introducción de nuevos productos la metodología para la cadena de suministro en la industria automotriz es la Planeación Avanzada de la Calidad del Producto “*Advance Product Quality Planning*” (APQP) para asegurar que el diseño y proceso cumplen con las expectativas futuras del cliente, con el propósito de lograr un diseño y proceso sin falla durante la introducción de nuevos modelos con el máximo beneficio y costo mínimo cumpliendo con la calidad, costo y entrega para proveedores dentro de la industria automotriz. Cabe mencionar que la metodología APQP es un elemento clave y básico para la comunicación interna y externa dentro de la organización y proveedores, iniciando primero: con el plan y definir el desarrollo de la tecnología y concepto; segundo: realizar la verificación del desarrollo y diseño del producto; tercero: la verificación del prototipo, confirmación del producto y validación del proceso; cuarto: la validación del producto y el proceso; quinto y último: retroalimentación y acción correctiva para mantener la mejora continua. Sobre la base de las consideraciones anteriores, dentro del proceso APQP existen cuatro herramientas claves para el desarrollo de nuevos productos como es Control Estadístico del proceso “*Statistical Process Control*” (SPC), Análisis del Sistema de Medición “*Measure System Analysis*” (MSA), Análisis del Modo y Efecto de la Falla “*Process Failure Mode and Effect Analysis*” (PFMEA), Plan de Control, Proceso de Aprobación de Partes para Producción “*Production Part Approval Process*” PPAP, (Book, 2008).

El plan de control describe el sistema para controlar partes y procesos, en tres fases distintas que son el prototipo, pre-producción y producción, es una descripción de las mediciones dimensionales, pruebas de materiales y desempeño antes, durante y después de la producción masiva. Soluciones de observaciones durante el plan serán documentadas en una matriz con responsabilidades y tiempo de ejecución como método de solución de problemas ante situaciones difíciles. Por tanto es necesario calendarizar una plan con lista de tarea, asignaciones y otros eventos y fechas (inicial y final) de ejecución, todos los miembros deberán está de acuerdo con cada evento, acción y fechas usan el método de ruta crítica llevando una agenda de juntas de seguimiento. A continuación se describen las fases: Fase 1: Plan y definición del programa. En esta etapa es necesario obtener datos respecto a la investigación del mercado y la información que refleja la voz del cliente para plasmar todo esto en las características del producto y proceso como son: la voz del cliente, investigación de mercado, historial de garantías, información de calidad, plan de negocio, estrategia de mercado, estudio de confiabilidad. Así como el objetivo del diseño, confiabilidad, objetivos de calidad, listado de materiales, diagrama de flujo del proceso, características especiales, plan de aseguramiento del producto y apoyo de la administración (Book, et al., 2008). Fase 2: Diseño y desarrollo del producto. Es necesario considerar las siguientes etapas durante el diseño y desarrollo del producto aun cuando el diseño es propiedad del cliente o compartido, por tanto es necesaria la construcción de un prototipo para verificar que cumple con un diseño viable, volumen de producción, capacidad, calidad, fiabilidad, costos, peso, costo unitario, características y control de los procesos, así como una revisión exhaustiva y crítica de los requisitos de ingeniería para evaluar los problemas potenciales que podrían ocurrir durante la fabricación. (Book, et al., 2008). Fase 3: Diseño y desarrollo del proceso. Las tareas a realizar en esta etapa del proceso

de planificación dependen de la finalización con éxito de las anteriores, en este momento se considera el proceso para asegurar el desarrollo integral que cumpla los requisitos del cliente, considerando especificación de empaque, revisión del proceso y producto, diagrama de flujo de proceso, matriz de característica, distribución de planta, análisis del modo potencia de falla, plan de control, análisis del sistema de medición, estudio de capacidad de procesos para reforzar el compromiso de la administración en el desarrollo del nuevo producto. (Book, 2008). Fase 4: Validación de producto y proceso. En esta etapa es para la validación del proceso de fabricación a través de una evaluación del producto y proceso durante una significativa corrida de producción generalmente la mitad del turno con el propósito de utilizar las herramientas y equipo, medio ambiente para mostrar la cantidad de producción, la aprobación de las primeras piezas, evaluación de empaque, la cantidad de buenas por primera vez para concluir con la repetitividad y reproducibilidad con la validación del sistema de medición. (Book, 2008). Fase 5: Retroalimentación, evaluación y acción correctiva. El plan de control de la producción es la base para la evaluación del producto o servicio con el análisis de los datos variable y de atributos evaluados con el control estadístico del proceso SPC *“Statistical Process Control”* con el objetivo de reducir la variación, satisfacción del cliente, mejora de la entrega y servicio. (Book, et al., 2008).

MÉTODO

Planteamiento del Problema

Las empresas del ramo automotriz están obligadas a cumplir en tiempo y forma con las expectativas que el mundo vertiginoso y competitivo que requiere para garantizar su permanencia y preferencia en el mercado. Los requerimientos exigidos tanto por las armadoras de automóviles como por el mercado de refacciones, hacen necesario que los fabricantes de autopartes cumplan con altos niveles de calidad, eficiencia, tiempos de entrega, servicio al cliente y estrategias de reducción de costos, las empresas instaladas en el país cumplen con todos estos requerimientos, es por eso que México debe seguir consolidándose como líder de la industria y ser un clúster que sirva como plataforma internacional, demostrando que los productos mexicanos son de alta calidad y tienen un alto valor agregado.

Justificación de la Investigación

En la industria automotriz la introducción de nuevo producto presenta un costo de miles de dólares para el desarrollo de la herramienta, producto y proceso por tanto es necesaria una inversión y uso con el propósito de obtener cero defectos, debido a lo anterior existe una metodología desarrollada específicamente para la industria automotriz para lograr un seguimiento ordenado, con mínimo de error y participación de todos los departamentos o funciones dentro de la organización mejorando la comunicación interna y externa como equipo para el desarrollo de un nuevo producto.

Objetivos

Objetivo General

Determinar los factores para el desarrollo y administración de nuevos productos de la industria automotriz, en Tijuana, B.C. México.

Objetivo específico

Determinar los factores que logran el desarrollo y validación de la introducción de nuevos productos en la industria automotriz en Tijuana.

Muestra

El muestreo es representativo de un total de 504 empresas afiliadas en el Directorio de la Industria Maquiladora de Baja California de Tijuana No. 13 del 2013, de las cuales 27 son proveedores de la industria automotriz en Tijuana desde cinturón, módulos de control, sensores, sistemas de sonido, toldos, cubiertas, empaques, baleros, vidrio automotriz, remolques, caja, tapones de radiador y gasolina, válvula de monitoreo de vapor de gasolina. Se aplica un instrumento de medición-cuestionario a una muestra de 23 empresas en Tijuana, Baja California. La investigación se llevo a cabo los dos últimos cuatrimestres del 2012 y todo el año 2013. Los factores que se tomaron en cuenta en el cálculo de la muestra, es que la población se considera con características homogéneas, además, de contarse con una población finita, ya que el número de franquicias de comida rápida es conocido y la representatividad de la muestra está determinada por un error permisible de 0.068, con un nivel de confianza del 95% y $p = q = 0.5$. La muestra para la población finita de empresas del ramo automotriz como se muestra en la siguiente tabla:

Tabla 1: Total de Empresas de Acuerdo al Directorio de la Industria Maquiladora de Baja California No. 13 del 2013

Total de Empresas Automotrices	Muestra
27	23

La tabla muestra que el total de empresas registradas integran una población de 124 franquicias, la población se considera con características homogéneas y se contó con una población finita, porque se conoce el número, dando como resultado que la muestra esperada es de 66 empresas estas fueron válidas y ninguna fue excluida al momento de analizar la información. Fuente elaboración propia, (2014)

Validación del Instrumento

A los empleados de las empresas automotrices se les aplicó un cuestionario conformado de 49 preguntas, el cual fue validado relacionado al tema de estudio. Se utilizó una escala de medición de *likert*. Se elaboraron los cuadros que permiten un análisis de los factores que inciden en la competitividad de las franquicias de comida rápida. La validez del cuestionario se determinó mediante el coeficiente de confiabilidad de *Alfa-Cronbach*, por medio del programa SPSS: el resultado arrojado por dicho programa fue de .80, un grado de confiabilidad aceptable (ya que esta por arriba .60 y de 0.70, puntuación mínima aceptable). A continuación se muestra en la Tabla 2.

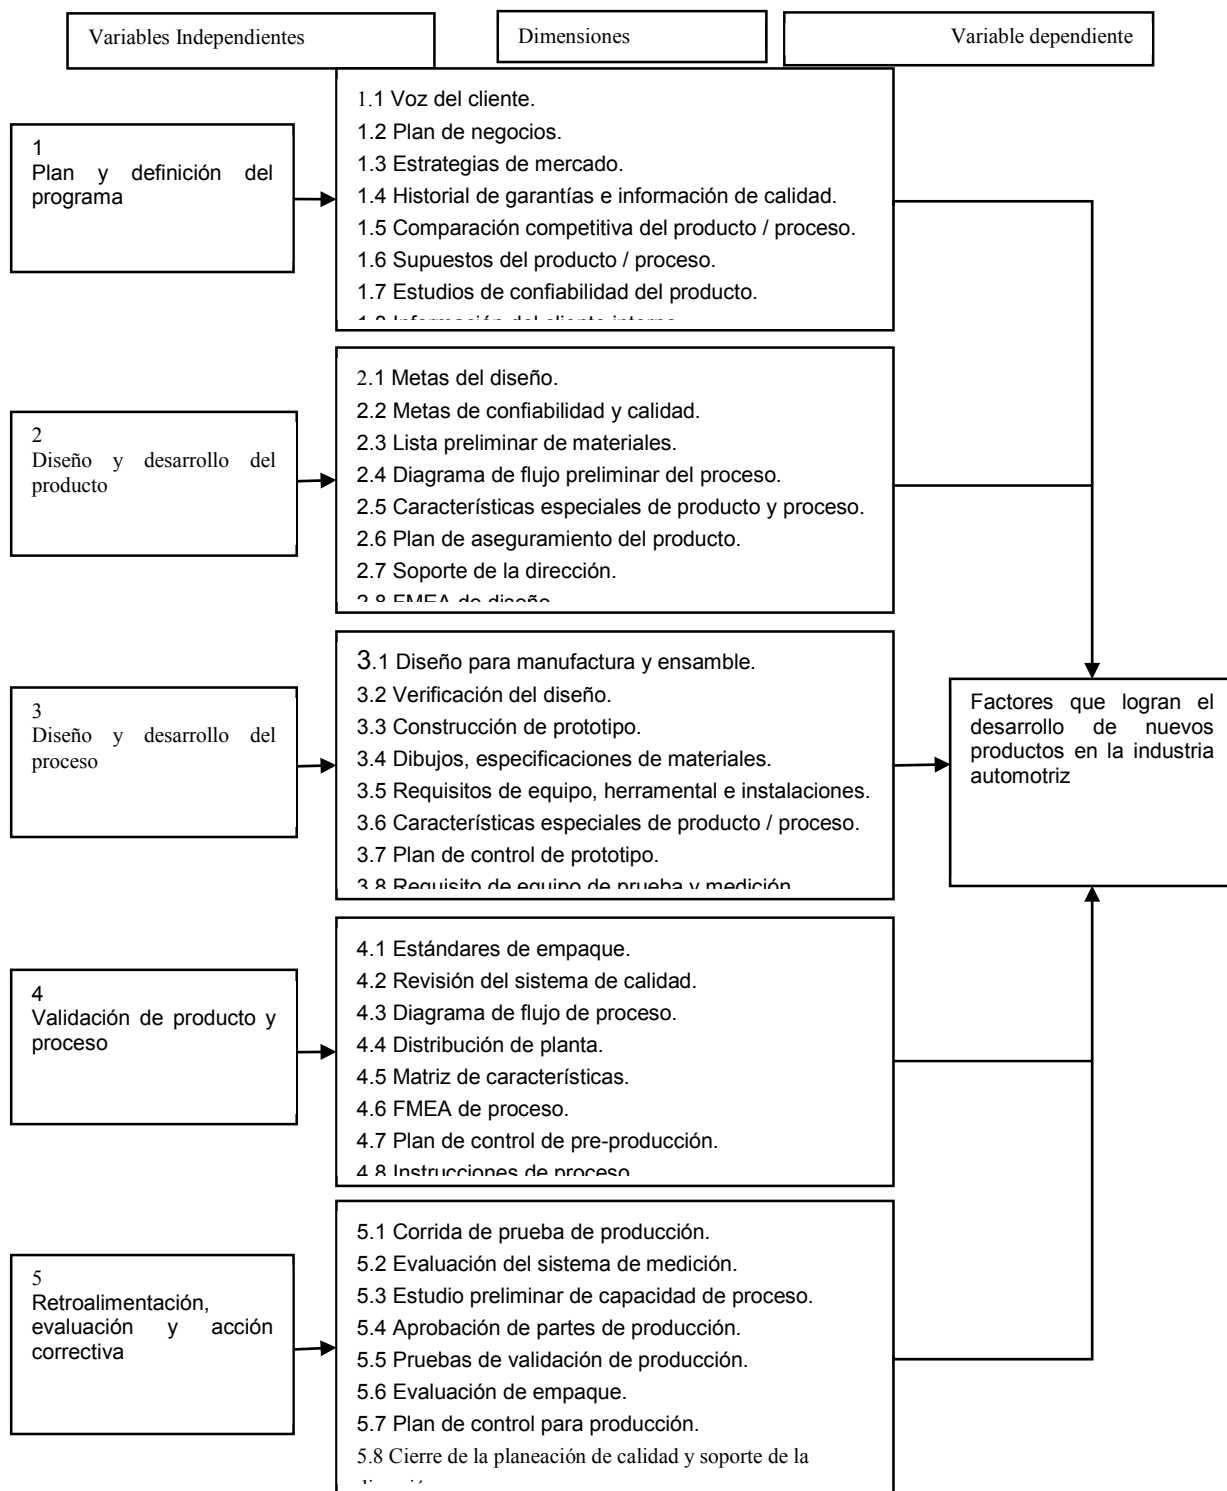

Tabla 2: Análisis de Fiabilidad

Alfa de Cronbach	No. De Elementos
.997	49

En la tabla se muestra la validez del cuestionario se determinó mediante el coeficiente de confiabilidad de Alfa-Cronbach, por medio del programa SPSS: el resultado arrojado por dicho programa fue de .923, un grado de confiabilidad aceptable (ya que esta por arriba .60 y de 0.70, puntuación mínima aceptable.). Fuente: elaboración propias con datos del spss (2014)

El Diagrama de Variables representa a las variables independientes tales como: Plan y definición del programa. En esta etapa es necesario obtener datos respecto a la investigación del mercado y la información que refleja la voz del cliente para plasmar todo esto en las características del producto y proceso. Diseño y desarrollo del producto. Es necesario considerar las siguientes etapas durante el diseño y desarrollo del producto aun cuando el diseño es propiedad del cliente o compartido. Diseño y desarrollo del proceso. Las tareas a realizar en esta etapa del proceso de planificación dependen de la finalización con éxito de las anteriores, en este momento se considera el proceso para asegurar el desarrollo integral que cumpla los requisitos del cliente. Validación de producto y proceso. En esta etapa es para la validación del proceso de fabricación a través de una evaluación del producto y proceso durante una

Fuente: La figura muestra el diagrama de variables, en las cuales se muestran las variables independientes, dimensiones y la variable dependiente.
 Fuente: elaboración propia (2014)

significante corrida de producción. Retroalimentación, evaluación y acción correctiva. El plan de control de la producción es la base para la evaluación del producto o servicio con el análisis de los datos variable y de atributos evaluados con el control estadístico del proceso SPC "Statistical Process Control" con el objetivo de reducir la variación, satisfacción del cliente, mejora de la entrega y servicio. (Book, 2008), asimismo las dimensiones de cada una de las variables independientes y la variable dependiente que son los factores que logran el desarrollo de nuevos productos en la industria automotriz.

RESULTADOS

Correlaciones Bivariadas (Matriz De *Pearson*) de las Variables Independientes

Para determinar las variables en las que existe correlación se utilizó la Matriz de Correlación de *Pearson*. Los resultados de las correlaciones permiten concluir que dos variables están relacionadas con otras dos variables: Se propone como estrategia de investigación que, a partir de la evidencia empírica que arroja la matriz de coeficientes de correlación de *Pearson*, considerar sólo aquellas correlaciones significativas al rango de 0.01 y 0.05 y de una magnitud igual o mayor a 0.50, lo cual representa una correlación positiva de moderada a fuerte. Como se muestra en la Tabla 3. Resultando las variables independientes con una correlación más alta de acuerdo al criterio establecido con anterioridad.

Tabla 3: Correlaciones Bivariadas (Matriz de *Pearson*) de las Variables Correlaciones Bivariadas (Matriz de *Pearson*) de las Variables

Correlación Entre Variables	Correlación
Plan y Definición del Programa	0.980
Diseño y Desarrollo del Producto	0.969
Diseño y Desarrollo del Proceso	0.981
Validación del Producto y Proceso	0.954
Retroalimentación, evaluación y acción correctiva	0.983

*En la tabla se observan las correlaciones que resultaron del análisis estadístico a través del SPSS 15. Se muestran las correlaciones más altas con respecto a las variables independientes, dando como resultado que el plan y definición del programa con 0.980 y el diseño y el desarrollo del producto incide de manera directa en los factores que logran el desarrollo de nuevos productos en la industria automotriz en un 0.969, el diseño y desarrollo del proceso inciden en un 0.954, la validación del producto y proceso en un 0.981 y la retroalimentación en un 0.983 presentando correlaciones significativas en el nivel de 0.01. Fuente:elaboración propia (2014) **La correlación es significativa en el nivel 0.01 *La correlación es significativa en el nivel 0.05*

Los resultados de las correlaciones anteriores permiten concluir que las variables de plan y definición del programa con una correlación de 0.980, el diseño y desarrollo del producto con un 0.969, el diseño y desarrollo del proceso con 0.981, la validación del producto y proceso con 0.954, así como la retroalimentación, evaluación y acción correctiva con 0.983 tienen una incidencia directa con los factores que logran el desarrollo de nuevos productos en la industria automotriz. En la búsqueda de determinar los factores que logran el desarrollo y validación de la introducción de nuevos productos en la industria automotriz en Tijuana, Baja California, así como el analizar la importancia de la administración de los mismos y optimizar el uso de las herramientas claves para la calidad y métricos para la mejora continua en el desarrollo de los nuevos productos, a continuación se presentan los resultados encontrados con la finalidad de aportar información útil a las empresas y/o lectores interesados en dicho tema, que les permita un panorama actual, enriquezcan y fundamenten la toma de decisiones con respecto a la validación, introducción y administración de nuevos productos de metal para audio. Cabe mencionar que iniciando con el análisis, se tiene que el grueso de las empresas representado por un 39% es proveedor nivel 1, el 30% es nivel 2, el 26% es nivel 3 y el 4% representa a las empresas que son equipo de manufactura original en

Tijuana, B.C. Los factores determinantes para el diseño de un nuevo producto en donde el 35% considera las características especiales del producto o proceso, el 26% la especificación de material o cambio en el dibujo, el 22% orientados a la confiabilidad y el 17% considera las características especiales en el proceso o producto. En tanto que los factores determinantes para el desarrollo del producto en donde el 39% considera la revisión del diseño, el 22% revisa tanto el análisis del modo potencial de falla y el plan de control para la construcción del prototipo y el 17% revisa las características especiales y el equipo de prueba. Asimismo, los factores para la validación del producto y proceso en donde el 35% la especificación y estándar para el empaque, el 30% el plan preliminar del estudio de capacidad de procesos, el 22% el plan de análisis del sistema de medición y el 13% la aprobación para partes para producción. El factor de mayor peso durante la validación del primer producto en donde el 43% tiene énfasis en las características especiales, el 35% en el seguimiento del flujo de proceso y plan de control, el 13% demostrar la capacidad del proceso de producción y el 9% la medición de la repetitividad y reproducibilidad. Los factores para la retroalimentación y acción correctiva durante la introducción de un nuevo producto, el 39% considera la acción correctiva, el 30% la metodología de planear, hacer, verificar, revisar, el 17% generar las opciones y el 13% reunir a la gente clave.

CONCLUSIONES

De acuerdo a lo comentado en la búsqueda extraída en esta sección se desarrolla el análisis de las variables que influyen en el proceso mencionado, tomando en cuenta el instrumento utilizado mediante un cuestionario de opción múltiple, por lo que las variables analizadas en este trabajo tienen la característica principal de mostrar el estado actual de lo que requieren la industria automotriz en este rubro en Tijuana, B.C. Por lo tanto las variables de de plan y definición del programa con una correlación de 0.980, el diseño y desarrollo del producto con un 0.969, el diseño y desarrollo del proceso con 0.981, la validación del producto y proceso con 0.954, así como la retroalimentación, evaluación y acción correctiva con 0.983 tienen una incidencia directa con los factores que logran el desarrollo de nuevos productos en la industria automotriz. Se concluye de acuerdo a la clasificación que existe para la manufactura de nuevos productos en la industria automotriz, que las empresas dedicadas a este rubro, el 39% es proveedor nivel 1 que se encarga de construir las partes para motor, el sistema funcional, etc., mientras que el 30% es nivel 2 que realiza la forja, estampado, plástico, etc., el 26% de estas empresas representan al nivel 3 que se encarga de insumos para el nivel 2, y finalmente se encontró que el 4% representa al equipo de manufactura original. Se encuentra que el sistema de producción utilizado en sus procesos de manufactura, el 35% indica que usa el método “justo a tiempo”, el 26% de las empresas utiliza el método de “sistema flexible de fabricación”, y que el 22% de las empresas utiliza el método de “producción por lote” y finalmente el 17% de las mismas utiliza el “flujo continuo”, por lo que queda de manifiesto que con el método “Justo a tiempo” se obtiene mayor beneficio.

Así mismo, se encontró que uno de los factores que influye fuertemente es el criterio para definir la factibilidad en el desarrollo de un nuevo producto, en donde el 35% de las empresas encuentran como apoyo al estudio de confiabilidad, mientras que el 30% considera a la estrategia de mercado, el 26% de las empresas se apoya en la opinión del cliente y finalmente el 9% utiliza el análisis histórico de garantías; por lo anterior, significa que el estudio de confiabilidad continúa siendo el instrumento con el cual las empresas se apoyan para desarrollar un nuevo producto. El estudio arroja que como estrategia de mercado, las empresas en un 48% consideran el tipo de mercado, mientras que el 26% considera a la cultura y costumbres, el 17% aprovecha el entorno socioeconómico y el 9% mediante la competencia. Tocante al factor que toman las empresas para conocer al cliente interno, se encontró que el 30% de las empresas se apoya en los reclamos internos, el 26% considera el nivel de servicio, mientras que el 22% de las empresas considera en igual porcentaje de importancia por un lado la relación interna con el cliente, y por el otro lado considera también el contacto cara a cara. Para la selección de materiales, los criterios que utilizan las empresas, son los siguientes: el 35% de las mismas consideran para la selección de materiales a el proceso de manufactura, mientras que el 30% da relevancia al diseño; un 17% de estas empresas, tanto consideran

la definición del producto, como de igual importancia, en un igual porcentaje se lo atribuyen a las características especiales del producto. Los factores que se consideran predominantes para el plan de control de prototipos, son los siguientes: un 39% de las empresas manifiesta que es identificando las dimensiones críticas, un 35% de las mismas consideran el instrumento de medición, mientras que un 17% toma en cuenta el método de verificación y finalmente el 9% de las empresas se guían por las características especiales.

El trabajo de investigación encontró que el nivel de aceptación para la capacidad de proceso, es el siguiente: el 30% de las empresas lo considera mayor que 1.65, mientras que el 26% opina que es mayor que 2.00 y el 22% de las empresas afirma que es por un lado mayor que 1.33 y finalmente el mismo porcentaje del 22% por otro lado consideran que es mayor al 1.00 el nivel de aceptación para la capacidad de proceso. Se concluye que el factor de peso para definir un plan de control para producción de nuevos productos o modelos son las características especiales ya que un 43% de las empresas así lo consideran, mientras que un 35% considera que son las tolerancias de las dimensiones, y el 13% toma en cuenta la revisión de la medición y finalmente el 9% de las empresas utiliza el instrumento de medición. Lo anteriormente analizado nos permite ampliar el panorama y ejercer una mejor toma de decisiones que nos lleven a cumplir el objetivo general y así como los objetivos específicos de este trabajo de investigación, permitiendo un aporte como antecedente para futuras investigaciones al respecto.

LAS VARIABLES SOCIODEMOGRÁFICAS Y SU RELACIÓN CON EL CLIMA ORGANIZACIONAL

Maricela Carolina Peña Cárdenas, Universidad Autónoma de Coahuila-México

Ma. Guadalupe Díaz Díaz, Universidad Autónoma de Coahuila-México

Diego Díaz Salinas, Universidad Autónoma de Coahuila-México

RESUMEN

El presente trabajo de investigación se llevó a cabo con el propósito de conocer la relación de las variables sociodemográficas y los factores del Clima Organizacional de los trabajadores de la industria metal-mecánica Monclova y Frontera, Coahuila. El estudio se realizó a 31 trabajadores, a quienes se les aplicó un cuestionario estructurado, tipo escala Likert, que consta de 7 variables; para la fiabilidad del instrumento se utilizó la prueba Alfa de Cronbach, obteniéndose un coeficiente de consistencia interna de 0.851. Una vez tabulados los datos, el tratamiento estadístico se realizó usando el programa SSPS (versión 17.0). Los resultados fueron los siguientes: el Nivel de estudios se relaciona con Liderazgo, Mecanismos Útiles y Recompensas; la Actividad principal muestra una relación con Actitudes hacia el cambio, Propósito, Relaciones y Mecanismos Útiles; mientras que la Edad y la Antigüedad no reportan asociación alguna.

PALABRAS CLAVE: Clima Organizacional, Satisfacción

SOCIODEMOGRAPHIC AND ITS RELATIONSHIP WITH ORGANIZATIONAL CLIMATE VARIABLES

ABSTRACT

This research work was conducted in order to learn about the relationship of socio-demographic variables and factors of the organizational climate of workers in the metal- mechanical industry Monclova, y Frontera, Coahuila. The study was carried out to 31 workers, who applied a questionnaire structured, type scale Likert, consisting of 7 variables; for the reliability of the instrument was used the Cronbach's alpha test, obtaining a coefficient of internal consistency of 0.851. Once tabulated data, the statistical treatment was conducted using the SSPS software (version 17.0). The results were as follows: the level of studies is related to leadership, useful mechanisms and rewards; the main activity shows a relationship with attitudes to wards change, purpose, relationships, and useful mechanisms; While age and age not reported no association.

KEYWORDS: Organizational Climate, Satisfaction

INTRODUCCIÓN

El ser humano necesita trabajar para sobrevivir, hoy en día las organizaciones son los lugares en que el hombre pasa mayor parte de su tiempo, adquiere un gran número de experiencias, pone en práctica sus habilidades y enriquece su aprendizaje. El lugar de trabajo es también un área en la que existe la oportunidad de interactuar con otras personas, brinda estatus y reconocimiento a los trabajadores. Dentro de las organizaciones se desarrollan fenómenos determinantes para el crecimiento de las mismas y de quienes pertenecen a ellas, uno de estos es el provocado por la interacción de las personas, la estructura y los procesos organizacionales que caracterizan la manera en la cual perciben a la organización y a la vez influyen en su comportamiento; a esto se le llama Clima Organizacional, o también conocido como Clima Laboral, Ambiente Laboral, o Ambiente Organizacional.

García Ramírez, M. & Ibarra Velázquez, L. (2012) definen el clima organizacional como las percepciones compartidas que tienen los miembros de una organización acerca de los procesos organizacionales, tales como las políticas, el estilo de liderazgo, las relaciones interpersonales, la remuneración, etc. Es importante recordar que la percepción de cada trabajador es distinta y ésta determina su comportamiento en la organización por lo que el clima organizacional varía de una organización a otra.

Con un estudio del clima organizacional se puede predecir una serie de sucesos que se desencadenarán a partir del tipo de clima que se tenga, si es positivo se pueden esperar beneficios tanto para los empleados como para la organización misma, como lo señalan Peña, et al. (2013) que las empresas para obtener resultados positivos ante dicha situación, han concluido que la clave es el recurso humano, pues su trabajo es fundamental para el logro de los objetivos organizacionales y; así lograr un clima organizacional satisfactorio; en cambio si es negativo, se esperarán pérdidas, gastos, conflictos y demás situaciones contrarias que pueden llevar a la organización a la quiebra. El objetivo del presente estudio es relacionar la Edad, Antigüedad, Nivel de estudios y Actividad principal, con los factores del Clima Organizacional de los trabajadores de dos Pequeñas Empresas de la industrial metal-mecánica ubicada en Monclova y Frontera, Coahuila, y su mercado meta es de tipo industrial.

REVISIÓN LITERARIA

En la actualidad, el Clima organizacional ha logrado ser importante en las empresas, ya que nos permite analizar situaciones para lograr el máximo beneficio para ellas y el trabajador; por lo anterior, debe de prevalecer en las organizaciones un clima laboral en el que el ambiente de trabajo proporcione a los trabajadores sentirse satisfechos por su labor, estableciendo un compromiso más fuerte hacia la organización. Litwin y Stringer (1968) fueron los primeros autores en dotar el significado del clima organizacional bajo una perspectiva perceptual. Para ellos, el clima es un conjunto de propiedades del entorno de trabajo que son susceptibles de ser medidas percibidas directa o indirectamente por los trabajadores que vive y trabaja en dicho entorno y que influye en su comportamiento y motivación. La teoría de Litwin y Stringer (1968) intenta explicar importantes aspectos de la conducta de los individuos que trabajan en una organización utilizando los conceptos como motivación y clima. Los autores tratan de describir los determinantes situacionales y ambientales que más influyen sobre la conducta y percepción del individuo, citado por Acosta, B. y Venegas, C. (2010).

Sandoval Caraveo, M. et. al. (2011) mencionan que el clima laboral es la característica del ambiente laboral percibido por los miembros de la organización el cual influye en la conducta de los individuos y por ende, en el desempeño organizacional. Para Chiavenato, I. (2000) el clima organizacional puede ser definido como las cualidades o propiedades del ambiente laboral que son percibidas o experimentadas por los miembros de la organización y que además tienen influencia directa en los comportamientos de los empleados. El Clima Organizacional es decisivo en la toma de decisiones en una organización y en la forma de como se dan las relaciones personales dentro y fuera de la misma. Por ello es ineludible que exista un clima satisfactorio para que se vean consecuencias positivas en la misma, portando beneficios a la empresa y por ende su posicionamiento en el mundo competitivo.

Teoría del Clima Organizacional

La Teoría de los Sistemas de Likert (1968), la cual establece que el comportamiento de los subordinados es causado por el comportamiento administrativo y por las condiciones organizacionales que los mismos perciben, por sus esperanzas, sus capacidades y sus valores. Por lo tanto, se afirma que la reacción está determinada por la percepción. Likert propone una teoría de análisis y diagnóstico del sistema organizacional basado en tres tipos de variables que determinan las características propias de una organización, las cuales influyen en la percepción individual del clima: Las *variables causales*, son las que

están orientadas a indicar el sentido en el que una organización evoluciona y obtiene resultados; la cual se encuentran la estructura de la organización y su administración, reglas, decisiones, competencia y actitudes; si estas se modifican, hacen que se modifiquen las otras variables. Las *variables intermedias*, reflejan el estado interno y la salud de una empresa y constituyen los procesos organizacionales de una empresa; por ejemplo; la actitud, los objetivos, la eficacia de la comunicación y la toma de decisiones. Y por último las *variables finales*, son las que repercuten del efecto de las variables causales y de las variables intermedias, por lo que reflejan los logros obtenidos por la organización, entre ellas están la productividad, los gastos de la empresa, las ganancias y las pérdidas.

METODOLOGÍA

El diseño metodológico corresponde a una investigación de campo, transversal, mixta (cuantitativa y cualitativa) y de tipo descriptivo. La Muestra se determinó por consenso ya que incluye a la población total de los trabajadores de dos pequeñas empresas. Para efecto de la recolección de la información se aplicó el Modelo Organizacional de Seis Casillas de Weisbord (1976). Para determinar la confiabilidad del instrumento los resultados fueron sometidos a la prueba de Alfa de Cronbach, obteniéndose un coeficiente de consistencia interna de 0.851, el cual es considerado como aceptable. Una vez tabulados los datos, el tratamiento estadístico consistió en calcular frecuencias, Coeficientes de Contingencia y niveles de significancia, usando el programa SSPS (versión 17.0).

RESULTADOS

Los resultados presentados en este apartado, han sido calculados en base a los datos obtenidos del cuestionario de Weisbord, aplicado a los 31 sujetos que conforman la Muestra de las pequeñas empresas objeto de estudio. Se establecieron rangos de edad, de antigüedad, nivel de estudios y de actividad principal, calculando las frecuencias y dar respuesta a los reactivos de las características demográficas; observándose que el 52% de los trabajadores se encuentran en el rango de 31 a 50 años de edad; mientras que el 26% con una antigüedad de 3 a menos de 5 años de servicio, seguidos por el 23% con una antigüedad de 7 a menos de 10 años de servicio; con respecto al nivel de estudios, se encontró que el 32% de los trabajadores han cursado la carrera Técnica, seguidos por 26% de los trabajadores cuentan con estudios de Secundaria; y la actividad principal que predomina en un 19% son Soldadores y Torneros. Posteriormente, para analizar los resultados de este estudio, se procedió hacer el cálculo de los coeficientes de contingencia de Kendall a fin de conocer si las 7 variables estudiadas presentan relaciones o asociaciones significativas con las características sociodemográficas.

Tabla 1: Coeficientes de Contingencia y Niveles de Significancia.

Variables	Edad		Antigüedad		Nivel De Estudios		Actividad Principal	
	Coefi. de Contin.	Nivel Significancia	Coefi. de Contin.	Nivel Significancia	Coefi. de Contin.	Nivel Significancia	Coefi. de Contin.	Nivel Significancia
Propósito	0.736	0.302	0.793	0.576	0.810	0.718	0.904	0.034**
Estructura	0.738	0.288	0.817	0.236	0.830	0.390	0.866	0.877
Liderazgo	0.674	0.811	0.747	0.948	0.863	0.024**	0.889	0.298
Relaciones	0.681	0.634	0.803	0.256	0.820	0.344	0.891	0.088*
Recompensas	0.773	0.549	0.838	0.697	0.890	0.065*	0.921	0.219
Mecanismos Útiles	0.739	0.680	0.836	0.405	0.884	0.028**	0.916	0.098*
Actitudes hacia el Cambio	0.691	0.697	0.798	0.503	0.813	0.666	0.914	0.002***

En esta tabla se muestran los Coeficientes de Contingencia y los Niveles de Significancia por cada una de las variables estudiadas.

*Nivel de significancia $p < 0.05$; **Nivel de significancia $p < 0.02$; ***Nivel de significancia $p < 0.01$

En la tabla 1 se puede observar que en el Nivel de Estudios existe una relación significativa entre la variable Liderazgo, lo cual indica que el trabajador se siente satisfecho en la forma que su jefe ejerce la autoridad;

por otro lado, existe una asociación significativa con las variables Mecanismos Útiles y Recompensas, indicativo de que el trabajador se sienta satisfecho es importante que se le proporcionen trabajos interesantes, recompensas justas y equitativas, condiciones físicas adecuadas. En cuanto a la Actividad Principal, la asociación es altamente significativa con el factor de Actitudes hacia el Cambio, lo cual indica que los trabajadores están dispuestos a un cambio o implementación de un sistema de administración, para el mejoramiento de la calidad productiva. También, esta característica presenta una relación significativa con la variable Propósito, indicativo de que los trabajadores conocen con claridad las metas y objetivos de la organización. Otras de las relaciones significativas que se presentan con las variables Relaciones y Mecanismos Útiles. Las características sociodemográficas de Edad y Antigüedad no presentan relaciones o asociaciones significativas con las variables del clima organizacional.

CONCLUSIONES

A partir de los resultados obtenidos la percepción del clima organizacional de los trabajadores administrativos y operativos de las empresas objeto de estudio. En general se identificó que de los 31 encuestados, se reporta una relación significativa en el Nivel de estudios con las variables de Liderazgo, Mecanismos Útiles y Recompensas; lo que significa que los trabajadores perciben un clima satisfactorio en cuanto a la relación con su jefe, considerando que éste ejerce autoridad de manera pertinente, respetuosa y justa. Liam, T. et al. (2001) citado por Millan, G. et al. (2007) afirman que la satisfacción disminuye con el nivel educativo. En cuanto a la Actividad principal existe una asociación muy significativa con los factores de Actitudes hacia el cambio, Propósito, Relaciones y Mecanismos Útiles; es decir, que los trabajadores sin importar la actividad a realizar perciben una actitud positiva hacia el cambio en un futuro, en cuanto al sistema de administración y mejoramiento de la calidad. Hoy en día, no es viable pensar en implementar nuevas estrategias organizacionales, sin seguir un proceso de cambio planeado que involucre al personal y sin tomar en consideración lo que está sucediendo en el entorno. Mientras que las características de Edad y la Antigüedad no reportan asociación alguna. Se recomienda continuar este estudio, a través de estrategias de mejora, de reforzamiento y/o de cambio, aprovechando las áreas de oportunidad; esto a través de proporcionar retroalimentación a los directivos, en el cual se entregará un informe con los resultados obtenidos de acuerdo a las respuestas otorgadas por los trabajadores.

LA RESPONSABILIDAD SOCIAL EMPRESARIAL COMO FACTOR DE COMPETITIVIDAD EN LA INDUSTRIA MAQUILADORA DE TIJUANA, B.C., MÉXICO

María Virginia Flores-Ortiz, Universidad Autónoma de Baja California

Alfonso Vega-López, Universidad Autónoma de Baja California

Edgar Armando Chávez-Moreno, Universidad Autónoma de Baja California

RESUMEN

El presente trabajo de investigación se busca determinar los factores que inciden de manera directa en la responsabilidad social empresarial como factor de competitividad en la Industria Maquiladora en Tijuana, B.C., México, dado que La industria maquiladora de exportación ha traído consigo la globalización a México, siendo un claro fenómeno de las tendencias e impactos de los mercados globales. La RSE es hoy en día una necesidad para toda empresa, debido a que una organización que se preocupa por mejorar continuamente y que entre sus metas esté el permanecer en el mercado, debe aprender a interactuar correctamente en el entorno en el que se maneja cuidando minuciosamente que el alcanzar sus objetivos y metas no dañen la relación ni el entorno en el que se encuentra y una vez logrado esto, entonces, la RSE se convierte en un factor de competitividad para esa empresa. (Parra et. al, 2012) Para lograr los resultados se han realizado 49 encuestas representativas empresas afiliadas en el Directorio de la Industria Maquiladora de Baja California de Tijuana.

CORPORATE SOCIAL RESPONSIBILITY AS A FACTOR IN BOND INDUSTRY COMPETITIVENESS OF TIJUANA, BC, MEXICO

ABSTRACT

This research seeks to determine the factors that influence directly in corporate social responsibility as a competitive factor in the bond Industry in Tijuana, BC, Mexico, since the bond industry has brought globalization to Mexico, is a clear phenomenon of trends and impacts of global markets. CSR is now a necessity for every business, because an organization that cares for continuous improvement and is among its goals to remain in the market, you must learn to interact properly in the environment in which it is handled carefully watching that achieving its goals and objectives do not damage the relationship or the environment in which it is located and once this is achieved, then CSR becomes a competitive factor for that company. (Parra et. Al, 2012) to achieve the results are representative surveys conducted 49 affiliates in the bond Industry Directory of Baja California from Tijuana.

KEYWORDS: Social Responsibility, Competitiveness, Bond Industry

INTRODUCCIÓN

La industria maquiladora de exportación ha traído consigo la globalización a México, siendo un claro fenómeno de las tendencias e impactos de los mercados globales. A partir de la década de los sesenta cuando empezaron a establecerse este tipo de inversiones en el país, el sector maquilador se ha convertido en un equivalente de transformación económica. De tal manera que el número promedio de establecimientos activos en el país de Enero a Julio de 2011 a nivel nacional representa un total de 5,097, el personal promedio total nacional ocupado durante el mismo período es de 1'845,094, comprendiendo el personal ocupado que se contrato directamente, así como el personal subcontratado. Las remuneraciones totales pagadas al personal ocupado total nacional fueron de \$119,849.30 millones de pesos. (INEGI, 2011) Los ingresos del mercado nacional fueron de \$ 636,333.00 millones de pesos, distribuido de la siguiente manera: Coahuila 9.7%, Nuevo León 18.5%, Tamaulipas 3.9%, Veracruz 3.8%, Puebla 6.9%, Jalisco 5.8%, Querétaro 5.5%, Guanajuato 6.1.% Distrito Federal 5.9%, resto del país 20.9%.

En cuanto a los ingresos provenientes del mercado extranjero el total nacional fue al equivalente de 824,945.20 millones de pesos distribuidos de la siguiente manera: Baja California 6.1%, Sonora 6.7%, Chihuahua 5.7%, Coahuila 13.9%, Nuevo León 14.7%, Tamaulipas 6.9%, Puebla 8.0%, Jalisco 4.5%, Guanajuato 7.3%, Distrito Federal 7.2% y el resto del país 19.0%. (INEGI, 2011). En lo que se refiere a Baja California el número promedio de establecimientos activos de Enero a Julio de 2011 fueron 942. El personal ocupado total promedio fue de 223,893 que comprende el personal ocupado que se contrato directamente así como al personal subcontratado. Las remuneraciones totales pagadas al personal fueron de \$116,179.65 millones de pesos y en cuanto a los ingresos provenientes de mercados extranjeros Baja California obtuvo \$50,321.66 millones de pesos. De aquí la importancia de que la industria maquiladora tome en cuenta la responsabilidad social empresarial (RSE) como el inicio de la competitividad, pues permite a las compañías identificar las oportunidades y riesgos del entorno y de la cadena de valor para tornarlos en ventajas competitivas que le permitan utilizar sus potencialidades y enfrentar sus limitaciones, por lo tanto la integración de la responsabilidad empresarial le permite a una organización fundar una relación sólida y sostenible con el entorno social y medioambiental. La RSE está relacionada a otros términos como la imagen de la marca, el rendimiento, las normas y regulaciones así como la gestión ambiental, que a su vez hacen incrementar la competitividad de las empresas. Además de que la RSE ayuda a que las organizaciones vislumbren, más allá del compromiso ético que tienen con la sociedad y con la sostenibilidad ambiental, a detectar las oportunidades que les brinda al presentarse una eficiencia interna.

REVISIÓN LITERARIA

En la revisión de la literatura diversos autores han abordado el tema de Responsabilidad Social Empresarial entre ellos Dahlsrud (2008), en su análisis comparado de diversas definiciones, aquí se define la RSE como el conjunto de políticas y acciones que las firmas adoptan de manera voluntaria para contribuir a la sociedad, proteger la naturaleza y mantener buenas relaciones con los agentes interesados (*stakeholders*). La más reciente definición de RSE de acuerdo con la Comisión de las Comunidades Europeas (2011), se refiere a la responsabilidad de las empresas por su impacto en la sociedad y hace referencia expresa a la necesidad de colaborar con todas las partes interesadas para integrar las preocupaciones sociales, medioambientales y éticas, el respeto de los derechos humanos y las preocupaciones de los consumidores en sus operaciones empresariales y su estrategia básica. Para Rodríguez (2008), la RSE es aquella a través del cual la empresa integra de forma voluntaria las dimensiones social y medioambiental en sus relaciones con los grupos de interés". Dicha concepción implica que las empresas deben poseer una visión integral de su negocio donde se respeten las personas, la sociedad y el medio ambiente (Jaén y Rivas, 2008; Campbell, 2007), afirman que deben institucionalizarse las estrategias empresariales en aras de fomentar y asegurar un comportamiento responsable; de otra forma, las empresas actuarán responsablemente en la medida en que sus prácticas maximicen sus utilidades

Responsabilidad Social Como Factor de Competitividad

La RSE es hoy en día una necesidad para toda empresa, debido a que una organización que se preocupa por mejorar continuamente y que entre sus metas esté el permanecer en el mercado, debe aprender a interactuar correctamente en el entorno en el que se maneja cuidando minuciosamente que el alcanzar sus objetivos y metas no dañen la relación ni el entorno en el que se encuentra y una vez logrado esto, entonces, la RSE se convierte en un factor de competitividad para esa empresa. (Parra et. al, 2012). Por lo tanto la competitividad empresarial, tiene en cuenta que las fuentes generadoras de ventajas competitivas en las empresas están cambiando, y surgen nuevas oportunidades y retos que deben ser abordados (Hitt et al., 2009). Por lo tanto la RSE se está transformando, de manera creciente y rápida, en una variable competitiva de reconocimiento mundial, un factor de éxito en los negocios que se conjuga con el compromiso ético de la empresa moderna con la sociedad.

La conducción socialmente responsable de una empresa genera decisiones de negocios mejor informados, construye fidelidad, enriquece la imagen de la empresa y de marca, y contribuye, en forma cuantitativa, a la rentabilidad corporativa de largo plazo. Cada vez más, los clientes y la sociedad en general esperan, e incluso exigen, que las empresas jueguen un rol importante en el desarrollo y aumento de la calidad de vida de sus empleados, de su comunidad y del país. (Parra et. al, 2012) La Responsabilidad Social Empresarial es en pocas palabras una herramienta de gestión empresarial, es una nueva visión de negocios que involucran la preocupación y el desempeño de la empresa con el entorno en el que se involucra. Es responder con buena parte de lo que la empresa está produciendo, a la comunidad o sociedad que le permitió llegar hasta donde se encuentra. La importancia de la RSE radica en los beneficios que esta genera a toda aquella empresa que sepa integrar adecuadamente la RSE en su estrategia y posteriormente en el nivel operativo, ya que con ello tiene grandes posibilidades de que se convierta en un factor de competitividad que les facilite un mejor posicionamiento. (Parra et. al, 2012).

De hecho, existen gerentes y empresarios genuinamente preocupados por lograr que sus firmas hagan una contribución a la sociedad más allá de su actividad económica principal. Pero en el mundo de las grandes corporaciones son los inversionistas quienes tienen la última palabra, las decisiones empresariales tienen que ver cada vez menos con los valores individuales de gerentes y propietarios y más con la posibilidad de abrir mercados, reducir costos, maximizar beneficios y, en últimas, generar valor para los accionistas. (Vargas, G., 2011) Un incentivo adicional para invertir en RSE es mantener la buena reputación de la firma, es decir la imagen de la marca, lo cual contribuye a proteger o incluso a incrementar su valor de mercado, haciéndola atractiva frente a potenciales inversionistas, y generar valor para sus propietarios. . (Vargas, G., 2011) Jaén y Rivas (2008), sostienen que el ámbito social debe institucionalizarse en aras de poder incorporar la parte social a las estrategias empresariales, lo importante es que los empresarios deben estén conscientes de que el nuevo rol que tienen en la sociedad es la creación de valor compartido y no solo de ganancias, es decir, debe crearse valor económico, al mismo tiempo que se crea valor para la sociedad (Kliksberg, 2008).

Para que este objetivo se logre, es necesario que la RSE esté en el centro de la toma de decisiones empresariales; de acuerdo con Porter y Kramer (2006), la RSE debe estar interrelacionada con las estrategias empresariales utilizando el mismo enfoque que guía las decisiones principales del negocio. Por otro lado, la creación y aplicación de regulaciones efectivas del Estado está en función de la capacidad de los actores (uniones, consumidores, ambientalistas) de participar y monitorear esas regulaciones, aunque muchos sostienen que las empresas se resistirán a las regulaciones impuestas y siempre tratarán de que el gobierno las disminuya o las mitigue. La tesis principal de este enfoque radica en que existe más probabilidad de comportarse de manera responsable si existen regulaciones fuertes y bien establecidas, y si el proceso de creación de regulaciones es inclusivo de empresas y gobierno. (López et. al 2011) Para efectos de esta investigación las variables independientes son: la imagen de la marca, el rendimiento, las normas y

regulaciones así como la gestión ambiental. Las cuales a continuación se definen: Imagen de la marca. La imagen será el pilar sobre el que se soporta la imagen general que tienen los públicos sobre la empresa. Esta concepción es compartida por los investigadores actuales de la marca; así, la imagen de marca se convierte en una red de memoria asociativa basada en las percepciones de los comunicadores. (Keller, 2008) Rendimiento. Esta centrado en el cumplimiento de objetivos cuantitativos y cualitativos. Así, se dice de una persona que demuestra un alto rendimiento cuando alcanza o excede sus objetivos, lo hace con gran calidad en la forma de conseguirlos y también con una forma determinada de utilizar los recursos, evaluar situaciones, generar soluciones o tomar decisiones. (Valda, 2013)

Normas y regulaciones. Norma. En el marco del SEIA, (2014), el concepto de normativa de carácter ambiental, o normativa ambiental aplicable, comprende aquellas normas cuyo objetivo es asegurar la protección del medio ambiente, la preservación de la naturaleza y la conservación del patrimonio ambiental, e imponen una obligación o exigencia cuyo cumplimiento debe ser acreditado por el titular del proyecto o actividad durante el proceso de evaluación. Regulación. El Estado emite reglas que norman las actividades económicas y sociales de los particulares. Mediante estas reglas se pretende garantizar el funcionamiento eficiente de los mercados, generar certeza jurídica, garantizar derechos de propiedad, evitar daños inminentes o bien atenuar o eliminar daños existentes a la salud o bienestar de la población, a la salud animal y vegetal, al medio ambiente, a los recursos naturales o a la economía.

Por ello, las regulaciones son las reglas o normas emitidas por el gobierno para garantizar beneficios sociales. Por lo tanto la regulación social son las disposiciones que buscan proteger el medio ambiente y la salud humana, animal y vegetal, así como establecer condiciones para el ejercicio de profesiones y para las relaciones laborales. (COFEMER, 2009) Gestión ambiental. Desde el punto de vista de la administración pública, principal actor en la planificación y ordenamiento territorial; la gestión ambiental se define como aquel conjunto de acciones normativas, administrativas y operativas que impulsa el Estado para alcanzar el desarrollo con sustentabilidad ambiental. Es decir, el objetivo de desarrollo sustentable, se lograría mediante funciones tales como el diseño y formulación de; políticas ambientales; una legislación ambiental; de un sistema administrativo; y de un conjunto de instrumentos de acción. (Chabalgoity, 2006)

MÉTODO

La metodología de la investigación es cuantitativa y cualitativa. La investigación cuantitativa se aplica para el levantamiento de encuestas, a través de cuestionarios a los empleados según una muestra aleatoria de la población total de la Industria Maquiladora. Se proceso la información recabada con aplicación del programa estadístico SPSS para el análisis descriptivo e inferencial. La variable dependiente es la responsabilidad social empresarial. En cuanto a las variables independientes como factores de competitividad se tomaron las siguientes: imagen de la marca, rendimiento, normas y regulaciones, por ultimo gestión ambiental. En la tabla 1 se muestra su operacionalización.

Justificación de la Investigación

En la actualidad las empresas no entienden por completo la necesidad de implementar la responsabilidad social empresarial como un factor de competitividad que vaya a la par con la estrategia general de la organización, ya que se está convirtiendo en una variable competitiva de reconocimiento global. Por lo tanto cuando una empresa asume la responsabilidad social empresarial como tal, crea vínculos de fidelidad, enriquece la imagen de la marca y contribuye al rendimiento de la organización. De tal manera que cuando la empresa comprende y reconoce las normas y regulaciones que implica la responsabilidad social empresarial, es el momento en que son socialmente responsables y lo en un factor de convierten en un factor de competitividad.

Objetivos

Objetivo General: Determinar los factores que inciden de manera directa en la responsabilidad social empresarial como factor de competitividad en la Industria Maquiladora en Tijuana, B.C., México

Objetivo específico: Determinar si la imagen de la marca, el rendimiento, las normas y regulaciones así como la gestión ambiental inciden de manera directa en la responsabilidad social empresarial como factores de competitividad en la Industria Maquiladora en Tijuana, B.C., México.

Muestra

El muestreo es representativo de un total de 75 empresas afiliadas en el Directorio de la Industria Maquiladora de Baja California de Tijuana No. 13 del 2013, de las cuales 45 se dedican al ensamble de componentes electrónicos. Se aplica un instrumento de medición-cuestionario a una muestra de 49 empresas en Tijuana, Baja California. La investigación se llevo a cabo los dos últimos cuatrimestres del 2012 y todo el año 2013. Los factores que se tomaron en cuenta en el cálculo de la muestra, es que la población se considera con características homogéneas, además, de contarse con una población finita, ya que el número de empresas maquiladoras es conocido y la representatividad de la muestra está determinada por un error permisible de 0.068, con un nivel de confianza del 95% y $p = q = 0.5$. La muestra para la población finita de empresas del ramo automotriz como se muestra en la Tabla 1:

Tabla 2: Total de Empresas de Acuerdo al Directorio de la Industria Maquiladora de Baja California No. 13 del 2013

Total de Empresas Automotrices	Muestra
75	49

La tabla muestra que el total de empresas registradas en el Directorio de la industria maquiladora que integran una población de 75 maquiladoras, la población se considera con características homogéneas y se contó con una población finita, porque se conoce el número, dando como resultado que la muestra esperada es de 49 empresas estas fueron válidas y ninguna fue excluida al momento de analizar la información. Fuente elaboración propia, (2014)

Validación del Instrumento

A los empleados de las gerentes de la industria maquiladora se les aplicó un cuestionario conformado de 49 preguntas, el cual fue validado relacionado al tema de estudio. Se utilizó una escala de medición de *likert*. Se elaboraron los cuadros que permiten un análisis de los factores que inciden de manera directa en la responsabilidad social empresarial como factor de competitividad en la Industria Maquiladora en Tijuana, B.C., México. La validez del cuestionario se determinó mediante el coeficiente de confiabilidad de *Alfa-Cronbach*, por medio del programa SPSS: el resultado arrojado por dicho programa fue de .80, un grado de confiabilidad aceptable (ya que esta por arriba .60 y de 0.70, puntuación mínima aceptable). A continuación se muestra en la Tabla 2.

Tabla 3: Análisis de Fiabilidad

Alfa de Cronbach	No. de Elementos
0.925	49

En la tabla se muestra la validez del cuestionario se determinó mediante el coeficiente de confiabilidad de *Alfa-Cronbach*, por medio del programa SPSS: el resultado arrojado por dicho programa fue de .925, un grado de confiabilidad aceptable (ya que esta por arriba .60 y de 0.70, puntuación mínima aceptable.). Fuente: elaboración propia (2014)

RESULTADOS

Correlaciones Bivariadas (Matriz de Pearson) de las Variables Independientes

Para determinar las variables en las que existe correlación se utilizó la Matriz de Correlación de *Pearson*. Los resultados de las correlaciones permiten concluir que dos variables están relacionadas con otras dos variables: Se propone como estrategia de investigación que, a partir de la evidencia empírica que arroja la matriz de coeficientes de correlación de *Pearson*, considerar sólo aquellas correlaciones significativas al rango de 0.01 y 0.05 y de una magnitud igual o mayor a 0.50, lo cual representa una correlación positiva

de moderada a fuerte. Como se muestra en la Tabla 3. Resultando las variables independientes con una correlación más alta de acuerdo al criterio establecido con anterioridad.

Tabla 4: Correlaciones Bivariadas (Matriz de *Pearson*) de las Variables Correlaciones Bivariadas (Matriz de *Pearson*) de las Variables

Imagen de la Marca	0.823
Rendimiento	0.917
Normas y regulaciones	0.854
Gestión ambiental	0.964

*En la tabla se observan las correlaciones que resultaron del análisis estadístico a través del SPSS 15. Se muestran las correlaciones más altas con respecto a las variables independientes, dando como resultado la imagen de la marca con 0.823 el rendimiento incide en un 0.917, las normas y regulaciones en 0.854 y por último la gestión ambiental en un 0.964 inciden de manera directa en la responsabilidad social empresarial como factor de competitividad en la Industria Maquiladora, presentando correlaciones significativas en el nivel de 0.01. Fuente: elaboración propia (2014) **La correlación es significativa en el nivel 0.01 * La correlación es significativa en el nivel 0.05*

Los resultados de las correlaciones anteriores permiten concluir que las variables la imagen de la marca con 0.823 el rendimiento con un 0.917, las normas y regulaciones en 0.854 y por último la gestión ambiental en un 0.964 inciden de manera directa en la responsabilidad social empresarial como factor de competitividad en la Industria Maquiladora de Tijuana, B.C., México. En lo referente a la imagen de la marca el resultado de la correlación es de 0.823, dado que la industria maquiladora si el líder en su sector, son dinámicas, innovadoras, progresistas, son empresas seguras, reconocidas, respetadas y con prestigio.

El rendimiento dio como resultado una correlación de 0.917, debido a la calidad del producto, la eficiencia de los procesos operativos internos, la organización de las tareas de los colaboradores, la satisfacción de los clientes, la rapidez de adaptación a las necesidades de los mercados, el incremento de las maquiladoras en el mercado, la motivación y satisfacción de sus empleados y la reducción de la rotación que tienen en áreas administrativas y por último la reducción del ausentismo laboral. Asimismo en cuanto al resultado de las normas y regulaciones el resultado de correlación es de 0.854 ya que las maquiladoras tienen un compromiso de cumplir con las leyes y regulaciones ambientales, han tomado medidas para mejorar su desempeño ambiental debido a las regulaciones ambientales con que cuenta, han cambiado su consumo de agua, combustibles, consumo de energía eléctrica a partir del cumplimiento de las normas ambientales, además de que conocen el monto de las multas por no cumplir las normas ambientales en su ramo y reciben visitas periódicas de tipo ambiental. Por último el resultado obtenido de la gestión ambiental es de 0.964, las maquiladoras cuentan con una persona que está a cargo de los asuntos ambientales, cuentan con un comité de ambiente, seguridad e higiene, asimismo con un sistema formal de gestión ambiental, manuales de gestión ambiental, manejan indicadores de desempeño ambiental, cuentan con instalaciones, equipos y sistemas anticontaminantes o de tratamiento pro ambiental, han realizado cambios en el equipo para mejorar la ecología, han realizado cambios por razones ambientales en los insumos y productos, tomaron medidas para mejorar su desempeño ambiental debido a los requerimientos de los proveedores de insumos y a las presiones de la comunidad local, todo esto con la finalidad de mejorar su imagen pública. Cuentan con un inventario de fuentes potenciales de contaminación, un sistema reciclamiento, recirculación y tratamiento de agua y tienen proyectos de investigación y desarrollo o de ingeniería con fines ambientales y han contratado alguna empresa de consultoría ecológica.

CONCLUSIONES

La responsabilidad social empresarial es hoy en día una necesidad para toda empresa, debido a que una organización que se preocupa por mejorar continuamente y que entre sus metas esté el permanecer en el mercado, debe aprender a interactuar correctamente en el entorno en el que se maneja cuidando

minuciosamente que el alcanzar sus objetivos y metas no dañen la relación ni el entorno en el que se encuentra y una vez logrado esto, entonces, la RSE se convierte en un factor de competitividad para esa empresa. (Parra et. al, 2012). Las maquiladoras las deben considerar como una herramienta estrategia para elevar su competitividad, sus resultados son a largo plazo y afecta de manera positiva su competitividad al mejorar sus productos, los procesos de producción y obtienen la satisfacción y lealtad de sus clientes. Asimismo se incrementa la motivación y fidelidad de los colaboradores, lo cual fomenta el incremento de su creatividad y capacidad de innovación. Mejora su imagen pública al obtener certificaciones o premios, por ende tiene proyección hacia la comunidad, obtiene mejor posicionamiento en el mercado laboral, mayor relaciones con otras empresas del mismo sector y tienen mayor acceso a fondos de apoyos financieros gubernamentales, debido a la consolidación de la empresa y su imagen.

En lo referente a la imagen de la marca, dado que la industria maquiladora si el lider en su sector, son dinamicas, innovadoras, progresistas, son empresas seguras, reconocidas, respetadas y con prestigio. El rendimiento se manifiesta en la calidad del producto, la eficiencia de los procesos operativos internos, la organización de las tareas de los colaboradores, la satisfacción de los clientes, la rapidez de adaptación a las necesidades de los mercados, el incremento de las maquiladoras en el mercado, la motivación y satisfacción de sus empleados y la reducción de la rotación que tienen en áreas administrativas y por último la reducción del ausentismo laboral. Asimismo en cuanto al resultado de las normas y regulaciones las maquiladoras tienen un compromiso de cumplir con las leyes y regulaciones ambientales, han tomado medidas para mejorar su desempeño ambiental debido a las regulaciones ambientales con que cuenta, han cambiado su consumo de agua, combustibles, consumo de energía eléctrica a partir del cumplimiento de las normas ambientales, además de que conocen el monto de las multas por no cumplir las normas ambientales en su ramo y reciben visitas periódicas de tipo ambiental.

Por último la gestión ambiental, las maquiladoras cuentan con una persona que está a cargo de los asuntos ambientales, cuentan con un comité de ambiente, seguridad e higiene, asimismo con un sistema formal de gestión ambiental, manuales de gestión ambiental, manejan indicadores de desempeño ambiental, cuentan con instalaciones, equipos y sistemas anticontaminantes o de tratamiento pro ambiental, han realizado cambios en el equipo para mejorar la ecología. Estas han realizado cambios por razones ambientales en los insumos y productos, tomaron medidas para mejorar su desempeño ambiental debido a los requerimientos de los proveedores de insumos y a las presiones de la comunidad local, todo esto con la finalidad de mejorar su imagen pública. Cuentan con un inventario de fuentes potenciales de contaminación, un sistema reciclamiento, recirculación y tratamiento de agua y tienen proyectos de investigación y desarrollo o de ingeniería con fines ambientales y han contratado alguna empresa de consultoría ecológica. Por último se puede concluir que la imagen de la marca, el rendimiento, las normas y regulaciones así como la gestión ambiental inciden de manera directa en la responsabilidad social empresarial como factores de competitividad en la Industria Maquiladora en Tijuana, B.C., México.

Aportación de la Investigación

La principal contribución de este trabajo, es la determinación de los factores de competitividad que inciden de manera directa en la responsabilidad social en la Industria Maquiladora de Tijuana, B.C., México, tales como: la imagen de la marca, el rendimiento, las normas y regulaciones así como la gestión ambiental contribuirán a mejorar los niveles de su competitividad.

Limitación de la Investigación

La principal limitación que se presentó en la investigación, fue la recolección de la información, debido básicamente a la resistencia y poca colaboración que se presento al inicio de la aplicación de los cuestionarios por parte de los sujetos de estudio, prolongando significativamente, el periodo para recabar los datos y por ende el procesamiento de la información para obtener los resultados de la investigación.

TIPO DE CAMBIO Y DESEMPEÑO DE LAS EXPORTACIONES EN PERIODOS DE VOLATILIDAD FINANCIERA: EL CASO DE MÉXICO Y CHINA

Mario Alberto Lagunes Pérez, Universidad Popular Autónoma del Estado de Puebla
Héctor Hugo Pérez Villarreal, Universidad Popular Autónoma del Estado de Puebla

RESUMEN

A partir de la crisis financiera de 2008 se incrementó la volatilidad del tipo de cambio respecto al dólar estadounidense en varias naciones, para diversos autores el tipo de cambio sigue siendo determinante de la competitividad de las exportaciones, de modo que el objetivo de esta investigación no experimental cuantitativa, y correlacional descriptiva se centra en una aproximación metodológica para evaluar si existe una relación estadísticamente significativa entre el tipo de cambio y las exportaciones chinas y mexicanas, para lo cual se utilizará un modelo GARCH (p,q). Los resultados sugieren que esta relación solo es válida para China, siendo el ingreso de los Estados Unidos la variable que mejor explica el comportamiento de las exportaciones mexicanas.

PALABRAS CLAVE: Tipo de Cambio, Exportaciones, Competitividad

EXCHANGE RATE AND EXPORTS PERFORMANCE DURING VOLATILITY FINANCIAL PERIODS: THE CASE OF MEXICO AND CHINA

ABSTRACT

The 2008 financial crisis increased the volatility of many nation's exchange rate compared to the U.S. dollar, some authors point out that the exchange rate continues to be an important determinant of the competitiveness of exports, The objective of this non-experimental, quantitative, descriptive and correlational research focuses on a methodological approach to assess whether there is a statistically meaningful relationship between exchange rate and the exports of China and Mexico, for which a GARCH (p, q) model will be used. The results suggest that this relationship is only valid for China, being the income of the United States the variable that best explains the behavior of Mexican exports.

INTRODUCCIÓN

El mercado estadounidense ha sido por muchas décadas un importante destino de las exportaciones mundiales ocasionando que tanto gobiernos como países procuren promover la competitividad de sus productos para poder incursionar en dicho mercado, en la actualidad dos países emergentes se encuentran entre los 4 principales socios comerciales de los Estados Unidos, tal es el caso de la República Popular China y México. La crisis financiera mundial que inició a finales de 2008 ha traído desequilibrios monetarios y comerciales que han afectado de manera diferente a varias naciones, ocasionando en el caso de México una contracción de su economía en el año 2009 así como la devaluación e incremento en la volatilidad del tipo de cambio respecto al dólar estadounidense, China por su parte experimentó una desaceleración de su crecimiento económico, pero al contrario de México las autoridades monetarias han

procurado una revaluación del yuan respecto al dólar estadounidense, obligando a las empresas exportadoras de dichas naciones a cambiar sus políticas y metas corporativas. Las innovaciones científicas aportadas al tema de la competitividad como elemento de éxito en el sector exportador, han considerado diferentes variables relevantes para una mejora de la misma, no obstante todavía se han presentado en los últimos años estudios científicos en los cuales el valor del tipo de cambio y el costo de la mano de obra continúa siendo una variable estadísticamente significativa para explicar el desempeño de las exportaciones, sin embargo otros estudios continúan reconociendo que existen otras variables estadísticamente significativas que puedan explicar el volumen de las exportaciones como lo son: el ingreso mundial, el ingreso de los Estados Unidos, los diferenciales de inflación, el tipo de cambio real de las divisas respecto al dólar u otras monedas con las que realizan importantes flujos comerciales y el tipo de cambio de los países competidores. Esta investigación no experimental, cuantitativa y correlacional descriptiva, tiene como objetivo determinar el modo en que las variaciones del tipo de cambio de las divisas de México y la República Popular China han impactado el desempeño de las exportaciones de dichas naciones.

REVISIÓN DE LA LITERATURA

La implementación de elementos competitivos que favorezcan a las empresas y a las naciones juegan un papel altamente importante en la mayoría de las economías del mundo orientadas al sector exportador e integradas al comercio internacional (Organisation for Economic Co-operation and Development ([OECD], 2009).

Globalización y Competitividad

Desde que comenzó el proceso de globalización a finales del siglo pasado, la competitividad ha sido un elemento estratégico que requieren tanto las empresas como las naciones para tener éxito en los mercados mundiales, Ketels (2010) argumenta que ante la situación económica y financiera mundial que se derivó de la crisis de 2008, los países alrededor del mundo se encuentran examinando la manera de reactivar el crecimiento económico, en países altamente integrados a la economía mundial estos esfuerzos se enfocan en desarrollar habilidades que permitan incrementar la colocación de bienes y servicios domésticos en los mercados globales mediante el impulso a la competitividad de las exportaciones. El proceso de globalización ha tenido como consecuencia que las exportaciones de México pasaran de 40,711 millones de dólares en 1990 a 349,569 millones de dólares en 2013, expandiéndose en un 758%, por su parte la exportaciones chinas pasaron de 249,203 millones de dólares en 1990 a 2,048,782 millones de dólares en 2012 presentando un crecimiento del 722% (Organización Mundial de Comercio [OMC], 2014).

La mayor parte de las investigaciones científicas muestran que la competitividad es un elemento determinante para el desarrollo económico y social de las naciones, Atkinson (2013) afirma que no existe un acuerdo acerca de lo que es y lo que representa el término competitividad puesto que muchas veces el concepto es bastante ambiguo y se confunde con conceptos como lo son la innovación y la productividad, no obstante que los términos pueden ser muy similares, al momento de diseñar modelos o políticas, las variables utilizadas pueden ser muy diferentes, lo que da como resultado diferentes metodologías e índices y que los resultados arrojados por las investigaciones científicas pueden ser contradictorios.

Esser, Hillebrand, Messner y Meyer-Stamer (1994), analizan a la competitividad desde el punto de vista macroeconómico y microeconómico. El nivel macroeconómico está relacionado con el desempeño de las economías en relación a otros países y se mide usualmente por el crecimiento económico, dentro de las variables más comúnmente utilizadas para medir la competitividad a nivel macroeconómico se encuentran agregados económicos y financieros como son: el rendimiento comercial, balanza de pagos, el tipo de cambio, las tasas de interés, inversión en infraestructura, costo de la mano de obra incluyendo también variables cualitativas como son el nivel de actividad científica y tecnológica del país, los resultados de las instituciones en el campo de la investigación y desarrollo y la transparencia gubernamental. A nivel

microeconómico las medidas cuantitativas de competitividad se estiman en base a elementos como son: la participación del mercado, indicadores de productividad y/o costos, márgenes de ganancia y/o beneficios netos, del mismo modo cualitativamente, existen mediciones y definiciones como la investigación y las estrategias gerenciales.

Tipo de Cambio Real y Exportaciones

Uno de los indicadores más frecuentemente utilizados para medir los cambios en la competitividad internacional son los precios o costos relativos de las mercancías, expresadas en una moneda común, lo que se conoce como el tipo de cambio real (Turner y Van't Dack, 1993). Del mismo modo que otras variables analizadas, tampoco existe un acuerdo sobre el efecto que tendría el tipo de cambio real sobre el nivel de exportaciones de un país. Baldwin y Krugman (1989) afirman que únicamente a través de una depreciación muy alta en el tipo de cambio se puede tener una influencia real en las exportaciones, debido a la existencia de costos hundidos, en cuanto a los mercados emergentes, Berman y Berthou (2006) afirman que las imperfecciones en los mercados financieros de estas naciones pueden conducir a una respuesta muy pequeña sobre el nivel de exportaciones ante la depreciación del tipo de cambio real, por su parte Berthou (2008) argumenta que la apreciación del tipo de cambio real reduce el valor de las exportaciones, llegando a estimar que una apreciación del 10% ocasiona una disminución en la exportaciones del 6.8% en los países que utiliza como muestra,

Analizando casos específicos, Berger y Martin (2011) concluyen que uno de los pilares para el incremento en la competitividad de la exportaciones de China ha sido la tasa de cambio subvaluada, por su parte Sato, Shimizu, Shrestha y Zhang (2013) realizan un análisis que va del año 2005 al 2013, encontrando que la apreciación del yen japonés afectó las exportaciones de algunas industrias de ese país excepto al sector automotriz, mientras que la apreciación del won surcoreano aparte de ocasionar una pérdida de competitividad en varias industrias, también afectó de manera negativa el sector automotriz, Cheung y Sengupta (2013) concluyen que la apreciación de la rupia ha tenido un impacto negativo y significativo en el nivel de exportaciones de India, por lo que urgen a las autoridades monetarias a evitar la apreciación de la moneda, por su parte Aspe y Jarque (1985) elaboran un modelo de exportaciones donde se utilizan los precios de exportación e ingreso mundial como variables independientes, puesto que el principal destino de las exportaciones mexicanas son los Estados Unidos de América, Peñaloza Webb (1988) desarrolla un modelo de exportaciones que está en función del nivel de ingreso de dicha nación.

Breve Marco Contextual

El principal receptor de las exportaciones mexicanas son los Estados Unidos de América que contabilizaron a diciembre del año 2013 el 80.74% de las exportaciones totales de México (Banco de México, 2014). Es importante señalar que a partir de 1990 y hasta 2002 México fue incrementando su comercio bilateral con los Estados Unidos, sin embargo a partir de 2003, China desplazó a México convirtiéndose así en un competidor importante de los productos y servicios mexicanos (Chavez y Leyva, 2007). A su vez China se ha convertido en un elemento fundamental del desempeño económico mundial con un ingreso que representa el 11.36% del ingreso mundial y cuyas exportaciones representan el 11.3% del total mundial (Banco Mundial, 2013). Del mismo modo las exportaciones chinas tienen un mayor grado de diversificación regional puesto que el 17.2% de las mismas tiene como destino los Estados Unidos de Norteamérica, el 16.3% es adquirido por la Unión Europea, el 15.8% llegan a Hong Kong y Japón adquiere un 7.4% de las mismas. Es importante el impacto que China tiene en el comercio exterior mexicano, ya que después de los Estados Unidos de América, la segunda fuente de importaciones mexicanas provienen de China que representan el 14.92% de las importaciones totales, no obstante la participación mexicana en China es aún muy pequeña, ya que solo el 1.40% de las exportaciones totales tienen como destino dicha nación. (Instituto Nacional de Estadística y Geografía [INEGI], 2012).

Cabe destacar que la crisis financiera internacional que dio inicios a partir del año 2007 y se agudizó en 2008, desencadenó una crisis económica global que impactó a diferentes sectores ocasionando la caída de los precios de las acciones en los mercados de valores, quiebras bancarias, inestabilidad en el comportamiento de los precios de los metales, volatilidad cambiaria, desempleo y el descenso en los precios de muchas de las materias primas (León y De la Rosa, 2010). En el caso de México el PIB retrocedió un 6.9% en el año 2009 e incrementó la volatilidad del tipo de cambio del peso mexicano respecto al dólar estadounidense, Por su parte China experimentó una disminución en su tasa de crecimiento de un 14.2% en 2007 a un 9.6% en 2008 y a un 9.2% en 2009, mientras que el yuan chino ha venido experimentando un periodo de apreciación pasando de 7.25 unidades por dólar en 2008 a 6.28 por dólar en 2013.

METODOLOGÍA

Este estudio tiene como finalidad analizar los efectos que la variación en el tipo de cambio del peso mexicano y el yuan chino tiene sobre las exportaciones de dichos países en el periodo 2007-2013, para lograr este objetivo, se realizarán pruebas econométricas para analizar el cambio en el valor de las exportaciones de los países anteriormente mencionados como consecuencia de las variaciones en el tipo de cambio de sus respectivas divisas, además se incluyen otras variables que pueden impactar el nivel de dichas exportaciones como los son el ingreso de los Estados Unidos, el ingreso mundial, el tipo de cambio del yuan chino y del peso mexicano respecto al dólar estadounidense.

Especificación Empírica del Modelo

Las variables a utilizar en esta investigación abarcan el periodo 2007-2013, información que fue obtenida de las bases de datos de INEGI y del Banco Mundial, para verificar la existencia de relación entre el tipo de cambio real de las divisas seleccionadas sobre el valor de sus respectivas exportaciones se utilizará una versión del modelo GARCH (1,1), el cual al modelar la varianza, permite determinar si la variación de una variable incluida en ese modelo tiene efectos sobre la variable dependiente. El modelo que se utilizará para validar la relación anteriormente comentada es el siguiente:

$$\begin{aligned} (1) \quad xc_t &= a_b + b_t xc_{t-1} + \eta_t \\ (2) \quad \sigma_t^2 &= \varphi_t + \alpha_t \eta_{t-1}^2 + \beta_t \sigma_{t-1}^2 + \gamma_t \text{divc}_{t-1} + \delta_t \text{usa}_{t-1} + \varepsilon_{mt} \text{mxn}_{t-1} + \zeta_t \text{wor}_{t-1} \\ (3) \quad xm_t &= a_b + b_t xm_{t-1} + \eta_t \\ (4) \quad \sigma_t^2 &= \varphi_t + \alpha_t \eta_{t-1}^2 + \beta_t \sigma_{t-1}^2 + \gamma_t \text{divm}_{t-1} + \delta_t \text{usa}_{t-1} + \varepsilon_{yt} \text{yua}_{t-1} + \zeta_t \text{wor}_{t-1} \end{aligned}$$

Donde:

xc_t Es el valor en el tiempo t de las exportaciones chinas y xm_t es el valor para las exportaciones mexicanas.

a_b Es el término constante.

Xc_{t-1} Es el valor en el tiempo t-1 de las exportaciones chinas y Xm_{t-1} es el valor de las exportaciones mexicanas.

η_t Es el término de error aleatorio.

σ_t^2 Es la varianza condicional, es decir, aquella pronosticada por la información de períodos anteriores.

φ_t Es el término constante del modelo de la varianza.

$\alpha_t \eta_{t-1}^2$ Es el término ARCH e indica el efecto del mismo sobre el modelo.

$\beta_t \sigma_{t-1}^2$ Es el término GARCH indica el efecto del mismo sobre el modelo.

γ_j Es el coeficiente del tipo de cambio de cada divisa respecto al dólar estadounidense del modelo de la varianza, el cuál es útil para determinar cómo esta variable afecta a la variable dependiente.

$divc_{t-1}$ Es el tipo de cambio real del yuan respecto al dólar estadounidense en el periodo t-1, $divm_{t-1}$ es el tipo de cambio del peso mexicano.

δ_i Es el coeficiente del ingreso de Estados Unidos que servirá para encontrar la existencia de alguna relación del mismo con la variable dependiente.

usa_{t-1} Es valor del Ingreso de Estados Unidos en el tiempo t-1.

ε_{mt} Es el coeficiente del tipo de cambio del peso mexicano respecto al dólar estadounidense el cual permite observar si tiene algún efecto sobre la variable dependiente.

mxn_{t-1} Es el tipo de cambio del peso mexicano respecto al dólar estadounidense en el tiempo t-1

ε_{yt} Es el coeficiente del tipo de cambio del yuan chino respecto al dólar estadounidense el cual permite observar si tiene algún efecto sobre la variable dependiente.

yua_{t-1} Es el tipo de cambio del yuan chino respecto al dólar estadounidense en el tiempo t-1

ζ_i Es el coeficiente del ingreso mundial el cuál se utiliza para determinar cómo esta variable impacta a la variable dependiente.

wor_{t-1} Es valor del ingreso mundial en el tiempo t-1. El valor de cada variable se encuentra expresado como $\ln p_{t+1} - \ln p_t$. Estadísticamente existe la posibilidad de que el efecto de las variables independientes no se presente en el mismo periodo de tiempo, sino en algún momento posterior por lo que para capturar esa posibilidad la ecuación (1) se amplía de la siguiente manera:

$x_{t+1} = a_b + b_i r_{t-1} + \eta_t$, con $i = -1, 0, 1, 2, \dots$ (3) Este estudio no pretende pronosticar el valor de las exportaciones de los países seleccionados, sino determinar si el tipo de cambio tiene un efecto estadísticamente significativo sobre el valor de las mismas por lo que el enfoque recae en el valor y la significancia de los coeficientes $\gamma_t, \delta_t, \varepsilon_t, \zeta_t$.

Hipótesis

Cuando el valor del tipo de cambio real es la única variable que tiene un impacto sobre el valor de las exportaciones, el coeficiente estimado del tipo de cambio real debe ser estadísticamente significativo y distinto a cero, mientras que el resto de las variables deben ser iguales a cero.

$H_{01}: |\gamma_t| \neq 0; \delta_t = \varepsilon_t = \zeta_t = 0$

En todas las estimaciones el coeficiente del término GARCH (β_i) debe ser significativo, lo cual indica que la estimación del modelo mediante el proceso GARCH es la adecuada.

RESULTADOS

En primera instancia se realizan las pruebas LM y White, cuyo propósito es analizar la presencia de autocorrelación y heteroscedasticidad. Los resultados obtenidos muestran la existencia de ambos elementos, estimándose con el procedimiento GARCH (1,1).

Tabla 1: Resultados Econométricos del Modelo del Valor de las Exportaciones de China Como Función del Tipo de Cambio Real del Yuan Respecto al Dólar Estadounidense

A	γ_t	δ_t	ε_{mt}	ζ_t
0	0.13 (1.99)*	0.05 (2.07)*	0.34 (0.52)	0.06 (2.04)*
1	0.18 (2.03)*	0.15 (2.10)*	0.39 (0.61)	0.13 (2.07)*
2	0.15 (0.54)	0.35 (0.62)	0.14 (0.07)	0.19 (0.23)

* significativo al 5%, ** significativo al 1%. El dato entre paréntesis bajo el coeficiente es el valor del estadístico Z; A=número de adelantos

Tabla 2: Resultados Econométricos del Modelo del Valor de las Exportaciones de México Como Función del Tipo de Cambio del Peso Mexicano Respecto al Dólar Estadounidense

A	γ_t	δ_t	ε_{yt}	ζ_t
0	0.19 (0.34)	-0.32 (-2.08)*	0.10 (3.14)**	0.04 (0.28)
1	0.38 (0.35)	-0.34 (-2.11)*	0.29 (3.22)**	0.18 (0.17)
2	0.17 (0.31)	0.14 (0.08)	0.05 (0.17)	0.15 (0.01)

* significativo al 5%, ** significativo al 1%. El dato entre paréntesis bajo el coeficiente es el valor del estadístico Z. A=número de adelantos

Los resultados obtenidos muestran efectos mixtos para cada uno de los países utilizados en la muestra, siendo el ingreso de los Estados Unidos la única variable que muestra un efecto estadísticamente significativo sobre el valor de las exportaciones tanto de México como de China. Es importante resaltar que en el caso de China el coeficiente del tipo de cambio de su moneda respecto al dólar estadounidense es significativo, lo cual permite deducir que esta variable durante el periodo analizado ha impactado el nivel de exportaciones de dicha nación, si bien se sabe que el yuan ha sido altamente controlado por las autoridades monetarias, pareciera que las fuerzas económicas tanto internas como externas han obligado al estado a apreciar la moneda pudiendo ser un factor que explique la disminución en las tasas de crecimiento, que si bien son superiores a la media mundial, son bajas respecto a las que se presentaban en periodos anteriores. El ingreso mundial también tiene estadísticamente un efecto directo con las exportaciones de la República Popular China, es así que cuando éste disminuye, las exportaciones se ven afectadas de manera negativa muy probablemente por la diversificación de las mismas y el contagio de la crisis al resto del mundo. Para todo el resto de las variables explicativas el modelo no muestra una relación estadísticamente significativa, por lo que en el periodo analizado el tipo de cambio, el ingreso de los Estados Unidos y el comportamiento global de la economía son las variables que han impactado el nivel de exportaciones de China.

Analizando los resultados de México, la primera diferencia sustancial respecto al caso chino consiste en que el coeficiente del tipo de cambio real de su moneda respecto al dólar estadounidense no es significativo, es decir que su economía se ha desenvuelto de modo que el tipo de cambio no sea una ventaja competitiva significativa que impulse el desempeño de las exportaciones, situación que se tendría que continuar analizando ante la depreciación de la moneda en el mes de septiembre y principios de octubre de 2014 además de la volatilidad que ha presentado en el periodo analizado. En el caso del ingreso mundial, las exportaciones mexicanas parecen no ser afectadas por el mismo, de hecho los resultados de la tabla 2 muestran que el ingreso de los Estados Unidos es el principal determinante del nivel de las exportaciones mexicanas, lo cual es lógico ya que en promedio el 79% de las exportaciones mexicanas tienen como destino dicha nación, por lo que durante el periodo estudiado el comercio mexicano ha sido altamente dependiente del comportamiento de la economía estadounidense.

Además se puede apreciar que también existe una competencia de las exportaciones chinas y las exportaciones mexicanas en el mercado estadounidense, puesto que el coeficiente del tipo de cambio del yuan resulta significativo y con valor negativo, lo cual indicaría que el encarecimiento relativo de la mano de obra y de las exportaciones chinas han beneficiado a las exportaciones mexicanas cuyo destino son los Estados Unidos. Los resultados del ingreso mundial sugieren no tener un impacto estadísticamente significativo para el mercado mexicano por lo que durante el periodo analizado las exportaciones mexicanas han sido explicadas por el desempeño de la economía estadounidense y por el comportamiento de la competencia china. Los resultados permiten observar que las economías de los países analizados se han ido comportando de manera diferenciada, es notable el caso en cómo la economía mexicana se ha ido desenvolviendo de modo que el volumen de sus exportaciones ha dejado de ser función del tipo de cambio, dejando de ser un factor que otorgue a las empresas de dicha nación una ventaja competitiva, no obstante la economía china parece seguir dependiendo del valor de su moneda para impulsar las exportaciones, de modo que se tendría que trabajar para crear las condiciones microeconómicas y macroeconómicas para evitar que las exportaciones sean función del tipo de cambio debido a las consecuencias que las depreciaciones y apreciaciones traen sobre las variables fundamentales de las economías. China ha tenido éxito en la diversificación de sus exportaciones, situación que

México no ha logrado puesto que un alto porcentaje de sus exportaciones siguen dependiendo del desempeño económico de los Estados Unidos, el Tratado de Libre Comercio para Norteamérica y su localización geográfica pueden ser factor que expliquen la situación anterior, no obstante habría que analizar este último elemento ya que por varios años China ha desplazado a México como socio comercial de los Estados Unidos. Es importante señalar que ante el fenómeno de la globalización y siendo la economía de Estados Unidos el motor más importante de la economía mundial, una situación adversa en la economía de dicha nación se ve reflejada en la mayor parte de los países del mundo como se observó en la crisis de finales de la primera década del siglo XXI, por lo que en un momento dado la diversificación de las exportaciones no podría dar los resultados que sugieren los teóricos, puesto que como se observa en los resultados de la tabla 1 el ingreso mundial tiene un afectación sobre las exportaciones chinas, de modo que si el comportamiento negativo del ingreso de Estados Unidos se permea en el ingreso mundial, la ventaja de la diversificación de las exportaciones se vería nulificada.

La economía china se ha convertido en un competidor muy importante dentro de la economía mundial, llegando a desplazar las exportaciones de otras naciones, mucho se ha escrito sobre las condiciones desleales con las que China ha logrado mejorar sus niveles de competitividad, pero dado que la economía mundial, incluida la estadounidense, siguen dependiendo de costos bajos, es seguro que las exportaciones chinas seguirán siendo un competidor a tomar en cuenta durante un periodo largo de tiempo al realizar la toma de decisiones.

CONCLUSIONES

El presente estudio muestra que a diferencia de lo que mencionan algunos autores, no se puede determinar en algunos casos si efectivamente el tipo de cambio tiene un efecto sobre las exportaciones, sin embargo es claro que el comportamiento económico de Estados Unidos y por ende de la economía mundial son un elemento clave que determina el nivel de exportaciones de México y China. La globalización parece tener un impacto significativo en la competitividad de las exportaciones de los países analizados, ya que en el caso específico de China las exportaciones de esa nación son un importante competidor de las empresas mexicanas. Queda claro para los empresarios mexicanos que el tipo de cambio no parece ser ya una variable decisiva sobre la cual realizar una adecuada toma de decisiones, ya que hay que considerar otros elementos que permitan que sus mercancías sean competitivas a nivel global, no obstante la volatilidad del tipo de cambio puede alterar los resultados de la empresa, por lo que sería conveniente una mayor utilización de coberturas que ofrecen los mercados derivados para alcanzar la metas de las empresas. La correcta toma de

decisiones, implica que las empresas tanto chinas como mexicanas deben tener la mayor y mejor calidad informativa sobre el desempeño económico y financiero en Estados Unidos. Los gobiernos de las naciones analizadas deben elaborar políticas que permitan desarrollar empresas exitosas, en vez de únicamente crecimientos espectaculares de corto plazo, que a la larga pueden ser muy perjudiciales, de modo que el entorno económico es definitorio para que el sector empresarial pueda alcanzar las metas planeadas, gestionar el riesgo y mejorar sus niveles de competitividad que les permita colocar sus productos y competir de manera exitosa en el mercado mundial.

Este trabajo tiene como limitante el carecer de un análisis más profundo de la demanda de productos de las naciones estudiadas en el exterior, tampoco explica el modo y la razón por la que los bancos centrales han intervenido en sus monedas ya que si bien no son objeto de este estudio, si podrían ser consecuencia de un deterioro económico que pudiese impactar a las empresas exportadoras. Se recomienda construir una función de demanda de productos de las naciones en el mercado mundial e incluir un modelo que explique el comportamiento de los costos de mano de obra, también es importante notar que éste trabajo se desarrolla durante un periodo en que los mercados financieros han sido muy volátiles, por lo que no se puede inferir que los resultados sean similares en una situación de estabilidad económica y financiera más estable.

SOCIALIZACIÓN Y ENGAGEMENT

Carlos Reynoso-Núñez, Universidad Popular Autónoma del Estado de Puebla
María Eugenia Cíofalo-Lagos, Universidad Popular Autónoma del Estado de Puebla

RESUMEN

La socialización es un proceso delicado ya que su impacto en el nuevo trabajador, será un determinante para el comportamiento que muestre dentro de la organización. Este estudio, parte de la observación realizada a un grupo de colaboradores perteneciente al nivel operativo dentro de una empresa automotriz, a quienes se les impartió el proceso de inducción, usando dos metodologías que difieren en tiempo y contenido. La de menor tiempo, con contenido más general, es específica para el puesto de trabajo; la de mayor tiempo, consideró aspectos del puesto del trabajo y propios de la cultura organizacional. A lo largo de tres meses se midieron los índices de rotación, ausentismo y engagement para identificar si al prolongar la conducción del individuo de nuevo ingreso hacia su área laboral, a la vez que al ambiente de la empresa, se genera como consecuencia una elevada satisfacción laboral que incide en la disminución de los índices de rotación y ausentismo, al introyectar desde el inicio, lo que la organización espera de ellos y tener así la certidumbre de lo que su puesto de trabajo requiere. De este modo se concluye que el modelo facilita el engagement y por lo tanto, disminuye rotación y ausentismo.

PALABRAS CLAVE: Socialización, *engagement*, satisfacción, sentido de pertenencia

SOCIALIZATION AND ENGAGEMENT

ABSTRACT

Socialization is a delicate process and its impact on the new worker will be decisive for the behavior displayed within the organization. This study, strives through the observation of a group of employees from the operational level of an automotive company, who passed through an induction process, using two methodologies that differ in time and content. One which had less time, also had more general content specific to the job; the largest one in time considered different aspects of the work as well as the organizational culture. Over three months turnover rates, absenteeism and engagement were measured to identify whether to prolong the conduction of individual entrants to their working area, while the environment of the company, generated high satisfaction through work so turnover and absenteeism decreased because it was introjected from the beginning. So they knew what was expected from their work and be certain at the organization. In conclusion this is an outcome from this model because it facilitates engagement and hence, reduces turnover and absenteeism.

KEYWORDS: Socialization, Engagement, Satisfaction,

Inducción y Socialización

El origen del proceso de Inducción surge de la necesidad de lograr satisfacción y compromiso en los trabajadores a pesar de realizar tareas de riesgo, gran dificultad o extremo peligro; con la finalidad de garantizar su permanencia una vez que desarrollaran las competencias necesarias para un óptimo desempeño (Topa y Moriano, 2012). Por lo tanto, la inducción debe dirigirse a encaminar y servir de guía a los nuevos colaboradores, para lograr su involucramiento en el trabajo y sean capaces de invertir su mejor esfuerzo para la eficiencia y eficacia organizacionales (Ivancevich *et. al*, 2004)

Así mismo, la socialización como lo menciona Schein (1979) puede concebirse como sinónimo de inducción, al ser un proceso de inserción y adaptación del individuo a una organización y; a la empresa le corresponde brindar los medios para lograr una integración favorable y generar estrategias de retención del talento, dirigidas tanto a procesos cognitivos como a la percepción de los factores ambientales óptimos para su desenvolvimiento (De Olivera, Rose-García, Tamayo, 2001). Las investigaciones que en diversos momentos históricos se han desarrollado para buscar la mejor metodología no empírica sino científica y documentada, orientada al mejor aprovechamiento de la capacidad del capital humano, subrayan centrarse en sus necesidades para evitar el ausentismo o rotación, facilitando la satisfacción laboral; (Lawrence, 2003; Richer, 2002; Ryan, 2000; Evans, 1986; citados por Lufthans, 2008 pp. 158, 159, 165, 167). De esta forma, se destaca la importancia que debe darse a cada uno de los actores; desde el directivo o empresario que atrae, retiene e involucra al talento humano en su proceso cultural, como el aspirante a ser considerado candidato a incorporarse al mundo laboral. Desde las tres aristas del comportamiento organizacional: individuo, grupo y organización se conforma un ente existente en un contexto provoca constantes interacciones y permea cada plano organizacional permanentemente.

Bournout y engagement: Las últimas investigaciones han permitido determinar que si bien existe el *engagement*, también está la parte contraria que es el *burnout* laboral, ese desgaste profesional, síndrome de cansancio emocional o agotamiento laboral, resultante de las actividades del puesto de trabajo que se traduce en baja motivación y comportamiento disfuncional en el trabajo (Raigosa y Marín, 2011). La psicología humanista sentó las bases para entender el *engagement* sobre la idea de la Persona como centro de la organización que logrará una mayor identidad externa al reforzar su autoconcepto, lo que incidirá en el incremento de la comunicación, práctica colaborativa y resultados positivos en su área de trabajo, partiendo del autoconocimiento, determinación de sus valores y extensión de sus redes de influencia (Cárdenas, 2014; Ciófalo, 2013). Estos conceptos parten de Maslow y Rogers como padres de la psicología humanista que se orientan en la promoción y máximo aprovechamiento de los talentos de las personas que forman parte de una organización para que puedan experimentar el *engagement* (Cárdenas *et. al.*, 2014). Por tanto, puede verse a la inducción como la plataforma ideal para prevenir conflictos en los niveles más complejos de la organización como lo son: Comunicación, liderazgo y motivación, principalmente. Así como para establecer el lazo de pertenencia que permita el *engagement* y el desarrollo de un óptimo compromiso institucional; por eso resulta trascendental afinar los elementos y procesos de la inducción (Rayton y Yalabik, 2014).

Lo anterior otorga coherencia al sentido de pertenencia a través del cual se consigue el *engagement* y por ende, la satisfacción laboral ligada a la productividad que sólo se logra a través de un proceso de inducción claramente definido para este propósito (Isauro, 2001). Bajo la misma línea, otro estudio afirma que existe correlación entre el contrato psicológico y el efecto negativo del *engagement* por lo que debe de trabajarse en el contrato psicológico que lo incrementa y repercute en la satisfacción laboral, cuando el colaborador percibe que su organización cumple con sus obligaciones (Rayton, 2014). A este respecto, un estudio realizado a 157 maestros durante 5 meses, arrojó como resultado que el *engagement* predijo la insatisfacción laboral y los problemas de salud que lo afectan negativamente y; demostró que aspectos como la satisfacción laboral, facilitan un alto rendimiento (Simbula y Guglielmi, 2013)

Rotación Laboral

La rotación o fluctuación laboral es considerada por los investigadores como aquellos cambios constantes de los trabajadores en lapsos cortos considerando que pueden ser biológicas; socialmente necesarias; por causas personales o impuestas por la empresa (Flores, Abreu y Badii, 2008). Por otra parte, Deloitte explica que la intención voluntaria de abandonar la organización es el deseo consciente y deliberado de un empleado, dentro de un intervalo de tiempo determinado. También explica que los colaboradores tratan de mantener sus puestos de trabajo en épocas de recesión, por lo que si la economía de un país es fuerte disminuye la rotación (Erickson, Schwartz y Ensell, 2009). Sin embargo, también hay organizaciones donde

los supervisores provocan la rotación de personal. Aldape, Pedrozo, Castillo y Velázquez (2011), investigaron los diferentes estilos de liderazgo de Hersey y Blanchard: Dirigir, Persuadir, Participar y Delegar y concluyeron que cada uno influye en la rotación de manera diferente. Otras investigaciones (Miller, 2011), han encontrado que 7.7 días al año por trabajador, es el promedio de ausentismo y; esta tendencia es de 8.7% en las organizaciones gubernamentales y en la industria manufacturera se reduce hasta 5.7% .

Ausentismo

Aunque existen estudios en donde se hace saber el impacto del ausentismo en materia de salud, debemos diferenciar en particular cuatro tipos de ausentismo por Enfermedad: a) General, causada por agentes externos al trabajo; b) Profesional, la que resulta como práctica de la actividad laboral; c) Accidente de trabajo, derivada de la práctica de la actividad y; d) Accidente en trayecto de trabajo que es el incidente que sufre el trabajador al trasladarse a su centro de trabajo o de regreso a su hogar (Ley del Seguro Social, 1973). En su caso Puc (2005), señala que existen 3 modelos de ausentismo: a) Económico que consiste en la tolerancia de las leyes para evitar presentarse a laborar sin tener aparentemente una repercusión en el hecho; b) Psicosocial que resulta de la interacción entre los miembros de los grupos de trabajo que crean subculturas con particulares formas de comportamiento que los identifica y; c) Médico, con características del medio demográfico que incluyen la distancia al trabajo, tipo de grupos sociales y grado de compromiso hacia la organización. Sin duda los números proyectan la realidad de los hechos y así, Vásquez (2011) en su investigación en una compañía de minas subraya que el 66.9% de ausencias se debió a enfermedad general y un 33.33% a riesgos de trabajo; estas evidencias permiten a las organizaciones tomar decisiones en base al impacto que puede tener el ausentismo en sus procesos productivos.

Satisfacción Laboral

Existe una fuerte relación entre satisfacción y estabilidad organizacional -refiriéndola como ausencia de ausentismo-. Sin embargo, el tema de satisfacción es complejo quizá porque se relaciona con la diversidad y es un tema de percepción humana. Así podemos destacar dos grupos de personas, las que se centran en un conjunto de sentimientos positivos y quienes las describen como actitudes en relación con aspectos específicos del trabajo (Newstrom, 1993). Por ello las actitudes están fuertemente relacionadas con la satisfacción laboral y al tener componentes Cognitivo, Afectivo y Comportamental, se ligan a descripciones, creencias, emociones y acciones intencionales que derivan en percepciones positivas o negativas que inciden definitivamente en el ausentismo, rotación y *engagement* (Griffin y Moorhead, 2011). Así la ausencia de *engagement* y recurrencia de ausentismo y rotación pueden llevar a desarrollar un síndrome conocido como *Burnout* que, en el ámbito del trabajo afecta significativamente la relación con compañeros y jefes, conduciendo a un verdadero agotamiento emocional, despersonalización y disminución de la autoestima y el autoconcepto que como indican las investigaciones, son decisivos para el sentido de autoeficacia (Ciófaló, 2013; McCray, Cronholm, Bogner, Gallo y Neill, 2008; Marrau, 2004; Aldrete, Pando, Aranda, Balcázar, 2003).

METODOLOGÍA

Dos grupos de colaboradores participaron en la implementación del método. El primer grupo participó 6 horas en el proceso de socialización; el segundo, se involucró durante 5 días de inducción en el que se incluyó un contenido más amplio. La de menor tiempo, con contenido más general, es específica para el puesto de trabajo; la de mayor tiempo, consideró aspectos del puesto del trabajo y propios de la cultura organizacional y la relación con jefes de otras áreas incluyendo tiempo para convivir con la dirección general.

Tipo de Estudio

Este es un trabajo cualitativo experimental transversal simple que parte del análisis comparativo de dos grupos de colaboradores de la misma organización. El proceso cuantitativo aborda una investigación experimental transversal.

Sujetos

Los trabajadores muestra conservan el título de puesto, obreros generales, estos colaboradores tienen un rango de edad de 19 a 38 años, con estudios de secundaria.

Instrumentos

Para esta investigación se aplicó una encuesta que pide básica del encuestado como son: edad y sexo. La encuesta es constituida por 15 enunciados. Se expresan afirmaciones en las que se buscaba conocer cómo se respondía a variables de entorno laboral para así identificar las cuestiones de mayor peso en los colaboradores, que a su vez tuviera un efecto en el tema de rotación, ausentismo y sentido de pertenencia en su área laboral. La percepción de la persona se calificaba de 1 – 5. La encuesta fue diseñada bajo el esquema de la escala de LIKERT en la cual se establecen rangos para identificar de manera cualitativa el grado en el que la persona está de acuerdo o desacuerdo con las aseveraciones dadas, éstas no presentan ningún nivel de inclinación o inducen a que se dé una respuesta. La encuesta fue aplicada en dos fases en la primera se verificó la utilidad de la misma y del impacto que causaba en el grupo muestra, la segunda fue después de un periodo de tres meses en donde los grupos ya habían tomado su curso de inducción de acuerdo a la metodología que les correspondió de manera aleatoria y habían ejercido las actividades de su puesto de trabajo.

PROCEDIMIENTO

El estudio se desarrolló tomando en cuenta un método de inducción como propuesta de este trabajo, se realizó con un grupo muestra, con la finalidad de determinar si después de tres meses de trabajo en la empresa el grupo de nuevos colaboradores que llevaron este proceso; continúan laborando en la organización, se han mantenido sin ausentarse y han desarrollado un *engagement* o sentido de pertenencia en la organización. La muestra fue de treinta colaboradores.

Variable Independiente: Modelo de Inducción Se confirma en este trabajo que el modelo de inducción presentado para los ayudantes generales de la organización será nuestra variable independiente.

Variables Dependientes: Rotación, Ausentismo y *Engagement*, son los aspectos que se medirán para concluir las hipótesis señaladas.

Sujetos: Los colaboradores que participaron en este experimento son 16 hombres y 14 mujeres.

RESULTADOS

Las variables consideradas para la realización de las encuestas son en primer lugar la rotación de personal, además de ausentismo y por último sobre satisfacción laboral. A continuación se presentan las figuras que reflejan cómo se comportaron los trabajadores después de un tiempo determinado. Así como las opciones elegidas por ellos de manera general en las encuestas.

Figura 1: Socialización y Engagement

Nota: El total de la muestra es de 30 individuos, este grupo recibió inducción de 1 día. a) Dicho grupo está conformado por personas de nuevo ingreso en el puesto de obrero de la empresa elegida la cual ofrece como un servicio el transporte, los encuestados son parte del sindicato de trabajadores y tienen un sueldo igualitario.

En la Figura 1 se muestra que del total de los encuestados, un 62% eligió la opción nunca incurrir en el abandono del trabajo. En este caso el número 5 era la respuesta ideal a obtener, con lo que se puede decir que los aspectos manejados en esos enunciados como considerar cambiar de empresa, percibir demasiadas disyuntivas en el entorno laboral, mucho tiempo para llegar a la organización, dificultades para con el cuidado de su familia o creer que las expectativas no han sido cumplidas. No son determinantes, para que estos obreros en particular, se aparten de su centro de trabajo o pidan permisos para faltar a laborar.

Figura 2: Socialización y Engagement

Nota: El total de la muestra es de 30 individuos, este grupo recibió inducción de 1 día. Dicho grupo está conformado por personas de nuevo ingreso en el puesto de obrero de la empresa elegida la cual ofrece como un servicio el transporte, son parte del sindicato de trabajadores y tienen un sueldo igualitario.

El 67% del grupo experimental eligió la opción 5 mostró estar totalmente de acuerdo en evitar las ausencias injustificadas en su trabajo de acuerdo a las aseveraciones 6 – 11. En este caso el número 5 era la respuesta ideal a obtener, con lo que se puede decir que los aspectos manejados en esos enunciados como puesto poco interesante, aburrido, convivencia difícil, mala actitud del jefe y sentirse excluido de la empresa; son aspectos poco constantes en las percepciones de los obreros por lo que se puede destacar que estas cuestiones serán irrelevantes en las razones por las que se ausentarán de su puesto de trabajo.

Figura 3: Socialización y Engagement

Nota: El total de la muestra es de 30 individuos, este grupo recibió inducción de 1 día. Dicho grupo está conformado por personas de nuevo ingreso en el puesto de obrero de la empresa elegida la cual ofrece como un servicio el transporte, son parte del sindicato de trabajadores y tienen un sueldo igualitario.

Con respecto a esta variable de satisfacción laboral la Figura 3 muestra que un 69% de los encuestados eligió la opción 1 que de acuerdo a la escala de Likert empleada la opción “siempre” con respecto a estar de acuerdo con la afirmación dada de las aseveraciones 12 – 15. En este caso el número 1 era la respuesta ideal a obtener, con lo que se puede decir que los aspectos manejados en esos enunciados como percibirse como un elemento importante dentro del grupo de trabajo, buena motivación de parte de los superiores, salario justo, creerse capaz de cumplir con las metas del puesto, han sido alcanzadas ya que los trabajadores han obtenido cierto sentido de pertenencia debido a la satisfacción laboral percibida hasta ese momento.

Figura 4: Socialización y Engagement

Nota: El total de la muestra es de 31, este grupo recibió inducción de 1 semana. a) Dicho grupo está conformados por personas de nuevo ingreso en el puesto de obrero de la empresa elegida la cual ofrece como un servicio el transporte, son parte del sindicato de trabajadores y tienen un sueldo igualitario.

En esta Figura 4 se puede observar que el 77% de los encuestados, lo que simboliza 15% más de lo mostrado en la figura 3, eligió la opción 5 que de acuerdo a la escala de Likert empleada da un valor de nunca con respecto a estar de acuerdo con la afirmación dada de las aseveraciones 1 – 5. En este caso el número 5 era la respuesta ideal a obtener, con lo que se puede decir que los aspectos manejados en esos enunciados como considerar cambiar de empresa, percibir demasiadas disyuntivas en el entorno laboral, mucho tiempo para llegar a la organización, dificultades para con el cuidado de su familia o creer que las expectativas no han

sido cumplidas. No son determinantes, para que estos obreros en particular, se aparten de su centro de trabajo o pidan permisos para faltar a laborar.

Figura 5: Socialización y Engagement

Nota: El total de la muestra es de 31, este grupo que recibió inducción de 1 semana. Dicho grupo está conformados por personas de nuevo ingreso en el puesto de obrero de la empresa elegida la cual ofrece como un servicio el transporte, son parte del sindicato de trabajadores y tienen un sueldo igualitario.

Un 68% de la muestra, 1% menos que lo mostrado en la Figura 5, eligió la opción 5 que de acuerdo a la escala de Likert empleada da una respuesta de nunca con respecto a estar de acuerdo con la afirmación dada de las aseveraciones 6 – 11. En este caso el número 5 era la respuesta ideal a obtener, con lo que se puede decir que los aspectos manejados en esos enunciados como puesto poco interesante, aburrido, convivencia difícil, mala actitud del jefe, sentirse excluido de la empresa. No son aspectos constantes en las percepciones de los obreros por lo que se puede destacar que estas cuestiones no impactarán en las razones por las que se ausentarán de su puesto de trabajo.

Figura 6: Socialización y Engagement

Nota: El total de la muestra es de 31, este grupo que recibió inducción de 1 semana. Dicho grupo está conformados por personas de nuevo ingreso en el puesto de obrero de la empresa elegida la cual ofrece como un servicio el transporte, son parte del sindicato de trabajadores y tienen un sueldo igualitario.

El 50% de los trabajadores encuestados, 19% menos de lo que se obtuvo en la Figura 6, eligió la opción 1 que de acuerdo a la escala de Likert empleada da como constante la opción de siempre con respecto a estar de acuerdo con la afirmación dada de las aseveraciones 12 – 15. En este caso el número 1 era la respuesta ideal a obtener, con lo que se puede decir que los aspectos manejados en esos enunciados como percibirse

como un elemento importante dentro del grupo de trabajo, buena motivación de parte de los superiores, salario justo, creerse capaz de cumplir con las metas del puesto, han sido alcanzadas ya que los trabajadores han obtenido cierto sentido de pertenencia debido a la satisfacción laboral percibida hasta ese momento. Después de tres meses los índices de permanencia en ambos grupos elegidos como muestra para esta investigación, se han movido de la siguiente manera:

Tabla 1: Socialización Engagement

Tiempo de inducción	Índice de Permanencia		
	Continúan (%)	Baja (%)	Total (%)
1 día	63	37	100
1 semana	58	42	100

Nota: El total de la muestra es de 30 de los que tomaron curso de inducción de 1 día y 31 del grupo que recibió inducción de 1 semana.

a) Ambos grupos están conformados por personas de nuevo ingreso en el puesto de obrero de la misma empresa, tienen el servicio de transporte de personal, los individuos pertenecen al sindicato de trabajadores y perciben el mismo sueldo.

En la Tabla se puede observar que un 63% de los trabajadores que recibieron un día de curso de inducción permanecieron laborando en la empresa, el 37% restante es baja de su puesto de trabajo.

Por otro lado, de la muestra que recibió una semana de inducción únicamente el 58% de los obreros permanecieron dentro del centro de trabajo. El 42% restante ya no labora dentro de la empresa.

CONCLUSIONES

El proceso de inducción del personal bien llevado incide en una percepción favorable de los sujetos hacia la empresa facilitando una integración favorable al disminuir la rotación y el ausentismo e incrementar la satisfacción. La aplicación de este concepto, en las diferentes estructuras organizaciones acarreará eficiencia y eficacia en los procesos, de acoplamiento del colaborador a la empresa. El nuevo empleado al conocer su estatus de permanencia en la empresa ya sea por tiempo determinado o tiempo indefinido tendrá la información suficiente en el tiempo adecuado para adaptarse a la empresa lo antes posible. En base a los resultados alcanzado en este estudio de caso se puede concluir que la encuesta de percepción de la intención del trabajador en incidir en ausentismo o rotación así como el grado de satisfacción que presenta en un periodo de tres meses posterior a haber participado en un proceso de inducción, ha logrado su objetivo que fue, el incrementar el *engagement*. Las organizaciones en su necesidad de acuerdo al modelo trabajado deben poner especial atención en este proceso, ya que incide favorablemente en la permanencia de los colaboradores, el menor ausentismo de los mismos y en generar el *engagement*. Queda abierta la indagación para futuras investigaciones, el tiempo que la empresa debe dedicar a la inducción o socialización, no solo a mandos operativos como es el caso de esta investigación sino a mandos medios o gerenciales.

EL IMPACTO DEL LAVADO DE DINERO EN MÉXICO

Silke Mora López, Universidad Nacional Autónoma de México

RESUMEN

En este artículo se investigó el impacto alcanzado en relación a la entrada en vigor de varias disposiciones legales nacionales así como también de adecuaciones internacionales para el combate del lavado de dinero y financiamiento al terrorismo en México. Este impacto se mide tomando en consideración los resultados reflejados en los informes de gobierno de cada sexenio, en los cuales se analiza los avances obtenidos desde la entrada en vigor de legislaciones acerca de la prevención y radicación del lavado de dinero, mismas que derivaron de observaciones en dictámenes emitidos por Organismo Internacionales especializados en el tema. Se concluye que el impacto ha sido beneficioso para el país, ya que se está logrando una vigilancia continua y con ello evitar que el dinero generado por la delincuencia siga blanqueándose a través del sistema financiero.

PALABRAS CLAVES: Dinero, Ilegalidad, Terrorismo, Narcotráfico Y Delincuencia Organizada

THE IMPACT OF MONEY LAUNDERING IN MEXICO

ABSTRACT

In this article it was investigated the impact achieved in relation to the entrance in force of several national laws as well as international adjustments to combat the money laundering and terrorism financing in México. This impact is measured by considering the results reflected on government reports every six years, in which it is analyzed the progress made since the entrance in force of the laws about prevention and permanence of money laundering, those were derived from observations in dictums issued by international organisms specialized in the subject. It is concluded that the impact has been beneficial for the country, as it is achieving continuous monitoring and thereby avoid that the money generated by delinquency continue bleaching in through the financial system.

INTRODUCCIÓN

Desde el punto de vista etimológico el concepto de lavado de dinero (Figuroa, 2002) es el de “ajustar a la legalidad fiscal el dinero procedente de negocios delictivos o injustificables”. El órgano intergubernamental denominado Grupo de Acción Financiera sobre Blanqueo de Capitales y Financiamiento al Terrorismo (GAFI), define el lavado de dinero en términos generales como el procesamiento de las ganancias derivadas de la actividad criminal para disfrazar su procedencia ilícita, permitiendo a los criminales gozar de ellas sin arriesgar su fuente. Ahora bien, el lavado de dinero como tal lleva una secuencia para poder llevarse a cabo ya que sin duda es un mecanismo planeado y desarrollado con plena exactitud del objetivo que se desea lograr, que en este caso sería darle cabida al dinero ilícito para blanquearlo; por ello, las etapas o procesos para la consecución del lavado de dinero son las siguientes:

Colocación: Constituye la introducción de los recursos de procedencia ilícita a la economía mexicana. Para ello, el crimen organizado emplea diferentes mecanismos como son, entre otros, la compraventa directa de bienes o mercancías a particulares con recursos de origen ilícito, principalmente en efectivo; la

estructuración de operaciones financieras (comúnmente denominada como “pitufeo”); la constitución de empresas “fachada”; y la sobrefacturación de empresas legítimamente constituidas. Muchas de estas operaciones se hacen a través de prestanombres.

Ocultamiento: Dependiendo del mecanismo que se emplee en la etapa de colocación de los recursos de procedencia ilícita, las organizaciones criminales llevan a cabo una serie de operaciones para ocultar su origen e impedir el rastreo de la fuente. Por ejemplo, en el caso de la introducción en instituciones financieras mexicanas de dólares derivados del narcotráfico, se han observado transferencias electrónicas de fondos a instituciones financieras en EEUU y Asia simulando, principalmente, transacciones de operaciones comerciales internacionales.

Integración: Los criminales disponen del producto de las operaciones con recursos de procedencia ilícita a través de la venta –aparentemente legítima– de los activos e instrumentos empleados para ocultar dichos recursos. (Estrategia Nacional para la Prevención y el Combate al Lavado de Dinero y el Financiamiento al Terrorismo, 2010)

REVISIÓN LITERARIA

Antecedentes

En el año 2010, nace la “Estrategia Nacional para la Prevención y el combate al Lavado de Dinero y el Financiamiento al Terrorismo”, la cual es una acción concreta del Estado para combatir la delincuencia organizadas y otros fenómenos criminales, permitiendo así el desarrollo sostenido de las capacidades económicas de los mexicanos sobre bases de legalidad, confianza transparencia y seguridad pública. Así también, señala los objetivos y líneas de acción diseñados para la implementación de dicha lucha pretendida en ese sexenio. Por otra parte, se consideraba un instrumento clave del Estado mexicano que contribuye a los esfuerzo de la comunidad internacional en contra del lavado de dinero y el financiamiento al terrorismo.

ESTRATEGIAS

La “Estrategia Nacional para la Prevención y el combate al Lavado de Dinero y el Financiamiento al Terrorismo“, tenía como propósito fortalecer la lucha contra dichas actividades delictivas a través de un sistema integral enfocado a impedir que las organizaciones delictivas dispongan de sus ganancias y, judicializar oportuna y efectivamente casos de alta relevancia. Dicha Estrategia se constituye de cuatro ejes rectores:

Información y Organización;
Marco Normativo;
Supervisión Basada en Riesgo y Procedimientos Eficaces, y
Transparencia y Rendición de Cuentas

Asimismo, a fin de cumplir con el segundo eje de dicha estrategia, se contemplaba la síntesis del paquete legislativo enviado al H. Congreso de la Unión, la cual contenía el Proyecto de iniciativa de Ley para la Prevención e Identificación de Operaciones con Recursos de Procedencia Ilícita y Financiamiento al Terrorismo, la cual tiene calidad de Ley desde su publicación el día 17 de julio de 2013 en el Diario Oficial de la Federación, así como también comprendía diversas reformas en la legislación en materia penal. Es notable destacar que dichas reformas fueron alentadas bajo las observaciones realizadas en el Informe de Evaluación Mutua en 2008, en donde México fue evaluado conjuntamente por el GAFI, el GAFISUD y con la participación del Fondo Monetario Internacional con base en las 40 Recomendaciones sobre Lavado de Dinero y las 9 Recomendaciones Especiales sobre el Financiamiento al Terrorismo, en donde, lo destacado fue la deficiencia de México en su legislación en cuanto a los supuesto jurídicos, sus sanciones

y adecuar las sanciones que ya obran en dicha materia, con la finalidad de encontrarse en aptitud a lo dicho por los organismos internacionales. De dicha evaluación realizada en 2008, se determinó que México cumple satisfactoriamente con 24 de las 40 Recomendaciones en materia de Lavado de Dinero, lo que lo ubica por encima del promedio de los países miembros del GAFI. México y así como los países miembros, son constantemente evaluado en cuanto las medidas preventivas y de acción en contra del lavado de dinero, y de las cuales existe evidencia del avance de evaluación mutua las cuales se llevaron a cabo en julio 2009, diciembre 2009, julio 2010, diciembre 2010, junio 2011 y diciembre 2011 y julio 2012, esta última determino que de las 6 recomendaciones clave que emite el GAFI México las tiene parcialmente cumplidas las cuales son: la Recomendación 1,5,13, Especial II y Especial IV, mas sin embargo, México continua trabajando en ello, para cumplir con los lineamientos emitidos.

Legislación Regulatoria Mexicana

Anteriormente se habló del surgimiento de la Ley anti-lavado de dinero en México así como las adecuaciones del tipo penal en el Código Penal Federal, pero para que estas normatividades se encuentren en la legalidad deberán apegarse a lo que la constitución mexicana establezca. Es por ello, que a continuación se señala el marco normativo regulatorio en cuanto al lavado de dinero, basado en la supremacía constitucional marcada en el artículo 133 constitucional.

Constitución Política de los Estado Unidos Mexicanos

El lavado de dinero se encuentra regulado como una facultad del Congreso de la Unión para expedir leyes en la materia a través de la fracción XXI del artículo 73, que a la letra dice:

Artículo 73. El congreso tiene facultad:

XXI. Para expedir:

B) la legislación que establezca los delitos y las faltas contra la federación y las penas y sanciones que por ellos deban imponerse; así como legislar en materia de delincuencia organizada;

Por tanto dicho artículo constitucional prevé la regulación de la delincuencia organizada y cuya ley prevé las bases a través de las cuales el Ministerio Publico se coordinará con la Secretaria de Hacienda y Crédito Público para llevar a cabo la investigación.

Ley Federal Para la Prevención E Identificación de Operaciones Con Recursos de Procedencia Ilícita

Esta ley fue expedida con el objeto de proteger el sistema financiero y la economía nacional, por medio del establecimiento de medidas y procedimientos para prevenir y detectar actos y operaciones que involucren recursos de procedencia ilícita, a través de una coordinación interinstitucional. Además, tiene como finalidad recabar elementos útiles para investigar y perseguir los delitos de operaciones con recursos de procedencia ilícita, los relacionados con estos últimos, las estructuras de las organizaciones delictivos y evitar el uso de los recursos para su financiamiento. A su vez de esta ley se desprende que serán parte del marco jurídico del lavado de dinero:

Respecto al delito: Código Penal Federal Capítulo II Operaciones con Recursos de Procedencia Ilícita. Artículo 400 bis. Se impondrá de cinco a quince años de prisión y de mil a cinco mil días multa al que, por sí o por interpósita persona realice cualquiera de las siguientes conductas:

Adquiera, enajene, administre, custodie, posea, cambie, convierta, deposite, retire, dé o reciba por cualquier motivo, invierta, traspase, transporte o transfiera, dentro del territorio nacional, de éste hacia el extranjero o a la inversa, recursos, derechos o bienes de cualquier naturaleza, cuando tenga conocimiento de que proceden o representan el producto de una actividad ilícita, o

Oculte, encubra o pretenda ocultar o encubrir la naturaleza, origen, ubicación, destino, movimiento, propiedad o titularidad de recursos, derechos o bienes, cuando tenga conocimiento de que proceden o representan el producto de una actividad ilícita.

Para efectos de este Capítulo, se entenderá que son producto de una actividad ilícita, los recursos, derechos o bienes de cualquier naturaleza, cuando existan indicios fundados o certeza de que provienen directa o indirectamente, o representan las ganancias derivadas de la comisión de algún delito y no pueda acreditarse su legítima procedencia.

En caso de conductas previstas en este Capítulo, en las que se utilicen servicios de instituciones que integran el sistema financiero, para proceder penalmente se requerirá la denuncia previa de la Secretaría de Hacienda y Crédito Público.

Cuando la Secretaría de Hacienda y Crédito Público, en ejercicio de sus facultades de fiscalización, encuentre elementos que permitan presumir la comisión de alguno de los delitos referidos en este Capítulo, deberá ejercer respecto de los mismos las facultades de comprobación que le confieren las leyes y denunciar los hechos que probablemente puedan constituir dichos ilícitos. Dicho Código tipifica ocho conductas que integran y tipifican como ilícito penal en el lavado de dinero: Adquirir, Enajenar, Administrar, Custodiar, Cambiar, Depositar, Dar en garantía, Invertir, Transportar, Transferir; Así como, cuatro conductas que se consideran con propósito del lavado de dinero: Ocultar, Pretender ocultar, Encubrir, Impedir, en cualquiera de estos casos, conocer el origen, localización, destino o propiedad de los recursos, derechos o bienes que proceden o representan el producto de una actividad ilícita, o en su defecto para alentarla.

Respecto a Entidades Financieras: Con relación a las Entidades Financieras que intervienen y son parte del proceso del Lavado de Dinero, ya sea en su función de prevención, identificación o detección de operaciones con recursos de procedencia ilícita o como parte de la comisión del delito, la propia Ley hace referencia y remisión a los ordenamientos jurídicos que las regulan, formando parte del marco jurídico sobre lavado de dinero, previendo los supuestos y obligaciones que deberán cumplir dichas instituciones como los reportes e informes sobre operaciones con recursos de procedencia ilícita en que puedan incurrir sus clientes y que deben presentar a la Secretaría de Hacienda y Crédito Público, así como las sanciones e infracciones a las que se harán acreedores quienes incurran en la comisión de este tipo penal, la forma de determinar el monto de las sanciones, la protección y reserva de la información y de los datos personales..

Instrumentos Internacionales En Materia de Lavado de Dinero

Convención de las Naciones Unidas contra el Tráfico Ilícito de Estupefacientes y Sustancias Sicotrópicas (Convención de Viena de 1988). La Convención fue aprobada por la Asamblea General el 20 de diciembre de 1988 y entró en vigor el 11 de noviembre de 1990. En ella se desarrollaron aspectos relacionados con la lucha y acciones a emprender contra el narcotráfico e hizo mención a la incautación y embargo preventivo, no solo de los estupefacientes o sustancias sicotrópicas, sino que además lo extendió a los bienes derivados de su tráfico ilícito. Adicionalmente, hizo mención a la necesidad de presentar información a las autoridades sin que se pudiera invocar la reserva bancaria. *Convención de las Naciones Unidas contra la Delincuencia Organizada Transnacional.* Esta Convención también es conocida como la “Convención de Palermo”, la cual tiene como propósito promover la cooperación para prevenir y combatir más eficazmente la delincuencia transnacional.

Grupo de Acción Financiera (GAFI): Dicho organismo ha emitido 40 recomendaciones sobre el lavado de dinero, las cuales son conocidas como los estándares internacionales en combate al lavado de dinero, tienen como objetivo establecer patrones mínimos para la acción de los países miembros en la implementación de

medidas detalladas para combatir dicho delito. A través de estas Recomendaciones, se prevé que los países incluyan en su legislación, las medidas en materia de penalización, prevención y cooperación internacional contra el lavado de dinero, las cuales deberán atenderse de acuerdo con sus circunstancias particulares.

Implicaciones Derivadas de la Aplicación de la Ley Federal Para La Prevención E Identificación de Operaciones con Recursos de Procedencia Ilícita

La SHCP ha establecido estándares aplicables a las instituciones financieras y no financieras para la prevención y combate al lavado de dinero y el financiamiento al terrorismo, obligando a los sujetos a revisar, controlar, verificar y conservar la información de sus clientes y de sus transacciones, siendo esto el motivo que originó y justificó la Ley. Por ello es pertinente mencionar lo que con lleva la aplicación de esta ley, así como también, que estándares son los necesarios para estar en cumplimiento. *Sujetos obligados al cumplimiento de esta ley.*

Entidades Financieras

Personas Físicas y Personas Morales quienes realicen actividades vulnerables.

Clientes y usuarios de servicios financieros.

Clientes y usuarios en transacciones sobre bienes y servicios identificados como actividades vulnerables.

Actividades Vulnerables

La Ley no señala un concepto específico de lo que debe entenderse por Actividades Vulnerables. Sin embargo hace la siguiente distinción: Los actos, operaciones y servicios que realizan las **Entidades Financieras** se consideran Actividades Vulnerables y están sujetas a las disposiciones de la Ley. Por otra parte, en la Ley se listan las Actividades Vulnerables, las cuales están listadas en el artículo 17 de la mencionada ley. Es importante resaltar que en dicho artículo se hace mención concreta de aquellas actividades que son vinculantes con la actividad que realizan los prestadores de servicios legales, concretamente, los despachos de abogados.

Concursos, sorteos o juegos con apuesta

Emitir o comercializar tarjetas de servicios, de crédito o pre-pagadas, o cheques de viajero.

Otorgar préstamos.

Comercializar inmuebles.

Comprar y vender piedras y metales preciosos, joyas, relojes y obras de arte.

Venta o arrendamiento de vehículos aéreos, marítimos y terrestres.

Traslado de dinero o valores.

Servicio de blindaje.

Prestación de servicios profesionales, de manera independiente, cuando se prepare o realice a nombre de terceros cualquiera de las siguientes operaciones:

Compra venta de inmuebles.

Administración y manejo de valores o activos.

Manejo de cuentas bancarias, de ahorro o de valores.

Constitución, escisión, fusión, operación y administración de personas morales.

Fedatarios públicos. (Notarios y corredores)

Agentes Aduanales.

Organizaciones sin fines de lucro.

Arrendamiento de bienes inmuebles.

Obligaciones Contempladas En la LFPIORPI Para Quienes Realicen Actividades Vulnerables

Quienes realicen Actividades Vulnerables, en términos de la Ley Federal para la Prevención e Identificación de Operaciones con Recursos de Procedencia Ilícita, tendrán las siguientes obligaciones:

Alta: Quienes realicen Actividades Vulnerables deberán realizar el trámite de alta y registro ante el Servicio de Administración Tributaria, previo a la presentación del primer Aviso, por lo que deberán de estar inscritos en el Registro Federal de Contribuyentes y contar con el certificado vigente de la Firma Electrónica Avanzada, a efectos de enviar a dicho órgano desconcentrado la información para su identificación en términos de las Reglas de Carácter General a que se refiere la Ley.

Identificar a los Clientes y Usuarios: Dentro de las obligaciones de quienes realicen Actividades Vulnerables, se encuentra la de identificar a sus Clientes y Usuarios en el caso de que se supere el umbral de identificación de la operación en cuestión, en caso de que este exista, de lo contrario con la simple realización de la operación.

La identidad de los Clientes y Usuarios con quienes se realicen las Actividades Vulnerables se deberá de verificar basándose en credenciales o documentación oficial, así como recabar copia de la documentación. -De igual forma, les solicitarán a dichos Clientes o Usuarios información acerca de si tiene conocimiento de la existencia del Dueño Beneficiario y, en su caso, exhiban documentación oficial que permita identificarlo, si ésta obrare en su poder; en caso contrario, declarará que no cuenta con ella.

Para los casos en que se establezca una relación de negocios, se solicitará al Cliente o Usuario la información sobre su actividad u ocupación, basándose entre otros, en los Avisos de inscripción y actualización de actividades presentados para efectos del Registro Federal de Contribuyentes.

Para los Clientes o Usuarios es obligatorio proporcionar la información cuando les sea requerida. En caso de negarse a proporcionarla, quienes realizan Actividades Vulnerables deberán abstenerse de realizar la operación.

Presentar los Avisos e informes a la UIF, por conducto del SAT: La información relativa a las operaciones realizadas por los Clientes o Usuarios de quienes realicen Actividades Vulnerables que excedan el umbral de Aviso establecido para su actividad se proporcionará a la Unidad de Inteligencia Financiera a través del Servicio de Administración Tributaria a más tardar el día 17 del mes inmediato siguiente a la realización de la operación que le diera origen.

Los Avisos se enviarán de forma electrónica, en el formato que la Unidad de Inteligencia Financiera establezca. Estos deberán contener lo siguiente:

Datos generales de quien realiza la Actividad Vulnerable.

Datos generales del Cliente o Usuario o, en su caso, del Dueño Beneficiario, así como información sobre su actividad preponderante.

Descripción general de la Actividad Vulnerable.

Existe la posibilidad de modificar la información proporcionada, a través de un “Aviso modificador”, en un periodo de 30 días siguientes a la presentación del aviso que se pretende modificar.

Otras obligaciones: Custodiar, proteger, resguardar y evitar la destrucción u ocultamiento de la información y documentación soporte de la realización de Actividades Vulnerables, así como la que identifique a sus Clientes o Usuarios. (La información se debe conservar física o electrónicamente por 5 años contados a partir de la fecha de la realización de la Actividad Vulnerable, salvo que las leyes de la materia de las

entidades federativas establezcan un plazo diferente.) Brindar a los funcionarios encargados las facilidades para que se lleven a cabo las visitas de verificación.

Requerimiento de información: Tanto la UIF como el SAT, podrán requerir en todo momento, la información que conserven las personas que realicen actividades vulnerables; en donde se tendrá un plazo de 10 días hábiles que pueden ser prorrogables a petición del interesado a partir del día en que se reciba el requerimiento. Así también habrá requerimiento de información especial por las siguientes actividades vulnerables:

Juegos con apuesta, concurso o sorteos.

Comercialización de tarjetas de servicios o de crédito.

Comercialización con vales o cupones, monederos electrónicos o certificados canjeables por bienes o servicios.

Comercialización de tarjetas pre-pagadas.

Comercialización de cheques de viajero.

La UIF o el SAT, podrán requerir la información sobre el destino o uso que se otorgue a las tarjetas, vales, cupones, monederos, cheques de viajero, se deberán incluir los datos sobre las localidades y fechas en que estos se hubieran utilizado, fondeado, recargado o presentado para cobro. Las personas que realicen actividades vulnerables deberán convenir por escrito con el cliente, la obligación de proporcionar esa información cuando les sea requerida. Tendrán un plazo de dos meses, los cuales podrán ser prorrogables a petición del interesado, a partir de la notificación del requerimiento.

Autoridades

Secretaría de Hacienda y Crédito Público: La cual tendrá la facultad de supervisión e imposición de sanciones.

Unidad de Inteligencia Financiera: Le compete participar en la prevención y combate a los delitos de operaciones con recursos de procedencia ilícita y de terrorismo y su financiamiento.

Procuraría General de la República: Tendrá un papel preponderante, mediante la cooperación interinstitucional.

Unidad Especializada en Análisis Financiero: Encargado del análisis financiero y contable relacionado con las operaciones efectuadas con recursos de procedencia ilícita.

Policía Federal

Las Autoridades supra citadas tendrán la obligación de observar, en el ejercicio de esta Ley, los principios rectores de las instituciones de seguridad pública señalados en el artículo 21 de la Constitución Política de los Estados Unidos Mexicanos. Así como de Coordinar sus acciones, en el ámbito de sus respectivas competencias, para el cumplimiento del objeto de esta Ley; Abstenerse de proporcionar información generada con motivo de la presente Ley a persona alguna que no esté facultada para tomar noticia o imponerse de la misma.

RESULTADOS

La PGR a través de la Unidad Especializada en Investigación de Operaciones con Recursos de Procedencia Ilícita y de Falsificación o Alteración de Moneda, de septiembre de 2013 a julio de 2014 realizó las

siguientes acciones: El inicio de 289 averiguaciones previas y despacho de 194, lo que derivó en la consignación de 88 indagatorias, con los siguientes resultados:

El aseguramiento de poco más de 1.9 millones de pesos, aproximadamente 5.8 millones de dólares americanos y 50 mil pesos colombianos.

La detención de 79 personas, el aseguramiento de seis armas largas, ocho armas cortas, 1,827 cartuchos, 41 cargadores, 34 vehículos terrestres, cuatro inmuebles, 145 cuentas bancarias, así como 131,747 piezas de moneda nacional falsificada y 3,144 piezas de dólares americanos falsificados y ocho piezas de euros.

El abandono a favor del Gobierno Federal de poco más de 11.9 millones de pesos, 2.6 millones de dólares americanos, así como cinco vehículos terrestres y uno marítimo.

Con un equipo especializado de 183 elementos para la prevención, investigación, análisis de lavado de dinero, la Policía Federal, la PGR y la UIF de la SHCP, participaron en los Grupos de Acción Financiera Internacional (GAFI) y de Acción Financiera de Sudamérica (GAFISUD), para el seguimiento y cumplimiento de los compromisos y acuerdos internacionales suscritos por el Gobierno de la República, en materia de este tipo de delito. De septiembre de 2013 a julio de 2014, destacaron los siguientes resultados:

La detención por la Policía Federal de 38 personas que operaban estructuras financieras de organizaciones delictivas.

El aseguramiento de 1.5 millones de pesos y casi 5 millones de dólares americanos.

La atención de 299 de 333 solicitudes de mandamientos ministeriales y judiciales para localizar y presentar a personas presuntamente relacionadas con operaciones con recursos de procedencia ilícita.

CONCLUSIONES

La entrada en vigor de las disposiciones nacionales vinculadas al combate de blanqueo de capitales, ha tenido resultados favorables, pero las personas que realizan las actividades vulnerables están receptivas en el sentido que consideran que dicha obligación primigenia de señalamiento de posibles blanqueos es del Gobierno, circunstancia que no es posible dado que como he señalado, la imposibilidad del estado es en tiempo y económica, ya que no puede disponer de un “guardia” en cada establecimiento para detectar a los clientes que lavan el dinero; es por ello, que considero que dichas adecuaciones legales han tenido un impacto fuerte en sociedad pero dicho impacto atraído consigo más beneficios y seguridad financiera para todos los usuarios, mas también considero a la legislación necesita más barreras para ciertas actividades vulnerables.

IDENTIFICACIÓN DE RIESGOS INTERNOS CONTABLES PARA MICROEMPRESARIOS

Ana Isabel Barocio Torres, Universidad de Guadalajara
Martin Miguel López García, Universidad de Guadalajara
Mónica Marsela López García, Universidad de Guadalajara

RESUMEN

En México gran parte de los negocios y comercios se encuentran en el rubro conocido como micro, pequeña y mediana empresa, la curva de vida de estas no rebasa los seis años, lo que hace necesario crear herramientas que les ayude a eliminar este tan corto periodo de vida otorgándoles de una solides estructural que le de confianza en el proceso de crecimiento, el objetivo es identificar los criterios a considerar en una herramienta para el apoyo a los microempresarios novatos en la evaluación de riesgos de una forma sencilla, clara y breve, ya que por su tamaño y escaso capital no permite la contratación de personal especializado en la identificación, evaluación y eliminación de riesgos de tipo contable, generando con ello un adecuado control interno.

PALABRAS CLAVE: Microempresas, Control Interno, Identificación de Riesgos, Auditoría

HAZARD IDENTIFICATION FOR INTERNAL ACCOUNTING MICROENTREPRENEURS

ABSTRACT

In Mexico many of the businesses and shops are located in the area known as micro, small and medium enterprises, life curve of these does not exceed six years, making it necessary to create tools to help them eliminate this short period of life by giving them a structural solidity with confidence in the growth process, the objective is to identify the criteria to be considered a tool to support novice entrepreneurs in the risk assessment in a simple, clear and brief, since by its size and limited capital not allow the recruitment of specialized personnel in the identification, assessment and elimination of risks of financial rate, thereby generating adequate internal control.

INTRODUCCIÓN

Hablando en términos claros y sencillos, sin la utilización de tecnicismos para describir en primer lugar lo que es un modelo de control, este se considera una herramienta que se utiliza para salvaguardar los activos de cualquier empresa y además para verificar la integridad y exactitud de los registros contables lo que puede en un momento dado dejar tranquilos a los dueños de los negocios, empresarios o comerciantes de que la información reflejada en sus estados financieros es toda y confiable. Por otra parte el riesgo o los riesgos en las empresas son situaciones a las que toda empresa grande o pequeña está expuesta y es aquella que tiene relación con la pérdida de un activo o el mal manejo de estos lo que afecta a esta en sus finanzas, por lo que el contador de la empresa a fin a su profesionalismo tiene que establecer los controles necesarios para evitar que esto suceda. Es recomendable que el empresario se concientice de lo que requiere conocer y cómo hacer para responder ante los riesgos, qué medidas tomar para garantizar un adecuado

funcionamiento de la organización, qué información requiere generar, a quién tiene que presentársela y con qué frecuencia, conocer la razones por las cuales requiere presentar información financiera de manera periódica y saber cómo generarla, ya que la actitud de la administración hacia los controles es de vital importancia. Actualmente en México, gran parte del sector productivo es considerado como Pequeña y Mediana Empresa (en adelante PYME), por lo que es necesario el apoyo a estas en todos los aspectos con el objeto de que estas no solo adquieran la consolidación sino que sienten las bases para su crecimiento, en el país el 99.8 % de las empresas son PYME y estas aportan el 52% del Producto Interno Bruto en (adelante PIB), lo que da una idea de su importancia en el sector económico:

Constituyen la columna vertebral de la economía nacional por los acuerdos comerciales que ha tenido México en los últimos años y asimismo por su alto impacto en la generación de empleos y en la producción nacional. De acuerdo con datos del Instituto Nacional de Estadística y Geografía (INEGI), en México existen aproximadamente 4 millones 15 mil unidades empresariales, de las cuales 99.8% son PYMES que generan 52% del Producto Interno Bruto (PIB) y 72% del empleo en el país (Pro México, 2013).

Cabe resaltar que los criterios para ser considerada como PYME, son distintos depende de cada país incluso existen considerables diferencias entre la Unión Europea y América, pero es fácil identificar a estas organizaciones cuando estas cuentan con pocos trabajadores, con una estructura organizacional poco definida, y con una nula identificación de riesgos financieros, fiscales y contables objeto de estudio del presente documento. En la república mexicana la clasificación que se considera para esta es la siguiente:

Tabla 1: Estratificación de Micro, Pequeña y Mediana Empresa, Por Número de Trabajadores.

Estratificación Por Número de Trabajadores			
Sector/tamaño	Industria	Comercio	Servicios
Micro	0–10	0–10	0–10
Pequeña	11–50	11–30	11–50
Mediana	51–250	31–100	51–100

Los datos presentados en la Tabla 1, presentan la clasificación de las empresas de acuerdo a su número de trabajadores, estos datos son reconocidos por los organos de gobierno en México, es importante mencionar que esta clasificación no necesariamente es reconocida en otros países pues los datos varían de un país a otro y de un continente a otro.

Iniciar un negocio o empresa es sencillo en relación a su duración por diversos aspectos, mantener a esta activa y sobre todo por un periodo prolongado parece ser una odisea desconocida por los empresarios ya que al considerar que un contador solo sirve para calcular impuestos y elaborar los documentos respectivos para su presentación ante una autoridad, pero desconocen toda lo que la elaboración de estos documentos conlleva, la valoración de riesgos que es un renglón comienza a cobrar importancia en el sector empresarial. Las empresas a lo largo de su vida enfrentan una serie de riesgos que deben ser eliminados o evitados por estas para evitar que se refleje en sus activos que es lo que posee el dueño de la misma, las conocidas como PYME, carecen no solo de una estructura administrativa, sino que no cuentan con objetivos que son la base para que estas puedan manejar los riesgos.

Estos a sus ves darán lugar al cumplimiento de sus metas, a su misión y su visión que son los ejes alrededor de los cuales se desarrollan. Si los miembros de una organización no cuenta con conocimientos mínimos relacionados a modelos de control y matrices de análisis de riesgos, no puede continuar creciendo y expandirse, las dificultades a las que se enfrenta respecto a su crecimiento la dificultad para ampliar sus mercados incluso exportar genera por consecuencia complejidad para contar con equipos de trabajo integrados sin un clima laboral adecuado, y con esto los costos de operación se incrementan lo que trae como consecuencia el cierre de la negociación. Se considera que el 80% de las Pymes, tiene un promedio de vida de cinco años pues fracasan antes de este y el resto ni siquiera rondan los diez años de existencia, estos resultados presentan una idea de la necesidad que hay de apoyar en la evaluación de riesgos a través

de documentos informativos simples que apoyen al menos al inicio de vida de estos negocios para lograr la estabilidad económica que les permita contratar los servicios de un profesional.

El desconocimiento por parte del empresario mexicano propietario de una PYMES, de las herramientas, técnicas, material didáctico y científico, etc. que existen actualmente, el uso inadecuado de las TIC's, con el objetivo de contar con una nueva filosofía del concepto de negocio productivo y rentable, aunado a los riesgos que existen por el simple hecho de ser una pequeña empresa, afecta el desempeño durante el transcurso de sus operaciones, lo que se traduce en un periodo de vida de la empresa inferior a la expectativa que se tiene al momento de inicio de la negociación. Aunado a lo ya expuesto anteriormente se tiene que agregar la poca existencia de bibliografía en español sobre los diferentes modelos de control interno existentes a nivel mundial, los hay pero en idioma inglés, lo que limita el acceso al conocimiento de los riesgos empresariales y cuales afectan a los resultados de presentados en los estados financieros lo que lleva a estos a dirigir el negocio contando únicamente con la experiencia que ha adquirido a lo largo de su vida. Otro espacio donde se encuentra información es en las bibliotecas públicas, pero lamentablemente en la práctica diaria se observa que la mayoría de personas que consultan esta información son estudiantes, no empresarios de PYMES. Importante resaltar que el material existente en el mercado, está redactado en un lenguaje técnico, no comercial, por lo que se requiere contar con una preparación previa para poder comprenderlo y obtener el mayor provecho posible.

Al pasar al tema del análisis de riesgos se encuentra un panorama similar al de los modelos de control interno, solo que en este renglón un gran porcentaje del conocimiento se obtiene en las universidades lo que hace necesaria la contratación de un especialista en esta materia. Cuando un análisis de este tipo es elaborado por un profesional el costo llega a ser elevado para una empresa que inicia o aun una que pudiera al menos, en apariencia estar estable por lo que se hace necesario considerar la creación de elementos que apoyen al nuevo empresario en la consolidación de su negocio, para lo cual se presentan las siguientes interrogantes: ¿Cómo despertar el interés del empresario de una Pyme respecto a la necesidad de establecer Controles Internos contables? ¿Qué tipo de herramientas deben elaborarse para apoyar al microempresario en la evaluación de riesgos? ¿Qué tipo de información debe incluir las herramientas propuestas? El objetivo general del presente es identificar los criterios a considerar en una herramienta para el apoyo a los microempresarios novatos en la evaluación de riesgos de una forma sencilla, clara y breve.

REVISIÓN DE LA LITERATURA

Se considera que el Control Interno (en adelante CI), apoya a las empresas de cualquier tamaño a detectar desviaciones en el cumplimiento de sus objetivos y que estas a su vez afectan los registros de sus operaciones que se reflejan en los estados financieros de estas. Es por esto que el CI ha venido a ocupar un lugar muy importante debido a las crisis financieras y a los problemas de fraude que se han presentado en los últimos años en todos los niveles, las organizaciones buscan nuevas formas de establecer control en sus operaciones que aseguren sus activos y con ello su ganancias.

La proliferación de fraudes corporativos y delitos financieros como el lavado de activos ha llevado a las entidades a reformular su estrategia implantando modelos de control interno que enfocan su atención en el ambiente de control y la gestión integral de riesgos. El resultado de aplicación de la matriz es un disparador para que los responsables del ente tomen decisiones respecto a la detección de operaciones inusuales o sospechosas y se pongan en marcha los controles, los mecanismos de alertas y profundice el análisis del cliente (Albanese, 2012)

Analizar los riesgos a los riesgos a los que puede estar expuesta una empresa y sobre todo si esta es pequeña es difícil, la inexperiencia de sus dueños aunado a que se complica la contratación de especialistas debido a que las ganancias en un inicio se considera son pocas, la mentalidad del microempresario mexicano aun no contempla la política de invertir en la empresa durante varios años y considera en la mayoría de las

ocasiones que negocio que no da ganancia en tres meses no es negocio. Las pocas o muchas investigaciones al respecto van encaminadas a empresas de un sector en específico pero que son empresas grandes como la investigación que realiza Chan, Gameros & Balam (2015), sobre el sector turístico en Yucatán, en donde se conocieron y analizaron las acciones de CI, que realizan los empresarios del sector en cuestión para minimizar los riesgos a los que están expuestas las empresas del sector ya mencionado y que pueden afectar a su información financiera, lo que nunca se podrá compara con empresas pequeñas o familiares que son mayoría en México:

Las acciones de control interno que los empresario utilizan para minimizar el riesgo son: en cuanto lo operativo, un estricto control del registro de las operaciones mensuales, respecto al financiero, elaboración y análisis de flujos de efectivo de la empresa; tecnológico, respaldo de información cuando la tienen; toma de decisiones, auditoria interna; recursos humanos, la motivación a sus colaboradores. El giro de establecimientos de hospedaje es el que tiene mayor riesgo de negocio por su temporalidad y dependencia casi estricta a los turistas que visitan la zona de Yucatán. La estructura financiera de las empresas de la región está conformada por un 65% de financiamiento vía capital y un 35 % vía deuda. Esto significa que las empresas de este sector no tienen problemas graves de endeudamiento, es decir, cuentan con el respaldo de su capital propio y ganado. En términos generales se puede decir que existe un riesgo de negocio moderadamente alto en las empresas turísticas de la zona sur del estado de Yucatán.

El recurso humano factor importante en una empresa es todavía más relevante en negocios pequeños debido a que en muchas de las ocasiones son familiares quienes la conforman o son muy pocos trabajadores lo que dificulta la toma de decisiones adecuadas, quienes toman medidas que son adecuadas pueden resultar en un momento dado peligrosas el problema es que no consideran recurrir a externos como lo son los auditores, el trabajo de estos consiste en evaluar los controles internos para considerar su efectividad, algunas investigaciones se centran en ello pero para empresas grandes olvidándose un poco de que las pequeñas necesitan el apoyo para consolidarse.

El inevitable proceso de globalización que los países en desarrollo han tenido que entrar y así hacer frente a los cambios económicos internacionales, establece el tono para el sistema económico del que forma parte de las empresas a perfeccionar sus entidades de gestión. Por lo tanto es de suma importancia para las decisiones que toman los que dirigen estas empresas son evaluadas de manera efectiva, pero ¿hasta dónde los gerentes creen que el riesgo de una decisión equivocada? La auditoría es una de las técnicas avanzadas de gestión moderna, por lo que es necesario para mejorar la actividad de auditoría de contribuir al proceso de mejora empresarial en el logro de sus objetivos de eficiencia y competitividad (Gutiérrez, López, & Torres, 2013)

Aunque todos quienes se dedican a la investigación en el área de las ciencias sociales se olvidan de las empresas pequeñas recientemente investigadores de la Universidad Estatal de Sonora, presentan un modelo de planeación estratégica para las microempresas, su propuesta va enfocada a conservar su competitividad en un mercado globalizado lo cual también se enfoca en el sentido de darle herramientas a las microempresas para su permanencia y consolidación en el mundo empresarial.

La apertura de la economía, a través de los diferentes procesos, ha permitido el ingreso de competidores externos, generando un cambio en el panorama del desarrollo, crecimiento y sostenibilidad de pequeñas y medianas empresas. La habilidad de una empresa para conservar su posición competitiva, puede ser bien salvaguardada por gerentes que sean capaces de establecer un mecanismo que les permita prever el futuro, mediante estrategias y tácticas formales que conduzcan al logro de sus objetivos a largo plazo. Por lo cual los administradores deberán estar dispuestos a ser capaces de percibir la estrategia dentro del contexto de la actividad diaria (Bracamonte, Arreola, & Osorio, 2013).

El profesional de la auditoría parte para considerar los riesgos a los que puede estar expuesta una microempresa de la Norma Internacional de Auditoría (NIA), titulada Evaluación de riesgo y control interno que es la 400, que apoya al contador en el establecimiento de lineamientos para comprender el riesgo y los clasifica como: *riesgo inherente*, *riesgo de control* y *riesgo de detección* (Facultad de Ciencias Contables Económicas y Administrativas, s/f). Con el interés de continuar aportando a los negocios pequeños es importante que tomen en cuenta que cada empresa cada tipo de negocio se enfrenta a diferentes tipos de riesgos y que estos pueden estar presentes en el interior de él o pueden incluso presentarse en el exterior pero que pueden afectar el negocio. En relación con la importancia que tiene en una entidad la evaluación de los riesgos Carmona Ibáñez (2007), hace un análisis de la influencia que tienen estos en la planeación de una auditoría, interesante aportación cuando se realiza un examen de estados financieros pero como siempre considerando el marco conceptual del Informe COSO, el cual es ideal para corporativos pero no para microempresas.

Es decir, en qué medida los auditores valoran los riesgos de control y trasladan tales valoraciones sobre el trabajo sustantivo durante la etapa de planificación de una auditoría, teniendo en cuenta las premisas de COSO que inciden en una adecuada identificación de los riesgos, en la línea del nuevo enfoque de auditoría orientado hacia los riesgos de negocio. Los resultados de las pruebas estadísticas muestran que en general se tiende a estimar el riesgo de control y a ajustar la cantidad y extensión de los procedimientos sustantivos considerando las amenazas de control interno, cuando se presentan siguiendo el esquema del marco conceptual del Informe COSO (Carmona, 2007)

Las aportaciones por parte de investigaciones en torno a la identificación, valuación y eliminación de los riesgos contables con efecto en los resultados de los estados financieros es casi nula es importante que los especialistas en el área se aboquen a la investigación que dé como resultado herramientas de aplicación para otorgar de solides a las microempresas generando con ello su permanencia en el mercado de los negocios lo da como resultado creación de fuentes de empleo, incremento del Producto Interno Bruto en México, entre otras aportaciones.

MÉTODOLOGIA

Tipo de investigación: Se considera una investigación de tipo cualitativa ya que permite *generalizar los resultados, permite la posibilidad de réplica en puntos específicos, facilita la comparación y el control de datos* (Hernández, 2013), el desarrollo de una herramienta simple permite al empresario iniciar con actividades de control interno establecidas, evaluadas y supervisadas por el mismo.

Diseño de la Investigación: Inicialmente es a partir de un tipo de estudio exploratorio aunque el control interno basado en la identificación y evaluación de riesgos es un tema que se estudia constantemente no existen documentos que procuren el apoyo a los nuevos microempresarios para la identificación de los mismos.

Método de investigación: El método para efectuar el presente estudio es el Inductivo, ya que *inducir es ir más allá de lo evidente. La generalización de los eventos es un proceso que sirve de estructura a todas las ciencias experimentales* (Plataforma e-ducativa aragonesa, 2014), ya que el documento propuesto se pretende tenga utilidad para micro empresas de cualquier giro, lo que permite generalizar su aplicación.

Delimitación: La investigación se enfoca a características de riegos para microempresas, ubicadas en la Zona Metropolitana de Guadalajara.

RESULTADOS

Tabla 2: Guía de Identificación de Riesgos Para Microempresas en México

Elementos de un Sistema de Control Interno	Establecer Políticas En Cuanto a:	Identificación de Riesgos y Consecuencias
ambiente de control	<ol style="list-style-type: none"> 1. organigrama 2. delegacion de autoridad y responsabilidad 3. identificacion de funciones y descripción de puestos 4. diseño de politicas 	<p>A) Cuando no hay organigrama todos son responsables y a la vez nadie de entre los integrantes de la entidad se hace responsable por fallas en los procesos.</p> <p>B) Cuando no se delega autoridad entonces vienen los robos y/o abusos</p> <p>C) Importante la identificación de funciones ya que esto puede provocar pleitos y desacuerdos entre los integrantes del negocio.</p> <p>D) La falta de un estilo directivo hace que se genere una ausencia de conciencia del control de las operaciones, esto puede ser considerado como la actitud de la administración hacia los controles establecidos.</p> <p>E) La falta de prácticas de recursos humanos hace que el grado de riesgo se incremente, el éxito de las políticas de control interno depende del personal que las lleva a cabo por lo tanto es un elemento esencial de la organización</p> <p>F) La dirección es responsable de la integridad y los valores éticos ya que la ausencia de estos afectan directamente el diseño, administración y vigilancia de los controles internos.</p>
evaluación de riesgos	<ol style="list-style-type: none"> 1. evaluar el cumplimiento de politicas 2. evaluar la delegacion de autoridad 3. evaluar la mision, visión y el cumplimiento de objetivos 	<p>A) No evaluar las políticas de forma constante provoca que poco a poco el personal se olvide del cumplimiento de estas.</p> <p>B) La revisión de la delegación de autoridad evita el nacimiento de “caciques” o nuevos patrones lo que relaja el orden en una institución.</p> <p>C) Evaluar los elementos básicos de una organización apoya que quienes integran esta pongan los pies en la tierra y como se dice se pongan la camiseta.</p>
información y comunicación	<ol style="list-style-type: none"> 1. establecer una comunicación constante entre integrantes de la organización 2. evaluar los canales y formas de comunicacion 	<p>A) La falta de comunicación del gerente o dueño de la empresa crea confusión entre los empleados lo que se traduce en una baja producción y/o operatividad</p> <p>B) Importante considerar la calidad de la información pues la toma de decisiones de manera oportuna depende de la calidad de la comunicación.</p> <p>C) Importante tomar en cuenta los informes necesarios para la dirección.</p> <p>D) Importante considerar un plan para recuperar información de datos esenciales en caso de desastres</p> <p>E) Contar con información financiera íntegra y oportuna debe considerarse como prioritario pues como consecuencia de ello puede ir de pérdidas financieras cuantiosas hasta el cierre de la organización en su totalidad.</p>
actividades de control	<ol style="list-style-type: none"> 1) estas son las políticas y procedimientos que la dirección implementa para detectar los riesgos y con ello proporcionar seguridad en el registro de operaciones contables de la empresa. 	<p>A) Deben de establecerse controles de tipo preventivo los cuales deben diseñarse para evitar errores que afecten los resultados de la información financiera.</p> <p>B) Estos deben cumplir primordialmente con la salvaguarda de activos, delegación de autoridad, autorizaciones de procesos relacionados con manejo de efectivo, activos o documentos de importancia, procesamiento de la información como estados financieros etc.</p> <p>C) Establecer controles de tipo detectivo estos deben diseñarse para evitar desviaciones en los objetivos de los controles establecidos.</p>
vigilancia	<ol style="list-style-type: none"> 1) este proceso tiene relación con la evaluación de la calidad cuando se ejecutan los controles internos pues a través del tiempo los controles pierden efectividad entonces es necesario establecer acciones correctivas. 	<p>A) Este debe de ser a través de Acciones Continuas las cuales son para las actividades que se realizan de forma cotidiana como son: las tomas físicas de inventarios o las conciliaciones.</p> <p>B) Y también las Acciones Externas que son las que llevan a cabo externos a la organización como lo son los auditores.</p>

La tabla 2, muestra el resultado del análisis con la elaboración de una guía simple utilizando lenguaje sencillo para que los microempresarios identifiquen los riesgos potenciales en un micro negocio dando los primeros pasos a la implementación de un modelo de control interno sin la contratación de personal especializado.

CONCLUSIONES

Aportar herramientas a los microempresarios que les ayude a que sus micronegocios cuenten con un soporte estructural, propicia que poco a poco comiencen a contar con un crecimiento sólido y ordenado, esto no se

logra rápidamente pero si este llega presentado en un lenguaje sencillo, fácil de entender será fácilmente implementado en estos por lo tanto:

Elaborar herramientas simples y sencillas para los microempresarios ayuda a que los riesgos financieros a los que están sometidos los negocios pequeños puedan ser detectados a tiempo y minimizarlos o eliminarlos.

Los modelos de control interno mayormente conocidos como el Coso entre otros continúan con una estructura adecuada para Corporativos lo que al tratar de establecerlos en pequeñas empresas resulta una tarea compleja que acaba por desalentar a los dueños de estas debido a sus escasos o nulos conocimientos al respecto.

Crear modelos a la medida de las empresas mexicanas es primordial y para ello debe prepararse el profesional contable ya que este es el responsable de minimizar los riesgos financieros que impactan los resultados de los estados financieros.

Importante considerar la difusión de la presente herramienta considerando que esta es tan solo el capital semilla de los resultados futuros que se obtendrán.

RESUMEN

Hoy en día el éxito de las organizaciones, depende no sólo de sus líderes, sino en gran medida de las personas y de su integración en grupos de trabajo. En este trabajo de investigación de tipo descriptivo, no experimental, se toma como base el modelo de Lawshe (1975) modificado por Tristán (2008) para validar el contenido de un instrumento de medición del Liderazgo Transformacional. Con la ayuda de un grupo de 7 expertos en el tema, se evaluó de manera independiente el contenido y pertinencia de cada uno de los ítems del instrumento, considerando como criterios de valoración las categorías esencial, útil pero no esencial y no esencial. Se obtuvo como resultado una razón de validez de contenido (CVR) donde el valor mayor fue de 0.8571 y el valor menor de 0.2857, con un índice de validez de contenido (CVI) de 0.75, el cual excede el punto de corte mínimo de 0.58, por lo que se considera que el instrumento de medición evaluado es aceptable.

PALABRAS CLAVES: Liderazgo Transformacional, Validez de Contenido

CONTENT VALIDITY OF A MEASURING INSTRUMENT FOR TRANSFORMATIONAL LEADERSHIP

ABSTRACT

Organizational success is today relying not only on their leaders but also on the integration to the working teams from their job participants. This researching paper is a non experimental descriptive based on Lawshe (1975) with modifications from Tristan (2008) to validate the content for Transformational leadership measuring instrument. With the help from a group integrated by seven experts who independently evaluated content and belonging as well for each item considering the evaluation criteria split into essential, useful but not essential and non essential categories, the results were as follows: maximum value on the content validity reason was 0.8751 and minimum value result was 0.2857 for the content validity of 0.75 which exceeds de minimum cut value of 0.58. This result indicates therefore that the measuring instrument is considered acceptable.

KEY WORDS: Transformational Leadership, Content Validity

INTRODUCCIÓN

En la actualidad las empresas operan en entornos altamente competitivos y dinámicos, caracterizados por una alta competitividad. En este entorno, se hace importante un modo de dirección que resalte el talento de los individuos (Ojeda, 2007). Las personas se han convertido en una fuente esencial de ventaja para las firmas, ya que el éxito de éstas depende no solo de sus líderes, sino en gran medida de la participación e

integración de sus empleados (Ulrich, 2006). Los cambios del entorno actual de las organizaciones, han creado la necesidad de que los individuos, cuenten con cualidades y habilidades de liderazgo (Vallejo, 2009). En consecuencia, los líderes tratan de influir en los individuos para así poder alcanzar los objetivos, delegando tanto tareas como oportunidades de crecimiento (Bass, 1999; Ramírez & Sgambatti, 2008). Particularmente el liderazgo transformacional ha creado la necesidad de que las personas al frente de las firmas sean visionarias; este tipo de líder es un agente de cambio, que incrementa las capacidades de los miembros de la organización, a fin de resolver individual o colectivamente los diferentes problemas de la empresa (Pedraja et al., 2009; Pedraja, Rodríguez, & Rodríguez, 2008).

REVISION DE LITERATURA

El liderazgo es un proceso natural que ocurre entre una persona -el líder- y sus seguidores; se considera como una habilidad de influencia y seguimiento en la organización para lograr metas específicas (Parris & Peachey, 2013). Yukl (2008) comenta que el liderazgo es el proceso de influir sobre otras personas, para conseguir su comprensión y consenso acerca de las acciones y medidas necesarias, y de esta forma facilitar los esfuerzos individuales y colectivos para conseguir objetivos comunes. El líder transformacional es aquel que consigue elevar la moral y motivación en su seguidores a través de su influencia personal (Cuadrado & Molero, 2002); plantea un futuro deseable, enseña cómo se puede llegar a éste, demuestra determinación y confianza, exhorta a los seguidores a ser más innovadores y creativos, y en consecuencia éstos se identifican con esa orientación (Bass, 1999). Algunos autores (Avolio & Bass, 1995; Bass, 1999; Lowe et al., 1996; Zhu et al., 2005) afirman que el líder transformacional es motivador, comunicador y busca la satisfacción de los seguidores.

Con base en el trabajo original de Bass (1985), ampliado posteriormente por Avolio y Bass (1995), Avolio, Bass y Jung (1999), Bass (1999) y Pillai, Schriesheim y Williams (1999), es posible identificar cuatro dimensiones de liderazgo transformacional: Carisma, Inspiración, Consideración individualizada y Estimulación intelectual. El liderazgo es considerado como un elemento esencial dado que reconoce la importancia del líder en la formación de las estructuras de la organización (Dewettinck & Ameijde, 2011). Asimismo, es considerado como un componente clave que aumenta la autonomía de los seguidores en la organización (Avolio et al., 1999; Pearce et al., 2003). Además, los líderes transformacionales crean un clima en el que los empleados se sientan inspirados y seguros de sí mismos (Maynard, Gilson, & Mathieu, 2012).

METODOLOGÍA

Esta investigación es de tipo descriptivo con un diseño no experimental, a través de ella se determinó la validez de contenido con la ayuda de un grupo de 7 expertos, quienes evaluaron de forma individual cada uno de los ítems del cuestionario, a fin de determinar su relevancia para la variable que se pretende medir. Con la finalidad de tener evidencia de que la definición semántica está representada correctamente en cada uno de los ítems formulados, se procedió a calcular el índice de validez de contenido (CVI) del instrumento, mediante el modelo cuantitativo de Lawshe (1975) modificado por Tristán (2008). De acuerdo al mismo, el índice de validez de contenido debe al menos alcanzar un valor igual o mayor a 0.58. El instrumento inicial quedó integrado por 19 ítems representados en 4 dimensiones; la primera de ellas, referida al carisma; la segunda a la inspiración; la tercera a la estimulación intelectual; y la cuarta a la consideración individualizada. Cada una de las dimensiones cuenta con sus propios ítems.

A cada uno de los expertos se le proporcionó un cuestionario, en el cual se incluían las indicaciones y la definición conceptual del constructo, además de los criterios de valoración *esencial*, *útil pero no esencial* y *no esencial*, para que el sujeto evaluara el nivel de importancia de cada uno de los ítems. Posteriormente, se determinó la razón de validez de contenido (CVR y CRV') para cada uno de los ítems, mediante las ecuaciones descritas en el modelo de Lawshe; además, se calculó el Índice de validez de Contenido (CVI).

RESULTADOS

Los valores de la razón de validez de contenido (CVR) de cada uno de los ítems se muestran en la tabla 1. Los resultados demuestran que la mayoría de los ítems se consideran aceptables, de acuerdo con los criterios de Lawshe (1975) modificados por Tristán (2008), dado que los valores superan el punto de corte mínimo de 0.58. Se puede observar que los ítems 5, 16 y 18 se encuentran por debajo del valor aceptado; también se puede apreciar que el índice de validez global es de 0.70 o 70%, mientras que el índice de validez de los ítems considerados como aceptables es de 0.75 o 75%, con lo cual es posible afirmar que son aceptables.

Tabla 1: Razón de Validez de Contenido

Constructo	Dimensión	Ítems	Esencial	Útil Pero No Esencial	No Esencial	CVR	CVR'
Liderazgo transformacional	Carisma	1	5	1	1	0.4285	0.7142
		2	5	2	0	0.4285	0.7142
		3	5	2	0	0.4285	0.7142
		4	5	2	0	0.4285	0.7142
		5	3	3	1	-0.1428	0.4286
	Inspiración	6	5	1	0	0.4285	0.7142
		7	6	1	0	0.7142	0.8571
		8	5	2	0	0.4285	0.7142
		9	5	2	0	0.4285	0.7142
		10	6	1	0	0.7142	0.8571
	Estimulación	11	5	1	1	0.4285	0.7142
		12	5	1	1	0.4285	0.7142
	Intelectual	13	6	1	0	0.7142	0.8571
		14	5	0	1	0.4285	0.7142
		15	5	1	1	0.4285	0.7142
	Consideración individualizada	16	4	0	3	0.1428	0.5714
		17	5	2	0	0.4285	0.7142
		18	2	4	1	-0.4285	0.2857
		19	6	1	0	0.7142	0.8571
		SUMA	93	28	10	7.5703	13.2845
					CVI global	0.40	0.70
					CVI ítems aceptables		0.75

En esta tabla se muestra la Razón de Validez de Contenido de los ítems del constructo Liderazgo Transformacional, además se muestra el índice de validez de contenido global del instrumento (CVI) y un índice de validez de contenido de los ítems aceptables con un 0.75 o 75% considerado aceptable, con base en el criterio de los 7 expertos.

En base a los resultados obtenidos, se procedió a la eliminación de ítems del instrumento, en aquellos casos en que su valoración fue menor de 0.58, manteniendo todos aquellos ítems en los que su valor superó el punto de corte mínimo de 0.58. En la versión final, el instrumento quedó integrado por 16 ítems: la primera dimensión, referida al carisma, incluye 5 ítems; la segunda, inspiración, cuenta con 4 ítems; la tercera, estimulación intelectual, se integra con 4 ítems; finalmente, consideración individualizada, cuenta con 3 ítems.

CONCLUSIONES

Se llevo a cabo una investigación de tipo descriptivo, no experimental, tomando como base el modelo de Lawshe (1975) modificado por Tristán (2008), para llevar a cabo la validez de contenido de un instrumento para medir el liderazgo transformacional, se procedió a realizar la validez de contenido por medio de un grupo de expertos, quienes evaluaron de forma individual y de acuerdo a su experiencia cada uno de los ítems del cuestionario según su relevancia. De acuerdo a los resultados se obtuvo una CVR' donde el valor mayor fue de 0.8571 y el valor menor de 0.2857, se procedió a eliminar 3 ítems del instrumento dado que los valores fueron menores a 0.58 siendo este el mínimo aceptable. El índice de validez de contenido global fue de 0.70 y el índice de validez de contenido (CVI) de los ítems aceptables fue de 0.75, el cual excede

el punto de corte mínimo de 0.58 con base en el modelo de Lawshe (1975) modificado por Tristán (2008), por lo que se considera que el instrumento es considerado como aceptable.

OBJETOS SIMBÓLICOS DE CONSUMO Y SU RELACIÓN CON LA CONSTRUCCIÓN DE IDENTIDAD DE LAS GENERACIONES DE CONSUMIDORES EN LA CIUDAD DE CALI – COLOMBIA

Carmen Elisa Lerma Cruz, Universidad Autónoma de Occidente
Yuly Pauline Paredes Bedoya, Universidad Autónoma de Occidente

RESUMEN

El consumo de productos tiene un significado que va más allá de su carácter utilitario y su valor comercial. Este significado se sustenta en la capacidad que tiene el consumo de contener y comunicar significados personales y culturales. Así, los productos – marcas son comprados porque las personas creen que estos, de alguna manera, representan lo que ellos son. Esto implica que el consumo contribuye a la creación y mantenimiento de las identidades. La identidad es un concepto subjetivo de cómo las personas se ven a sí misma, pero una persona puede tener más de una identidad y el número de éstas depende de los diferentes roles que posee en la vida y para asumir dichos roles requiere de una serie de consumos; lo que implica que las personas usan diferentes tipos de productos para representar cada una de estas identidades. Teniendo en cuenta lo anterior, esta investigación busca comprender, mediante un análisis histórico hermenéutico, los objetos simbólicos de consumo y su relación en la construcción de identidad de las diferentes generaciones de consumidores (Baby Boomers, Generación X, Generación Y y Generación Z) en la ciudad de Cali. A su vez, identifica el objeto símbolo que representa a cada uno de las generaciones explorando su relación con los individuos y con su realidad. La investigación es de enfoque cualitativo, se usó el método hermenéutico y se aplicaron técnicas como las entrevistas en profundidad, los relatos de vida, análisis de contenido y la observación.

PALABRAS CLAVES: Consumo Simbólico, Objeto Símbolo, Identidad, Generaciones de Consumidores

SYMBOLIC OBJECTS OF CONSUMPTION AND ITS RELATIONSHIP WITH THE IDENTITY CONSTRUCTION OF THE CONSUMERS GENERATIONS IN CALI – COLOMBIA

ABSTRACT

The consumption of products has a significance that goes beyond their utilitarian character and commercial value. Its meaning is based on the ability of the consumption to contain and communicate personal and cultural meanings. Thus, the products - brands are bought because people believe these, somehow, represent what they are. This implies that consumption contributes to the creation and maintenance of identities. Identity is a subjective concept that represents how people see themselves, but a person could have more than one identity and their number depends on the different roles they have in life. And people to assume these roles requires a series of consumption; implying that people use different types of products to represent each of these identities. Given the above, this research seeks to understand the symbolic objects of consumption and its relation to the construction of identity of the different generations of consumers (Baby Boomers, Generation X, Generation Y and Generation Z) in the city of Cali. In turn, identifies the symbol that represents each of the generations to explore their relationship with individuals and with their reality. The research approach is qualitative, hermeneutic method was used and applied techniques such as in-depth interviews, content analysis, life stories and observation.

INTRODUCCIÓN

El comportamiento de consumo va más allá de los actos de compra, está fuertemente relacionado con la experiencia de “tener” y “ser”. Lo anterior, implica reconocer como la compra y el consumo de diversos productos y servicios afectan nuestra vida. También, cómo nuestra posesiones influyen en la forma como nosotros nos vemos, nos sentimos y como vemos a los demás. La identidad es la percepción que tenemos de nosotros mismos. Y, saber quién es uno le permite a la gente responder preguntas tales como: ¿dónde encajo yo?, ¿a dónde pertenezco?. Estas preguntas hacen parte esencial del ser humano (Lewis, 1990). Pues, nuestra identidad es subjetiva y la forma en la cual nosotros nos vemos a nosotros mismos está influenciada por una serie de experiencias individuales y por los grupos a los cuales pertenecemos o deseamos pertenecer (Sedikides & Brewer, 2001). Así, el tema de la presente investigación es abordado teóricamente desde una mirada interdisciplinaria. Entendiendo que en las sociedades de consumo, mediadas por el mercado, se reinterpretan las relaciones humanas a semejanza de la dinámica que se establece entre consumidores y bienes de consumo (Bauman, 2007).

En este orden de ideas, es importante decir que, la expresión: significado simbólico es ampliamente utilizada como sinónimo de lo *signico*. Por lo tanto, Bourdieu, destacan al objeto simbólico de consumo como signo de la posición diferencial de los sujetos (Bourdieu, 1997) y que al mismo tiempo no hacen más que significar (Baudrillard 1969). Por otro lado, los objetos simbólicos se encuentran dentro de una dinámica de personalización, que los destaca como los objetos de consumo según (Lipovetsky, 1990), mediados de igual forma por la moda y época en el tiempo (Barthes, 2003).

REVISIÓN DE LITERATURA

Un gran número de estudios de investigación han mostrado, repetidamente, que el consumo es una parte integral de las vidas de las personas. Por ejemplo, ha sido encontrado que las actividades de consumo pueden tener impacto sobre la identidad de las personas y cómo ellas, también, transmiten su estatus social a través del uso de ciertos productos y servicios (Dittmar, 2008). Una persona puede tener más de una identidad y algunas de ellas no siempre están ancladas en la vida real, sino también en el entorno *online* (Schau & Gilly, 2003). Por otra parte, Patricia Pallavicini Magnère (2008) muestra como los objetos de consumo influyen en la construcción de los procesos de individuación de adolescentes. A su vez, Emilia Bermúdez socióloga de la Universidad del Zulia realizó una investigación de cómo los jóvenes venezolanos convierten a los *malls* en territorios y objetos de consumo simbólicos en los procesos de construcción de identidades y diferencias (Bermúdez, 2008).

Así, Baudrillard (2002) sigue afirmando que: “los objetos son por lo tanto el lugar, no de satisfacción de necesidades, sino de un trabajo simbólico (...) Son un lugar de consagración de un esfuerzo, de una realización interrumpida de un *stress for achievement*, tendiente hacer la prueba continua y tangible del valor social”. Así pues, Lipovetsky (1990) plantea que “nunca consumimos un objeto por sí mismo o por su valor de uso, sino en razón de su «valor de cambio», es decir, en razón del prestigio, del estatus y del rango social que confiere”. De igual forma, los objetos de hoy día tienen valores y características humanas. De otro lado, se entiende por generación un grupo de edad que comparte a lo largo de su historia un conjunto de experiencias formativas que los distinguen de sus predecesores (Ogg y Bonvalet, 2006). Aunque estas clasificaciones de consumidores pertenecen a Estados Unidos, es pertinente su aplicación a Latinoamérica, ya que como afirma, Néstor García Canclini (1995), “a través de la relación con Estados Unidos los latinoamericanos han aprendido a ser consumidores”. Es por esta razón que se estudian las generaciones de consumo con sus denominaciones originales. (Tabla 1)

Tabla 1: Generaciones de Consumidores

Generaciones de consumidores	Características
<i>Baby Boomers</i> : nacidos entre 1946 y 1964, después de la segunda guerra mundial	Son consumidores motivados, les gusta realizar las compras por sí mismos. Son adictos al trabajo de la historia, para brindar a los suyos mejores oportunidades, alimentando un sistema capitalista en furor, adquiriendo pertenencias para el hogar que connotaban su progreso y su esfuerzo laboral. Sus predecesores se esforzaron en proporcionar a sus hijos las oportunidades que por el contexto histórico y social no fueron accesibles para ellos.
Generación X: nacidos entre 1965 y 1976	Su macro-entorno estuvo mediado por el aumento en la proporción de divorcios y en el número de madres que ingresaron a la fuerza laboral (Kotler, 2003). Desarrollaron un enfoque económico más cauteloso, es más escéptica y desconfía de los pronunciamientos de marketing que prometen un éxito fácil. Son consumidores más educados, se informan antes de hacer una compra. Quieren una mejor calidad de vida y están más interesados en que su trabajo les de satisfacciones. Poseen más preparación académica y experiencia internacional.
Generación Y: nacidos entre 1977 y 1994	Crecieron en un contexto saturado por los medios de comunicación masiva (Schiffman, 2005), y por tanto la presencia e influencia de la publicidad y la variedad de productos y artefactos presentes en la posmodernidad actual. Esta generación ha reorientado parte del tiempo que dedicaba a ver televisión para utilizarlo en navegar por internet. Son inteligentes, despiertos y objetivos. Les gustan los anuncios dirigidos a ellos que los entretengan (Kotler, 2003), así la publicidad y las marcas les hablan directamente y los involucran en su comunicación, son generadores de contenido, comentan en las redes sociales acerca de los productos que consumen.
Generación Z: personas nacidas entre 1995 y 2005	Son independientes; esta generación han crecido viendo a ambos padres trabajar, ellos consideran al internet un gran aliado y esa combinación influye en la manera que la generación percibe el concepto de trabajo y estudio. Está generación se encuentra íntimamente ligada a la realidad de las redes digitales, como es en el hecho de tener gustos y preferencias globalizadas (Rubio, 2013). Es una generación que desconfía de la postergación de objetivos (quiere todo rápido y sin mucho esfuerzo), con menores habilidades para la comunicación verbal y unas relaciones amistosas más laxas (Bauman, 2005; Sennett, 2000).

METODOLOGÍA

Esta investigación es de enfoque cualitativo y la teoría del conocimiento inserta en la perspectiva teórica constructivista y en la metodología está sustentada por paradigma histórico-hermenéutico. La población la constituyeron hombres y mujeres pertenecientes a cada una de las generaciones antes mencionadas, en estratos socioeconómicos 4 y 5, residentes de la ciudad de Cali. Se trabajó muestreo no probabilístico. El total de participantes de este estudio fueron 17 individuos. Las técnicas y procedimientos que se usaron para obtener y analizar datos, fueron:

Relatos de vida. Narraciones biográficas delimitadas por el objeto de estudio del investigador. Entrevistas en profundidad. Encuentros cara a cara, entre un investigador y sus informantes, los cuales se orientan a entender las perspectivas del entrevistado sobre su vida. **Análisis de documentos y análisis de contenido.** Bibliográfico, impreso (Periódicos, revistas, documentos y libros), fotográfico y audiovisual (fotos, videos y comerciales) donde existen registros de los diferentes objetos simbólicos de consumo. De igual forma se analizó el material fotográfico proporcionado por los entrevistados, y sus perfiles en redes sociales como *Facebook* e *Instagram*.

RESULTADOS

Los resultados de esta investigación se presentaran acorde a los objetivos propuestos

Caracterización de las Generaciones de Consumidores

Generación de los *Baby Boomers*: Esta generación nace desde 1946 a 1964, vivió en una época marcada por cambios sociales que empezaban a gestarse a nivel internacional, sin embargo estuvieron condicionados por bases tradicionalistas y conservadoras (Simón, 2007), ya hacían que se gestará una sociedad de

individuos particulares, que además estaban mucho más informados de su entorno ya que el 13 de Junio de 1954 fue inaugurada la Televisión en Colombia, acontecimiento que permitió llevar un televisor a cada hogar y sentar a toda la familia frente a la novedosa caja de entretenimiento que brindaba noticias acerca del mundo, pero que además los educaba como consumidores, pues también comenzaron a ver los primeros comerciales y a distinguir las marcas promocionadas a través de este medio (Tabla 2).

Generación X. Los nacidos entre 1965 y 1976 pertenecientes a esta generación de consumidores vivieron en una sociedad colombiana donde se gestaba la violencia, el hombre llegó a la luna el 20 de Julio de 1969, acontecimiento que surgió en la época de la Generación X, pero que le correspondió vivir frente a la pantalla del televisor a los *Baby Boomers*.

Estos consumidores poseen mejor preparación académica y experiencia internacional, de allí que sean una generación más escéptica y desconfie de los pronunciamientos de la publicidad y del *marketing*. Además de no han perdido el vínculo con los amigos de su generación con los que comparten gustos y recuerdan momentos de su infancia. Así mismo, se preocupan por estar informados acerca de su entorno, consumen noticias. Algunos usan el internet como medio secundario para el uso de correo electrónico, *chats* y *Facebook*. (Tabla 3).

Así mismo, se preocupan por estar informados acerca de su entorno, consumen noticias no sólo políticas, sociales y económicas sino también de entretenimiento, en plataformas como la televisión, la radio y las revistas principalmente. Algunos usan el internet como medio secundario para el uso de correo electrónico, *chats* y *Facebook*. (Tabla 3).

Generación Y: Generación de consumidores nacidos entre 1977 y 1994, época de la globalización, las nuevas tecnologías y el surgimiento de nuevos dispositivos electrónicos para el entretenimiento que comenzaron a proliferar en los hogares. En 1977 es lanzada la consola Atari 2600 y la 5200 en 1982, objetos que cambiaron la manera de interactuar frente al televisor y educaron a esta generación en el mundo de los videojuegos. Siguiendo con el desarrollo tecnológico que mando la parada en esta generación, aparece en escena en 1990 la consola *Nintendo Entertainment System* (NES) y en 1994 es lanzada al mercado la primera consola *Play Station* lo cual amplió el panorama.

Tecnología	Walkman	SONY	Periódicos y Revistas

*Corresponde a la categoría de productos al cual pertenece el objeto simbólico de la generación. ** son los medios consumidos por esta generación. Fuente: elaboración propia.

Por lo anteriormente descrito, estos consumidores presenciaron la evolución tecnológica de medios de comunicación rápidamente, durante su niñez y su adolescencia estuvieron frente a medios de comunicación masiva como el internet que les otorgó competencias audiovisuales mayores que sus antecesores. Como consumidores son inteligentes y les gusta que los anuncios estén dirigidos a ellos y sobre todo que los diviertan, pasan gran cantidad de tiempo en redes sociales (poseen más de dos) y en internet, ya que este es su medio de comunicación e información principal, seguido de la televisión, la radio y el cine como medio de entretenimiento. (Tabla 4).

Generación Z: Nacidos entre 1995 y el 2005, son una generación de consumidores que han crecido viendo a ambos padres trabajar. Están familiarizados con la responsabilidad social y la tecnología. El tiempo en el que se encuentran les ha mostrado que la obsolescencia es la constante, ya que los avances tecnológicos se desarrollan cada vez más rápido, es por eso que desconfían de la postergación de objetivos. Así mismo, sí los de la Generación Y presenciaron la llegada del internet conmutado a sus hogares, estos vivieron la banda ancha y el 4G, ya que a mediados de 2010 el operador UNE ganó la concesión de la primera licencia de espectro donde se destaca el Internet móvil de alta velocidad. En este orden de ideas, el consumo de medios de la Generación Z, no está mediado por el interés social y político de su país, ya que su principal interés es la industria del entretenimiento y su plataforma favorita es el internet, para el uso de redes sociales, donde se enteran de los que pasa en su entorno, siendo la televisión un medio secundario donde visualizan series internacionales, videos musicales y reality shows (Tabla 5).

CATEGORÍAS Y MARCAS DE PRODUCTOS REPRESENTATIVAS

Generación de los Baby Boomers: Las categorías de productos representativos para estos consumidores son los electrodomésticos, cuyo consumo estaba ligado a la familia, con el fin de proveerle a ellos bienes que garantizaran su entretenimiento y que permitieran llenar la casa de objetos indicadores de progreso y del valor del ahorro frente a los demás. Es así como aparecen en escena marcas como SONY, SHARP, LG, SAMSUNG, General Electric, PHILIPS, Panasonic, Kodak y Canon, pertenecientes a diferentes tipos de objetos simbólicos de consumo de los cuales se hablará en el siguiente capítulo. De igual forma la categoría de los vehículos aparece con marcas como Volkswagen y Renault las cuales generaron recordación y preferencia en la generación de los Baby Boomers.

Generación X: Así mismo, esta generación de consumidores obtuvo sus objetos simbólicos de consumo de la categoría de electrodomésticos ya que seguían estando ligados al hogar y a compartir tiempo con sus familias alrededor estos. Continuaron siendo relevantes marcas como SONY, SHARP, PHILIPS y

Panasonic, pero aparecieron JVC y TOSHIBA, Panasonic, LG y Samsung. Al mismo tiempo, que la categoría de Tecnología hizo su primera aparición con la marca SONY, dispuesta a proveer de entretenimiento a los consumidores.

Generación Y: En esta generación de consumidores ya no aparece la categoría de los electrodomésticos sino que emerge la categoría de los videojuegos con marcas como *Atari, Nintendo, Play Station* que unieron a esta generación a amigos y no a sus padres. Del mismo modo, la categoría de tecnología seguía siendo una constante que unía a la Generación Y con sus antecesores, con marcas como *IBM, COMPAQ, HP, LG, Samsung, NOKIA, Motorola y Siemens*.

Generación Z: Estos consumidores son los únicos que no tienen dos categorías de productos dentro de su consumo simbólico, por el contrario sus objetos simbólicos de consumo pertenecen a la categoría de tecnología, la cual comenzó a aparecer con la Generación X, cuando está inicio su separación del consumo ligado al hogar. En ella se encuentran marcas como: *HP (Hewlett-Packard), Apple, Vaio, Samsung, BlackBerry, iPhone y iPad*.

Objetos Simbólicos de Consumo de Cada Generación de Consumidores

Generación de los Baby Boomers: El consumo simbólico de esta generación estaba ligado a la categoría de electrodomésticos y artículos para el hogar, donde se encuentran tres objetos simbólicos de consumo: el televisor, el radio con tocadiscos y la cámara de rollo. El televisor es para los *Baby Boomers* el más importante, ya que hizo su primera aparición en esta generación, los otros objetos ya existían cuando estos consumidores nacieron. De igual forma, la televisión se mostraba como un progreso social, que debía adquirirse y mostrarse, además de y sentar a la familia frente a este para compartir los mismos programas de televisión. El segundo objeto simbólico de consumo de la categoría era la mezcla entre radio y tocadiscos, poseía funciones comunicativas del radio que permitían sintonizar las diferentes emisoras AM y FM para escuchar música, programas, radio novelas o noticias. Por último, en la categoría de electrodomésticos y artículos para el hogar se encuentra la cámara fotográfica de rollo, debido a que está se vendía en centros de distribución de productos de esta categoría, además de que era usada para fotografiar a la familia. Por otra parte, en la segunda categoría identificada para esta generación, la cual es la de vehículos, aparece el carro como objeto simbólico de consumo con las marcas: *Wolkswagen y Renault*, elemento clave en la significación del ahorro, el progreso y sobre todo en el estatus social.

Generación X: el televisor sigue siendo este objeto simbólico de consumo. El televisor *SONY* estaba situado en la sala de la casa como una muestra social de estatus para los visitantes, que posteriormente migró a la habitación de los padres, ya que el espacio que se compartía para ver televisión era un momento de descanso familiar. La radiograbadora corresponde un avance tecnológico que le permite compartir dos aspectos adscritos a la categoría de electrodomésticos, la primera comprendía su uso al interior de la familia, y, el segundo aspecto corresponde al uso individual de la radiograbadora ya que está se podía transporta dentro del hogar o por fuera de este.

El Walkman: es el objeto simbólico de consumo que otorgó a la Generación X su primer objeto de la categoría de tecnología (no electrodoméstico familiar), de uso individual que le permitió escuchar música en radio y de los casetes que compraba y grababa con sus amigos. Así mismo, el Walkman de *SONY*, era usado con los audífonos, lo que hacía que el individuo se aislara, pero su uso también proyectaba significaciones de estatus frente a los demás.

Generación Y: las primeras consolas de videojuegos de esta generación nacieron con Atari y Nintendo, posterior a esto se unió *Play Station* y hoy en día se podría hablar de *Xbox* y las plataformas online que permiten ejecutar videojuegos desde el computador personal. Agregado a lo anterior, estos objetos simbólicos de consumo fueron comprados y obsequiados por los *Baby Boomers* a sus hijos Y, en la niñez,

en celebraciones especiales como cumpleaños y navidad, lo que se convirtió en los regalos más anhelados. De igual forma, el surgimiento de estas consolas y los videojuegos generaron una generación de *Gamers*, los cuales consumían y superaban, además adquirían toda serie de elementos alrededor de esto, como juguetes de colección, ropa, afiches y *souvenirs*, que lo distinguían de una generación y le permitían consolidarse como parte del grupo social de los *Gamers*, que dedicaban gran parte de su tiempo libre a los videojuegos. Esta situación se evidenció con Mario Bros, en donde los participantes de esta generación conocían cada uno de sus personajes y apropiaban a este videojuego como parte de sus vivencias en la niñez y la adolescencia. Posteriormente, con la llegada del internet y la evolución tecnológica el computador de escritorio se convertía cada vez más en un vehículo de comunicación masiva donde proliferaban los sitios web de chats, además de la recién llegada de Google en 1998 como buscador online, que desplazaba las enciclopedias virtuales, modificando la forma de realizar las tareas escolares y de relacionarse con sus pares. Fue así como el computador se convertía en una forma de ver el mundo y comunicarse con otros, lo que implicó un alejamiento del televisor como medio masivo tradicional y una ventana para conocer nuevas personas a través de la red.

El Teléfono Celular; dispositivo electrónico perteneciente a la categoría de tecnología llegó a la vida de los participantes de este estudio como un obsequio de innovación tecnológica proveniente de sus padres en celebraciones de cumpleaños, navidad o culminación de logros académicos, con la posesión de este objeto simbólico de consumo los Y, proyectaban estatus frente a su círculo social, ya que los usuarios de celulares en un comienzo eran limitados para muchos por sus altos precios.

Generación Z: estos sujetos como nativos digitales y altamente influenciados por las nuevas tecnologías de comunicación en un entorno globalizado son tal vez los que más usan términos en inglés para referirse a los objetos de consumo que los rodean, de allí que estos sean presentados en este idioma. El *Laptop*, el nombre de este objeto simbólico de consumo se refiere en inglés a un computador portátil, desligado del hogar como objeto que se comparte con la familia, sino exclusivamente de quien lo posee. Por otro lado, a diferencia de objetos anteriormente nombrados, el *laptop* fue y sigue siendo un objeto con el que los nativos de esta generación crecieron o adquirieron sin novedad, ya que el computador personal para estos sujetos, constituye una necesidad y no un lujo de significación de estatus para su entorno. El teléfono inteligente (*Smartphone*), una modificación del teléfono celular es para los consumidores de la Generación Z su objeto simbólico de consumo más representativo, ya que su auge en la ciudad de Cali se gestó en su tiempo de adolescencia y niñez.

Estos crecieron con teléfonos celulares que tenían funciones de navegación y cámara fotográfica y conforme iba avanzando la tecnología y el mercado se encontraron con los *smartphones* que poseen en la actualidad características como: reproducción de música, cámara fotográfica y de video de alta definición, navegación en internet y redes sociales, además de GPS y chats especializados, fue así como en sus inicios la marca *Blackberry* fue la preferida por estos consumidores, pues en este podían comunicarse vía chat con otros que tuvieran *smartphones* de la misma marca, además este llegó a ser moda, pues generaba estatus entre los poseedores. De modo que, el *Blackberry* fue el primer *smartphone* de esta generación, el cual fue un regalo de sus padres en celebraciones especiales como los siguientes *smartphones* que llegaron, tales como *Samsung Galaxy* y *iPhone*, los cuales poseían en sí mismos la unión de varios objetos simbólicos de consumo presentes en otras generaciones como la cámara fotográfica, el reproductor musical, el computador, y teléfono celular. Por otro lado, este objeto resalta la individualidad del consumidor ya que de uso personal y no familiar, sin dejar de lado que brinda estatus pues hace que quien lo posea pertenezca a un grupo en especial.

Por último, el *smartphone* constituye una herramienta para el consumidor Z de mostrarse al mundo y encontrar aceptación, esto gracias a la cámara fotográfica incorporada en este dispositivo, con la cual se toman fotos de sí mismos (*selfie*), de los productos y lugares de consumo, los cuales suben inmediatamente a las redes sociales con el fin de que generen interactividad. Las tabletas de pantallas táctiles corresponden

otro objeto simbólico de consumo para esta Generación Z. Este dispositivo perteneciente a la categoría de tecnología es también de uso individual y hace parte de las gratificaciones y obsequios recibidos en fechas memorables. Así, marcas como iPad y Samsung se convirtieron en las *tablets* de mayor estatus para los participantes de este estudio. Por tanto, abandonaron la observación de las imágenes en computadoras para hacerlo desde este dispositivo, además de dejar a un lado los libros físicos. En conclusión la *tablet*, es un objeto de consumo simbólico de consumo que influye en la construcción de identidad de esta generación con su mundo de interacción digital en su círculo social, además del desarrollo de sus responsabilidades como un objeto secundario, siendo los dos anteriores los primarios.

CONCLUSIONES

Se puede decir que, las generaciones de consumidores de estratos socioeconómicos 4 y 5 de la ciudad de Cali han variado su forma de relacionarse con su entorno y de consumir, ya que en un comienzo los *Baby Boomers* y hasta la Generación X adquirirían todo tipo de bienes de consumo con el fin de satisfacer las necesidades de su familia, mientras que la Generación Y y Z, constituyen un grupo de consumo individual basado en sus propias necesidades primando prima el valor emocional como el entretenimiento, las relaciones sociales y el estatus. De igual manera, los *Baby Boomers* poseían objetos simbólicos de consumo adscritos a la categoría de electrodomésticos y vehículos, mientras que la Generación X conservaba la primera pero incorporó la de tecnología, que llegó a ser identificada en la Generación Y junto a la categoría de videojuegos y por último la Generación Z que posee únicamente la categoría de tecnología en donde se identifican sus tres objetos simbólicos de consumo. Así mismo, marcas como *SONY*, *Nintendo*, *IBM*, *COMPAQ*, *Samsung* y *Apple*, lograron ser identificadas como representativas para cada generación, *SONY* a las dos primeras, *Nintendo*, *IBM* y *COMPAQ* a la tercera y *Samsung* y *Apple* a la última generación de consumidores en sus tres objetos de consumo.

Cabe recordar que, el uso personal de los objetos comienza en la Generación *Baby Boomer* con el objeto simbólico de la cámara fotográfica, al igual que la grabadora y el Walkman de la Generación X que le permitía acercarse a la individualidad a través del uso mismo del *gadget* y la reproducción de sus gustos musicales previos. Por otra parte, el celular y el computador de escritorio de la Generación Y marcaron una historia de consumo de interacción y generaron una nueva forma de relacionarse con su entorno, algo con lo que la Generación Z nació. En este sentido, los objetos simbólicos de consumo de cada generación construyeron identidad con ellos mismos y con su realidad, para las dos primeras generaciones con la categoría de vehículos y artículos para el hogar que les permitía compartir tiempo en familia y generar lazos al interior de esta. Posteriormente con las últimas generaciones, primaron los objetos tecnológicos de comunicación que permitieron y permiten relacionarse con sus amigos, acceder al entretenimiento, generar contenido online e interactuar con su entorno globalizado a través de dispositivos móviles de uso individual siendo este la principal característica de su consumo simbólico, pues el campo familiar ya no es su preocupación.

HOMOLOGACIÓN DEL IVA 2014 EN LA FRONTERA NORTE DE MEXICO: INFLACIÓN Y REORDENAMIENTO ECONÓMICO.

José Ezequiel Robles Encinas, Universidad Estatal de Sonora
Fidel Antonio Mendoza Shaw, Universidad Estatal de Sonora
Rossana Palomino Cano, Universidad Estatal de Sonora
Sergio Ramiro Ramírez Guardado, Universidad Estatal de Sonora

RESUMEN

El 1° de Enero del 2014 entró en vigor la reforma hacendaria, que incluye lo correspondiente a la Ley del Impuesto al Valor Agregado (IVA), misma que de acuerdo al Servicio de Administración Tributaria en México constituiría una herramienta para aumentar la recaudación. Actualmente, considerando la versión oficial señala que la homologación del impuesto en la Zona Fronteriza de 11 al 16%, tendría un impacto relativamente pequeño y transitorio sobre la inflación y a la vez, no generaría presiones inflacionarias. Al mes de Julio del 2014 la inflación para la región de la frontera norte de México ya promediaba valores a la alza no previstos en los últimos años, este indicador del crecimiento de los precios en la región, no solo alcanzó el promedio nacional sino que lo rebasó, éste suceso económico y sus posibles repercusiones se abordan en el presente trabajo.

PALABRAS CLAVES: Impuesto Al Valor Agregado, Homologación, Inflación, Región Fronteriza

CONVERGENCE OF 2014 VALUE ADDED TAX ON MEXICO NORTHERN BORDER: INFLATION AND ECONOMIC REORGANIZATION

ABSTRACT

On January 1st, the tax reform entered into force which includes the corresponding tax law to the added value. In accordance with the Tax Administration Service in Mexico, will build an increase revenue tool. Currently considering the official version which indicates that the official tax approval at the Borderland from 11 to 16 percent, would have a relatively small transitory impact over the inflation, and at the same time would not generate inflationary pressures. By the month of July 2014 the inflation for Northern Mexico's region had already averaged out values to the rise not foreseen in the last years, this growth indicator of the region's prices not only reached the national average but exceeded them, so this economic event is addressed in the present work.

INTRODUCCIÓN

A partir del 1° de Enero del presente año, la reforma fiscal entró en vigor en todo México, una de las medidas que más impacto tuvo en la opinión pública: la homologación del IVA en la zona fronteriza, lo que implicaba cambiar la aplicación de la tasa impositiva del 11% al 16%. La preocupación mayor del ciudadano común y de expertos en la materia era el probable crecimiento de los precios de manera general,

producto por un lado de una inflación autoconstruida, esto es aquella en la que los agentes económicos prevén aumentos futuros de los precios y ajustan su conducta actual en base a esa previsión futura y por otro lado, el crecimiento de los precios que sin duda generaría el aumento del IVA en la zona referida. La inflación en la zona fronteriza del Norte de México generalmente había sido menor a la inflación promedio nacional, por lo que sorprende que en los primeros seis meses del 2014 esta tendencia histórica de menores tasas de inflación en la región, se haya revertido. Hoy se tienen, las tasas de inflación más altas del país, en ciudades fronterizas como Mexicali, Tijuana y Ciudad Juárez. Por parte de la Autoridad, la nueva disposición fiscal no prestó atención a las características propias del consumo que reviste la zona fronteriza, no se consideró el apoyo a la competitividad de las empresas en general, así como el estímulo al comercio nacional en la frontera, por lo que se puede deducir que la aplicación del IVA del 11% al 16% del IVA contribuye muy poco al crecimiento del comercio fronterizo.

El tema se inicia con la descripción del papel que la inflación representa en la actividad económica propia de los países, considerando sus bondades y desaciertos. Posteriormente se efectúa un recuento general de la importancia de resaltar el papel que juegan las ciudades en estudio bajo el contexto de la globalización, considerando variables como el Producto Interno Bruto, las inversiones, así como su ubicación geográfica entre otras. Se describe específicamente el comparativo de la inflación promedio nacional contra la inflación en la zona fronteriza del Norte de México, durante el período comprendido de enero de 2010 al mes de julio del 2014, esto último en virtud de la información oficial actualizada. Así mismo, se detalla el comportamiento de la inflación para ciudades de mayor peso económico en la zona como: Tijuana, Cd. Juárez, Matamoros y Mexicali, resaltando sus implicaciones a raíz de los cambios en la citada reforma hacendaria.

REVISIÓN LITERARIA

En la literatura de orden financiero, se presentan diversos tipos de indicadores que sirven para medir el grado de comportamiento que ha tenido la inflación, mismos que son tomados en consideración para realizar su comportamiento en relación al incremento del Impuesto al Valor Agregado; en México, estos indicadores son publicados por el Instituto Nacional de Estadística y Geografía (INEGI), conformando la parte sustancial para realizar este trabajo. También el Banco de México, es fuente imprescindible al rescatar la información relativa al PIB, e inversión extranjera directa, para cada uno de los estados que conforma la zona en estudio. Además se ha recurrido a la revisión de otras fuentes importantes relacionadas con el tema como son las disposiciones legales, así como los comentarios y puntos de vista de académicos de la región estudiada y otros especialistas, cuyas citas complementan el abordaje del presente tópico.

METODOLOGÍA

Es importante destacar que la información aplicada para la construcción de las tablas, fue tomada de las publicaciones emanadas del Instituto Nacional de Estadística y Geografía (INEGI) de México. Rescatándose la inflación acumulada mensual (llamada también inflación interanual) por ciudades fronterizas de México: Mexicali, Cd. Juárez, Matamoros y Tijuana y la inflación acumulada del promedio nacional, del periodo comprendido de enero de 2012 a julio de 2014, gráfico y tabla 1. Así mismo, en el gráfico y tabla 2, se muestra la inflación fronteriza en relación a la inflación general promedio del país, durante el período del año 2010 a julio del 2014. Asumiéndose una posición indicadora de repunte inflacionario, respecto de los últimos períodos, siempre observándose una tendencia al alza a fin del año de 2014 y superior al promedio nacional durante el primer semestre del último año, por lo tanto, se aprecia claramente el crecimiento de la inflación en la zona fronteriza, como producto de la homologación del impuesto en la zona.

RESULTADOS

La inflación de México y de muchos países en el mundo, en décadas pasadas, fue sinónimo de desorden económico. México alcanzó tasas de inflación mayores al 150% anual a mediados de los años ochenta, se buscó como una prioridad de política económica el reducirla, ya que además del caos económico empezaba a crear un enorme malestar e inestabilidad en el ámbito social. De manera gradual se alcanzó el objetivo, a principios de los años noventa, fue de 50 puntos porcentuales y, desde fines del siglo pasado, la inflación ha sido menor a dos dígitos. En el ámbito de la economía como la japonesa, durante las últimas dos décadas del siglo pasado, tuvo tasas de inflación negativas, es decir, había una caída general en los precios (llamada desinflación) y eso desestimulaba la producción y agravaba su crecimiento económico. Tal era su nivel de producción y su competitividad que durante más de una década presentó precios decrecientes, generaba así poco aliciente a los productores y traía problemas para retomar su ritmo de crecimiento. Los gobiernos de décadas pasadas aprendieron la lección de los daños de una inflación alta y de una desinflación (decrecimiento en los precios), se busca una inflación moderada. Hoy a finales del 2014 son muy pocos los países en todo el mundo que rebasan la inflación de dos dígitos, así tenemos a Sudán con 21% e Irán con 23% y Venezuela con 50%, con una tasa de las más altas que existen. Fuera de éstos países, en muchos otros se tienen inflaciones moderadas, incluso en el caso de los países africanos no tienen problemas con la inflación, China tiene 3%, México el 3%, Ecuador 2.8% y así, una gran mayoría de los países goza de control en los precios. La información fue tomada de: www.imf.org/external/spanish/pubs/ft/reo/2014/whd/wreo0414s.pdf

Por otra parte de acuerdo a la declaración de Agustín Cartens en su papel de Gobernador del Banco de México tras su participación en una ceremonia en el Senado de México y en referencia a la citada homologación del IVA mencionó: “tendrá un impacto relativamente pequeño y transitorio sobre la inflación”. Al respecto, se puede considerar que la inflación siempre y cuando sea moderada constituye un estímulo al productor para que se incremente el precio de los productos que venderá, es una invitación a invertir más. Este incremento a las cantidades producidas tiene sentido por la misma dinámica del crecimiento poblacional, así crece el consumo y junto a ello opera un crecimiento y certidumbre económica, con una eficaz planeación económica de parte de los gobiernos.

En México, la región fronteriza ha jugado en el contexto internacional un papel estratégico para el capital tanto nacional como internacional: bajos costos de la mano de obra, programas de apoyo a la industrialización fronteriza fomentado por el Estado Mexicano, implementación de políticas económicas con menores tasas impositivas, cercanía al mayor mercado del mundo y su crecimiento poblacional mayormente marcado por la inmigración nacional. Atendiendo a la Figura 1 y Tabla 1 la región fronteriza del Norte de México mantuvo tasas de inflación por debajo del promedio nacional todavía hasta el último mes del 2013, sin embargo, a partir de enero del 2014 (una vez homologado el impuesto al valor agregado de la zona fronteriza del 11% al impuesto del 16%, igual que en el resto del país), las tasas de inflación de la región y de la mayoría de las ciudades fronterizas presentan una inflación mayor al promedio nacional. Esto pone en clara desventaja a la región fronteriza frente a la competencia que existe en el mercado mundial.

La tendencia había sido hacia los valores inflacionarios bajos, actualmente se enfrenta a tasas altas, con resultados tendientes a desestabilizar la economía y lo más grave destaca el hecho que el ciudadano se vea afectado en su poder adquisitivo, por lo que al respecto, El Colegio de la Frontera Norte expone: “Incremento de la Inflación: este efecto es el que se presentó más rápido. En la primera quincena de enero, la inflación a tasa anual a 4.63%, de acuerdo con el Instituto Nacional de Estadística y Geografía (INEGI). Un análisis de Bank of América a través de Merrill Lynch señala: “que la homologación del IVA fronterizo fue uno de los principales factores que impulsaron la inflación, pues esto contribuirá en 20 puntos base del índice Nacional de Precios al Consumidor (INPC)”.

Figura 1: Inflación Fronteriza del Norte de México Contra Inflación General (2010-2014)

En la región de la frontera Norte de México la inflación se presenta siempre menor respecto al índice general, a excepción del último año, en 2014, cuando la inflación fronteriza es mayor al promedio nacional durante los primeros seis meses

Tabla 1: Inflación Frontera Norte de México y Promedio Nacional 2010-2014

	Frontera Norte	Promedio Nacional
2010/01	4.53%	4.46%
2010/07	2.96%	3.64%
2011/01	2.98%	3.78%
2011/07	1.24%	3.55%
2012/01	3.67%	4.05%
2012/07	4.36%	4.42%
2013/01	2.78%	3.25%
2013/07	2.96%	3.47%
2014/01	4.62%	4.48%
2014/07	4.17%	4.07%

Los indicadores presentan el comportamiento de los índices inflacionarios del año 2010 al 2014, que demuestran el hecho de que el fenómeno reflejaba hasta 2013 inflación baja y a partir de enero del 2014, se empieza a incrementar.

Además, en el caso de las importaciones temporales de la industria maquiladora de exportación, la Secretaría de Hacienda y Crédito Público, ha emitido reglas como las certificaciones y en función de ello se determina el pago del impuesto, lo que hace que se incrementen los costos de una industria que en el país, ha ayudado al crecimiento de sectores, como el automotriz, electrodomésticos y el aeroespacial, gravándose con el mismo porcentaje, el transporte foráneo, alimentos para mascotas y goma de mascar por citar algunos casos, que hacen que se originen comportamientos inflacionarios que no son benéficos para la economía de la región fronteriza. El Dr. Noé Arón Fuentes, investigador del Departamento de Estudios Económicos para la Frontera Norte, argumenta que los datos oficiales evidencian que un aumento mensual de 1.5 de puntos porcentuales en la tasa inflacionaria, supone que quien carga con el pago de las contribuciones, viene a ser no el productor sino el consumidor, puesto que un aumento en la tasa impositiva implica que tanto el productor como el consumidor, tengan que distribuir el impacto de una mayor tasa: “Esto significa, a su vez, un aumento del 45% a la carga fiscal de los consumidores, lo cual es exagerado y tendrá al menos cinco graves consecuencias. La primera es un aumento de la inflación, luego un efecto recesivo, otras de recaudación menor, de competitividad y de peor distribución de recursos” (Fuentes,

2014). La consideración sería que la aceleración del fenómeno inflacionario, es consecuencia de un impacto temporal que acontece mientras los precios alcanzan un punto en los cuales se llegue a una estabilización y se dé un equilibrio en los mismos, lo cierto es que a poco más de un semestre del incremento de Impuesto al Valor Agregado en la frontera, se presenta un impacto general y automático en el costo de la vida.

En el terreno de esta economía regional, la reforma fiscal asume como política, el aumentar los recursos fiscales para ser redistribuidos, como se ha indicado anteriormente, una de las medidas constituyó la homologación del IVA del 11 al 16% en la región fronteriza, que colinda paralelo a los 20 kilómetros en dirección a la línea divisoria entre Estados Unidos y México. Una vez revisada la literatura y considerando la opinión de académicos y expertos en el tema, una propuesta constructiva de acuerdo a Fuentes sería: “Negociar otro instrumento regional que nos permita mantener la competitividad, pues los poderes legislativo y ejecutivo están alineados para no cambiar la tasa del IVA. El término de devolución de impuestos se da en aeropuertos internacionales y puertos marinos, pero no se respeta en los puertos terrestres fronterizos, es decir, exportamos la carga impositiva. El Dr. Fuentes propone aceptar el aumento del IVA a cambio de que se nos permita devolver los impuestos extranjeros. Esto nos daría un factor de competitividad importante, provocando mayor flujo de visitantes y compensando la fuga de consumidores. Uno pensaría que a mayor recaudación de impuestos, menor crecimiento económico, pero se puede crecer aun aumentando los impuestos, pero se cuestiona los principios de eficiencia y de justicia, pues si pagan más los que menos tienen, la reforma es regresiva”. (Fuentes, 2014). Siguiendo a detalle la Figura 2, con base en la información de la Tabla 2, de las cuatro ciudades consideradas representativas para la zona, se puede observar que Tijuana y Cd. Juárez presentan para el último semestre mayores tasas en la inflación, siguiendo después Mexicali y con menor crecimiento inflacionario, la ciudad de Matamoros.

Figura 2: Inflación Anual en las Principales Ciudades Fronterizas del Norte de México (2012-2014)

En el cuadrante hacia la derecha, se observa que la inflación es más alta respecto a los años anteriores, destacando Mexicali, Cd. Juárez y Tijuana por encima del promedio nacional, solamente la ciudad de Matamoros está debajo del promedio nacional. Fuente: INEGI, México.

Tabla 2: Inflación Anual de las Principales Ciudades Fronterizas del Norte de México (2012-2014)

	Mexicali	Cd. Juárez	Matamoros	Tijuana	Promedio Nacional
2012/01	3.44%	3.46%	2.45%	3.71%	4.05%
2012/07	3.76%	4.31%	3.46%	4.62%	4.42%
2013/01	3.25%	2.22%	3.03%	2.85%	3.25%
2013/07	3.04%	3.33%	3.30%	2.36%	3.47%
2014/01	4.98%	4.18%	4.14%	4.25%	4.48%
2014/07	4.66%	4.20%	3.44%	4.65%	4.07%

En la tabla se observa a partir del año 2012, hasta el 2014, el repunte de la inflación en cada una de las ciudades fronterizas consideradas y, se observa el incremento del promedio anual.

Para efectos de conocer los indicadores inflacionarios, el INEGI presenta información relativa a índices de inflación por ciudades, lo cual permite el acceso a 46 ciudades del país, destacando por su importancia, para efectos del estudio, cuatro ciudades fronterizas específicamente, las cuales son: Ciudad Juárez, Matamoros, Mexicali y Tijuana, en las que la inflación de manera general, se ha mantenido por largos períodos por debajo del promedio nacional, por lo que en los gráficos comparativos se pueden observar los resultados emanados de los mismos.

Aunado al crecimiento de los precios, la inversión extranjera directa (IED) se redujo para el país y en todos los estados fronterizos, (a excepción del estado de Sonora que presentó crecimiento), tuvieron caídas en esta variable en más del 50% en los dos primeros trimestres del 2014, así por ejemplo Chihuahua que había recibido 834.7 millones de dólares en el primer trimestre del 2013, en el primer trimestre del 2014 solo recibe 346.3 millones de dólares. Tamaulipas presenta igual comportamiento decreciente en mismo periodo, cae de 351.7 a 72.4 millones de dólares (ver Tabla 3, referida a la IED comparando los primeros dos trimestres del 2013 y 2014).

Tabla 3: Inversión Extranjera Directa. Millones de Dólares (Enero-Junio 2013-2014)

	Baja California	Chihuahua	Tamaulipas	País
2013 ene-marzo	222.4	834.7	351.7	8,605.6
2013 abril-junio	200	395.1	154.4	20,178.7
2014 enero-marzo	142.9	346.3	72.4	7,428.6
2014 abril-junio	118.1	131.0	82.1	2,303.9

De acuerdo con información de la Secretaría de economía, en conjunto con el Banco de México, la inversión extranjera directa se ha desplomado en los estados seleccionados a partir de los dos trimestres de 2013 y en los dos trimestres de 2014, comparativamente y en relación al país en general.

Si bien la inversión sigue llegando al renglón de las manufacturas preferentemente, existen dos rubros importantes que conforman el renglón de la Inversión Extranjera directa: nuevas inversiones y reinversiones, el primero es el que más se ha reducido, revela el Banco de México que durante los meses de enero a junio del 2014, apenas se alcanzó los \$9,733 millones de dólares provenientes solo de reinversiones y no hubo nuevas inversiones. Por lo anterior, es entendible el por qué las predicciones en la tasa de crecimiento del PIB en México haya venido ajustándose a la baja, indudablemente, esto viene a corroborar el papel estratégico que juega la región fronteriza en el desarrollo México.

CONCLUSIONES

La economía fronteriza crecerá sin mayores problemas con las tasas de inflación que hoy rigen, siempre y cuando el crecimiento de los precios vaya muy acorde con el crecimiento en el producto. Sin embargo a nivel mundial y nacional hay crecimiento lento en el PIB, por lo que es viable que el crecimiento promedio que en un tiempo fue más alto en la zona fronteriza, comience a descender. Se esperaría una contracción económica frenada por bajas en la inversión extranjera, derivándose de ello caídas en el empleo y en el

consumo, es decir, el mejor panorama pudiese ser, un leve crecimiento en la inflación, aunados a un bajo crecimiento en la producción.

La labor de promoción para la inversión en ciudades de la zona fronteriza, por parte de las instancias gubernamentales, deberá ser mucho mayor, el lento crecimiento de las economías, la baja entrada del capital internacional al país y en el caso del aumento al impuesto al valor agregado, son factores que poco ayudan a convencer al capital internacional que busca penetrar en economías favorecidas, tomando en cuenta su estabilidad económica. La demanda de bienes es más alta en la región fronteriza que en el resto del país, motivado por la razón histórica de adquirir bienes de importación, lo que propicia menor poder adquisitivo en los más pobres, ya que en principio, las clases más bajas no tienen posibilidad de obtener visa para cruzar a Estados Unidos, puesto que uno de los criterios que exige el Consulado Americano para otorgarla, consiste en demostrar el tener propiedades y un trabajo estable, entre otros, por lo que las clases altas al tener esta posibilidad, pueden fugarse del país, consumir productos de origen extranjero y evitar el pago de contribuciones en México. Consecuentemente y de acuerdo a los argumentos presentados en el presente trabajo, es de esperarse una caída en los niveles de la economía regional, toda vez de que por parte del Gobierno Federal, que es la instancia adecuada, no se implemente políticas de apoyo a estas regiones donde el IVA fue homologado.

MARCO LEGAL: UNA BARRERA DE CRECIMIENTO PARA LAS OSC EN MÉXICO

Ma. Guadalupe Díaz Díaz, Universidad Autónoma de Coahuila-México
Adriana Guadalupe Chávez Macías, Universidad Autónoma de Coahuila-México
Pedro Ulises Martínez Carreón, Universidad Autónoma de Coahuila-México

RESUMEN

El presente estudio de tipo teórico, parte del conocimiento de la evolución de los organismos de la sociedad civil, del análisis de las leyes regulatorias de su existencia y su operatividad en México, para posteriormente recurrir a la teoría de dependencia de recursos como una propuesta alternativa e innovadora que ayuda a la obtención de recursos que dichos organismos requieren para poder funcionar, obteniéndolos de diversas fuentes. Por lo tanto el objetivo de éste documento es aportar elementos que faciliten la comprensión de la operatividad de las OSC bajo su contexto legal regulatorio, así como de la teoría de Dependencia de Recursos como una alternativa de sustentabilidad y crecimiento.

PALABRAS CLAVES: Organismos de la Sociedad Civil, Marco Legal, Teoría de Dependencia de Recursos

LEGAL FRAMEWORK: A NON PROFIT ORGANIZATIONS BARRIER TO GROWTH IN MEXICO

ABSTRAC

This study theoretical, of the knowledge of the evolution of civil society organizations, the analysis of the regulatory laws of its existence and its operation in Mexico, later resorting to resource dependency theory as an alternative proposal helping innovative resourcing these bodies require to function, obtaining them from various sources. Therefore the aim of this document is to provide elements that facilitate understanding of the operation of Nonprofit Organizations under its regulatory legal context and dependence theory as an alternative Resource sustainability and growth.

KEYWORDS: Nonprofit Organizations, Legal Framework, Resource Dependence Theory

INTRODUCCIÓN

Las Organizaciones de la sociedad civil, han surgido y estado presente en los asuntos internacionales desde la segunda mitad del siglo XIX. En 1945, un grupo de países como Francia, Alemania, Japón, Italia y Reino Unido, en unión con el fondo Monetario Internacional fundan el Banco Mundial con la finalidad de apoyar a la recuperación de los países devastados por la segunda guerra mundial. Así fueron surgiendo y fortaleciéndose con metodologías de financiación y trabajo muy específicos. Finalmente obtuvieron su reconocimiento formal a partir del artículo 71 de la Carta de las Naciones Unidas en el año de 1945. De acuerdo con la definición del Banco Mundial (2008), el término sociedad civil se refiere a una amplia gama de organizaciones no gubernamentales y sin fines de lucro que están presentes en la vida pública, expresan los intereses y valores de sus miembros y de otros, según consideraciones éticas, culturales, políticas, científicas, religiosas o filantrópicas. De ahí que el término organizaciones de la sociedad civil (OSC) abarca una gran variedad de organizaciones: grupos comunitarios, organizaciones no gubernamentales, sindicatos, grupos indígenas, organizaciones de caridad, organizaciones religiosas, asociaciones profesionales y fundaciones. Dicho término coincide con el de otros estudiosos del tema, tal es el caso de

Alejandro Natal citado por Lam R. (2012) quien alude que dichos organismos cuentan con características básicas como:

Son asociaciones de ciudadanos, cada una de estas conformadas por individuos que deciden participaren un grupo, en principio, por un interés particular. Son voluntarias, cada ciudadano tiene la libertad de elegir si desea o no asociarse con otros individuos y, en todo caso en qué organización participará. No son lucrativas, formalmente las OSC pueden recibir financiamiento a través de donaciones, servicios e incluso de fuentes gubernamentales para poder sobrevivir, lo cierto es que estos recursos no deben servir para el enriquecimiento de sus miembros ni debe ser un negocio. No buscan el poder político, este es un elemento definitorio, las OSC no tienen como objetivo la consecución del poder, específicamente político, no desean transferirse a la esfera gubernamental. De 1945 a 1946 el Consejo Económico y Social ha pasado de 41 ONG reconocidas con el status de consultivas, a aproximadamente 2350 ONG (2003). Número mucho mayor si se incluyen a las que actúan sólo a nivel local y regional. Cita Tapia, M. y Verduzco, M. (2013) que es hasta el 09 de Febrero del 2004 cuando México, les da el reconocimiento legal, regulando su operatividad a través de la ley federal de fomento a las actividades de las organizaciones de la sociedad civil (LFFAROSC), la cual además de permitir su registro público, genera el compromiso de rendir informes y presentar comprobantes del uso y dinero que administren y de ser necesario serán fiscalizadas.

Resalta Ramírez, J. (2004) que esta misma ley de operatividad de las OSC en nuestro país, indica a estos organismos, su registro público (CLUNI) (CLUNI Iniciales de Clave única de Identificación) ante Secretaría de Desarrollo Social (SEDESOL) rendir informes y presentar comprobantes de uso y destino del dinero que administren durante la realización de sus funciones encaminadas al logro de sus metas. De esta manera se está generando un registro lo más confiable posible del número de OSC existentes en México. Aquí en México, El contar con un registro y CLUNI les da la oportunidad de obtener fondos económicos por medio de la participación de convocatorias publicadas, por parte del gobierno federal y estatal creando así un lazo de corresponsabilidad. De acuerdo al Instituto nacional de Estadística y Geografía de México (INEGI) (2010), México tiene 112 millones 336 mil 538 habitantes y cuenta con aproximadamente 20 mil organizaciones civiles. Es decir que hay 1.7 OSC por cada 100 mil habitantes.

En forma de comparativo de nuestro país con otros países de América, cita Cortes, C. (2009) que México se encuentra a la zaga de países como Chile, Argentina o Estados Unidos que cuentan con 300,000, 105,000 y 2'000,000 de organizaciones de la sociedad civil respectivamente. De la variedad de problemas que presentan las OSC, cita León A. y Palma I. (2009) que el problema central es la existencia de Actores sociales débiles y desarticulados para promover el desarrollo social de los grupos vulnerables, esto producido por prácticas auto gestivas limitadas, recursos financieros y materiales limitados, reducido desarrollo institucional, escasa sinergia entre actores sociales, así como mecanismos limitados de participación ciudadana producido por una desvinculación entre el gobierno y sociedad civil que conlleva a la generación de estímulos institucionales contradictorios. Hoy en día las OSC encuentran limitaciones en el terreno de sus prácticas legales, financieras y humanas para cumplir sus objetivos razón de ser y metas planteadas. En cuanto a lo legal, son pocas las OSC que realizan la gestión necesaria para ser reconocidas jurídicamente por el Estado a través de alguna figura legal (La LFFAROSC significa Ley Federal de Fomento a las Actividades Realizadas por las Organizaciones de la Sociedad Civil, la cual establece como requisito necesario, contar con la Clave Única de Inscripción (CLUNI) ante el Registro Federal de las Organizaciones de la Sociedad Civil y para ello es necesario que las OSC estén constituidas legalmente). Otro factor que limita las prácticas de las OSC en el desarrollo de sus actividades y en el mantenimiento de su estructura organizativa es su capacidad financiera. Las fuentes de ingresos de estos actores pueden provenir de donativos, recursos públicos, así como de ingresos autogenerados, por ejemplo, por la venta de servicios, productos, asesorías(AA.VV. Definición de una agenda fiscal para el desarrollo de las OSC en México, INCIDE-MC Editores, México, 2007, p. 43.) entre otros más, aunado al ingenio de sus directivos con la finalidad de generar ingresos suficientes para su mantenimiento en la sociedad. Además de ello, es necesario operar bajo los lineamientos que marca la Ley del impuesto sobre la renta (ISR) Por lo tanto el

objetivo del presente estudio es aportar elementos que faciliten la comprensión de la operatividad de las OSC bajo su contexto legal regulatorio que marca la ley federal de fomento a las actividades de las organizaciones de la sociedad civil (LFFAROSC), la Ley del impuesto sobre la renta (ISR), así como de la teoría de Dependencia de Recursos como una alternativa de sustentabilidad y crecimiento. Bajo este contexto surge el interés de generar y aportar conocimiento sobre todo a los directivos de pequeñas OSC de origen local o regional, que les permita establecer y desarrollar estrategias que los conlleve a lograr su misión y visión respetando y aprovechando el marco jurídico que los regula.

REVISIÓN LITERARIA

Hablar de la legislación de las OSC en México, es hablar de una variedad de leyes regulatorias desde una forma ambigua y generalizada hasta la creación de leyes específicas para su regulación. Al respecto Alude Ablanedo I. (2009) que conforme los sistemas legales evolucionan, una reforma a la vez, algunas leyes queden rezagadas respecto a otras, y que las normas dispersas en el marco legal se encuentren momentáneamente desfasadas. Aunque esto sucede en muchos países, en México sucede con cierta frecuencia lo cual impide cierta claridad para la operatividad de estos organismos. Antes del reconocimiento y la promulgación de la Ley Federal de Fomento a las Actividades Realizadas por las Organizaciones de la Sociedad Civil (LFFAROSC) (2004) las pocas organizaciones civiles sin fin de lucro existentes, podían operar bajo diferentes leyes tales como la Ley de Planeación o la Ley General de Educación es decir, leyes que contemplan a las OSC de manera tangencial, en la que su participación en la sociedad es de carácter consultivo. Bajo este nuevo contexto, de la LFFAROSC describe Ramírez J. (2004) que define como Organización de la sociedad civil:

“Aquella que está constituida por individuos, fundamentalmente unidos por lazos asociativos que pueden realizar actividades de defensa y respeto a los derechos humanos de apoyo o asistencia a terceros sin fines de lucro, que no persiguen beneficios personales sino sociales comunitarios. Esencialmente su origen responde al derecho de todo miembro de la sociedad civil de ser su participación ciudadana como la clave para la existencia de una mayor corresponsabilidad de los gobiernos y ciudadanos” Como se observa dicha definición no se contrapone a la descrita por el Banco municipal. Actualmente, todas las OSC legalmente constituidas generalmente se dan de alta ante el Sistema de Administración Tributaria (SAT) como personas morales no lucrativas (o no contribuyentes), lo cual les exime del pago del Impuesto sobre la Renta (ISR) y el Impuesto al Valor Agregado (IVA) por sus actividades. Sin embargo, es necesario explicar que requiere llevar a cabo un trámite adicional para lograr ser donatarias autorizadas (Aquí en México ser donataria Autorizada es un procedimiento de consentimiento sumamente complicado por el tipo de requisitos solicitados, motivo por el cual se encuentra fuera del alcance de un gran número de OSC.); éstas son las únicas organizaciones cuyos donativos (en efectivo) recibidos son deducibles de impuestos y están sujetas a un régimen fiscal particular (A lo largo del 2005 el CEMEFI, el ITAM, Incide Social, entre otras instituciones convocan al foro de consulta fiscal que involucró tanto a los expertos en temas fiscales como a colaboradores de la sociedad civil. Los resultados pueden obtenerse en <http://www.agendafiscalsociedadcivil.org> Está en proceso la elaboración de un manual que explica el régimen fiscal de las donatarias autorizadas; puede consultarse un borrador en <http://www.agendafiscalsociedadcivil.org/files/marcolegal2.doc> 95 El DIF Nacional y el DIF Sonora aplican estos criterios. Este criterio puede ser inflexible dado que el universo de las donatarias autorizadas es muy reducido y el proceso de autorización de las donatarias es muy incierto; posiblemente, se prefiera dar apoyos a estas OSC porque están obligadas a presentar un dictamen fiscal.) En cuanto a las disposiciones fiscales resultado de la reforma fiscal 2010, y que a la fecha sigue en vigor, cita Ávila, O. (2010) que arremete contra las instituciones altruistas pues ya que desde el 2007 ha realizado una serie de cambios y establecido reglas de control a las donatarias autorizadas con la finalidad de mantener su transparencia respecto de los donativos recibidos y sus destinos, además de limitar la deducción de los donativos al 7% de los de los ingresos acumulables en el ejercicio, tanto de las personas físicas como morales que toman a bien colaborar con sus aportaciones. En el ejercicio 2010 la reforma abordó establecer algunos supuestos

de ingresos por los cuales las donatarias autorizadas deberán cubrir el Impuesto Sobre la Renta del 30% sobre el resultado fiscal como si fueran una persona moral con actividades lucrativas, así lo determina la modificación al artículo 93 y 95, los cuales establecen que cuando las donatarias autorizadas perciban ingresos por actividades distintas a los fines para los que fueron autorizadas para recibir donativos y siempre que excedan del 10% de sus ingresos totales en el ejercicio, deberán determinar el impuesto sobre el excedente de acuerdo al Título II, es decir, como una persona moral con actividades lucrativas. Dicho autor afirma que estas instituciones que se encuentran en una situación complicada para obtener donativos en las circunstancias económicas actuales, realizan otras actividades para obtener recursos y continuar con sus labores sociales, a partir del 2010 se convirtió en obligación pagar el impuesto en lugar de usar ese recurso para los fines que fueron creadas.

Como se observa el ser donataria autorizada tiene sus pros y contras pues de acuerdo con algunos expertos "... La ventaja mayor de ser donataria autorizada es la posibilidad de obtener más recursos para los programas de la organización —sobre todo, de particulares y empresas, y en algunas ocasiones las dependencias establecen ese requisito para acceder a sus recursos — y tener mayor credibilidad en sus actividades porque entre las obligaciones que deben cumplir está un dictamen fiscal anual por un contador autorizado...". Por otra parte, en muchos casos estas ventajas parecen no compensar suficientemente los costos de pertenecer a dicho régimen, ya que "... como desventajas están los costos de reformar los estatutos para cumplir con los requerimientos legales del Servicio de Administración Tributaria (SAT), los costos anuales del dictamen fiscal, informar mensualmente al SAT sobre los donativos recibidos superiores a 100 mil pesos y, en general, la obligación de tener a disposición pública la información relativa al cumplimiento de las obligaciones fiscales..." Quizás por ello solo existen en México 7,900 donatarias autorizadas al cierre del ejercicio del 2013. Todos estos cambios presentados en los últimos años los resume y presenta Tapia, M. y Verduzco, M. (2013) en el cuadro 1.

Cuadro 1: Características de Regímenes Fiscales: Lucrativo, No Lucrativo y Donatarias Autorizadas

1 Régimen de Personas Morales con Fines de Lucro	2 Régimen de Personas Morales No Lucrativas (Incluido el Título III de la LISR)	3 Régimen de Donataria Autorizada (Incluido En el Título III de la LISR)
Empresas Mercantiles Contribuyentes de impuestos	<p>Personas morales no lucrativas que realicen actividades señaladas en el artículo 95 de la LISR.</p> <p>Entre otras instituciones: los partidos políticos, las asociaciones religiosas, patronales y gremiales.</p> <p>No pagan o contribuyen con Impuesto sobre la renta (ISR), Impuesto al valor agregado (IVA), ni al impuesto empresarial a tasa única(IETU).</p>	<p>Pueden solicitar al SAT autorización para otorgar recibo deducible de impuestos a sus donantes particulares.</p> <p>Personas morales no lucrativas que realicen actividades señaladas en el artículo 95 y cuyas fracciones aparezcan en el artículo 97 de la LISR.</p> <p>Entre otras instituciones de asistencia social o beneficencia, las instituciones de enseñanza que cumplan con la Ley General de Educación, las instituciones que realizan actividades culturales y las de investigación científica y tecnológica, inscrita en el Registro Nacional de Instituciones y Empresas Científicas (REINECIT).</p> <p>No pagan o contribuyen con ISR, IVA ni IETU.</p>

Fuente: Elaboración: Tapia, M. y Verduzco, M. (2013)

A pesar de que las leyes están impresas y legalmente autorizadas por el Congreso de la Unión, frecuentemente es difícil su interpretación pues algunas se contraponen produciendo confusión para su operatividad, por ello día a día, los directivos de estos organismos buscan alternativas que les permita lograr su fin social, una de las alternativas en la actualidad es a través del uso de la "Teoría de dependencia de recursos". Explica Agüero, J.(2007) que esta teoría surge en la década de 1970 propuesta por (Aldrich y

Pfeffer, 1976; y Salancik, 1978. Parte del supuesto que toda organización depende del contexto para obtener los recursos que necesita: humanos, tecnológicos, materiales, financieros y otros, que son proveídos por otras organizaciones que a su vez obtiene sus recursos de otras organizaciones y así sucesivamente, generándose una cadena de dependencia de recursos interorganizacional.

Las organizaciones tratan de disminuir la incertidumbre y contingencia que genera esta interdependencia por medio de fusiones, alianzas y otras formas de relación interorganizacional. Estas acciones son decididas internamente en las organizaciones mediante opciones estratégicas que seleccionan la mejor alternativa que permita el contexto. En relación a dicha teoría complementa Vázquez, C. (2008) que las aportaciones que han realizado autores como Hudock (1995) observa una dependencia a los fondos del gobierno y agencias donantes, esto afectando su autonomía y efectividad; sin embargo resalta Vázquez, C. (2008), las relaciones que pueden fortalecerse entre las mismas OSC bajo el contexto de la Teoría de Dependencia de Recursos, pueden ser más productivas y con efecto a una mayor duración, tal como la plantea Agüero J.(2007) generando acuerdos, fusiones alianzas entre otros en lo que cada OSC provea sus recursos fuertes a otra recibiendo a cambio otro tipo de recursos de los cuales necesita para lograr sus objetivos. En este marco, Edwards y McCarthy (2004) han sugerido una calificación de los recursos necesitados y de interés para las organizaciones y movimientos sociales, identificándose cinco tipos de ellos, según se muestra en el cuadro 2.

Cuadro 2: Clasificación de Recursos Según Edwards y Mccarthy

Recursos	Descripción
Morales	Reconocimiento, solidaridad, difusión y apoyo a los objetivos de los movimientos y organizaciones
Humanos	Trabajo voluntario, apoyo técnico, especialistas y liderazgo.
Organizacionales	Membrecía (sentimiento de pertenencia a un grupo o movimiento), acceso a redes interorganizacionales, conocimiento y capacidades sobre el funcionamiento de organizaciones, reclutamiento de integrantes, acceso a información y promoción (publicidad) del movimiento u organización.
Culturales	Experiencia de activistas, comprensión de los problemas y asuntos ante los cuales se actúa, acceso al conjunto de valores y percepciones de los actores políticos participantes en el movimiento u organizaciones.
Materiales	Financiamiento y recursos materiales (espacios de reuniones y equipos necesarios para las funciones adjetivas del movimiento u organización.

Fuente: Elaboración de Vázquez, C. (2008) en base a Edwards y McCarthy.

Cualquiera de este tipo de recursos es susceptible a negociación e intercambio dentro del contexto de operatividad de las OSC. La clave para que una organización funcione y sobreviva, es su habilidad para adquirir y mantener recursos según Pfeffer y Salancik (1978). Ello habla de la importancia del ambiente o del entorno en el que se encuentran e interactúan las organizaciones ello abarca elementos del entorno en que las OSC no tienen injerencia como tal es el caso de las disposiciones políticas, legales y fiscales que regulan su operatividad.

METODOLOGÍA

El diseño de la investigación partió de una investigación propiamente documental y descriptiva, por otro lado, se realizó una investigación de campo; es decir, se consultó y se realizó entrevista de carácter semi estructurada a directivos de dos diferentes organismos de la sociedad civil, el primero de ellos es una institución grande fundada hace 36 años y de origen local ubicada en la ciudad de Monterrey, N.L. La segunda institución es también de origen local pequeña y con 10 años de servicio a su mercado, localizada en la ciudad de Monclova, Coahuila. Para afianzar datos e información sobre el tema investigado; se visito, sitios en la web y bases de datos oficiales.

RESULTADOS Y CONCLUSIONES

Evaluar la legislación que regula a las organizaciones de la sociedad civil en México puede resultar un verdadero reto, y el veredicto al que han llegado diversos expertos es sin duda uno muy dividido. Por ejemplo, en un estudio internacional realizado por el *Center for Civil Society Studies* de la Universidad Johns Hopkins, que lleva por título *The Influence of the Legal Environment on The Development of the Nonprofit Sector* (“La influencia del ambiente legal en el desarrollo del sector no lucrativo”), México es de hecho calificado como un país con un marco legal *altamente* favorable para las actividades del llamado sector no lucrativo. Sin embargo, la medida en la que este marco ha logrado en la práctica promover el florecimiento del sector en el país resulta cuestionable para los mismos autores, quienes se muestran intrigados al reconocer que México es el único país de entre los 22 incluidos en la investigación en el cual no se confirma la regla de que “cuanto más favorable sea el régimen fiscal para la actividad no lucrativa, más altamente desarrollado será dicho sector.

En entrevistas realizadas con directivos de OSC expresan que el ser y mantenerse como donataria autorizada, requiere de un grupo de profesionistas y conoedores de las leyes mexicanas para cumplir con todos los requerimientos que la ley les demanda. Ello los conlleva no solamente a la búsqueda de recursos para financiar las actividades propias de su misión, sino que además deben de contar con el recurso financiero necesario para mantener su estructura organizacional que les da el soporte administrativo además del operativo. El poder acceder a mayor y mejores recursos de carácter nacional e internacional deben de contar con normas ISO de calidad, las cuales les demanda capacitar, difundir, compartir y auxiliar a otros organismos de la sociedad civil en su ramo y de ésta manera generan compromisos o alianzas de apoyo en el que todos los organismos involucrados ganan. Como se observa Este tipo de compromisos están basados en la teoría de Dependencia de recursos, que de acuerdo a la clasificación de Edwards y McCarthy son recursos en este caso sonde tipo humanos, materiales.

En la información proporcionada por el directivo de una pequeña OSC de origen local y con 10 años de haberse fundado expresa que el marco regulatorio que rige en el país, es verdaderamente una barrera de sostenimiento y crecimiento para pequeños organismos como el que él preside, pues el lograr ser una Donataria autorizada es un sueño difícil de alcanzar, mismo que le dificulta acceder a patrocinios y fuentes de financiamiento que les permita lograr su fin. Sin embargo en ocasiones eventuales han logrado establecer intercambios de recursos de tipo moral, humano y materiales con autoridades estatales, municipales y otras OSC de la comunidad. Sus fuentes de ingresos provienen de donativos, recursos públicos, así como de ingresos autogenerados en campañas y eventos para la recaudación de fondos. Las conexiones entre organizaciones de la sociedad civil que resultan del intercambio de recursos no únicamente indican que existen interrelaciones sino que entre ellas están en juego ciertos recursos y lo cual orienta a que se identifiquen distintos modos de interacción, que se propone entenderlos como las acciones mutuas que se suscitan entre dos o más organizaciones civiles ya sea porque las relacione algún mecanismo de vinculación o tengan recursos que intercambiar.

La importancia de estudiar la operatividad e interacción de estas organizaciones descubre las barreras que tal vez de manera inconsciente genera la legislación mexicana con el afán de evitar que otras organizaciones o empresas encuentren una manera fácil y viable de evadir impuestos. Lo cual daña la generación y crecimiento de OSC en nuestro país. La teoría de dependencia de recursos es hasta ahora una alternativa de operatividad y crecimiento que no genera obligaciones fiscales.

RESUMEN

El cambio en el modelo económico es necesario para garantizar la sostenibilidad a largo plazo de nuestras formas de producción y consumo, que tiende a equilibrar con el potencial ecológico del planeta y de las generaciones futuras que permiten niveles aceptables de bienestar. El consumo responsable es una forma de consumo consciente y coherente, que tenga en cuenta el impacto social y ambiental del consumo con el fin de reducir al mínimo, para hacer un uso racional y razonable de los recursos naturales, que no ponga en peligro el bienestar de las generaciones futuras; hoy el consumo responsable ha sido identificado como una herramienta eficaz y coherente que ayuda a la sociedad para hacer frente a los nuevos desafíos del siglo XXI, como la lucha contra el cambio climático y la erradicación de la pobreza; en última instancia, el consumo responsable se une a todas las iniciativas que tienen como objetivo promover el desarrollo sostenible. El comercio justo: justo, ético y solidario es una de las pocas alternativas que tienen los pequeños productores rurales de los países en desarrollo para poner su producto de trabajo en el mercado internacional, que pueden representar una industria en crecimiento con un gran potencial de diversificación, que introduce valores y diferenciada y más sensible a la realidad de las prácticas de negocios pequeños. Sin embargo, el comercio justo requiere que todos los actores (productores, intermediarios y consumidores) y un importante esfuerzo para transformar y mejorar las condiciones no sólo cuantitativa y cualitativamente sus productos, sino toda la cadena.

FAIR TRADE IN GLOBAL CONTEXT: THE CHALLENGE OF THE FAIR

ABSTRACT

The change in the economic model is necessary to ensure long-term sustainability of our ways of production and consumption, tending to balance them with the ecological potential of the planet and future generations allowing acceptable levels of welfare. Responsible consumption is a form of conscious and consistent consumption, which takes into account the social and environmental impact of consumption in order to minimize it, to make a rational and reasonable use of natural resources, which does not endanger the welfare of future generations; today responsible consumption has been identified as an effective and consistent tool that helps society to face the new challenges of the XXI century, as the fight against climate change and the eradication of poverty; ultimately responsible consumption joins all initiatives that aim to promote sustainable development. The Fair Trade: fair, ethical and solidarity is one of the few alternatives that have small rural producers in developing countries to place their work product in the international market, which may represent a growing industry with great potential diversification, which you enter values and differentiated and more sensitive to the reality of smallholders business practices. However, fair trade requires all actors (producers, intermediaries and consumers) and a significant effort to transform and improve conditions not only quantitatively and qualitatively their products, but the entire chain.

METODOLOGIA

A partir de una investigación bibliográfica se buscarán las definiciones de términos y conceptos claves como Globalización, comercio justo, desarrollo sustentable, comercio alternativo, competitividad, justicia y desarrollo. Se procederá a la búsqueda de información a través una revisión en libros, artículos de revistas, páginas de Internet, así como, consulta y visita hacia instituciones vinculadas con los aspectos estadísticos y analíticos del tema (Comercio justo México, AC) con la finalidad de comprender la idea de la justicia de un comercio alternativo.

INTRODUCCION

La idea de un marco globalizado pujante por la competencia y el mejor nivel de vida, nos hace voltear la mirada a diferentes rutas de desarrollo, que nos conduzcan a caminos más seguros donde una localidad pueda aprovechar las ventajas competitivas y relativas para vivir mejor. Los estilos de vida tienden naturalmente al cambio, donde una población busca constantemente satisfacer sus necesidades de acuerdo a los recursos que tienen a su alcance, con ayuda de la creatividad e información generada por la experiencia vivida. Esto es, que entre más conozca lo que pasa en su contexto local y vea nuevas técnicas o aplicaciones de tecnologías relacionadas a su comunidad podrá adaptar ideas a su estilo de vida; a través del uso de las tecnologías de comunicación, una población mantiene contacto con otros lugares los cuales viven las mismas circunstancias y optan por diferentes formas de producción, comercialización y normatividades, las cuales son generadas por su población; información que al compartirse, permite generar patrones adaptables que los gobiernos sin diferenciar el ámbito, local a nacional, permite establecer políticas que guíen las actividades productivas que velen por el desarrollo y el crecimiento económico de una zona. La importancia del buen desempeño de las relaciones internacionales en el desarrollo político, económico y cultural a nivel mundial es primordial hoy día para el logro del desarrollo integral de las naciones; que dan base a la formación de un comercio y viceversa, que permita generar un intercambio que satisfaga las necesidades del mercado. Factores como las condiciones climatológicas y geográficas propias de cada nación inducen naturalmente intercambiar bienes y servicios con zonas donde producen bienes necesarios para la supervivencia y desarrollo de áreas vitales entre naciones.

El desarrollo del comercio internacional hace que los países prosperen, al aprovechar sus activos que producen mejor y luego intercambiarlos con otros países que a su vez ellos producen mejor, de acuerdo con la teoría económica del comercio internacional. (Smith, 1994). Otro factor a considerar son las relaciones comerciales internacionales, dentro de la actividad económica, las cuales son muy complejas y no pueden ser explicadas por una sola causa (González Blanco, Enero-Febrero 2011), cabe declarar que no hay una sola nación que pueda considerarse autosuficiente así misma y que no necesite del concurso y apoyo de los demás países, aun las naciones más ricas necesitan recursos de los cuales carecen y que por medio de las negociaciones y acuerdos mundiales suplen sus necesidades y carencias en otras zonas.

El Reto de lo Justo

El comercio internacional de hoy en día es muy diferente al que existía hace diez años, además de su incremento en volumen, las innovaciones tecnológicas, y los servicios que de ella derivan nos imponen cada día nuevos retos y problemas necesarios de regulaciones que se adapten a los componentes de cada nación, tanto sociales como ambientales. Uno de eso es el comercio internacional libre de trabas, es decir, libre de aranceles a las importaciones y de subsidios a las exportaciones, beneficia a todos los países

participantes por igual a través de la especialización a que da lugar; especialización que a su vez promueve el crecimiento económico al interior de cada país y, por tanto, el crecimiento de la economía mundial en su conjunto. El comercio internacional (Lerma Kirchner, 2004) permite una mayor movilidad de los factores de producción entre países, dejando como consecuencia las siguientes ventajas:

Cada país se especializa en aquellos productos donde tienen una mayor eficiencia lo cual le permite utilizar mejor sus recursos productivos y elevar el nivel de vida de sus trabajadores. Equilibrio entre la escasez y el exceso. Hace posible la oferta de productos que exceden el consumo a otros países, en otros mercados; entendiéndose como exportaciones. Hace posible que un país importe aquellos bienes cuya producción interna no es suficiente y no sean producidos. Los movimientos de entrada y salida de mercancías dan paso a la balanza en el mercado internacional. Donde los precios tienden a ser más estables. Por medio de la balanza de pago se informa que tipos de transacciones internacionales han llevado a cabo los residentes de una nación en un período dado. Desde el punto de vista económico se ha considerado al comercio como el conjunto de operaciones de intercambio de bienes y servicios que se requieren para la satisfacción de las necesidades de la sociedad en general y de los seres humanos en particular. En cambio desde el punto de vista jurídico, el comercio se conceptúa como: la actividad por medio de la cual las personas realizan actos de intercambio de bienes y servicios, con el propósito de lucro y de cuyas actividades se generan derechos y obligaciones que son legalmente exigibles.

Atendiendo la concepción económica, las operaciones o intercambios de bienes y servicios que se realizan entre personas, empresas o entidades ubicadas en diferentes países, se origina la actividad que se conoce como comercio internacional. El comercio, ya sea doméstico o interno, así como el internacional, poseen en términos generales los atributos y características fundamentales. No obstante, el comercio internacional tiene en la actualidad una gran importancia para todas las naciones que lo practican, importancia que no solo es económica, sino también política, en virtud de que esa actividad le permite al Estado que la desarrolla, establecer una serie de estrategias, actitudes y posiciones que no solo le produce el ingreso de divisas, tan esenciales para el mantenimiento o crecimiento de su economía, sino que también le da presencia y significación en el comercio internacional. (Martínez Vera, 2006).

Los actos de comercio, cualquiera que sea el alcance y contenido de estos, requieren de una regulación jurídica, en virtud de que solamente a través de la observancia de los preceptos jurídicos, estos actos pueden tener certeza, confiabilidad, reiteración y permanencia entre las partes y entre las naciones. Es por ello que los diferentes gobiernos se han preocupado por dotar a los actos de comercio de las normas legales necesarias para que por una parte, el comercio de un estado determinado se transforme en factor de progreso y desarrollo de sus propios intereses, y por la otra para que queden garantizados los derechos y obligaciones de las partes que intervienen en la celebración de dichos actos, los cuales se llevan a cabo a través de un acuerdo de voluntades regulado por las normas jurídicas. En cambio en el ámbito internacional, por tratarse de Estados dotados de soberanía, de la cual se deriven principios de igualdad entre dichos Estados y de no Intervención de los asuntos internos, resulta que las leyes de un país no pueden aplicarse en otro, salvo autorización expresa consignada en las leyes de este último. Motivo por el cual las naciones se han preocupado por la celebración de negociaciones, acuerdos y tratados internacionales que tengan por objeto resolver las cuestiones que se generen entorno a los actos de comercio internacional.

La forma en que se ha implementado esta globalización económica se ha traducido en el aumento de relaciones entre mercados externos muy cambiantes, lo que lleva inevitablemente a la flexibilización del mercado laboral internacional (flexibilidad en normas laborales en general, en el salario y aumento de trabajo precario o contrato a jornada parcial). La tecnología y especialización ha llevado a la disminución del trabajo estable y aumento del trabajo temporal, incluso a través de la tercerización o subcontratación, especialmente de los servicios. A su vez, la globalización no es un proceso homogéneo y por lo tanto se puede desarrollar de manera muy asimétrica entre los distintos países o en las distintas clases sociales de un mismo país. Esto genera niveles de desigualdad.

Frente a la permeabilidad de las fronteras económicas y culturales, la liberalización del comercio y la eliminación de controles al mismo, la alternativa más recurrente ha sido la desreglamentación del mercado del trabajo, lo que genera empleo precario, moderación salarial, bajo costo del despido e incluso, exclusión social. Sin embargo, los países en desarrollo tienen condiciones desiguales con los desarrollados. Estos últimos parten de un sistema de protección social, mientras los otros lo hacen desde la precariedad laboral y social. Por su cuenta el comercio exterior constituye el objetivo de la política comercial externa, misma que puede orientarse a finalidades proteccionistas, liberales o neoliberales y estadísticas, según el sistema económico aplicable. Las operaciones de comercio jurídicamente pueden asumir modalidades diversas tales como compraventas internacionales de mercaderías, contratos de licencias o franquicias; las cuales dependen de la formación de la sociedad y las políticas de mercado que el país tenga, generando patrones de competencia bajos esquemas probados como el *Know How* de las franquicias y estándares de calidad los productos a nivel internacional. (Charan, 2012) La competitividad en términos comerciales significa la posibilidad de triunfar sobre otros cuando al confrontase con los productos sustitutos, se tiene alta probabilidad de salir victoriosos, favorecidos por la compra del consumidor. La competitividad en el ámbito del comercio exterior depende de las condiciones (Lerma Kirchner, 2004) que están presentes en dos niveles: Macro y estructural que comprende las condiciones básicas y generales del país o región necesarias para que las empresas puedan operar con eficiencia y Micro y estructural. En el que se encuentran las condiciones a nivel empresa y producto que pueden hacer que las mercancías se desplacen exitosamente en los mercados metas.

Es innegable que el modelo económico actual repercute de manera nociva sobre el medio ambiente. Por un lado, la subordinación de las economías de los países pobres a la actividad exportadora para generar divisas a la que se ven obligadas para pagar la deuda externa de los países en desarrollo, ha acentuado la explotación de bosques, de recursos pesqueros y el uso de cultivos agroquímicos; Por otra parte, el comercio internacional a largas distancias ha provocado un aumento del transporte mundial tanto de materias primas como de manufacturas, así como un incremento del consumo de energía y de la emisión de sustancias contaminantes. También, con el fin de ser más competitivos en un mercado global, hay que bajar los estándares ambientales y reducir los costos ambientales en los costos de producción. En el contexto la pobreza se visualiza como causa y efecto de los desequilibrios estructurales nacionales e internacionales, que debe ser eliminada para resolver los problemas ambientales.

En un mundo cada vez más inclinado a la integración comercial, en donde los intereses económicos entran en conflicto con diversos intereses de la sociedad actual aderezado con el incremento del flujo de bienes y servicios, se encuentra una fuerte tensión entre la liberalización comercial y la protección del medio ambiente, un choque de culturas, teorías y la implantación de las políticas económicas tendientes al desarrollo. Con el avance globalizado de la circulación de bienes, quienes trabajan en el comercio internacional buscan condiciones favorables para el crecimiento económico como las leyes flexibles para la industria y para la circulación de bienes, evitando así políticas comerciales protección del medio ambiente, que constituyen barreras que elevan los costos y encarecen los productos haciéndolos menos competitivos. Incluso, en algunos casos, buscan eliminar completamente tales esfuerzos con la responsabilidad social bajo el cobijo de los gobiernos, generando empleos, zonas o reservas de un animal en peligro, comprando bonos de carbono entre otros. El problema del deterioro del medio ambiente se ha convertido en una preocupación central en el proceso de desarrollo, el cual es un problema global que afecta tanto a países ricos como a países en vías de desarrollo sin importar quién o quienes hayan originado tal situación. Es, por lo tanto, un problema que requiere necesariamente el esfuerzo de todos para tratar de encontrar soluciones reales, viables y planificadas a largo plazo. Las naciones ante las circunstancias particulares como el calentamiento global, contaminación de aires y mares entre otros problemas; están tomando cada vez mayor conciencia de lo importante que es lograr un desarrollo sostenible, que permita asegurar la satisfacción de las necesidades del presente sin comprometer la capacidad de las futuras generaciones. (Pierri, 2005)

Es un hecho que el comercio puede implicar también un aumento de la contaminación por lo que son necesarias medidas regulatorias y de control ambiental. Sin lugar a dudas, algunas veces hacer comercio implica ir en contra del cuidado del medio ambiente. El hecho de que se exploten los recursos naturales es factible siempre y cuando sea de una manera responsable. Esto implica la conciencia de la empresa que explota estos recursos y el apoyo/supervisión del estado de regular el usufructo de los recursos naturales de la nación. Ante estas circunstancias de la Organización Mundial de Comercio (OMC) que estudia ahora temas más amplios que abarcan no solo los impactos económicos y sociales del comercio, sino que agranda la agenda de comercio en temas de barreras no arancelarias y otros temas que recaen en actividades gubernamentales y de comercio interno que van más allá del campo del comercio internacional. Teniendo en cuenta que los problemas ambientales suelen trascender las fronteras nacionales, la solución a estos problemas debe ser el resultado de una acción concertada a nivel internacional. Los Miembros de la OMC reconocen desde hace tiempo la necesidad de una acción coherente de las instituciones internacionales para hacer frente a los problemas ambientales mundiales. Las negociaciones en curso sobre la relación entre la OMC y los acuerdos multilaterales sobre el medio ambiente (AMUMA) ofrecen una oportunidad excepcional para crear sinergias positivas entre los programas relativos al comercio y al medio ambiente a nivel internacional.

La iniciativa actual, es elegir políticas que se elaboren en respuesta a esta compleja necesidad doble de crecimiento económico y protección de los recursos naturales; estas políticas debieran ser diseñadas de forma abierta y explícita para la sociedad, apegándose a la lógica económica y política en el camino hacia un mundo de protección efectiva del medio ambiente y simultáneamente libre del proteccionismo comercial. Mientras gran parte de las naciones afinaban los criterios de eficiencia económica y en busca de su integración, hubo grupos sociales de que no lograron unirse a esta dinámica y poder participar de la comercialización internacional que llevaría al futuro próspero de la globalización y la modernidad, teniendo que inventar y reinventar las pocas opciones que quedaban a su alcance. Siendo así como surge la idea del comercio justo en conjunto a la evolución de los consumidores en la modernidad, después de la Segunda Guerra Mundial en casi todos los países los objetivos del mercadeo de productos eran las ventas en grandes cantidades de productos poco diferenciados.

La estrategia que operaba en las organizaciones era la de la producción, puesto que los consumidores estaban más interesados en obtener el producto en sí que algunos de sus atributos. Sin embargo, las pautas de consumo han cambiado radicalmente; los consumidores buscan ahora cuando compran conseguir la máxima calidad y diferenciación en sus productos. Los movimientos de consumo ético de los que el comercio justo forma parte, han experimentado un peculiar aumento y difusión en las últimas décadas y lo han hecho en la mayor parte de los casos usando técnicas y metodologías de mercado con impacto en la sociedad, en los que se identifican lo siguientes más comunes: la comercialización de productos ecológicos, productos que respeten la vida e integridad de los animales, maderas ecocertificadas obtenidas de bosques no devastados, productos agropecuarios orgánicos, productos que no recurran al trabajo o explotación infantil y los que defienden la soberanía alimentaria local; todo esto dentro del consumo cotidiano, que con el apoyo de su estado gestionan pautas de comercialización con impacto directo en los consumidores, sensibilizándolos previamente de la bondad de sus causas y certificando con sellos reguladores que sus productos se corresponden con los procedimientos éticos que ellos dicen defender. El movimiento del comercio justo opera a través de sistemas de sobreprecio, esto es pagando más a los productores de los bienes, especialmente café, cacao o productos de artesanía, que los precios que imperan en el mercado. También garantizan un precio superior al del mercado en caso de caídas de precios en los mercados mundiales. A cambio los productores se comprometen a respetar una serie de pautas, que varía según la organización de comercio justo que efectúe la transacción, pero que incluyen normalmente el respeto a las condiciones laborales de los empleados de la explotación, la no discriminación de la mujer y que no se use mano de obra infantil en la producción. También se acostumbra a incluir cláusulas de respeto al medio ambiente y el fomento de proyectos educativos y de desarrollo comunitario.

La tendencia de este movimiento es la promoción de un consumo ético o ciudadano, que se opone al consumismo y se diferencia de la tradicional defensa del consumidor que solamente se preocupa de la relación calidad/precio. Las organizaciones dentro de este comercio alternativo han establecido la creación de sellos, como un mecanismo que le permite al consumidor identificar productos socialmente justos y ecológicamente correctos, en los lugares de compra habituales. Establecieron criterios económicos y sociales que les permiten controlar el respeto al otorgar una etiqueta distintiva a algunos distribuidores y la inscripción de organizaciones de productores del sur en los registros comunes que han establecidos por producto. Las contradicciones sociales derivadas de prácticas económicas de producción y comercialización internacional consideraras como injustas como: la explotación de la mano de obra sobre todo la infantil, de la exclusión del primer eslabón de la cadena productora, de la distorsión de precios y de la pérdida de la calidad en la lucha por bajar los precios, han dado lugar a otro tipo de producción y distribución más conveniente para los pequeños productores, la cual toma en cuenta no sólo los valores económicos, sino también los sociales y los relacionados con el medio ambiente. Con estas bases, una respuesta viable se empezó a gestar desde hace algunas décadas por medio de un tipo de comercio alternativo. Son múltiples las definiciones acuñadas para lo que en términos generales se denomina comercio alternativo o no convencional. También son muchas las experiencias que existen en el mundo sobre este tipo de intercambio comercial. La diversidad de denominaciones incluye: comercio con justicia, solidario, justo, ético, orgánico, social, ecológico, equitativo.

El Comercio alternativo es una reacción a las actuales reglas de juego del comercio internacional, consideradas como injustas. Para el Comercio Justo el gran desafío de los países menos desarrollados pasa más por una redistribución más equitativa de los recursos y de la renta, que por una expansión o globalización de los mercados a nivel mundial. Esta idea de un sistema alternativo es una posibilidad para crear lazos directos entre los productores generalmente agropecuarios de países del sur y los consumidores, que en su mayoría se encuentran en los países industrializados. Además, crea opciones tanto a aquellos que trabajan el campo en pequeñas parcelas, como a los propietarios de microempresas de transformación y venta de productos de base. De esta manera, las diferentes crisis y los años de lucha han dejado un legado importante. En un esfuerzo de supervivencia, los pequeños productores han creado cooperativas y organizaciones no gubernamentales, algunas de las cuales son notorias por el éxito que han tenido a pesar de las circunstancias, y se han inscrito en la red del comercio justo.

El Comercio Justo es un sistema comercial basado en el diálogo, la transparencia y el respeto, que busca una mayor equidad en el comercio internacional prestando especial atención a criterios sociales y medioambientales. Contribuye al desarrollo sostenible ofreciendo mejores condiciones comerciales y asegurando los derechos de productores/as y trabajadores/as desfavorecidos, especialmente en el Sur. (WFTO, 2014). Este concepto, hace que se resalte la necesidad de generar un cambio en las reglas y prácticas del comercio, no solo en un sentido moral, sino como una práctica equitativa en la que se puede competir en mercados establecidos; que pueden llevar a consolidar e identificar a negocios empresas a dar prioridad a la gente. El comercio justo, como lo conocemos hoy, surge de la voluntad de poner en marcha el ideal de los países productores de materias primas con el lema: "Comercio, No Ayuda" que surgió en una Conferencia de la Comisión de las Naciones Unidas para el Comercio y el Desarrollo (UNCTAD, por sus siglas en inglés), en Ginebra en 1964. (Lopez J, 2008)

La idea de justo en la historia está determinada por la estima que cada sistema histórico legal social tenga hacia el mérito, la necesidad o la capacidad. Entre los Estados, la justicia representa la equidad de trato político y económico entre ellos. Ahora bien, los derechos y deberes de los individuos frente al Estado están determinados por la idea de finalidad del Estado que se tenga. Así, un Estado cerrado o liberal dejará actuar a los ciudadanos sin interferencias inmediatas, siempre y cuando tengan el mérito de cumplir con las leyes establecidas. Por ende la equidad en la distribución de bienes y servicios está determinada por el mérito o la necesidad de los individuos, de acuerdo con el sistema económico existente. Un sistema capitalista se alimenta del constante mérito y capacidad de hombres e instituciones para competir, mientras que un

sistema socialista se fundamenta a partir de satisfacer necesidades básicas. La relación entre los Estados está determinada por estimaciones de mérito, necesidad o capacidad que se tengan unos a otros. Los Estados son desiguales por su capacidad militar, técnica, etcétera; son desiguales por sus méritos o desméritos históricos y sociales; y desiguales en cuanto a sus necesidades físicas o metafísicas.

(Mendez Pinto, 2012) Es por tanto evidente que todas estas aplicaciones y atribuciones objetivas de justicia están invariablemente determinadas por el carácter subjetivo que siempre decreta y define a la justicia en sí misma. De acuerdo a la idea de Héller que todo el modelo no es más que una recomposición de las prácticas tradicionales y contemporáneas antes citadas y no una recomposición arbitraria. Es la única recomposición posible que incluye todos los componentes de la justicia, si la humanidad es pensada como un grupo social esencial y si las relaciones humanas son relaciones de reciprocidad simétrica. El procedimiento justo no puede estar motivado por necesidades radicales, pues estas necesidades pueden ser ciegas y pueden expresarse en posturas irracionales. Y mucho menos puede un procedimiento justo ser racional, pues hay diferentes tipos de comprensión radical (actitud) y la decisión de optar por una particular debe estar motivada por algo más que la racionalidad. Que de no ser implicado la racionalidad se caería en lo injusto. En un sentido teórico el intercambio es justo, pues cada quien intercambia cosas o bienes por el valor que estas representa, pero la problemática empieza cuando las necesidades, los méritos de los individuos se enfrentan en circunstancias particulares de sociedades o empresas con valores librecambistas que compiten en un mercado con reglas cambiantes y luchas de poder. Desde la perspectiva mostrada las relaciones mercantiles internacionales librecambistas bajo un esquema de valores son esencial y moralmente dudosas, puesto que en ellas alguien gana y alguien pierde. Aun cuando estos intercambios sean libres y voluntarios, se crean desventajas.

CONCLUSIÓN

Se tiene claro que se vive en un mundo globalizado con una realidad cada vez más interconectada e integrada gracias a un conjunto de procesos tecnológicos, económicos, sociales y culturales, pero esta globalización no tendría por qué ser negativa, de acuerdo a la idea teórica, pero al estar ligada a un determinado modelo político y económico basado en la ideología neoliberal, así como a un concreto modelo de vida sostenido en el consumo, el afán por la acumulación, el individualismo exacerbado y la uniformidad cultural, ha convertido a la economía un fin en sí mismo, sin tenerla en cuenta como un medio de satisfacción de las necesidades de las personas, del bienestar de las colectividades y del desarrollo humano. Pues se ha desligado de otras consideraciones éticas y se ha dejado llevar por un modelo y práctica neoliberal que, incuestionablemente crea grandes injusticias, desigualdades y además se hace insostenible para nuestro. Ante esta realidad viene configurándose en las últimas décadas un movimiento social que reúne a un conjunto de organizaciones e iniciativas que están generando un pensamiento y una práctica alternativa y solidaria de la economía en sus diferentes facetas: producción, financiación, comercio y consumo.

Por un lado se propone una economía solidaria con un cambio del sistema de prioridades en el que actualmente se fundamenta la economía neoliberal. Se trata de una visión y una práctica que reivindica la economía como medio, y no como un fin, al servicio del desarrollo de las personas y comunidades. Una concepción que coloca a la persona y a la comunidad en el centro y como prioridad. Transformando así el modelo convencional de actividad económica y concediendo a las personas, sus necesidades y capacidades de trabajo un valor por encima del capital y su acumulación, así como reivindicando un modelo socioeconómico más redistributivo y equitativo. Dentro de esta nueva visión de la economía, se establecerían nuevas redes comerciales que funcionarían bajo otra lógica. Este Comercio Justo establece unas relaciones comerciales basadas en el trato directo y el respeto mutuo, con criterios no sólo económicos sino también sociales y ambientales. Este comercio trata de crear oportunidades para los más desfavorecidos y ofrecer unas condiciones dignas de trabajo, así como unas prácticas comerciales justas para que puedan desarrollarse. Este comercio tiene en cuenta y respeta tanto las diferencias culturales, como el medio

ambiente donde se desarrolla. Siempre basándose en la transparencia en la gestión, en la responsabilidad social y el respeto al interés de los grupos que participan en él.

El comercio justo no es un movimiento de caridad ni de dádivas, representa un sistema de pago justo al trabajo digno y de calidad; es un sistema solidario que apoya procesos de productores organizados que producen con responsabilidad social y cuidando el medio ambiente. El comercio justo nació como un movimiento social en favor de los productores de países pobres, pero poco a poco se ha convertido, sobre todo a partir de la liberación de los mercados, en una forma de comercio alternativo al sistema tradicional; se pudiera decir que es una antítesis del comercio tradicional, ya que no busca un lucro a favor de los intermediarios, sino que la mayor ganancia se revierte en el iniciador del proceso, que es el pequeño productor o el artesano. Si bien es cierto que las grandes empresas acaparan los mercados, también es cierto que existen nichos de mercado que tienen un potencial económico prometedor para este nuevo sistema de comercio. De acuerdo a la idea de Stiglitz, Los países en vías de desarrollo desean una ayuda, una mano, un incremento en sus oportunidades.

Pero para que los países en vías de desarrollo puedan aprovechar las nuevas oportunidades, tendrán que relacionarse con la asistencia comercial. La ayuda y comercio son complementos, no sustitutos. Muchos de los comercios mundiales están afectados por las políticas de los países desarrollados, ellos entonces juegan un papel crucial en la ayuda a los países en vías de desarrollo y se abren a ellos para negociar. Pero los países desarrollados no son ni enteramente el problema ni la solución a todo. Sus políticas de comercio son importantes, pero su reforma también es un complemento, no un sustituto para reformar los países en vía de desarrollo. (Joseph E. Stiglitz y Andrew Charlton, 2006). En consecuencia, el Comercio Justo es uno de los mecanismos más claros para lograr una redistribución más progresiva a través de la vía comercial, ya que en estos países el comercio exterior está tradicionalmente en manos de pocas corporaciones grandes, que no generan beneficio para las comunidades locales. Es por eso que esta forma alternativa promueve una relación voluntaria y justa entre productores y consumidores. Así, al comprar juguetes, joyas o alimentos se puede pagar lo que realmente cuesta producirlos y apoyar a los pequeños productores, que trabajan de manera sustentable y digna para poder vivir. Esto se hace a través de una tienda designada y certificada que apoya en el canal de distribución de dichas mercancías.

El objetivo principal del comercio justo es realizar operaciones a un valor adecuado, que considere el trabajo que demandó la elaboración de un determinado bien, la preocupación ambiental y condiciones laborales óptimas para que éste se llevara a cabo. La idea es que se generen acuerdos comerciales equitativos en base a estándares éticos que contribuyan a un desarrollo sostenible, y es de resaltar que son los compradores o consumidores finales son quienes ponen el precio final de un determinado producto, valorando siempre al trabajador y todo lo que implicó su elaboración y no solo las organizaciones. Las organizaciones que se adhieren a esta forma de venta, apoyan a los fabricantes a fijar un precio, considerando los costos fijos y variables, más un pequeño porcentaje de lo que significa su comercialización, para así llegar al precio justo de su producto. Es importante considerar que mientras existan más intermediarios entre el productor y el consumidor final, más caro será su precio. Las organizaciones que trabajan bajo las bases de este concepto, generalmente se acercan a los productores y los invitan a proveerlos de sus productos, pagando por éstos, lo que realmente cuesta elaborarlos.

EL MERCADO DE DERIVADOS EN COLOMBIA: OBSTÁCULOS EN SU DESARROLLO Y PERSPECTIVAS DE CRECIMIENTO (RESULTADOS PRELIMINARES)

Julian Alberto Rangel Enciso, Universidad del Tolima -Colombia
José Rodrigo Cática Barbosa, Universidad del Tolima -Colombia
Oscar Hernán López Montoya, Universidad del Tolima -Colombia

RESUMEN

Este documento presenta los resultados preliminares de una investigación que busca identificar los obstáculos que han impedido el crecimiento, diversificación y sofisticación del mercado de derivados estandarizados en Colombia y las perspectivas de su crecimiento futuro. Los resultados preliminares muestran que aunque el mercado de derivados estandarizado Colombiano ha tenido un crecimiento importante en los últimos años, aún presenta un limitado desarrollo, especialmente si se compara con otros países Latinoamericanos. Por otra parte, una encuesta realizada a las Sociedades Comisionistas de Bolsa que operan en Colombia, identificó que algunos de los más importantes obstáculos que han limitado el desarrollo de este mercado en el país son: 1) El desconocimiento de sus participantes sobre la forma de operación de estos instrumentos debido a su relativa complejidad. 2) La falta de una demanda adecuada debido a que el mercado over-the-counter suple las necesidades de los participantes. 3) La falta de incentivos a los agentes para actuar más como oferentes, que como demandantes. 4) Una regulación contable en materia de derivados relativamente compleja y que no ha adoptado principios internacionales y 5) Las deficiencias en el marco regulatorio de las opciones y los swaps relacionadas con la administración del riesgo y la valoración.

THE DERIVATIVES MARKET IN COLOMBIA: OBSTACLES ON ITS DEVELOPMENT AND GROWTH PERSPECTIVES (PRELIMINARY RESULTS)

ABSTRACT

This document presents the preliminary results of a research that looks for identifying the obstacles that have prevented the growth, diversification and sophistication of the Colombian standardized derivative market and the perspectives of its future growth. The preliminary results indicate that even though the Colombian standardized derivative market has had an important growth in the last years, it still presents a limited development, specially if we make the comparison to other Latin American countries. On the other hand, a poll performed to the broker firms operating in Colombia identified that some of the most important obstacles that had limited the development of this market in the country are the following: 1) The lack of knowledge of its participants about the way these instruments operate because of their relative complexity. 2) The lack of an adequate demand because the over-the-counter market supplies the participants' necessities. 3) The lack of incentives for the agents in order to act more like offerors, instead of offerees. 4) An accountant regulation about financial derivatives relatively complex and without adopting international principles and 5) The deficiencies of the options and swaps regulatory framework related to risk management and valuation.

INTRODUCCIÓN

El desarrollo del mercado de capitales es sin duda un factor fundamental para el progreso económico de un país al facilitar el traspaso en forma eficiente y segura de los excedentes de recursos de ahorradores e inversionistas a empresas e individuos que los requieren para adelantar proyectos productivos que incrementan la disponibilidad de bienes y servicios que requiere una sociedad. En los mercados de capitales más desarrollados, el mercado de derivados financieros es un componente primordial que permite la protección contra algunos de los más importantes riesgos que deben soportar los diversos actores que participan en los procesos productivos de una economía. Sin ser exhaustivos, algunos de estos riesgos son, por ejemplo, el asociado con la tasa de cambio, el cual enfrentan los exportadores e importadores de bienes y servicios cuando comercializan con monedas extranjeras (divisas). También, el riesgo de tasa de interés, que afecta prácticamente a todos los actores del sistema económico en la medida en que esta variable incide en los precios de todos los bienes y servicios. Finalmente, el riesgo de mercado que enfrentan productores y consumidores en la comercialización de los llamados commodities o productos básicos, debido a variaciones de precio asociados con los diferentes ciclos de oferta y demanda.

Para protegerse contra estos y otros riesgos, los mercados de derivados han desarrollado instrumentos como los contratos forward, los contratos de futuros, las opciones, los swaps, etc. los cuales permiten la transferencia del riesgo de una forma eficiente, de tal manera que el participante puede tener un mejor control sobre aquellas variables que afectan su desempeño económico. A pesar que los mercados de derivados financieros no son nuevos en el mundo, su introducción en Colombia apenas se hizo en la última década del siglo anterior y su evolución y desarrollo desde ese momento, aunque importante, no ha logrado alcanzar los niveles de sofisticación y participación del mercado financiero que si tiene en otras economías. Efectivamente, los mercados de derivados se conocen desde la época de los griegos. Los comerciantes europeos del siglo XII los utilizaban como una forma de mitigar el riesgo. Los japoneses del siglo XVIII tranzaban contratos de futuros que prometían la entrega a futuro de una cierta cantidad de arroz a un precio estipulado con anticipación. En los Estados Unidos se negocian contratos derivados estandarizados desde 1848, cuando se fundó la Chicago Board of Trade –CBOT. La participación del mercado de derivados estandarizados de Norte América es tan importante que de acuerdo con el Banco Internacional de Pagos (En Inglés: the International Settlement Bank), su valor nocional a junio de 2014 alcanzó la cifra de 41,184 billones de dólares, lo cual representa aproximadamente el 56.1% del total de derivados estandarizados negociados a nivel mundial.

Con respecto al caso Colombiano, a pesar de que el mercado de derivados muestra algunos avances, el limitado desarrollo no solamente se evidencia en el mercado de mostrador o Over The Counter -OTC sino también en el mercado estandarizado de las bolsas de valores. Esta situación se hace evidente al examinar la poca variedad de instrumentos financieros negociables y el número y monto de las transacciones realizadas. Por ejemplo, a pesar de que la negociación de derivados comenzó en el país hace ya varios años, en la Bolsa de Valores de Colombia - BVC únicamente se negocian contratos de futuros y no existen transacciones de opciones sobre ningún tipo de activo subyacente, el cual es otro instrumento importante y característico de los mercados de derivados estandarizados. Con respecto a los volúmenes de negociación en el mercado Colombiano de derivados estandarizados, se estima preliminarmente que para el año 2014 esta cifra alcance los 50 billones de dólares, que aunque importante, muestra la poca profundidad y limitado desarrollo del mercado de derivados en este país.

Este documento presenta los resultados preliminares de una investigación que busca identificar los obstáculos que han impedido el crecimiento, diversificación, sofisticación y desarrollo del mercado de

derivados estandarizados en Colombia y las perspectivas de su crecimiento futuro, como parte del esfuerzo para consolidar un mercado de capitales amplio y eficiente que promueva el desarrollo económico del país.

MARCO TEÓRICO

Un derivado financiero es un instrumento cuyo valor depende (o se deriva) del valor de otro activo conocido como activo subyacente. Los activos subyacentes pueden ser de muy diversa índole, por ejemplo acciones, índices bursátiles, commodities (café, trigo, petróleo, etc.), divisas, bonos, etc. El mercado de derivados se divide en dos tipos: el primero es aquel en el que se negocian derivados por acuerdos entre dos partes, conocido como mercado over-the-counter -OTC, o mercado de mostrador. En el mercado OTC se negocian contratos forward, opciones y swaps principalmente. El segundo tipo de mercado es el de derivados estandarizados que se negocian en las bolsas de valores. Ejemplos de contratos estandarizados son los contratos de futuros y las opciones fundamentalmente. Existen otros tipos de derivados financieros, pero en esencia son el resultado de combinaciones, modificaciones y/o variaciones de estos 4 tipos básicos de contratos. Los contratos de derivados son de muy diversa índole y variedad, con un muy alto potencial de utilización por la posibilidad que ofrecen de mitigar diferentes clases de riesgos. A pesar de estas ventajas, el desarrollo del mercado de derivados en Colombia, especialmente de instrumentos estandarizados, ha sido muy limitado. Solamente los contratos de futuros sobre algunos activos son negociados en bolsa y aún no se conoce en Colombia la negociación de contratos de opciones estandarizadas.

Algunos analistas y estudiosos del tema han resaltado que en muchas ocasiones el crecimiento del mercado de derivados en otros latitudes ha sido el resultado de la iniciativa privada como respuesta a acontecimientos que impactan el mercado. Por ejemplo, con el colapso del acuerdo de Bretton Woods en 1973, la volatilidad de las tasas de cambio entre diferentes monedas se incrementó notablemente, lo cual impulsó en gran medida el desarrollo del mercado de derivados sobre divisas en las últimas 4 décadas. Por el contrario, en el limitado desarrollo del mercado de derivados en Colombia, aunque también ha participado en forma destacable la iniciativa privada, el apoyo, participación, direccionamiento y en algunos casos restricción por parte del gobierno nacional, es indiscutible. De acuerdo con un artículo aparecido en la edición 928 del 2 de diciembre de 2013 de la publicación *Semana Económica* de la Asociación Bancaria de Colombia titulado *Evolución y Retos del Mercado de Derivados en Colombia*, se afirma lo siguiente: "...A pesar de los esfuerzos en pro de potenciar su crecimiento, es evidente que no se han logrado las metas deseadas de desarrollo, gran parte de la infraestructura continúa estando subutilizada, hay concentración en pocos participantes y el mercado tiene poca profundidad."

Otro aspecto importante que determina en gran medida el desarrollo de los mercados es el de la regulación. Un conjunto de disposiciones constituyen las bases jurídicas sobre las cuales se sustentan las operaciones del mercado de derivados en Colombia. En primer lugar, con la expedición de la ley 964 de 2005 o ley del mercado de valores y el decreto 2893 de 2007, se definió el papel de las Cámaras de Riesgo Central de Contraparte – CRCC, lo cual allanó el camino para la constitución de estas entidades cuyo papel es vital para el crecimiento de los mercados de derivados estandarizados al disminuir el riesgo de incumplimiento de las obligaciones originadas en las transacciones. Adicionalmente, con el decreto 1796 de 2008 se reglamentaron las operaciones con instrumentos financieros derivados y productos estructurados, tanto en el mercado mostrador como en sistemas de negociación de valores. Es también importante mencionar la restricción impuesta por el Banco de la República de Colombia a la utilización de ciertos derivativos como son los swaps de crédito, lo cual por supuesto disminuye la oferta de productos transables y el mismo desarrollo del mercado.

La anterior discusión muestra algunos factores que han influido en la evolución, crecimiento y caracterización del mercado de derivados en Colombia. Ciertos factores han impulsado el desarrollo del mercado y otros por el contrario han limitado su crecimiento. Como ya se ha mencionado, esta investigación

busca identificar aquellos factores que se han convertido en barreras para el desarrollo del mercado de derivados estandarizados en Colombia y examinar las posibilidades de crecimiento del mismo.

METODOLOGÍA

Como se ha mencionado anteriormente, esta ponencia presenta resultados preliminares de una investigación de tipo inductivo que busca identificar los obstáculos que han impedido el crecimiento y desarrollo del mercado de derivados estandarizados Colombiano y las perspectivas de su crecimiento futuro. Los resultados preliminares aquí presentados fueron obtenidos en dos etapas. En la primera etapa se recolectó información estadística de las negociaciones de derivados estandarizados en la Bolsa de Valores de Colombia, única bolsa donde se negocian derivados en el país y estas cifras se compararon con las estadísticas de la Bolsa de Derivados de México –MexDer y la Bolsa de Valores, Mercaderías y Futuros de Sao Paulo - BM&FBOVESPA. En la segunda etapa, se realizó una encuesta a las Sociedades Comisionistas de Bolsa que operan en Colombia, en su calidad de organismos encargados de realizar ante las bolsas de valores las operaciones de derivados requeridas por sus clientes, donde se preguntó sobre los principales obstáculos que enfrenta el mercado de derivados estandarizados del país.

RESULTADOS

Los resultados preliminares que aquí se presentan son de dos tipos. En primer lugar, están los resultados correspondientes al análisis de las cifras de crecimiento y evolución del mercado de derivados estandarizado Colombiano y su comparación con otros mercados Latinoamericanos. En segundo lugar, se presentan los resultados de una encuesta realizada a las Sociedades Comisionistas de Bolsa –SCB, mediante la cual se buscó identificar los principales obstáculos que enfrenta el mercado de derivados estandarizados del país.

Crecimiento del Mercado de Derivados Estandarizado Colombiano

La Figura 1 presenta el valor nocional y número de contratos de la negociación de contratos de derivados estandarizados en la Bolsa de Valores de Colombia desde septiembre de 2008, momento en el cual comenzó a funcionar este tipo de mercado en el país. Toda la negociación corresponde a contratos de futuros, puesto que en la BVC no se negocian aún opciones. La negociación comprende futuros sobre acciones, futuros sobre tasas de interés incluyendo bonos, tasa interbancaria e inflación y futuros sobre el dólar americano. Como puede observarse, el crecimiento del mercado de derivados fue muy importante en los primeros años de operación. Sin embargo, en el año 2012 se presentó una caída en el valor nocional del 23.7%, producto en parte a la desaceleración del crecimiento económico del país (el crecimiento del PIB de Colombia pasó del 6.6% en el 2011 al 4% en el 2012). En el 2013 nuevamente se toma la senda del crecimiento y para el año 2014 se espera un volumen de negociación cercano a los 100 billones de pesos colombianos -COP (aproximadamente 50,000 millones de USD). En cuanto al número de contratos, los resultados muestran un comportamiento similar al aumento del valor nocional.

Comparación del Mercado Colombiano Con Otros Mercados Latinoamericanos

La Figura 2 presenta el comparativo entre los mercados de derivados estandarizados de Colombia, México y Brasil. Estos últimos dos países son considerados los países en Latinoamérica con mayor desarrollo del mercado de derivados, por lo cual su referente es fundamental para analizar el desarrollo del mercado de derivados Colombiano. Las cifras de los valores nominales y del número de contratos muestran las grandes diferencias de magnitud entre los mercados de estas naciones. Mientras en Colombia el valor nocional a 2013 fue de 44,621 millones de USD, en México esta cifra alcanzó los 262,343 millones de USD, casi 6 veces el tamaño del mercado Colombiano. A su vez, el mercado Mexicano parece muy pequeño comparado con el mercado de Brasil, cuyo valor nocional a 2013 fue de 30,796.2 billones de USD, es decir 117 veces

más grande que el mercado Mexicano. Una conclusión similar sobre las diferencias de magnitud puede obtenerse con base en el número de contratos negociados en cada mercado.

Figura 1: Comportamiento de la Negociación de Derivados Estandarizados En la Bolsa de Valores de Colombia Desde Inicio de Operaciones de Este Mercado En Septiembre del 2008

Año	Número de Contratos	Valor Nocial (Millones De COP)	Crecimiento Anual Del Valor Nocial (%)
2008	621	146,569	N.A.
2009	14,896	3,511,280	2295.7
2010	287,492	25,156,676	616.5
2011	795,298	84,436,560	235.6
2012	630,590	64,384,105	-23.7
2013	685,137	83,930,961	30.4
2014 (*)	345,937	44,138,279	N.A.

Esta figura muestra el valor notional y número de contratos de la negociación de derivados estandarizados en la Bolsa de Valores de Colombia - BVC desde inicio de operaciones de este mercado en Septiembre del 2008. Notas: (*) El 2014 solo incluye el primer semestre. N.A. = No aplica. Fuente: BVC.

La Figura 3 presenta el valor notional del mercado de derivados estandarizado como porcentaje del PIB de cada país. En este caso, las cifras muestran que el valor notional del mercado de derivados estandarizado Colombiano representa para el año 2013 cerca del 12% del valor del PIB. Mientras que en México, esta relación ha estado disminuyendo en los últimos años para ubicarse en el 2013 en el 21% aproximadamente. Por su parte, el mercado Brasileiro de derivados estandarizado ha registrado en los últimos 5 años valores notionales que oscilan entre 20 y 13 veces su PIB, lo cual indica la gran profundidad y desarrollo del mercado de derivados financieros de este gigante Suramericano. En resumen, aunque el mercado de derivados estandarizado Colombiano ha crecido en forma importante desde su lanzamiento en el año 2008, su profundidad y desarrollo todavía es precario si se compara con las cifras del mercado Mexicano (aproximadamente unas 6 veces más grande, medido por sus valores notionales) y más aún con el mercado de derivados Brasileiro, el cual a su vez es más de 100 veces superior al mercado Mexicano. Lo anterior, con base en las últimas cifras disponibles del año 2013.

Figura 2: Comportamiento del Mercado de Derivados Estandarizados En Colombia, México y Brasil Desde el 2009 Hasta El 2013

Año	Colombia (1)		México (2)		Brasil (3)	
	Número de contratos	Valor notional (Millones de USD)	Número de contratos	Valor notional (Millones de USD)	Número de contratos	Valor notional (Millones de USD)

RESULTADOS DE LA ENCUESTA

La encuesta estuvo dirigida a la totalidad de las Sociedades Comisionistas de Bolsa –SCB adscritas a la Bolsa de Valores de Colombia. De un total de 23 SCB activas y efectivamente contactadas, 16 Sociedades respondieron finalmente la encuesta. Con base en un listado de posibles obstáculos que enfrenta el mercado de derivados estandarizado Colombiano, algunos propuestos por los autores de la presente investigación y otros obtenidos a partir de documentos, artículos, trabajos de investigación previos y otras fuentes consultadas, se les pidió a las SCB encuestadas que clasificaran la importancia de cada obstáculo (se utilizó la siguiente escala de categorías: 5 muy importante, 4 importante, 3 alguna importancia, 2 poco importante y 1 nada importante). De acuerdo con estas firmas, los (5) cinco principales obstáculos que han impedido el crecimiento, diversificación, sofisticación y desarrollo del mercado de derivados estandarizados en Colombia son los siguientes, ordenados de menor a mayor consenso: Actualmente existen deficiencias en el marco regulatorio de las opciones y los swaps relacionado con la administración del riesgo y la valoración. El 56% de las firmas encuestadas clasificaron este obstáculo en las tres primeras categorías desde muy importante, importante o de alguna importancia. El marco regulatorio es esencial puesto que

genera las condiciones para que el mercado de derivados se pueda desarrollar. Con respecto a este obstáculo, el gobierno nacional a través de las autoridades regulatorias del sector financiero debe realizar un gran esfuerzo para mantener actualizado el conjunto de normas que regulan la operación y funcionamiento del mercado, especialmente en lo relacionado con estos dos instrumentos. Sin las condiciones necesarias creadas será muy difícil que las opciones estandarizadas se puedan comenzar a negociar en las bolsas de valores del país. La regulación contable en materia de derivados actualmente es relativamente compleja y no ha adoptado principios internacionales. También el 56% de las firmas encuestadas clasificaron este obstáculo en las tres primeras categorías de mayor importancia, de estas firmas el 50% ubicó el obstáculo en las dos primeras. Con la adopción de las normas internacionales de información financiera -NIIF que en Colombia se están comenzando a implementar, este obstáculo su podrá superar en el mediano plazo, lo cual redundará en un mercado más transparente, en especial para lograr una mayor participación de inversionistas extranjeros. Los agentes no tienen el incentivo para actuar como oferentes, sino como demandantes. El 75% de las firmas clasificaron este obstáculo como muy importante, importante o de alguna importancia. Para atacar este obstáculo, se podría implementar, entre otras medidas, un programa robusto de creadores de mercado que ayude a mejorar los índices de liquidez y profundidad del mercado de derivados estandarizado en el país.

No existe una demanda adecuada debido a que el mercado OTC suple las necesidades de los participantes. El 94% de las firmas clasificaron este obstáculo como muy importante, importante o de alguna importancia. Este obstáculo es especialmente cierto para los futuros sobre el dólar americano (TRM o tasa representativa del mercado en Colombia), los cuales se ven desplazados por el forward sobre la divisa, en el cual participan activamente los bancos comerciales del país. El hecho de que no se necesite una cuenta de margen en el forward, como si se requiere en el futuro, sino únicamente utilizar el cupo de crédito que tiene el cliente con el banco comercial, favorece indudablemente la operación OTC o de mostrador por encima de la transacción estandarizada. Adicionalmente, la regulación Colombiana permite que la operación forward pueda ser compensada y liquidada en la Cámara de Riesgo Central de Contraparte, tal y como se requiere para los futuros financieros. Existe un desconocimiento de los participantes de este mercado sobre la forma de operación de estos instrumentos debido a su relativa complejidad. El 100% de las firmas encuestadas clasificaron este obstáculo como muy importante, importante o de alguna importancia. Sin duda alguna, el poco conocimiento sobre la forma como operan estos instrumentos, las ventajas de su utilización y por supuesto, los riesgos involucrados en un manejo inadecuado de los mismos, se constituye en la principal barrera para su utilización. Sorprendentemente, la falta de educación sobre los derivados financieros no solamente involucra a los inversionistas y al sector empresarial sino que también impera en algunos sectores de la comunidad financiera del país.

CONCLUSIONES

Aunque el mercado de derivados estandarizado Colombiano ha crecido en forma importante desde su lanzamiento en el año 2008, su profundidad y desarrollo todavía es precario si se compara con las cifras del mercado Mexicano (aproximadamente unas 6 veces más grande, medido por sus valores nominales) y más aún con respecto al mercado de derivados Brasileño, el cual a su vez es más de 100 veces superior en tamaño que el mercado Mexicano. Con base en una encuesta realizada a las SCB adscritas a la Bolsa de Valores de Colombia, algunos de los más importantes obstáculos (algunos propuestos por los autores de la presente investigación y otros obtenidos de otras fuentes consultadas) que han impedido el crecimiento, diversificación, sofisticación y desarrollo del mercado de derivados estandarizados en Colombia son los siguientes: 1) Desconocimiento de sus participantes sobre la forma de operación de estos instrumentos debido a su relativa complejidad. 2) Falta de una demanda adecuada debido a que el mercado OTC suple las necesidades de los participantes. 3) Falta de incentivos a los agentes para actuar más como oferentes, que como demandantes. 4) Una regulación contable en materia de derivados relativamente compleja y que no ha adoptado principios internacionales y 5) Deficiencias en el marco regulatorio de las opciones y los swaps relacionadas con la administración del riesgo y la valoración.

UN META-ANÁLISIS DE LA COLABORACIÓN GLOBAL A TRAVÉS DE REDES SOCIALES EN EL ENTORNO UNIVERSIDAD Y EMPRESA: COMENTARIOS Y DIRECCIÓN FUTURA

Yvonne L. Huertas, Universidad de Puerto Rico

RESUMEN

El propósito de este trabajo es propiciar la creación de un plan estratégico que facilite la colaboración en dos redes compuestas por profesionales de la contabilidad (Red I) y por académicos principalmente dedicados a la enseñanza de contabilidad (Red II) y que se alcance un nivel de madurez en el uso de las redes sociales apropiado para reducir o eliminar la “pobreza de información”, término acuñado por Zayas Mujica (2010), para describir la brecha digital. Se hacen propuestas con el fin de facilitar la medición de la colaboración en red, la realización de proyectos de investigación y colaboración coordinados y, no menos importante, la creación de un legado investigativo que permita a las redes sentar las bases para la sucesión generacional que renovará el ciclo de vida de las redes. Se investiga el uso de redes sociales para facilitar una explosión de conocimiento, reconociendo que América Latina es la región con mayor “engagement” en el uso de las redes sociales. Se diagnostican las redes como de colaboración práctica e híbrida, siendo esta última, una mezcla de práctica y aprendizaje, según la clasificación establecida por Meirinhos y Osorio (2009). Se aplica el cuadro de mando integral de Kaplan y Norton como herramienta para establecer las metas y la identificación de métricas relevantes que se espera lleven al éxito a estas redes.

A META-ANALYSIS OF GLOBAL COLLABORATION SUPPORTED BY SOCIAL NETWORKING IN BUSINESS AND UNIVERSITY SCENARIOS: OBSERVATIONS AND EXPECTATIONS

ABSTRACT

The purpose of this paper is to pave the way for the formulation of a strategic plan that will facilitate collaboration among members of two distinct networks. Network I is composed mainly of professional accountants spread among 23 countries in Latin America, and Network II is composed principally of academics that teach Accounting courses in various Latin American countries. It is anticipated that the use of social media (social networks) will reach the maturity level needed to reduce or eliminate the digital divide. This paper offers proposals that enable the networks analyzed to measure, among other things, collaboration by members, the completion of coordinated research projects and collaborative initiatives. No less important, is the objective of this paper of promoting the creation of a database of research findings that will set the stage for a successful succession planning roadmap that will allow a next-generation to steer the networks unto “new unchartered waters” of collaboration. The theme of social media within the context of its use in the Latin American Region is explored to enable an explosion of information. It is a well-known fact that Latin America is one of the regions with a noteworthy engagement level in the use of

social networks. The networks analyzed are defined as a practice oriented collaborative effort (Network I) and hybrid, that is, learning and practice oriented collaborative effort (Network II) based on Meirinhos and Osorio (2009) classification of networks. This paper closes with an application of Kaplan and Norton's Balanced Scorecard as the preferred tool to establish objectives, and identify relevant metrics that will help both networks to achieve the goals defined in their mission statements.

KEYWORDS: Social Networks, Social Media, Balanced Scorecard, Measurement, Succession Management and Planning, Practice Oriented Collaborative Networks, Hybrid Collaborative Networks, Learning and Practice Oriented Collaborative Networks.

EFFECTO DE LA REGULACIÓN AMBIENTAL EN EL COMPORTAMIENTO AMBIENTAL Y LOS VALORES DE LOS DUEÑOS DE LOS NEGOCIOS DE ALFARERÍA

María del Carmen Avendaño Rito, Instituto Politécnico Nacional
Arcelia Toledo-López, Instituto Politécnico Nacional

RESUMEN

El objetivo de este estudio es analizar cómo la presión de la regulación ambiental interviene en la relación entre el comportamiento ambiental de los negocios de alfarería y los valores de los dueños. Para probar las hipótesis, se seleccionó el tamaño y lugar de la muestra bajo el criterio de muestra estratificada, se completaron 80 cuestionarios de los dueños/encargados de los pequeños negocios de alfarería en Oaxaca y Jalisco México. Mediante una correlación bivariada de Pearson se encontró una relación negativa entre los valores y la regulación ambiental, también se encontró con el análisis de regresión lineal que la regulación ambiental afecta negativa y significativamente el comportamiento ambiental de los dueños de negocios de alfarería. Con este estudio se concluye que la presión coercitiva del gobierno, afecta la relación entre el comportamiento ambiental en negocios de alfarería y los valores de los dueños de los negocios, ya que las inspecciones frecuentes de las autoridades para dar seguimiento a la implementación de normas ambientales y de salud influyen en los valores de seguridad para que los dueños se nieguen a participar de forma activa en los programas y sólo las cumplen de forma parcial sin conseguir modificar el comportamiento en pro del ambiente.

EFFECT OF THE ENVIRONMENTAL REGULATION, IN ENVIRONMENTAL BEHAVIOR AND VALUES, OF THE OWNERS BUSINESS POTTERIES

ABSTRACT

The goal of this study is to analyze how the pressure of environmental regulation is involved in the relationship between the environmental performance of the business of pottery and values of the owners. To test the hypothesis, the size and location of the sample under the criterion of stratified sample was selected, 80 questionnaires from owners / managers of small businesses pottery in Oaxaca and Jalisco Mexico were completed. Using a bivariate Pearson correlation was found a negative relationship between values and environmental regulation, also found with linear regression analysis that environmental regulation affects negatively and significantly the environmental performance of business owners pottery. This study concluded that coercive government pressure, affects the relationship between environmental performance businesses pottery and values of the owners of the business, as frequent inspections by the authorities to monitor the implementation of environmental standards influence health and security settings so that the owners refuse to actively participate in the programs and only partially met without getting change behavior towards the environment.

INTRODUCCIÓN

Los problemas ambientales en el mundo producidos por el cambio climático han llamado la atención especial de muchas organizaciones, ya que estos parecen estar relacionados con pautas del comportamiento humano y de la organización social (Berenguer Y Corraliza 2000), esta preocupación mundial puede verse reflejada en las acciones que muchos organismos sociales y ambientales implementan para evitar o resarcir los daños ocasionados al ecosistema. Mientras que las grandes compañías muestran interés en su comportamiento ambiental ya que su dimensión impacta ambientalmente a otros sectores, el relativo silencio del sector de la pequeña y mediana empresa (PyME) es preocupante dada su importancia en la mayoría de las economías (Brammer, Hoejmoose, Marchant, 2012). Según Tilley (1999), Aragón Correa, Hurtado, García y Sharman (2008) los dueños de las PyME's no reconocen su contribución al deterioro ambiental, porque perciben que por el tamaño del negocio no contaminan tanto como las grandes industrias.

Las PyME's de manera individual pueden no impactar tanto al ambiente, pero en conjunto contaminan más que las grandes empresas, lo que las ubica como uno de los sectores que más daño causa al ambiente por la falta de conciencia, reconocimiento y comportamiento ambiental, esta situación ha llevado a establecer normas ambientales en todos los sectores que mueven la economía de un país, incluyendo a las micro y pequeñas empresas de comunidades rurales como la de artesanías (Novelo 1996). El sector de las micro y pequeñas empresas en México representan el 95% de todas las empresas registradas, generan el 52% del producto interno bruto y contribuyen al 72% de los empleos formales (INEGI 2009, Secretaria de Economía, 2010). La mayoría de estas micro y pequeñas empresas desempeñan actividades en el sector de la manufactura, utilizan como materia prima los recursos naturales y no renovables, como el caso del sector alfarero, los cuales en su proceso de producción hacen uso de varios recursos naturales como el barro, energía, agua, leña, y materiales peligrosos para elaborar productos decorativos o utilitarios, la mayoría son vidriados o esmaltados con altos contenidos de plomo (Thieme, 2007).

Estos alfareros operan micro o pequeños negocios, según Lienholm (2002) la mayoría de los pequeños negocios se ubican en las zonas rurales donde hay pocas posibilidades de desarrollo industrial, son tradicionales pero contribuyen significativamente a la economía local. Sin embargo esta aplicación de normas ambientales para regular a este sector parece no funcionar exitosamente, pues los dueños de los negocios tienen una percepción y actitud negativa para la aceptación y cumplimiento de las normas de regulación ambiental (Thieme, 2007). Para legislar en pro del ambiente y modificar el comportamiento en los negocios de alfarería, organismos gubernamentales han establecido normas de salud y ambientales como la NOM-085-ECOL-1994 de emisión de contaminantes que regula la quema de materiales como leña y, las NOM-009-SSA1-1993, NOM-010-SSA1-1993, NOM-011-SSA1-1993 y NOM-231-SSA1-2002, que establecen los límites de plomo y cadmio solubles en artículos de alfarería vidriada, cerámica vidriada y porcelana (Secretaria de Salud, 2008).

Sin embargo, los artesanos se niegan a aceptar que el contenido de plomo en sus productos daña severamente la salud de quienes los utilizan, incluso daña su propia salud y la de quienes se encuentra alrededor de los talleres de alfarería (Vega-Franco, Alvear y Meza-Camacho, 1994, Chantiri, Azamar, Galván y Lozada 2003, Hernández, Domínguez y Caballero, 2005), por lo que continúan utilizando los mismos materiales, argumentando que sus abuelos y bisabuelos hicieron y usaron alfarería vidriada sin sufrir algún problema de salud por ello (Thieme, 2007). Meyer y Rowan (1977), Tolbert y Zucker (1983) coinciden al señalar que para lograr un cambio de comportamiento se tiene que lograr a través de modificaciones en los valores y creencias en los individuos. Para Dmaggio y Powell (1983) el comportamiento se puede modificar a través de presiones coercitivas, normativas y miméticas para lograr homogeneidad organizacional. El objetivo de esta investigación es analizar la relación entre los valores, la regulación ambiental y el comportamiento ambiental de dueños de negocios de alfarería en México. Específicamente: (a) analizar cómo la regulación ambiental influye en el comportamiento ambiental de los

dueños de los negocios de alfarería. (b) analizar cómo la regulación ambiental interviene en la relación entre los valores y comportamiento ambiental de los dueños de negocios de alfarería.

Construcción Teórica

En la década de los 60's y 70's comenzaban a predominar las teorías de liderazgo y motivación donde los factores ambientales sociales y económicos influían en el comportamiento de los empleados dentro del desempeño de la empresa esto aunado al cambio de sistema de valores de la sociedad y al aumento de la influencia de múltiples grupos de interés (Stakeholder) han contribuido en generar presión en las empresas para aumentar la competitividad (Chumpitaz, Andre, Swaen y Bigné, 2005) estas presiones y la creciente preocupación por los efectos de la contaminación en donde una de las principales fuentes emisoras son las empresas (Aragón Correa, Hurtado, García y Sharman, 2008) han generado que los organismos nacionales e internacionales, públicos o privados, regulen a las empresas a través de normas ambientales y de salud. Pero el problema no está en que las empresas cumplan o no las normas, sino que la regulación de estas normas modifiquen el comportamiento de los individuos y por ende de las organizaciones en pro del ambiente.

Según Freeman (2008) las organizaciones como tal, no tienen valores, puesto que los valores son conceptos psicológicos, intrínsecos a una persona, sin embargo, al estar conformadas por personas, se expresa los valores existentes, los cuales son compartidos de distinta manera entre los miembros de la organización y las personas que influyen en ella como clientes proveedores, instituciones llamados stakeholder internos y stakeholder externos. Brenner and Cochran (1991), sostienen que los stakeholder internos o externos describen como operan las organizaciones y como predecir su comportamiento, los actos y las acciones de las personas que de forma individual o en conjunto influyen de forma importante en el desempeño de la empresa, en las presiones normativas, en la calidad de sus proceso o en el fracaso de la misma, (Delmas y Toffel, 2004).

HI: Los valores de los dueños de los negocios de alfarería se relacionan de forma positiva con la regulación ambiental del negocio Dmaggio y Powell, (1983) demuestran cómo los comportamientos de organización son respuestas no solamente a las presiones del mercado, sino también a las presiones institucionales, puesto que las relaciones económicas necesitan de un marco regulatorio que les permita interactuar en el mercado, es ahí donde las instituciones entran en acción al establecer ciertos límites —ya sean formales e informales— que regulen las negociaciones económicas, en un mercado imperfecto.

Hart y Sharma (2004) sostienen que la administración de los stakeholder en las empresas se centran en reparar los daños y realizar acciones para el cuidado al medio ambiente cuando estos ya surgen, evitándose así ser señalados y obligados a regularse. El enfoque del stakeholder se basa en cualquier recurso o argumento moral para que los stakeholder puedan reducir costos y generar ventajas competitivas Delmas y Toffel (2005) señalan que en las organizaciones, la visión de la presión ejercida por sus clientes, proveedores y componentes de los competidores dentro de su entorno de mercado, es típicamente canalizada al departamento de marketing, pues se asume como una oportunidad aumentar la cuota de mercado y beneficios empresariales a través de la satisfacción de los stakeholder. No obstante, este cumplimiento de presión no modifica el comportamiento ambiental de las personas involucradas ni las de la empresa, pues la adopción de prácticas más allá del cumplimiento de normas ambientales que son demandadas por los clientes o por presión de los competidores tienen más probabilidades de ser culturalmente enmarcadas como indicadores de gestión superior y de riesgo mitigado (Berrone, Gelabert & Fosfuri, 2009). La mayoría de la empresas sólo buscan cumplir con las normas ambientales impuestas por los organismos reguladores, pero son pocos los que lo adoptan como parte de su cultura para definirlos como comportamiento propio, por ejemplo Anton, Deltas y Khanna (2002) señalan que el interés de las empresas para cumplir con las normas ambientales presionados por las instituciones ambientales es para evitar las sanciones.

Para Aragón Correa et al., (2008), las PYMEs cumplen con la regulación impuesta por las instituciones ambientales, pero también implementan estrategias de acción contra el deterioro ambiental, lo que las hace más proactivas. Dasgupta, Hettige y Wheeler (2000) por su parte señalan que regulación ambiental es una forma de presión para que las empresas implementen acciones que tome la empresa para lograr el cumplimiento de las normas impuestas por las autoridades ambientales, y en la medida en que estas sean adoptadas con frecuencia el comportamiento organizacional puede cambiar en pro del ambiente. Así se plantea la siguiente hipótesis:

H2: La regulación ambiental interviene significativamente en la relación entre valores y comportamiento ambiental.

MÉTODO

El estudio fue exploratorio, de tipo transversal, se utilizó una metodología cuantitativa de corte estadístico para medir el comportamiento ambiental de los negocios. La unidad de análisis fue los negocios de alfarería vidriada, el tamaño de la muestra se determinó de acuerdo al criterio de Fowler (2002) debido a la falta de un censo en negocios alfarería, seleccionando la muestra al azar. El instrumento de medición fue un cuestionario semiestructurado y para la recopilación de información se aplicó la técnica de entrevistas cara a cara preguntándole directamente a los dueños de los negocios sobre su percepción sobre las variables del estudio. La muestra quedó integrada por 80 negocios de alfarería en dos Estados de la República Mexicana, de los cuales 40 fueron en Oaxaca (Santa María Atzompa) y 40 en Jalisco (Tonalá y Tlaquepaque).

Tratamiento de Variables

Comportamiento ambiental: Se definió operacionalmente como la frecuencia en que los dueños de negocios de alfarería realizan acciones para reducir impactos en el medio ambiente. Para operacionalizar esta variable se utilizaron dimensiones de acciones de comportamiento ambiental desarrolladas y validadas en otras investigaciones (Fryxell & Lo 2003, Bouvier, 2009, Rao, Singh, O'Castillo, Intal& Sajid 2009, Mir & Feiltenson 2007, Sharfman, Shaft, Anex, 2009) medidas con escala Likert de 1 a 5 en indicadores como basura, agua, energía, combustibles y compras.

Valores: Para medir valores se utilizó la escala desarrollada por Schwartz (2001) en el cuestionario de retratos que fue adaptado al contexto de los dueños de negocios de alfarería. La variable valores se definió operacionalmente como las motivaciones que guían a los dueños de negocios de alfarería a la selección y toma de decisiones en distintas situaciones del negocio. Para medir esta variable, se utilizó el cuestionario de retratos de Schwartz (2001), con una escala tipo Likert de 5 puntos que va desde (1) nada hasta (5) mucho: donde 1 significa no me parezco en nada a esta persona, 2 me parezco muy poco a esta persona, 3 me parezco algo a esta persona, 4 me parezco a esta persona y 5 me parezco mucho a esta persona. Para esta escala se pidió al dueño del negocio proyectar sus valores a través del parecido con una tercera persona (Juan). Las dimensiones de esta variable fueron logro, poder, hedonismo, estimulación, autodirección, universalismo, benevolencia, tradición, conformidad y seguridad.

Regulación ambiental: Para medir la variable regulación ambiental se utilizó la escala desarrollada por Dasgupta, Hettige, Wheeler (2000), que incluye dimensiones como programas, inspecciones y multas. Regulación ambiental se define operacionalmente como la frecuencia en que en los negocios de alfarería se conocen y cumplen con las normas ambientales, inspecciones, multas y programas implementados por diferentes instituciones ambientales. Los indicadores de esta variable son inspección, multas, programas ambientales.

Confiabilidad y Validez de las Escalas

La validez de las escalas se determinó con el análisis de factores mediante la técnica de componentes principales con Rotación Varimax, Normalización de Kaiser. La confiabilidad se determinó mediante el alfa de Cronbach de cada una de las variables.

Comportamiento ambiental: El comportamiento ambiental se distribuyó en 7 factores: reducción de agua, consumo de agua, reúso de agua, reducción de combustible, compras verdes, consumo de energía, reciclaje de basura. La varianza total explicada de la variable fue 77.13% con un alfa de Cronbach de .827

Se integraron 4 dimensiones (agua, basura, energía y compras verdes) que se sumaron para determinar la variable comportamiento ambiental que se recodificó en 5 puntos, que va desde (1) nada hasta (5) muchísimo.

Valores: La variable valores quedó distribuida en 8 factores: conformidad, universalismo benevolencia, seguridad tradición 1 hedonismo tradición 2 y estimulación La varianza explicada de la variable fue 71.39% con un alfa de Cronbach de .54

Se integraron 7 dimensiones (benevolencia, universalismo, estimulación, hedonismo, seguridad, conformidad y tradición) que se sumaron para determinar la variable valores que se recodificó en 5 puntos, que va desde (1) nada hasta (5) muchísimo. Regulación ambiental La variable regulación ambiental se cargó con dos factores etiquetados como Inspección (factor 1) y programas (factor 2), la varianza total explicada de esta variable fue del 65.90%, 46.30% para programas y 19.60% para inspección. La confiabilidad de la escala se determinó a través del alfa de Cronbach teniendo un alfa de .797 (Tabla 3) lo que da un 79% de consistencia interna en el grado de comprensión en las preguntas realizadas en el cuestionario. La varianza total para esta variable es de 65.90% dividida en 2 factores, la varianza explicada para la variable de programas es de

RESULTADOS

Hipótesis 1: *Los valores de los dueños de los negocios de alfarería se relacionan de forma positiva con la regulación ambiental del negocio, esta hipótesis no se prueba, se encontró relación significativa pero negativa entre los valores y la regulación ambiental (-.403 $P < 0.01$)* Tabla 1

Tabla 1: Correlación Bivariada de Pearson Entre Valores Regulación Ambiental

	Inspección	Programas	Regulación ambiental
Benevolencia	-0.262*		
Estimulación		.275*	
Seguridad		-0.222*	
Conformidad		-0.590**	
Valores			-0.403**

*. La correlación es significativa al nivel 0,05 (bilateral). **. La correlación es significativa al nivel 0,01 (bilateral).

Estos resultados explican que los valores de los dueños de los negocios de alfarería se relacionan de forma negativa con la regulación ambiental y es debido a la resistencia por parte de los dueños a ser inspeccionados por dependencias ambientales. El valor de benevolencia se relacionó negativamente con inspección (-0.262 $P < 0.05$), los dueños de los negocios de alfarería a pesar de saber que algunos materiales que utilizan en el barniz de sus productos contaminan, no están de acuerdo en las inspecciones ya que alegan que solo son inventos de las mismas dependencias. El valor de estimulación se relacionó

positivamente con los programas ambientales (.275 $P < 0.05$), porque algunas dependencias les han ofrecido capacitación, platicas de información a los dueños y empleados de los negocios de alfarería. El valor de seguridad se relacionó negativamente con los programas (-.222 $P < 0.05$), esto se debe a los programas que existen para evitar el uso de greta que contiene plomo en los barnices de su producción, los dueños de los negocios de alfarería piensan que solo son exageraciones por parte de las dependencias y que no afecta la salud como ellas aseguran. El valor de conformidad se relacionó negativamente con los programas (-.590 $P < 0.01$), los dueños de los negocios de alfarería piensan que la implementación de programas ambientales es costoso e innecesario ya que sostienen que los materiales que utilizan no son dañinos para el ambiente y para la salud.

H2 La regulación ambiental interviene significativamente en la relación entre valores y comportamiento ambiental, esta hipótesis se prueba ya se encontró una asociación significativa controlando por la variable regulación ambiental ver Tabla 2

Tabla 2. Correlación parcial controlando por regulación

Variables de control		Comporta	Valores
Regulación	Comportamiento	1.000	.265
	Valores	.265	1.000

*. La correlación es significativa al nivel 0,05 (bilateral). **. La correlación es significativa al nivel 0,01 (bilateral).

Se encontró que con la intervención de regulación ambiental en la relación valores y comportamiento ambiental es significativa (.418 $P < 0.01$) se muestra en la Tabla 1, pero controlando la regulación ambiental la significancia de la relación entre valores y comportamiento baja significativamente (.265 $P < 0.05$). Esto se explica que interviniendo la regulación ambiental, los dueños de negocios de alfarería tienen un mayor comportamiento ambiental, debido a que para poder comercializar, por seguridad y su salud cumplen con algunas de las normas impuestas como la Norma NOM- 231- SSA1-2002, que establece las cantidades límites de plomo y cadmio liberadas, pero que no están del todo conformes, ya que siguen sosteniendo que solo son calumnias y que aceptan las inspecciones por parte de las dependencias ambientales por presiones de las mismas, pero que no están de acuerdo, y al cumplir con las normas ellos muestran un mejor comportamiento ambiental.

Para explicar los variables que determinan el comportamiento ambiental de los dueños de los negocios de alfarería se realizó el análisis de los datos mediante un modelo de regresión lineal por pasos sucesivos, donde la variable dependiente fue el comportamiento ambiental, y las independientes fueron valores y regulación ambiental. En la tabla 3 se muestra el modelo que el comportamiento ambiental de los dueños de los negocios de alfarería es influenciado por la regulación ambiental pero de forma negativa: a mayor comportamiento menor regulación. Esto se explica porque para los dueños de los negocios de alfarería a mayor presión por parte de las instituciones menos comportamiento ambiental, ya que la presión que ejercen las instituciones no forman parte de sus valores, ellos se ven obligados a cumplir con las normas ambientales, realizan acciones ambientales pero no definen su comportamiento ambiental al no tener la más mínima intención de cuidar el ambiente. Así el cumplimiento de las normas es de forma provisional, lo que demuestra que solo cumplen por espacios de tiempo mientras las instituciones los verifican y posteriormente vuelven a las prácticas antiguas y tradicionales

Tabla 3: Regresión Lineal Por Pasos Sucesivos

Modelo		Coeficientes ^a				
		Coeficientes no estandarizados		Coeficientes tipificados Beta	t	Sig.
B	Error típ.					
2	Comportamiento ambiental	3.804	.154		24.627	.000
	Regulación ambiental	-.222	.065	-.359	-3.402	.001

a. Variable dependiente: Comportamiento ambiental

En resumen el comportamiento ambiental se explica con su relación con regulación ambiental en un 35%, pero solo es explicado por la regulación ambiental en un 12%, con un error típico de estimación de 0.48, Ver tabla 4.

Tabla 4: Resumen del Modelo de Regresión

Resumen del modelo de regresión				
Modelo	R	R cuadrado	R cuadrado corregida	Error típ. de la estimación
1	.359 ^a	.129	.118	.48636

a. Variables predictoras: (Constante), Regulación ambiental

El modelo de regresión queda como:

$$Y = \beta - .222X_1$$

Donde

Y= comportamiento ambiental

$\beta = 3.804$

X₁= Regulación ambiental

CONCLUSIONES

De los diez valores propuestos por Schwartz (1994), en el contexto de los negocios de alfarería en México, los valores más significativos fueron la benevolencia, universalismo, hedonismo, estimulación, seguridad, conformidad y tradición, lo que demuestra el arraigo a sus costumbres, a su forma de vida y de actuar dentro de sus casas y repercute muchas veces en sus negocios, ya que a diferencia de los valores de autodirección, logro y poder, valores que son poco aceptados culturalmente en un contexto de negocios tradicionales como son los negocios de artesanía. La regulación ambiental no tiene una influencia positiva en los valores de los dueños de alfarería, esto es debido a que las dependencias ambientales visitan pocas veces a los negocios de alfarería. los dueños de los negocios manifiestan que les falta información y de conocimiento sobre los temas que afectan al ambiente por la falta de atención que reciben de las mismas, y que cuando los visitan solo es para inspeccionar su producción, y decir que contiene plomo, a lo cual ellos manifiestan su inconformidad asegurando que el plomo no afecta la salud, de igual forma los dueños de los negocios están conscientes que el uso de leña afecta al ambiente pero no pueden optar por otro combustible ya que el implemento de hornos de gas les generaría un gasto que no pueden cubrir, como todo contexto latinoamericano (zevallos, 2003), las regulaciones de las dependencias ambientales públicas, carecen del rigor para aplicar las sanciones correspondientes a una incumplimiento de las normas. Las conclusiones de este estudio sientan las bases para hacer recomendaciones a los hacedores de la política pública para orientar los programas ambientales en atención a los valores de los individuos como dueños de negocios tradicionales, que en su mayoría operan con recursos escasos, viven día a día con ingresos de subsistencia, pero sobre todo tienen creencias arraigadas para operar negocios y trabajar con recursos naturales.

Los procesos de producción tradicional de las artesanías se aprenden de la socialización y pasan de generación en generación y las creencias que los artesanos tienen sobre su proceso no se pueden modificar con políticas públicas no dirigidas ni atinadas, menos con presiones coercitivas, los dueños de estos negocios pueden cumplir con la norma para evitar sanciones pero no forman parte de su valor, comportamiento, menos llegarán a formar parte de su cultura.

RESUMEN

Hoy en día las empresas deben someterse a constantes cambios para poder competir con aquellas empresas fuertes, que abarcan los mercados no solamente los nacionales sino internacionales, y para subsistir, surge la necesidad de combinarse con otra para crecer, fortalecerse y ganar competitividad en el mercado. Es por esto que a través de este estudio por medio de las consultas de libros, revistas y leyes, se analiza el origen de la fusión, así como los efectos que conlleva esta operación, tanto los derechos como las obligaciones de las mismas, analizando el aspecto legal, fiscal, financiero y contable, para que las empresas que están optando por fusionarse, conozcan los beneficios, así como los efectos fiscales, ya que en ciertas ocasiones podría convertirse en una carga tributaria innecesaria para la sociedad fusionante. De esta manera, al optar por esta herramienta de la fusión, ayudará conocer el procedimiento de la fusión de sociedades, facilitará el proceso, y permitirá dar un nuevo enfoque a las empresas al mejorar la calidad, ofrecer mejor servicio y ser más competitivas. La investigación ha sido estructurada en cuatro apartados. El primero consta del aspecto legal, en donde se presentan los conceptos más importantes para conocer una fusión desde sus orígenes, así como sus causas y procedimientos paso a paso de acuerdo a la Ley General de Sociedades Mercantiles. En el segundo apartado se analiza el aspecto fiscal para conocer los impuestos implicados en el proceso, analizando el Código Fiscal de la Federación, la Ley del Impuesto sobre la Renta y la Ley Impuesto al Valor Agregado. En el tercer se analizan los resultados obtenidos, y las conclusiones y recomendaciones en el último apartado.

PALABRAS CLAVES: Fusión, Efectos Fiscales, Sociedades

INTRODUCCIÓN

Planteamiento del Problema

Con la llegada de la globalización, las empresas han adoptado nuevas formas de gestión administrativa en el mercado global, debido al alto nivel de competitividad que se desarrolla entre éstas, esto ha provocado la creación de grandes corporaciones en ciertos sectores industriales, haciendo que las pequeñas y medianas empresas que se ven en la necesidad de desaparecer, deban asociarse entre ellas para competir y ser más fuertes en el mercado local o bien sean vendidas a las empresas grandes, a través de las fusiones. La fusión de sociedades es una alternativa que brinda dinamismo a la vida de los negocios; se busca formar una empresa nueva o que una de las fusionantes crezca, implicando el traspaso de derechos y obligaciones, aprovechando así, las ventajas para obtener mayor crecimiento, diversificación y fortalecimiento en el mercado. Sin embargo, es importante tener en cuenta que también la fusión lleva consigo obligaciones y consecuencias en materia fiscal, ya que como tal es considerada enajenación, por este motivo la empresa fusionante tendrá que asumir las cargas fiscales referentes a este rubro. El análisis del proceso de la fusión de sociedades, ayuda a comprender el efecto fiscal y contable, lo cual permite identificar las ventajas y desventajas que tienen las empresas que optan por considerar la fusión como una alternativa para subsistir.

Antecedentes

Con el auge de la globalización las empresas han aprovechado oportunidades como podemos encontrar en cuanto a la producción y el comercio; al adquirir tamaño y destrezas que les permiten competir más eficazmente, logrando entrar en mercados internacionales, sin embargo hoy en día, la preocupación ya no es solo por llegar a nuevos mercados como era a lo mejor hace algunos años, sino por mantenerse ante las demás empresas que han venido a establecerse a nuestro país. En México, la fusión de sociedades fue adoptada por la ley general de sociedades mercantiles en el año de 1933, basándose en el código de comercio de 1882 y el código de 1889. De conformidad con lo que establece la Ley General de Sociedades Mercantiles cualquier sociedad puede fusionarse con otra siempre y cuando cumpla con los requisitos que establece la misma ley. Se debe tener en cuenta que adaptarse a los cambios tanto tecnológicos como de modelos gerenciales, como son de producción, distribución y mercado, no es solo una moda, sino una necesidad para poder llegar a ser competitivos, reforzar conocimientos, subsistir y lograr sus objetivos. Para llevar a cabo estos cambios podemos encontrar como una herramienta eficaz la fusión de sociedades.

Justificación: La fusión de sociedades puede ser una herramienta de planeación tanto fiscal como financiera, ya que tomando en cuenta que no se considera que hay efectos económicos, no se contempla esta figura como una enajenación, con lo cual se da la transferencia de activos sin causar impuestos. La necesidad de analizar el proceso de las fusiones, es para que las empresas que están optando por fusionarse, conozcan los beneficios, así como los efectos fiscales que conlleva este proceso, ya que en ciertas ocasiones podría convertirse en una carga tributaria, innecesaria para la sociedad fusionante. De esta manera, al optar por esta herramienta de la fusión, ayudará conocer el procedimiento de la fusión de sociedades, facilitará el proceso, y permitirá dar un nuevo enfoque a las empresas al mejorar la calidad, ofrecer mejor servicio, ser competitivas, pero principalmente para subsistir en el mercado.

Alcance: Para llevar a cabo esta investigación, el método será cualitativo de carácter descriptivo ya que se consultarán libros, revistas, y leyes hasta concluir en artículos relativos al tratamiento fiscal y financiero de la fusión.

Marco Teórico

El tema de las fusiones ha sido estudiado anteriormente por varios autores que han realizado trabajos de investigación y publicado libros; en este apartado se presentan algunas citas de estos estudios, mostrando sus aspectos generales como conceptos, lo fundamental para que surja el fenómeno de la fusión, como el señalamiento de los aspectos legales que necesariamente deben observarse para llevar a cabo una operación de esta naturaleza, así como también los aspectos fiscales que se encuentran previstos en la ley, ya que es indispensable, conocer las causas que producen efectos desde el punto de vista fiscal, en cuanto se trate de la fusión de sociedades.

Fusión

La Ley General de Sociedades Mercantiles (LGSM) no define el concepto de Fusión, es por ello que se acude a lo que gramaticalmente se entiende por fusión de acuerdo al diccionario de la Real Academia Española: "Como la acción de fundir o fundirse; unión de intereses, ideas o partidos, Integración de varias empresas en una sola entidad, que suele estar legalmente regulada para evitar excesivas concentraciones de poder sobre el mercado". Para poder analizar el proceso de la fusión, se parte de una base específica de 4 aspectos: fiscal, legal, contable y financiero, en donde repercute este proceso y son muy importantes ya que pueden llegar a brindar beneficios, por ejemplo un incremento considerable en el precio de las acciones de la empresa fusionante, ayudar a mejorar la utilidad por acción, mejor apertura para la empresa dentro del mercado. (Cisneros & Jiménez (2003)

Se puede mencionar que contablemente una fusión es un tipo de combinación de negocios, se define como: "Una combinación de negocios, es la operación de reunir empresas separadas en una sola entidad económica, como resultado de la unión de intereses o que una empresa obtenga el control sobre los activos netos u operaciones de otra empresa". (García, 2005, p.3) Por otro lado analizando el aspecto jurídico: "una fusión consiste en el acuerdo de dos o más sociedades jurídicamente independientes, por el que se comprometen a unir sus patrimonios y formar una nueva sociedad" (Karina García, Fusiones y absorciones, 2005, p.3).

"Para la Organización para la Cooperación y Desarrollo Económico (OCDE): La fusión consiste en la transmisión del patrimonio de una o varias sociedades a otra sociedad, por medio de la absorción por parte de una sociedad. La fusión es una operación por la cual las sociedades pueden aumentar su producción o penetrar en mercados nuevos. La fusión puede tener varios objetivos: la búsqueda de una mayor eficiencia económica o de un poder sobre el mercado, una diversificación, un redespiegue geográfico sobre todos los mercados, la obtención de sinergias financieras o para la investigación y desarrollo." (Becerril, 2003, p.7)

Tipos de Fusiones: La fusión de sociedades mercantiles se puede clasificar dependiendo de su impacto económico y su situación jurídica.

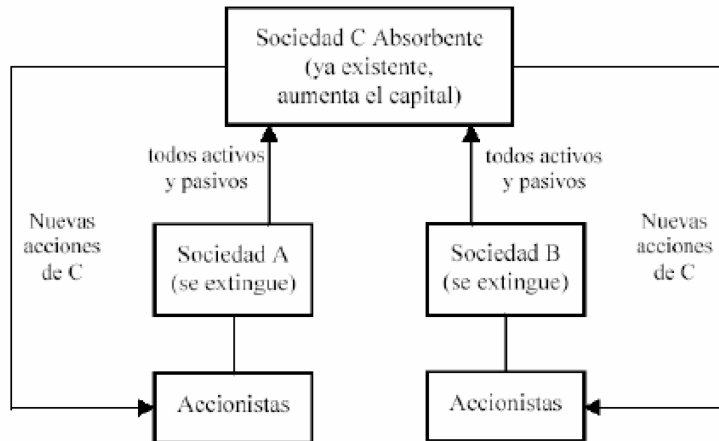

Clasificación por su impacto económico: Dentro de las Normas de Información Financiera (NIF), se señala que existen dos métodos para registrar los efectos contables de una fusión: La fusión vertical se da cuando la empresa adquirente decide comprar otra compañía con el fin de integrarse hacia delante o hacia atrás, es decir, cuando la empresa busca ser su propio cliente o su propio proveedor (Becerril Arredondo, Fusión de Sociedades: Análisis de la Fusión de AOL Time Warner, 2003, p.11). La fusión horizontal es aquella en la que la empresa que compra decide adquirir a otra compañía que se encuentra ubicada dentro de su sector y operan dentro de los mismos mercados geográficos. (Becerril, 2003, p.11)

Además de estos 2 tipos de fusión que se mencionan, Becerril (2003) en su tesis analiza un tercer método, que incluye la fusión por conglomerados, en la que se lleva a cabo, cuando una compañía compra otra empresa que pertenece a un sector completamente diferente al suyo y unas de las razones para llevar a cabo este método son: Para la extensión del producto: la fusión se da entre empresas que manejan sistemas de producción o distribución similares y los productos no compiten entre sí directamente. Para la extensión del mercado: la fusión se lleva a cabo entre empresas que fabrican productos similares, pero se da en distintos mercados. Sin relación: aquí en la fusión las empresas que no tienen relación alguna y la finalidad es entrar a nuevos mercados.

Clasificación por su situación jurídica: Fusión por incorporación o absorción: Este tipo de fusión se lleva a cabo mediante el intercambio de acciones libres de impuestos, a raíz de la cual una de las compañías sobrevive y la otra desaparece, reconociendo la empresa sobreviviente tanto el activo como el pasivo de la empresa, y entrega las nuevas acciones a los accionistas de las sociedades extinguidas (Becerril, 2003). Con la siguiente figura se puede observar cómo se da este tipo de fusión: Fusión por integración o acumulación: Cuando las dos empresas se funden dando origen a una nueva sociedad, desapareciendo ambas. Al igual que en el caso anterior, esta nueva empresa reconoce los activos y pasivos de las antiguas compañías (Becerril, 2003).

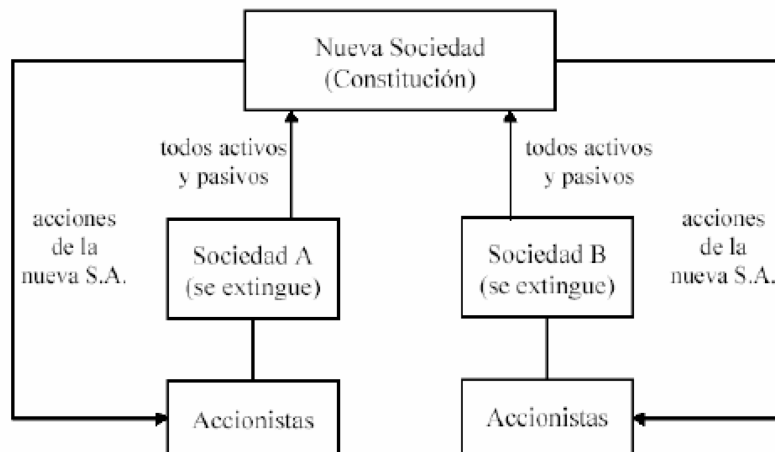

La elección entre una forma de fusión u otra, depende de muchos factores como carácter cotizado de alguna de las sociedades, estructura de las acciones, convenios colectivos, entre otros (Blanco Tiburcio, R. Estudio general financiero sobre la fusión entre las sociedades internacionales de servicios de Internet y entretenimiento América Online y Time Warner. 2005, p.10). Cabe señalar que la fusión por integración se da en la unión de dos fuertes empresas, en donde las 2 sociedades se extinguen y se crea una nueva sociedad y en el caso de la fusión por absorción una empresa es más fuerte que la otra, es decir, la absorbente, tiene un tamaño más importante que la absorbida.

Aspecto Fiscal

Código Fiscal de la Federación : Cuando se ha considerado llevar a cabo la fusión de distintas sociedades, es muy elemental tener en cuenta que de la fusión se derivan distintas obligaciones y efectos fiscales que, si se cumplen correctamente, se puede llegar a realizar una fusión con éxito. Existen ciertos requisitos que deben cumplirse para que una fusión de sociedades no sea considerada como una enajenación para efectos fiscales. Al no cumplirse los requisitos, la fusión deberá tratarse como una enajenación. Dentro del Código Fiscal de la Federación, en su artículo 14 fracción IX, señala lo que se entiende por enajenación mediante fusión o escisión de sociedades, a excepción en los supuestos a que se refiere el artículo 14-B: “Para los efectos de lo dispuesto en el artículo 14, fracción IX, de este Código, se considerará que no hay enajenación en los siguientes casos:

En el caso de fusión, siempre que se cumpla con los siguientes requisitos:
Se presente el aviso de fusión a que se refiere el Reglamento de este Código.”

Otro requisito del artículo 14-B del código para que no se considere enajenación es:

Que con posterioridad a la fusión, la sociedad fusionante continúe realizando las actividades que realizaban ésta y las sociedades fusionadas antes de la fusión, durante un período mínimo de un año inmediato posterior a la fecha en la que surta efectos la fusión

Ley del Impuesto Sobre la Renta

Una de las obligaciones en cuanto al impuesto sobre la renta es la de efectuar pagos provisionales mensuales a cuenta del impuesto del ejercicio en este caso mientras se cumplan con los requisitos señalados en el artículo 14-b del CFF, no grava la empresa porque no se realiza enajenación, sino se fusiona o se une, sin producir utilidad o pérdida. “Se puede decir que en esta ley se cumple con el principio de la cesión universal de derechos y obligaciones, tanto en fusión como en escisión, sin provocar efectos económicos ni fiscales, incluyendo disposiciones que respetan costos y antigüedades de la fusionada en la fusionante o de la escidente en la escindida, con excepción de la transmisión del derecho para disminuir, en la fusionante, las pérdidas de la fusionada, prohibición de la LISR avalada por antiguas jurisprudencias de la Suprema Corte de Justicia” (Eseverri Ahuja, Fisco Actualidades: Fusiones y escisiones, el mito del artículo 14-b del código fiscal, 2010). Existe una disposición en el Artículo 20 en donde señala que se consideran ingresos acumulables “...la ganancia realizada que derive de la fusión o escisión de sociedades y la proveniente de reducción de capital o de liquidación de sociedades mercantiles residentes en el extranjero, en las que el contribuyente sea socio o accionista.” Pero en el último párrafo de esa fracción menciona “...no se considerará ingreso acumulable la ganancia derivada de dichos actos, cuando se cumplan los requisitos establecidos en el artículo 14-B del Código Fiscal de la Federación”.

De acuerdo a Eseverri (2010), algunos bienes de una empresa, que son objeto de enajenación por fusión o escisión, podrían ser básicamente: las inversiones bancarias, las cuentas y documentos por cobrar, los inventarios, las inversiones en acciones, los activos fijos y los gastos diferidos. En este caso “el ingreso acumulable sería el ingreso total y en otros la ganancia en la enajenación, pero en ambos casos para que se cuantifique el ingreso se requiere de un precio o contraprestación, lo cual no ocurre en la fusión... Indudablemente que existen los valores de los bienes determinados para efectos de la operación y que se muestran en los estados financieros, e incluso se podría hablar de avalúos, pero entre las sociedades no existen pagos ni obligación alguna de efectuarlos, por lo que las fusionadas no reciben suma alguna, por lo que no pueden cuantificar ingreso ni ganancia por la enajenación de los bienes.”

De Acuerdo a (Pellón, 2010) menciona que aun cuando, derivado del proceso de agrupación de socios y de distribución accionaria, los accionistas se pudieran ver con algún tipo de beneficio por la fusión, no podrá gravarse dicho beneficio al efectuarse el canje accionario, ya que la ley no establece un método que lo regule. “De este modo, si las autoridades pretendieran considerar a los accionistas de la sociedad fusionante como contribuyentes por una ganancia derivada de la fusión, pagarán el impuesto sobre la renta (ISR) sobre dicha "utilidad" cuando enajenen las acciones de la sociedad fusionante, se reduzca capital o se liquide esta última. Otro punto es, si se considerara que la fusionante es la contribuyente del impuesto, no puede darse una ganancia gravable, pues lo que ocurre en la fusionante es precisamente un aumento de capital (expresamente el segundo párrafo del artículo 17 no lo considera como ingreso) o la integración del mismo, y no puede producirse una utilidad por la unión de patrimonios. Adicionalmente, no existe en la ley metodología alguna para cuantificar la utilidad o ganancia por fusión para la sociedad fusionante ni tampoco se precisa en qué casos se obtiene, por lo que sería cuestionable tal pretensión (Pellón Martínez Gabriela, Interpretaciones selectas en materia de fusiones y escisiones, p. 244, 2010.)”

Enajenación de Activos Fijos

Los activos fijos de las empresas pierden valor por el uso y paso del tiempo, esta pérdida se le conoce como depreciación. Para la enajenación de Activos Fijos se debe calcular el valor en libros, siendo el (MOI)

Monto Original de la Inversión menos la depreciación acumulada al día de la enajenación, dando como resultado el valor actual de lo que el bien debe costar de acuerdo al tiempo desde que se adquirió hasta el que es enajenado. Para ello el artículo 37 de la LISR, menciona: “Cuando los bienes se adquieran con motivo de fusión o escisión de sociedades, se considerara como fecha de adquisición la que le correspondió a la sociedad fusionada o a la escidente. Cuando el contribuyente enajene los bienes o cuando estos dejen de ser útiles para obtener los ingresos, deducirá, en el ejercicio en que esto ocurra, la parte aun no deducida. En el caso en que los bienes dejen de ser útiles para obtener los ingresos, el contribuyente deberá mantener sin deducción un peso en sus registros.

Los contribuyentes ajustarán la deducción determinada multiplicándola por el factor de actualización correspondiente al periodo comprendido desde el mes en el que se adquirió el bien y hasta el último mes de la primera mitad del periodo en el que el bien haya sido utilizado durante el ejercicio por el que se efectúe la deducción. Cuando sea impar el número de meses comprendidos en el periodo en el que el bien haya sido utilizado en el ejercicio, se considerara como último mes de la primera mitad de dicho periodo el mes inmediato anterior al que corresponda la mitad del periodo.” Además de lo anterior la Cuenta de Capital de Aportación (CUCA) y la Cuenta de Utilidad Fiscal Neta (CUFIN), se pueden transmitir de una sociedad a otra, reuniendo ciertos requisitos establecidos en la LISR.

Ley Del Impuesto Al Valor Agregado

“Tomado en cuenta las exenciones en materia del Impuesto al Valor Agregado (IVA), los bienes objeto de la enajenación, principalmente pueden ser: los inventarios, los activos fijos y los gastos diferidos. En este caso se tiene objeto del impuesto, debido a que hay enajenación en territorio nacional, también se tiene base porque existe disposición, en el artículo 34 de la Ley del Impuesto al Valor Agregado (LIVA), en el sentido de que se considera el valor de mercado o de avalúo cuando no exista contraprestación; no obstante, en el artículo 11 de la LIVA se dispone que se efectúa la enajenación de los bienes en el momento en el que efectivamente se cobren las contraprestaciones. Al efecto en el artículo 1-A de la LIVA, se consideran efectivamente cobradas las contraprestaciones cuando se reciben en efectivo o en bienes o cuando el interés del acreedor quede satisfecho.(Eseverri Ahuja, Fusiones y escisiones, el mito del artículo 14-b del código fiscal, 2010, p. 5 7 Samuel Pérez Salgado, Análisis de la figura de fusión como una herramienta de crecimiento y competitividad para las PYMES, 2008)” Como se puede observar en el caso de fusión no grava porque no se considera una enajenación de bienes, ya que se entiende es toda transmisión de propiedad, aun en la que el enajenante se reserva el dominio del bien enajenado, con excepción a los actos de fusión y escisión.

Como consecuencia de una fusión, las partes tendrán un derecho de transferir el IVA, es decir el derecho a acreditar el impuesto al valor agregado (IVA). El fundamento se encuentra en el Artículo 4 (LIVA) que menciona: “se entiende por impuesto acreditable el impuesto al valor agregado que haya sido trasladado al contribuyente y el propio impuesto que él hubiese pagado con motivo de la importación de bienes o servicios, en el mes de que se trate. El derecho al acreditamiento es personal para los contribuyentes del impuesto al valor agregado y no podrá ser transmitido por acto entre vivos, excepto tratándose de fusión.

METODOLOGÍA

La presente investigación se desarrolla por medio del método cualitativo y asimismo se considera descriptiva, por la razón de que se adentrará en el estudio del proceso de la fusión de sociedades, posteriormente se estudiarán las implicaciones fiscales, así como sus ventajas y desventajas por medio de herramientas a través de consultas de libros, revistas, tesis, y se partirá de la generalidad de las leyes en la materia, hasta concluir concretamente en los artículos relativos al tratamiento fiscal de la fusión. Se procederá a revisar bibliografía que trate del tema para así extraer información que sea útil para el estudio. Asimismo la información obtenida se seleccionará, para poder llegar a responder a los objetivos de la

investigación. Una vez seleccionada y analizada la información, se procederá a la formulación de conclusiones y recomendaciones, las cuales se pretende que sean útiles para el lector y especialmente las empresas que están tomando en cuenta llevar a cabo el proceso de la fusión.

CONCLUSIONES Y RECOMENDACIONES

La fusión de sociedades es la unión de 2 o más empresas (fusionadas) en una sola entidad económica (fusionante), dando como resultado el control sobre los activos u operaciones de las fusionadas. Se clasifican en 2 tipos; Fusión por incorporación o absorción y Fusión por integración o acumulación, en la primera es mediante el intercambio de acciones, en la que una de las sociedades sobrevive y la otra desaparece, en la de integración se da cuando 2 o más empresas se unen para dar origen a una nueva sociedad, desapareciendo las anteriores, así como también se cancelan las acciones. Con las fusiones se pueden encontrar grandes ventajas, ya que crean economías a escala y alcance, así como una mayor eficiencia, además de que no se requieren grandes desembolsos de efectivo, ni fuertes endeudamientos para su realización. Así mismo existen ciertas desventajas de esta operación como por ejemplo en lo laboral, si no existe una buena comunicación entre directivos y empleados de las empresas fusionadas, puede ocasionar conflictos por la pérdida de control, así como también cambios en la forma de trabajo.

No es posible determinar todos los factores que llevan al fracaso las fusiones, pero es muy importante para que una fusión resulte exitosa llevar a cabo todas las fases del proceso de la fusión, ya que van ligadas unas con otras, como son la Planificación Estratégica, Organización, Búsqueda, Análisis y Oferta, Integración, Transición y Negociación y Cierre, ya que con ellas se conocerá a fondo primeramente a la empresa con la que se quiere llegar a fusionar, así también como para establecer una estrategia para una eficaz transición e integración, es por ello que es necesario realizar una valoración de la operación a realizar por lo que es recomendable que sea por medio de un especialista en el área y además después de finalizada la operación no se debe descuidar la administración ni los empleados, ya que si se descuidan estos puntos importantes podrían surgir conflictos internos como la falta de comunicación, los métodos de trabajo, etc. y estos son también algunos casos que dan origen al fracaso de fusiones. El proceso de la Fusión está regulada por La Ley general de Sociedades Mercantiles, e inicia con el común acuerdo de cada sociedad, firmando un convenio de fusión, el siguiente paso será la inscripción de los acuerdos sobre la fusión en el Registro Público de Comercio, además de su publicación en el periódico oficial del domicilio de las sociedades.

Para que una fusión no se considere enajenación será necesario que se cumplan ciertos requisitos como lo señala el artículo 14-B del CFF, primero se presentará un aviso de fusión ante la autoridad fiscal mediante un escrito libre, que debe ser presentado por la sociedad que surja o subsista, y que sea dentro del mes siguiente a la fecha en que se llevó a cabo la fusión, otro requisito importante es que con posterioridad a la fusión, además deberán continuar realizando las actividades que realizaban las sociedades antes de la fusión, durante un periodo mínimo de 1 año inmediato posterior a la fecha en la que surta efectos la fusión y por último que la sociedad que subsista, o que surja por la fusión, presente las declaraciones de impuestos que correspondan por las sociedades fusionadas, corresponden por el término de fusión. En el proceso de la fusión, la participación de los accionistas, no afecta ni para la fusionante ni para la fusionada, ya que pasan con el mismo monto de sus aportaciones que tenían las sociedades antes de fusionarse, porque de igual manera aumenta el capital social. Una ventaja importante que se tiene con este beneficio del art 14-B del CFF, es que se evita el proceso legal que conlleva la liquidación de una empresa, los trámites, así como los costos muy elevados en los que incurren. Por medio de la fusión se da la adquisición de activos de una manera más fácil y rápida.

Otro punto muy importante por resaltar es que dentro de la fusión, no se podrá transferir las pérdidas fiscales pendientes de amortización de una sociedad a otra, ya que dichas pérdidas esta previsto en ley que únicamente es a favor de quien las genere, tal como lo menciona el artículo 61 LISR “El derecho a disminuir las pérdidas fiscales es personal del contribuyente que las sufra y no podrá ser transmitido a otra persona ni

como consecuencia de fusión.” Las sociedades que se fusionan se encuentran obligadas a dictaminar sus estados financieros conforme al artículo 32-A CFF, igualmente la sociedad que subsista o surja por la fusión se deberá dictaminar además por el ejercicio siguiente. Existen muchas razones para utilizar las fusiones, cuando las empresas se combinan, permite reducir los costos de la empresa, el del flujo de ingresos y aumenta los beneficios, y en las empresas transnacionales la diversificación geográfica, así como la transferencia de recursos. Al realizar la fusión, se combinan los esfuerzos para la elaboración de un producto, en algunas ocasiones a un mejor costo, y todo esto permite un mayor crecimiento de la empresa. Es por ello que al optar por esta herramienta, será necesario realizar el análisis de la fusión, con el cual determinará si podrá considerar la fusión de sociedades como una operación que traerá beneficios o no.

EL RÉGIMEN DE INCORPORACIÓN FISCAL COMO MEDIDA DE DESARROLLO ECONÓMICO EN MÉXICO

Martha Sheila Gómez González, Universidad de Guadalajara
Mónica Araceli Reyes Rodríguez, Universidad de Guadalajara

RESUMEN

A partir del ejercicio de 2014 con la nueva Ley del Impuesto Sobre la Renta se establece el nuevo régimen de Incorporación Fiscal, el cual sustituye al Régimen de Pequeños Contribuyentes y al Régimen Intermedio de las Actividades Empresariales. Este nuevo régimen es el punto de partida para que quienes se dedican a actividades económicas en el sector informal, buscando con ello la integración al Registro Federal de Contribuyentes y generando, de manera transversal, efectos económicos en los demás contribuyentes. En la presente investigación se realizará un análisis a este nuevo régimen y su comparación con los regímenes anteriores, así como los beneficios fiscales otorgados por el Gobierno Federal a fin de incentivar a la inscripción y los resultados que se han obtenido desde la creación del nuevo régimen a la fecha.

PALABRAS CLAVE: Incorporación Fiscal, Tributación, Reformas Fiscales

FISCAL REGIMEN INCORPORATION AS A MEASURE OF ECONOMIC DEVELOPMENT IN MEXICO

ABSTRACT

In the year fiscal 2014, with the new tax law is created the new regime Income Tax Incorporation, which replaces the Regime of Small Taxpayers and Intermediate Regime of business activities. This new system is the starting point for those engaged in economic activities in the informal sector, thereby seeking to integrate the Federal Tax and generating, in a cross-economic effects on other taxpayers. In this research an analysis of the new scheme and the comparison with previous schemes and tax benefits granted by the Federal Government to encourage enrollment and results that have been obtained since the creation of the new regime will take to date.

INTRODUCCIÓN

Según un estudio efectuado por el INEGI (2014) para el año 2012 la medición de la Economía Informal mostró que 25.0% del PIB es informal y se generó por 59.8% de la población ocupada en condiciones de informalidad. Asimismo, que 75.0% del PIB lo generó el Sector Formal con 40.2% de la población ocupada formal. Es decir que por cada 100 pesos generados de PIB del país, 75 pesos lo generaron el 40% de ocupados formales, mientras que 25 pesos los generan el 60% de ocupados en informalidad. Del citado 25.0% de la Economía Informal, en 2012, 10.8% corresponde al Sector Informal, es decir, a aquellos negocios no registrados de los hogares dedicados a la producción de bienes o servicios. De igual manera, el 14.2% corresponde a las otras modalidades de la Informalidad, que refieren a todo trabajo que aún y cuando labora para unidades económicas distintas a las de los micro negocios no registrados, no cuenta con el amparo del marco legal e institucional. La evasión fiscal por parte de este sector constituye una fuente potencial de ingresos para la economía nacional, la inadecuada fiscalización y el exceso de regulaciones y trámites burocráticos, han hecho de la economía informal una alternativa de subsistencia ante la falta de

fuentes de empleo. En aras de evitar que el comercio informal siga aumentando y que además, este mismo se convierta en comercio formal, el Gobierno Federal ha realizado entre otras actividades, modificaciones a las leyes fiscales. La principal modificación efectuada ha sido la creación del Régimen de Incorporación Fiscal en la nueva Ley del Impuesto sobre la Renta (LISR) publicada en el Diario Oficial de la Federación el día 11 de diciembre de 2013 para entrar en vigor a partir del 1° de enero de 2014, buscando con esta reforma aumentar el padrón de contribuyentes con un régimen que, como su nombre lo indica, incorporará nuevos contribuyentes otorgándole beneficios que estimulen su inscripción y permanencia.

REVISIÓN LITERARIA

Es en el Artículo 31 fracción IV de la Constitución Política de los Estados Unidos Mexicanos donde se establece la obligatoriedad para contribuir al pago de contribuciones, el cual a la letra dice: “Contribuir para los gastos públicos, así de la Federación, como del Distrito Federal o del Estado y Municipio en que residan, de la manera proporcional y equitativa que dispongan las leyes”. Es de este apartado donde se desprende el origen de las leyes fiscales, que hablando del Régimen de Incorporación Fiscal, su regulación corresponde a la ley del ISR. El Régimen de Incorporación Fiscal sustituye, por llamarlo de alguna forma, al Régimen de Pequeños Contribuyentes, regulado en el la Sección III del Capítulo II, Título IV de las Personas Físicas, de la ley del ISR abrogada el 31 de diciembre de 2013. El Régimen de Pequeños Contribuyentes surgió de la necesidad de ofrecer un mayor grado de simplicidad a aquellos contribuyentes con bajo nivel de ingresos y una reducida capacidad administrativa, más sin embargo, no contemplaba acciones a efecto de incorporar al comercio informal a la formalidad.

Era el Artículo 137 de la abrogada Ley, el que establecía que las personas físicas que realizaran actividades empresariales, que únicamente enajenaran bienes o prestaran servicios al público en general, y que sus ingresos en el ejercicio no hubieran excedido la cantidad de \$2'000,000.00 podían tributar en el Régimen de Pequeños Contribuyentes. La determinación de este impuesto conforme a Ley de realizaba de forma mensual restando a la totalidad de los ingresos obtenidos en el mes cuatro salarios mínimos del área geográfica del contribuyente elevados al periodo, y por la diferencia aplicar la tasa del 2%, el resultado así determinado sería el ISR a pagar del bimestre. Como obligaciones a cumplir por parte de estos contribuyentes se tenían las siguientes:

Solicitar su inscripción en el Registro Federal de Contribuyentes

Conservar comprobantes que reúnan requisitos fiscales, por las compras de bienes nuevos de activo fijo que usaran en su negocio cuando el precio fuera superior a \$2,000.00

Llevar un registro de sus ingresos diarios.

Entregar a sus clientes copias de las notas de venta y conservar originales de las mismas por las operaciones que realizaran.

Presentar declaraciones mensuales de pago del ISR.

Aun cuando este régimen se encontraba regulado por una ley federal, buscando que las Entidades Federativas tuvieran una mayor intervención dentro del esquema de recaudación, se les otorgó por medio de convenios de colaboración administrativa la facultad para que fueran éstos quienes se encargaran de administrar y recaudar las contribuciones de estos contribuyentes. A partir de estos convenios se establecen facilidades a los contribuyentes a fin de pagar el impuesto de acuerdo cuota determinada según los ingresos obtenidos por el pequeño contribuyente, pero además con una periodicidad bimestral y no mensual, como lo establecía la Ley. Más sin embargo, la OCDE (2011) señala que México debería reevaluar los costos y beneficios de sus numerosos regímenes tributarios especiales para las empresas. Los costos y beneficios de todos los regímenes tributarios especiales para las empresas deberían evaluarse con atención, y sólo mantener aquellos que comprueben su eficiencia... En particular, existen razones para reevaluar el régimen especial para los pequeños contribuyentes (REPECO), que actualmente administran los estados, y reconsiderar su diseño. A pesar de que la exención fiscal en el REPECO es muy generosa, de acuerdo con

un estudio reciente, estas empresas evaden 95% de sus obligaciones tributarias, lo que indica que los estados deben intensificar sus esfuerzos recaudatorios. Aunado a esto, el Centro de Estudios Estratégicos del Instituto Tecnológico de Monterrey, realizó en el año 2011 una investigación respecto a la evasión de los pequeños contribuyentes con el objetivo general del estudio de estimar el monto de la evasión fiscal nacional en este régimen; en términos porcentuales se aprecia que la tasa de evasión fiscal de los REPECOS es muy grande para todas las entidades federativas. Como ejemplo se tiene el año 2010, en el cual prácticamente todas las entidades federativas presentaron tasas de evasión arriba del 90%. Para este año las entidades con las más altas tasas de evasión fueron Estado de México (98.6%), Morelos (98.5%), Distrito Federal (97.6%), Nuevo León (97.4%) y Oaxaca (97.4%), mientras que las entidades con la menor tasa de evasión en 2010 fueron Baja California Sur (92.5%), Querétaro (92.3%), Colima (91.7%), Zacatecas (90.5%), San Luis Potosí (90.3%) y Baja California (80.6%). Recomienda la OCDE (2013) que México debe fortalecer la aplicación de impuestos para el régimen de pequeños comercios y considerar una recalificación después de algunos años o una cláusula de caducidad, recomendación que fue considerada en el 2013 al proponer la eliminación del Régimen de Pequeños Contribuyentes y la creación del Régimen de Incorporación Fiscal.

Establecido en los Criterios Generales de Política Económica 2014 (2013) la complejidad en el pago de impuestos resulta particularmente onerosa para las empresas más pequeñas, para las cuales el costo administrativo de las disposiciones fiscales es proporcionalmente más elevado... La Reforma Social y Hacendaria propone la creación de un Régimen de Incorporación, que sustituirá a los Regímenes Intermedios y de REPECOS, para que las empresas accedan a la formalidad. El Régimen propuesto está diseñado para que participen en él, las personas físicas con actividad empresarial con capacidad administrativa limitada... El Régimen de Incorporación preparará a los contribuyentes para una eventual inserción en el régimen general para fines tributarios y de seguridad social. Con ese fin, los contribuyentes que participen recibirán descuentos en el pago de sus impuestos y de sus contribuciones de seguridad social durante los primeros años, a cambio del cumplimiento de obligaciones de información fiscal. En la Iniciativa de Decreto por la que se expide la Ley del Impuesto sobre la Renta presentada por el Ejecutivo Federal a la Cámara de diputados para 2014 se señala:

“Uno de los objetivos prioritarios de las políticas de la presente Administración consiste en alcanzar un incremento generalizado de la productividad, en el que participen todos los sectores de la población. Ello obedece a que solamente por esa vía será posible incrementar sostenidamente la capacidad de crecimiento de largo plazo de la economía mexicana. A su vez, elevar el potencial de crecimiento económico representa una precondition indispensable para mejorar el bienestar de la población y reducir la pobreza de manera acelerada.

La facilidad en el cumplimiento del pago de impuestos representa un factor esencial para que los negocios que se van creando en una economía, particularmente los de menor escala, se incorporen de inmediato a la formalidad en la esfera tributaria. Considerando lo anterior, una de las principales medidas que contiene la presente Iniciativa de Reforma Hacendaria es la sustitución de diversos regímenes fiscales aplicables a las personas físicas con actividades empresariales por un solo régimen, el Régimen de Incorporación.

A través del Régimen de Incorporación se pretende que las personas físicas con actividades empresariales y que prestan servicios inicien el cumplimiento de sus obligaciones fiscales en un esquema que les permita cumplir fácilmente con sus obligaciones tributarias. La participación en el Régimen de Incorporación traerá aparejado el acceso a servicios de seguridad social. De esta forma, se creará un punto de entrada para los negocios a la formalidad, tanto en el ámbito fiscal como en el de la seguridad social.”

A partir de esta reforma y con estos argumentos se crea el Régimen de Incorporación Fiscal con las siguientes características:

Tabla 1: Elementos del ISR En el Régimen de Incorporación Fiscal

Sujeto	Personas físicas que realicen únicamente actividades empresariales, que enajenen bienes o presten servicios por los que no se requiera para su realización título profesional, siempre que los ingresos propios de su actividad empresarial obtenidos en el ejercicio inmediato anterior, no hubieran excedido de la cantidad de dos millones de pesos.
Objeto	Las actividades empresariales o la prestación de servicios
Base	Restando de la totalidad de los obtenidos las deducciones autorizadas, las erogaciones efectivamente realizadas en el mismo periodo para la adquisición de activos, gastos y cargos diferidos y la participación de los trabajadores en las utilidades de las empresas pagada en el ejercicio.
Tasa o Tarifa	Tarifa bimestral progresiva (Tabla 2)
Periodicidad de pago	Pago definitivo bimestral, a más tardar el día 17 de los meses de marzo, mayo, julio, septiembre, noviembre y enero del año siguiente

En esta tabla se muestran las principales características del Régimen de Incorporación Fiscal establecidas en la Ley del Impuesto sobre la Renta.
Fuente: Elaboración propia.

De acuerdo a lo que se establece en la Ley respectiva, no pueden tributar en el Régimen:

- Los socios, accionistas o integrantes de personas morales o cuando sean partes relacionadas
- Los contribuyentes que realicen actividades relacionadas con bienes raíces, capitales inmobiliarios, negocios inmobiliarios o actividades financieras
- Las personas físicas que obtengan ingresos por concepto de comisión, mediación, agencia, representación, correduría, consignación y distribución, salvo tratándose de aquellas personas que perciban ingresos por conceptos de mediación o comisión y estos no excedan del 30% de sus ingresos totales.
- Las personas físicas que obtengan ingresos por concepto de espectáculos públicos y franquiciatarios.
- Los contribuyentes que realicen actividades a través de fideicomisos o asociación en participación.

Tabla 2: Tarifa Para el Cálculo Del ISR En el Régimen de Incorporación Fiscal

Límite inferior	Límite Superior	Cuota fija	Porcentaje para aplicarse
\$	\$	\$	\$
.01	992.14	0.00	1.92%
992.15	8,410.82	19.04	6.40%
8,420.83	14,798.84	494.48	10.88%
14,798.85	17,203.00	1,188.42	16.00%
17,203.01	20,596.70	1,573.08	17.92%
20,596.71	41,540.58	2,181.22	21.36%
41,540.59	65,473.66	6,654.84	23.52%
65,473.67	125,000.00	12,283.90	30.00%
125,000.01	166,666.66	30,141.80	32.00%
166,666.67	500,000.00	43,475.14	34.00%
500,000.01	En adelante	156,808.46	35.00%

En esta tabla se muestra la Tarifa que deben aplicar los contribuyentes del Régimen de Incorporación Fiscal para determinar el ISR bimestral.
Fuente: Artículo 110 LISR 2014

Como se estableció en la exposición de motivos por parte del Ejecutivo Federal, este régimen considera una reducción del ISR determinado, con el objeto de estimular a las personas físicas a registrarse en el registro federal de contribuyentes en este régimen. Se establece que para el primer año la reducción será por el 100% del ISR determinado, y se disminuirá en un 10% cada año subsecuente, de forma que al llegar al año 10 la reducción será del 10% y a partir del año 11 el contribuyente ya no podrá tributar en el Régimen de Incorporación Fiscal, sino que deberá tributar conforme al régimen de personas físicas con actividades empresariales y profesionales. Es importante señalar que tratándose de este régimen, ya no son las Entidades Federativas las responsables de administrar a estos contribuyentes, sino que la autoridad es directamente el Servicio de Administración Tributaria (SAT), y con el fin de incentivar aún más a quienes se encuentran en la informalidad. El pasado 8 de septiembre, el Ejecutivo Federal puso en marcha el Programa “Crezcamos Juntos”, que incluye acciones para fomentar la integración a la formalidad fiscal, consistente en apoyos fiscales, de seguridad social y de capacitación laboral, basado en tres premisas fundamentales:

La primera, combatir la informalidad de manera integral, transversal, la segunda la innovación, para generar incentivos dirigidos a quien hoy decide estar en la informalidad, como el Régimen de Incorporación Fiscal y el Régimen de Incorporación a la Seguridad Social, y la tercera, la comunicación en todos los niveles, en todo el país, para que se conozcan los beneficios, se comprendan los mecanismos y reciban la asesoría para ser formales.

En términos generales, el Programa para los contribuyentes que se integren al Régimen de Incorporación Fiscal, según las declaraciones del Presidente contempla el acceso a los servicios médicos y sociales del IMSS para el dueño del negocio y para sus empleados; pensión para el retiro y créditos a la vivienda, apoyos económicos a los pequeños empresarios a través del Instituto Nacional del Emprendedor; créditos baratos para los negocios y sus empleados, gracias a las garantías que otorgará Nacional Financiera, y acceso a los programas de capacitación en el trabajo mediante la Secretaría del Trabajo y Previsión Social. El documento relativo a este programa se publicó en el Diario Oficial de la Federación el día 10 de septiembre de 2014. Se trata de un Decreto por el que se otorgan beneficios fiscales a quienes tributen en el Régimen de Incorporación Fiscal, el cual entrará en vigor el 1° de enero de 2015.

Dentro de los principales aspectos que se consideran cabe destacar los siguientes: la aplicación de porcentaje para determinar Impuesto al valor agregado y del Impuesto especial sobre producción y servicios para quienes realicen actividades gravadas por estos impuestos, así como una reducción generalizada de ambos impuestos para quienes realicen operaciones con el público en general en la misma proporción que la establecida en la Ley del Impuesto sobre la Renta. Así mismo, para quienes en el ejercicio fiscal sus ingresos no rebasen de cien mil pesos se aplicará una reducción del 100%, motivando con ello a los contribuyentes con poca capacidad económica a registrarse en el régimen, por último facilitar el cálculo de los impuestos, ya que bastará con que especifiquen dos datos: la actividad a la que se dedican y el monto de sus ingresos y con ello se determinarán los impuestos a cargo del contribuyente.

METODOLOGÍA

La investigación que se presenta es de corte cualitativo, es un estudio descriptivo de tipo documental. Los pasos aplicados fueron la revisión de publicaciones sobre el tema de estudio. Posteriormente se analizó la normatividad que regula el Régimen de Incorporación Fiscal. Con base en la revisión literaria se pudo identificar el marco referencial y jurídico. Se llevó a cabo un análisis de la Sección II del Capítulo II del Título IV de la Ley del Impuesto sobre la Renta 2014, así como un comparativo con la Sección III del Capítulo II de la Ley del ISR 2013. El análisis realizado permitió elaborar conclusiones que se presentan.

RESULTADOS

En el Primer Informe de Acciones y resultados de la mesa de combate a la ilegalidad del periodo de Enero-Julio 2014 presentado por la Secretaría de Hacienda y Crédito Público, se señala que al 31 de julio de este mismo año se incorporaron más de 700 mil contribuyentes al Régimen de Incorporación Fiscal, para llegar a un total de 4'239,904 contribuyentes activos del RIF, que incluye a 3'886,294 contribuyentes que fueron migrados del extinto Régimen de Pequeños Contribuyentes. A partir de estos datos se puede observar un incremento del 9.09% de contribuyentes registrados durante los primeros siete meses de 2014. A esta misma fecha, los contribuyentes de este régimen emitieron más de 3 millones de facturas electrónicas con la herramienta electrónica Factura Fácil, y en la aplicación de Mis Cuentas se registraron más de 3 millones de operaciones de Gastos y casi 2 millones de operaciones de Ingresos, algo que con el Régimen de Pequeños Contribuyentes no se cumplía, ya que no podían expedir comprobantes fiscales denominados facturas, y no contaban con una herramienta que facilitara la presentación de las declaraciones. En el mes de julio se liberó la aplicación para que este sector presentara su declaración del primer bimestre del 2014; se recibieron más de 2 millones de declaraciones de contribuyentes que en su mayoría nunca habían declarado. En términos monetarios, según el SAT, se espera recaudar en 2014 por parte de estos

contribuyentes, 14,000 millones de pesos por concepto de ISR y 1,200 millones por concepto de IVA, de los cuales, el ISR les será “devuelto” para utilizar en reinversiones o gastos, mientras que en 2013, con el Régimen de Pequeños Contribuyentes se recaudaron 3,490 millones de pesos, por lo cual se estima una recaudación 400% mayor en este año. Para el año 2015, y con base a las declaraciones presentadas a julio del presente, se espera recaudar más de 132 millones de pesos.

CONCLUSIONES

Para simplificar y promover la formalidad de las personas físicas se estableció el régimen de incorporación, fomentando principalmente a los contribuyentes informales a regularizar su situación fiscal. Se considera con esta modificación incrementar sostenidamente la capacidad de crecimiento de largo plazo de la economía mexicana. Con el Régimen de Incorporación Fiscal, se espera incorporar a contribuyentes que buscan cumplir con sus obligaciones, pero que la complejidad de las leyes tributarias les impedía regularizar su situación fiscal, aumentando con ello así la base de contribuyentes, haciendo más equitativo el sistema y generando una percepción de mejores condiciones para aquellos contribuyentes cumplidos. Con el beneficio de la reducción del ISR hasta por el 100% en el ejercicio y efectuado los pagos bimestrales a través de una herramienta proporcionada por la autoridad fiscal en el portal de Internet del SAT, se dará cumplimiento de forma fácil y oportuna. El problema que se presenta es que muchos de estos contribuyentes no saben leer ni escribir, ni disponen de los medios informáticos para poder hacerlo, lo cual se convierte en una limitante, aunado a los comerciantes que viven en zonas donde no se dispone de servicio de Internet.

Que la autoridad fiscal capte este tipo de contribuyentes generará, como ya se mencionó, una ampliación en la base de los contribuyentes, que si bien, no pagarán impuestos por la aplicación de las tasas de reducción del ISR si generará de forma transversal un incremento en la tributación por parte de los contribuyentes de otros regímenes, al ser proveedores de bienes o servicios de estos nuevos contribuyentes al existir la obligación, que no existía en el Régimen de Pequeños Contribuyentes, de aplicar deducciones a los ingresos obtenidos para determinar la base del impuesto, lo cual obligará a la expedición de facturas a los proveedores antes mencionados, y con la facilidad, de que a través de la herramienta de Mis Cuentas podrán los contribuyentes objeto de este estudio expedir facturas simplificadas pero que tienen la misma validez que las facturas de los contribuyentes de otros regímenes. Estas facturas también contemplan el IVA y el IEPS en su caso, los cuales serán trasladados y en su caso pagados a la autoridad tributaria, incrementado la recaudación de estos impuestos indirectos.

Limitaciones

Las limitantes de esta investigación son la falta de resultados medibles respecto al funcionamiento del Régimen de Incorporación Fiscal, ya que los datos publicados por la autoridad fiscal corresponden solo al primer semestre del 2014 siendo insuficientes. De igual manera, sería conveniente que una vez obtenidos los resultados de por lo menos dos ejercicios (2014-2015) se pueda hacer un análisis más certero del funcionamiento del régimen, lo cual será objeto de posibles futuras investigaciones.

RESUMEN

Los últimos trabajos investigativos en torno a las Pequeñas y Medianas Empresas (PYME) han permitido lograr un mayor conocimiento de sus características y relaciones con el entorno económico, no obstante, siguen necesitadas de fundamentos y acciones estratégicas para la toma de decisiones. Por ello el objetivo del trabajo es el análisis del comportamiento de la diferenciación de los modelos de negocios según los sectores económicos del Estado de Coahuila. La metodología contempla un estudio documental y validación empírica, mediante una encuesta de percepción de los directivos de 349 PYME del Estado de Coahuila. Los resultados muestran dentro del modelo de negocio las percepciones de los directivos acerca de las diferencias en los atributos de sus productos, servicios y negocios con la competencia por sectores económicos, se emplea el coeficiente de correlación de Spearman para determinar los contrastes de hipótesis entre los atributos.

THE VALUE PROPOSITION OF THE BUSINESS MODEL FOR SMES: A STUDY IN DIFFERENT ECONOMIC SECTORS OF COAHUILA

ABSTRACT

Recent research work around the Small and Medium Enterprises (SMEs) have led to a better understanding of their characteristics and relationships with the economic environment, however, are in need of fundamentals and strategic actions for decision making. Thus, the aim of this paper is to analyze the behavior of differentiating business models according to economic sectors where employers surveyed in the state of Coahuila by Business Lab at the Universidad Autonoma de Coahuila perform which is a virtual site that offers an online diagnostic available to any owner of an SME entrepreneur. The methodology includes a desk study and empirical validation, through a survey of 349 managers of MSMEs in the State of Coahuila. The results show in the business model of managers' perceptions about the differences in the attributes of their products, services and business competition for economic sectors, the Spearman correlation coefficient was used to determine the hypothesis contrasts between attributes, conclusions and the recommendations that are offered.

KEYWORDS: Business Model, Product Differentiation and Business, Value Proposition, Smes

INTRODUCCIÓN

Los últimos trabajos investigativos en torno a las Pequeñas y Medianas Empresas (PYME) han permitido lograr un mayor conocimiento de sus características y relaciones con el entorno económico. No obstante, las PYME siguen necesitadas de fundamentos y acciones estratégicas y operativas que, de forma continua, pongan de manifiesto las oportunidades y las posibles estrategias para la toma de decisiones. Como parte de los esfuerzos en el contexto mexicano para el estudio sistemático de las PYME, se creó el Laboratorio Empresarial en la FCA- UAdeC con el propósito de diagnosticar y proponer soluciones que les permita a las PYME facilitar la adquisición de conocimientos, habilidades y capacidades que contribuyan a su éxito y competitividad. Además constituye un sustento de la Red de Cooperación Innovativa bajo un Modelo de Triple Hélice y fuente de información para al aprendizaje en el área de administración para estudiantes de licenciatura y postgrado. De esta manera, la universidad se convierte en un pilar importante para brindar a la PYME herramientas que le permitan adecuar sus estrategias, estructura organizativa y su forma de gestión al entorno dinámico de la economía actual.

Entre las actividades del Laboratorio se encuentra, mediante un servicio científico técnico de la universidad, ofrecer un instrumento de auto diagnóstico empresarial, con enfoque de administración estratégica, del Modelo de Negocios de las PYME, on line o presencial; identificar las áreas de oportunidad que contribuyen a incrementar de forma sostenible la competitividad empresarial y fomentar una cultura innovadora y de cooperación sustentado en el Modelo de Triple Hélice de la interacción universidad – empresa – gobierno, en un contexto de compromiso social.

Entre sus resultados se halla la indagación empírica en la que participaron 212 PYME de diversos sectores económicos del Estado de Coahuila con el fin de determinar la percepción de los empresarios/gerentes sobre el Modelo de Negocio (MN), en el periodo 2010-2012 y el auto diagnóstico realizado de manera online del 2012 al 2013. En (Molina, Armenteros, & López, 2014) se analizan –entre otras- las respuestas acerca de cómo los directivos perciben que sus productos, servicios y negocio se diferencian de la competencia. Los resultados indican que los precios y la calidad son los atributos diferenciadores con mayor impacto en productos y servicios y en cambio la marca, postventa, innovación y diseño obtienen los valores más bajos. Así mismo en la diferenciación del negocio resaltan el equipamiento y formas de pago y con menor valor los sistemas de innovación, uso de las TIC y cadena de distribución, entre otros. Los autores continúan la investigación antes citada y presentan en este artículo los atributos que más diferencian los productos, servicios y negocios de las PYME, pero esta vez en función del sector de la economía al que pertenecen, procesan estadísticamente los resultados de 349 respuestas, al ampliar la participación de empresarios con respecto al 2013, validan las hipótesis de la investigación y muestran cómo abrir nuevos espacios para la investigación de Modelos de Negocios mediante su flexibilización para lograr que sus diseños no sean generales, sino particularizados según el sector de la economía.

REVISION DE LITERATURA

Prahalad & Ramaswamy (2004) afirman que los modelos de negocio del futuro están basados en la co-creación de valor y creación de redes de experiencias. La co-creación de valor, aporta una nueva dinámica a la relación productores/consumidores, involucrando a los consumidores en cualquier etapa de la cadena de valor. De ahí la importancia de la diferenciación de los productos/servicios como indicador de la propuesta de valor diferenciadora de los modelos de negocio, aspecto que será objeto de estudio en diversos sectores de las PYME. Es importante recalcar que Puhakainen y Malinen (2009) aseguran que los modelos de negocio estáticos pueden ser peligrosos. Los modelos de negocio existentes pueden y deben ser adaptados al contexto estratégico de la PYME como un proceso dinámico y continuo, en lugar de la creación de un artefacto, dicho proceso debe producir varias sub estructuras en lugar de un modelo estático. En su trabajo sobre la innovación de los modelos de negocio Chesbrough (2007) describe el valor de integrar un

modelo de negocio dinámico, argumentando la importancia de los modelos de negocio en la formación y crecimiento de las empresas y el papel crítico de las capacidades dinámicas en competitividad de las empresas actuales. Habitualmente el trabajo sobre modelos de negocio se basa en conceptualizaciones estáticas de sus elementos y de las interrelaciones entre estos y con el exterior. No se pueden olvidar aspectos dinámicos que resultan decisivos para el desarrollo y el éxito final de nuevos modelos (Matarranz, A. 2011). La innovación de un modelo dinámico, apropiado permitirá a las PYME como señala Teece, Pisano y Shuen (2011), la capacidad de integrar, construir y reconfigurar competencias internas y externas para hacer frente rápidamente a los cambios del entorno.

Si profundizamos más en este aspecto –tema central de este artículo- vemos que en la arquitectura de los modelos de calidad, de los modelos de competitividad y de los modelos de negocios están presente un conjunto de componentes y elementos a partir de los cuales se formulan preguntas con el fin de lograr que el empresario conozca qué tan bien o mal está manejando su negocio. Algunos modelos, más elaborados, pueden incluso darle al empresario una valoración acerca de cómo anda su negocio con respecto a sus competidores y qué debe mejorar para lograr ser más competitivo. Uno de estos modelos es el del Laboratorio Empresarial de la FCA Torreón (Molina, V, et al, 2014), en el cual se le pregunta a los directivos (on line) acerca del diseño de su modelo de negocio y se le dan –a partir de sus respuestas- estrategias de actuación para lograr un mejor desempeño.

Dos de las preguntas se formulan en los siguientes términos: ¿en qué se diferencian sus producto/servicio de la competencia? y ¿en qué se diferencia su negocio de la competencia? Para responder la primera pregunta se le presentan diez atributos o características como son Calidad; Exclusividad; Garantías; Innovación permanente; Marca; Plazo de entrega; Precios; Presentación (diseño industrial); Protección al medio ambiente y Servicio post-venta y para responder la segunda se le pregunta sobre Canales de Distribución; Equipamiento e instalaciones; Flexibilidad para responder a los cambios; Logística; Sistema de Investigación & Desarrollo; Rendimiento (eficiencia) de la Planta de Producción; Seguridad; Ubicación Geográfica; Uso de las TIC's en los procesos clave y Volumen de producción. Al observar las respuestas de los empresarios los autores denotan variaciones sensibles en función del sector económico al que pertenecen los encuestados por lo que se puede inferir que sea incorrecto dirigir preguntas similares a empresas de diferentes sectores y lo que es aún más incorrecto, dar iguales recomendaciones de actuación a empresas de diferentes sectores.

METODOLOGÍA

El diseño de la investigación comienza con un estudio documental dada la poca información que existe publicada acerca de las respuestas que directivos de las PYME han dado sobre las características de sus modelos de negocios; para elaborar el estudio se aplicó el método de investigación descriptiva para recolectar datos a partir de las respuestas brindadas por los gerentes de 349 PYME mediante entrevista estructurada en agosto-octubre del 2012, y por el cuestionario capturado on line por el Laboratorio Empresarial del 2012 al 2014. Finalmente el estudio es correlacional lográndose contrastar las hipótesis estadísticas de la investigación. Para la contrastación de hipótesis se emplea el Test Exacto de Fisher como procedimiento válido que permite conocer si hay diferencias en las respuesta de los empresarios cuando comparamos un mismo atributo diferenciador en dos sectores diferentes, ésta prueba permite analizar si dos variables dicotómicas están asociadas. Este test exige que al menos el 80% de las casillas tengan un valor esperado superior a 5, en este caso el 100% de las casillas cumple este requisito. El Test Exacto de Fisher no involucra la necesidad de calcular un Chi cuadrado para contrastarlo con un p de Tabla y por tanto la decisión de aceptar o rechazar la hipótesis nula (de no diferencias) se aplicará si el valor de Chi Cuadrado es mayor a 0,01 para un $\alpha = 1\%$; o mayor a 0,05 para un $\alpha = 5\%$. Posteriormente se aplica la Correlación de Spearman con la intención de investigar si existe o no alguna relación entre los atributos. La interpretación de coeficiente de Spearman es igual que la del coeficiente de correlación de Pearson, oscila

entre -1 y +1, indicándonos asociaciones negativas o positivas respectivamente; +0 (cero) significa no correlación pero no independencia.

RESULTADOS Y DISCUSIÓN

Diferenciación del Producto/Servicio

Como se aprecia, el atributo innovación permanente es el que acapara el mayor impacto, en este caso en el sector Servicios y el más destacado en el sector de Industria es el Plazo de Entrega. Del estudio descriptivo quizás erróneamente se pudiera inferir que el atributo precios es más destacado en la Industria que en el Servicio, o que el atributo Protección al Medio Ambiente o Servicio Post-Venta sea superior en Servicios que en Industria. He aquí un error que se pudiera generar si no se emplearán métodos de investigación estadísticos para determinar si realmente hay diferencias o no en los ejemplos relacionados. Como se recuerda, éste es uno de los objetivos de la presente investigación.

Diferenciación del negocio

Al igual que con el tema producto/servicio se han realizado análisis descriptivos para cada sector. En la Figura 2 se muestran las diferencias entre las respuestas de los empresarios acerca de en qué se diferencia su negocio de la competencia en estos dos sectores de la economía estudiados. Se destaca la percepción del sector Industria donde resaltan dentro de sus atributos diferenciadores los canales de distribución el volumen de producción, el rendimiento de la planta productiva y uso de las TICs. En los Servicios, la flexibilidad para asumir cambios, equipamiento e instalaciones, seguridad y ubicación geográfica aparentemente tienen los mayores impactos. Aquí también asalta la duda de si realmente hay diferencias en las percepciones de los empresarios de dos sectores diferentes ante un mismo atributo y es por ello que se debe recurrir a la contrastación de hipótesis.

Resultados del Contraste de Hipótesis Empleando Estadístico Exacto de Fisher

De los diez atributos que diferencian de sus competidores a los productos y servicios, sólo hay diferencias significativas con valor $p < 0,001$ en el atributo Plazos de Entrega y con una $p < 0,05$ en los atributos Garantía, Innovación y Calidad; con respecto a ésta última, analizamos que los servicios, a diferencia de los productos industriales, son generalmente inmateriales, por lo que el concepto de calidad ha tardado más en introducirse en las empresas de servicios que en las empresas industriales esta diferencia que le dan tanto los industriales como los de servicio al tema de Calidad fundamenta uno de los temas de esta investigación como es el tratar de manera diferente la calidad en el servicio y la calidad en la industria Concluyendo podemos afirmar que la hipótesis H01 se cumple para 6 de los 10 atributos. En el caso del contraste de Hipótesis para el Negocio, el único atributo que presenta un valor de significación con $p < 0,05$ es el referido al Volumen de Producción. El resto de los atributos no presenta diferencias significativas entre sectores lo que indica que aún se aplican estrategias similares a negocios diferentes y esta puede ser una de las causas de los reiterados fracasos y baja sobrevivencia de las PYME. Por ejemplo, todas las referencias estudiadas indican que los canales de distribución para la industria y para el servicio deben tratarse de manera diferente, dado que en la industria la distribución tiene un mayor impacto en el sistema de proveedores y en la mercadotecnia industrial, no así en el servicio donde el canal de distribución va más dirigido al usuario final que consumirá lo que genera nuestro negocio. Una interpretación equivalente se pudiera hacer en el tema de logística dado que la diferencia entre la Logística de servicios y la Logística de productos reside en gran medida en la naturaleza de los productos y servicios, (Chávez y Torres-Rabello 2014) puesto que una diferencia clave es que los productos son susceptibles de ser acumulados, mientras que los servicios no. Y continúan planteando estos autores que, en la Logística de productos los inventarios son clave, mientras que en la de Servicios lo es la capacidad: En la Logística de servicios la producción ocurre

simultáneamente a la entrega del servicio. Podemos afirmar que la hipótesis H02 se cumple para 9 de los 10 atributos

CONCLUSIONES

Los resultados obtenidos servirán como referencia para la elaboración de propuestas que contribuyan al diseño de Modelos de Negocios Flexibles adaptados a sectores específicos caracterizados por presentar elementos comunes (tamaño y antigüedad) con el fin de estimular el desarrollo de ventajas competitivas sistemáticas, para fomentar el crecimiento y el desarrollo económico, tecnológico y social en la región. Simplificar la incorporación de este tipo de MN es también uno de los objetivos futuros que se deberán cumplir. El equipo de investigadores del Laboratorio Empresarial, como perspectiva de la investigación, incorporará al modelo un enfoque dinámico, flexible e integral para obtener el resultado deseado una notoria mejora en la estructura y manejo de estos modelos.

Al priorizar dentro de la propuesta de valor las evidentes diferencias que se producen en los productos/servicios y negocios en dependencia del sector en que está ubicada la empresa se le da un mayor grado de confiabilidad a las respuestas de los empresarios lo que permitirá resolver los problemas del diseño de MN a través de estrategias específicas para cada sector; esto permitirá clarificar interna y externa la forma en que se pretende crear beneficios a los clientes, así como diferenciar las estrategias de comercialización y divulgación; esta diferenciación por sectores orientará de manera objetiva la toma de decisiones con enfoque al cliente. La contrastación de hipótesis vino a revelar que de los 20 atributos analizados, solo siete de ellos tienen diferencias en las percepciones de los empresarios, un análisis más profundo de este resultado se alejaría de los objetivos de este artículo pero forma parte de las investigaciones que el Laboratorio Empresarial lleva a cabo para ir progresivamente diseñando los Modelos de Negocios en función del sector donde se ubica la empresa.

No obstante, una breve reflexión nos llevaría a tener en consideración que estos siete atributos deben formularse de manera diferente en dependencia del sector en el que se ubique la empresa que accede a nuestra web para autodiagnosticar su modelo de negocios. Una situación concreta con el atributo canales de distribución (por ejemplo) sería preguntarle al empresario del sector industrial “como funciona su cadena de obtener aprovisionamiento, manufacturar, distribuir y si es necesario devoluciones del cliente o retornarlo al proveedor”, pero al empresario de una empresa de servicios no se le puede preguntar de igual forma porque el proceso manufacturar y distribuir ocurre simultáneamente”. Este simple detalle facilitará que ambos empresarios conozcan exactamente en su sector de que se trata el atributo canales de distribución....y así debería de ocurrir en estos primeros siete que han sido detectados como significativos. La contrastación de hipótesis a través de la correlación de Spearman revela un grupo importante de asociaciones entre diferentes atributos lo que abre una nueva línea de investigación –que se aleja del enfoque de este artículo-, no obstante, apuntamos que se destaca el impacto que presenta el atributo Plazo de Entrega en todos los sectores, al estar asociado con la exclusividad, la innovación, la marca y el medio ambiente, esto significa que cuando se analice este atributo en el autodiagnóstico del modelo de negocio hay que tener muy en cuenta los otros atributos con los que se relaciona en el momento de formular la pregunta del diagnóstico.

RESUMEN

Si en las últimas dos décadas del siglo pasado los aspectos de la relación universidad-empresa estuvieron más enfocados a la "concientización" del vínculo mutuo, en los momentos actuales se exige trabajar más en cuestiones de la aplicación concreta de esta vinculación y la evaluación de resultados. En este artículo se presentan diferentes enfoques y resultados prácticos alcanzados por los autores en donde se destacan las barreras que la universidad debe vencer para lograr una mejor vinculación así como los aspectos más importantes que vienen limitando desde la óptica de la empresa el lograr este vínculo. A partir de la percepción de 166 empresarios encuestados, se identifican y validan las variables más representativas mediante triangulación metodológica empleando Prueba de Kruskal Wallis y Análisis de Regresión, lo que permite entender un Modelo Conceptual a partir de esta selección de variables. Se valida un Sistema de Vinculación, demostrándose cómo éste coadyuva al desarrollo empresarial.

UNIVERSITY BUSINESS ENTAILMENT SYSTEM: VALIDATION OF ITS ECONOMIC AND SOCIAL IMPACT

ABSTRACT

If the last two decades of the last century aspects of university-industry relationship were more focused on the "awareness" of the mutual bond, at the present time are required to work more on issues of practical implementation of this linkage and evaluation results. In this article, different approaches and practical results achieved by the authors which highlights the barriers that the university must overcome to achieve better bonding and the most important aspects that come from the perspective of limiting the company achieve this link are presented. From the perception of 166 employers surveyed, the most representative variables were identified and validated by methodological triangulation using Kruskal Wallis and Regression Analysis, which allows to understand a conceptual model from this selection of variables. Bonding System is validated, demonstrating how it contributes to business development.

KEY WORDS: Bonding, University Business, Triple Helix, Barriers, Methodological Triangulation

INTRODUCCIÓN

El fundamento de la vinculación reside por una parte en las necesidades del sector productivo y por la otra en las posibilidades económicas de adquirir los conocimientos, de esta manera este sector se constituye en una estructura social demandante de tecnología y como destinatario de las innovaciones y conocimientos

generados por las universidades. Para el logro de lo anterior es necesario, por parte del sector productivo, una visión clara para internalizar la importancia de la variable tecnología en relación al ámbito de la productividad y competitividad, además de entender la relevancia de absorber el producto investigativo de las universidades. La vinculación puede convertirse en un instrumento eficaz de promoción de la universidad, al establecer una interacción de conocimiento mutuo con los sectores, con el fin de que la percepción de su imagen sea acorde con su realidad, (Alcántar, 2004).

La revisión analítica de la literatura hace énfasis en encontrar cómo se habían tratado estos aspectos más actuales de la vinculación, lo que unido a experiencias e investigaciones que los autores habían realizado en esta zona del Estado de Coahuila sobre la Triple Hélice se logró crear un Modelo Teórico Conceptual con tres Factores latentes: La motivación de la empresa para vincularse, la propia vinculación universidad empresa y la competitividad empresarial lograda a partir de esta vinculación la cual es finalmente apoyada por el gobierno; contiene también 17 variables endógenas consideradas como tales, aquellas que en el modelo se intentan explicar. Para entender las relaciones entre las nuevas variables se procede mediante Análisis Factorial Exploratorio y se hallan los componentes principales que las agrupan; en otra etapa de la metodología se diseña y aplica una encuesta para identificar la percepción de 166 empresarios de la zona acerca de sus actividades de vinculación y cooperación. Finalmente se identifican y validan las variables más representativas mediante triangulación metodológica. Se ofrecen los resultados donde participan un grupo de empresas con las que se vincula la propia Facultad de Contaduría y Administración y catedráticos de la Facultad de Metalurgia. En el artículo se presenta una revisión del marco teórico referencial, relacionado con la Relación Universidad-Empresa y un apartado acerca de la Metodología de la Investigación que se aplicó, luego se pasa al análisis de Datos e interpretación de resultados en donde con diferentes figuras y análisis se logra explicar los aspectos más importantes evaluados así como las consideraciones más generales, finalmente en el apartado de Conclusiones se muestra el Modelo propuesto de vinculación y los aspectos clave que tanto la universidad como la empresa deben abordar pueden incidir en la mejora de estas relaciones.

REVISION DE LA LITERATURA

Para conocer el alcance que tiene la vinculación de las universidades con el sector empresarial es importante alternar desde sus antecedentes, aportaciones, concepto y el origen del mismo, así como hacer mención de los textos desarrollados por investigadores de diferentes países. Los antecedentes históricos de la vinculación de las universidades con las empresas a nivel internacional se van dando, como es el caso de países de Asia, que en el desarrollo moderno de Japón, mismo que tiene una raíz de 130 años, cuando una nueva dinastía japonesa lleva a cabo la modernización del país, proviniendo esta modernización, fundamentalmente, del esfuerzo educativo. La dinastía Meiji separa al Japón en dos vertientes: económica y educativa, modificando las pautas que, en esos ámbitos, habían prevalecido durante siglos. En el sentido educativo, significó enterarse donde estaban los principales procedimientos tecnológicos de la época (Alemania, Francia, Inglaterra) e incorporarlos, como currículo a sus procesos de formación de profesionales, o como métodos de producción, a las nuevas formas de desarrollo capitalista nacional; con ello se modernizó el sistema educativo tal como se expresa (Pallán, 1995)

En la Comunidad Europea, se han integrado varios programas en el proceso de vinculación de las empresas con las universidades. Entre ellos sobresale el Programa Community Action Programm in Education and Training for Technology (COMETT), por sus siglas en Inglés, el cual plantea la unificación de objetivos, metas y estrategias a través de consorcios y alianzas que provoquen un cambio de actividades en la cooperación de empresas e instituciones de educación superior. Este programa, dio como resultado en el período 1986-1990 la iniciación en toda la Comunidad Europea de más de 1,300 proyectos, llegando a la creación de 125 asociaciones universidad-empresa. Dado a conocer por decisión 86/365/CEE del Consejo, de 24 de julio de 1986, por lo que se aprueba el programa de cooperación entre la universidad y la empresa en materia de formación en el campo de las tecnologías (Europa, 2013)

Con relación a Alemania, la vinculación de las empresas con las universidades se inicia a través de la Industria Química en la década de los setenta del siglo XIX. (Duarte, 2005) En la Figura 1 se muestra información acerca de la Calidad de las Instituciones Científicas (barra celeste) y la Colaboración Universidad/Empresa (barra roja) a nivel mundial, en donde destaca negativamente la posición de México en ambos aspectos. El BM (Banco Mundial) explica que México está por debajo de Brasil, Costa Rica, India y Chile tanto en la calidad de sus instituciones científicas como en la vinculación universidad empresa, tan mal como Colombia y Argentina y muy por debajo de países de Europa que son líderes en estos dos renglones

Figura 1: Colaboración Universidad- Empresa

Fuente: Banco Mundial, México, Enero 2009

Se han consultado en esta investigación diferentes Modelos y Sistemas del trabajo de vinculación universidad-empresa comenzando desde las investigaciones y criterios sobre Triple Hélice de (Etzkowitz, 2009), siguiendo por trabajos en la propia zona de Monclova reflejados en (Gutiérrez, 2011) y modelos de vinculación como los de (SIVU, 2013) de la Universidad Veracruzana, Modelo de vinculación del Centro de Investigación y Ciencia y Tecnología Aplicada (CICTA) de la Universidad Autónoma de Ciudad Juárez (UACJ, 2013); los de (García, Vidaurrázaga, Sandoval, 2009) de la Universidad Tecnológica de Huejotzingo, así como los de (Cruz, 2008) de la Unidad Politécnica de Integración Social. El Modelo (UAEH, 2012) de vinculación de la Universidad Autónoma del Estado de Hidalgo y el de la Secretaria de Trabajo y Previsión Social, (STPS, 2011) así como trabajos de (Duarte, 2005) y en todo ellos se aprecia que son pocas las investigaciones con un enfoque cuali-cuantitativo; algunas de las que así lo hacen se caracterizan generalmente por brindar alternativas para resolver la problemática pero sin diagnósticos previos, un por ciento menor diseña y pone en práctica estas iniciativas y sólo una ínfima cantidad puede llegar a medir el impacto que se ha generado por la vinculación. En correspondencia con los objetivos de esta investigación se formulan las siguientes Hipótesis estadísticas:

H1a Las acciones que la empresa innovadora le demanda a la universidad para mejorar la vinculación con ella se relacionan con ejecutar un activo trabajo de gestión en pro de la vinculación, promover y mantener una alta comunicación, así como apoyar a la empresa en cuestiones relacionadas con ideas innovadoras, capacitar su personal y asesorarlos para mejorar sus prácticas administrativas,

H1b. Las acciones que la empresa innovadora entiende que dependen de su propio sistema empresarial están asociadas al número de años de actividad del directivo en el cargo, su nivel educativo, el tamaño de

la empresa, el mantener una actitud proactiva y una buena y estable comunicación, disponer de tiempo para esta actividad y que la dirección de la empresa apruebe la vinculación

METODOLOGIA

Etapa 1	Diseño del Modelo Conceptual a Partir de la Revisión Analítica e Investigaciones Propias
	Determinadas 25 variables que explican el Modelo Conceptual
Etapa 2	Empleo del método Experto para definir Componentes Principales Obtenidos los Componentes Principales mediante Análisis Factorial Exploratorio. Dos componentes y 25 variables Diseño de una encuesta dentro de los marcos del Modelo Conceptual y los Componentes Principales.
Etapa 3	Calculo de la Población (N) y la Muestra (n) Aplicada la encuesta a 166 directivos de la Región de Monclova Formuladas la preguntas e hipótesis de la investigación
Etapa 4	Triangulación metodológica, se emplean los métodos de Kruskal-Wallis y el Análisis de Regresión. Resultados y recomendaciones.

RESULTADOS

La Hipótesis H1a se plantea desde la universidad y tiene como objetivo asociar el accionar de la universidad a aspectos clave que la empresa le demanda como son las cuestiones en que interesa trabajar de conjunto y los aspectos que pudieran lograr que la universidad tuviera un mejor acercamiento con la empresa. Comprobación de H1a.

	P111	P113	P114	P137	P142
	Brindar ideas innovadoras	Formar personal	Mejorar prácticas de administrar	Mejorar la gestión en pro de vinculación	Buena y estable comunicación
Sig. Asintót. Kruskal-Wallis	.001***	.000***	.001***	.027**	.041**
Sig. Asintót. Análisis regres.	.067*	.044**	.055*	.070*	.098*

* $p < 0,10$ ** $p < 0,05$ *** $p < 0,001$ *Elaboración propia. Las variables sombreadas en amarillo están asociadas a las preguntas que le debe brindar la universidad a la empresa y qué debe activar en pro de la vinculación Las cinco variables independientes de las columnas se contrastan con la variable dependiente P12 (qué modalidades prefiere para vincularse) Las respuestas sombreadas en amarillo comprueban que el recibir ideas innovadoras, que se le forme su personal, que se le ayude a mejorar sus prácticas administrativas, así como que la universidad mejore su gestión y comunicación serían cinco aspectos clave que la empresa demanda. Se valida esta hipótesis dado que por los dos procedimientos los valores de significación son inferiores a 0,1; 0,05 y 0,001.*

La Hipótesis H1b se plantea desde la empresa y tiene como objetivo asociar hasta qué punto los recursos y capacidades de ella influyen en el éxito de la vinculación y cuáles serían los aspectos claves que la empresa debiera disponer o ejecutar para lograr y mantener en el tiempo una adecuada vinculación. Las tres primeras preguntas se asocian por tanto a los recursos y capacidades de la empresa y las otras cuatro con el accionar y la gestión en pro de la vinculación.

Sig. Asintót. Análisis regresión.	.356	,862	,049**	,018**	,012**	,000***	,045**

* $p < 0,10$ ** $p < 0,05$ *** $p < 0,001$ Elaboración propia. Las variables independientes de las columnas se contrastan con la variable dependiente P11 (aspectos que influyen en la cooperación) y se denota que ni los años de experiencia del directivo ni su nivel educativo influyen en la cooperación, no así el tamaño de la empresa que tiene influencia pero con valores de significación inferiores a 0,1. Respuestas equivalentes se reflejan en los estudios de (FAEDPYME, 2010) cuando se comprueba que las dos primeras variables no tienen relación con la actividad innovadora de la empresa. Las respuestas sombreadas en amarillo comprueban la influencia que tiene una actitud proactiva, la comunicación, el tiempo del directivo y el respaldo de la institución para lograr una buena vinculación dado que todos los valores de significación son inferiores a 0,05 y 0,001, resultado muy importante que valida cuatro momentos clave en que se debe poner énfasis en la empresa si se pretende lograr una adecuada vinculación. En otros trabajos en este tema, también aparece una demanda de la empresa vinculada a la necesidad de trámites sencillos para formalizar la vinculación, así como la obtención de resultados rápidos que pongan de manifiesto el aporte de la universidad en el corto plazo.

CONCLUSIONES

La universidad debe brindarle a las empresas en el proceso de vinculación ideas innovadoras, formarle personal, modificar sus prácticas administrativas e incrementar su gestión por la vinculación. Por su parte, se detecta que la empresa que le interesa vincularse es aquella que tiene mayor cantidad de empleados y sus directivos disponen de más tiempo para ello y tendrían mejores resultados si activan más su gestión, se mejora la comunicación y disponen de un mayor apoyo institucional. De esta manera, el Modelo Teórico inicialmente propuesto quedaría identificado con las variables mostradas en la Figura 7 que son las que se corresponden con las aceptadas como significativas en las Hipótesis anteriormente comprobadas por dos procedimientos de triangulación. Ninguno de los documentos consultados (Duarte, 2005) trae un estudio de esta naturaleza por lo que se hace imposible comparar resultados de otras regiones con los nuestros. En las decenas de referencia consultadas son pocas las investigaciones con este enfoque cuali-cuantitativo, algunas de las que así lo hacen se caracterizan generalmente por brindar alternativas para resolver la problemática, un por ciento menor diseña y pone en práctica estas iniciativas y sólo una ínfima cantidad puede llegar a medir el impacto que se ha generado.

ANÁLISIS A LA ESTRUCTURA DE LAS FINANZAS PÚBLICAS DEL ESTADO DE SONORA 2009-2013

Francisco Javier Pestaño Uruchurtu, Universidad Estatal de Sonora.

Rossana Palomino Cano, Universidad Estatal de Sonora.

Erika Olivas Valdez, Universidad Estatal de Sonora

RESUMEN

En este documento se hace un análisis a las Finanzas Públicas del Estado de Sonora por el periodo 2009-2013, con información obtenida por investigación documental, en lo referente al crecimiento y desarrollo de sus ingresos, gastos, estado de posición financiera y estado de origen y aplicación de recursos. Con la información obtenida, misma que se plasma en el desarrollo del caso; aplicando los métodos y procedimientos del análisis financiero con el objetivo de determinar la situación financiera en la que se encuentra actualmente el Estado de Sonora. Este trabajo de investigación y análisis está enfocado a determinar si la actual administración gubernamental del Estado de Sonora, ha llevado a cabo una eficiente y efectiva recaudación y gestión de sus Ingresos, administración, distribución y aplicación de estos en los programas prioritarios que permitan mejorar las condiciones económicas y sociales de los sectores más vulnerables del Estado, fomentando su crecimiento y desarrollo financiero, que ofrezcan a su vez unas finanzas públicas sanas. Para lo anterior, se presenta una sección donde se contextualiza los conceptos, el procedimiento y los métodos utilizados para llevar a cabo el presente análisis. En la segunda sección de este documento, se presenta la información cuantitativa de los conceptos en análisis, recopilada de los Informes de Cuenta Pública del Estado de Sonora, que una vez analizados nos permite realizar una serie de afirmaciones a modo de conclusión.

PALABRAS CLAVE: Finanzas Públicas, Administración, Eficiencia y Efectividad

Analysis to the Structure of the Public Finance of the State of Sonora 2009-2013

ABSTRACT

In this document an analysis to the public finance of the State of Sonora is made for the period of 2009-2013, with information obtained by documentary research, in relation to the growth and development of their income, expenses, financial position and state of origin and application of resources. With the information obtained, which is reflected in the development of the case; by applying the methods and procedures of the financial analysis with the objective of determining the financial situation in which the State of Sonora is currently. This research and analysis work is focused to determine if the current Government of the State of Sonora, has carried out an efficient and effective collection and management of revenue, administration, distribution and application of these priority programmes that improve economic and social conditions of the most vulnerable sectors of the State, encouraging their growth and financial development offer healthy public finances at the same time. For he above, presents a section where it contextualizes concepts, the procedure and the methods used to carry out this analysis. In the second section of this document, the quantitative information of the concepts is presented in analysis, compiled from reports of public account of the State of Sonora, who once analyzed allow us to perform a series of statements by way of conclusion.

KEY WORDS: Public Finance, Management, Efficiency and Effectiveness

INTRODUCCIÓN

A continuación se pone a discusión la eficiencia del gobierno del Estado de Sonora como institución en su función de captar y gestionar recursos, distribuirlos y aplicarlos en los distintos capítulos y ejes rectores del Gasto Público, que son presentados a través de los Informes de la Cuenta Pública Estatal que se presentan cada año para su revisión y aprobación al H. Congreso del Estado, con el objetivo de presentar unas finanzas públicas sanas en apego a la Ley de Ingresos, Egresos y demás normatividad aplicable al ejercicio del mismo, que garanticen a su vez su crecimiento y desarrollo así como la satisfacción de sus necesidades como Institución y las de la sociedad en general, con la aplicación de estos recursos en áreas productivas y prioritarias, estableciendo políticas de ahorro y austeridad, para de esta manera lograr los objetivos y las metas establecidas en el Plan de Desarrollo Estatal, así como transparentar la eficiente administración de estos recursos, y que su recaudación y distribución se hagan con apego a la Ley.

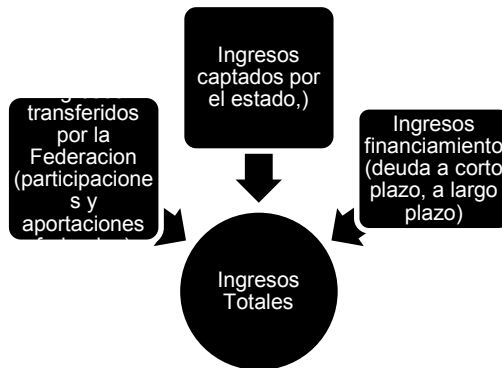

Los principios rectores del gasto público son: la eficiencia, la eficacia, la honestidad y la transparencia en el uso de los recursos que le han sido conferidos para su administración buscando cómo único destino de los recursos públicos, el bienestar de la sociedad y la satisfacción de sus necesidades, “el gobierno es emanación genuina del pueblo y se instituye para beneficio del mismo”. (Artículo 22 de la Constitución Política del Estado de Sonora). Por lo anterior consideramos importante llevar a cabo este análisis buscando encontrar las causas y fenómenos que nos dé respuesta a la siguiente pregunta ¿Ha cumplido el Gobierno del Estado actual con una eficiente y efectiva administración de los recursos financieros que le han sido conferidos, aplicando medidas de racionalidad y austeridad en el ejercicio del Gasto Público, logrando con ello presentar unas finanzas públicas sanas que garanticen un futuro económico sostenible, que impacte en el crecimiento y desarrollo del Estado y en la satisfacción de las necesidades de la sociedad?

ANTECEDENTES Y MARCO CONTEXTUAL

El término de finanzas públicas ha tenido diversas connotaciones de acuerdo con las funciones que tiene el Estado. Esto obedece principalmente a razones históricas, así como al nivel de desarrollo de cada país y a la forma de gobierno (Chávez, 2002:11). Los efectos del gasto público y deuda pública son difíciles de medir en la sociedad, sin embargo, las posturas de los gobiernos en turno pueden diferir de forma tal, que las estrategias para aumentar o disminuir el porcentaje del gasto respecto al PIB, son exclusivas de la Administración Pública Estatal del momento (Olivas, 2013).

En la práctica, el gasto público que ha presentado la actual administración del periodo 2010-2013, sin fijar acciones efectivas de ahorro y austeridad en rubros no prioritarios, ha llevado a la administración actual a niveles de endeudamiento más altos que la razonabilidad financiera establece como normales, teniendo que destinar parte de los ingresos de los próximos años para amortizar esta deuda o a la venta de bienes patrimoniales, que afectaran sustantivamente áreas prioritarias como la educación, salud, seguridad, desarrollo social e inversión en infraestructura.. Los ingresos del Estado de Sonora se componen por los ingresos captados por el mismo Estado (Impuestos y Contribuciones, Derechos, Productos, Aprovechamientos, por Venta de Bienes y Servicios y Otros Ingresos Estatales) y por los ingresos que le son transferidos por el Gobierno Federal como participaciones y aportaciones por medio de programas federales. A continuación presentamos en la figura 1, la estructura de los Ingresos del Estado de Sonora y el origen de estos recursos los cuales son presupuestados y presentados para su aprobación por el Ejecutivo al Congreso del Estado.

Figura 1: Estructura de los Ingresos del Gobierno del Estado

En esta figura se presenta la estructura de las fuentes de ingresos públicos que percibe el Estado de Sonora

Para analizar el crecimiento y desarrollo de las finanzas públicas del Estado de Sonora y concluir si el Gobierno actual ha administrado eficiente y efectivamente los recursos financieros, consideramos necesario hacer un análisis por cada uno de los elementos que componen la estructura de las finanzas públicas del Estado de Sonora, correspondientes al periodo 2009-2013. El desempeño de una Organización se puede medir de muchas maneras distintas. Una forma común es en términos de eficiencia y efectividad. Hay considerable diferencia entre estos dos conceptos. Eficiencia, es la habilidad para que se hagan las cosas de manera correcta, lograr hacer más con menos. Efectividad es la habilidad para “hacer las cosas correctas” o hacer que las cosas se logren. De acuerdo con Peter Drucker, experto en Administración, la efectividad es el secreto del éxito para toda Organización. “Lo pertinente no es como hacer las cosas correctas, sino encontrar las cosas correctas que hacer y concentrar en ellas los recursos y los esfuerzos” (Megginson, Mosley, Pietri, 1988:37).

Los estados financieros son la manifestación fundamental de la información financiera: son la representación estructurada de la situación y desarrollo financiero de una entidad a una fecha determinada o por un periodo definido. (Lara Flores.2010:50) Por método de análisis podemos entender “el orden que se sigue para separar y conocer los elementos descriptivos y numéricos que integran el contenido de los estados financieros”. (Perdomo Moreno, 2009:87) Análisis financieros es “la separación de los elementos de un estado financiero, con el fin de examinarlo críticamente y conocer la influencia que cada uno de estos elementos ejerce sobre los fenómenos que el estado financiero expresa (Elizondo López, 1991:426).

METODOLOGÍA

Con el fin de medir si el actual Gobierno del Estado de Sonora ha administrado los recursos financieros con eficiencia y efectividad, se procederá a aplicar distintas técnicas, métodos y procedimientos de análisis a los informes de Ingresos y Gastos, así como al Estado de Posición Financiera y Estado de Origen y Aplicación de Recursos por el periodo 2009-2013. Existen varios métodos para llevar a cabo el análisis financiero motivo de nuestro trabajo de investigación: Método de Análisis vertical, Método de Análisis Horizontal y Método de Análisis Histórico. El procedimiento de Porcientos Integrales consiste “en la separación del contenido de los estados financieros a una misma fecha o correspondiente a un mismo periodo, en sus elementos o partes integrantes, con el fin de poder determinar la proporción que guarda cada uno de ellas en relación con el todo” (Perdomo, 2009:93).

El procedimiento de aumentos y disminuciones o procedimiento de variaciones, consiste en comparar los conceptos homogéneos de los estados financieros a dos fechas distintas, obteniendo de la cifra comparada

y la cifra base una diferencia positiva, neutra o negativa. (Perdomo, 2009:171). El procedimiento de las tendencias estudia la trayectoria seguida por la entidad económica durante un periodo de tiempo determinado, infiriendo la proyección futura de la propia entidad (Elizondo López, 1991:426).

RESULTADOS

Ingresos Públicos del Estado de Sonora Periodo 2009-2013

A continuación se presenta el comportamiento y desarrollo de los Ingresos del Estado de Sonora captados por el periodo del 2009 al 2013 en relación con cada uno de los ejercicios anteriores, mismos que procederemos a su análisis como a continuación se desglosan en la tabla 1 que a continuación se presenta.

Tabla 1: Ingresos Captados Por el Estado de Sonora Durante el Periodo 2009-2013
(Cifras Expresadas en Millones de Pesos)

Conceptos	Ejercicio 2009	Ejercicio 2010	Ejercicio 2011	Ejercicio 2012	Ejercicio 2013	Variación	% Var	%Int. Var

Incremento de Ingresos % de Incremento		9%	22%	-5%	19%			

Tabla que nos muestra el crecimiento y desarrollo de los Ingresos del Estado de Sonora del 2009 al 2013 determinando su variación en importe, porcentual y la proporción que guarda en relación con el total de la variación por cada uno de los componentes de los Ingresos. Construcción con información presentada en la publicación de los Informes de Cuenta Pública 2009, 2010, 2011, 2012 y 2013 en el Portal del Gobierno del Estado.

Los Ingresos del Estado de Sonora por el periodo 2009-2013 presentan un crecimiento en general del 50% al incrementarse de 34,408 millones de pesos en 2009 a 51,677 millones de pesos en el 2013, que representó un incremento de 17,269 millones de pesos, observándose que el renglón de ingresos por financiamientos se dispara en un 1,634% al pasar de 354 millones de pesos en el 2009 a 6,139 millones de pesos en el 2013 producto de un excesivo uso del financiamiento que represento el 33% del crecimiento de los ingresos, sin embargo este tipo de recursos trae consigo un costo de financiamiento que viene a impactar en el gasto (intereses) y por consiguiente en el pago y amortización de la deuda por los próximos años. Se observa también en lo correspondiente a los Ingresos estatales en el renglón de aprovechamientos una reducción fuerte del 2009 al 2013 1,828 millones de pesos, sin embargo se logra equilibrar este rubro con el incremento que se tiene en el renglón de Ingresos por Venta de Bienes y Servicios y Otros Ingresos Estatales al incrementarse de 3,962 millones de pesos en el 2009 a 10,045 millones de pesos en el 2013 que represento un 154% de incremento porcentual y 6,083 millones de pesos en términos monetarios.

Como se puede observar en la figura número 2, el Estado no logro incrementar sus Ingresos que capta mediante los impuestos, aprovechamientos, productos, derechos, venta de bienes y otros ingresos, sin embargo como se explicó anteriormente los ingresos que la federación aporta al Estado como vienen

etiquetados previamente por la Federación estos no pueden ser utilizados en el gasto corriente del Estado, por lo que al no ser suficiente sus Ingresos generados se tuvo que recurrir a un alto financiamiento de instituciones bancarias al pasar de 359 millones de pesos en el 2009 a 6,139 millones de pesos en el ejercicio 2013, que directamente fueron utilizados en el ejercicio del Gasto Corriente e Inversión en Infraestructura y amortización de la misma deuda.

Figura 2: Comparación del Comportamiento de los Ingresos Estatales, Federales y de Financiamiento del 2009 Comparados Contra el 2013

Comparación de los Ingresos captados del ejercicio 2009 y 2013, apreciándose el alto crecimiento en el renglón de Financiamiento a Corto y Largo Plazo. Construcción con información de la tabla 1

Gasto Público del Estado de Sonora Periodo 2009-2013

El Gasto Público del Estado de Sonora se asigna y se informa por Eje Rector, Por Unidad Administrativa y por Objeto del Gasto. Para nuestro análisis se tomó el de asignación por Objeto del gasto. Los principales capítulos por objeto del gasto que conforman los Gastos Administrativos del Gobierno Estatal, se dividen en: Servicios Personales, Materiales y Suministros, Servicios Generales, Transferencias a Organismos y Entidades, Adquisición de Bienes e Inmuebles, Inversiones en Infraestructura para el Desarrollo, Inversiones Productivas, Participaciones y Aportaciones a Municipios y por ultimo Deuda Pública con un impacto este ultimo de 1058% de crecimiento del 2009 al 2013, como se puede apreciar en la tabla 2 que se presenta continuación.

Como podemos observar el comportamiento del Gasto del 2009 al 2013 ha tenido un incremento de 16,810 millones de pesos, lo que representa un 48% en términos porcentuales, presentando los incrementos más significativos en el ejercicio 2011 y en el ejercicio 2013 con 8,417 millones de pesos y 8,028 millones de pesos respectivamente. Los capítulos que más impactaron en este incremento de 16,810 millones de pesos, son el de Servicios Personales (Sueldos y Prestaciones de los Servidores Públicos del Estado de Sonora) con 1,869 millones de pesos que represento un incremento del 33%, presentando en el ejercicio 2012 un incremento del 12% al pasar de 5,956 millones de pesos a 6,678 millones de pesos, cuando el incremento salarial autorizado en este año fue del 4.5%, aspecto que nos permite determinar que se tuvo un incremento mayor en sueldos, prestaciones y plazas autorizadas que impactaron en el crecimiento de este capítulo del gasto, representando en términos de por ciento integral un 11% del 100% del incremento total del ejercicio 2009 al 2013.

Tabla 2: Desarrollo del Gasto Publico del Estado de Sonora Correspondiente al Periodo 2009-2013 (Cifras Expresadas en Millones de Pesos)

Capítulo	Ejercicio 2009	Ejercicio 2010	Ejercicio 2011	Ejercicio 2012	Ejercicio 2013	Variación 2009-13	% Var	% Int.
Servicios Personales	5,633	5,956	6,678	7,087	7,502	1,869	33%	11%

Incremento en el Gasto		2,797	8,417	-2,432	8,028			
% de Incremento		8%	22%	-5%	18%			

Se presenta el comportamiento del gasto público del ejercicio 2009 al 2013 donde se muestra el incremento en el gasto del 2013 en comparación con el gasto del 2009, su variación en importe, porcentual y la proporción que guarda en relación con el total de la variación por cada uno de los componentes de los gastos. Construcción con información presentada en la publicación de los Informes de Cuenta Pública 2009, 2010, 2011, 2012 y 2013 en el Portal del Gobierno del Estado.

El capítulo de Transferencias a Organismos y Entidades presenta una variación de 5,961 millones de pesos que represento un incremento del 34% al pasar de 17,724 a 23,685 millones de pesos del 2009 al 2013, observándose que en el ejercicio 2012 presentó un comportamiento positivo al reducir su nivel de gasto de 24,395 millones de pesos del 2011 a 21,095 millones de pesos en el 2012, sin embargo en el ejercicio 2013 vuelve a presentar un comportamiento negativo al pasar de 21,096 millones de pesos a 23,685 millones de pesos en el 2013, teniendo su impacto más fuerte del ejercicio 2010 al 2011 con un 35% al pasar de 18,494 millones de pesos a 24,395 millones de pesos, que represento un incremento de 5,904 millones de pesos solo en ese ejercicio que representa el 99% del incremento total del periodo, esto derivado a que a partir de este ejercicio se incluyó en el capítulo de transferencias el Organismo con clave 21 Amortización de la Deuda, como se puede apreciar en la tabla 3. En base al análisis de los informes de la cuenta pública de los ejercicios 2010 y 2011, los Organismos que presentaron un incremento considerable en las transferencias efectuadas, se presentan a continuación:

Tabla 3: Trasferencias a Organismos Con Mayor Impacto En el Incremento Por el Periodo 2009-2011 (Cifras Expresadas En Millones de Pesos)

Clave	Organismos de los Recursos Transferidos	Transf. 2009	Transf. 2011	Variación	%
08	Servicios Educativos	9,294	10,029	735	12%
09	Servicios de Salud	2,802	3,065	263	4%
12	Secretaria de Ganadería, Agricultura, Recursos Hidráulicos, Pesca y Acuicultura	340	634	294	5%
21	Amortización de la Deuda Pública a Largo Plazo	0	4,485	4,485	77%
	Varios Organismos	6,058	6,182	124	2%
	Totales	18,494	24,395	5,904	100%

Organismos que presentaron la mayor proporción del incremento en Transferencias del 2010 al 2011. Construcción con información presentada en la publicación de los Informes de Cuenta Pública 2009, 2010, 2011, 2012 y 2013 en el Portal del Gobierno del Estado.

Como se puede apreciar el Organismo que represento por si solo el 77% del incremento total del ejercicio 2010 al 2011 es el de amortización de Deuda Pública a Largo Plazo, al presentar en el 2011 un importe de transferencia de 4,485 millones de pesos cuando en el ejercicio 2010 no presento importe ejercido. Es importante mencionar que en este Organismo se registran las transferencias para el Pago de la Deuda a Largo Plazo, la cual al cierre del ejercicio 2011 presentaba un saldo aun por amortizar de 10,079 millones

de pesos que representa un 74% de la Deuda Total por 13,577 millones de pesos, cifra tomada del Estado de Posición Financiera del Informe de la Cuenta Pública del Estado de Sonora. Por último tenemos que el capítulo Deuda Pública que corresponde a los pagos efectuados de las Deudas a Corto Plazo por los Fondos y líneas de crédito con instituciones de crédito y adeudos fiscales de ejercicios anteriores (corresponden a pasivos al cierre de ejercicio que son programados para pagarse con recursos del ejercicio siguiente), presenta un incremento del ejercicio 2009 al 2013 de 4,923 millones de pesos que en términos porcentuales representa el 1,058% al pasar de 465 millones de pesos en el 2009 a 5,388 millones de pesos en el 2013, corresponde a este capítulo el 29% del incremento total de 16,810 millones de pesos.

Una vez efectuado nuestro análisis de porcentos integrales y variaciones, determinamos que el Estado de Sonora en su estructura del Gasto Publico por su objeto del mismo, presenta un incremento global del 48% que por los 4 años que tomamos para nuestro análisis nos da un incremento promedio del 12% anual, sin embargo al observar que el incremento en el capítulo de Inversiones en Infraestructura que presento un incremento del 2009 al 2013 de solo 1,987 millones de pesos al pasar de 5,505 millones de pesos en el 2009 a 7,492 millones de pesos en el 2013 que si consideramos el índice de inflación del 3% anual, realmente este rubro no tuvo un incremento real al presentar en términos porcentuales solo el 11% del incremento total que al promediarlo en los 4 años nos da un incremento promedio de 2.25% anual. Siendo este un rubro importante en la aplicación de los recursos ya que la inversión en infraestructura es pilar de crecimiento y desarrollo de toda entidad federativa, el incremento en los recursos y la aplicación de los mismos no fue canalizada en una proporción considerable al rubro de inversión, sin embargo si tomamos los recursos ejercidos en pago de Deuda a corto y largo plazo por un importe de 4,923 y 4,485 millones de pesos respectivamente y que represento la aplicación de 56% del incremento en el gasto por el periodo 2009-2013. Es importante mencionar que el 1 de agosto del 2012 el Gobierno del Estado de Sonora publicó en el Boletín Oficial del Gobierno del Estado edición número 9 “Acuerdo que establece Lineamientos de Ahorro y Austeridad” estableciendo que uno de los objetivos del Plan Estatal de Desarrollo 2009-2015, dentro del Eje Rector 6 "Sonora Ciudadano y Municipalista", específicamente la estrategia 6.2. "Gobierno Austero", es el de garantizar el uso eficiente de los recursos públicos, mediante una cultura de austeridad, disciplina y rendición de cuentas, con el propósito de generar una nueva forma de administrar y orientar el presupuesto a ejercer.

Sin duda, los sonorenses exigen que los recursos que ponen al cuidado del Gobierno, sean utilizados de la manera más eficiente en beneficio exclusivo de la sociedad y buscando en todo momento hacer más con menos. Que bajo las anteriores premisas, el Acuerdo que se plasma en este documento, establece diversas medidas obligatorias para la Administración Pública Estatal, que tienen como propósito reducir el gasto corriente en temas no prioritarios para fortalecer el gasto de inversión y los programas sociales que benefician de manera directa a los sonorenses. Sin embargo derivado de nuestro análisis podemos constatar que este acuerdo solo logro reducir en un 5% el gasto total en el 2012, observándose que para el ejercicio 2013 se tuvo un incremento del 18% en el gasto total que representó un incremento en el gasto de 8,028 millones, razón por la cual se tuvo que recurrir a solicitar de nuevo financiamientos por un importe de 6,139 millones como se puede apreciar en la Tabla número 1 presentada en el rubro de los Ingresos Públicos.

Estado de Posición Financiera (Balance General)

El balance general llamado también estado de posición financiera, muestra la información relativa a una fecha determinada sobre los recursos y obligaciones financieras de la entidad, los activos en orden de disponibilidad, los pasivos en orden de exigibilidad, así como el capital contable o patrimonio contable a la fecha (Lara Flores, 2010:54) Una forma de disponer de elementos que permitan valorar el desempeño financiero de un Ente, se refiere a la información que se contiene en sus estados financieros, particularmente el Balance General. Presentamos a continuación la tabla número 4 que nos muestra los resultados descritos anteriormente para proceder a su interpretación.

Tabla 4: Estado de Posición Financiera Comparativo Por el Periodo 2009-2013
(Cifras Expresadas En Millones de Pesos)

Conceptos	Ejercicio 2009	% Int	Ejercicio 2013	% Int	Variación 2009-13	% Var	% Int.

Estado comparativo de posición financiera presentado a nivel rubro que nos muestra las variaciones del 2009 al 2013 determinando Construcción con información presentada en la publicación de los Informes de Cuenta Pública 2009, 2010, 2011, 2012 y 2013 en el Portal del Gobierno del Estado.

Se observa que del 2009 al 2013 el Estado de Posición Financiera nos presenta un crecimiento del 48% derivado del incremento de 16,533 millones de pesos, al pasar de 34,898 millones de pesos en el 2009 a 51,431 millones de pesos en el 2013, sin embargo en el 2009 la proporción deuda-patrimonio presentaba una relación 18%-82% pasando en el 2013 a 35%-65%, teniendo que la proporción integral de la deuda a corto y largo plazo de 12,059 millones de pesos represento por sí sola el 73% del incremento total. Aplicando el procedimiento de razones simples, determinamos las razones de capital de trabajo (nos determina en términos monetarios la proporción con que se cuenta para hacer frente a los compromisos a corto plazo su comportamiento debe ser al menos igual o mayor a 1) y la razón de endeudamiento (nos determina la proporción de deuda en términos porcentuales en razón del activo total, su comportamiento debe ser el menor posible), para determinar las tendencias que fue presentando estos indicadores del 2009 al 2013, mismas que se presentan en la tabla 5.

Tabla 5: Tendencia de las Razones de Capital de Trabajo y de Endeudamiento del 2009 Al 2013
(Cifras En Millones de Pesos)

Razón financiera simple	2009	2010	2011	2012	2013	TendenciaPara el 2014
Razón de Capital de Trabajo	89%	78%	49%	46%	36%	23%
Razón de endeudamiento	18%	21%	35%	32%	35%	39%

Tabla que nos muestra la tendencia que presentó la razón de capital de trabajo y de endeudamiento del 2009 al 2013. Construcción con información de los Estados de Posición Financiera presentados en los Informes de Cuenta Pública 2009, 2010, 2011, 2012 y 2013. Para el cálculo estas razones financieras, se tomó como referencia las siguientes relaciones matemáticas: Razón de capital de trabajo= Activo circulante / Pasivo circulante; Y para Razón de endeudamiento = Pasivo Total / Activo Total.

Como podemos observar a partir del ejercicio 2010 se empieza a notar la tendencia negativa que guarda la razón de capital de trabajo al pasar de 89% del 2009 al 36% en el 2013, producto de irse incrementando el importe del pasivo a corto plazo por la utilización de financiamiento de proveedores de materiales y servicios, así como la utilización de créditos bancarios revolventes a corto plazo, lo cual se ve reflejado en la tendencia negativa que presenta la razón de endeudamiento al pasar del 18% en 2009 al 35% en 2013, al utilizar adicionalmente al financiamiento a corto plazo un mayor financiamiento a largo plazo, que al aplicar el procedimiento de tendencias podemos determinar que para el ejercicio 2014 se espera una razón de capital de trabajo del 23% y una razón de endeudamiento del 39%. lo que nos hace determinar que el Estado de Sonora no cuenta actualmente con una estabilidad financiera.

Estado de Origen y Aplicación de Recursos

A continuación en la tabla 6 presentamos el Estado de Origen y Aplicación de Recursos que nos muestra la fuente de origen de los recursos y a que rubro fueron aplicados por el periodo 2009-2013, es importante mencionar que estos importes representan movimientos netos del periodo en mención.

Tabla 6: Estado de Origen y Aplicación de Recursos Por el Periodo 2009-2013
(Cifras En Millones de Pesos)

Conceptos	Importe	%
Orígenes de Recursos		
De las Cuentas de Pasivo a Corto Plazo	4,979	30%
De las Cuentas de Pasivo a Largo Plazo	7,080	43%
De los Resultados de los Ejercicios (Patrimonio)	4,474	27%
Total de Orígenes	16,533	100%
Aplicación de Recursos		
A cuentas de Activo Circulante	528	3%
A cuentas de Activo Fijo	16,005	97%
Total de Aplicaciones	16,533	100%

Construcción con información extraída de la tabla número 5.

Como podemos observar, es notable que el 73% de los Orígenes de los recursos provienen de fuentes de financiamiento externo originados como ya se había establecido previamente en el análisis de los Ingresos, Gastos y Balance General, mismos se aplicaron en un 97% en el rubro de Activo Fijo (Inversión en Infraestructura, Equipo de Transporte, Equipo de Oficina etc. Este crecimiento sustentado con financiamiento por deuda a corto y largo plazo afectara en los subsecuentes ejercicios el crecimiento y desarrollo del Estado al presentar un saldo por amortizar al 31 de diciembre del 2013 de 18,191 millones de pesos como se puede apreciar en la tabla 4, ya que se tendrán que utilizar los recursos de los subsecuentes años al pago de estas deudas.

CONCLUSIÓN

Una buena relación entre rendición de cuentas, eficiencia y eficacia es la base fundamental para lograr una adecuada planificación de la gestión y desempeño administrativo. Una constante evaluación a su desempeño, es como puede calificarse a un ente público como eficiente y eficaz. Toda administración pública del ámbito a que corresponda, debe enfocarse a lograr de manera efectiva la satisfacción de las necesidades de la sociedad, por lo que deben de actuar con una adecuada gestión y desempeño que los lleve a cumplir con la normatividad aplicable así como con las expectativas puestas en ellos por la sociedad y acorde a la visión y misión establecidas en su Plan de Desarrollo.

Es fundamental para poder satisfacer las necesidades de una sociedad y lograr índices de crecimiento y desarrollo administrando, que toda administración pública del ámbito municipal estatal o federal, logren incrementar sus ingresos a través de la recaudación y gestión de recursos, sin embargo es importante que esta fuente de recursos sea utilizada solo en programas prioritarios y de atención a fenómenos emergentes encausados a satisfacer o solucionar necesidades de la sociedad, lo que permitirá no hacer uso de recursos de la fuente de financiamiento, sin embargo se observa al analizar la variación que presentaron los ingresos durante el periodo 2009-2013 que estos, presentaron un comportamiento igual en cada una de sus fuentes de recursos (ver tabla 2, figura 1). Lo anterior nos muestra que el estado no fue capaz de generar los ingresos suficientes que le permitan hacer frente a sus compromisos de pago de deuda, gasto corriente e inversión, teniendo que recurrir al uso de más financiamiento, por lo que consideramos que se tiene que establecer para los próximos años, medidas fuertes de ahorro y austeridad en el gasto corriente, así como aplicar los recursos a programas prioritarios de inversión, establecer estrategias de recaudación y de gestión ante las autoridades federales para obtener más ingresos y apoyos extraordinarios.

Para finalizar, una vez efectuado nuestro análisis, consideramos que el gobierno del Estado de Sonora en su administración por el periodo 2009-2013 no ha administrado los recursos financieros de una manera eficiente y efectiva, aun cuando se determinaron medidas de racionalidad y austeridad en el ejercicio 2012, estas no fueron aplicadas de manera efectiva en el ejercicio del Gasto Público, por lo que no se ha logrado presentar unas finanzas públicas sanas que garanticen un futuro económico sostenible, que impacte en el crecimiento y desarrollo del Estado y en la satisfacción de las necesidades de la sociedad. Se pone a consideración la siguiente recomendación; si no se logra un equilibrio entre los Ingresos y los gastos que permitan al Estado no recurrir a mas endeudamiento, estableciendo un programa de pagos y amortización de la deuda acorde a los recursos del estado sin afectar los programas prioritarios de salud, educación y seguridad, se tendrá que recurrir a la venta de parte de sus bienes inmuebles, afectando al patrimonio del estado y de la sociedad, que le permitirán hacer frente a sus compromisos de gasto y de pago de la deuda, saneando sus finanzas que actualmente presentan altos niveles de endeudamiento y bajos niveles de liquidez resultado del excesivo uso de recursos por financiamientos, llevando a cabo los ajustes necesarios en el gasto programado en razón de los ingresos captados, estableciendo medidas de racionalidad y austeridad.

CONOCIMIENTO QUE TIENEN LOS EMPLEADOS DEL ÁREA DE GESTIÓN HUMANA EN LAS INSTITUCIONES DE SALUD

Gladys Irene Arboleda Posada, Universidad de Antioquia

RESUMEN

Este artículo es resultado una investigación de corte transversal con la participación de 224 empleados de instituciones prestadoras de servicios de salud de mediana (322) y alta complejidad (52) que buscó Identificar el grado de conocimiento mediante la aplicación de encuestas, que los empleados tienen de los programas desarrollados por el área de gestión humana en el Valle de Aburra, Colombia. Se encontró que las instituciones estudiadas cuentan con departamento o persona encargada de la Gestión Humana; los encuestados en su mayoría no han sido beneficiados de programas de desarrollo personal y profesional. No se cuenta en la mayoría de instituciones con programas de inducción, reinducción, entrenamiento, capacitación y evaluación, integrados y permanentes. De lo anterior se destaca la importancia de que las instituciones cuenten con un área que gestione el activo intangible más importante como es el capital humano.

PALABRAS CLAVE: Recursos Humanos, Capacitación, Educación Basada En Competencias, Planes de Motivación del Personal, Evaluación de Recursos Humanos En Salud

KNOWLEDGE OF EMPLOYEES AT HUMAN TALENT SERVICE IN HEALTH INSTITUTIONS

ABSTRACT

This article is the result of a cross sectional study to identify knowledge level of the staff of 224 employees at human resource management area at health institutions of medium (322) and high (54) complexity in Valle de Aburra. This study searched to determine the grade of knowledge by applying surveys to employees about developed programs by human resource management area from Valle de Aburra, Colombia. As results of present study it was found that in studied institutions count with a department or person in charge of human resource management; most of respondents don't benefit of personal and professional development programs. Majority of institutions are not available induction, reinduction, training and evaluation integrated and permanently programs. The foregoing stand out the importance of an area that manage the intangible asset in an institution more important as is human capital.

INTRODUCCIÓN

Los recursos humanos son indispensables para hacer viables los sistemas de salud; promover la eficiencia, eficacia y calidad en el sector (1). Existe una fuerte relación entre la calidad de la atención de salud y la calidad de la formación de los profesionales que la brindan. Al respecto, la OMS refiere numerosas experiencias que demuestran que la cantidad y la calidad de los trabajadores de la salud tiene estrecha relación con la calidad de salud de la población (2).

El personal representa el capital humano de una organización, el conocer las necesidades reales o sentidas que influyan en su desempeño laboral, es una prioridad que permite ejecutar acciones tendientes a ofrecer a los trabajadores aquellos elementos que contribuyan a lograr la satisfacción en el desempeño de sus funciones, lo cual se verá reflejado en la productividad y el ambiente de trabajo. El recurso humano, para ser productivo y competitivo, debe renovar de manera continua sus conocimientos y capacidades con el fin de insertarse en los mercados globales actuales (3). Las condiciones de desarrollo personal y profesional en los empleados vinculados laboralmente al sector salud se pueden ver afectadas por aspectos como el desestímulo a las promociones y a los ascensos en la escala laboral, la insatisfacción por el escaso acceso a programas de capacitación, disponibilidad de tiempo, limitaciones de recursos económicos por parte de los empleadores para que el personal acceda a la educación superior, además de estímulos laborales insuficientes (4).

REVISIÓN LITERARIA

En el estudio de Gladys A, en el tema de capacitación se encontró que la mayoría de directivos manifestaron que no hay programas de enseñanza definidos, acordes a las necesidades de sus empleados y las demandas del sector salud. Asimismo, tienen dificultades en el acceso a programas de capacitación, debido a factores económicos y de tiempo (5). En Colombia, Conteras y Medina (6), encontraron en un estudio realizado al personal de la salud, bajos resultados en las áreas de desarrollo, inducción, entrenamiento, capacitación, redistribución y administración de salarios, y bajo nivel en la medición de necesidades, expectativas y satisfacción con su trabajo del equipo humano de las instituciones evaluadas.

Robles y colaboradores (11), encontraron en España, que el 25,1% de los encuestados considera como satisfactorias o muy satisfactorias las peticiones de capacitación de los trabajadores, y el 27,8% manifiesta que las posibilidades de formación que brinda la institución son adecuadas o muy adecuadas (1 de Gladis ingreso y capacitación). Con relación a las competencias Alles (7) enuncia que si un empleado está al tanto de las competencias de su cargo en los niveles requeridos puede autoevaluarse y controlar sus propias conductas, de tal forma que al ser evaluado tenga mayor claridad y disposición hacia un plan de mejoramiento. La formación Basada en Competencias, es el modelo que los organismos internacionales recomiendan, en este modelo el currículo se diseña a partir de las competencias que el campo laboral demanda, integrando habilidades y actitudes requeridas para formar profesionales competentes (8).

METODOLOGÍA

Investigación de corte transversal. La ejecución se llevó a cabo mediante la aplicación de encuestas a los empleados para la evaluación del Conocimiento de las políticas de investigación. La Población fue el personal que laboraba en las Instituciones Prestadoras de Salud (IPS) de Alta y Mediana Complejidad en el Valle de Aburrá en el año 2011, estas IPS fueron 374, de las cuales 52 de complejidad alta y 322 de complejidad media. Para llegar al número de empleados a encuestar, se solicitó telefónicamente información, sobre la cantidad aproximada de empleados a las 69 Instituciones elegidas aleatoriamente. El total de la muestra fue de 224 empleados. En el análisis de las variables: tipo de entidad, nivel de atención, información socio demográfica, formación académica y laboral del encuestado, se calcularon porcentajes y pruebas Chi cuadrado en tablas de contingencia para determinar relación entre las variables. En todos los casos, se consideró como significativa cualquier valor-p menor de 0,05. La información recibida fue de carácter confidencial, se utilizó únicamente para fines académicos y dar cumplimiento a los objetivos propuestos. Se garantizó la omisión de los nombres de los encuestados. Las preguntas hechas no tocaron la intimidad, se contó con el consentimiento informado según lo establece la resolución 8430 de 1993 del Ministerio de Salud de Colombia.

RESULTADOS

A continuación se presentan los resultados más sobresalientes: Con relación a la existencia de un departamento o persona encargada de la gestión humana, el 76% manifestó que si existe en su institución. Analizando con el tipo de entidad, el 96% en la pública y el 68% en las privadas, manifestaron lo mismo. Observando con el nivel de complejidad, casi la totalidad de las altas manifestaron la existencia del departamento o persona encargada de la gestión humana.

Figura 1: Departamento de Gestión Humana Según Tipo de Institución y Nivel de Complejidad

(1) $X^2=19,996$, $gl=2$, $p=0,000$, 1 casillas (16,7%) tienen una frecuencia esperada inferior a 5, son dependientes

(2) $X^2=12,932$, $gl=2$, $p=0,000$, 1 casillas (16,7%) tienen una frecuencia esperada inferior a 5, son dependientes

Fuente: Elaboración propia

Figura 2: Beneficiados de Programas de Desarrollo Profesional Según Tipo de Institución y Nivel de Complejidad

(1) $X^2=12,824$, $gl=1$, $p=0,000$, 0 casillas (0,0%) tienen una frecuencia esperada inferior a 5, son dependientes

(2) $X^2=0,399$, $gl=1$, $p=0,527$, 0 casillas (0,0%) tienen una frecuencia esperada inferior a 5, son independientes

Fuente: Elaboración propia

Analizado si se han beneficiado de programas institucionales que propicien el desarrollo profesional, alrededor de la mitad habían sido beneficiados; expresándose en mayor proporción en instituciones públicas, con el nivel de complejidad, no se presentan mayores diferencias entre la alta y la media.

Tabla 1: Herramientas Para Evaluar el Desempeño Según Tipo de Institución

Herramientas Para Evaluar el Desempeño(A)	Tipo de Institución					
	Pública		Privada		Total	
	n	%	n	%	n	%
Cuestionarios	25	45,5	47	31,8	72	35,5
Autoevaluación	29	52,7	66	44,6	95	46,8
Evaluación por competencias	43	78,2	58	39,2	101	49,8
Entrevistas	21	38,2	35	23,6	56	27,6
Visualización directa de las funciones	32	58,2	102	68,9	134	66,0
Total	55		148		203	100,0

Los porcentajes y los totales se basan en los encuestados. a Agrupación de dicotomías. Tabulado el valor 1. Fuente: Elaboración propia

Ante la pregunta ¿Sabe si la institución utiliza algunas de las siguientes herramientas para evaluar su desempeño?, la respuesta afirmativa más alta correspondió a la visualización directas de las funciones con el 66%, seguida de la evaluación por competencias y la autoevaluación. En las instituciones públicas, la evaluación por competencias fue el porcentaje más representativo, en las privadas el mayor porcentaje estaba dado para la visualización directa de funciones. Otras herramientas utilizadas para evaluar el desempeño según manifestaron los investigados fueron: Auditoria de historia clínica, auditoria de procesos, cumplimiento y seguimiento a los acuerdo de gestión, dictamen de los organismos de control, evaluación anual a carrera administrativa, informe de metas entre otras.

Figura 3: Competencias Definidas Para el Cargo Según Tipo de Institución y Nivel de Complejidad

(1) $X^2=0,000$, $gl=1$, $p=1,000$, 0 casillas (0,0%) tienen una frecuencia esperada inferior a 5, son independientes
 (2) $X^2=3,055$, $gl=1$, $p=0,081$, 0 casillas (0,0%) tienen una frecuencia esperada inferior a 5, son independientes
 Fuente: Elaboración propia

Las tres cuartas partes de los encuestados, afirmaron que la institución tiene definidas competencias requeridas para su cargo, no se observaron diferencias entre las públicas y las privadas, mientras que porcentaje el más representativo (86%), se encontró en las de alta complejidad.

Figura 4: Plan de Formación Por Competencias Según Tipo de Institución y Nivel de Complejidad

(1) $X^2=3,775$, $gl=2$, $p=0,151$, 0 casillas (0,0%) tienen una frecuencia esperada inferior a 5, son independientes

(2) $X^2=6,018$, $gl=2$, $p=0,049$, 0 casillas (0,0%) tienen una frecuencia esperada inferior a 5, son dependientes

Fuente: Elaboración propia

El 49% manifestaron que en su institución hay plan de formación por competencias para cada cargo, destacándose los de complejidad alta. No se encontraron diferencias significativas entre instituciones públicas y privadas, pero si con relación al nivel de complejidad. Se destaca que el 26% en las instituciones públicas manifiestan no saber al respecto.

Figura 5: Programas de Ascenso y Rotación de Puestos Según Tipo de Institución y Nivel de Complejidad

$X^2=6,420$, $gl=2$, $p=0,040$, 0 casillas (0,0%) tienen una frecuencia esperada inferior a 5, son dependientes

$X^2=2,456$, $gl=2$, $p=0,293$, 0 casillas (0,0%) tienen una frecuencia esperada inferior a 5, son independientes

Fuente: Elaboración propia

El 50% expresaron que en sus instituciones no existen programas de ascensos y rotación, el 59% del personal de las instituciones públicas respondieron que estas no cuentan con dichos programas, un porcentaje un poco menor en las privadas tenían el mismo concepto, estas diferencias fueron significativas. En cuanto al nivel de complejidad, el concepto negativo fue mayor en las instituciones de mediana complejidad.

Figura 6: Reinducciones Según Tipo de Institución y Nivel de Complejidad

$X^2=9,895, gl=1, p=0,002, 0$ casillas (0,0%) tienen una frecuencia esperada inferior a 5, son dependientes
 $X^2=0,128, gl=1, p=0,720, 0$ casillas (0,0%) tienen una frecuencia esperada inferior a 5, son independientes
 Fuente: Elaboración propia

A la pregunta ¿En el desarrollo de su labor ha recibido reinducciones que le permiten mantenerse actualizado? dos terceras partes lo manifestaron positivamente, siendo amplia y significativa la diferencia entre los empleados de instituciones públicas y privadas, 82% y 58% respectivamente. En cuanto al nivel de complejidad no se observaron diferencias apreciables.

Tabla 2.: Reinducciones Según Formación Académica y Antigüedad En Años

Reinducciones	Formación Académica(1)							
	Técnico		Profesional		Especialista		Total	
	n	%	n	%	n	%	n	%
Si	78	65,0	43	61,4	24	70,6	145	64,7
No	42	35,0	27	38,6	10	29,4	79	35,3
Total	120	100,0	70	100,0	34	100,0	224	100,0
	Antigüedad en años(2)							
	1 - 5		6 - 10		Más de 10		Total	
Si	97	63,4	16	51,6	32	80,0	145	64,7
No	56	36,6	15	48,4	8	20,0	79	35,3
Total	153	100,0	31	100,0	40	100,0	224	100,0

$X^2=0,849, gl=2, p=0,654, 0$ casillas (0,0%) tienen una frecuencia esperada inferior a 5, son independientes
 $X^2=6,541, gl=2, p=0,038, 0$ casillas (0,0%) tienen una frecuencia esperada inferior a 5, son dependientes
 Fuente: Elaboración propia

En la formación académica, no se observaron diferencias apreciables, en sentido contrario a la antigüedad donde las diferencias son significativas y de quienes llevaban laborando más de 10 años en la institución, el 80% afirmaron haber recibido reinducción.

CONCLUSIONES

Los hallazgos de esta investigación evidenciaron que estas instituciones cuentan con departamento o persona encargada de la Gestión Humana; los encuestados en su mayoría no han sido beneficiados de programas de desarrollo personal y profesional. No se tiene en la mayoría de instituciones programas de inducción, reinducciones, entrenamiento, capacitación y evaluación, integrados y permanentes. De lo anterior se destaca la importancia de que las instituciones cuenten con un área que gestione el activo intangible más importante como es el capital humano. Las debilidades en este tema pueden deberse a que no se cuenta con presupuesto suficiente y adecuado para la implementación de esos programas, o hay debilidad en la gestión gerencial del capital humano.

se requiere la implementación de programas que permitan identificar y valorar el capital humano con miras a la creación de un capital intelectual, estructural y relacional, fomentando el aprendizaje individual y colectivo. En cuanto a las herramientas para evaluar el desempeño las más utilizadas según los encuestados son: visualización directa de funciones, evaluación por competencias y autoevaluación, sin ser estos porcentajes representativos. Por su parte algunos entrevistados manifiestan que no hay programas definidos para evaluar el desempeño porque apenas están implementando el manual de funciones y competencias para los diferentes cargos; esta situación difiere para instituciones de alta complejidad que en la mayoría cuentan con estos programas y aplican con rigor diferentes herramientas para tal fin. Es preocupante entonces, que las instituciones que no hacen uso de estos instrumentos y metodologías no pueden identificar oportunamente las fortalezas y debilidades del personal en el desarrollo de sus funciones y con ello la implementación de los planes de mejoramiento, acarreado limitaciones al desarrollo del capital humano y la competitividad de la empresa.

Retomando los resultados, una de las principales herramientas para evaluar el desempeño es la evaluación por competencias, lo cual guarda relación con las tendencias administrativas modernas que la ubican como uno de los medios para alcanzar el éxito en las organizaciones de la mano con la Gestión del Conocimiento. Es así, como las instituciones del sector deben interiorizar el concepto e implementarlo en su quehacer; asimismo, hacerlo visible en la gestión de recursos humanos. De las fortalezas que presenta este tipo de evaluación es que se focaliza en el desempeño más que en la persona, se refiere a un saber actuar y promueve un lenguaje común⁵⁴ (9). Con respecto al tema de reinducciones la mayoría de los encuestados dicen que casi no existen en la institución, lo cual llama la atención en la medida que si los empleados no reciben reinducciones periódicamente no se puede pretender que estos se involucren con el desarrollo de las metas institucionales, interioricen la misión de la misma y adquieran un mayor sentido de pertenencia; lo cual trae como consecuencia el manejo no adecuado de los procesos, reflejándose en el aumento de los costos institucionales. Los procesos de inducción y reinducción garantizan al empleado el éxito en su desarrollo profesional y en la institución donde se desempeña, ya que al conocer y reconocer sus funciones con mayor precisión disminuye los errores, esto conlleva a la prestación de un servicio con mayor calidad y oportunidad, donde impacta directamente al usuario, aumentando la productividad y la buena imagen institucional⁵⁸ (10).

RESUMEN

Actualmente la Calidad de un proceso o producto es una parte fundamental en el desarrollo de cualquier empresa para satisfacer las necesidades y expectativas del cliente; fomentando la confianza de que los productos y servicios que ofrece son competitivos y rentables para la sociedad. Implementar métricas y herramientas estadísticas válidas para el logro de las características críticas de Calidad para productos y/o servicios es necesario. Para controlar el proceso de la tira de acero a través de equipos electrónicos, primero tenemos que tener entradas y salidas medibles satisfactoriamente, así como identificar las variables críticas del proceso que puedan tener un impacto desfavorable en las características del producto esto a través de la recolección de información. Estableciendo una base de datos confiable para el control, análisis y estabilidad estadística para la toma de decisiones a través de los índices de desempeño C_p , C_{pk} , P_p , P_{pk} , L_y , estableciendo mejoras de producto a través de Statistical Process Control_{MR} (SPC/CEP) y Loss Function_{MR}, logrando: Minimizar quejas del cliente de las características especiales, establecer meta 3.4 PPMD, minimizar costos de no calidad y una función de pérdida aceptable de acuerdo a la capacidad.

PALABRAS CLAVE: Optimización, Calidad, Estadística

IMPLEMENTATION OF STATISTICAL PROCESS CONTROL THROUGH ELECTRONIC CONTROL EQUIPMENT TO MEET QUALITY STEEL STRIP

ABSTRACT

Currently the Quality of a process or product is an essential part in the development of any business to meet the needs and expectations of customers; building confidence that the products and services offered are competitive and profitable for society. Implement statistically valid metrics and tools to achieve the critical features of quality for products and / or services required. To monitor the process of the steel strip through electronic equipment, we must first have successfully measurable inputs and outputs, and identify critical process variables that may have an adverse impact on product characteristics through this collection information. Establishing a reliable database for monitoring, analysis and statistical stability for decision-making through performance indices CP , Cpk , Pp , Ppk , Ly , establishing product enhancements through Statistical Process Control[®] (SPC / CEP) and loss function[®], achieving: Minimize customer complaints of the special features, goal Set 3.4 PPMD, minimize costs and no quality loss function a good according to the capacity.

INTRODUCCION

En Calidad actualmente hay metodologías, Métricas y herramientas proporcionadas por los gurús de calidad y en este proyecto no podrían faltar. Nuestro problema son los procesos continuos para asegurar el Control Estadístico de Proceso es muy complicado ya que no se puede parar la línea para muestrear de manera representativa un rollo de 1.0 -1.5 km. De longitud y enrollado para su medición en espesor y ancho parando frecuentemente la línea para medir e ir construyendo la carta de control no es posible y más cuando es en caliente. Pero como garantizar que toda la cinta está dentro de la especificación requerida por el cliente. Entonces tenemos que hacer uso de los medios electrónicos de control y robots (software y hardware) para el muestreo y control de la variabilidad de la cinta Entre los indicadores que existen para una característica especial, dimensional están los índices de Ppk y Cpk ≥ 1.33 estos índices quieren decir cómo se mantiene la cinta en su habilidad real de proceso en todo lo largo y ancho de la misma. De nuestros clientes más importantes que solicitan esta característica son los del sector automotriz, obteniendo este indicador se puede inferir si podemos mantener el indicador y posteriormente lograr hasta 3.4 PPMD en la cinta y en lote de producción en la magnitud dimensional la cual en nuestra planta supera la producción 500 rollos cada 24 horas. Esta investigación se presenta de manera en la que se van necesitando los algoritmos del manual de referencia Statistical Process Control second edition de la AutomotiveIndustryActionGroup (AIAG) el cual nos va dando la pauta para ir haciendo la investigación para una aplicación que mejore las variables o factores de ruido que están impactando el proceso y por ende al indicador del producto.

REVISION LITERARIA

En esta literatura se menciona que es necesario un muestreo aleatorio y representativo del producto siendo que los indicadores se basan en la normalidad de los datos mencionando como prueba de normalidad el histograma y la prueba Anderson Darling. Esta prueba mide en qué grado los datos siguen una distribución normal. Mientras mejor se ajuste la distribución a los datos. Este estadístico significa Las hipótesis para la prueba de Anderson-Darling son:

H_0 : Los datos siguen una distribución normal. Hipótesis nula

H_1 : Los datos no siguen una distribución normal. Hipótesis alternativa

Si el valor p (cuando está disponible) para la prueba de Anderson-Darling es inferior al nivel de significancia seleccionado (generalmente 0.05 ó 0.10), concluya que los datos no siguen la distribución normal. Por lo que el indicador no es válido si se sigue calculando igual. El manual hace referencia a estudios propuestos cuando los datos son no normales se debe calcular el índice de habilidad de desempeño de proceso Ppk con las transformaciones las cuales son: Box Cox, Johnson, modelos unimodales.

METODOLOGIA

En este estudio se utilizó la metodología Define, Measurement, Analyses, Improvement, Control (DMAIC). Se define el problema no se aseguraba si los índices estaban bien calculados en calibre, Se estaban reportando muy altos los Cpk's y Ppk's algunas veces no se mantenían pasaban 1, 00 a 1, 33, 1,67 hasta > 5 en caso de los anchos Y aun así teníamos producto sospechoso o reprocesado en calibre. Iniciamos con la medición verificamos que los procesos de medición cumplieran con las pruebas de MeasurementSystemsAnalyses (MSA), Sesgo (Bias), Estabilidad, Linealidad, GR&R En los anchos se determinó que los datos son no normales por lo que se define utilizar el Ppk las transformaciones Johnson. Para analizar se tomó en consideración los productos en rollo de mejor cumplimiento en los índices Cpk,

Ppk y validados con el cliente, como se comportaron las variables del proceso, y como se comportaron cuando los índices bajaron en relación a la calidad del producto manufacturado.

Muestra

Tabla 1: Muestra de Espesores En Rollos de Laminación En Caliente

Cono	Espesor Nominal (Mm)	Limite Inferior de Especificacion (Mm)	Limite Superior de Especificacion (Mm)	Cantidad de Datos Por Rollo	Cantidad de Rollos Muestreados
6392	2.26	2.16	2.36	266	5
6567	6.35	6.20	6.50	280	5
6607	1.83	1.74	1.92	258	5
6609	2.03	1.88	2.18	263	5

En esta tabla se describe la muestra representativa de rollos de los cuales se obtuvieron los datos para realizar el análisis. El cono es un conjunto de rollos que tienen las mismas especificaciones, el valor nominal es aquel en el que se desea que se encuentre la media de las mediciones de cada rollo, los límites de especificación están dados por el cliente y no se deben alterar ni modificar para el estudio. Se dictaminó que de cada cono se obtuviera una cantidad de 5 rollos, los cuales se eligieron aleatoriamente. De cada cono se consideraron todos los datos arrojados por el software SIEMENS VAI para el estudio.

Tabla 2: Muestra de Espesores En Rollos de Laminación En Caliente, Aplicando Muestreo Aleatorio

Cono	Espesor Nominal (Mm)	Limite Inferior de Especificacion (Mm)	Limite Superior de Especificacion (Mm)	Cantidad de Datos Por Rollo	Cantidad de Rollos Muestreados
6392	2.26	2.16	2.36	100	5
6567	6.35	6.20	6.50	100	5
6607	1.83	1.74	1.92	100	5
6609	2.03	1.88	2.18	100	5

En esta tabla se describe la muestra representativa de rollos de los cuales se obtuvieron los datos para realizar el análisis. Por efectos de estudio, se emplearon los mismos rollos para observar la diferencia existente al calcular los índices de capacidad empleando todos los datos arrojados por el software SIEMENS VAI y al emplear un muestreo aleatorio. Se dictaminó que para unificar criterios se emplearía una muestra de tamaño $n=100$. Los datos fueron obtenidos utilizando un muestreo aleatorio simple, con este muestreo se creó otra base de datos a la que se le realizaron las mismas pruebas.

En la primera fase de comprobó que los datos obtenidos precedieran de una distribución normal. Se empleó la prueba de Anderson-Darling con un nivel de significancia de 5%.

En la segunda fase se calcularon los índices de capacidad C_p y C_{pk} , P_p y P_{pk} de los rollos seleccionados. Se emplearon los siguientes algoritmos para realizar los cálculos:

$$C_p = \frac{LSE - LIE}{6\sigma_c} = \frac{LSE - LIE}{6\left(\frac{R}{d_2}\right)} \quad C_{pk} = \frac{LSE - \bar{X}}{3\sigma_c} = \frac{LSE - \bar{X}}{3\left(\frac{R}{d_2}\right)} \quad C_{pk} = \frac{\bar{X} - LIE}{3\sigma_c} = \frac{\bar{X} - LIE}{3\left(\frac{R}{d_2}\right)}$$

$$P_p = \frac{LSE - LIE}{6s} = \frac{LSE - LIE}{6s} \quad P_{pk} = \frac{LSE - \bar{X}}{3s} = \frac{LSE - \bar{X}}{3s} \quad P_{pk} = \frac{\bar{X} - LIE}{3s} = \frac{\bar{X} - LIE}{3s}$$

Transformadas de Johnson: para los datos que no normales

$$S_B \quad w = \log\left(\frac{x}{(1-x)}\right) \quad \text{Con límites (Bounded)}$$

$$S_L \quad w = \log(x) \quad \text{Log Normal}$$

$$S_U \quad w = \sinh^{-1}(x) = \log(x + 1 + \sqrt{y^2 + 1}) \quad \text{Sin límites (Unbounded)}$$

Distribuciones multivariadas:

Un par de variables aleatorias X y Y tienen una distribución normal bivariada si, y solo si, su probabilidad de densidad está dada por:

$$f(x, y) = \frac{1}{2\pi\sigma_x\sigma_y\sqrt{1-p^2}} e^{\left(\frac{z}{2(1-p^2)}\right)}$$

$$\text{Donde } z = \left(\frac{x - \mu_x}{\sigma_x}\right)^2 - \frac{2p(x - \mu_x)(y - \mu_y)}{\sigma_x\sigma_y} + \left(\frac{y - \mu_y}{\sigma_y}\right)^2$$

$$p = \text{COV}(x, y) = \frac{\sigma_{xy}}{\sigma_x\sigma_y}$$

$$-\infty < x < \infty; -\infty < y < \infty; \text{donde } \sigma_x > 0; \sigma_y > 0$$

Para calcular el índice equivalente multivariado de P_{pk} la forma multivariada (e.g. $f(x, y)$) se suele determinar la proporción de no conformidad. En el caso bivariado esto debe ser:

$$p_z = \iint_{\text{zona de tolerancia}} f(x, y) dx dy$$

Este valor es convertido a valor z usando el inverso de la distribución normal estándar. Esto significa que el valor z es:

$$p_z = \int_{-\infty}^z e^{-\left(\frac{x}{2}\right)^2} dx \quad \text{Entonces, } P_{pk} = \frac{z}{3}$$

Un estimado de P_p puede encontrarse usando:

$$P_p = \frac{\text{área de especificación}}{\text{área est. 99.73\%}}$$

Donde la forma multivariada es usada para calcular el área estimada 99.73%. Por el motivo de que éste ajuste utiliza la variación total para calcular la proporción de no conformidad, no hay un análogo multivariado disponible para C_{pk} .

RESULTADOS

Aplicando la metodología descrita en la segunda fase se obtuvieron los índices de capacidad para cada rollo. La Tabla 3 representa los estadísticos descriptivos de los indicadores de capacidad. Haciendo una comparación del antes y después de realizar el muestreo aleatorio.

Tabla 3: Resumen de Resultados de los Indicadores de Capacidad

Cono	Promedio de Cpk (Antes)	Promedio de Cpk (Muestreo Aleatorio)
6392	3.84	1.90
6567	5.00	2.28
6607	4.45	1.57
6609	2.73	1.44

Esta tabla nos muestra la diferencia del indicador Cpk de los rollos que muestreamos anteriormente. La primera columna pertenece a los conos, recordemos que de cada cono se obtuvieron 5 rollos, para hacer más práctica la tabla se omitió los nombres de los rollos y generalizamos al poner solo en nombre del cono. Para realizar la segunda columna, se obtuvo el Cpk de los 5 rollos de cada cono y se calculó el promedio. Para la tercera columna se siguió el mismo procedimiento. Se observa claramente que los índices de Cpk disminuyeron considerablemente.

CONCLUSIONES

El presente proyecto nos ubica que aun en los sistemas electrónicos de control podríamos tener un margen de error significativo en los muestreos electrónicos y que aun cuando se controle en una nominal podríamos tener diferentes distribuciones y que el mismo manual de referencia del SPC segunda edición lo menciona de una manera sugerida el análisis multivariado. Por otra parte con este proyecto nos hemos dado cuenta que el nivel de detección de un sistema experto de control pudiera fallar si se desconocen las fuentes de interacción de las variables críticas del proceso y el desconocimiento de factores de ruido. El siguiente paso es el Multivariate Statistical Process Control(MSPC). Esto permite también tener la visión de que el indicador únicamente es un reflejo de lo que puede estar sucediendo en el proceso para mantenerse y mejorar la sigma es necesario determinar a través del análisis multivariado como podemos detectar una variación que desestabilice el proceso y que afecte la característica del producto y que el display del tracking electrónico pueda predecir la fuente de variación para su control.

Limitaciones :Dentro de las limitaciones las relevantes son: No todas las plantas de procesos continuos cuentan con un sistema experto de control, también que la mayor parte de las organizaciones que lo tienen piensa que el sistema experto puede hacer todo y que no puede haber limitaciones, No tener un pensamiento estadístico consciente de lo que está perdiendo por no tener un mejor control en el proceso.

ANEXOS

Anexo 1: Muestra las Perdidas Por No Mantener los Indicadores de Habilidad Real de Proceso

Cpk-Ppk	%Nivel de Confianza	Σ	Ppmo	Costos de Calidad
.95	95.43	1	690,00	No aplica
.98	98.74	2	308,537	No aplica
1.00	99.73	3	66,807	20-30% de /ventas
1.33	99.937	4	6,210	10-20%/ventas
1.67	99.999943	5	233	5-10%/ventas
2.00	99.9999998	6	3.4	<5%/ventas

Los resultados en tabla son obtenidos de diferentes artículos de internet con el enfoque y relación de los indicadores de habilidad real de proceso Vs. Costos de Calidad y Six Sigma.

RESUMEN

El escenario del actual mundo globalizado nos obliga a la mejora continua y por consecuencia al enfoque sistemático de la calidad, que es uno de los parámetros más importante que contribuye a través de sus herramientas a la optimización, en esta investigación se sitúan a las PYMES de nuestra región centro de Coahuila como sujetas de análisis para establecer áreas de oportunidad y mejorar sus procesos a través de las diferentes metodologías de la calidad que conforma la manufactura esbelta. El objetivo del estudio fue analizar la utilización de estas metodologías, así como el impacto en los resultados económicos de la empresa; y diseñar una herramienta que apoye su implementación y estandarización en los proceso; a mayor porcentaje de utilización para que esto contribuya al desarrollo y permanencia de la PYME, y así mantener las fuentes de empleo que de ahí se generan.

PALABRAS CLAVE: Optimización, Calidad, Manufactura Esbelta

ANALYSIS OF IMPACT ON THE APPLICATION OF THE METHODOLOGY OF LEAN MANUFACTURING SMEs IN THE REGION CENTRE OF COAHUILA

ABSTRACT

The stage of today's globalized world requires us to continuous improvement and therefore the systematic approach to quality, which is one of the most important parameters contributing through their optimization tools, in this research are located at SMEs our central Coahuila region as subjects of analysis to determine areas of opportunity and improve their processes through different methodologies quality that makes lean manufacturing. The aim of the study was to analyze the use of these methodologies, and the impact on economic performance of the company; and design a tool to support the implementation and standardization of the process; to high utilization rate for this to contribute to the development and persistence of the SMEs, and keep the sources of employment are generated there.

KEYWORDS: Optimization, Quality, Lean Manufacturing

INTRODUCCIÓN

La necesidad de investigar sobre este tema, se presenta debido a los retos que se enfrentan en las empresas para mantenerse vigente y con expectativas de permanencia a largo plazo y para su contribución económica en el estado. En muchas pequeñas y medianas empresas no se tiene conocimiento sobre las metodologías de calidad o los beneficios que aportaría esta a su empresa, por tal motivo decidimos realizar un análisis a empresas que implementan metodologías de calidad, para visualizar los resultados que estas obtienen y establecer la referencia para el resto de ellas. Muchas de las PYMES no conocen metodologías de calidad o los beneficios que estas aportan, por ende se decidió realizar este proyecto en diferentes empresas para luego obtener porcentajes e analizarlos, y así, conocer los beneficios que se pueden obtener al implementar dichas metodologías, para que se cree conciencia de optimización en las PYMES ya que no están exentas de que en ellas se apliquen métodos y técnicas enfocadas a la maximización de sus procesos o servicios. Los objetivos de este trabajo son visualizar los beneficios que las PYMES tienen posterior a la aplicación de técnicas de calidad y metodologías Esbelta, así como cuáles son las más convenientes según el entorno productivo de la región centro de Coahuila. En estos días, más que en otras ocasiones, la Manufactura Esbelta es una herramienta útil, válida y actual. El mundo de la pyme no la ha asumido como filosofía, tan sólo ha utilizado parte, es hora de incluir en todas las operaciones de nuestro negocio. Esta investigación se presenta organizada de la siguiente manera: En la sección literaria se plantean los argumentos que soportan el uso de la metodología Esbelta en las PYMES de la región centro de Coahuila, así como el posicionamiento de las mismas en la economía del estado y por ende en el país. Posteriormente se presenta la metodología que se utilizó para establecer las estadísticas en función del uso de las diferentes metodologías que se utilizaron, el impacto que estas tuvieron en la economía de la empresa así las áreas de oportunidad para la futura utilización de estas. Consecutivamente se presentan los resultados obtenidos del desarrollo de la investigación. Y finalmente las conclusiones del trabajo realizado, así como sus limitaciones.

REVISION LITERARIA

Las micro, pequeñas y medianas empresas (PYMES), constituyen la columna vertebral de la economía nacional por los acuerdos comerciales que ha tenido México en los últimos años y asimismo por su alto impacto en la generación de empleos y en la producción nacional. De acuerdo con datos del Instituto Nacional de Estadística y Geografía, en México existen aproximadamente 4 millones 15 mil unidades empresariales, de las cuales 99.8% son PYMES que generan 52% del Producto Interno Bruto (PIB) y 72% del empleo en el país. Para México las PYMES, son un eslabón fundamental, indispensable para el crecimiento de México. Contamos con una importante base de Micro, Pequeñas y Medianas empresas, claramente más sólida que muchos otros países del mundo, debemos aprovecharla para hacer de eso una fortaleza que haga competitivo al país, que se convierta en una ventaja real para atraer nuevas inversiones y fortalecer la presencia de productos mexicanos tanto dentro como fuera de nuestra nación. El instrumento de recolección de datos utilizado en esta sección fue diseñado por el organismo del gobierno federal encargado de coordinar las estrategias dirigidas al fortalecimiento La filosofía Manufactura Esbelta (Lean Manufacturing) es aplicada por lo general a empresas con alto volumen y baja variación. Sin embargo, la metodología de trabajo, también pueden ser aplicados a entornos de alta variación y bajo volumen, que son características centrales en las en pymes. Por alta variación, bajo volumen nos referimos a empresas que tienen de cientos a miles de referencias, con poco volumen de fabricación. Las órdenes no son predecibles y la planificación es complicada.

La implantación de Manufactura Esbelta es importante en diferentes áreas, ya que se emplean diferentes herramientas, por lo que beneficia a la empresa y sus empleados. Algunos de los beneficios que genera son: Reducción en costos de producción, Reducción de inventarios, Reducción del tiempo de entrega (lead time), Mejor Calidad, Menos mano de obra, Mayor eficiencia de equipo, Disminución de los desperdicios, Sobreproducción, Tiempo de espera (los retrasos), Transporte El proceso, Inventarios, Movimientos, Mala calidad, entre otras. (Ruiz de Arbulo López, 2007) La PYME tiene en la metodología Esbelta, una extraordinaria metodología para ser más competitiva, tiene que incidir en los siguientes puntos: Integrar la

cultura Esbelta dentro de su visión. Desarrollar un liderazgo basado en esa cultura. Desplegar esa cultura a todas las personas de la organización. Hacer participar a todo el equipo de la gestión. Tener planes y estrategias bien definidas. Conocer muy bien qué procesos aportan y cuáles no aportan valor. Hacer que esta cultura sea su día a día (E. Gutiérrez, 2011). (D. Jones, J. Womack, 1996)

METODOLOGÍA

En la región centro del estado de Coahuila existen operaciones de negocios de clasificación PYMES, de estas se trabajó con una muestra por conveniencia de 50 PYMES, mismas a las que se aplicó un instrumento elaborado para la evaluación del impacto cuantitativo. Lo anterior para dar respuesta a las incógnitas planteadas con enfoque cuantitativo; la información se obtuvo de la fuente a través de entrevistas presenciales con los involucrados, mediante la aplicación de un cuestionario conformado por nosotros. La confiabilidad de dicho instrumento se obtuvo a través del SPSS habiendo obtenido un coeficiente de .959 (Alpha de Cronbach) con ayuda del software estadístico SPSS; el valor de Alpha de Cronbach puede variar entre cero y uno y una aplicación general de este parámetro es que el instrumento es válido cuando su valor es por encima de .70; por consiguiente, el instrumento de medición cuantitativa se considera excelente considerando el criterio anterior de George y Mallery (George, D. y Mallery, P. 1995) quienes indican que si el alpha es mayor a 0.9, el instrumento es aceptable; en intervalo de 0.7 – 0.6, el instrumento es débil; entre 0.6 – 0.5 el instrumento es pobre; y si es mayor a 0.5, “n” es aceptable (Fernández, 2003).

RESULTADOS

Los resultados obtenidos con la información recolectada a través del instrumento aplicado a las pymes seleccionadas de la región centro de Coahuila nos indican que tienen capacidad para la implementación, ya que como derivación nos muestra que del conjunto de metodologías esbeltas aplican alguna de ellas; y en la aplicación de las mismas se involucran tanto a trabajadores como a encargados de área; la aplicación de la metodología nos remonta a seis o más meses de implementación; y con la aplicación el beneficio obtenido es mayormente económico, sin dejar de mencionar el beneficio en la cultura del trabajador y el beneficio en la eficiencia de sus procesos o servicios, y esto se obtiene aun con la aplicación limitada en áreas específicas y no en toda la empresa. También se muestra como resultado que el área de mayor aplicación de las metodologías de la Manufactura Esbelta es el área de producción, o donde se lleva a cabo el proceso del bien o servicio de la pyme, estas cuentan con personal capacitado interno, mismo que recibió adiestramiento para ello; la necesidad de la utilización de la Manufactura esbelta nació debido a la inquietud de los empresarios a maximizar sus niveles de eficiencia y minimizar los desperdicios, se visualiza en un panorama general el optimismo de la aplicación futura de las metodologías por parte de las pymes ya que proyectan la aplicación de las mismas para reforzar a los procesos que ya lo tienen establecido, así como manifiesta el énfasis en el parámetro de maximización de la productividad.

CONCLUSIONES

El presente trabajo se centra al estudio e impacto de la utilización de las metodologías de Manufactura Esbelta por las Pequeñas y Medianas Empresas de la región centro de Coahuila, por lo tanto su alcance es meramente regional. Los agentes empresariales involucrados en el desarrollo de la investigación requieren de un fortalecimiento educativo a través de un vínculo entre universidades o instituciones que puedan generar el soporte necesario para la implementación al cien por ciento de técnicas y/o metodologías que se creía eran exclusivas de las grandes empresas. El uso de las herramientas de manufactura Esbelta reflejan un cambio en la empresa en aumento de sus indicadores económicos y disminución de los desperdicios, a su vez fomentan la mejora continua, definitivamente se manifiesta una resistencia al cambio, misma que se trabaja constantemente para su disminución. En la región centro del estado de Coahuila existen los actores necesarios para llevar a cabo este fortalecimiento de las PYMES que se encuentran ajenas a este proceso y la búsqueda de áreas de oportunidad en las que ya se aplican; así como recomendar el planteamiento de las metodologías a las PYMES a través de módulos que manifiesten una sola técnica de aplicación con un

proyecto a un tiempo corto determinado y engranarlas para que en conjunto manifiesten la aplicación de una Manufactura Esbelta total, ya que el área de oportunidad está en la desinformación de herramientas de este tipo por parte de los pequeños empresarios y no en la capacidad de llevarlas a cabo e implementarlas con éxito.

H-OTPOT HERRAMIENTA DE CONVERGENCIA EN EL SISTEMA DE GESTIÓN DE LA CALIDAD BASADO EN LA NORMA ISO 9001:2015

Carlos Luna Gutiérrez, Norsort Company
Luis Enrique Ibarra Morales, Universidad Estatal de Sonora
Jesús Manuel Velázquez Castellanos, Universidad Estatal de Sonora

RESUMEN

Bajo una óptica de mejora, la administración tradicional evoluciona hacia la gestión, desencadenando un cambio de actitud en la solución de problemas basada en la prevención y predicción del riesgo, en la detección de fallas inesperadas de los procesos y en la obtención de información para la toma de decisión efectiva en escenarios potenciales con efectos irreparables para organización. El reto de las organizaciones en los próximos años se tornará en el marco de la transición a la certificación de la norma internacional ISO 9001:2015, denominada Requisitos para la implementación de un Sistema de Gestión de la Calidad (SGC). Al considerar las nuevas exigencias en los criterios de calidad internacional, las organizaciones interesadas en certificarse deberán incorporar como elementos de cumplimiento, la planeación estratégica, la administración del riesgo y el seguimiento efectivo de las acciones realizadas para la contención y detección de oportunidades. La implementación de un SGC conforme a la norma ISO 9001:2015 conlleva a la preparación de procesos al interior de la organización. Por tal motivo la herramienta administrativa H-otpot permite el seguimiento de las actividades desde lo operativo hasta lo estratégico, pensada para ser un vínculo perfecto entre los directivos y los dueños del proceso. Su contribución se encuentra enfocada en establecer estrategias de convergencia en los nuevos requisitos para los Sistemas de Gestión de Calidad.

PALABRAS CLAVES: Calidad, Sistema de Gestión de Calidad, ISO 9001:2015

H-OTPOT, APPLICATION SYSTEM FOR CONVERGENCE IN THE QUALITY MANAGEMENT SYSTEM BASED ON INTERNATIONAL STANDAR ISO 9001:2015

ABSTRACT

Based on Improve focus, the traditional Management moves to Management Improve, provokes a change in the aptitude for solve problems with prevention and prediction risk, detection unexpected fail and management information for effective decision in possible unfavorable sceneries of the organization. The organization challenge in the next years will be certificate ISO 9001:2015 transition, called Requirements of Quality Management System. For the update quality international criteria, the organization must incorporate important elements as the planning strategic; management risk, effective monitoring and measurement of the actions for reduce risk and detections opportunities. The Quality Management System implementation with ISO 9001:2015 needs planning organization internal process. Therefore, the System application H-otpot includes the monitoring of strategic and operative activities, designed as a perfect link between directors and process owners. The contribution is determined convergence strategies for the update requirements Quality Management System.

INTRODUCCIÓN

La Organización Internacional para la Estandarización, en sus siglas en inglés ISO, actualmente revisa los requisitos para un Sistema de Gestión para la Calidad con la finalidad de establecer un estándar acorde al entorno globalizado de las organizaciones. El futuro de la norma ISO 9001:2015 responderá a las tendencias de la competitividad y la compatibilidad con otros Sistemas de Gestión como son: ISO 14001 para la gestión ambiental, OHSAS 18001 para gestión en la seguridad y salud ocupacional, ISO 31000 para la gestión de riesgo, entre otras. Al considerar el análisis del Comité Internacional de la ISO/TC 176/SC 2/WG23 N065, la ISO 9001:2015 está enfocada en la administración del riesgo, esto tiene una implicación en el interior de las organizaciones sobre la evaluación sistemática de los problemas potenciales y las consecuencias por la falta de atención y seguimiento, también en una mayor preocupación para la implementación adecuada del enfoque basado en procesos, en el desarrollo de la hábito rutinario de las acciones preventivas y la detección de oportunidades para las organizaciones.

Según el documento de la ISO/TC 176/SC 2/N1147 1- ISO/CD 9001, “los conceptos que tienen cambios importantes de interpretación y aplicación son el enfoque basado en procesos, liderazgo, planeación, operación, evaluación y mejora” (ISO, 2013). El propósito de la actualización del estándar se enfatiza en la confianza y satisfacción del cliente, el aseguramiento de la constancia de la calidad de productos y servicios, el establecer una cultura proactiva para la prevención y mejora. y el éxito de las organizaciones con la aplicación de un enfoque basado en riesgo. Las metodologías aplicadas en la administración del riesgo en las organizaciones tienen escasos años de aplicación generalizada. Con el compromiso de aplicación de la norma ISO 9001:2015 en las organizaciones en primera instancia se promueve el registro del riesgo y oportunidades, y la utilización de un estándar complementario que establece los principios y orientaciones para la administración del riesgo, denominado ISO 31000.

La aplicación del estándar ISO 31000, en términos generales indica la manera de establecer el análisis y priorización de los riesgos y oportunidades, determinar la clasificación entre aceptables y no aceptables, diseñar planes de acción, operar la contención y eliminación de los riesgos, implementar la mitigación del riesgo cuando suceda, verificar la efectividad de las acciones y aprender de las experiencias para la mejora. Los retos de una organización comprometida en un SGC basado en la ISO 9001:2015 se focalizan no sólo en establecer los planes de acción para evitar o contener el riesgo, también en autoevaluar las condiciones factibles en las actividades de comunicación, compromiso, toma de consciencia, seguimiento y evaluación sobre los resultados obtenidos y los esperados. En este documento se establece una alternativa de aplicación para consolidar estas actividades, a través de la herramienta administrativa H-otpot que permite el seguimiento de las actividades desde lo operativo a lo estratégico, pensada como un vínculo perfecto entre los directivos y los dueños de los procesos. Su contribución en el marco de la Norma Internacional ISO 9001:2015 será apoyar a la alta dirección para la toma de decisión en el cumplimiento de los objetivos y planes, y los cambios de mejoras requeridos en el óptimo desempeño de la organización.

REVISIÓN LITERARIA

Generalidades de la ISO 9001, Sistema de Gestión de la Calidad

Para conocer con mayor precisión la norma ISO 9001 es necesario definir que es un sistema de gestión de la calidad, la cual “es la manera que una organización controla y dirige aquellas actividades relacionadas directa e indirectamente con la satisfacción de los requerimientos del cliente” (AENOR, 2013). La implementación del SGC debería ser práctica, sencilla y flexible en su aplicación y su implementación, y la inversión realizada deberá estar vinculada a los retornos después de conocer los impactos tangibles que tiene la organización en un periodo estimado de implementación y evaluación. Cuando hablamos de ISO 9001, es necesario comentar que la existencia de una serie de normas internacionales aplicadas a la Gestión

para la Calidad de las empresas conforme a la Organización Internacional de la Estandarización. Por ejemplo: ISO 9000:2005 especifica los fundamentos y vocabularios para la Gestión de la Calidad, ISO 9001:2008 (En proceso de actualización a la versión 2015) señala los requisitos para la implementación de un Sistema de Gestión para la Calidad, y la norma ISO 9004:2009 que orienta la gestión para el éxito sostenido. La norma ISO 9001 es la única sujeta a certificación, y la ISO 9000 y 9004 son consideradas pares consistentes que apoyan a una mejor implementación de un SGC.

Las series de norma ISO 9000 pueden aplicarse “prácticamente en cualquier compañía, desde fabricantes de productos hasta proveedores de servicios. No están diseñadas especialmente para un producto o industria determinada” (Aguilar, 2014). El esquema general está compuesto por requisitos y orientaciones que permiten establecer la gestión de la calidad fundamentada en los principios de la gestión de la calidad, el enfoque basado en procesos y la administración de la calidad total, su propósito principal radica en asegurar que los productos y servicios sean realizados de forma constante conforme a los criterios de aceptación definidos y acordados con el cliente. Estas normas son de observación general con aplicación en más de 70 países del mundo y con participación de especialistas técnicos, profesionales reconocidos y empresas a nivel mundial comprometidas con la calidad.

Actualización a la Norma ISO 9001

La exigencia de un mercado globalizado, las organizaciones requieren un SGC que mejore su productividad y competitividad, la Organización Internacional de la Estandarización preocupada por esta situación, cristalizó elementos de atención en la actualización de la norma ISO 9001. La metodología representó la integración de argumentos y experiencias de las empresas retomadas por el Comité ISO/TC 176 para primeramente tener el borrador de trabajo, el borrador del Comité, el borrador del Estándar Internacional, el borrador final del Estándar Internacional y por último el Estándar Internacional. Actualmente se encuentra aprobado el borrador final del Estándar y se espera su publicación de la norma en el segundo semestre del año 2015. “Los principales propósitos de actualización fueron el incremento de la diversificación de la norma ISO 9001:2015, el desarrollo del conocimiento y la tecnología, incrementar el interés de implementación y los cambios actuales en la industria” (ISO 9001, 2013). Los principales cambios realizados a la ISO 9001 fueron un énfasis en la administración basada en riesgo, lograr el valor agregado para las organizaciones y los clientes, incrementar la flexibilidad de la utilización de la documentación, y aplicación mayor a las empresas de servicio. El estándar mejora el compromiso sobre el enfoque al cliente, y establece las condiciones para la implementación de múltiples sistemas de gestión en la organización como por ejemplo: calidad, ambiental, seguridad, administración de la tecnología, entre otros. La estructura de la norma ISO 9001:2015 es totalmente diferente a la versión anterior (ISO 9001, 2013):

Alcance: Demostrar el cumplimiento de las especificaciones de los productos y servicios, cumplimiento legal, satisfacción del cliente y desempeño de los procesos eficaz.

Normas de referencia: La modificación a la norma ISO 9000:2015 sobre los fundamentos y vocabularios para un Sistema de Gestión para la Calidad.

Términos y definiciones: Énfasis en vocabulario que no fue señalado en las versiones anteriores como Riesgo y Desempeño.

Contexto organizacional: Situación actual de la empresa al interior y en su entorno, definición del alcance del Sistema de Gestión de la Calidad.

Liderazgo: La importancia de la dirección hacia responsabilidad de la alta dirección, la política de calidad, las responsabilidades y autoridades en el Sistema de Gestión de la Calidad.

Planeación: Acciones para determinar el riesgo y las oportunidades por medio de los objetivos y planes establecidos.

Soporte: Recursos, competencia, premiaciones, comunicación y documentación.

Operación: Planeación y control operacional, determinación de las necesidades del mercado y su relación con el cliente, control de los procesos, control externo de la provisión de bienes y servicios, desarrollo de bienes y servicios, producción de bienes y provisión de servicios, realización de bienes y servicios, no conformidad.

Evaluación del desempeño: Monitoreo, medición, evaluación y análisis, auditoría interna, y revisión por la dirección.

Mejora: No conformidad y acciones correctivas

La Importancia de la ISO 31000 Al Sistema de Gestión Para la Calidad Conforme a los Criterios de la ISO 9001:2015

Considerando el estándar de la ISO 31000, “las organizaciones de todo tipo y tamaño enfrentan factores e influencias, internas y externas, que crean incertidumbre sobre si ellas lograrán o no sus objetivos. El efecto que esta incertidumbre tiene en los objetivos de una organización es el riesgo. Todas las actividades de una organización implican riesgo. Las organizaciones gestionan el riesgo mediante su identificación y análisis y luego evaluando si el riesgo se debería modificar por medio del tratamiento del riesgo con el fin de satisfacer sus criterios. A través de este proceso, las organizaciones se comunican y consultan con las partes involucradas, monitorean y revisan el riesgo y los controles que lo están modificando con el fin de garantizar que no se requiere tratamiento adicional del riesgo” (ISO 31000,2009). La norma ISO 31000 brinda “los principios y las directrices genéricas sobre las actividades coordinadas para dirigir y controlar una organización con respecto al efecto de la incertidumbre sobre los objetivos. La implementación de un Sistema de Gestión de Riesgo considera la aplicación sistemática de las políticas, los procedimientos, las prácticas de gestión a las actividades de comunicación, consulta, establecimiento del contexto, identificación, análisis, evaluación, tratamiento, monitoreo y revisión del riesgo. Teniendo como propósito consolidar el enfoque de la organización para evaluar y eventualmente buscar, retener, tomar o alejarse del riesgo” (ISO 31000,2009).

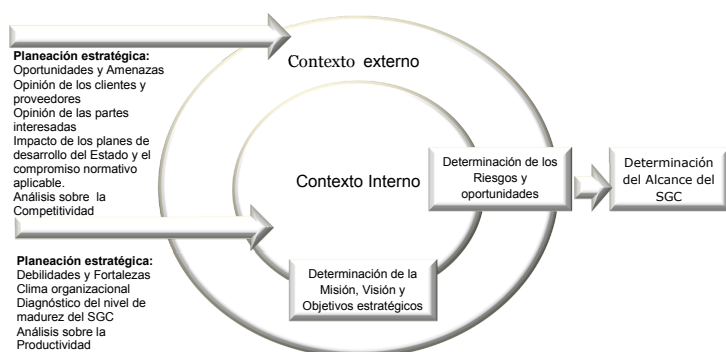

Según la Norma ISO 9001:2015, la gestión basada en riesgo debe ser un pensamiento automático para contemplar que las acciones que hacemos o no hacemos tienen efectos subsecuentes positivos o negativos. El riesgo debe ser considerado en el enfoque de procesos de la organización, desarrollo de acciones preventivas y la identificación de oportunidades en el SGC. El concepto de riesgo conforme a la norma ISO 9001 tiene el énfasis el evitar la incertidumbre en el cumplimiento de los objetivos de calidad, su aplicación se observará en la provisión de productos o servicios que cumplan sus expectativas y la percepción positiva en su consumo.

Tabla 1: Implicaciones de la Filosofía Organizacional Para la Administración del Riesgo (ISO/TC 176/SC 2/N 1147, 2013)

Requisito de la Norma ISO 9001:2015	Acciones
Alcance del Sistema de Gestión de la Calidad	<ul style="list-style-type: none"> • Demostrar el impacto del SGC en la provisión de productos o servicios acordes a las necesidades de los clientes. • La eficiencia del SGC en la percepción positiva del cliente. • La consideración en el SGC el cumplimiento legal aplicable a la organización, incluyendo los requerimientos explícitos e implícitos.
Contexto de la Organización	<ul style="list-style-type: none"> • Los cambios y tendencias del entorno de la organización. • Información de las partes interesadas. • Políticas de desarrollo del Estado con impacto en la organización. • Disponibilidad de los recursos y los posibles cambios tecnológicos requeridos en la organización. • Comprender la situación actual al interior de la organización.

Con las intenciones de la norma ISO 9001 en su versión actualizada, denota un cambio importante en el diseño del SGC, su implicación puede conllevar a muchas organizaciones en un replanteamiento de la orientación de su funcionamiento.

Figura 1: Consideraciones Para el Diseño del SGC Conforme a la Norma ISO 9001:2015

Como podemos observar en la figura anterior, algunos aspectos para su atención puntual podrán ser:

- Revaluación de la misión y visión de la organización.
- Consistencia entre los objetivos de calidad y los objetivos estratégicos de la empresa.
- Diseño de métricas pertinentes del cumplimiento de los objetivos de la organización.
- Equilibrio entre el desempeño de la organización y la administración de la calidad.

Con esta nueva forma de trabajo hacia la calidad, el SGC se convierte en un elemento estratégico que permite demostrar el éxito sostenido de la organización, eliminando el paradigma que el SGC es una actividad adjetiva. Por otra parte, en la definición de los riesgos dentro de una organización, es necesario referenciar los principios de la gestión del riesgo según la norma ISO 31000:

Gestión de riesgo sobre el valor agregado: Demostrar el cumplimiento y mejora de los objetivos.

Gestión de riesgo como parte integral en los procesos de la organización: Desempeño y cambios en los procesos y proyectos.

Gestión de riesgo para la toma de decisiones: Analizar las situaciones no deseadas y oportunidades potenciales con la finalidad de determinar alternativas de solución y acciones concretas de prevención.

Gestión de riesgo en situaciones inciertas: la importancia del proceso de decisión ante situaciones difíciles en la empresa, llegando a un consenso y una solución factible y viable.

Gestión de riesgo sistemáticamente: Considerar las acciones para controlar los riesgos que puedan afectar el cumplimiento de los objetivos de la organización.

Gestión de riesgo con información pertinente: Sistemas de información y seguimiento para la toma de decisiones oportuna.

Gestión de riesgo tolerable: Controlar el riesgo de tal manera que no afecte el funcionamiento de los procesos y el cumplimiento de los objetivos. Administrar la incertidumbre existente.

Gestión de riesgo en forma dinámica, responsable y comprometida al cambio: Una actitud al cambio bajo situaciones de riesgos, las acciones de prevención pueden promover cambios relevantes en los procesos de la organización.

Gestión de riesgo para la mejora y el crecimiento de la organización: Las acciones realizadas en la gestión del riesgo deberá promover la mejora continua de los procesos y con ellos impactar positivamente al desempeño de la organización.

La implementación del SGC basados en los cambios de la norma ISO 9001:2015 deberá considerar inicialmente la planeación estratégica de la organización como son la misión, visión y objetivos estratégicos, posteriormente la determinación y evaluación de los riesgos latentes y potenciales. Sin embargo, el éxito de la planeación del SGC basado en la gestión de riesgos dependerá los mecanismos de seguimiento de las acciones para contener las situaciones y oportunidades detectadas.

H-Ot Pot Una Herramienta de Convergencia Para el Seguimiento, Análisis y Toma de Decisiones Para El Sistema de Gestión de la Calidad de la ISO 9001:2015

La propuesta de norma ISO 9001:2015 tiene un mayor énfasis sobre la planeación y el aseguramiento de las actividades con respecto a los objetivos de la organización. En el requisito 6.2 sobre la planeación y logro de los objetivos de calidad, se requiere la consistencia con la política de calidad, la relevancia con la conformidad de los bienes y servicios orientados a la satisfacción del cliente, a la medición y al monitoreo de su cumplimiento. En el requisito 8.1, planeación y control operacional, la organización debe planear, implementar y controlar los procesos necesarios que incluyan los criterios, la implementación de controles y el registro de la documentación necesaria. Con referencia al requisito 8.2.4, comunicación con el cliente, se debe establecer controles necesarios para atender las retroalimentaciones y las quejas de cliente para comunicar a toda la organización los ajustes requeridos para cumplir con los criterios establecidos en los procesos. En el caso del requisito 8.3, planeación de los procesos, señala que para la realización del bien o servicio, la organización debe implementar procesos requeridos para la verificación, validación, monitoreo, medición, evaluación e inspección.

El requisito 8.6.1, control de la producción del bien y prestación del servicio, establece las condiciones de controlar las actividades para la implementación, seguimiento y medición cuando sea necesario. En el 8.6.2, información y trazabilidad, especifica la necesidad de identificar en cualquier momento las etapas en que se encuentra el producto o servicio, mediante un método adecuado de seguimiento de las actividades. Para el requisito 9.1, seguimiento, medición, análisis y evaluación, se requiere determinar y evaluar los riesgos de la organización. También establecer la forma de evaluar el desempeño de la organización, así como la eficacia de la operación del Sistema de Gestión de la Calidad. Para el requisito 9.1.2, satisfacción del cliente, se requiere un seguimiento sobre la retroalimentación y los procesos de atención antes, durante y después de la entrega del bien o el servicio. El requisito 9.1.3, análisis y evaluación de datos, se señala la

implementación de un método de control de los procesos para demostrar la eficacia del Sistema de Gestión de la Calidad. La norma ISO 9001 en la versión 2015 señala en el 67% de los capítulos, el control y seguimiento de las actividades referentes al producto, servicio o Sistema de Gestión de Calidad. Por tal motivo, para una transición o implementación adecuada deberá determinar un método que permita agilizar la disposición y hacer afectiva la utilización de la información para la toma de decisiones. El efecto negativo de la falta de control de la actividad e información, se refleja en incumplimiento en la entrega al cliente, impuestos no pagados en tiempo, cobranzas tardías, falta de prevención, falta de pagos a proveedores, y muchas actividades más que pueden afectar estructuralmente a un empresa. En cualquier organización se tiene expuesto a estas situaciones, sin embargo la alta gerencia sufrirá en la reducción de beneficios y toma de decisiones tardías.

Todas las actividades son importantes, en el ámbito de la calidad, las actividades que impactan al SGC debe ser controladas, evitando frases como -si hubiéramos realizado aquella actividad que considerábamos irrelevante esto no hubiera pasado-. Para determinar un método para mejorar el flujo de la información y el seguimiento de las actividades, se requiere saber ¿Quién tiene el Control de las Actividades? ¿Por qué no se realizan esas actividades que agregan valor en su debido tiempo? ¿Tendremos que tener todo sistematizado? ¿Qué puedo hacer para que no se le olvide hacer esta actividad a mi subordinado e inclusive a mí mismo? ¿Existirá esa súper secretaria que se siempre me recordará mi agenda de actividades, tanto a mí como a toda la organización? Y todas estas interrogantes se resumen a esta herramienta administrativa que nos ayuda en la toma de decisiones en la estructura organizacional y que tiene el nombre de H-otpot

H-otpot es un Sistema diseñado en WEB para mejorar el flujo de la información de una organización cuando se requiere establecer seguimiento remoto, permite evaluar los procesos para fines de cumplimiento y rendición de cuentas, y agiliza el proceso de toma decisiones basadas en cuatro factores principales información pertinente, análisis adecuado, contacto con los responsables correctos y conclusiones eficaces. En su aplicación cotidiana en las organizaciones, se determina una actividad por responsable, se establecen los tiempos inicio y conclusión de una actividad, se señalan las indicaciones críticas, y se especifica el resultado esperado. El Sistema H-otpot brinda seguimiento en el acceso, actividades parciales, avisos importantes, advertencia de cumplimiento, solicita justificación incumplimiento y se registra el historial de la productividad de los procesos. De esta manera la organización tiene evidencia para medir, brindar seguimiento y evaluar los procesos del SGC por medio de gráficos y tablas de desempeño para cada responsable.

METODOLOGÍA

Generalidades

La metodología fue fenomenología que significa “la investigación sistemática de la subjetividad, su meta es el estudio del mundo tal como se nos presenta en y, a través de la conciencia” (Bullington, 1984). Su descripción es cualitativa que consiste en la observación del fenómeno, explora, induce y describe, y es orientada a las actividades que se relacionan en el fenómeno, su clasificación es explicativa con la finalidad de responder las causas del fenómeno de estudios y centrar la explicación que ocurre y en qué condiciones se encuentra (Álvarez, 2008). El procesos fenomenológico de esta investigación se focaliza en conocer la opinión de las organizaciones que han utilizado el Sistema de H-otpot y tienen un Sistema de Gestión para la Calidad, realizar una revisión documental de la organización, el desempeño del sistema de gestión, la infraestructura y los sistemas de información con la relación los impactos en el seguimiento y medición de las actividades orientadas a procesos, productos y bienes, y por último la observación directa considerando los puntos de revisión de cumplimiento de la norma ISO 9001:2015 y las condiciones de revisión que marca la método de auditoría según la norma ISO 19011. Posteriormente con el análisis de la información anterior se lleva a una comprensión global del fenómeno, para la interpretación de cada una de las unidades de significado (niveles de convergencia) y decidir cuáles son más importantes para la investigación.

Algún énfasis considerado en el análisis para el diseño del Sistema H-otpot fue la detección de oportunidades de mejora por medio de cuestionamientos como: ¿Cuál es la parte del Sistema de Gestión de la Calidad que requiere la mejora? ¿Cuál es la percepción del Sistema H-otpot? ¿Se genera la información con respecto a la Norma ISO 9001?, entre otras.

Métodos de Investigación

Los métodos (Álvarez, 2008) utilizados fueron la observación directa en las organizaciones: Consiste en revisar el fenómeno de estudio por medio de los sentidos de la vista y el oído, su análisis se caracteriza de percepción e indagación sobre el comportamiento de la variable de estudio; Entrevistas no estructuradas con la alta dirección del Sistema de Gestión de la Calidad: Se realiza un conjunto de preguntas estructuradas y no estructurada sobre el sujeto de estudios o personas involucradas al fenómeno a estudiar; Revisión documental de los Sistemas de información y del Sistema de Gestión de la Calidad: Investigar acervo o fuentes información que contribuyan al análisis del fenómeno y el mismo desarrollo de la investigación. La aplicación del Sistema H-otpot fue en organizaciones que requieren un seguimiento y control de las actividades en los sectores de servicio, distribución y logísticas, e industria minera, todas las organizaciones se caracterizan por tener una estructura de matriz con sucursales o sitios que requieren tener información pertinente en tiempo real para la toma de decisiones.

RESULTADOS

Con la aplicación de la metodología y sus correspondientes métodos de investigación, se llegó primeramente al primer resultado que fue conocer desde un punto de vista documental, la modificación relevante de la norma ISO 9001:2015 en comparación a la versión anterior. El análisis de la información de la Organización Internacional para la Estandarización llevo a determinar la existencia de modificaciones en la estructura de los Sistemas de Gestión para la Calidad, principalmente en actividades estratégicas y operativas en el control de riesgo, liderazgo, control y seguimiento de los procesos que afectan la calidad de los productos o servicios. Por otra parte, como segundo nivel de análisis se detectó el impacto que tiene la norma ISO 31000 en los Sistemas de Gestión de la Calidad para reconocer los cambios en los procesos internos de las organizaciones para una implementación exitosa utilizando el nuevo estándar de calidad de la ISO, resaltando la orientación o reorientación de la planeación estratégica de las organizaciones bajo un enfoque de mejora, prevención de riesgos y detección de oportunidades de crecimiento y expansión. Al analizar las exigencias en los criterios de calidad de la norma ISO 9001:2015 con respecto a la operación del Sistema H-otpot se pudo observar y escuchar los comentarios positivos en la totalidad de las empresas con relación a la forma sencilla y fácil para brindar seguimiento a las actividades, la eficacia en la programación de actividades por tiempos, responsable y resultados, la utilización de medios electrónicos, y la forma de comunicar el desempeño de los procesos para las decisiones importantes en momento cruciales para las organizaciones.

En comentarios con los expertos en la organización la interacción del Sistema con el personal que tiene asignada una actividad permite una validación adecuada para aceptar y aprobar los resultados esperados, y permite visualizar los problemas y sus causas en cualquier parte del proceso con el propósito de realizar correcciones, acciones correctivas y preventivas, así como contener o reducir el riesgo sumergido por la empresa en cualquier ámbito de la organización. La flexibilidad del Sistema H-otpot destruye la premisa que la organización se adapta a los Sistemas, en este caso el Sistema contribuye a mejora la organización, comunicación y evaluación de resultados de las actividades operativas y estratégica. La siguiente etapa de este trabajo posteriormente a la certificación de las empresas por medio de la norma ISO 9001:2015 y considerando un tiempo relevante de implementación tanto del Sistema H-otpot y del Sistema de Gestión de Calidad, será la evaluación del impacto en la productividad, reducción de costos y tiempos de respuestas de las actividades de la organización.

CONCLUSIÓN

Los cambios realizados a la norma ISO 9001:2015 conllevan a una serie de modificaciones importantes en la planeación, desarrollo, evaluación y mejora de los procesos tanto operativos como estratégico, su eje principales se enfocan en el desarrollo humano y la eficiencia en los procesos de comunicación. La modificación de relevancia será el control y seguimiento de las actividades para la toma de decisiones de manera eficiente, esto implica que los sistemas de información deben ser pertinentes de tal manera que permita recabar, analizar, sintetizar y proporcionar información útil para la realizar acciones inmediatas cuando las actividades se encuentren fuera de control. El reto de transición a la norma ISO 9001:2015 será establecer un método validado para atender los cambios de la nueva versión. Para la situación antes señalada, el diseño del Sistema H-otpot tiene convergencia para atender las necesidades de control y seguimientos de las actividades debido a la opinión favorable de los encargados de la organización sobre la utilización del Sistema en lo práctico, sencillo, útil y flexible, independiente el tipo de producto, servicio o ramo de la empresa.

Juan Gabriel Vanegas, Fundación Universitaria Autónoma de Las Américas

RESUMEN

Este trabajo cuantifica el impacto de la eficiencia, el margen de utilidad y el apalancamiento financiero sobre el desempeño exportador de las comercializadoras internacionales de confecciones, haciendo uso de un análisis Dupont estocástico. En primera instancia se utiliza la simulación de Montecarlo para modelar el sistema Dupont, aproximando todas las cifras del Balance General –BG- y el Estado de Resultados –PyG– a las distribuciones de probabilidad de mejor ajuste y producir una cifra para explicar el rendimiento del patrimonio y de la inversión de este tipo de empresas y a través de un análisis de sensibilidad, mediante @Risk, se determina el impacto de las variables explicativas de eficiencia, margen y apalancamiento en el comportamiento del Índice Dupont proyectado.

PALABRAS CLAVE: competitividad, modelo Dupont, pymes, tipo de cambio, sistemas de lógica difusa, simulación de Montecarlo.

KEY WORDS: Dupont Model, SMEs, AHP, SM

INTRODUCCIÓN

En el plano macroeconómico la pérdida de competitividad implica un encarecimiento relativo de los bienes y servicios de origen, lo que dificulta su ingreso en el mercado exterior, en tanto que en el plano microeconómico se traduce en una reducción del margen de ganancia de las empresas, lo cual repercute en menos producción e inversiones, y alienta la importación sustitutiva de bienes y servicios locales (América Economía, 2011, Mayo). Por su parte, el análisis Dupont permite desarrollar un análisis simultáneo de eficiencia y rentabilidad y muestra cómo interactúan para determinar la rentabilidad sobre los activos –ROA– (Dehning & Stratopoulos, 2002), para ello relaciona el PyG, midiendo la capacidad de la empresa para convertir ventas en ganancias, y el BG, cuantificando la capacidad de la empresa para generar ventas a través de los recursos (inversiones en capital de trabajo y activos fijos) con el financiamiento. Así, el análisis propuesto en este artículo se realiza a nivel de sector y firma, y tiene por finalidad introducir el análisis estocástico en la cuantificación de la incidencia que tienen las variables explicativas del índice Dupont, en el potencial exportador de las pymes comercializadoras internacionales del sector confecciones del Valle de Aburrá en el periodo 2003-2012.

En este sentido, las firmas objeto de análisis son las pymes comercializadoras internacionales (CI), empresas que tienen anclados todos sus ingresos a la exportación de sus productos, y dónde los movimientos cambiarios determinan su potencial exportador. Se dispone de datos para 62 CI que reportan información financiera a la Superintendencia de Sociedades entre 2003 y 2012, esto facilita la construcción de indicadores anuales para todo el grupo de CI como un conjunto, y se deflactan las variables por IPC e IPP

para tener un conjunto homogéneo de información en términos reales (pesos de 2005). Esta información se procesa en el software @Risk, utilizado para modelar el índice Dupont Este artículo está estructurado en cinco partes incluida esta introducción. La segunda parte presenta una breve revisión de los conceptos del Modelo Dupont y del análisis multicriterio y sus aplicaciones en problemas similares; posteriormente, la parte 3, esboza un breve planteamiento de la vocación exportadora de Antioquia y los métodos multicriterio. En cuarto lugar se muestra el cálculo y análisis del indicador Dupont y de la Matriz Interna y se cierra, como quinto punto, con los resultados y las principales conclusiones.

Modelo Dupont

El modelo Dupont fue ideado por Donaldson Brown, y aplicado para diagnosticar las finanzas de la empresa automotriz General Motors. El éxito del ejercicio, se registra como el pionero de los procesos de reingeniería en una empresa, y se constituyó en el paradigma de control que impero hasta los años setenta. El sistema Dupont hace parte de la batería de razones financieras de rentabilidad, con gran aplicación para la evaluación del desempeño tanto económico como operativo de una empresa (León, 2008). Su fortaleza radica en que el sistema Dupont combina los principales indicadores financieros para determinar la eficiencia con que la empresa está utilizando sus activos, el capital de trabajo y el apalancamiento financiero (Cuevas Villegas, 2001). El sistema Dupont agrupa el margen neto de utilidades, la rotación de los activos totales y el apalancamiento financiero. En la revisión bibliográfica, se registran trabajos y aproximaciones al diagnóstico y medición de eficiencia financiera mediante el modelo Dupont (Fairfield & Yohn, 2001; Soares & Galdi, 2011; Dehning & Stratopoulos, 2002; Chang, Chichernea, & HassabElnaby, 2013; Botika, 2012), se encuentra la particularidad de que ninguno de los trabajos consultados utiliza procesos estocásticos para determinar las variables que componen el ROE y elaborar análisis de sensibilidad.

Cálculo del Índice Dupont

Teniendo claro el significado de las variables utilizadas por el sistema Dupont, se determina como es su cálculo de una forma sencilla mediante la siguiente ecuación (García, 2004).

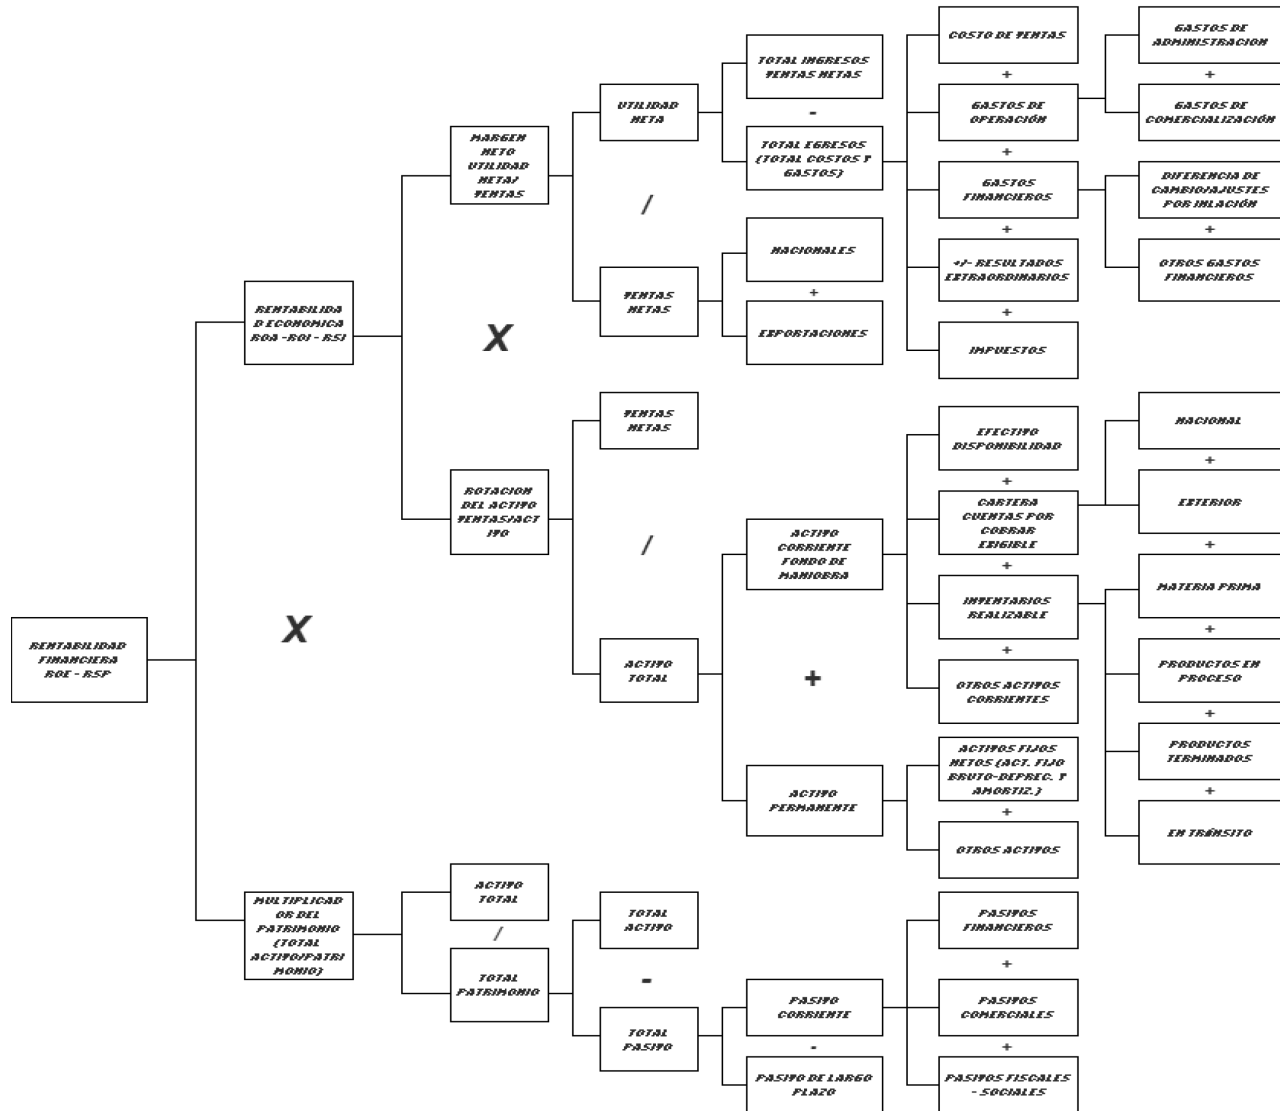

$$\text{Dupont} = (\text{Utilidad neta/ventas}) * (\text{ventas/activo total}) * (\text{apalancamiento financiero})$$

Se observa como el primer factor corresponde al margen de utilidad en ventas, el segundo factor representa la rotación de activos totales que refleja la eficiencia en la operación de los activos y el tercer factor considera el apalancamiento financiero. La filosofía del modelo simplifica la complejidad del análisis financiero estableciendo una relación entre el estado de resultados, determinando la capacidad de la empresa para traducir las ventas en utilidades, y el balance general, cuantificando el potencial de la empresa para generar ventas a través de los recursos utilizados como las inversiones en capital de trabajo, activos operativos y de producción y el financiamiento. Mediante este modelo es posible establecer las causas por las cuales se incrementan o disminuyen las utilidades (Fairfield & Yohn, 2001).

Con la incorporación de las distribuciones de probabilidad a los cambios porcentuales de las cifras de los balances históricos que componen el índice Dupont, se genera una herramienta de gestión de riesgo, al determinar la volatilidad de tales cambios, aportando a la batería de herramientas de gestión de riesgo, y reafirmando la premisa de que el problema no es que no existan herramientas para gestionar el riesgo o que no funcionen, sino que las empresas raramente usan las adecuadas (Hubbard, 2009). La **Error! Reference source not found.**, presenta una síntesis de las principales razones que subyacen en la obtención de un mayor enriquecimiento o pobreza de los accionistas se enclavan en un mayor y eficiente control de gastos que deriva en un mejor margen de utilidad neta; eficiente aprovechamiento de los recursos de la empresa incentivando el aumento de la rotación de los Activos; y por último, un uso eficaz de los recursos de terceros

por medio del financiamiento a base de deuda, mejorando el apalancamiento financiero, y considerando que se asume un mayor riesgo operacional o financiero.

Metodología, supuestos y planteamiento A continuación, se detalla la metodología desarrollada para la medición del indicador Dupont, mediante un análisis multicriterio. Construcción del modelo Dupont, recurriendo a la información histórica del periodo 2000/2011, se construyen las variaciones porcentuales de todas y cada una de las cuentas del Balance General y del estado de pérdidas y resultados. A cada serie, por medio del @Risk, se le halló la distribución de probabilidad teórica que mejor ajuste presentó, se incorporó el análisis de correlación al modelo y se proyectó el índice Dupont para el año 2012. Se analizaron 37 cuentas de balance y PyG y se hallaron 37 distribuciones de probabilidad en correspondencia a una por cuenta Ver Anexo 2. Los valores obtenidos se incorporan en la Matriz de evaluación interna de las variables del Índice Dupont y se procede al análisis de sensibilidad y la formulación de la ecuación de regresión que genera el índice Dupont.

Resultados y Discusión

Ilustración 1. Ajuste de Distribuciones de Probabilidad Para Las Cuentas del Activo Corriente

Fuente: Elaboración propia con datos de la Superintendencia de Sociedades (2013) y el uso del @Risk.

La Ilustración 1, permite observar los resultados del ajuste de distribuciones de probabilidad para las cuentas más importantes que conforman el Activo corriente; todas las demás cuentas se presentan en el Se acota, que se eligió entre varias distribuciones aquellas que cumplieran con la prueba chi-cuadrado y presentarán un p-value de mejor ajuste. Igualmente se incorporó el análisis de correlación entre las variables explicativas para la obtención del ROE mediante la descomposición del análisis Dupont. La

Ilustración 2, refleja el impacto de cada variable explicativa del modelo

Dupont en el ROE, se aclara que la lectura de cada variable es independiente, esto significa que se asumen las demás variables constantes; así la variable de mayor determinación o influencia sobre el ROE son los ingresos operacionales, que lo ubican en el intervalo [-6.18%; 7.14%] en función del valor asumido de acuerdo con su distribución de probabilidad de los ingresos. En términos simples, si los ingresos por ventas llegan al valor mínimo de crecimiento histórico –escenario pesimista–, el ROE llegará a un valor negativo de -6.18%. En condiciones normales, las ventas llegaran al crecimiento promedio histórico –escenario normal– y el ROE alcanzará el valor de 2.55%; y en el evento de que las ventas alcancen el máximo crecimiento histórico –escenario optimista– el ROE llegará a un valor de 7.14%. En su orden, el costo de las ventas se posiciona en segundo lugar y lo ubica en el intervalo [-5.88%; 7.23%]. Las demás variables presentan la misma interpretación de los ingresos operacionales y el costo de ventas.

Ilustración 2: Análisis de Sensibilidad del ROE En el Modelo Dupont

Fuente: Elaboración propia en @Risk con datos de Supersociedades (2013).

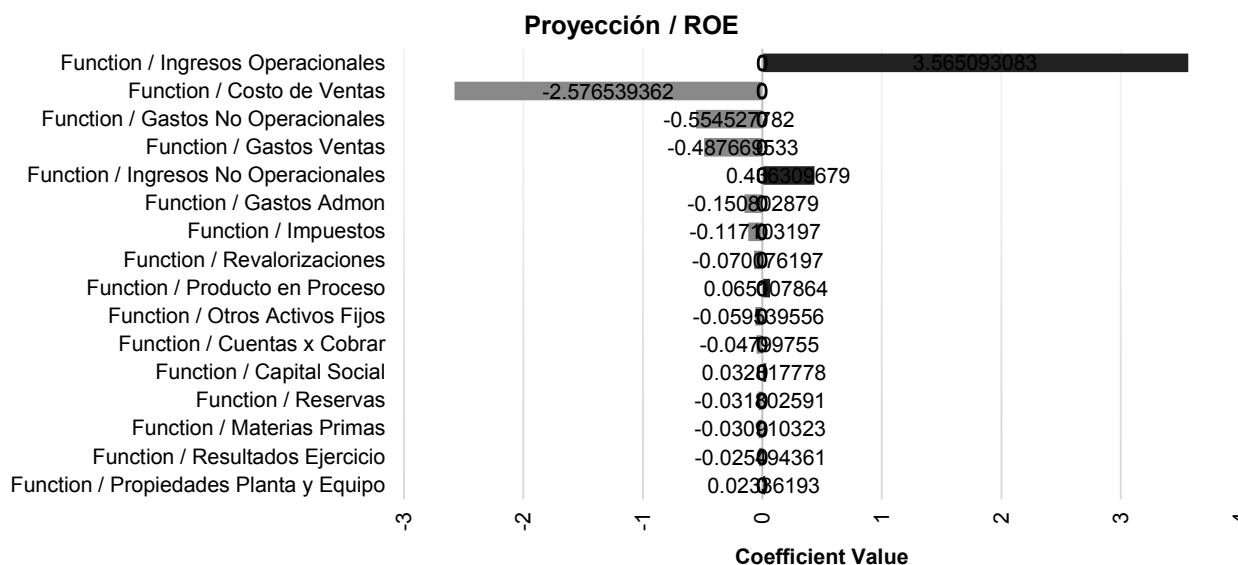

Por su parte, la Ilustración 3, presenta los coeficientes de regresión para la determinación del ROE; por medio de una estimación lineal de la forma:

$$\hat{R} = \beta_1 X_1 + \beta_2 X_2 + \dots + \beta_n X_n$$

Donde $X_{i=1...n}$, corresponde a las cuentas que componen el modelo Dupont, tales como: Ingresos Operacionales, costo de ventas, Gastos no operacionales, gastos de ventas, impuestos, entre otras. Se destaca como los ingresos operacionales presentan un coeficiente de 3.56 que significa que por cada incremento porcentual de las ventas el ROE se incrementa en 3.56 unidades porcentuales y presenta una relación directamente proporcional; en tanto que los costos presentan un coeficiente negativo de -2.57, indicando que un incremento porcentual de los costos, representan una reducción de 2.57 unidades porcentuales del ROE

El análisis anterior es recurrente para las variables involucradas en la determinación del ROE y presentadas en la Ilustración 3. Ahora, contrastando el valor estocástico del ROE y el alcanzado por el método multicriterio, se observa que existe una alta correlación positiva entre los resultados, una vez que un valor de 2.5% para el ROE es considerado por los empresarios como una debilidad del sistema.

Ilustración 3: Coeficientes de Regresión Para la Obtención del ROE Por Análisis Dupont

CONCLUSIONES

Los resultados de los análisis empíricos anteriores, contienen un mensaje importante para los empresarios y administradores de empresa que consideran diferentes estrategias para apoyar la búsqueda de una ventaja competitiva. El rendimiento de ROA de una empresa puede determinarse por el comportamiento de su eficiencia (rotaciones), la rentabilidad y el apalancamiento financiero. En este sentido, ("DuPont analysis of an IT-enabled competitive advantage," 2002), desarrollan una investigación donde concluyen que en los casos en que las medidas de eficacia y rentabilidad se mueven en la misma dirección o siguen la misma tendencia, el ROA responde en la misma dirección y el comportamiento del ROA en períodos donde las medidas de eficiencia y rentabilidad se mueven en direcciones opuestas se determinará por la dirección y la magnitud de estos cambios. Estos resultados se corroboran en este estudio para las empresas del sector de prendas de vestir en Colombia. Contrastando el valor estocástico del ROE y el obtenido por el método multicriterio, se infiere una fuerte relación directamente proporcional entre los resultados, una vez que un valor de 2.5% para el ROE es considerado por los empresarios como una debilidad del sistema. Ese análisis, también es corroborado por Restrepo y Vanegas (2013), que desarrollan una análisis de frontera de eficiencia entre los sectores más empleadores del País y donde concluyen que el sector de prendas de vestir ha sido ineficiente en la última década, reportando recursos ociosos en el sistema, éstos resultados incorporados al análisis Dupont, afectan la rotación de inventario de manera negativa y por tanto, según el análisis de sensibilidad de la Ilustración 2, reducen el indicador ROE, confirmando de manera empírica los resultados obtenidos en este trabajo.

LA AFINIDAD DE SOCIOS EN LA INTEGRACIÓN DE CLUSTER: CASO MIPYMES MORELIANAS

Gerardo Gabriel Alfaro Calderón, Universidad michoacana de san Nicolás de Hidalgo
Víctor Gerardo Alfaro García, Universidad de Barcelona

RESUMEN

En este documento presentamos una aplicación haciendo uso de recursos derivados de la lógica difusa y la teoría de afinidades, para agrupar MiPyMES. Los resultados presentan seis grupos de miembros muy relacionados que podrían realizar clústeres efectivos. La originalidad del trabajo reside en la intuitiva metodología presentada, que une los beneficios del Algoritmo de Pichat y las herramientas de lógica difusa con el fin de disminuir la incertidumbre en el proceso de toma de decisiones y optimizar los métodos de agrupamiento actuales que son impulsados principalmente por enfoques de prueba y error.

PALABRAS CLAVE: Afinidad, Mipymes, Algoritmo de Pichat, Cluster

AFFINITY PARTNER IN THE INTEGRATION OF CLUSTER: CASE SME'S MORELIANAS

ABSTRACT

In the present research we present an application based on resources derived from fuzzy logic and the theory of affinities in order to compile affine groups of SME'S. Results present six groups of highly related members that could perform clusters. The originality of the paper resides on the intuitive methodology that has been presented, matching the benefits of Pichat's Algorithm and the fuzzy logic tools in order to decrease uncertainty in the decision making process and improve current clustering methods which are mainly driven by trial and error approaches.

KEYWORDS: Affinity, SME'S, Pichat Algorithm. Cluster

INTRODUCCIÓN

Los desafíos que enfrentan los directivos de empresa son cada vez más exigentes, la globalización que se encuentra presente en casi todas las actividades significativas de negocio, ha dado como resultado una mayor intensidad y diversidad de competencia, lo que ha provocado una gran incertidumbre para las empresas y en mayor medida para las Micro, Pequeñas y Medianas empresas (MiPyMES), es por ello que estas empresas deben buscar nuevas alternativas a fin de lograr ventajas competitivas respecto a sus similares, posicionarse en los mercados globales como empresas de clase mundial. Con base en las experiencias internacionales se ha detectado que el desarrollo de agrupamientos industriales y de servicios (también conocidos como: clústeres, redes empresariales o sistemas locales de producción), alcanzan un alto grado de especialización, competitividad y eficiencia generando procesos dinámicos a través de los cuales es posible garantizar el éxito, son importantes instrumentos de política económica para modernizar y fortalecer ampliamente la competitividad de las firmas de una rama o sector económico. Uno de los principales problemas a resolver en la integración de un clúster son los integrantes que lo conformaran que mientras mayor grado de similitud o afinidad entre ellos mayor garantía de éxito, dado lo anterior a fin de identificar los integrantes de clúster recurrimos a la definición aportada por Gil A. y Kaufmann "Definimos

las afinidades como aquellas agrupaciones homogéneas a determinados niveles estructuradas ordenadamente, que ligan elementos de dos conjuntos de distinta naturaleza, relacionados por la propia esencia de los fenómenos que representan” (Gil Aluja, 1999). Por lo tanto el objetivo del presente trabajo es aplicar la teoría de las afinidades propuesta por Kaufmann y Gil-Aluja a fin de identificar subconjuntos de MiPyMES turísticos de acuerdo a su afinidad que les permita la conformación de clústers, a fin de incrementar sus ventajas competitivas.

REVISION DE LA LITERATURA

La Presencia de las Pymes En México

En México a fin de clasificar a las empresas de acuerdo a su tamaño se han adoptado criterios tales como al sector que atienden, el número de trabajadores, sus ingresos tal como se observa en la tabla 1. Para el país la existencia MiPyMES son un soporte invaluable en su economía ya que más del 99.80 % de todas las empresas establecidas en México corresponden a esta categoría, ocupan el 78.5% del personal de la planta productiva, su consumo en conjunto de este tipo de empresas es mayor que el de las consideradas grandes empresas y tienen una participación en el PIB del 52% (Secretaría de Economía, 2009)

Tabla 3: Clasificación de las Empresas en Mexicanas

Tamaño de la Empresa	Sector Económico	Rango del Número de Trabajadores	Rango del Monto de Ventas Anuales (MDP)	Tope Máximo Combinado (MDP)
Micro	Todas	Hasta 10	Hasta \$4	\$4.60
Pequeña	Comercio	Desde 11 hasta 30	Desde \$4.01 hasta \$100	\$93
Pequeña	Industria y Servicios	Desde 11 hasta 50	Desde \$4.01 hasta \$100	\$95
Mediana	Comercio	Desde 31 hasta 100	Desde \$100.01 hasta \$250	\$235
Mediana	Servicios	Desde 51 hasta 100	Desde \$100.01 hasta \$250	\$235
Mediana	Industria	Desde 51 hasta 250	Desde \$100.01 hasta \$250	\$250

En esta tabla se muestra la estratificación de empresas en México de acuerdo a los criterios sector económico, número de trabajadores e ingresos fuente: (Secretaría de Economía, 2009)

De acuerdo con los datos del censo económico 2009 (INEGI 2010), la conformación sectorial de las empresas mexicanas es la siguiente: el 11.70% pertenecen al sector industrial, 49.90% pertenecen al sector comercial y el 37.80% son del sector servicios, el personal ocupado de acuerdo a su estructura de acuerdo a la clasificación de su tamaño se observa en la tabla 2.

En México como en muchos otros países de América Latina (Saavedra, 2008), Asia, Estados Unidos y Europa, la pequeña y mediana empresa o MiPyME conforma la inmensa mayoría del universo empresarial. De ahí la importancia estratégica que éstas adquieren o deberían tener en términos del desarrollo económico nacional, regional, de lo anterior se hace necesario el fortalecimiento de las MiPyMES ya que enfrentan un ambiente globalizado e incierto, retos que solamente aquellas que sean capaces de generar ventajas competitivas logran mantenerse y crecer en el mercado.

Caracterización de las Mipymes Mexicanas

Las MiPyMES presentan diferentes características que se ven reflejadas en el funcionamiento tales como: Limitada posibilidad de acceso a recursos financieros dado por la falta de calidad de su información lo que propicia faltad de credibilidad de instituciones financieras (Melle, 2001).

Tabla 2: Caracterización del Sector Industrial Mexicano

Estratos de personal ocupado		Unidades económicas		Personal ocupado total		Producción bruta total	
		Absoluto	%	Absoluto	%	Absoluto	%
Total		436,851	100.0	4,661,062	100.0	4,876,999,255	100.0
Micro	0 a 2	239,989	54.9	348,733	7.5	27,177,590	0.6
	3 a 5	127,755	29.2	465,599	10.0	44,980,412	0.9
	6 a 10	36,412	8.3	266,381	5.7	42,486,333	0.9
Subtotal Microempresa		404,156	92.52	1,080,713	23.19	114,644,335	2.35
Pequeñas	11 a 15	9,315	2.1	117,544	2.5	31,534,173	0.6
	16 a 20	4,467	1.0	79,313	1.7	28,1863,07	0.6
	21 a 30	4,546	1.0	113,007	2.4	52,766,967	1.1
	31 a 50	4,021	0.9	157,333	3.4	86,297,066	1.8
Subtotal Pequeña Empresa		22,349	5.12	467,197	10.02	198,784,513	4.08
Medianas	51 a 100	3,897	0.9	280,135	6.0	218,982,789	4.5
	101 a 250	3,216	0.7	517,772	11.1	583,985,272	12.0
Subtotal Mediana Empresa		7,113	1.63	797,907	17.12	802,968,061	16.46
Total MIPYME		433,618	99.26	2,345,817	50.33	1,116,396,909	22.89
Grandes	251 a 500	1,660	0.4	581,128	12.5	761,813,187	15.6
	501 a 1000	1,014	0.2	711,497	15.3	861,640,227	17.7
	1001 y más	559	0.1	1,022,620	21.9	2,137,148,932	43.8
Subtotal Empresa Grande		3,233	0.74	2,315,245	49.67	3,760,602,346	77

En esta tabla se observa la el número de Unidades Económicas, Personal Ocupado Y la Producción de la estructura del Sector Industrial mexicano. Fuente: (Saavedra, 2013)

Incertidumbre: El entorno en el cual se desarrollan les crea incertidumbre ya que tienen la incapacidad de controlar significativamente su entorno. Reducida cuota de mercado, ocasionando la poca influencia en: la determinación de tecnologías dominantes, en el nivel de precios, en el comportamiento de los canales de distribución, comportamiento de proveedores, etc. El gestor-propietario, tiene una influencia determinante en el desempeño de este tipo de empresas, ya que su visión y valores influyen todos los aspectos de la organización y su comportamiento suele ser menos adverso al riesgo que lo usual de los gestores de la gran Empresa (Burns, 1996), (Shane & Venkataraman, 2000).

Habilidad de cambiar: Este atributo está directamente relacionado con sus posibilidades de sobrevivir y de alcanzar el éxito, debido a que, al no poder controlar los cambios que se producen en su entorno, debe poder adaptarse rápidamente a las nuevas circunstancias en que deba de competir. Innovación: Usualmente se considera que la MiPyME juega un papel determinante en la innovación. Investigadores de diversos países han demostrado que entre el 50% y el 60% innova, al menos de forma espontánea e incremental, y de esas empresas innovadoras, solo del 5 al 10% innovan de manera más formal (Julien P. 1998). Las MiPyMES al no contar con recursos para realizar actividades I+D, su flexibilidad, su habilidad de cambiar y ajustarse, y la rapidez de sus reacciones, junto con la estrecha relación que se establece entre el gestor-propietario con los clientes y proveedores le proporciona una ventaja en la detección y aprovechamiento de las oportunidades del entorno mediante esquemas de innovación muy ajustados a las necesidades de sus clientes (Burns P.1996), dichas innovaciones se consiguen a partir del conocimiento creado por su propia actividad competitiva.

Redes de relaciones de la empresa son estrechas lo que propicia confianza, reduciendo los costos de transacción además de facilitar la creación de acuerdos y redes entre empresas así como el parentizaje y la obtención de recursos adicionales (Gulati, 1998), (Wu, Wang, Chen, & Pan, 2008). De las características anteriores observamos que algunas de ellas le pueden generar a las MiPyMES conflictos para su supervivencia e incluso su desaparición, más sin embargo existen algunas que le pueden permitir lograr la construcción de ventajas competitivas no únicamente para sobrevivir sino que para fortalecerse y ser empresas de éxito: A fin de presentar una mayor competitividad en el mercado estas empresas han acudido al asociativismo empresarial como una alternativa para que las organizaciones hagan frente a los drásticos cambios del entorno y puedan ser competitivas dentro del mercado en el cual se desarrollan tal como menciona Druker (1997), las sociedades de cooperación o asociaciones en participación habrán de convertirse en la forma predominante de realizar negocios, facilitándole a estas empresa aumentar su

competitividad y rentabilidad. En México existe evidencia de diferentes formas de asociación tales como Empresas integradoras, Cadenas productivas, Alianzas estratégicas y Clusters, a fin de mejorar su capacidad competitiva en diversos aspectos: financiero, productivo, mercadológico, gestión del talento humano y tecnológico, reducción de costos, crecimiento, acceso a nuevos mercados e incrementar su eficiencia.

Conformación de Clusters

La alta presión competitiva originada por la globalización económica ha propiciado cambios organizacionales y acciones estratégicas tales como la cooperación o asociación entre empresas, denominados clúster o conglomerados, sustentados en la competencia mediante la articulación de potencialidades existentes en los ámbitos locales y regionales, de esta manera aprovechar el acceso a insumos, información y tecnología. (Porter, 1999) En México a través de la Subsecretaría de la Pequeña y Mediana Empresa, de la Secretaría de Economía,) a fin de fortalecer la competitividad de la MiPyMES ha generado el Programa de clústers constituyéndose este como una estrategia de desarrollo económico para consolidar a las empresas buscando: Aprovechar las vocaciones productivas regionales, estableciendo una visión estratégica de mediano y largo plazo. Fortalecer las cadenas productivas para convertirlas en detonadoras del desarrollo regional. Elevar los niveles de competitividad de las empresas mediante su integración en las cadenas productivas. Lograr una visión compartida de todos los agentes económicos involucrados en el desarrollo de agrupamientos empresariales. Vincular e instrumentar mecanismos de apoyo (estímulos fiscales, crédito, capacitación, tecnología e infraestructura), que faciliten el desarrollo de agrupamientos empresariales.

Gran cantidad de autores han contribuido al análisis y conformación de estos agrupamientos llamados clúster, Porter (1990), define un agrupamiento industrial como “*un conjunto de industrias relacionadas a través de relaciones comprador-proveedor, o por tecnologías comunes, los compradores comunes o los canales de distribución, y los lugares comunes de trabajo*”. Menciona dos tipos de agrupaciones: clústeres verticales y clústeres horizontales. Las agrupaciones verticales se hacen de las industrias que están vinculadas a través de relaciones entre compradores y vendedores, mientras que las agrupaciones horizontales, se logran por la existencia de las interconexiones entre empresas en un mismo nivel, con el fin de compartir los recursos aquí se incluyen las industrias en las que los otros tipos de elementos comunes (mercado, tecnología, mano de obra,...) prevalecen. En recientes definiciones se ha incluido la concentración geográfica como característica importante de un clúster Autores como (Jacobs & De Man, 1996), proponen tres definiciones relacionadas al concepto de clúster. El clúster regional, integrado por industrias espacialmente concentradas, el clúster sectorial, integrado por sectores o grupos de sectores, y el clúster de redes integrados por cadenas de valor, quienes identifican dimensiones clave que pueden utilizarse para definir grupos tales como:

La agrupación geográfica de la actividad económica. Relaciones horizontales y verticales entre los sectores industriales. Utilización de una tecnología común. Presencia de un actor central ya sea una gran empresa, centro de investigación, etc. La calidad de interconexión entre empresas o la cooperación entre éstas. La presencia de un actor central como elemento dinamizador para un clúster. Porter (2000), redefine el concepto de clúster en la que incorpora la concentración geográfica como elemento importante en el clúster definiendo a este como "concentraciones geográficas de empresas interconectadas, proveedores especializados, proveedores de servicios, empresas de sectores afines e instituciones asociadas en campos particulares que compiten pero también cooperaran ", definición que se adoptaremos en la realización del presente trabajo. Una herramienta fundamental en la conformación de clústeres es el “Modelo diamante” de Michael Porter, herramienta que permite evaluar la conveniencia o no de la implantación de un clúster. Según Porter, existen cuatro factores: Estrategia, Estructura y Rivalidad Empresarial, Condiciones de la Demanda, Industrias Relacionas y de Apoyo y Condiciones de Factores, elementos esenciales que deben estar alineados y ser similares en los destinos turísticos que conformen un clúster, ya que de lo contrario el beneficio de la cooperación que se espera de estos agrupamientos no se lograría y considerando que el

clúster a diseñar se concibe con encadenamientos horizontales y el competir por el mismo cliente propicia barreras que son necesarias superar tales como el comportamiento oportunista así como la rivalidad que surge entre los miembros del clúster Para la elección de los socios que deben conformar el clúster es necesario considerar aspectos tales como: su participación en el mercado, su experiencia en el sector, su capacidad de liderazgo y su participación en organizaciones y/o asociaciones empresariales, lo que permitirá garantizar la interacción, su colaboración y en consecuencia la evolución del clúster para el logro de los beneficios esperados tales como: Priorizar la colaboración sobre el de competencia. Fortalecimiento y mantenimiento de relaciones inter-empresariales de largo plazo. Actitud hacia la Innovación y mejoramiento continuo de productos. Autogeneración de ventajas competitivas . Orientación al logro de altos estándares de calidad. Elevado intercambio de información entre agentes participantes. Compromiso de las instituciones para apoyar el desempeño de los clústeres a través de infraestructura, marco legal, clima de negocios, etc.

Otra dinámica en la elección de los socios para integración de un cluster es considerar su afinidad competitiva, considerando la definición aportada por Rubio & Aragón (2008) citada por (Delgado R., Álvarez H., & Pedraza M., 2013) en la que sostiene que la “*competividad que representa la capacidad por parte de las empresas que les permite obtener un desempeño superior al de los competidores dando lugar a una posición competitiva favorable*”. Definición sustentada en que de recursos y capacidades de las empresas las que sustentan las ventajas competitivas y por lo tanto su éxito competitivo (Gautam, Barney, & Muhanna, 2004), por lo tanto un correcto análisis de los recursos y capacidades de la empresa nos permitira identificar el posible grado de asociación, e incorporando la metodología propuesta por Gil A. y Kaufmann (1999), podra garantizar la correcta elcción de los integrantes del cluster.

METODOLOGÍA

Debido a la complejidad de la naturaleza del fenómeno que tratamos de analizar, el uso de recursos derivados de la lógica difusa y la teoría de afinidades serán acercamientos que en general guiarán nuestro estudio. A continuación describiremos paso a paso la metodología utilizada para la agrupación de MiPyMES considerando 15 casos de éxito observados en nuestra investigación:

Tabla 5: Empresas Objeto de Estudio

Idem.	Empresa	Idem	Empresa
a	Acumuladores Michoacanos	i	Aceros trefilados de Morelia
b	Industrial de pinturas Volton	j	Alambres Profesionales
c	Maderas y diseños Gova	k	Emulsa
d	Mecanizado Industrial Guayangareo	l	Industrias Químicas
e	Muebles Tata Vasco	m	Manufactura Mexicana de Equipos
f	Fabri Muebles Nips	n	Michoacán de Plásticos
g	Industrial Fama	o	Productos Altek
h	Paneles y Aislantes		

En esta tabla se muestran el idem y las empresas consideradas en el estudio. Fuente: Elaboración propia

Adquisición de Variables: El éxito competitivo de las empresas ha sido explicado ampliamente en la literatura por los recursos tecnológicos, la innovación, los recursos comerciales, la calidad del producto o servicio, la gestión y dirección de los recursos humanos, la capacidad del directivo y la cultura de la organización, serán considerados como las variables de afinidad de socios en la conformación de Clusters incluiremos, a partir de sus características inherentes su evaluación a través de una etiqueta lingüística, evaluada entre 0 y 1, donde:

Tabla Etiquetas lingüísticas de evaluación

Etiqueta Lingüística		Etiqueta Lingüística	
1.0	Excelente rendimiento	0.4	Relativamente pobre rendimiento
0.9	Gran rendimiento	0.3	Pobre rendimiento
0.89	Muy buen rendimiento	0.2	Muy pobre rendimiento
0.7	Buen rendimiento	0.1	Peor rendimiento
0.6	Relativamente mejor rendimiento	0.0	Desastroso rendimiento
0.5	Ni buen ni mal rendimiento		

En esta tabla se observa el valor asociado al desempeño Fuente: Elaboración propia

En nuestro caso se obtiene la siguiente matriz de evaluación:

Tabla 5: Variables de Asociación

	Recursos Tecnológicos	Innovación	Recursos Comerciales	Calidad del Producto	Gestión de Los R.H.	Capacidad del Directivo	Cultura de la Organización
Acumuladores Michoacanos	0.80	0.80	0.80	0.90	0.80	0.8	0.9

Tabla de indicadores de variables adaptado a partir del trabajo empírico de la "Competitividad de la MiPyMES manufacturera de Moreliana" Fuente: elaboración con base en (Chauca, 2003)

Distancia Relativa

Para determinar la distancia relativa que se encuentra entre las variables evaluadas debemos recurrir a un concepto ya conocido, la Distancia relativa de Hamming. Para determinar tal distancia entre dos sets difusos, el procedimiento general es el de sustraer los valores existentes de cada nivel de criterios, añadir las diferencias en valores absolutos y finalmente dividirlos por la suma de los criterios escogidos. De tal forma, el resultado final será un número comprendido entre el 0 y 1. De tal forma que:

$$\delta(\tilde{A}, \tilde{B}) = \sum_{i=1}^n |\mu_{\tilde{A}}(x_i) - \mu_{\tilde{B}}(x_i)| \quad Ec (1)$$

$$\text{donde } x_i \in X, \forall_i = 1, \dots, n \text{ y } 0 \leq d(\tilde{A}, \tilde{B}) \leq n$$

Matriz de Distancias

Con los resultados obtenidos por la distancia relativa del Hamming, ahora procedemos a crear una matriz en la que se indica la relación simétrica y anti-reflexiva entre los elementos. En nuestro caso:

Tabla 4: Matriz de Distancia de Hamming

	a	b	c	g	e	f	g	h	i	j	k	l	m	n	o
a	0	0.20	0.14	0.06	0.08	0.08	0.08	0.06	0.08	0.18	0.08	0.20	0.04	0.04	0.18
b		0	0.06	0.22	0.20	0.24	0.16	0.22	0.16	0.10	0.12	0.24	0.10	0.62	0.62

o															0

En esta tabla se muestra la relación simétrica y anti-reflexiva entre empresa de estudio Fuente: Elaboración propia

Matriz de Similitudes

En este paso se crea otra matriz, conocida como la relación de similitud. Tal matriz representa la complementariedad a la unidad de la matriz de diferencias. En nuestra investigación:

Asociación de Máxima Similitud: Pichat Algorhythm

Con el fin de obtener las máximas asociaciones de similitud usaremos el Algoritmo de Pichat (Pichat, 1970). Los principales productos del algoritmo son sub-matrices, las cuales nos permiten identificar los principales grupos de destinos turísticos que revelan los mayores niveles de similitud. A continuación se detallan los pasos a realizar: El punto de partida proviene de la existencia o la creación de una relación de similitud Booleana. A partir de esa relación (matriz) se considera sólo la parte superior a diagonal principal. De la matriz, únicamente consideramos los ceros en cada fila, multiplicando los elementos de las columnas en las que se presentan ceros. Se procede a realizar una adición booleana del elemento de la línea con el último producto. Las adiciones tienen que seguir las siguientes reglas: el proceso excluye las líneas sin ceros. Durante el proceso de adición, ya sea que en la suma aparezca un elemento en dos términos y uno de ellos es aislado, la adición se sustituye por tal elemento. Por lo tanto: $a + abc = a$ (porque $a + abc = a(1 + bc) = a \cdot 1 = a$) *ec.*(2). Finalmente se realiza una adición de elementos. Para cada uno es necesario obtener el elemento complementario en relación con la referencia de los elementos. Cada uno de los elementos complementarios son las máximas sub-matrices de similitud.

Tabla 5: Matriz de Similitudes

	a	b	c	d	e	f	g	h	i	j	k	l	m	n	o
a	1.00	0.80	0.86	0.94	0.92	0.92	0.92	0.94	0.92	0.82	0.92	0.80	0.96	0.96	0.82
b		1.00	0.94	0.78	0.80	0.76	0.84	0.78	0.84	0.90	0.88	0.76	0.90	0.38	0.38

l												1.00	0.81	0.17	0.17
m													1.00	0.93	0.80
n														1.00	0.81
o															1.00

En esta tabla se observa la complementariedad a partir de la matriz de Hamming Fuente: Elaboración propia

En nuestro caso el Algoritmo se realizó utilizando un nivel de significancia del $\alpha = 0.80$, lo cual quiere decir que solo se tomará como parte del procedimiento, aquellos elementos que en la matriz de similitud excedan el valor de 0.80. Se obtiene la siguiente matriz binaria:

Tabla 6: Matriz Binaria

	a	b	c	d	e	f	g	h	i	j	k	l	m	n	o
a	1	0	1	1	1	1	1	1	1	0	1	0	1	1	0
b		1	1	0	0	0	0	0	0	1	1	0	1	0	0
c			1	1	1	0	1	1	0	1	1	0	1	0	0
d				1	1	1	1	1	1	0	1	1	0	0	0

j										1	1	1	0	0	1
k											1	1	1	1	0
l												1	0	0	0
m													1	1	0
n														1	0
o															1

Tabla binaria base para el algoritmo de Pichat Fuente Elaboración propia

Procedemos a desarrollar el algoritmo utilizando los pasos descritos antes en la siguiente ecuación:

$$S = (a + bjlo) \cdot (b + defghilno) \cdot (c + jlno) \cdot (c + flno) \cdot (d + jmno) \cdot (e + jlo) \cdot (f + jklo) \cdot (g + jlo) \cdot (h + jlo) \cdot (i + l) \cdot (j + mn) \cdot (k \cdot o) \cdot (l + mno) \cdot (m + o) \cdot (n + o) \quad Ec \dots 1$$

Desarrollando se obtiene:

$$S' = (ghikmn) + eghikmn + bckm + efghimn + ceghikn + ikmn$$

A modo de comprobación, se presentan las sub-matrices de cada asociación. En las cuáles es fácil observar que el total de los elementos excede el nivel de significancia de $\alpha = 0.85$.

AGREGACIÓN Y RESULTADOS

Como consecuencia de los resultados del algoritmo Pichat, los elementos más similares se agregan de la siguiente manera:

(g,h,i,k,m,n): Industrial Fama, Paneles y Aislantes, Aceros trefilados de Morelia, Manufactura Mexicana de Equipos, Michoacán de Plásticos

(c,e,g,h,i,k,m): Maderas y diseños Gova, Muebles Tata Vasco, Industrial Fama, Paneles y Aislantes, Aceros trefilados de Morelia, Emulsa, Manufactura Mexicana de Equipos

(e,g,h,i,k,m,n): Muebles Tata Vasco, Industrial Fama, Paneles y Aislantes, Aceros trefilados de Morelia, Emulsa, Manufactura Mexicana de Equipos, Michoacán de Plásticos.

(e,f,g,h,i,m,n): Muebles Tata Vasco, Fabri Muebles Nips, Industrial Fama, Paneles y Aislantes, Aceros trefilados de Morelia, Manufactura Mexicana de Equipos, Michoacán de Plásticos

(b,c,k,m): Industrial de pinturas Volton, Maderas y diseños Gova, Emulsa, Manufactura Mexicana de Equipos

(i,k,m,n): Aceros trefilados de Morelia, Emulsa, Manufactura Mexicana de Equipos, Michoacán de Plásticos

Estas MiPyMES han demostrado una alta afinidad en virtud de las variables propuestas. Podemos asegurar con un alto nivel de certeza que comparten aspectos comunes que podrían ser utilizados con el fin de crear sinergias entre ellos. No obstante lo anterior, más investigación se debe desarrollar en la creación de diferentes escenarios en los que sus afinidades podrían vincularse y ayudan al crecimiento de los sectores económicos, sociales y ambientales.

CONCLUSIONES

A través del proceso y la metodología prevista en el presente estudio, hemos obtenido las MiPyMES más similares, que comparten factores comunes. Mediante la asociación, organización y creación de sinergias entre estos elementos, los tomadores de decisión podrían aumentar la probabilidad de éxito. Al conocer los elementos más afines, el Estado debe ser capaz de orientar los recursos específicos para promover el desarrollo social y económico positivo para la región. Este análisis contribuye a la mejora de las economías de las ciudades emergentes y podría ser replicado en regiones similares asociar diversos elementos y aumentar los beneficios de los programas, planes y proyectos de atracción.

Jesús Igor Heberto Barahona Torres, Universidad de las Américas de Puebla

RESUMEN

El objetivo es conocer los diferentes segmentos de mercados en las entidades financieras de la Zona Metropolitana de Puebla, comprobando las variables que son sujetas de agrupación relativas a la percepción del servicio. Además, se analizarán el perfil de usuarios de cada segmento así como sus resultados por entidad financiera. Fueron entrevistados mediante un cuestionario 385 clientes de los 5 bancos con mayores activos en México. Los análisis muestran la existencia de diferentes perfiles con diferentes niveles de percepción del nivel del servicio. Los resultados revelan un distintivo particular en cada segmento de mercado mediante clientes por entidad financiera. Este tipo de datos ilustran con claridad una necesidad de implementación de estrategias de satisfacción en los bancos de la Zona Metropolitana de Puebla.

PALABRAS CLAVE: Segmentación, Satisfacción, Entidades Financieras

PERCEPTION OF CUSTOMERS WITH RESPECT TO THE SATISFACTION OF FINANCIAL SERVICES PROVIDERS AT PUEBLA'S METROPOLITAN ZONE: A SEGMENTATION APPROACH

ABSTRACT

The main objective is to know different segments of financial services providers, which integrate the market on the metropolitan zone of Puebla. The foregoing is achieved by grouping variables related with perception of the service. In addition, it was analyzed the profile of each specific segment and the results of each financial entity. A total of 385 customers of 5 most important brands on Mexican market, were asked to provide their feedback through a written questionnaire. Results show the existence of different profiles with different levels of perceptions regarding with a given level of service. It is also revealed, a particular distinctive on each segment through customer by financial service provider. In general these kinds of data clearly illustrate the implementation of strategies of satisfaction on financial entities of metropolitan zone of Puebla.

KEY WORDS: Segmentation, Satisfaction, Financial Institutions

INTRODUCCIÓN

Las instituciones financieras en México presentan grandes niveles de confrontación en la oferta de productos y servicios. Estos grandes movimientos se traducen en un alto nivel de competencia en el sector.

Aunque los trabajos de Morales et. al. (2013) señalan que el sector de la banca comercial en México se encuentra estable y con solidez financiera, no se contraponen a elevar el número de productos/beneficios ofrecidos en el sector lo que se puede traducir a un indicador con altos niveles de competitividad (Pineda, 2009). En este sentido, los bancos comerciales en México con mayor número de activos son los que se representan en la siguiente Tabla 1.

Tabla 1: Activos de Bancos Comerciales En México

Concepto	Banamex		Banorte/Ixe		BBVA Bancomer		HSBC		Santander

Fuente: CNBV (2014). Balance general, activos producidos netos por institución. Cifras en millones de pesos.

A pesar de que son las cinco entidades financieras en México con mayor número de activos, también son las que tienen mayor número de quejas de los usuarios. En los últimos años se ha detectado un incremento en las quejas de los usuarios de BBVA Bancomer, Banamex, Santander, Banorte/Ixe y HSBC (constituyendo los 5 entidades con mayores quejas en orden de importancia); en general del año 2012 al 2013 se pasó de 2 millones 54 mil 887 a 2 millones 221 mil 590 quejas en México (González, 2013). Por lo tanto esta investigación se inspira en los trabajos de Kromidha y Kristo (2014) donde señala que la administración de la calidad percibida y la satisfacción del consumidor son un eje fundamental para los gerentes de los bancos.

REVISIÓN LITERARIA

Orientación al Mercado

El rol del cliente como centro de la estrategia empresarial ha sido uno de los principales fundamentos en todas las áreas de actividad económica. Según Valenzuela y Villegas (2013) señalan que las organizaciones deben de poner mayor énfasis en las acciones del personal de ventas/marketing hacia los clientes. Estos mismos autores señalan que el deber de la alta dirección es poner en el centro al cliente del valor al cliente (lo que el cliente más valora de la relación, cómo lo jerarquiza y pondera).

Percepción y Satisfacción del Cliente

Este valor del cliente está sujeto de acuerdo a la percepción del cliente, definida como el proceso de selección, organización e interpretación de los estímulos para formar una imagen significativa y coherente del mundo (Schiffman y Kanuk, 2005). Por lo tanto se llega a la determinación que la satisfacción del cliente depende del resultado que se percibe de un producto en cuanto a la entrega de valor en relación con las expectativas del comprador. Si el resultado del producto no alcanza las expectativas previstas, el comprador quedará no satisfecho o insatisfecho. En cambio, si el resultado coincide con las expectativas, el comprador quedará satisfecho. Finalmente si el resultado rebasa las expectativas, entonces el comprador

quedará más que satisfecho (e.g., Kotler y Armstrong, 2003; Centros Europeos de Empresas Innovadoras de la Comunidad de Valencia, 2008; Dudek-Burikowska y Szewieczek, 2008).

Segmentación de mercados: La segmentación del mercado es definida como la acción de dividir un mercado en grupos distintos de compradores, con base en sus necesidades, características o conducta, y que podrían requerir productos o mezclas de marketing distintos según Kotler y Armstrong (2007). No obstante las organizaciones deben de detectar sus puntos clave del negocio para segmentar de acuerdo a las variables más importantes que le dan valor a sus clientes, por lo que sin duda la estrategia de segmentación por sí misma constituye la decisión más importante del marketing (Staton, Etzel y Walker, 2000). De acuerdo con Llorens (2004) las entidades financieras deben de trabajar un modelo de “bajo demanda” que se entiende por pasar a ofrecer ciertos servicios y productos a cierto segmento de mercado. Este autor da importancia elevada a que el reto por el cual se debe de enfrentar cualquier entidad financiera es a elegir los segmentos a los cuales se decide atacar.

Antigüedad del cliente: Por otro lado, la antigüedad del cliente se puede asemejar como una de las partes y componentes de la lealtad comportamental, pero está siempre debe de darse cuando el cliente cuenta con una satisfacción suficiente positiva de acuerdo al servicio percibido (Panther y Farquhar, 2004). En el mismo sentido, los estudios de Valenzuela (2010) señalan que la orientación al cliente se relaciona positivamente con el aumento del valor de tiempo de vida del cliente, por lo que a mayor antigüedad mayor lealtad comportamental y por ende mayor satisfacción en el servicio. Esto refuerza la línea de la perspectiva comportamental medida a través del compromiso de los consumidores a usar un proveedor de servicios preferido a pesar de la existencia de ciertas barreras (e.g., económicas, ubicación, etc.) (Ko De Ruyter et al., 1998).

METODOLOGÍA

En primera instancia esta investigación pretende identificar y caracterizar los diferentes tipos de clientes de las entidades financieras de acuerdo a su percepción en el servicio que recibe respecto a la satisfacción. Posteriormente es importante identificar los diferentes segmentos de acuerdo a su nivel de servicio en la variable de satisfacción. De acuerdo con los objetivos perseguidos las hipótesis estuvieron formuladas en orden de importancia:

H1: Los clientes que cuentan con mayor satisfacción en el servicio de las entidades financieras de la zona metropolitana de Puebla son las entidades con mayor número de activos.

H2: Existen diferentes tipologías de clientes de acuerdo a la evaluación del nivel de satisfacción en la zona metropolitana de Puebla en las entidades bancarias.

De acuerdo con los objetivos propuestos se seleccionaron 385 clientes de diferentes bancos comerciales ubicados en la zona metropolitana de Puebla. Cumpliendo una representatividad de la población a un nivel de confianza de 95% y un $\pm 5\%$ de error de muestreo. El cuestionario contiene preguntas relacionadas a la satisfacción de los clientes de entidades financieras. Las preguntas de satisfacción están direccionadas al nivel de percepción del servicio como: es agradable hacer negocios en la entidad, realización de servicios especiales, prestación clara y razonable del servicio y realización satisfactoria del trabajo. Por otro la línea del producto real esta direccionada a los aspectos como: comodidad, mejores tipos de interés, conocimiento del producto, conocimiento de la empresa de las necesidades de los clientes. Y por último el producto aumentado está encaminado a los ítems de: tratos especiales más ventajosos, servicios especiales, trato prioritario en las colas, servicio más rápido, niveles de servicio superiores y ofrecimiento de nuevos productos.

Tabla 2: Ficha de Investigación

Universo	Número de Habitantes de la Zona Metropolitana de Puebla. (2'728,790)*
Unidad muestral	Clientes de las entidades
Ámbito geográfico	Zona metropolitana de Puebla. Ciudades principales del levantamiento: Puebla, San Pedro Cholula, San Andrés Cholula, Tlaxcala.
Método de recogida de la información	Encuesta personal
Encuesta	Escala de Likert (1-5), donde: 1 Totalmente en desacuerdo, 2 Bastante en desacuerdo, 3 Ni de acuerdo ni desacuerdo, 4 Bastante de acuerdo y 5 Totalmente de acuerdo. 13 ítems.
Lugar de realización de la encuesta	En entidades financieras de los 5 bancos con mayores activos en México. BBVA Bancomer, Santander, Banamex, HSBC y Banorte.
Tamaño de la muestra	385 cuestionarios válidos. Nivel de confianza 95% y $\pm 5\%$ error de muestreo.
Ubicación de la muestra: número de clientes por tipo de banco.	BBVA Bancomer: 77 Santander: 77 Banamex: 77 HSBC: 77 Banorte: 77
Procedimiento de muestreo	No probabilístico. Muestreo por cuotas. Primera etapa cuota por entidad financiera 77 elementos. Segunda etapa por conveniencia cumpliendo el filtro de cliente por entidad. De los 77 elementos se tomaron como mínimo 4 establecimientos diferentes de una misma marca dentro del ámbito geográfico.
Fecha de trabajo de campo	Septiembre-Octubre 2014

Fuente: Elaboración propia.

Para esta encuesta se aplicó el Alfa de Cronbach dando .892 (13 ítems) por lo cual según Hair et. al. (1999) existe una alta fiabilidad en la encuesta.

Análisis Factorial

A continuación, para analizar las posibles diferencias entre los segmentos de mercados, se aplicaron diferentes fases para precisar las características del segmento. Se motivó a realizar un análisis factorial para reducir los ítems de la satisfacción del servicio, este análisis se muestra en la Tabla 5.

Tabla 5: Matriz de Componentes Rotados

	Variable 1	Variable 2	Variable 3
	<u>Prioridad en el servicio</u>	<u>Servicio cómodo</u>	<u>Servicio y rapidez</u>
Tratos especiales más ventajosos	.613	.461	.086
Comodidad en las operaciones	.189	.659	.355
Mejores tipos de interés	.357	.514	.288
Hacer negocios con mi entidad es agradable	.285	.617	.401
Realizan servicios especiales para mí	.720	.122	.366
Conozco lo que puedo obtener	.367	.430	.415
Trato prioritario en las colas	.654	.135	.408
Prestación clara y razonable del servicio	.232	.583	.511
Servicio más rápido	.247	.406	.625
Niveles de servicio superiores	.403	.339	.576
Realizan bien su trabajo	.101	.501	.654
Contactan para ofrecerme nuevos productos	.274	.063	.623
Conocen mis necesidades	.462	.175	.599
Interacciones de rotación	.340	.376	.562

Método de extracción: Análisis de componentes principales. Método de rotación: Normalización Varimax con Kaiser. La rotación ha convergido en 11 rotaciones. Elección de nombres de variables arbitrario. Fuente: Elaboración propia

Análisis de Clúster

Como se puede observar en la Tabla 6 los segmentos de mercados carecen algunos aspectos en relación al servicio que se percibe en la entidad financiera. Para el segmento 1 la estrategia de mercadotecnia más adecuada será la de implementar servicios especiales y una presentación clara/razonable del servicio. Para el segmento 2 se recomienda mayor atención en los servicios especiales, traducido en personalizar el servicio. Por último para el segmento 3 tratos más ventajosos (mayor atención por parte del banco) y tener algún incentivo en un servicio especial y contacto en ofrecer nuevos productos. Este último segmento necesita una estrategia de publicidad y promoción efectiva.

Tabla 6: Centro de Conglomerados Finales

	Segmento 1	Segmento 2	Segmento 3
Tratos especiales más ventajosos	2.31	4.16	2.92
Comodidad en las operaciones	2.77	4.40	3.53
Hacer negocios con mi entidad es agradable	2.57	4.16	3.42
Realizan servicios especiales para mí	1.71	3.98	2.64
Trato prioritario en las colas	2.47	4.36	3.47
Prestación clara y razonable del servicio	2.21	4.30	3.44
Servicio más rápido	2.55	4.37	3.70
Realizan bien su trabajo	2.28	4.20	3.18
Contactan para ofrecerme nuevos productos	2.31	4.16	2.92

Fuente: Elaboración propia.

A continuación en la Tabla 7 se ofrecen la identificación con características demográficas para distinguir a los clientes de cada segmento de mercado.

Tabla 7: Identificación de los Segmentos de Mercados

	Segmento 1	Segmento 2	Segmento 3
Número de elementos	116	123	146
Antigüedad	Menor a 6 meses (8.6%) Entre 7 y 11 meses (6.0%) Entre 12 y 35 meses (30.2%) Más de 3 años (55.2%)	Menor a 6 meses (1.6%) Entre 7 y 11 meses (6.5%) Entre 12 y 35 meses (30.1%) Más de 3 años (61.8%)	Menor a 6 meses (6.2%) Entre 7 y 11 meses (1.4%) Entre 12 y 35 meses (36.3%) Más de 3 años (56.1%)

Fuente: Elaboración propia.

CONCLUSIONES

El principal objetivo de esta investigación es identificar los diferentes tipos de clientes en relación al servicio percibido en las entidades financieras en la zona metropolitana de Puebla. Esto se logró con base en el análisis factorial (reducción de factores) y el análisis de cluster. Los resultados de este estudio proporcionan hallazgos muy importantes para el sector bancario en relación a las estrategias de mercadotecnia. Se puede apreciar en el análisis descriptivo de medias la entidad que cuenta con mayor satisfacción por parte de los clientes es Banorte (3.58) seguida de HSBC (3.41), por lo que se rechaza la H1 donde los bancos que cuentan con menor activos son los que tienen mayor percepción de satisfacción por parte de los clientes. Para llegar a definir los segmentos de mercados se incluyeron tres fases. En primera instancia se incluyeron ítems tales como: Tratos especiales más ventajosos, comodidad en las operaciones, mejores tipos de interés, hacer negocios con mi entidad es agradable, realizan servicios especiales para mí, conozco lo que puedo obtener, trato prioritario en las colas, prestación clara y razonable del servicio, servicio más rápido, niveles de servicio superiores, realizan bien su trabajo, contactan para ofrecerme nuevos productos, conocen mis necesidades.

Posterior al análisis factorial se tomó los ítems con mayores cargas, para este caso fueron: Tratos especiales más ventajosos, comodidad en las operaciones, hacer negocios con mi entidad es agradable, trato prioritario en las colas, prestación clara y razonable del servicio, servicio más rápido, realizan bien su trabajo, contactan para ofrecerme nuevos productos. Por lo cual se paso de tener 13 ítems a solo 8. Por lo cual se identificaron tres variables a estos ítems de acuerdo con la carga, tal como: Prioridad en el servicio, servicio

cómodo y, servicio y rapidez. Lo cual uno de los factores clave del éxito para estas identidades debe de estar enfocada en estos 3 aspectos.

En una segunda fase se ingresaron las 3 semillas (arbitrariamente) al análisis de cluster para agrupar e identificar segmentos que comparten una misma base conductual sobre la satisfacción de su entidad. Para este caso como no se tiene información de la ponderación y rentabilidad de los clientes, se optó por un análisis de conglomerados k-medias (no jerárquico). En la tercera y última fase se identificaron las características demográficas para cada uno de los segmentos, para ayudar a la evaluación del segmento meta de cada entidad financiera. En formas generales se validan los resultados de la investigación de Valenzuela y Llanos (2008) en que los clientes bancarios necesitan mayor atención en aspectos como percepción del servicio y tiempo del servicio. Por lo tanto se acepta H2 donde los clientes tienen diferente tipologías entre ellos incluyendo mayoritariamente la identificación y pertinencia en la entidad bancaria.

El segmento 1 se caracteriza por ser mayoritariamente de BBVA Bancomer, femenino y de 25 a 34 años. El segundo segmento se encuentra regido por clientes de Banorte, masculino y de 35 a 44 años. Y el tercero por Santander y de 25 a 34 años. Todos los segmentos se encuentran conducidos por la antigüedad mayor a 3 años, casado (a) y de último grado de estudios nivel licenciatura. Es decir, con estos hallazgos nos da la pauta de poder analizar los segmentos de acuerdo a la edad y género, ya que en este momento no es posible establecer una declaración causal sobre estos dos tipos de características de la muestra/población. En definitiva, los resultados ofrecen un conocimiento más cercano de los diferentes tipos de clientes que enfrentan los bancos comerciales en la zona metropolitana de Puebla. Se recomienda a las empresas determinar las estrategias de mercadotecnia más adecuadas a cada uno de los segmentos y asignar el nivel de importancia de acuerdo a la rentabilidad del mismo. Se recomienda como futura línea de investigación incluir otro tipo de variables en el contexto de la confianza y lealtad de los clientes de las entidades financieras. Variables como actitud de lealtad, confianza en el establecimiento, confianza en la marca, entre otros, sería variables a considerar para establecer el vínculo entre empresa-cliente. También es importante establecer una forma de relación y correlación entre las variables y poder establecer un modelo teórico-causal de la satisfacción, confianza y lealtad de los clientes de entidades bancarias en la zona metropolitana de Puebla.

PREDICTIBILIDAD DE LOS RETORNOS EN EL MERCADO DE COLOMBIA

Juan Benjamín Duarte Duarte, Universidad Industrial de Santander-COL
Katherine Julieth Sierra Suárez, Universidad Industrial de Santander-COL
Victor Alfonso Rueda Ortíz, SENA-COL

RESUMEN

Cuando los mercados se comportan eficientemente, los precios de sus activos siguen una caminata aleatoria y dependen solamente de la información disponible, por tanto no es posible predecir sus precios. Este trabajo tiene como propósito evaluar la predictibilidad del mercado colombiano, para verificar su eficiencia; para este propósito se usa el test Ratio de Varianza Automático en subperiodos de tiempo con una ventana de tiempo de dos años. Los resultados muestran que el mercado colombiano solo presenta un posible periodo de predictibilidad entre octubre de 2010 y octubre de 2012.

PALABRAS CLAVES: Predictibilidad, Ratio de Varianza Automático, Eficiencia de Mercados

RETURNS PREDICTABILITY IN COLOMBIAN STOCK MARKET

ABSTRACT

When markets behave efficiently, asset prices follow a random walk and depend only on the information available. Therefore, it is not possible to predict its prices. This paper aims to test the predictability of the Colombian market to verify its efficiency; for this purpose the automatic variance ratio test is tested with time windows of two years. The results show that the Colombian market only has a possible predictability period between October 2010 and October 2012.

INTRODUCCIÓN

La importancia del estudio de los mercados financieros se evidencia en los premios nobel de economía entregados en el año 2013: Eugene Fama, Lars Peter Hansen y Robert Shiller, quienes se destacan por haber creado nuevos métodos de estudio del comportamiento de los mercados bursátiles desde distintas posiciones de pensamiento, las cuales han abierto un debate desde hace casi medio siglo, sobre si los mercados son eficientes o conductistas. En primera instancia, Fama enunció la teoría de mercados eficientes en 1970, mientras que Shiller consolidó una nueva escuela de pensamiento conocida como finanzas conductuales al predecir la burbuja *dot-com* en el 2000, demostrando que en este periodo no se cumplían los supuestos de la eficiencia. Ambas teorías han sido estudiadas de forma empírica, los resultados de las investigaciones han mostrado rechazo y aceptación para ambas teorías financieras. Con el propósito de contribuir a esta temática, se evalúa el nivel de predictibilidad del mercado bursátil colombiano mediante el ratio de varianza automático (AVR, por sus siglas en inglés), dado que no se ha llevado a cabo un estudio similar en Colombia, país que cobra importancia por el reciente incremento en su inversión directa extranjera. Para este fin, se usará la serie del índice COLCAP, dada su reciente consolidación como índice principal, desplazando al Índice General de la Bolsa de Valores de Colombia (IGBC), buscando identificar si el mercado de Colombia ha sido eficiente durante los últimos 12 años. Además se realiza una comparación

del comportamiento de la bolsa colombiana versus el del mercado estadounidense. Este documento se divide en cuatro secciones, estructuradas así: Se inicia con la revisión de la literatura acerca de los mercados eficientes, seguida de la metodología estructurada en tres etapas (Estadístico descriptivo, Test AVR, Análisis Relativo), interpretación de resultados y finalmente las conclusiones.

REVISIÓN LITERATURA

Fama (1965) define un mercado eficiente como una competencia equitativa en la cual la información esta libremente disponible para los participantes, quienes intentan predecir el comportamiento futuro de los precios del mercado. A causa de esto, en un instante de tiempo los precios reflejan toda la información relevante para los inversores con base en eventos ocurridos y en eventos que se esperan tendrán lugar en el futuro. Es decir, en un mercado eficiente el precio actual del activo es un buen estimador de su valor intrínseco y solo varía debido al ingreso de nueva información al mercado produciendo un comportamiento aleatorio en los activos del mercado, haciendo imposible su pronóstico sistemático.

Sin embargo, Shiller (2003) asegura que los inversores no siempre son racionales, sino que toman decisiones influenciados por la psicología y la sociología; cabe agregar, que Duarte y Mascareñas (2012) hace una revisión exhaustiva de la literatura empírica relacionada con eficiencia de mercados y encuentra que el 60% de ella niega la existencia de mercados eficientes, mientras que solo el 5% acepta una mejora del nivel de aleatoriedad en las bolsas durante la última década del siglo XX y principios del siglo XXI. La teoría de mercados eficientes es uno de los supuestos básicos de modelos de valoración de activos tales como el CAPM y el ATP, por tanto su rechazo implicaría la invalidez de estos modelos. Además, en un mercado no eficiente no hay garantía de que se estén dando las condiciones de un juego justo, lo cual genera desconfianza en los inversores. Por otro lado, si un mercado no es eficiente puede presentar burbujas en los precios de sus activos, lo cual llevaría a que algunos inversores obtengan ganancias o pérdidas mayores que las que se obtendrían si los precios fueran aleatorios. Recientemente, Duarte (2014), evalúa el cumplimiento de la caminata aleatoria en los mercados bursátiles de Latinoamérica, hallando una mejora en la eficiencia de los activos de México, Brasil y Colombia desde los años 2007 a 2012; mientras que observa un menor nivel de aleatoriedad en Perú y Chile con respecto a sus pares latinoamericanos durante todo el periodo de estudio (2002-2012).

METODOLOGÍA

Datos

El mercado accionario de Colombia inicia operaciones en 1928 con la Bolsa de Bogotá, dando origen al Índice de precios de acciones de la Bolsa de Bogotá (IBB), años después, en 1961 se crea la bolsa de Medellín y en 1983 la de Occidente, con sus respectivos índices. El 3 de julio de 2001, los índices de las bolsas de Bogotá, Medellín y Occidente se consolidan en el Índice General de la Bolsa de Valores de Colombia (IGBC) el cual representaba el comportamiento promedio de los precios de las acciones en el mercado. Desde el 1 de noviembre de 2013, el COLCAP reemplazó al IGBC como el principal indicador del comportamiento del mercado accionario colombiano. El COLCAP es un índice de capitalización que refleja las variaciones de los precios de las 20 acciones más líquidas de la Bolsa de Valores de Colombia, donde la participación de cada acción en el índice está determinada por la capitalización bursátil ajustada. En este trabajo se analiza la serie COLCAP desde su inicio el 16 de julio de 2002 hasta el 24 de octubre de 2014. Se omiten los días en los que la Bolsa no operó y los que presentan valores nulos. La serie se analiza con valores diarios en su periodo completo y usando seis subperiodos de aprox. 2 años (500 datos), con el fin de evaluar la eficiencia del mercado bursátil a través del tiempo. Adicionalmente, con el propósito de comparar el mercado de Colombia con el de Estados Unidos, se analiza la serie diaria del S&P500 en el mismo periodo de tiempo. Se toma como variable la rentabilidad continua de cada activo.

Etapas En esta investigación la metodología se desarrollarán tres etapas secuenciales: En primer lugar se realizará un análisis estadístico preliminar para identificar las características econométricas de las series, en segundo lugar se verificará existe eficiencia en el mercado mediante el test Ratio de Varianza Automático (AVR, por sus siglas en inglés), en tercer lugar se realizará una comparación del comportamiento del mercado colombiano en contraste con el de Estados Unidos. La primera etapa consiste en la estimación de los estadísticos preliminares de las series de retornos a evaluar (COLCAP, SP&500) para identificar sus principales características econométricas. En la segunda etapa se planea contrastar el nivel de eficiencia, teniendo en cuenta que un mercado eficiente no es predecible. Con este propósito se usa el test AVR planteado inicialmente por Choi (1999) y modificado por Kim J. (2009), el cual permite evaluar el grado de predictibilidad de un mercado. Este test es explicado por Kim, Shamsuddin, y Lim (2011), basándose en el test ratio de varianza desarrollado por Lo & MacKinlay (1988), que puede ser escrito como en la ecuación 1.

$$VR(k) = 1 + 2 \sum_{j=1}^{k-1} \left(1 - \frac{j}{k}\right) \hat{\rho}_j \quad (1)$$

Donde $\hat{\rho}_j$ es el estimador del coeficiente de autocorrelación de orden j –ésimo y k es el periodo *holding* (de posesión). La hipótesis nula de este estadístico es que $VR(k)$ es igual a 1 o que no existe autocorrelación en el rezago j –ésimo para todo k . La elección de k se hace generalmente de forma arbitraria (Kim, Shamsuddin, & Lim, 2011). Debido a esto, Choi (1999) propone un método dependiente solamente de los datos para la elección de \hat{k} óptimo para k ; demostrando que:

$$AVR(\hat{k}) = \frac{\sqrt{T} [VR(\hat{k}) - 1]}{\sqrt{2}} \xrightarrow{d} N(0,1) \quad (2)$$

Donde T , es el tamaño de la muestra, $VR(\hat{k})$ corresponde al estadístico evaluado en la ecuación 1 usando \hat{k} como k . Este estadístico bajo el supuesto de que los retornos son idénticos e independientemente distribuidos (iid) se distribuye normalmente con media cero y varianza uno. Sin embargo, cuando existe heterocedasticidad, la inferencia estadística puede ser inválida en pequeñas muestras. Por esta razón Kim J. (2009) propone una técnica *bootstrap* que provee inferencia estadística adecuada en pequeñas muestras bajo heterocedasticidad condicional. En este trabajo se usa el estadístico AVR usando los parámetros explicados por Ely (2011) en distintos subperiodos de tiempo. Lo anterior teniendo presente que la hipótesis nula del test ratio de varianza automático afirma que la serie de rentabilidad es aleatoria y no tiene patrones lineales que permitan su predicción. Por último, se llevará a cabo una comparación del comportamiento de la eficiencia en el tiempo del mercado colombiano versus el estadounidense, con iguales metodologías.

RESULTADOS

Estadísticas Preliminares

Al estimar las estadísticas básicas para las series de retornos se encuentra que: ambas las series presentan medias positivas estadísticamente significativas al 1%; el COLCAP muestra asimetría negativa al igual que el índice S&P500; además las series son leptocúrticas y la significancia del estadístico Jarque-Bera rechaza la hipótesis de que los retornos siguen una distribución Normal (Tabla 1).

Ratio de Varianza Automático

La predictibilidad del mercado colombiano es evaluada en la serie del COLCAP mediante el estadístico AVR. Estos resultados se presentan los resultados tanto en la

De la Figura 1 se puede deducir: en primer lugar, que el nivel de predictibilidad del índice varía en el tiempo, por lo tanto se podría afirmar que la eficiencia es dinámica, tal como lo postulan Kim, Shamsuddin, & Lim (2011). En cuanto a los datos del estadístico AVR se encuentra que durante el periodo de 2006 a 2010 el nivel de predictibilidad se mantuvo estable, mientras que los límites del intervalo de confianza se ampliaron en el periodo de 2008 a 2010, lo cual según Kim, Shamsuddin, y Lim (2011) indicaría un aumento en el nivel de incertidumbre de los precios, lo que podría interpretarse como mejoramiento de la eficiencia. Los anteriores resultados muestran la importancia de analizar la serie por subperiodos ya que al observar el periodo total, se podría haber llegado a la deducción errónea de que este periodo es predecible con un nivel de confianza del 10% (Tabla 2).

, cuyo objetivo es evaluar la significancia estadística del test AVR; como la Figura 1 con la cual se busca determinar gráficamente el comportamiento del test AVR de acuerdo a su intervalo de confianza. Se observan varios resultados interesantes: el estadístico AVR no es significativo al 5% ni en el rango total (2002-2014) ni en los subperiodos (De la Figura 1 se puede deducir: en primer lugar, que el nivel de predictibilidad del índice varía en el tiempo, por lo tanto se podría afirmar que la eficiencia es dinámica, tal como lo postulan Kim, Shamsuddin, & Lim (2011). En cuanto a los datos del estadístico AVR se encuentra que durante el periodo de 2006 a 2010 el nivel de predictibilidad se mantuvo estable, mientras que los límites del intervalo de confianza se ampliaron en el periodo de 2008 a 2010, lo cual según Kim, Shamsuddin, y Lim (2011) indicaría un aumento en el nivel de incertidumbre de los precios, lo que podría interpretarse como mejoramiento de la eficiencia. Los anteriores resultados muestran la importancia de analizar la serie por subperiodos ya que al observar el periodo total, se podría haber llegado a la deducción errónea de que este periodo es predecible con un nivel de confianza del 10% (Tabla 2).

teniendo en cuenta que los p-valor rechazan la hipótesis de significancia del estadístico a este nivel de confianza. Por otro lado, en la Figura 1 los subperiodos 2004-2006 y 2008-2010 presentan ampliación en su intervalo de confianza. También se evidencia que los rangos que más podrían presentar predictibilidad con estadísticos significativos al 10% son el periodo total y el periodo poscrisis subprime (2010-2012).

Tabla 2: Estadísticos AVR En el COLCAP

Subperiodo		AVR	P-Valor
16/07/2002	24/10/2014	1.153*	8.6%
16/07/2002	02/08/2004	0.06353093	71.6%
03/08/2004	18/08/2006	-0.3173403	46.6%
22/08/2006	10/09/2008	0.01686838	89.0%
11/09/2008	01/10/2010	0.0070395	96.0%
04/10/2010	17/10/2012	0.51052889*	8.4%
18/10/2012	24/10/2014	0.17748108	42.4%

* Significativo al 10%. COLCAP (Principal índice del Mercado accionario de Colombia). AVR (Automatic Variance Ratio). P-Valor (Significancia del estadístico AVR). Fuente: Elaboración propia.

De la Figura 1 se puede deducir: en primer lugar, que el nivel de predictibilidad del índice varía en el tiempo, por lo tanto se podría afirmar que la eficiencia es dinámica, tal como lo postulan Kim, Shamsuddin, & Lim (2011). En cuanto a los datos del estadístico AVR se encuentra que durante el periodo de 2006 a 2010 el nivel de predictibilidad se mantuvo estable, mientras que los límites del intervalo de confianza se ampliaron en el periodo de 2008 a 2010, lo cual según Kim, Shamsuddin, y Lim (2011) indicaría un aumento en el nivel de incertidumbre de los precios, lo que podría interpretarse como mejoramiento de la eficiencia. Los anteriores resultados muestran la importancia de analizar la serie por subperiodos ya que al observar el periodo total, se podría haber llegado a la deducción errónea de que este periodo es predecible con un nivel de confianza del 10% (**Error! Not a valid bookmark self-reference.**).

Análisis relativo Colombia vs Estados Unidos

El mercado de Estados Unidos es generalmente aceptado como eficiente, por lo tanto es importante realizar una comparación entre los patrones de comportamiento del mercado colombiano y el estadounidense. Con este propósito se estima el estadístico AVR para el índice S&P500 en los mismos subperiodos utilizados en Colombia (Tanto en la Tabla 3 como en la Figura 2 se evidencia que la eficiencia del mercado de Estados Unidos no permanece constante en los diferentes subperiodos, observación similar a lo encontrado en el COLCAP. Si se analiza la serie en el periodo total, se observa que el mercado de Estados Unidos podría ser predecible con modelos lineales según los resultados del test AVR, en donde el p-valor rechaza la hipótesis de aleatoriedad al 1% de significancia. Sin embargo, al analizar por subperiodos se encuentra que esta posible predictibilidad ocurre en un rango de tiempo específico: 2006 a 2010, donde el ratio de varianza permite rechazar la hipótesis de que la serie de rentabilidad es aleatoria y no tiene patrones lineales que permitan su predicción, es decir, que podrían existir modelos de predicción lineal que permitan estimar el comportamiento del mercado estadounidense durante este periodo de crisis y poscrisis. Además según Kim,

Shamsuddin, & Lim, el hecho de que el ratio de varianza sea negativo y significativo estaría dando indicios de pánico en los mercados y significaría sobre-reacción por parte de los inversores, comportamiento que es estudiado por la teoría de finanzas conductuales y no es contemplado dentro de los supuesto de eficiencia de los mercados.), siguiendo la misma metodología.

Tabla 3: Estadísticos AVR en el S&P500

Subperiodo	AVR	P-Valor	
16/07/2002	24/10/2014	-1.4964***	0.40%
16/07/2002	02/08/2004	-0.378380886	17.20%
03/08/2004	18/08/2006	0.14583672	25%
21/08/2006	10/09/2008	-0.86581447***	0.20%
11/09/2008	01/10/2010	-0.91213392***	0.40%
04/10/2010	17/10/2012	-0.351295109	24%
18/10/2012	24/10/2014	-0.035414173	71%

***Significativo al 1%. S&P500 (Standard and Poors 500). Fuente: Elaboración propia. AVR (Automatic Variance Ratio). P-Valor (Significancia del estadístico AVR)

se evidencia que la eficiencia del mercado de Estados Unidos no permanece constante en los diferentes subperiodos, observación similar a lo encontrado en el COLCAP. Si se analiza la serie en el periodo total, se observa que el mercado de Estados Unidos podría ser predecible con modelos lineales según los resultados del test AVR, en donde el p-valor rechaza la hipótesis de aleatoriedad al 1% de significancia. Sin embargo, al analizar por subperiodos se encuentra que esta posible predictibilidad ocurre en un rango de tiempo específico: 2006 a 2010, donde el ratio de varianza permite rechazar la hipótesis de que la serie de rentabilidad es aleatoria y no tiene patrones lineales que permitan su predicción, es decir, que podrían existir modelos de predicción lineal que permitan estimar el comportamiento del mercado estadounidense durante este periodo de crisis y poscrisis. Además según Kim, Shamsuddin, & Lim (2011), el hecho de que el ratio de varianza sea negativo y significativo estaría dando indicios de pánico en los mercados y significaría sobre-reacción por parte de los inversores, comportamiento que es estudiado por la teoría de finanzas conductuales y no es contemplado dentro de los supuesto de eficiencia de los mercados.

Figura 3: Estadístico AVR del índice S&P500

Nota: En la figura se muestran los valores del estadístico AVR para seis subperiodos de tiempo (línea gris) y los límites inferior y superior al 95% de confianza (líneas negras) para la serie del S&P500. Fuente: Elaboración propia.

Al comparar los resultados de los mercados colombiano y estadounidense se observa que en ambos escenarios la eficiencia es variable en el tiempo. Adicionalmente se encuentra que durante el periodo total ambos mercados parecen ser predecibles mediante patrones lineales, sin embargo, al analizar la serie por subperiodos se evidencia que esa posible predictibilidad aparece durante el periodo de crisis y poscrisis *subprime*. También es importante resaltar que en el mercado colombiano se rechaza la hipótesis de aleatoriedad al 10% de significancia solamente para dos años en el subperiodo 2008-2010, mientras que en el mercado estadounidense se encuentra posible predictibilidad al 1% de confianza en cuatro años, correspondientes a dos subperiodos (2006-2010).

CONCLUSIONES

Con base en la estimación del estadístico AVR a un nivel del 5% de confianza, se podría concluir que existe eficiencia débil en el mercado bursátil de Colombia, representado por el índice COLCAP. Además se detecta que durante la crisis y poscrisis del 2008, el mercado de Estados Unidos pareciera ser predecible, lo que lo llevaría a ser no eficiente; mientras que en Colombia el subperiodo de poscrisis (2008-2010) representó mayor incertidumbre en los precios, y solo se observa posible predictibilidad al 10% de significancia en el periodo 2010 a 2012. Esto podría deberse a que los inversionistas norteamericanos se desplazaron a países refugio como el Colombiano para hacer sus inversiones durante el periodo de crisis en Estados Unidos, haciendo que este mercado emergente se hiciera más eficiente. Por otra parte, partiendo de la significancia negativa del estadístico AVR y teniendo en cuenta planteamiento hecho por Kim, Shamsuddin, & Lim (2011), se podría interpretar que durante el periodo de crisis y poscrisis, en Estados Unidos habría existido pánico y sobreacción por parte de los inversores, los cuales son considerados sesgos de comportamiento desde la óptica de las finanzas conductuales, refutando la hipótesis de mercado eficiente, dado que se niega la racionalidad de los inversores.

REPERCUSIONES DEL ESTRÉS LABORAL EN LA INDUSTRIA MAQUILADORA AUTOMOTRIZ EN TRABAJADORES DE NIVEL OPERATIVO EN CIUDAD JUÁREZ, CHIHUAHUA

Karina De La O García, Universidad Autónoma de Ciudad Juárez
Mayra Alejandra del Real Morales, Universidad Autónoma de Ciudad Juárez

RESUMEN

La presente investigación se realiza con el propósito de conocer las repercusiones que tiene el estrés laboral dentro de la industria maquiladora automotriz de Ciudad Juárez. Es importante resaltar la creciente demanda del mercado automotriz, y la incursión de maquiladoras dentro de la localidad, las cuales tienen la expectativa que sus productos sean de primera calidad al salir hacia su destino en tiempo y forma, esto trae como consecuencia para los trabajadores operativos de la industria, cumplir con cierta cuota y calidad de trabajo en tiempo y forma, lo que genera estrés laboral con repercusiones riesgosas para los mismos, estas pueden ser repercusiones emocionales, físicas, psicológicas, problemas cognitivos y del sistema motor. En este documento se presenta el diseño general de la investigación, así como resultados preliminares que arrojó el análisis de la información obtenida de los encuestados y las repercusiones dentro de los hogares de los trabajadores, ya que su conducta se ve modificada cuando se sufre de estrés laboral.

PALABRAS CLAVES: Estrés laboral, industria maquiladora, repercusiones emocionales.

IMPACT OF WORK-RELATED STRESS IN THE AUTOMOTIVE ASSEMBLY INDUSTRY OPERATION WORKERS IN JUAREZ, CHIHUAHUA CITY

JEL: M10

KEYWORDS: Work-Related Stress, Automotive, Assembly Line

INTRODUCCIÓN

El concepto de Estrés se remota a la década de 1930 con el nombre de “Síndrome de Estar Enfermo”. Actualmente se define como: “la respuesta no específica del organismo a cualquier demanda del exterior”. El estrés laboral es un fenómeno que se presenta con más frecuencia con el paso de los años, aumenta en nuestra sociedad, especialmente por el constante cambio de la vida laboral. El estrés aparte de tener efectos negativos para la salud también puede incrementar los efectos positivos de la misma, ayuda a incrementar el rendimiento de las personas, siempre y cuando no sea con frecuencia, intensidad y que este no supere la capacidad de rendimiento de las personas.

La presente investigación en la industria maquiladora automotriz de Ciudad Juárez, Chihuahua permite tener una noción sobre lo que representa el estrés laboral, las causas que lo provocan y las consecuencias que ocasiona, el estrés es un problema actual, el cual es necesario conocer para intentar controlarlo, ya que es uno de los principales factores negativos que desequilibra la vida de muchas personas a nivel mundial.

En el mundo laboral, la responsabilidad, la toma de decisiones, la insatisfacción laboral y/o personal, pueden constituir fuentes de estrés, aprender a identificar los signos de estrés y aprender a prevenirlos debe convertirse en una tarea importante en el desarrollo de la vida de todo profesionista. El estrés se trata de una respuesta normal del organismo ante las situaciones de peligro, y en respuesta a esta situación de emboscada el organismo se prepara para combatir mediante la secreción de sustancias como la adrenalina, esta se disemina por la sangre y es percibida por receptores especiales en distintos lugares del organismo. Cualquier suceso que genere una respuesta emocional puede causar estrés, esto incluye situaciones positivas tanto como negativas, situaciones que provocan estrés en una persona pueden ser insignificantes para otra.

REVISIÓN DE LA LITERATURA

Los conceptos de estrés que nos menciona el autor (Miralles, 2005). El estrés es la presión o tensión experimentada por la percepción de un desequilibrio entre la demanda de la situación y la capacidad personal para responder con éxito a esa demanda, cuando las consecuencias de la resolución son percibidas como importantes. Tienen muchas maneras de presentarse o síntomas uno de los síntomas psicológicos como sentimientos de infelicidad e inferioridad (inicio de una posible depresión), ansiedad al comer o beber, falta de sueño o interrupciones del mismo, falta de iniciativa en el trabajo e inseguridad en la realización de su cometido profesional.

Por otra parte se nos menciona que el estrés laboral se conceptualiza como el conjunto de fenómenos que suceden en el organismo del trabajador con la participación de los agentes estresantes lesivos derivados directamente del trabajo o que con motivo de este puedan afectar la salud del trabajador (González y Olivares, 2009).

Estrés es el resultado de la relación entre el individuo y el entorno. Evaluado por aquel como amenazante que desborda sus recursos debido a la presencia de demandas de tareas, roles interpersonal y físico, y pone en peligro su bienestar. (Lazarus y Folkman, 2001.)

El estrés es la respuesta del cuerpo a condiciones externas que perturban el equilibrio emocional de la persona. Para Munuera, (2002), el resultado fisiológico de este proceso es un deseo de huir de la situación que lo provoca o confrontarla violentamente.

METODOLOGÍA

La presente investigación es una investigación cuantitativa, ya que busca cuantificar los datos que serán obtenidos por medio de la aplicación de encuestas a los trabajadores nivel operativo de Ciudad Juárez. Es una investigación explicativa en busca de establecer las causas y repercusiones del estrés laboral en los trabajadores a nivel operativo de Ciudad Juárez.

El tipo de investigación es causal ya que la principal prioridad es obtener evidencia sobre la causa y efecto del estrés laboral en los trabajadores nivel operativo en la industria maquiladora de Ciudad Juárez formulando preguntas por medio de encuestas para determinar el grado de asociación entre las variables y aprobar y/o rechazar hipótesis.

Se realizarán entrevistas a trabajadores de la industria maquiladora automotriz nivel operativo de Ciudad Juárez para definir los efectos del estrés laboral en su vida personal.

Población/Universo: Nuestro universo comprende a los operadores de la industria maquiladora automotriz en Ciudad Juárez, Chihuahua. El tamaño de la muestra estará basada en la formula estadística indicada para el proceso.

Muestreo: Muestra no probabilística o dirigida, la elección de los elementos no depende de la probabilidad sino de las características de la investigación.

TAMAÑO DE LA MUESTRA:*Fórmula de poblaciones finitas*

n = Tamaño muestra/tamaño de la población

Z² = Valor crítico correspondiente al nivel de confianza elegido

P/Q = Probabilidades con las que se presenta el fenómeno.

E² = Margen de error

N = Número de elementos de la población

$$n = \frac{(N)(Z^2)(p)(q)}{(d^2)(N-1) + (Z^2)(p)(q)} \quad (1)$$

RESULTADOS PRELIMINARES

El estrés laboral es la reacción que puede tener el individuo ante exigencias y presiones laborales que no se ajustan a sus conocimientos y capacidades, y que ponen a prueba su capacidad para afrontar la situación. El estrés laboral es el resultado del desequilibrio entre las exigencias y presiones a las que se enfrenta el individuo, por un lado, y sus conocimientos y capacidades por el otro, como textualmente argumenta Coon (2005) “La presión es otro elemento del estrés, sobre todo el laboral y sobreviene cuando hay que atender demandas o expectativas externas urgentes.”

Estrés laboral varonil

En la presente investigación se tomaron como muestra a 131 trabajadores de la industria maquiladora automotriz en Ciudad Juárez, Chihuahua, la cual es una muestra de la población a la cual se centra la presente investigación.

Hablando del estrés laboral en el sexo masculino, se hace resaltar que de los 131 hombres que fueron encuestados, 117, los cuales equivalen al 89.31% de la población masculina encuestada, sufren de estrés laboral.

El autor Miralles (2005) nos menciona que el estrés es la presión o tensión experimentada por la percepción de un desequilibrio entre la demanda de la situación y la capacidad personal para responder con éxito a esa demanda, cuando las consecuencias de la resolución son percibidas como importantes.

Tienen muchas maneras de presentarse o síntomas uno de los síntomas psicológicos como sentimientos de infelicidad e inferioridad (inicio de una posible depresión), ansiedad al comer o beber, falta de sueño o interrupciones del mismo, falta de iniciativa en el trabajo e inseguridad en la realización de su cometido profesional.

De acuerdo con lo mencionado anteriormente, en el hallazgo de la investigación se resaltó que 13 trabajadores, los cuales equivalen al 9.92% de los encuestados expresaron tener sentimientos de infelicidad, así como 7 de los mismos, equivalente al 5.34%, indicó que tenían sentimientos de inferioridad relacionados con el estrés laboral, lo preocupante de lo mismo es que estos trabajadores tienen síntomas de inicio de una posible depresión.

En cuanto a la ansiedad al comer o beber anteriormente mencionada, 8 de los encuestados presentaron este síntoma, el cual equivale al 6.11% del total de la muestra de la población y 12 encuestados que equivale al 9.16% presentó falta o interrupciones del sueño.

Con respecto a la falta de iniciativa mencionada por el autor Miralles, la presentaron 38 de los encuestados, el cual tiene un incremento notable del 29% en comparación con los síntomas previamente mencionados,

mientras que 16 de los encuestados de la población, el cual es equivalente al 12.21% señalaron tener falta de iniciativa en la realización de su cometido profesional.

Según Labrador y Crespo (1993), El estrés puede producir una alta activación fisiológica que, mantenida en el tiempo, puede ocasionar disfunciones psicofisiológicas o psicosomáticas, tales como dolores de cabeza tensionales, problemas cardiovasculares, problemas digestivos, problemas sexuales, etc. De los síntomas anteriormente mencionados, 58 de los mismos el cual equivale al 44.27% presentaron dolores de cabeza, 10 presentaron dolores cardiovasculares los cuales equivalen al 7.63% de la muestra y el 5.34% presentaron problemas sexuales. Según Doval (2004), Efectos negativos del estrés en el trabajador son los siguientes:

- Aumento de la tasa cardíaca
- Tensión muscular
- Dificultad para respirar

Con respecto a lo mencionado por Doval, solamente el 7.63% de los encuestados presentaron aumento cardíaco por causa del estrés, sin embargo, 47 de los encuestados, los cuales representan el 35.88%, presentaron tensión muscular derivada del estrés laboral y de igual manera, únicamente el 7.63% presentó dificultad para respirar.

Labrador y Crespo (1993), afirman que el estrés puede producir una alta activación fisiológica que, mantenida en el tiempo, puede ocasionar disfunciones psicofisiológicas o psicosomáticas, tales como dolores de cabeza tensionales, problemas cardiovasculares, problemas digestivos, problemas sexuales, etc.

En relación con lo dicho por Labrador y Crespo, se puede decir que una cifra considerable del 44.27% presenta dolores de cabeza como repercusión del estrés laboral y 10 de los encuestados los cuales equivalen al 7.63% tienen problemas cardiovasculares, y un 5.34% señalaron tener problemas sexuales.

Cano (1998), por otro lado menciona que entre los efectos psicológicos negativos producidos por el estrés laboral se encuentran: la preocupación excesiva, la incapacidad para tomar decisiones, la sensación de confusión, la incapacidad para concentrarse, la dificultad para mantener la atención, los sentimientos de falta de control, la sensación de desorientación, los frecuentes olvidos, los bloqueos mentales, la hipersensibilidad a las críticas, el mal humor, la mayor susceptibilidad a sufrir accidentes y el consumo de tóxicos.

De acuerdo con lo mencionado por Cano, hablando sobre el efecto negativo de la preocupación excesiva, de acuerdo con los resultados obtenidos, 24 de los encuestados, equivalente a un 18.32%, señalaron poseer dicho efecto, un 11.45% indicó tener imprecisión en la toma de decisiones mientras que 16 de los hombres encuestados, los cuales representan el 12.21% contestaron tener un bajo nivel de concentración, y en comparación con lo anterior un 16% indicó tener desorientación.

El efecto negativo de la hipersensibilidad a las críticas lo presentó un 3.82%, en cual no es un número alarmante en comparación con el mal humor, el cual 29.78% afirmaron poseer dicho efecto mencionado. El mantenimiento de estos efectos puede provocar el desarrollo de trastornos psicológicos asociados al estrés. Entre los más frecuentes están: trastornos del sueño, el cual lo presentaron el 9.16% de los encuestados, trastornos de ansiedad de comer o beber, 8 de los 131 encuestados señalaron poseerlo, fobias lo presentaron únicamente el 1.53%, drogodependencias solamente la presentan el 3.05%, trastorno de la personalidad lo presentaron 21 de los encuestados el cual es equivalente al 16% de la muestra tomada de la población.

Cuevas (2005), entre los signos o manifestaciones externas a nivel motor y de conducta estarían: hablar rápido, temblores, tartamudeo, imprecisión al hablar, precipitación a la hora de actuar, explosiones emocionales, voz entrecortada, comer excesivamente, falta de apetito, conductas impulsivas, risa nerviosa

y Todas estas consecuencias deterioran la calidad de las relaciones interpersonales, tanto familiares como laborales, pudiendo provocar la ruptura de dichas relaciones.

Con respecto a lo que menciona Cuevas, de acuerdo con las manifestaciones a nivel motor, haciendo referencia a hablar rápido, se puede que lo presentaron el 3.05% de la muestra, al igual que la manifestación de temblores, el tartamudeo tuvo un decremento en comparación con el porcentaje anterior con un 2.29% y 5 de los encuestados señalaron presentar voz entrecortada, los cuales representan el 3.82%.

Estrés Laboral Femenil

Como ya se mencionó anteriormente en esta investigación se tomó una muestra de 115 mujeres representando una población de la industria maquiladora automotriz en Ciudad Juárez, Chihuahua, se aplicó dicha encuesta para comprobar los efectos que el estrés laboral representa en el sexo femenino. El estrés es el resultado de la relación entre el individuo y el entorno. Evaluado por aquel como amenazante que desborda sus recursos debido a la presencia de demandas de tareas, roles interpersonal y físico. Y pone en peligro su bienestar. (Lazarus y Folkman, 2001).

Tomando en cuenta el concepto de estrés laboral que nos mencionan Lazarus y Folkman, de los 115 encuestados del sexo femenino del nivel operador en la industria maquiladora automotriz en Ciudad Juárez, 100 de ellas nos mencionan sufrir estrés laboral, representando un 86.95%, cifra que es interesante, ya que el al sufrir estrés laboral existe una amenaza de poner en riesgo su bienestar.

Peiró (1992), señala que el estrés es un fenómeno adaptativo de los seres humanos que contribuye, en buena medida, a su supervivencia, a un adecuado rendimiento en sus actividades y a un desempeño eficaz en muchas esferas de la vida. "Los efectos del estrés varían según los individuos. Se tomó en cuenta un rango de edad para poder investigar si según su edad variaba el estrés laboral en las mujeres ya que como nos menciona Peiró, el ser humano se adapta y puede hacer un rendimiento eficaz, así que tomando en cuenta esto se buscó comprobar si un rango de edad en la mujer tiene relación con sufrir estrés ya que esto se ve relacionado con su tipo de madurez y la manera en que enfrenta el estrés laboral.

De las 115 encuestadas se obtuvo un 37% del rango de 34-45 años de edad mencionando que estas sufren más de estrés laboral. El estrés es la respuesta del cuerpo a condiciones externas que perturban el equilibrio emocional de la persona. Para Munuera (2002), el resultado fisiológico de este proceso es un deseo de huir de la situación que lo provoca o confrontarla violentamente. Reiterando lo mencionado por Munuera, de las 100 mujeres encuestadas que afirman sufrir estrés, el 28% de ellas sufren de problemas emocionales, de las cuales 8 sufren de falta de iniciativa en el trabajo representando un 28,57%, 7 de los encuestados, ósea, el 25% afirman sufrir de inseguridad en su realización profesional cosa que provoca una situación inestable que le impide realizar sus actividades con firmeza y eficiencia, por otro lado 14.28% nos dice tener sentimientos de infelicidad.

William y Davis (1996), dicen que dentro de las organizaciones, no todos los trabajadores reaccionan de la misma forma, por lo que se puede decir que si el nivel de exigencia presentada en el trabajo es adecuada a la capacidad, conocimiento y estado de salud de un determinado empleado, el estrés tenderá a disminuir y podrá tener signos estimulantes, que le permitirán hacer progresos en el ámbito laboral y tener mayor proyección en el mismo.

Para comprobar la proyección que nos mencionan William y Davis, se preguntó si contaban con lo adecuado para trabajar, de las cuales un 56% de las encuestadas nos comentan que no cuentan con un ambiente adecuado, el cual califican como malo, por otra parte un 55% nos indicó que no cuentan con las herramientas necesarias para realizar sus actividades laborales con éxito.

Por otro lado otra situación que afecta a la mujer es la relación en ambiente con las personas que la rodean, como es sus compañeros de trabajo, ya que la mujer es muy susceptible a tener sentimientos de fracaso, rechazo o de falta de respeto por parte de las personas con las que mantiene una jornada diaria laboral, y como consecuencia produce sentimientos de inferioridad, de las 100 encuestadas que sufren estrés, un 37% nos indican que el respeto entre compañeros de trabajo es nulo, de las cuales 7 afirman sufrir sentimientos de inferioridad.

Todas estas consecuencias deterioran la calidad de las relaciones interpersonales, tanto familiares como laborales, pudiendo provocar la ruptura de dichas relaciones. (Cuevas, 2005). Dooley (2008), El estrés laboral es una de las principales causas de pelea en las parejas. La presión de trabajar hasta tarde, los plazos o los viajes constantes por cuestiones laborales pueden dejarte poca paciencia para los compromisos maritales. Cuando ambas personas trabajan, el estrés puede duplicarse. Un 11% de la muestra de mujeres que sufren estrés laboral muestra que tuvieron como consecuencia del estrés laboral el rompimiento de una relación amorosa y un 4% ha llegado a tener un divorcio como causa del estrés como lo menciona el autor Cuevas.

CONCLUSIÓN

Después de haber llevado a cabo la investigación para observar las repercusiones del estrés laboral en los operadores de la industria maquiladora automotriz en Ciudad Juárez, Chihuahua. Se observó que mediante la aplicación de encuestas con una muestra representativa a la población, un 88% de los encuestados sufren de estrés laboral, de los cuales 142, los cuales equivalen a 57.72% presentan problemas emocionales, de los cuales sobresalen sentimientos de infelicidad, manteniendo un porcentaje de 76% en el área femenil y 44.27% en varonil, el que los operadores sufran de estrés laboral también ocasionan repercusiones dentro de la empresa ya que también se ve afectada por falta de iniciativa para realizar sus labores dentro de la misma, en esta investigación encontramos un 26.83% de personas que destacan tener este problema.

Figura 1: ¿Cuenta con lo necesario para realizar su trabajo?

En esta figura se representa el porcentaje de estrés laboral en operadores de industria maquiladora automotriz en Ciudad Juárez Chihuahua, en género masculino y femenino en el año 2014, el número total de encuestados fue de 246 operadores tomados de una muestra de la población. Fuente: Elaboración propia.

El estrés laboral afecta a los operadores de la industria automotriz de Ciudad Juárez, presentan síntomas de repercusiones físicas, como son dolores fuertes de cabeza, tensión muscular, el cual poco a poco va ocasionando desgaste en el trabajador provocando problemas médicos y físicos más fuertes. Un 10.98% también presentan problemas de insomnio e irrupción de su sueño causando cansancio corporal impidiéndoles estar totalmente activos. Se llega a una conclusión de que según los datos obtenidos un 49.56% femenil y 45% varonil mencionan que las causas de estrés es que trabajan dentro de un medio que

no es adecuado ya que no se cuentan con las herramientas necesarias para llevar a cabo sus actividades laborales.

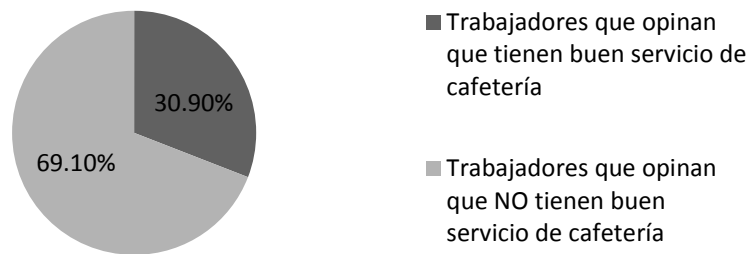

Figura 2: Estrés laboral en operadores de la industria maquiladora automotriz

En la presente figura se muestra el número de operadores de industria maquiladora automotriz en Ciudad Juárez Chihuahua que fueron encuestados, separando el total de encuestados y el número de los mismos que sufren estrés laboral, el número total de encuestados fue de 246 operadores tomados de una muestra de la población. Fuente: Elaboración propia.

Por otro lado un 19.10% femenino y 22.76% masculino nos mencionan que el respeto entre compañeros dentro de la empresa no es adecuado. Al igual que un 69.10% opinan que su servicio de cafetería es malo impidiéndoles tener una alimentación adecuada afectándoles de alguna manera y como consecuencia sufren de estrés laboral.

Figura 3: Servicio de cafetería en la organización

Descripción gráfica en la cual se muestra el número de operadores de industria maquiladora automotriz en Ciudad Juárez Chihuahua que fueron encuestados, en la cual opinan respecto al servicio de cafetería brindado por la organización en la que laboran, el número total de encuestados fue de 246 operadores tomados de una muestra de la población. Fuente: Elaboración propia.

Como consecuencia en un 10.16%, el estrés laboral ha causado el rompimiento de relaciones amorosas y hasta un 3.66% han llegado al divorcio, por falta de saber cómo manejar el estrés laboral de una manera en que no afecte el núcleo familiar. Un porcentaje de 80.89% en ambos sexos indican que les gustaría y sería de mucha ayuda que dentro de la empresa en la que laboran impartieran cursos para aprender a manejar el estrés laboral.

RESUMEN

La presente investigación tiene como objetivo determinar la relación que se da entre la asesoría y consultoría externa como factor importante para el logro de la permanencia y competitividad, y el impacto en las pequeñas empresas comerciales de Mexicali, B.C., por la intervención por parte de profesionales en materia administrativa y financiera. Para recabar la información se aplicó un cuestionario a una muestra de 200 pequeñas empresas comerciales de la ciudad de Mexicali, la información obtenida fue analizada e interpretada por medio del programa SPSS. Entre los resultados obtenidos se obtuvo que uno de los motivos por los que las organizaciones estudiadas fracasaron en sus esfuerzos por la supervivencia y por el crecimiento, fueron generado por la falta de asesoría empresarial, una deficiente administración y una mala organización, lo que les impacto negativamente para llegar a ser competitivos y lograr trascender.

PALABRAS CLAVES: Asesoría Y Consultoría, Pequeña Empresa, Competitividad

STRATEGIC CONSULTANCY AS ELEMENT FOR THE COMPETITIVENESS OF SMALL BUSINESSES

ABSTRACT

This research aims to determine the relationship that exists between external advice as important for achieving permanence and competitiveness factor, and the impact on small business enterprises in Mexicali, BC, by the intervention of professionals in administrative and financial. To gather the information a questionnaire to a sample of 200 small business enterprises of the city of Mexicali was applied, the information obtained was analyzed and interpreted by means of the SPSS program. Among the results, it was found that one of the reasons why the organizations surveyed failed in their efforts for survival and growth is generated by the lack of business advice, poor management and poor organization, which will impact negatively to become competitive and achieve transcendence.

INTRODUCCIÓN

El papel de las micro y pequeñas empresas es parte esencial en la economía de cualquier país, hablando de México, se considera que estas empresas constituyen una fuente importante en la generación de ingresos y

por consiguiente la principal fuente de creación de empleos, siendo el impulsor de la economía de la nación. Este grupo de empresas está en constante crecimiento y las cifras ligadas a este grupo lo avalan; de acuerdo con el Sistema de Información Empresarial Mexicano (SIEM), en la actualidad el segmento de la micro y pequeña empresa representan casi el 98% de las unidades económicas existentes en México, donde el 42.79% de estas empresas se dedican a la prestación de servicios, en el Estado de Baja California el 39.68% son empresas de servicios y en Mexicali el 49.03% de las empresas existentes se dedican a esta actividad (SIEM, 2013). Por tanto, se constituyen en una base significativa de empleo y en un medio para avanzar hacia una mejor calidad de vida de los empresarios, sus familias y la comunidad en la que se establecen.

REVISIÓN LITERARIA

En nuestro país el 99 por ciento de empresas se integran por Pymes, de estas solo el 45 por ciento tienen una antigüedad de 12 años en el mercado y el 12 % son empresas con menos de 4 años en el mercado, es decir hay un porcentaje pequeño de creación de empresas en comparación con aquellas que tienen más tiempo en el mercado. Sin embargo la principal característica que debe ser primordial para nuestra investigación es que estas empresas son tipo familiar y por lo tanto como nos indica Poza (2009) suelen tener problemas para su consolidación, pues el estrecho nexo que existe entre las personas que dirigen a veces impide la toma de medidas y decisiones difíciles para empresa.

Definición de Pequeñas Empresas Comerciales

La empresa es una organización económica de producción de bienes y servicios para un mercado específico, cuyo objeto primario o fin último es la obtención de utilidades para sus dueños. De acuerdo con Ferrell & Hirt (2010) las empresas mediante sus actividades ofrecen productos que proporcionan satisfacción y beneficios a las personas. La empresa es una unidad dirigida por un empresario formada por los factores de producción: capital, trabajo y organización. Existen varias formas para clasificar a las empresas atendiendo a diversos aspectos, tales como su tamaño, capital invertido, activos, número de empleados, ingresos obtenidos, entre otros. Por tamaño las empresas pueden clasificarse como grandes, medianas, pequeñas o micro empresas. En 2009 se realizó una modificación a la clasificación, de acuerdo a la Secretaría de Economía el cambio intenta evitar la discriminación y ampliar el acceso a programas de apoyo, la estratificación se realiza con base al número de empleados y ventas anuales, como se muestra en la siguiente cuadro:

Clasificación de Empresas Por Tamaño

Tamaño	Sector	Estratificación		
		Número de de trabajadores	Monto de ventas anuales (mdp)	Tope máximo combinado
Micro	Todas	Hasta 10	Hasta \$4	4.6
Pequeña	Comercio	Desde 11 hasta 30	Desde \$4.01 hasta \$100	9.3
	Industria y servicio	Desde 11 hasta 50	Desde \$4.01 hasta \$100	95
Mediana	Comercio	Desde 31 hasta 100	Desde \$100.01	235
	Servicios	Desde 51 hasta 100	hasta \$250	
	Industria	Desde 51 hasta 250	Desde \$100.01 hasta \$250	250

Elaboración: Propia Fuente: Diario oficial de la Federación 25 de Junio 2009

De acuerdo al SIEM (2012) las pequeñas empresas de comercio son de gran importancia en nuestro país representando el 32.96% de las empresas que existen a nivel nacional, en el Estado de Baja California estas empresas constituyen el 36.48% y en Mexicali estas representan el 39.89%.

Proporción de empresas pequeñas

Fuente: SIEM (2012)

Del Castillo, Cereceres, Rodríguez & Borboa (2005) definen a la empresa como una unidad productiva o de servicio que constituida según aspectos prácticos o legales se integra por recursos y se vale de la administración para lograr sus objetivos. Asimismo refieren que es una comunidad de personas que aportan lo que poseen y lo que son, con un fin de servicio mutuo y de complementación. Es una invención humana, diseñada para satisfacer mejor sus necesidades, mediante la unión de esfuerzos y recursos bajo una dirección que le permite cumplir sus propósitos y aportar beneficios a la sociedad, como se observa en la siguiente tabla sobre los componentes y criterios de eficacia de las empresas.

Tabla 1: Componentes y Criterios de Eficacia de las Empresas

Componentes	Criterio de Eficacia
Dueños	Retorno de inversión
Empleados	Satisfacción en el trabajo, salario
Clientes	Calidad de productos y servicios
Acreeedores	Rendimiento del crédito
Comunidad	Contribución a solucionar problemas sociales
Proveedores	Transacciones satisfactorias
Gobierno	Obediencia de leyes y regulaciones

Fuente: Del Castillo, Cereceres, Rodríguez & Borboa (2005)

Características Generales y Funcionales de las Pequeñas Empresas

Barragán (2009) y Rodríguez (2010) señalan que las pequeñas empresas poseen ciertas características generales que las hacen diferentes al resto de las empresas y a través de las cuales pueden ser fácilmente reconocidas. Algunas de estas características serían las siguientes:

Administración independiente, usualmente dirigida y operada por el propio dueño.

El número de personal tiene un límite inferior y otro superior. En México oscila entre 11 y 50.

Escasa especialización en el trabajo tanto en el aspecto productivo como en el administrativo.

Limitados recursos financieros, en la mayoría de estas empresas el capital de la empresa es suministrado por el propio dueño.

Sus sistemas de contabilidad y de control son elementales.

Poca o ninguna especialización en la administración.

La solución de problemas se hace mediante procedimientos de carácter informal y se resuelven conforme se hayan presentado.

Asesoría y Capacitación

Se debe considerar que la asesoría consiste en orientar, aconsejar, sugerir acciones de carácter específico al elemento que dirige la organización. Los asesores actúan como consejeros de los directivos y del personal subordinado y en virtud de ello, no tiene autoridad directa sobre ningún miembro de los departamentos en

los que hacen sus investigaciones, (Estudio De Caracterización Consultoría, 2006). El asesor es una persona por lo general muy preparada con una visión muy amplia de muchas materias de carácter general. Una asesoría contable permite una gestión contable organizada y clara, de forma que el usuario de la misma conozca en todo momento el estado de sus cuentas y los detalles de los balances. Esto permite la planificación de proyectos, puesto que la información que se obtiene de una buena gestión contable puede ser analizada con garantías, con lo que programar inversiones de futuro se convierte en una operación relativamente sencilla. En relación a la falta de capacitación Monterde y Bustamante (2014) señalan que las empresas pequeñas y medianas necesitan responder a las exigencias del mercado con personas competentes, formadas en el quehacer y los valores de su organización.

Para ello es necesario brindar capacitación continua a sus colaboradores y así responder con eficiencia a las demandas del entorno. La habilidad de una empresa de utilizar de manera eficiente tanto sus competencias internas (aprendizaje tecnológico y modos de construcción de conocimiento), como sus competencias externas (el uso del conocimiento externo a través del establecimiento de redes de relaciones sociales que la empresa establece con otras instituciones: proveedores, usuarios, universidades, centros de investigación, etc.). Las pequeñas y medianas empresas requieren una adecuada división del trabajo, organización de procesos y una mejor organización en la coordinación de personal y materiales físicos y financieros; pero sobre todo el involucramiento estratégico del empresario (Monterde y Bustamante, 2014). Con esto se puede considerar que aquella organización que desee ser competitiva, liderar el mercado y trascender, deberá destinar recursos para la formación de su capital humano. Una labor por la cual deben trabajar los propietarios de las PYMES es el poder competir en el mercado a través de personas competentes, formadas en el quehacer y los valores de su empresa y esto no se logra a menos que se brinde capacitación continua a sus colaboradores y así responder con eficiencia a las demandas del entorno. Invertir en las personas que laboran en una empresa es una recomendación constante que los especialistas consultores hacen a los directivos, toda vez que el monto invertido en el personal deberá significar una recuperación económica, la cual en determinado tiempo nos debe reflejar un beneficio mayor para la organización. Las empresas pequeñas y medianas necesitan responder a las exigencias del mercado con personas competentes, formadas en el quehacer y los valores de su organización. Asimismo la utilización de servicios de consultoría externos constituye un indicador de mejora de la competitividad de la empresa (Heras, Marimon & Casadesús, 2009).

Contrario a ello de acuerdo a un estudio realizado por Arosa, Iturralde y Maseda (2013) sobre una muestra de 307 pequeñas y medianas empresas la presencia de consejeros externos no se traduce en la mejora de los resultados de la empresa. A pesar de la mayor capacidad de control, asesoramiento y creación de redes atribuida a los externos. En este estudio las empresas presentaron una significativa presencia de consejeros internos, aspecto que puede estar relacionado con su mayor conocimiento de la empresa con el consiguiente efecto positivo en las decisiones estratégicas de la misma. Sin embargo es una realidad que las empresas pequeñas y medianas necesitan responder a las exigencias del mercado con personas competentes, formadas en el quehacer y los valores de su organización. Para ello es necesario brindar capacitación continua a sus colaboradores y así responder con eficiencia a las demandas del entorno. La gestión de la administración de empresas desde la consultoría y academia (universidades) debe continuar atendiendo las necesidades urgentes de la comunidad empresarial y coadyuvando con ello a mejorar su competitividad. Monterde & Bustamante (2014) señalan que una organización que desee ser competitiva, liderar el mercado y trascender, es la que destina recursos de todo tipo para la formación de su capital humano.

METODOLOGIA

Para la presente investigación se implementó una metodología establecida en dos etapas, en la primera parte se llevó a cabo la revisión y análisis de bibliografía en libros, revistas, periódicos, bases de datos y documentos electrónicos relacionados con el tema de estudio, apegándonos a esa revisión se elaboró el marco de referencia y el establecimiento de la hipótesis de investigación. En la segunda parte se realizó un estudio de campo, mediante la aplicación de un cuestionario a las personas que estuvieron a cargo de la

administración y funcionamiento de las empresas, el cual se elaboró tomando como referencia la información obtenida en la revisión documental. En esta fase una vez elaborado el instrumento se llevó a cabo su pilotaje para determinar si la estructura, validez y confiabilidad eran adecuadas. Después de esta prueba se hicieron correcciones al instrumento principalmente de forma, el cual una vez modificado, se aplicó a los empresarios que cumplieran con las características del objeto de estudio. Una vez aplicadas las encuestas a los participantes de la investigación, los datos fueron capturados y analizados a través de pruebas estadísticas con el sistema estadístico SPSS.

Planteamiento del Problema

La pequeña empresa mantiene un bajo índice de progreso y prosperidad por la falta de control dentro de sus actividades comerciales tanto internas como externas que está afectando la economía de los empresarios de Mexicali, B. C., debido a que implementan una forma básica de operar en la compra, distribución y venta de sus productos, dándole poca importancia a los aspectos administrativos y financieros que potencian la participación de cualquier negocio. Y esta actuación va obligándolos a ofrecer una escasa variedad de sus productos sin mayores opciones de elección que satisfaga las necesidades del consumidor, el cual juega un papel muy importante dentro del crecimiento micro empresarial, además a esto se adhieren el incremento del sector informal el cual está manteniendo una alta participación en este mercado conduciendo a muchos microempresarios a la quiebra de los negocios. La problemática planteada está ligada a las siguientes causas como: la poca cultura organizacional que impulse el control y dirección de los procesos administrativos, operativos y financieros, los escasos conocimientos de los propietarios en el manejo interno de sus actividades comerciales, una marcada tendencia de cambiar cantidad por calidad de sus productos. Estas causas generan efectos tales como un lento crecimiento micro empresarial, bajos rendimientos económicos, incremento del desempleo y una pobre participación en este mercado. El seguir operando bajo las causas establecidas sobre la problemática las microempresas seguirá manteniendo una limitada participación en este mercado o a su vez corren el riesgo de llegar a la quiebra de sus negocios.

Objetivo

El objetivo de esta investigación es determinar si la causa de que las pequeñas empresas del sector comercio en el municipio de Mexicali, B.C. no logran su trascendencia, consolidación y competitividad, es el no contar con asesoría financiera y administrativa como medida de apoyo para fortalecer su actividad. Como se puede observar en la Figura 1 el 51% de las empresas encuestadas no reciben ningún tipo de asesoría, lo cual se puede constatar lo planteado anteriormente. Sin embargo aquellas empresas que si están siendo asesoradas lo hacen a través de asociaciones civiles en un 28% y a través de los programas de gobierno tendientes a las asesoría y capacitación. Lo que es alarmante es el porcentaje tan bajo de empresas solo el 2.5% que reciben asesoría por parte de las instituciones de educación siendo las universidades un medio a través del cual estas empresas podrían recibir capacitación sobre cómo mejorar la operación de sus diferentes áreas; sobre todo aquellas universidades que contemplan en sus planes de estudio la gestión de negocios

ANÁLISIS DE RESULTADOS

Figura 1: ¿Quién le proporciona asesoría técnica?

Elaboración propia

Figura 2: ¿Considera adecuada la asesoría que ha recibido?

Elaboración propia

En relación a la percepción que tienen los pequeños empresarios sobre la asesoría que reciben se tiene que un alto porcentaje 93% tiene una opinión positiva sobre este tema, lo cual puede indicar que consideran que les ayuda a mejorar la administración de sus empresas y que convencido de ello son empresas que seguirán solicitando su asesoría de manera permanente. Figura 3: ¿Le interesa que le den asesoría técnica o nuevas asesorías?

Asimismo un 67.5% de los empresarios manifestaron su interés en recibir asesoría más técnica en algunas de las áreas de sus empresas o bien tienen la apertura para recibir un nuevo tipo de asesorías, un 32.5% mostró interés en cambiar el tipo de asesoría que recibe actualmente, lo cual puede deberse a que se consideran que la asesoría que tienen cubre las necesidades de su empresa.

Figura 4: ¿En Qué Área le Interesa Recibir Asesoría?

Elaboración propia

Los empresarios interesados en recibir asesoría más técnica señalaron principalmente el área de finanzas en un 33.10%, así como fiscal y mercadotecnia, en un 32.3% y 30.5% respectivamente. Como se puede apreciar el área de finanzas tiene un poco más de interés para los empresarios debido a que la adecuada administración de las finanzas tiene un impacto directo en todas las áreas de la empresa y sobretodo en el manejo del efectivo de la empresa que podríamos decir es el motor que mueve a la empresa. Asimismo existe un interés en el área de fiscal en virtud de que las empresas se preocupan de cumplir en tiempo y forma con sus obligaciones fiscales, ya que la falta de su cumplimiento puede llevar a la empresa a tener consecuencias como multas, recargos y sanciones de tipo administrativo, por tal motivo desean los empresarios estar asesorados en estos temas y mantenerse actualizados, además de que es un área que constantemente sufre modificaciones y las empresas deben adecuarse y establecer mecanismos para poder

estar acorde a las nuevas disposiciones fiscales. En cuanto al área de mercadotecnia actualmente las empresas compiten cada vez más en el mercado con estrategias publicitarias para ganar clientes, por ello los empresarios buscan nuevos medios o formas de hacer llegar sus productos o servicios a sus clientes, buscando aquellos que tengan un mayor impacto en el consumidor.

CONCLUSIONES

El propietario de una pequeña empresa comercial debe compenetrar los diversos intereses que se presentan en la empresa, procurando en todo momento la rentabilidad del negocio y la felicidad de los miembros, con el fin de asegurar la continuidad de la familia empresarial. La supervivencia de estas empresas no es fácil ya que carecen de elementos que precisamente son los que permiten a las grandes empresas consolidarse, aspectos tales como cultura empresarial, planeación, administración, controles internos, entre otros. La capacitación en la micro y pequeña empresa se ha convertido en algo necesario para la vida y existencia de un negocio, debido a que hoy en día en un sistema globalizado, competitivo, y actualizado, es muy grande la lucha que se libera en el mercado por mantenerse en un nivel estable o competitivo y con vida, es por ello que la necesidad de las capacitaciones y asesoramiento dentro de la micro y pequeña empresa se ha determinado como algo por lo cual los propietarios deben poner mucha atención o cuidado para su desarrollo. En muchas micro empresas, el tema de la asesoría externa es algo que no se valora como lo que es y por ello se muestra la gran carencia de capacitaciones tanto para los propietarios como para el personal, y de ahí es donde se da origen a la deficiencia de los negocios como baja en las ventas, descontrol en los productos, mala utilización del dinero, compra de productos ya existentes, y todo ello encamina a una quiebra segura del negocio. Estas empresas muestran una necesidad evidente de recibir una adecuada asesoría y capacitación que les facilite un funcionamiento de manera eficiente y competitiva, planteándose objetivos y evaluando los resultados obtenidos durante su desempeño. La utilización de servicios de consultoría externos constituye un indicador de mejora de la competitividad de la empresa.

RECOMENDACIONES

En base a los resultados y conclusiones de esta investigación se presentan las siguientes recomendaciones para un mejor desempeño de este tipo de empresas: Para que el propietario logre consolidar una organización exitosa, debe reconocer que debe utilizar las estrategias que asegurarán la permanencia de la PYME, dentro de las cuales debe ubicar el recibir asesoría y capacitación por externos que sean capaces de enfocar las acciones que se llevan a cabo en la empresa en busca de la permanencia y consolidación. Dentro de los requerimientos de planeación de los microempresarios se convierte en situación preponderante el que se analice el llevar a cabo un acercamiento con expertos que los encaminen brindándoles información actualizada sobre las operaciones propias de la organización lo cual le repercutirá en una mejor toma de decisiones sobre la administración de la empresa y recursos, los cuales impactan directamente en su continuidad, siendo una oportunidad para las universidades o escuelas de negocios ya que los estudiantes en etapas terminales se convierten en asesores actualizados con gran interés en poner en práctica sus conocimientos y algo adicional que se puede ganar es el hecho que no tendrán la resistencia a que alguien pueda llegar a cambiar sus métodos que es algo que les preocupa, el creer que estarán expuestos a ser estafados, intimidados o a perder el control sobre su organización.

RESUMEN

La extensión rural actualmente tiene que ver con acciones que envuelven la utilización de información y conocimiento, mediante una intervención basada en la comunicación con la intención de alcanzar, un desarrollo socialmente equitativo y ambientalmente sostenible para la población rural. La comunicación juega un rol importante para la obtención de logros que se buscan con la intervención; por lo que para lograrlo, debe de existir la selección, producción y uso de los medios adecuados para realizar el servicio de extensión rural. En este sentido, surgió la interrogante sobre ¿qué métodos de intervención se llevan a cabo para desarrollar la comunicación implementada en la extensión rural de Baja California Sur?; el objetivo de esta investigación es identificar y describir cualitativamente los métodos de intervención, y los medios de comunicación utilizados por los extensionistas en los servicios de extensión rural de Baja California Sur.

PALABRAS CLAVES: Extensión Rural, Método de Intervención, Medio de Comunicación

INTERVENTION AND COMMUNICATION STRATEGIES IN RURAL EXTENSION OF BAJA CALIFORNIA SUR

ABSTRACT

The rural extension work currently has to do with actions involving the use of information and knowledge through an intervention, based on communication with the intention of achieving a socially equitable and environmentally sustainable development for the rural population. The communication plays an important role for obtaining achievements that are sought by the intervention; so to achieve this, there must be, selection, production and use of appropriate for rural extension service means. In this sense, the question arises, what intervention methods are conducted to develop communication used in the extension rural Baja California Sur?; The objective of this research is to qualitatively identify and describe the intervention methods and the communication media used in rural extension services in Baja California Sur.

JEL:

KEYWORDS: Extension rural work, intervention methods, media communication

INTRODUCCIÓN

Desde los orígenes de la extensión rural, pasando por su adopción generalizada, bajo los distintos enfoques en los que se ha implementado hasta la actualidad, el medio de comunicación ha sido de forma

completamente natural, el agente de modernización por excelencia en la búsqueda del desarrollo rural; por ello, en tal búsqueda, el agente de desarrollo (extensionista, promotor, facilitador, etc.), tiene y ha tenido como función básica la de comunicarse con los sujetos a los que se dirige la extensión; por lo que para lograr el fin que se busca con la extensión rural, debe de existir un método de intervención adecuado, que permita llevar a cabo la comunicación efectiva.

Ante lo anterior, se plantea la interrogante ¿qué métodos de intervención se llevan a cabo para desarrollar la comunicación que se utiliza en la extensión rural de Baja California Sur?; por ello, se plantea que el objetivo de esta investigación es identificar y describir cualitativamente, los métodos de intervención utilizados por los extensionistas, así como los medios de comunicación preferidos en los servicios de extensión rural de Baja California Sur. La investigación propuesta recobra vital importancia, ya que se han realizado numerosos estudios de los medios de comunicación que los productores prefieren, pero estudios en cuanto a los medios utilizados por los extensionistas, es poco común su existencia, siendo éstos de suma importancia, ya que, el método de intervención propiciará la efectividad de la comunicación utilizada por los extensionistas, al realizar su labor con los sujetos de desarrollo, ejerciendo tal efectividad, influencia en el aprendizaje y desarrollo de estos últimos.

REVISIÓN DE LITERATURA

Extensión Rural

La extensión rural, se entiende como el conjunto de acciones que envuelven la utilización de información y conocimiento, mediante un proceso participativo de intervención, basado en la comunicación y de carácter educativo, con la intención de alcanzar un modelo de desarrollo socialmente equitativo y ambientalmente sostenible para la población rural (Sánchez de Puerta, 1996 y Gonzales 2007). Su objetivo es, el desarrollo integral de los sujetos que participan en este proceso y, la esencia del proceso educativo es el desarrollo de la personalidad humana (Barrientos y Rayan, 2005); se tiene entonces, que el proceso de extensión rural se basa en la comunicación y es de carácter educativo. La extensión se asienta en un proceso participativo de intervención, de comunicación, de carácter educativo no formal y que apunta a transformar la realidad (Gonzales, 2007).

Comunicación, Su Contexto y Proceso

Desde el punto de vista estructural, la comunicación es el proceso de transmitir mensajes de una fuente a un receptor, con la finalidad de modificar la conducta de este último (Mendoza y Caetano, 1992, y Galindo *et al.*, 2001). Por su parte Berlo (1984), define la comunicación como un proceso mediante el cual un emisor transmite un mensaje a través de un canal hacia un receptor; mientras que Paoli (1989), la define como un acto de relación entre dos o más sujetos, mediante el cual se evoca en común, un significado. Zayas (2011), argumenta que la comunicación es un proceso complejo, sistémico, multidisciplinario, interdisciplinario, de carácter material, subjetivo, espiritual, social, grupal e interpersonal que posibilita el intercambio de información, la interacción y la influencia mutua en el comportamiento humano. En éste sentido, la comunicación, puede ser entendida como la interlocución humana o diálogo social, necesaria para lograr el ciclo que nos lleva desde la información hacia la construcción del conocimiento, la toma de decisiones y la acción social (León *et al.*, 2001).

Para ello, la comunicación puede tener lugar en distintos entornos o contextos, los cuales West y Turner (2005), los clasifican de la siguiente manera: 1) la comunicación intrapersonal; 2) la comunicación interpersonal; 3) la comunicación en el grupo pequeño; 4) la comunicación organizacional; 5) la comunicación pública; 6) la comunicación de masas; 7) la comunicación intercultural. Por lo anterior, de acuerdo con Zayas (2008), la comunicación es una ciencia que tiene carácter sistémico, comprendiendo los

siguientes elementos: 1) idea del mensaje; 2) codificación o cifrado; 3) transmisión (canal); 4) recepción; 5) decodificación o descifrado; 6) utilización; y 7) retroalimentación.

Medios de Comunicación

Marsall McLuhan escribió sobre la influencia de las tecnologías en su libro *Understanding Media*, publicado por primera vez en 1964, estudiando el impacto de las primeras formas medidas de comunicación (relojes, televisiones, radios, teléfonos, entre otros). De acuerdo con West y Turner (2005), McLuhan afirmaba que la tecnología mediada conforma los pensamientos, los sentimientos y las acciones de las personas; asegurando que se tiene una relación simbiótica con la tecnología mediada.

McLuhan (1996), clasificó los medios de comunicación en calientes y fríos; los primeros piden poco al oyente, lector o espectador, dejando poco a la imaginación. Los medios fríos, al contrario, requieren un alto grado de participación, ya que son de baja definición dando poco; por lo que el oyente, espectador o lector, debe involucrarse considerablemente en la esencia del significado, el cual debe de ser creado mediante una alta implicación sensorial (West y Turner, 2005). En tal clasificación, la efectividad de los medios de comunicación, recobra vital importancia, teniendo ésta que ver con el número de sentidos que se afectan, por ejemplo, el material impreso estimula la vista; la radio y las cintas grabadas, el oído; la televisión, el vídeo y los títeres, estimulan la vista y el oído; y únicamente las demostraciones personales de métodos y resultados afectan todos los sentidos, en este aspecto entre más involucrados estén los sentidos, mayor será el entendimiento del significado (Quirós *et al.*, 1989 y Galindo *et al.*, 2001).

METODOLOGÍA

Para alcanzar el objetivo propuesto, se tomaron los servicios de extensión bajo las estrategias nacionales asistencia técnica agrícola, asistencia técnica pecuaria y una estrategia Estatal, inscritos en el Programa de Desarrollo de Capacidades y Extensionismo Rural de la Secretaria de Agricultura, Ganadería, Desarrollo Rural, Pesca y Alimentación (SAGARPA) en Baja California Sur durante el ejercicio del año 2013. Se realizó un cálculo de muestra probabilística, donde el tamaño de la muestra total (n) fue de 45 casos. Para identificar métodos de intervención, así como los medios de comunicación utilizados, se procedió a acompañar a los extensionistas en situación de trabajo durante la realización de los 45 casos de estudio, durante el periodo comprendido entre los meses de octubre de 2013 a junio de 2014; en tal acompañamiento se realizó una observación cualitativa, el papel de la observación fue distante no participante. Para el registro de datos, se elaboró un tablero en el que se registraron los métodos de intervención que se utilizaban por los extensionista, describiéndolos en el mismo evento, en los diferentes contextos de comunicación (interpersonal, grupo pequeño) que se presentaron de acuerdo a la clasificación proporcionada por West y Turner (2005), registrando la frecuencia utilizada del método. Así mismo, se elaboró un tablero que incluyera los medios identificados en el acompañamiento.

RESULTADOS

Las pláticas, los cursos de capacitación y los eventos demostrativos, resultaron ser los métodos de intervención preferidos por los extensionistas para que se diera la comunicación con los productores, la Tabla 1 presenta los métodos utilizados por los extensionistas. La identificación de la intervención se definió a partir de dos métodos, individuales y grupales. El primero se ubica en un contexto de comunicación interpersonal, ya que la comunicación se da cara a cara. Solo se observó un método para este caso, la asistencia técnica, en la cual el extensionista visitó la unidad de producción y propició una comunicación personal con el productor; de los 45 casos observados, en el 29.89% de los casos se identificó este método.

Tabla 4: Métodos de Intervención Utilizados Por los Extensionistas

Método	Contexto de la comunicación	Evento de intervención	Frecuencia	%
Individual	Interpersonal	Asistencia técnica	13	29.89
Participativo	Grupo pequeño/interpersonal	Capacitación	17	37.78
Participativa	Grupo pequeño/interpersonal	Eventos demostrativos	15	33.33
Participativa	Grupo pequeño/interpersonal	Entrevistas	8	17.78
Participativa	Grupo pequeño/interpersonal	Pláticas informativas	44	97.78

En el método de intervención grupal, se consideraron métodos masivos de enseñanza de grupo, por lo que el contexto de comunicación fue de grupo pequeño; estos fueron más frecuentes que los métodos individuales. En este tipo se identificaron: 1) Capacitación. 2) Evento demostrativo. 3) Entrevistas. 4) Pláticas. En cuanto al uso de medios de comunicación, los cuales se reflejan en la Tabla 2, se identificaron los medios impresos, como aquellos que tuvieron que ver con medios de comunicación basados fundamentalmente en combinaciones de palabras impresas e imágenes gráficas. En este sentido se observaron Folletos (15.56%), y Pizarra y rotafolios (33.33%).

Tabla 2: Medios de Comunicación Utilizados Por los Extensionistas

Tipo de Medio	Medios de Comunicación	Frecuencia	%
Impreso	Folletos	7	15.56
Impreso	Pizarra y rotafolios	15	33.33
Audiovisual	Presentaciones multimedia	7	15.56
Audiovisual	Videos	1	2.22

De igual forma se identificaron medios de comunicación audiovisuales, para lo cual se tomaron aquellos medios utilizados por los extensionistas, que se basaron en el sentido de la vista o del oído, ya sea solos o combinados. En este caso se observaron presentaciones multimedia (15.56%), y videos (2.22%).

CONCLUSIONES

Los métodos de intervención identificados, fueron las pláticas informativas, utilizadas en un 97.78% de los servicios observados, la capacitación en un 37.78%, los eventos demostrativos en un 33.33%, la asistencia técnica en un 29.89% y las entrevistas en un 18.78%. Se observa que el método más utilizado es la plática informativa; y en las intervenciones en las que se considera que su finalidad necesariamente tiene que ver con un comunicación con carácter educativo la más utilizadas de éstas, fue la capacitación. Así mismo, complementado los eventos de intervención presentados, se observaron los medios de comunicación utilizados por los extensionistas que consistieron en folletos (15.56 %), pizarras y rotafolios (33.33%), presentaciones multimedia (15.56 %) y videos (2.22 %), presentan una frecuencia baja, menos del 50% de los servicios observados hizo uso de ellos.

Ante lo anterior, considerando que la finalidad de la extensión rural con sus intervenciones, es el desarrollo integral de los sujetos que participan en el proceso, basado en la comunicación y de carácter educativo, apuntando a transformar la realidad de las personas atendidas, comprendiendo todo aquello que conduzca al desarrollo rural, la extensión rural de BCS, presenta en sus estrategias de intervención y de comunicación, un bajo grado de utilización por los que realizan las intervenciones (extensionistas) de las estrategias dirigidas a la finalidad considerada por la extensión rural.

CAUSAS DE DESEMPEÑO Y SOLUCIONES E INFLUENCIA DE LOS VALORES ÉTICOS

Víctor Mercader, CETYS Universidad

Resumen

Individualmente se puede trabajar pero el rendimiento se constata al trabajar en equipo. Si se quiere producir en mayores proporciones, el trabajo en equipo se considera necesario y fundamental. Las empresas en pro de cumplir sus objetivos y logros, dependen de su recurso humano y este es función de los equipos de trabajo que laboran en la misma. Si el trabajo de los equipos es satisfactorio, la empresa tendrá mayor productividad. El propósito de esta investigación es identificar y analizar la necesidad, las causas del no adecuado desempeño y las soluciones factibles aplicables al Trabajo en Equipo de la empresa o lugar de trabajo. La data obtenida proviene de la percepción de los profesionistas de la muestra en estudio del área de Baja California, centro industrial y fronterizo de primer orden de México, en relación al Trabajo en Equipo aplicado a la empresa y conocer si existe vinculación con los valores éticos. Los resultados implicarán un mayor conocimiento y comprensión de las causas y variables generadoras de crisis en el trabajo en equipo y por ende, se lograrán propuestas y factibles soluciones de mejoramiento que pueden ser aplicadas por diferentes tipos de líderes, empresarios y personas en general, tanto a nivel personal como profesional, empresarial y social.

PALABRAS CLAVE: Desempeño, Etica

TEAMWORK: CAUSES AND PERFORMANCE SOLUTIONS AND INFLUENCE OF ETHICAL VALUES

ABSTRACT

We may work individually but high performance is found in teamwork. If you want to engage in larger scales and higher levels of productivity, teamwork is necessary and essential. Companies intending to accomplish their goals and achievements depend on their human resources, which is a direct function of the teams that work in it. The company will have higher productivity when the results of teamwork are satisfactory. The purpose of this research is to identify the need of teamwork and analyze the causes of inadequate performance, the feasible solutions for improvement, and to identify if there is any link between teamwork and ethical values. The data collected comes from a study of a sample of professionals in the Baja California region. This region is on the border with California, USA and it is an important industrial center of Mexico. The results obtained provide greater knowledge and understanding of the multiple causes and variables that generate crisis in teamwork. The resulting data and analysis also generate proposals and solutions for improvement applicable to leaders, business people, entrepreneurs, and people in general in their personal, professional, and business pursuits.

KEYWORDS: Performance, Ethics

INTRODUCCIÓN

Individualmente se puede trabajar pero el rendimiento se constata y multiplica al trabajar en equipo. Si se quiere producir en mayores proporciones, el hecho de integrar equipos de trabajo y hacerlos trabajar

efectivamente se considera necesario y fundamental. De allí que las empresas en pro de sus objetivos y logros, dependen del recurso humano que a su vez depende del trabajo en equipo, el cual repercute en la efectividad y productividad de las mismas. La aplicación de los valores éticos es fundamental en el comportamiento del trabajo en equipo en las organizaciones (Alles, 2007). Es por ello importante encontrar también su relación con la ética.

Propósito

El propósito de esta investigación es identificar y analizar la necesidad, las causas del no adecuado desempeño y las soluciones factibles aplicables al Trabajo en Equipo de la empresa o lugar de trabajo. La data obtenida proviene de la percepción de los profesionistas de la muestra en estudio del área de Baja California, centro industrial y fronterizo de primer orden de México, en relación al trabajo en equipo aplicado a la empresa y conocer si existe vinculación con los valores éticos.

Justificación

El ser humano, como integrante de equipos, pasa a ser responsable del desempeño de la organización. El equipo tiene la necesidad de interrelacionarse entre sí y con los demás de maneras muy diferentes; de allí que la importancia de los valores éticos así como de otras variables del estudio se consideren necesarias de tomar en cuenta ya que todos dependemos entre sí, unos de otros. Las empresas en pro de cumplir sus objetivos y logros, están en manos de su recurso humano y este es función de los equipos que laboran en la misma. Si el trabajo de los equipos es satisfactorio, la empresa producirá mejor.

Problema de investigación: El Trabajo en equipo es fundamental en cualquier organización. El análisis de las causas que originan un mal desempeño del equipo, así como las factibles soluciones que puedan proponerse para mejorar el mismo es un tema fundamental para empresas, organizaciones e instituciones de toda índole. Si le adicionamos al estudio, la influencia de los valores éticos en los resultados que los equipos de trabajo dan, podremos encontrar respuestas que ayuden a mejorar dicho desempeño.

Preguntas a Investigar

El instrumento diseñado busca la identificación, el conocimiento y el análisis de:

Si el trabajo en equipo es necesario en las empresas.

Las causas que generan falta de un adecuado o no efectivo trabajo en equipo en las empresas.

Las soluciones factibles para mejorar el trabajo en equipo en las empresas.

Marco Teórico

El trabajo en equipo resulta fundamental a nivel de empresa, familia y sociedad. Nos enfocaremos en esta investigación en la empresa. La mayoría de empresas están conscientes de la necesidad e importancia del trabajo en equipo, sin embargo, ello no implica que trabajen lo bien que podrían hacerlo. De allí, el interés por esta investigación. Cooney & Sohal (2004) nos hace ver la importancia del trabajo en equipo y su repercusión en una mejor fluidez de la información, en el desarrollo de las funciones y responsabilidades de los empleados a todo nivel y en la solución de situaciones diversas que se presentan en el mundo empresarial e institucional. Los mismos autores afirman que los equipos de trabajo se forman de acuerdo al objetivo programado a alcanzar; de allí que la forma de integrarlos variará de formas diversas según sean obligatorios o voluntarios, temporales o permanentes, con especialidades diversas u homogéneas, con similares culturas o variadas, etc. Los objetivos deben estar por lo tanto, muy claros, accesibles y precisos para todos los componentes del equipo. El trabajo en equipo se puede considerar, según Robles (2012), como un valor que influye significativamente en el desarrollo de la organización y por ende en su ambiente

de trabajo, pasando a ser más bien una necesidad deseable y fundamental. Así, los equipos se tornan en entes vivos que requieren lograr los objetivos con alta satisfacción (Rodríguez y Aguilera, 2005) Sewell (2005) nos indica que el 72% de las organizaciones informan que para realizar un adecuado trabajo en equipo, la motivación es esencial y que el mejoramiento de la productividad y la calidad de vida de sus trabajadores deben ir de la mano.

También el factor confianza entra en juego en todo individuo al igual que a nivel de empresa. La confianza en las organizaciones dependerá de cómo sea la confianza mutua en los diferentes equipos que conforman la organización y el equipo rector o director. La productividad, el rendimiento y la competitividad se incrementará en relación a la confianza que exista en el personal entre sí y con sus dirigentes o jefes (Läms, A., & Pučėta, R., 2006). Seeger & Sellnow (2007) asevera que el sector laboral y el sector directivo deben converger en comunicación y expectativas en sus diferentes niveles de labores y responsabilidades, y coincidir en palabras y hechos. Surge de este modo, la necesidad de aplicar valores éticos para incrementar y mantener la dignidad, el respeto y la responsabilidad por parte de todos como un único equipo que es la empresa misma.

Nos plantea Seeger & Sellnow (2007) que si el ejemplo de los líderes es fundamentado en valores éticos, los equipos trabajarán y resolverán con mayor fluidez, coherencia y cooperación. Todos los equipos de trabajo relacionados con las empresas tienen la responsabilidad de aportar positiva y éticamente con la empresa y con la sociedad. Hay que considerar a todos los participantes directos e indirectos, como son accionistas, directores, empleados, clientes, cooperadores externos, proveedores, distribuidores y comunidades. Es por ello que la ética que el personal y los equipos de trabajo demuestren, se verá reflejada en su comportamiento y resultados, en el plano individual y de equipo (Mercader, 2011). Para alcanzar un rendimiento equilibrado será necesario elevar el sentido de equidad y el valor que el equipo demuestre en base a la confiabilidad y la ética que aplique (Keyton, J. & Beck, S., 2008). Adicionalmente, hay que considerar en los grupos o equipos: La identidad, el tamaño, las metas, la estructura y la interdependencia. Considera, Arcienaga et al. (2008) crear sinergia entre los miembros de los equipos de trabajo y la organización, lo cual va más allá de la capacitación, talentos, habilidades y competencias que normalmente se exigen. Se requieren valores en los equipos.

Schwartz, S.H. (1992) crea categorizaciones de valores según el objetivo motivacional mostrando 10 tipologías que conforman la estructura circular, a saber: Autoridad, Logro, Hedonismo, Estimulación, Auto dirección, Universalismo, Benevolencia, Tradición, Conformidad, y Seguridad. Mercader (2006) también plantea una taxonomía de valores éticos que ayuda al mejoramiento individual y grupal de trabajo y de vida. Los cambios de estrategia por parte de los equipos directivos son fundamentales para potenciar los equipos de trabajo a todo nivel, dar mayor participación a todos los integrantes en las decisiones y dar nuevos respiros a la empresa en pro de impulsar la productividad. Jones, Kalmi & Kauhanen (2010) mencionan que la iniciativa se amplía en función de otorgar mayor responsabilidad a los equipos de trabajo en sus diferentes áreas, lo que induce a que el entusiasmo y el espíritu de logro mejoren y se desarrollen. El trabajo en equipo requiere de responsabilidad para cumplir y alcanzar un alto desempeño, tanto dentro como fuera de la empresa, a nivel de equipo y a nivel social. La responsabilidad social de los equipos de trabajo y de su apoyo empresarial, según Vhora, Sheel, et al. (2012), pasa a ser una ventaja competitiva que puede repercutir incluso en beneficios financieros.

IRamírez, Sánchez y Quintero (2005) se basa en el beneficio que adquiere la empresa al tener equipos de trabajo que concienticen su sentimiento de pertenencia o arraigo, compartan y manejen en conjunto la información y los conocimientos aplicables, y apliquen valores de manera proactiva. El apoderamiento al equipo y a todos sus miembros otorga libertad pero simultáneamente obliga a solucionar con mayor responsabilidad y con espíritu de compromiso, lo cual incrementa la confianza y la productividad (Graham, 2005). Por su parte, Ramis, Manassero, Ferrer & Garcia (2007) hacen énfasis en lo que ellos denominan habilidad social y en la autoeficacia del equipo, lo que implica preparación y capacitación. Ahora bien, los

rendimientos y desempeños de los entrenamientos de los integrantes de equipos de trabajo son convenientes de analizar en relación a la inversión realizada y al costo-beneficio (Fortune, J. & Utley, D. R., 2005). Estos autores diseñaron una herramienta de medición y evaluación denominada (“Team Success Questionnaire”) TSQ que ayuda al ser respondida a comprender mejor el desempeño y el desarrollo de los equipos de trabajo.

El cumplir de modo correcto y a tiempo es necesario y esencial, de allí la necesidad de la ética del equipo de trabajo, la cual Bañon, Guillén & Ramos (2011) ratifican a nivel individual, de equipo y de empresas y en organizaciones de todo tipo. Los equipos interdisciplinarios en medicina, por ejemplo, son ejemplo de dependencia entre unos y otros y de la necesidad de trabajar en base a la ética profesional ya que todos los miembros son corresponsables de vidas humanas de modo directo o indirecto. Clark, Cott & Drinka, T (2007) Pérez, et al. (2007) se enfocan en la innovación creciente y la multiplicidad de tareas y actividades que obligan a la formación de equipos de trabajo para poder sobresalir y ser más competentes en todos los planos, empresa, equipo de trabajo, familia y sociedad. Cada día más, ya no se puede resolver solo, se requiere de la integración y participación cohesiva de un equipo de trabajo y de soluciones en conjunto. Como Sarramona (2005) afirma, el comportamiento mostrado afectará siempre, de una forma u otra, nuestro crecimiento profesional y personal y de igual manera, a los demás, tanto dentro como fuera del entorno de trabajo. Mantener satisfacción entre los miembros de los equipos reduce el stress laboral según Chen y Yang (2010). De allí que si los empleados y los equipos de trabajo no perciben una congruencia con los objetivos y el comportamiento cultural y organizacional de la empresa, la productividad, el compromiso y el entusiasmo decrecerán. Hacen hincapié Bañon, Guillén & Ramos (2011) en el hecho de aprovechar el talento de los integrantes de los equipos de trabajo de forma coherente y congruente en pro de los objetivos establecidos y analizados en común. Estos objetivos han de otorgar satisfacción en todos los niveles de la organización. Joseph y Sailakshmi (2011) hablan del término de Inteligencia espiritual que citan como una necesidad y ayuda en las relaciones tanto intrapersonales como interpersonales. Se puede comprender mejor ahora el amplio apoyo conceptual y empírico que hay en relación al trabajo en equipo y el aporte y necesidad que representa para las empresas, al igual que la influencia de la aplicación de la ética en los equipos de trabajo.

METODOLOGÍA Y ANÁLISIS DE DATOS.

Se ha aplicado en este estudio, un cuestionario con preguntas abiertas y cerradas a profesionistas que laboran en el área de Baja California, México.

Se han creado diversas categorizaciones con la data procedente de las respuestas a preguntas abiertas que serán útiles para conocer y encauzar un mejor Trabajo en Equipo. Variables sociodemográficas se incluyen en el cuestionario como el género, edad, nacionalidad, profesión y tipo de trabajo.

La muestra total estuvo constituida por 508 participantes.

Este estudio se puede decir que es un diseño múltiple combinando lo cualitativo con lo cuantitativo. Es de tipo transversal denominado también transeccional y en su mayor parte de tipo descriptivo. No se han realizado correlaciones.

El instrumento fue elaborado por el autor con el fin de encontrar respuestas a diferentes preguntas relacionadas y vinculadas con el Trabajo en Equipo y resulta similar con sus respectivas adaptaciones al instrumento utilizado en Mercader (2011) siguiendo una secuencia de investigaciones que el autor realiza.

RESULTADOS

Las preguntas del cuestionario fueron el eje y soporte para la obtención y análisis de la data que ha sido evaluada en este estudio enfocado en el trabajo en equipo.

1.- La primera pregunta relacionada al sexo o género se distribuyó como se indica en la Tabla 1, la cual muestra que hubo una leve mayoría de participación del género masculino. La diferencia fue de 5.52%. Ver Tabla 1.

Tabla 1. Sexo o género de los participantes.

Sexo	Porcentaje de respuestas	Número de respuestas
Opciones de respuesta		
Masculino	52.76%	268
Femenino	47.24%	240
Preguntas respondidas	100%	508
Preguntas sin responder		

2.- En el análisis de la edad, se establecieron intervalos de 5 años que mostraron que una mayoría de los profesionales participantes eran relativamente jóvenes, siendo la moda de 28 años con 45 participantes de esa edad. 263 participantes estaban en un rango de edad de 25 a 34 años, lo que representa el 51.77 % de la muestra. La edad de los participantes llegó hasta los 69 años. Ver tabla 2.

Tabla 2. Edad de los participantes por rangos de edades

Rangos de edades	Total personas según rango de edad
A 16 a 19	1
B 20 a 24	67
C 25 a 29	148
D 30 a 34	115
E 35 a 39	71
F 40 a 44	57
G 45 a 49	24
H 50 a 54	12
I 55 a 59	7
J 60 a 64	3
K 65 a 69	3
Total	508

NOTA: La data suministrada por personas de baja edad que no fueran profesionales no fue considerada.

Una vez colectadas y analizadas las respuestas demográficas (aunque solo dos de ellas han sido presentadas en este artículo) nos enfocamos a las preguntas primarias de la investigación que se dirigieron a la empresa, familia y sociedad.

En este estudio se han tomado en cuenta únicamente las respuestas relacionadas con la empresa.

3.- Se inicia el análisis con la pregunta: ¿Qué tan necesario es el trabajo en equipo en las empresas? La respuesta evidenció que los porcentajes de “muy necesario y bastante” fueron en la empresa casi el total de necesidad, obteniendo el 98.80%.

Tabla 3. Necesidad del Trabajo en Equipo

	Total de Respuestas	Porcentaje	Acumulado
Muy	374	73.6%	73.6%
Bastante	128	25.2%	98.8%
Más o menos	6	1.2%	100.0%
Algo	0	0.0%	100.0%
Poco	0	0.0%	100.0%
Total	508	100%	

4.- Este resultado indica que la investigación tiene sentido de haber sido efectuada, ya que confirma la importancia del trabajo en equipo en las empresas e induce a formular la siguiente pregunta que se refiere a: ¿Cuáles son las causas que dificultan y/o impiden que haya un adecuado y/o efectivo trabajo en equipo?

La pregunta da la oportunidad de responder dos causas a cada uno de los participantes en el cuestionario. Así, el número de respuestas ascendió a 940, lo que da un margen muy amplio de reflexión y análisis. Ver Tabla 4 y Figura 1.

Tabla 4. Causas de un NO Adecuado y/o Efectivo Trabajo en Equipo en empresas

Dimensiones categorizadas	1ra. selección	2da. selección	Total	%
1 Valores	181	218	399	42.45%
2 Comunicación	142	50	192	20.43%
3 Estructura organizacional	65	70	135	14.36%
4 Liderazgo	27	29	56	5.96%
5 Ambiente laboral	21	29	50	5.32%
6 Educación	19	26	45	4.79%
7 Otros	16	9	25	2.66%
8 Cultura	10	11	21	2.23%
9 Motivación e Indiferencia	12	5	17	1.81%
Total	493	447	940	100.00%

Se observa de manera muy significativa que la dimensión de Valores ocupa un 42.45% de la preferencia de los profesionales que participaron en la muestra.

Figura 1. Causas de un NO Adecuado y/o Efectivo Trabajo en Equipo en empresas

La sumatoria de las dimensiones Valores, Comunicación y Estructura organizacional alcanza un 77.24% de las causas que hacen que no haya un buen o adecuado trabajo en equipo en las empresas.

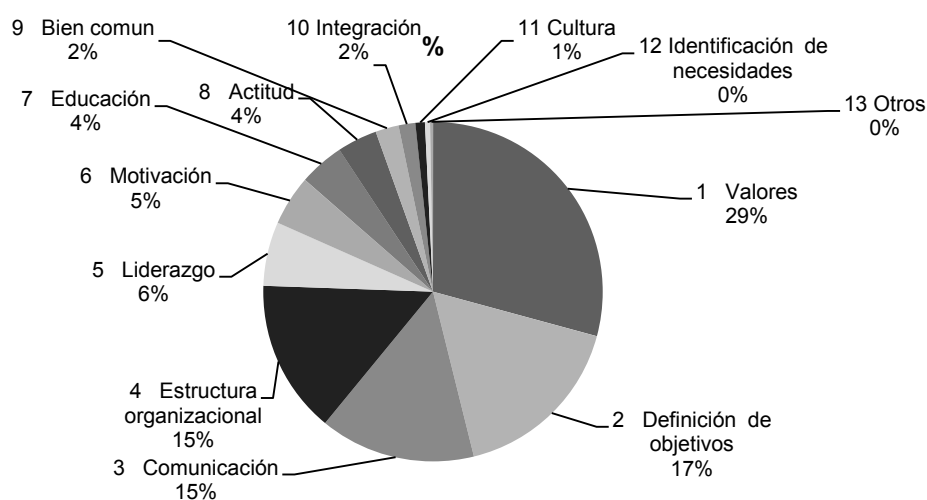

5- La siguiente pregunta que se refiere a: ¿Qué factores principales, soluciones o maneras podrías sugerir para mejorar el trabajo en equipo en las empresas? La pregunta da la oportunidad de responder tres soluciones por participante, lo que hace que el número de respuestas ascendiera a 1444 generando una gama de posibilidades muy amplia que obliga a agruparlas en categorizaciones. Ver Tabla 5 y Figura 2.

Tabla 5. Soluciones para mejorar el Trabajo en Equipo en empresas

Dimensiones categorizadas	Ira. selección	2da. selección	3ra. selección	Total	%
1 Valores	107	158	157	422	29.22%
2 Definición de objetivos	70	95	79	244	16.90%
3 Comunicación	135	45	34	214	14.82%
4 Estructura organizacional	62	74	75	211	14.61%
5 Liderazgo	35	26	27	88	6.09%
6 Motivación	15	33	21	69	4.78%
7 Educación	32	16	14	62	4.29%
8 Actitud	20	15	20	55	3.81%
9 Bien comun	16	16	0	32	2.22%
10 Integración	0	0	23	23	1.59%
11 Cultura	4	9	0	13	0.90%
12 Identificación de necesidades	0	0	7	7	0.48%
13 Otros	0	4	0	4	0.28%
Total	496	491	457	1444	100.00%

Se aprecia nuevamente de manera prominente que la dimensión de Valores alcanzó un 29.22% de la preferencia de los profesionales que participaron en la muestra. En este caso de soluciones propuestas produjo una categorización denominada Definición de objetivos que alcanzó un 16.90%. La sumatoria de las dimensiones Valores, Definición de objetivos, Comunicación y Estructura organizacional alcanzaron un 75.55% de las soluciones propuestas para mejorar el trabajo en equipo en las empresas.

Figura 2: Soluciones para mejorar el Trabajo en Equipo en empresas

Los resultados analizados nos demuestran la importancia de la aplicación de valores en el trabajo en equipo entre otros grupos categorizados de variables resultantes.

CONCLUSIONES

La investigación induce a la reflexión y necesidad del Trabajo en Equipo y se deriva la relevancia de los valores éticos aplicados a la empresa. De allí, se puede deducir que:

Los valores éticos son necesarios en el Trabajo en Equipo de manera independiente del sexo, edad, nacionalidad y de la profesión.

Los porcentajes obtenidos al sumar las respuestas referentes a la necesidad del Trabajo en Equipo en las empresas fueron muy elevados. “Muy necesario y bastante” alcanzaron el 98.80% en la Empresa, lo cual nos incita a implementar más programas de integración y desempeño de equipos de trabajo en cualquier tipo de organización.

La falta o inapropiada aplicación de valores éticos resulta ser en este estudio, la causa principal y muy significativa de un no adecuado o no efectivo Trabajo en Equipo. De modo similar, al sugerir los participantes de la muestra factibles soluciones para mejorar el comportamiento organizacional, vuelven a ser los valores éticos el factor o manera de solución con mayor preponderancia.

Las categorizaciones que se han creado, producto de la data obtenida en este estudio, nos abren y amplían un espectro de conocimientos para identificar, conocer y concientizar las causas, soluciones factibles y formas efectivas para mejorar el Trabajo en equipo.

El trabajo en Equipo está presente en nuestra vida diaria como seres interdependientes y exige una fusión con el comportamiento organizacional y la aplicación de valores éticos dentro del medio empresarial en el trabajo que nos desenvolvamos.

El marco teórico, corrobora, soporta y hace énfasis en los conceptos del Trabajo en equipo y su relación con los valores éticos.

En el estudio, se establecen en base a la data suministrada, como dimensiones creadas y/o variables, los términos de comunicación, valores, liderazgo, motivación, educación, cultura, estructura organizacional, ambiente laboral, integración, definición de objetivos y otros, los cuales están presentes en las organizaciones y en sus equipos de trabajo.

“La individualidad del ser humano se prueba al obtener efectividad en los resultados cuando trabaja en equipo”.

ANÁLISIS DE LAS REFORMAS ECONÓMICAS DEL 2013 PROMOVIDAS POR EL GOBIERNO CHINO Y SUS IMPLICACIONES EN EL ÁREA ECONÓMICA

Adriana Patricia Soto Aguilar, Benemérita Universidad Autónoma de Puebla

RESUMEN

En este trabajo de investigación analizo el papel que juegan las reformas económicas del 2013 de la República Popular de China, y su política económica-social, visto en varias perspectivas de análisis comercial, los problemas y desafíos que se enfrenta este país con más de 1340 millones de habitantes y el 21% de la población mundial además de ser referente comercial para nuestro país, México. El análisis se basa en los informes redactados por el propio gobierno chino y en documentos y datos oficiales pertenecientes a Organismos Internacionales

PALABRAS CLAVE: Contaminación, pobreza, comercio exterior, política comercial

ANALYSIS OF THE 2013 ECONOMIC REFORMS PROMOTED BY THE CHINESE GOVERNMENT AND THEIR ECONOMIC IMPLICATIONS

ABSTRACT

In this research I examine the role that the economic reforms of 2013 in the People's Republic of China play, and its economic and social policy, seen in several perspectives of business analysis, problems and challenges that this country faces more de 1340 million population and 21% of the world population as well as being a commercial reference to our country, Mexico. The analysis is based on reports made by the Chinese government itself and in official documents and data pertaining to international organizations

Economic Model of the Chinese Government (1978-2009), which averaged 9.6% annual growth in gross domestic product (GDP) increasing income and consumption per capita of their country in the past thirty years China's real GDP multiplied thirteen times, real GDP per capita is now in economic dilemma before the downturn that the world and now you have China, which according to the World Bank, contributed 0.5 percentage points to global economic growth of 3.9% in 2006 only in 2006 China was already the world's fourth largest, after the United States, Japan and Germany, with a total GDP of 2,720 billion economy. China a people who still lack the basic necessities is enjoying relative productivity, the "socialist" system also means poverty and inequality in China which is accompanied by high levels of pollution this is because there is no growth policy equitable between rural and urban areas, according to the latest statistics from the Ministry Chinese on housing construction has increased housing demand despite the overpopulation that count. (Shen, 2003). Recent policies of the central government of China has decreased poverty rates in urban areas only, they have exponentially increased rates of contaminants, whereas in areas such margins pollution becomes highly vulnerable by natural disasters or by the same pollution generated by the rapid economic growth, (Xinhua, 2011).

INTRODUCCIÓN

El Modelo económico del Gobierno Chino (1978-2009), que alcanzó un crecimiento anual promedio de 9.6% en su producto interno bruto (PIB) real aumentando el ingreso y consumo per cápita de su país. En los últimos treinta años el PIB real de China se multiplicó trece veces, su PIB real per cápita hoy se encuentra en disyuntiva económica ante la desaceleración que vive el mundo y que hoy padece China, país que según del banco mundial, contribuyó en 0.5 puntos porcentuales al crecimiento económico mundial de 3.9% alcanzado en 2006. Tan solo en el 2006 China ya era la cuarta economía más grande del mundo, después de los Estados Unidos, Japón y Alemania, con un PIB total de 2,720 billones de dólares.

China un pueblo que aún carece de los productos de primera necesidad esta disfrutando de relativa productividad, el sistema “socialista” también implica pobreza y desigualdad en China la cual es acompañada con altos índices de contaminación esto se debe a que no hay una política de crecimiento equitativo entre zonas rurales y urbanas, según las estadísticas más recientes del Ministerio Chino en materia de construcción de viviendas han aumentado la demanda de vivienda a pesar de la sobrepoblación con la que cuentan. (Shen, 2003). Las recientes políticas del gobierno Central de China han disminuido los índices de pobreza solo en áreas urbanas, estas han incrementado exponencialmente los índices de contaminantes, mientras que en las zonas marginas dicha contaminación se convierte en alta vulnerabilidad a través de los desastres naturales o por la contaminación misma que ha generado el crecimiento económico acelerado, (Xinhua, 2011).

Análisis de las Políticas Económicas del 2013 promovidas por el PPCH

1.-Desarrollo Industrial Desequilibrado.-La República Popular de China que es el principal comercializador de tecnología refleja su avance y supremacía económica en el comercio ilegal agrediendo las marcas y patentes así como los derechos de autoría y regalías sin embargo, si bien es cierto que el mundo capitalista ha sido víctima de la contaminación que generan las actividades económicas. China ha sido catalogada por los científicos en materia ambiental como uno de los principales países contaminantes del planeta, además de ser precursor del calentamiento global la fomentar el consumismo internacional de sus productos de mala calidad a precios bajos.

2.-Política de Comercio Exterior.- Falta de claridad de protocolos comerciales internacionales aunado a su producción nacional, en materia de comercio exterior las políticas comerciales de China presenta 14 productos en la lista de mercancías con alto grado de toxicidad, entre los que se destacan juguetes para uso en infantes menores a los tres años, otros productos relacionados con el uso diario etc. (Xinhua, 2011).

3.- Escaso desarrollo endógeno de la tecnología privada y estatal aunado a dependencia tecnológica y necesidad de incrementar las políticas de asistencia educativa el éxito de China sigue siendo la sobrepoblación es decir mano de obra abundante y poco calificada.

4.-La política económica gradual de liberalización y apertura hacia la inversión extranjera directa (En 1997 empieza el plan para la reestructuración de la propiedad de un gran número de empresas en propiedad del estado, mientras que en 1999 se promulga la reforma constitucional que reconoce explícitamente a la propiedad privada) en el campo industria y comercio son inconsistentes con la ideología comunista, (ver siguiente Tabla 1). Para fomentar la inversión extranjera, el Gobierno Chino creó las zonas económicas en la zona costera, gozando de garantías legales e incentivos fiscales e infraestructura pública, política complementaria con la creación de una nueva clase de negocios, el Getihu, empresas pequeñas con 8 o menos empleados, los cuales a finales de los setenta este tipo de negocios eran considerados ilegales,

mientras que a principios de los 200 ya existían en China más de 26 millones de estos negocios privados individuales y familiares, política detonante para generar la clase empresarial nacional China e incrementando los niveles de consumo interno chino en 3.7 billones de dólares y disminución del ahorro. China ha promovido reformas de control macroeconómico por más de 4 billones de yuanes.

Tabla 1. China. Inversión Extranjera Directa Acumulada.1990-2007

Año	IED Acumulada (Billones de USD)	Año	IED Acumulada (Billones de USD)
1990	3.5	1999	40.3
1991	4.4	2000	40.7
1992	11.0	2001	46.9
1993	27.5	2002	52.7
1994	33.8	2003	53.5
1995	37.5	2004	60.6
1996	41.7	2005	60.3
1997	45.3	2006	69.5
1998	45.5	2007	74.8

RESULTADO DE LAS REFORMAS ECONÓMICAS DEL 2013 PROMOVIDAS POR EL PCCH

Los problemas de sobreproducción para la década de los ochenta y noventa aun prevalecían de forma constante hoy en día con más de 300 millones de habitantes se sigue padeciendo una relación crítica entre población y sobre explotación de recursos no solo los demandantes en su territorio sino los que proceden de otras latitudes del planeta, situación ya planteada desde el punto de vista económico bajo la óptica Malthusiana. (Soto, 2012). Este fenómeno hace que la población china emigre a otras partes del mundo para tener libertad en sus decisiones, sociales y comerciales aumentando el peso poblacional de otros países. Parte de la población china presenta también elevados índices de pobreza y por lo tanto de condiciones insalubres y de desnutrición, ante tal panorama el gobierno Chino pretende restringir y castigar las especulaciones relacionadas con productos de primera necesidad contradictorio con la política del sistema colectivo de granjas administrado por las familias de campesinos que trabajan las tierras a quienes se les a permitido vender sus productos en el mercado nacional.

En contraparte las políticas empresariales implican desigualdad social no le ha permitido tener prácticas justas en laboral y materia ambiental (Soto, 2012). Tan solo es hasta mediados de los noventa -1995- se establecen los términos contractuales para el personal que labora en las empresas solo del estado. Así mismo existe un estancamiento social, donde sus usos y costumbres pertenecen a las tradiciones de los siglos pasados, sin percatarse del daño ecológico que generan al planeta al enviar productos con baja calidad, sin dejar de lado los casos de corrupción que vive el país.

Aun deficiente el ramo de políticas claras y políticas actualizadas de prevención ambiental por parte de los agentes importadores y exportadores chinos prevalecen los escasos controles de calidad y de la negligencia en materia de seguridad en la mayoría de la producción de mercancías, incluido los productos falsos que incluyen a los fármacos adulterados, como es el caso del fármaco xinfu antibiótico de pobre calidad y de bajos niveles de esterilización. (China Bussiness News, 2007). Al aumentar la población, producción y economía en China, se aumentan los índices de contaminación y devastación de los recursos naturales, controlar la población en china solo es un parte del problema ya que China no solo produce para abastecer la demanda nacional su política de comercio exterior es en base a la demanda mundial, sin dejar de lado los casos de corrupción(Los sobornos y regalos de este funcionario eran provenientes de las compañías farmacéuticas de Hainan Kongliyuan Grup por aprobar 277 medicamentos, de las cuales 100 fueron

aprobadas en el transcurso de solo un año. Sin embargo en materia de corrupción el caso no es aislado más de 30 personas están involucradas en el caso incluyendo a otros funcionarios como Cao Wenzhuang ex Director del Departamento de Registro de Medicamentos de la AEAM. (Xinhua, 2007). En dicho caso las autoridades chinas solo han manifestado su interés en fortalecer la supervisión de sus funcionarios en materia de salud. Sin embargo queda claro las prácticas de corrupción y abuso del poder golpean también al gobierno chino. El caso de Zheng quedo manifestado a nivel local al ser expulsado del Partido Comunista de China (PPCH), tras ser investigado por la Comisión Central de Control Disciplinario del PCCH y transferido a la Fiscalía Popular Suprema. El caso termino con la sentencia de solo 15 años de prisión y la pregunta es ¿ y el daño a la sociedad internacional donde queda?????. A este sonado caso de corte internacional se le une el del Subdirector de la Administración Municipal de Alimentos y Medicamentos de Quqihar Xun Fubo, de la provincia nororiental de Heilongjiang por aprobar medicamentos falsos uno de ellos es el armillarisin A inyectable causando la muerte de 11 pacientes después de sufrir alteraciones renales, en Guangdong. (Xinhua, 2007)

) que vive el país.

El fenómeno del comercio informal también ataca a la propia economía china y el resto del mundo puesto que un gran número de trabajadores rurales emigran a las urbes chinas en busca de mejores oportunidades de vida, sin embargo la mayoría de ellos tienen bajos niveles de educación, por lo cual en su propio país se ha fomentado la corrupción y el abaratar el mercado laboral. Los acuerdos salariales quedan poco claros o bien están remunerados por debajo de los promedios mínimos establecidos, los pagos salariales no siempre están debidamente definidos

CONCLUSIONES

Las políticas del PCCH presentan retos en los siguientes rublos:

- 1.- Amenaza constante en el aumento de precios de la canasta básica,
- 2.-Deficiente los cuidados al sector salud
- 3.- La corrupción gubernamental no se ha eliminado
- 4.- Aumento en la brecha entre ricos y pobres ciudadanos de raza amarilla,
- 5.-crisis en vivienda,
- 6.- Deficiencia en el desarrollo de políticas en torno a la educación,
- 7.-Políticas de seguridad alimentaria aun deficientes vinculadas a los productores
- 8.-Políticas endebles que disminuyan los índices de contaminación ambiental
- 9.-A pesar del ingreso a la OMC sigue la constante en piratería y baja calidad en productos.

REDUCCIÓN DE MERMA EN UNA MAQUILADORA AUTOMOTRIZ

Karla Alamillo Reyes, Instituto Tecnológico de Orizaba
Marcos Salazar Medina, Instituto Tecnológico de Orizaba
Ana Cristina Villarreal Toral, Instituto Tecnológico de Orizaba

RESUMEN

El presente artículo, muestra cómo reducir el desperdicio de materia prima en un proceso de elaboración de mangueras en una maquiladora automotriz, utilizando algunas herramientas como son: mapeo de la cadena de valor y el diagrama de Ishikawa, facilitaron el análisis y obtención de la cauda raíz del incremento del desperdicio presentado en dos áreas del proceso de producción de mangueras. Se localizaron las variables que generaban el desperdicio y se estableció un procedimiento de control para ellas. Logrando una reducción de 43% del material desperdiciado en el proceso de corte de puntas en mangueras, 2.1% en la longitud de corte de manguera establecida anteriormente en el diseño, así como, reducción de 5.08 segundos en el tiempo de proceso de producción para 84 modelos y 10.16 segundos en 6 modelos.

PALABRAS CLAVES: Reducción de Merma, Porcentaje de Encogimiento, Tiempo de Proceso, Anillo Bipartido y Tapón

WASTE REDUCTION IN AUTOMOTIVE MANUFACTURE

ABSTRACT

This article shows how to reduce the waste of primary stuff in a manufacturing-hose- process, applied in an Automotive Manufacture Factory, using some tools such as: mapping the value-chain and the Ishikawa diagram; these make the analysis easier to obtain the increasing-root of the waste given in two areas of the hose production process. The variables that generate the waste were located and it was possible to stablish a control procedure for them. Getting as a result a reduction of 43% of the material wasted during the process of hose-tops cutting; 2.1% in the length-hose cutting stablished previously in the design, besides the reduction of 5.08 seconds during the processing time of production for 84 models and 10.16 seconds in 6 models.

INTRODUCCIÓN

Una maquiladora de mangueras automotrices busca reducir la merma dentro de su proceso de producción, el cual cuenta con cinco subprocesos: extrusión, curado, lavado, corte de puntas y empaquetado, dónde el subproceso de corte de puntas presenta un incremento en el desperdicio de material, el cual se integra en al desperdicio interno total de la planta con más de 180,000 libras mensuales, con un costo de 1 millón 798 mil euros anualmente, pudiendo ser el resultado del uso ineficiente del equipo, material, trabajo, o capital humano. El uso de la herramienta de Mapa de la Cadena de Valor (MCV), ayudó al análisis del proceso de producción de manguera de la línea de producto Dayco. Tomando como base la investigación documental, la observación directa y la entrevista se elabora un MCV, que especifica y localiza los elementos necesarios en la producción de los que no agregan valor. Con el MCV, se obtienen lo siguiente: Lead time de fabricación (tiempo de entrega de fabricación de un lote de 10 piezas), número de personas requeridas en cada

subproceso; tiempo de preparación y de proceso de las máquinas; velocidad requerida de las máquinas de extrusión de acuerdo a la longitud de manguera y localización de áreas generadas de merma.

El MCV de la línea Dayco junto con el uso de otras herramientas facilitó la detección del área de oportunidad y a establecer el proyecto de mejora. La implementación del proyecto de mejora logró eliminar el proceso de corte de una o en ambas puntas de la manguera, y reducir la longitud de corte de manguera, en consecuencia se redujo la merma, la mano de obra, tiempo de proceso e incremento del rendimiento. Las herramientas utilizadas en el proyecto, que forman la base teórica para la reducción del desperdicio en la empresa. Después, se describe la metodología utilizada para reducir la merma mediante la eliminación del proceso de corte de una o ambas puntas de las mangueras automotriz. Posteriormente se establecen los resultados obtenidos, así como las conclusiones de éstas.

REVISIÓN DE LITERATURA

Existen diversas definiciones de merma, pero se definirá forma general, como la pérdida de las características físicas del producto o elementos utilizados para su elaboración, por ejemplo el peso, volumen, longitud, entre otros. Hernández y Cano (2010), describen y clasifican la merma de la siguiente manera:

Merma administrativa: producidas por errores en los movimientos administrativos.

Merma operativa: se generan por descuidos en las operaciones, negligencia o actos indebidos, producto dañado, desperdicio de material por operaciones ineficientes.

Merma natural: es proporcionada por los productos perecederos, es el producto que presenta una caducidad expirada y no es apto para su venta.

Merma por robo: se genera por situaciones de hurto, ya sea monetario o de producto físico.

Merma por producción: desperdicio de materia prima cuando se efectúa el proceso de manufactura de un producto.

Todo tipo de merma se encuentra presente en el proceso. ISO 9000:2005 (2014) define proceso como: “Cualquier actividad, o conjunto de actividades, que utiliza recursos para transformar elementos de entrada en resultados puede considerarse como un proceso”. Para que las organizaciones operen de manera eficaz, tienen que identificar y gestionar numerosos procesos interrelacionados y que interactúan entre ellos, existen diversas herramientas que ayudan a la identificación de éstos. Una herramienta empleada en la identificación de procesos, es el Mapeo de la Cadena de Valor, también, conocida como VSM (Value Stream Mapping por sus siglas en inglés), es una técnica reciente, utilizada por Toyota en su versión de Lean Manufacturing (Pais, 2013). Un VSM tiene como objetivos, eliminar el desperdicio, respaldar la mercadotecnia y las estrategias de negocios, éste, no sólo muestra dónde se están documentando los procesos, y cómo se realiza el trabajo, sino a dónde se quiere ir a través de la definición de un proceso que sea rápido y económicamente eficiente, el cual es plasmado en un mapa de estado ideal o de futuro, e identificar las dificultades a vencer (Locher, 2008). Muchas de las fábricas de productos automovilísticos, emplean los polímeros como material principal, mejor conocido como plástico. Los polímeros son materiales que están constituidos por muchas unidades llamadas monómeros, las cuales le proveen a estas macromoléculas pesos moleculares enormes en el orden de varios miles o más. Los polímeros se clasifican de acuerdo a sus propiedades físicas y mecánicas en tres grandes grupos:

Termopolímeros: Pueden ser moldeados cuando son calentados. Ejemplo polipropileno, polietileno, polietileno, etc.

Termorrígidos: Son materiales entrecruzados duros, no maleables y no flexibles. Ejemplo la fórmica, melamina, baquelita, etc.

Elastómeros: Material Entrecruzado flexible y extensible. Ejemplo el caucho, las gomas, etc.

METODOLOGÍA

Se selecciona el producto de acuerdo a: (1) al área generadora de desperdicio, (2) que no pierda las propiedades físicas del material desechado. La figura 1, muestra las cantidades de libras desechadas y las áreas dónde se genera. El producto de la línea Dayco cumple con los dos elementos anteriores.

Figura 1: Desperdicio de manguera por área, año 2013

En la figura se muestra el desperdicio de manguera generada en las dos principales áreas de la fábrica: Moldeo y Corte. Esta representación se efectuó en los meses de Enero a Septiembre, aunque en él se identifica al área de Moldeo como principal generadora de desperdicio en comparación con el área de Corte de puntas, sin embargo, la diferencia entre ambas radica en el material desechado, en Moldeo el termopolímero pierde sus propiedades físicas al aplicarse gran cantidad de calor en el proceso, mientras que la merma en el área de Corte se produce al seccionar las puntas de la manguera.

Se efectuó el diagnóstico, mediante un Mapa de la Cadena de Valor del proceso de producción de un modelo de la línea Dayco, exponiendo de forma gráfica, las áreas, equipos o maquinarias y capital humano necesario; tiempos de proceso, de máquina y de traslado para la producción de un lote de 10 piezas, la tabla 1, resume los resultados obtenidos en el VSM de un producto de Dayco, con la finalidad de obtener un panorama general del proceso.

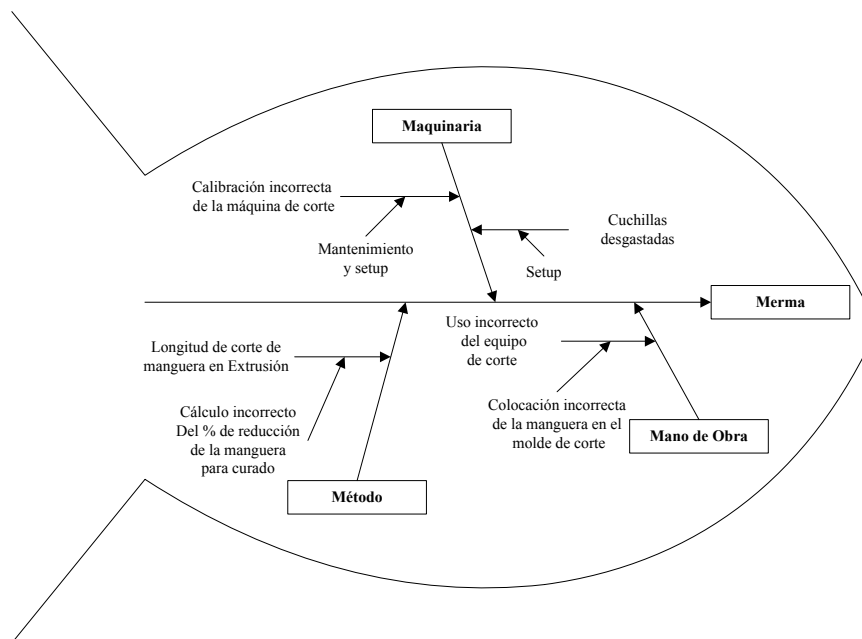

Tabla 1: Requerimientos Por Área Para Producción de un Lote de la Línea Dayco

Área	Maquinaria O Equipos	Tiempo De Proceso Por Área	Capital Humano
Extrusión	12	8.74 minutos	1
Almacén de Preforma	0	240 minutos	2
Curado	1	32 minutos	5
Lavado	1	16 minutos	1
Corte	1	2.03 minutos	1
Ensamble de aditamentos	1	1.17 minutos.	1
Empaque	1	2.32 minutos	1
Embarque	1	Espera de piezas hasta completar demanda del cliente	2

En esta tabla, se sintetizan los datos plasmados en el VSM elaborado para un producto de la línea Dayco, dividido por áreas, máquinas necesarias o equipos, el tiempo de proceso requerido, y el número de personas para producir un lote con 10 piezas. Para el área de embarque no se ha especificado el tiempo de proceso, debido a que, éste depende del cumplimiento de la demanda de los clientes para posteriormente realizar el embarque de las piezas a los destinos especificados. La tabla no muestra los tiempos de desplazamiento, éstos fueron incluidos en el tiempo de proceso por área.

El diagrama de Ishikawa, se empleó para determinar las posibles áreas de oportunidad para la disminución de merma, la figura 2, ejemplifica, las posibles causales del incremento de desperdicio, para después ser estudiadas a profundidad y determinar cuál de ellas presenta un área de oportunidad.

Figura 2: Diagrama de Ishikawa de Generación de Merma En el Área de Corte

Esta figura ejemplifica las tres categorías que emergieron: maquinaria, referente a lo requerido o involucrado con el equipo; mano de obra, incluye no sólo al trabajador, sino las capacitaciones, e instrucciones ente otros; y método, constituyen todo aquello utilizado en la forma de realizar el trabajo; éstas categorías fueron empleadas para clasificar y abordar las probables causas del incremento de merma, como, el uso incorrecto del equipo por la colocación incorrecta de la manguera en el molde de corte, cálculo incorrecto de longitud de corte de la manguera o el mantenimiento y calibración de las máquinas de corte.

Se estableció tres categorías para clasificar las causales: mano de obra, maquinaria y método. Entre las posibles causales se encuentran: Calibración incorrecta de la máquina de corte, el desgaste de las cuchillas, que no se cuenta con las instrucciones y capacitaciones pertinentes para el uso adecuado de las maquinas en general. Uso incorrecto del equipo, colocación incorrectamente la manguera sobre el molde de corte, el operador no cuenta con el conocimiento suficiente sobre instrucciones de trabajo y capacitación sobre el uso de herramientas de trabajo, y cómo realizar los cortes de las puntas. Se muestra de forma gráfica y descriptiva cómo realizar la inspección, colocación y uso de la cuchilla en la máquina, el posicionamiento de los moldes y cómo seccionar de las puntas, que es colocada al frente del operador para ser consultada en cualquier momento. Cálculo incorrecto de la longitud de corte, el cual se determina al realizar el diseño o la construcción de cada modelo de manguera. Mediante una inspección en los diseños y cálculos efectuados en los modelos de la línea Dayco, se presenta un área de oportunidad si se reduce el área de material sobrante en las puntas de la manguera.

La revisión de los diseños se efectúa recalculando los rangos de tolerancia para reducir la longitud de corte en el proceso de extrusión, hallando la forma de eliminar el proceso de corte en una o ambas puntas de la manguera, al emplear dos dispositivos en el mandril (tubo de acero empleado introducido en el interior de la manguera para darle forma a la manguera aplicando calor a través de una autoclave), para controlar la reducción del volumen de manguera y la deformación de sus puntas en el proceso de curado. Para la eliminación de una punta se emplea un anillo bipartido en la base del mandril, y para eliminar el corte de ambas puntas se usa el anillo bipartido más un tapón para la punta superior del mandril, como se muestra en la figura 3.

Figura 3: Mandril con Anillo Bipartido y Tapón

La figura muestra como luce un mandril (tubo de aluminio) montado sobre el carro de la autoclave. El mandril es usado para dar forma al introducirse en el interior de la manguera mediante la aplicación calor durante 15 minutos una vez que ha sido ingresado el carro a la autoclave, su forma (largo, ancho y grosor) del mandril depende del modelo de cada manguera. En la base del mandril se localiza el anillo bipartido, en la parte frontal se visualiza la punta del mandril, la cual contiene en tapón. Al fondo de la figura, puede distinguirse como luce la manguera una vez que es colocada sobre el mandril.

La selección de los modelos para la prueba piloto se determinó de acuerdo a la programación de producción, con una demanda continua y volúmenes altos de producción, obteniendo 84 modelos para implementar la eliminación del proceso de corte de una punta, y para ambas punta sólo se seleccionaron 6 modelos, debido a que sólo algunos modelos aceptan la adaptación de los dos dispositivos (anillo bipartido y tapón). La prueba piloto fue efectuada durante 17 semanas, en los que, los 90 modelos se produjeron al menos durante un mes.

RESULTADOS

Aplicando la metodología anterior, se llegó a la reducción del desperdicio en un 43%, en los modelos de la línea de Dayco, a través de la reducción de la longitud de corte y la eliminación de un proceso, corte de puntas de manguera. La tabla 2, resume los resultados obtenidos, referente al material no desperdiciado, que se refleja también en un ahorro económico por pieza producida.

Tabla 2: Resultado por reducción de longitud de corte, y eliminación del proceso de corte

Número de Modelo	Tipo de Mejora	Longitud de Corte Anterior (Mm)	Longitud de Corte Actual (Mm)	Ahorro Longitud Por Pieza (Mm)	Ahorro Por Pieza (Dls)
73-001201	Corte 1 punta.	1000	930	70	0.20628182
73-121801	Corte 1 punta.	210	143	67	0.32283455
73-135601	Corte 1 punta.	470	435	35	0.13028326
73-141201	Corte 1 punta.	640	600	40	0.16164249
73-209101	Cero puntas	515	455	60	0.14970884
73-017901	Cero puntas	483	420	63	0.15499268

La tabla resume los resultados obtenidos de algunos modelos al recalcular la longitud de corte de manguera en el proceso de extrusión, así como la adición de dispositivos en el mandril, empleado en el proceso de curado de la manguera. Se especifica el tipo de mejora (corte de 1 punta o ambas puntas) efectuada en cada modelo, el ahorro de longitud, que es la diferencia entre la longitud anterior y la actual, también el ahorro en dólares por cada pieza, obtenido por el volumen que ha sido reducido en cada modelo multiplicado por el costo del material. También puede observarse que existe un mayor ahorro en la longitud en modelos que se han eliminado una punta que en las de ambas puntas, esto se debe a la forma que cada modelo tiene.

Éste proyecto mejoró el proceso de producción el cual no requirió de una capacitación adicional al personal,

una mejora sobre el mandril así como el análisis y ajuste en las longitudes de corte de la manguera determinadas en su diseño inicial. El proyecto tuvo un costo aproximado de \$9.933 dólares, recuperando la inversión en 8 semanas. Se obtuvo: reducción de 2.1% en longitud de manguera, ahorro del material con un valor de \$20,051 dólares en una producción de 281,360 piezas en 21 semanas por eliminados los cortes de puntas, reducción de 5.08 segundo del tiempo de proceso de corte en 90 modelos.

CONCLUSIONES

El uso de herramientas como Value Stream Mapping y diagrama de Ishikawa facilitaron: la detección de un área de oportunidad; el conocimiento de los elementos involucrados y que agregan valor al proceso; el análisis profundo de las posibles causales y el hallazgo de la causa raíz a la problemática enfrentada. La colaboración, experiencia, y visión conjunta de los ejecutivos de la organización, permitieron impulsaron la innovación de una herramienta de trabajo, para mantener el control de la variables, y conseguir de manera efectiva la eliminación de un proceso generador de merma. Aunque hubiera significado una gran inversión, el retorno de la inversión fue en menos de 4 meses, con resultados significativos en: mano de obra, material desperdiciado, tiempo de producción, las cuales, representan para las grandes corporaciones demostrado que la búsqueda de la mejora continua, por pequeña que ésta parezca, puede significar grandes beneficios no sólo al cliente externo sino también al cliente interno.

RESUMEN

El turismo alternativo es una de las actividades que beneficia a las comunidades rurales, no solo en el aspecto económico, sino de manera social, cultural y ambiental, pero para que se tengan estos beneficios es importante realizarlo de manera adecuada. Este trabajo de investigación presenta las acciones realizadas para el emprendimiento de un negocio de turismo alternativo en la comunidad de La Ciénega, en el estado de Veracruz, México. Se comparte no solo el proceso que se efectuó, sino también las experiencias, concluyendo con las vivencias que se tuvieron mientras se trabajó con la gente de la comunidad; pudiendo observar que si se involucra a las personas de la comunidad de un principio, ellos aceptan la actividad del turismo y apoyan en el proceso pues entienden que pueden obtener un ingreso de este sector.

PALABRAS CLAVE: Emprender, comunidad, experiencias.

ENTREPRENEURSHIP FOR AN ALTERNATIVE TOURISM BUSINESS AT LA CIENEGA, VERACRUZ

ABSTRACT

Alternative tourism is an activity that benefits rural communities, not only in the economic aspect, but also in the social, cultural and environmental way; to get these benefits, it is important to be executed in the right way. This research presents the actions performed for an alternative tourism business entrepreneurship at La Cienega, Veracruz, Mexico. It is shared the process and the experiences gotten during the project. It's important and necessary to involve the community peoples since the beginning, so they accept the tourism activity and understand it as an extra income.

KEYWORDS: Entrepreneurship, Community, Experiences

INTRODUCCIÓN

Se presenta el proceso que se llevó a cabo para la implementación de la empresa de turismo alternativo *La Ciénega Eco Camping* en la comunidad de La Ciénega, Veracruz. Para lograrlo, es necesario realizar una revisión literaria que brinde un marco teórico de los conceptos utilizados y así entender la importancia de emprender, los componentes de un plan de negocios, las vertientes del turismo alternativo y sus conceptos. Una vez realizada esta revisión se prosigue al análisis de la problemática de la comunidad considerando puntos sociales, económicos y ambientales. Terminada la parte teórica se muestra el desarrollo del trabajo en el cual se describen las acciones realizadas durante la elaboración del plan de negocios, y así presentar lo resultados obtenidos; se finaliza con las conclusiones de los resultados obtenidos y de las experiencias que se tuvieron durante la implementación del proyecto.

REVISIÓN LITERARIA

El emprendedurismo es un impulsor fundamental del crecimiento económico, la productividad, la innovación y el empleo; se acepta de manera general como un elemento clave de dinamismo económico (OECD, 2013). El concepto tiene su origen en el término “empresario”, el cual fue utilizado por primera vez en los escritos del pensador francés Cantillon durante el siglo XVIII; en ellos señala que un entrepreneur, palabra de origen francés, es la persona que crea y pone en marcha una actividad empresarial. A través del tiempo se han originado otros conceptos de origen anglosajón como lo es entrepreneurship, término que hace referencia a la capacidad que tiene un sujeto de emprender y generar nuevos negocios, el término anglosajón, traducido al castellano se conoce como emprendedurismo (Martínez Rodríguez, 2008). Una herramienta fundamental de los emprendedores es el plan de negocios el cual se considera como un instrumento básico para la creación y dirección de una empresa, es el “documento de análisis con información ordenada para toma de decisiones sobre llevar a la práctica una idea, iniciativa o proyecto de negocios” (CONACYT, 2007), “define con claridad los objetivos de un negocio, y describe los métodos que se van a emplear para alcanzar los objetivos. Es un documento único que reúne toda la información necesaria para evaluar un negocio y indica los lineamientos generales para ponerlo en marcha” (IPN, 2006). “Tiene entre sus características ser un documento ejecutivo, demostrativo de un nicho o área de oportunidad, en el que se evidencia la rentabilidad, así como la estrategia a seguir para generar un negocio viable” (CONACYT, 2007). Un plan de negocios se conforma por la filosofía empresarial y cinco estudios que abarcan las áreas de una empresa, estos estudios son: Investigación de mercado o análisis de mercado, estudio técnico o ingeniería del proyecto, estudio económico-administrativo, estudio financiero, estudio de impacto ambiental.

El plan de negocios se puede aplicar para cualquier actividad emprendedora que se desee, como es en el sector de turismo. La Organización Mundial de Turismo (OMT) lo define como: “Las actividades que realizan las personas por un periodo de tiempo consecutivo inferior a un año, durante sus viajes y estancias en lugares distintos al de su entorno habitual con fines de ocio, por negocios u otros motivos”. Esta definición es ampliada por la misma organización mencionando que el turismo no es sólo una actividad sino que es “un fenómeno social, cultural y económico relacionado con el movimiento de las personas a lugares que se encuentran fuera de su lugar de residencia habitual por motivos personales o de negocios/profesionales. Estas personas se denominan visitantes y el turismo tiene que ver con sus actividades, de las cuales algunas implican un gasto turístico” (OMT, 2008).

Existen diversas maneras de clasificar el turismo, según el factor clave que se utilice, por ejemplo, Valence L. Smith propone una clasificación en base a las experiencias que proporcionan los destinos, definiendo seis categorías: Turismo étnico, turismo cultural, turismo histórico, turismo ambiental, turismo recreativo, turismo comercial (McIntosh & Gupta, 1990). Cárdenas Tabares, clasifica el turismo según el motivo del viaje: Turismo de descanso o de vacaciones, turismo de negocios, turismo deportivo, turismo de aventura, turismo religioso, turismo cultural, turismo científico, turismo gastronómico, turismo estudiantil, turismo de congresos y convenciones, turismo familiar, turismo de salud (Gurría Di-Bella, 1994). En un mismo destino turístico se pueden encontrar más de un tipo de turismo; todo va a depender en gran medida del motivo con el que vaya el turista y lo que ofrece los servidores turísticos.

Actualmente existe una fuerte tendencia hacia el cuidado y el acercamiento a la naturaleza, surgiendo una categoría nueva; el turismo alternativo, éste permite al hombre tener un reencuentro con la naturaleza, un reconocimiento al valor de la interacción con la cultura rural y permite a los países emergentes poder participar en este tipo de turismo. Además representa una oportunidad de participar y fomentar en los viajeros y en los pobladores de los lugares receptores, la necesidad de salvaguardar los recursos naturales y culturales, tal como lo menciona la Secretaría de Turismo (2004). Fontán Rodríguez (2014) menciona que esta modalidad del turismo expresa las transformaciones que ha ido teniendo las sociedades actuales con respecto a la revaloración de la naturaleza y a la utilización del tiempo libre, la SECTUR (2004) agrega el planteamiento de la sociedad ante la necesidad de una interrelación más estrecha con la naturaleza, la

preocupación en la conservación de los recursos naturales y sociales del área en que se efectúa la actividad turística. Es así como el turismo alternativo se basa en tres puntos característicos: 1. El motivo por el cuál se desplazó el turista, que es el de recrearse en su tiempo libre realizando diversas actividades en constante movimiento, buscando experiencias significativas. 2. Las actividades que busca desarrollar en y con la naturaleza de preferencia en estado conservado. 3. La actitud de compromiso de respetar, apreciar y cuidar los recursos que asume el turista para realizar las actividades. Con base en estas características se puede hacer una clasificación del turismo alternativo en tres grandes segmentos: Ecoturismo, turismo de aventura y turismo rural. Este turismo, puede impulsar el turismo social, el cual consiste en realizar actividades solidarias con diferentes colectivos más desfavorecidos en las comunidades locales, sin embargo no siempre se llevan a cabo estas acciones.

El ecoturismo, surge en los países en desarrollo como “una respuesta a la necesidad de generar alternativas de crecimiento económico que produzcan beneficios monetarios satisfactorios en regiones que atraviesan profundas crisis económicas; por otra parte, es el resultado de una toma de conciencia de empresarios turísticos y de turistas hacia la conservación y conocimiento de la naturaleza” (Sandoval S., 2006). El turismo rural es definido por Rafael Fuentes García como “aquella actividad turística realizada en el espacio rural, compuesta por una oferta integrada de ocio, dirigida a una demanda cuya motivación es el contacto con el entorno autóctono y que tenga una relación con la sociedad local” (Fontán Rodríguez, 2014). La Secretaría de Turismo (2004) lo define como “los viajes tiene como fin el realizar actividades de convivencia e interacción con la comunidad rural, en todas aquellas expresiones sociales, culturales y productivas cotidianas de la misma”. El turismo de aventura permite que los turistas se conviertan en protagonistas en una actividad que conjunta deporte y paisaje. La Secretaría de Turismo menciona que el turismo de aventura engloba los viajes donde se realizan actividades recreativas, asociadas a desafíos impuestos por la naturaleza. El turista que busca y gusta de estas actividades, quiere poner a prueba su condición física, reducir alguna tensión por medio de una descarga de adrenalina y la cual puede llegar a mejorar el estado emocional y físico de las personas, sin embargo, estas actividades sin las medidas de seguridad y la capacitación de los prestadores de servicios adecuadas, puede poner en riesgo la salud y la vida del turista.

Se considera que el ecoturismo y el turismo rural son las dos vertientes en las cuales, a diferencia del turismo de aventura, el turista se puede sumergir en la esencia del lugar, tanto en su parte ambiental como en su parte cultural y social. Una de las actividades que permiten realizar ecoturismo y turismo rural es el senderismo de interpretación ambiental, esta actividad consiste en realizar caminatas a través de veredas apropiadas, ya sea con la compañía y explicación de un guía o bien de manera auto guiada con el apoyo de señalética apropiada para comprender y apreciar lo que se está observando durante el recorrido, de igual manera se permite tener contacto con la cultura y gente del lugar donde se lleva a cabo esta actividad ya que los guías pueden ser personas del lugar, por lo que ellos transmitirán ciertos conocimientos a los turistas. Es así como se considera que el senderismo funciona como puente entre los turistas y los pobladores de las comunidades rurales, ya que permite a los primeros caminar por lugares naturales de manera segura en comunidades rurales en donde, además de apreciar la naturaleza puede llegar a convivir y conocer la cultura del lugar, por otro lado, el senderismo es puente también para los pobladores ya que, al ver gente de otros lugares, pueden proporcionarles otros servicios como lo es comida, hospedaje, guías, venta de sus productos, entre otras actividades obteniendo un ingreso extra y un intercambio de culturas entre la rural y la urbana.

Problemática de la Ciénega

Uno de los mayores problemas sociales en México es la condición de pobreza; durante el 2012 se registraron 53.3 millones de personas pobres en el país, lo que representa el 45.5% del total de la población (CONEVAL, 2013). La situación afecta principalmente al sector entre 15 y 29 años de edad, el cual representa el 26.4% del total de la población (INEGI, 2010). Tal situación se hace palpable en municipios rurales como es el caso de La Perla, municipio localizado en la zona centro suroeste del estado de Veracruz y forma parte de la región natural de las Grandes Montañas dentro del Parque Nacional del Pico de Orizaba. Se encuentra conformada

por 50 localidades y la cabecera municipal. Cuenta con una población total de 23 648 habitantes; la cual el 52.08% se encuentra en un grado de marginación alto, mientras que el 39.58% de la población tiene un grado de marginación muy alto. (www.microrregiones.gob.mx). Estos grados de marginación se ven reflejados en la realidad económica, laboral y productiva que presenta; el 88.8% de su población lleva a cabo actividades del sector agropecuario y forestal, el 2.6% de la población se dedica al sector de servicios como es el comercio, autotransporte público y privado. En el sector industrial, se encuentran el 5.8% en el cual existen personas que desarrollan sus actividades en las industrias de la ciudad de Orizaba.

Existen algunas personas que tienen otros ingresos ya que realizan actividades como albañilería, o bien, tienen pequeñas tiendas de abarrotes en la comunidad (Gobierno Municipal de La Perla, 2008). Esta situación ha hecho que los pobladores opten por buscar oportunidades fuera del municipio, dando lugar a la emigración. El municipio de La Perla forma parte de la Cruzada Nacional contra el Hambre, esta programa, como se cita textualmente en el portal de la Presidencia de la República: “Es una estrategia que busca la inclusión y bienestar social, que se implementará a partir de un proceso participativo de amplio alcance. La Cruzada contra el Hambre está orientada a la población objetivo constituida por las personas que viven en condiciones de pobreza multidimensional extrema y que presentan carencia de acceso a la alimentación. Dentro de los objetivos que abarca este programa es aumentar la producción de alimentos y el ingreso de los campesinos y pequeños productores agrícolas y promover la participación comunitaria para la erradicación del hambre”.

Como apoyo al cumplimiento a este objetivo del programa, se busca brindar alternativas económicas a los pobladores de La Ciénega, que es una de las comunidades de La Perla. Cuenta con un total de 1,223 habitantes, de los cuales 590 son hombres y 633 son mujeres; la población se encuentra en un alto nivel de marginación y pobreza (www.microrregiones.gob.mx, 2013). Cuenta con un ecosistema que pertenece a los bosques templados en donde se pueden encontrar especies como pino, encino, oyamel entre otros. Este tipo de bosques ocupan el 16% del territorio nacional. Además del bosque templado también se encuentra el bosque de galería o ribera, llamado así porque la vegetación que se encuentra está vinculada principalmente a la ribera de un río. A pesar de la riqueza natural con la que cuenta la comunidad, las tierras cuentan con un alto grado de erosión provocada por la excesiva deforestación consecuencia del fenómeno de la tala clandestina que tiene un origen social en la que están involucradas comunidades de alta marginación cuyos habitantes no tiene alternativas económicas, según datos proporcionados por la Comisión Nacional de Áreas Protegidas (CONANP). A pesar de que La Ciénega es una de las comunidades que ejercen presión sobre el Parque Nacional del Pico de Orizaba por la tala clandestina aún no se encuentran registradas acciones. Sin embargo dependencias del gobierno como la CONANP, Procuraduría Federal de Protección al Ambiente (PROFEPA) y Comisión Nacional Forestal (CONAFOR) en conjunto con el gobierno municipal se encuentran desarrollando un Programa de Desarrollo Integral con una estrategia de atención a nivel regional que incorpore proyectos y propuestas de todas las instituciones que permita diversificar las opciones de ingreso de las comunidades. El propósito de este trabajo de investigación es desarrollar un proyecto productivo que se apegue a las acciones que se están llevando en el Programa de Desarrollo Integral, brindando a la comunidad una alternativa económica, que sea sustentable, conserve al medio ambiente por medio de la actividad de turismo alternativo y permita generar fuentes de empleos en la comunidad.

Desarrollo del Trabajo

Para determinar si la empresa es viable, se elaboró un plan de negocios con la finalidad de obtener una visión general del negocio, ya finalizado éste se prosiguió a obtener el financiamiento de dependencias gubernamentales y/o instituciones financieras para poner en marcha la empresa. Cómo se ha mencionado en la revisión literaria, consta de 6 elementos claves, a continuación se describe cada uno de ellos:

Filosofía empresarial: En ella se definió la naturaleza del proyecto, se estableció nombre del negocio, la visión, misión, valores y objetivos a corto, mediano y largo plazo; así como la descripción del producto a ofrecer. Esta parte es fundamental pues se plasman las bases del plan de negocios, se describe a detalle la

esencia del negocio que se desea poner en marcha. Una vez descrito el negocio, se procede a la investigación de mercados.

Investigación de mercados: Es el primer estudio del plan de negocios en el cual se determina si existe mercado interesado para el consumo del producto que se ofrece. En esta investigación se conoció el entorno en el que se desarrollará el negocio de La Ciénega Eco Camping, cuales son los competidores directos, los productos sustitutos, los proveedores y los clientes, una vez definidos estos puntos se procede al cálculo de la muestra para la aplicación del cuestionario, se consideró a la región de Córdoba-Orizaba, teniendo una población de 559,782 habitantes. Se aplicó la fórmula de población infinita:

$$n = \frac{Z_a^2 \cdot p \cdot q}{i^2}$$

Donde:

n: Tamaño de la muestra

Z: Nivel de confianza, generalmente se utiliza un nivel de confianza del 95% lo que equivale a $z_{\alpha} = 1.96$

p: Probabilidad a favor

q: Probabilidad en contra (1 - p)

i: Error de estimación, es decir, la precisión en los resultados.

Se prosiguió a realizar el plan de marketing donde se determinan las estrategias de promoción, los canales de distribución, canales de comunicación con la finalidad de promocionar el lugar. Ya terminada la investigación de mercados se procede al estudio técnico o la ingeniería del proyecto.

Estudio técnico: En este estudio se determina la ubicación de la empresa, considerando la micro y macro localización, con la ubicación se determina los proveedores que hay en la comunidad que complementen al servicio que se ofrece, de igual manera se considera la infraestructura con la que cuenta la comunidad como lo es vías de comunicación, servicios de teléfono, luz y drenaje principalmente. En el apartado de tamaño de la empresa, se considera la capacidad de diseño, capacidad de sistema y capacidad real que puede abarcar la empresa de acuerdo a la demanda que existe; por último se realiza los procedimientos que se deben seguir para obtener los productos finales que se ofrece al cliente, con base en este punto se da la pauta para saber el personal que se requiere así como las herramientas que son necesarias, información que será utilizada en los estudios de organización y dirección, así como el análisis financiero

Organización y dirección: En este apartado se considera la administración de recursos humanos en donde se definen la forma de organización que requiere la empresa, con base en sus necesidades funcionales y presupuestales. Se realiza una descripción de los puestos en los que se demuestran con claridad que cada persona del equipo es la más adecuada para las funciones que estarán a su cargo; además se establece la constitución legal de la empresa realizando análisis del marco jurídico en el cual va a funcionar la empresa, la determinación de la estructura organizacional más adecuada a las características y necesidades del proyecto. Impacto ambiental: En este apartado se consideran y ponen en práctica las Normas Oficiales Mexicanas las cuales permite a la autoridad ambiental establecer requisitos, especificaciones, condiciones, procedimientos, metas, parámetros y límites permisibles que deberán observarse en regiones, zonas, cuencas o ecosistemas para el aprovechamiento de recursos naturales, en el desarrollo de actividades económicas, en el uso y destino de bienes, en insumos y en procesos. Estas normas desempeñan un papel esencial en la generación de una atmósfera de certidumbre jurídica y promueven el cambio tecnológico con la finalidad de lograr una protección más eficiente del ambiente.

Análisis financiero: El desarrollo del análisis financiero tiene como objetivos principales el conocer la inversión o financiamiento necesaria para el negocio, determinar los ingresos esperados, la tasa interna de rendimiento y retorno de la inversión, así como el tiempo requerido para alcanzar el punto de equilibrio. Este

análisis es el que más información aporta acerca de la viabilidad del negocio y las posibilidades de que se convierta en una empresa exitosa. Los estudios financieros que se realizan en este análisis son: Flujo de efectivo, estado de resultados, balance general, se determina punto de equilibrio y se realizan una evaluación del proyecto con el calculo de la tasa interna de retorno (TIR) y valor presente neto (VPN).

RESULTADOS

Plan de Negocios

La filosofía de la empresa se determinó el nombre de la organización, La Ciénega Eco Camping, teniendo como objetivo posicionar a la comunidad como un destino ecoturístico. Ofrecerá un producto turístico compuesto por los servicios de hospedaje, alimentos, actividades recreativas y transporte. Estos servicios van dirigidos a las personas que disfrutan del contacto con la naturaleza, realizan actividades al aire libre, buscan descansar del estrés de la ciudad y tener un momento agradable, con este negocio se desea que además de ser una opción de descanso para los turistas, éstos y los pobladores tengan el compromiso de cuidar el medio ambiente y de ser una alternativa económica para la comunidad receptora.

Descrita la filosofía de la empresa se prosigue a la investigación de mercados se efectuó un estudio del entorno para conocer a los competidores en la región de Córdoba-Orizaba y a los del municipio de La Perla. Después de analizar el entorno, se diseñó una encuesta de 12 preguntas, para obtener el tamaño de la muestra se aplicó la fórmula mostrada en la revisión literaria dando como resultado un total de 96 encuestas por aplicar, con estos datos se procedió a la recolección de datos aplicando las encuestas durante la temporada de vacaciones de Semana Santa 2014 en la región mencionada anteriormente. Se tomaron diferentes puntos donde, por la temporada, existe una mayor afluencia de personas locales y de turistas. Los puntos que se consideraron para la encuesta fueron: Terminales de autobuses, parques principales de las ciudades, sitios naturales de las ciudades como: los 500 escalones, ojo de agua, laguna de Nogales, y en la taquilla del teleférico. Además se aplicó la encuesta por medio de una aplicación de las redes sociales, lo que permitió aplicar las encuestas a personas de otras ciudades del estado de Veracruz tales como Xalapa, Poza Rica, Tuxpan, también hizo posible que se aplicara la encuesta en los estados de Baja California, Puebla, Distrito Federal, e incluso países como Estados Unidos y Canadá. Una vez aplicada la encuesta y conocer si la propuesta de negocio tiene aceptación, después de haber aplicado el total de encuestas obtenidas en el desarrollo del trabajo, se obtuvieron las siguientes respuestas mostradas en la Tabla 1, donde se observa que: Se determina que existe un mercado interesado y dispuesto a hacer uso de los servicios que se ofrecerán en

La Ciénega Eco Camping, además que se observa que una actividad que es demandada es el senderismo, por lo que la actividad de senderismo de interpretación ambiental es una actividad que puede tener gran importancia. Con base en la información obtenida de los clientes potenciales, se determinaron los precios, los canales de distribución y comunicación, así como las estrategias de promoción a seguir, en las cuales se consideran el uso de redes sociales, páginas web, participación de ferias, hacer uso de materiales impresos como son volantes, lonas, folletos, además de medios de comunicación masivos como lo son el periódico, spots de radio, entre otros. Ya finalizado la investigación de mercados, se continuó con el estudio técnico, donde se determinó la ubicación de La Ciénega Eco Camping, tiene una un área total de 21,012.5 m². Para obtener la capacidad real se deben considerar la temporadas en las que habrá más demanda, según la encuesta aplicada se obtuvo que las temporadas que las personas visitan estos lugares son Semana Santa con un 13.54%, vacaciones de invierno con un 8.33%, y durante el verano con 47.92%, siendo esta última temporada la más alta; 30.21% de los encuestados prefieren visitar estos sitios durante el fin de semana. Durante el año, existen: 52 fines de semana, 15 días vacaciones de semana santa, 35 días vacaciones de verano, 18 días vacaciones de navidad y fin de año. Sumando estos días se obtienen 120 días disponibles, los cuales se considera como la capacidad real de La Ciénega Eco Camping, siendo 35 días durante las vacaciones de verano que será considerado como la temporada alta. Si se considera una capacidad de la cabaña de 6

personas, se traduce en 720 noches por año, mientras que para el sendero, considerando una capacidad máxima de 15 personas por visita, se obtiene que la capacidad real será de 1800 personas por año.

Tabla 1: Resultados de la Investigación de Mercados

Preguntas	Respuestas
1	El 58% del total de los encuestados pertenecen al género masculino.
2	Más del 60% de las personas que visitan estos lugares se encuentran dentro del rango de 20 a 35 años de edad.
3	98% de los encuestados han visitados destinos ecoturísticos, siendo la mayoría personas originarias de la región Córdoba-Orizaba representando el 72% del total de las encuestas.
4	Veracruz es el estado con mayores visitas a destinos ecoturísticos con un 50% de las encuestas, seguido por Quintana Roo que representa el 12.50%.
5	Los encuestados consideran que los elementos principales que captan su atención en estos lugares son los ríos y cascadas con un 47%, montañas con un 22% y actividades recreativas con un 12%.
6	Los motivos principales por los que las personas deciden ir a visitar estos lugares son: Tener contacto con la naturaleza (44%), descansar de la rutina (24%) y pasear con seres queridos (22%).
7	El 47% de los turistas viajan con sus familias, mientras que el 26% viaja en grupo de amigos.
8	Las actividades preferidas a realizar en los destinos ecoturísticos son: Senderismo (43%) y observación de flora y fauna (21%).
9	La temporada en la que se visitan estos destinos son durante las vacaciones de verano con un 48%, seguida de los fines de semana representando un 30% de las visitas.
10	En cuanto al tiempo en que permanecen los turistas en los destinos ecoturísticos, las cifras se encuentran muy cerradas, ya que el 31% realiza excursiones de un día, 31% pernocta una noche, mientras que el 38% prefiere quedarse más de una noche, siendo la estancia promedio de 2 noches.
11	Se considera que el hospedaje (46%) y las actividades recreativas (24%) son los principales servicios que debe tener el lugar para tener una agradable experiencia en el destino ecoturístico.
12	El 42% de las personas están dispuestas a pagar por persona y noche entre \$600 y \$700 por un paquete ecoturístico.
13	Se considera que el principal medio de publicidad que se utiliza para consultar destinos ecoturísticos es la página web (55%) seguido de las recomendaciones de otras personas con un 23%.
14	El 55% de los turistas prefieren recibir información del destino ecoturístico por medio del correo electrónico, mientras que el 23% prefiere a través de las redes sociales.

La tabla 1 muestra los resultados de las respuestas obtenidas en la aplicación de 96 encuestas en la región Córdoba-Orizaba, de igual manera la encuesta fue aplicada en redes sociales. En el cuestionario se solicitó información como edad, lugares naturales que ha visitado, elementos naturales más importantes para los encuestados que captan su atención, motivos por los cuales deciden ir a lugares naturales, si gustan viajar solos, con familiares o amigos, que actividades gustan más de realizar en estos lugares, la temporada en que visitan los lugares, el tiempo en que permanecen, los servicios que desean encontrar en un lugar natural, el precio que están dispuestos a pagar, entre otra información.

Para la organización y dirección de la empresa se contratarán los servicios de los pobladores de La Ciénega para ofrecer los alimentos a los visitantes, además se hará un convenio con la asociación que ofrece servicio de transporte hacia las comunidades de La Perla, esto con la finalidad de brindarles a los turistas un transporte seguro y cómodo. Para la seguridad y mantenimiento del lugar, se le pagará a dos personas por día laborado. La empresa se constituirá bajo el marco legal de sociedad cooperativa ya que estará integrada por las personas de la comunidad que aportarán su trabajo personal. Se consideró para el impacto ambiental las normas que deben ponerse en práctica como son la NOM-06-TUR-2009 en donde se señalan los requisitos mínimos de información, higiene y seguridad que deben cumplir los prestadores de servicios turísticos de campamentos, NOM-07-TUR-2002 muestra los elementos normativos del seguro de responsabilidad civil que deben contratar los prestadores de servicios turísticos de hospedaje para la protección y seguridad de los turistas o usuarios, NOM-010-TUR-2001 que señala los requisitos que deben contener los contratos que celebren los prestadores de servicios turísticos con los usuarios-turistas, NMX-AA-133-SCFI-2006, muestra los requisitos y especificaciones de los servicios turísticos para obtener certificación ambiental ecoturismo. Con el estudio financiero se determinó la inversión inicial necesaria para poner en marcha la primera etapa del proyecto asciende a \$1,000,000 considerando la construcción de una cabaña, la compra de una casa de campaña, el ensamble de pérgola pequeña y una palapa, la construcción y equipamiento de los senderos de interpretación ambiental, así como los gastos administrativos para poner en marcha el negocio.

Búsqueda y Obtención de Financiamiento

Una vez elaborado el plan de negocios, se prosiguió a la búsqueda y obtención de financiamiento; La Ciénega, como se había comentado en la problemática, se encuentra dentro del programa Cruzada Nacional Contra el

Hambre por lo que cuenta con mayores probabilidades de ser apoyada con distintas programadas gubernamentales que vayan de acuerdo con los objetivos del programa nacional, sin embargo es necesario conocer cuales son los apoyos que van de acuerdo a la propuesta de proyecto que se desea implementar. Para obtener esta información se visitó el Ayuntamiento de La Perla, y se entrevistó al entonces, Director de Medio Ambiente y Turismo, Biólogo Graciano Illescas Téllez, quien comentó que unas de las actividades productivas que más beneficios brinda a las comunidades rurales es el ecoturismo, puesto que el municipio cuenta con una riqueza natural y las dependencias de gobierno suelen apoyar económicamente para el impulso de esta actividad. Por lo tanto dentro de los objetivos de la dirección del medio ambiente y turismo se encontraba detonar esta actividad, sin embargo aun no contaba con un plan de trabajo establecido. Se asistió a una reunión de trabajo, organizada por el biólogo Graciano en la que estuvieron presentes representantes de las dependencias gubernamentales de SEMARNAT y CONANP, y representantes de las diferentes comunidades de La Perla, quienes expusieron las necesidades de los habitantes y solicitaron apoyos para proyectos que impulsen la actividad económica y así tener la posibilidad de obtener un mejor ingreso. Por parte de la iniciativa privada se expusieron propuestas de proyectos productivos, uno de estos se propuso para La Ciénega. Después de escuchar las necesidades de las comunidades y propuestas, los representantes de SEMARNAT y CONANP mencionaron algunos de los apoyos que brindan estas dependencias. De esta reunión de trabajo y por medio del municipio se solicitó el apoyo a la Secretaría de Medio Ambiente y Recursos Naturales (SEMARNAT) para la construcción y equipamiento de los senderos de interpretación ambiental por medio del Programa de Empleo Temporal (PET) este apoyo solicitado fue aprobado por un total de \$182,144 con este recursos se pudo costear la mano de obra para la construcción de los senderos así como la compra de materiales y herramientas necesarias.

Implementación del Proyecto

Para iniciar con el desarrollo del negocio se reunieron a las personas de la comunidad que participarían en el programa de empleo temporal para darles una charla sobre la finalidad de los senderos interpretativos y su diseño, una vez terminada la plática se pidió la opinión de los integrantes, la cual fue realmente interesante ya que comentaron que hasta el momento no había habido ningún proyecto de ese tipo en la comunidad, y algo realmente sorprendente fue la reacción de las mujeres, pues ellas expresaron, que de igual forma era la primera vez que se les consideraba e invitaba a trabajar en un proyecto de este tipo, esa opinión fue general entre las mujeres de todas las edades que iban desde los 20 años hasta los 56 años.

Unas semanas después de la plática, se recibió el primer pago para la compra de herramientas y materiales, una vez conseguidos se iniciaron labores el 8 de mayo del mismo año. La organización del trabajo fue por medio de cuadrillas, o pequeños grupos de trabajo, por lo que existieron 7 cuadrillas en total; tres de ellas se encargaron de abrir, limpiar y acondicionar los senderos, una estuvo a cargo de la carpintería, elaborando las mesas, sillas y carteles utilizados a lo largo del sendero, y por último hubo 3 cuadrillas de mujeres quienes se encargaron de sembrar flores y diseñar jardineras. Cada una de las cuadrillas se organizaron en cuanto a días y horarios para laborar.

El programa tuvo una duración de 4 meses, tres de estos meses, (mayo a julio) fueron destinados a la construcción de senderos, la cual se llevó a cabo en 3 fases; la primera fase fue la apertura, limpieza y acondicionamiento del lugar, una vez que avanzaron 700 metros, se inició con la segunda fase, que fue la incorporación de las cuadrillas de las señoras quienes empezaron a sembrar las plantas y diseñar las jardineras, pues como comentaban ellas había que aprovechar la temporada de lluvia para que las plantas sembradas crecieran y puedan florear. A la par estos 6 grupos, la cuadrilla de los carpinteros estuvieron trabajando en su taller elaborando las mesas y sillas solicitadas para tenerlas listas en la última fase que fue la colocación de éstas a lo largo del camino; durante el mes de agosto se realizó la construcción del mirador, baño, una palapa y una pérgola, estas construcciones fueron aportadas por un ingeniero quien apoyo en este proyecto con su trabajo, material y construcción.

Las dificultades que se tuvieron que afrontar fueron diversas, una de ellas fue que las personas de la comunidad expresaran sus dudas, inquietudes, quejas o ideas, generalmente se tenía la incertidumbre de saber si habían comprendido o no la idea general, pues así se les preguntara o pidieran que dijeran lo que habían entendido muchas veces se mantenían reservadas en sus opiniones. Para crear un ambiente de mayor confianza y acercamiento entre los integrantes del programa y se realizaron pequeños convivios para celebrar el día de las madres, el día del padre, la salida de los niños de la escuela, esto permitió que los participantes se conocieran más de manera personal, lo que dio como resultado una confianza y también un mayor entendimiento también sobre el pensar y actuar de las personas de la comunidad; además de conocer sobre la realidad en la que viven y sensibilizarse más sobre las necesidades que tiene la comunidad. Otro de los contratiempos fue el clima a partir de junio empezaron las lluvias, causando desbordamientos y se debía limpiar el tramo perjudicado, por lo que las cuadrillas de los senderos se tuvieron que dividir y mientras que unos avanzaban en abrir el sendero otros se dedicaban a componer el tramo perjudicado. También hubo un retraso de la elaboración de mesas y sillas, ya que la madera no se encontraba totalmente seca y si se utilizaba húmeda se corría el riesgo de que se quebraran los tablones de madera. Para la construcción de la palapa, baño y mirador, había ocasiones en que la lluvia y las tormentas eléctricas no permitían avanzar ocasionando un retraso de 2 semanas. Finalmente se concluyó con el trabajo dando como resultado la apertura y equipamiento de 2km de senderos interpretativos .

CONCLUSIONES

Este proceso ha sido una experiencia enriquecedora la cual ha permitido conocer y vivir la realidad en la que se encuentran muchas personas en las comunidades rurales, pues se observa como el paternalismo del gobierno ha dañado a estas comunidades, esta actitud les ha limitado la visión de buscar soluciones para salir de su pobreza, ya que la gran mayoría de las personas se sienten conformes con su situación y con la falta de educación, ya que solo basta con cumplir con unos pocos requisitos para que cada mes obtengan un pequeño apoyo monetario, que para ellos es suficiente para pasar el mes, aunque esto signifique pasar penurias. Por otro lado, al sentirse atendidos por el gobierno no se sienten con la autoridad de exigir mejores servicios, educación y mayores oportunidades, están a expensas de lo que el gobierno les quiera dar. Es por esto que se dice, al inicio de este párrafo, que la actitud paternalista de gobierno limita la visión de las comunidades, en cambio si en lugar de solo darles dinero, se les lleva ideas nuevas, ellos buscan la manera de reproducirlas con los recursos materiales que ellos tienen, y es aquí donde se observa que el ingenio, la creatividad y las ganas de salir adelante de las personas de esta comunidad realmente es grande, además con el negocio de turismo que se ha iniciado se ha visto que las personas de la comunidad valoran más sus actividades diarias, como lo es la preparación de comida en un fogón de leña, el trabajo que realizan en el campo como es la siembra, la cosecha de flores y frutos, el cuidado de animales, sus bordados y aprecian más la riqueza natural que tiene, cuidan el lugar, lo mantienen limpio y cada vez más las personas de la comunidad están interesadas en que los turistas conozcan sus terrenos. Como se mencionó en el resumen el turismo es un fenómeno social, económico, cultural, y ambiental pues cada uno de estos sectores mueve al otro, de tal manera que, llevándose de maneja adecuada y justa beneficia a pobladores del destino turístico, a consumidores y a inversionistas, además de que se En estos momentos el proyecto se encuentra en etapa inicial y se comienzan a observar los efectos, será interesante observar los efectos que se tienen dentro de algunos años.

RESUMEN

El ser humano debe cubrir necesidades no solamente físicas, emocionales y cognitivas, sino también espirituales; ello, si lo que busca es encontrarle un sentido significativo a su trabajo. Esta investigación analizó la existencia de diferencias en variables observables del Espíritu de Trabajo, a partir de características demográficas y organizacionales en personal que labora en una planta maquiladora de artículos electrónicos, localizada en Ciudad Juárez, Chihuahua. Para ello, se diseñó una investigación empírica, cuantitativa, y de sección transversal; y se aplicó un instrumento, basado en la revisión de la literatura de dicha variable, específicamente en ambientes Lean-Kaizen, a 100 sujetos. Se realizaron análisis de la varianza considerando como variables independientes la edad, la escolaridad, la antigüedad y el puesto ocupado. Los resultados evidencian que el Espíritu de Trabajo, bajo un ambiente Lean-Kaizen, es diferente de acuerdo a la edad, la escolaridad, la antigüedad y el puesto ocupado.

IS SPIRIT AT WORK UNDER KAIZEN ENVIRONMENTS AFFECTED BY AGE, EDUCATION, TENURE AND POSITION AT THE ORGANIZATION?

ABSTRACT

Human being must cover not only physical, emotional and cognitive needs, but also spirituals; this, if he is looking to find a significant meaning to his work. This research analyzed the existence of differences in indicators of Spirit at Work considering personnel's demographic and organizational characteristics, who work in a maquiladora electronics plant located in Ciudad Juarez, Chihuahua. For this, an empirical, quantitative and cross-sectional study was designed; based on the literature review of this variable, particularly in environments Lean Kaizen, an instrument was applied to 100 subjects. Variance analysis considering as independent variables age, education, tenure and position held were performed. The results show that Spirit at Work under a Lean Kaizen environment is different according to age, education, tenure and position held.

INTRODUCCIÓN

Dentro de la filosofía *Lean*, se incita a los trabajadores a identificar los desperdicios y las oportunidades de mejora mediante el uso creativo de sus talentos, habilidades y experiencia (de Haan, Naus, & Overboom, 2011). Una de las formas de generar ideas para la mejora de procesos, es a través de los eventos *Kaizen*, los

cuales se administran sistemáticamente y producen resultados positivos (de Haan et al., 2011), que pueden verse reflejados tanto en los resultados de negocio como en los de recursos humanos (Glover, Farris, Van Aken, & Doolen, 2011). Sin embargo, se ha encontrado que la mayoría de la literatura actual se enfoca en la sustentabilidad de los resultados técnicos del sistema; muy pocos estudios toman en consideración los resultados del sistema social (Glover et al., 2011). Por otro lado, en la literatura se ha ignorado la dimensión espiritual del ser humano (Duchon & Plowman, 2005). No obstante, existen esfuerzos como el estudio de la promoción del espíritu de trabajo, el cual se considera un nuevo enfoque para mejorar la experiencia significativa de trabajo de las personas y alentar una vida plena para los empleados en la organización (Ashmos & Duchon, 2000; Kinjerski & Skrypnek, 2008).

Esta investigación analiza la existencia de diferencias en el Espíritu de Trabajo, a partir de características demográficas y organizacionales de personal que labora en una planta maquiladora de artículos electrónicos localizada en Ciudad Juárez, Chihuahua, la cual opera específicamente bajo un ambiente *Lean-Kaizen*. El trabajo se divide en cuatro apartados: Antecedentes académicos; metodología utilizada; resultados y finalmente, conclusiones del estudio.

REVISIÓN DE LITERATURA

Dentro de la manufactura *Lean*, un mecanismo de mejora que ha incrementado su utilización son los eventos *Kaizen* (Farris, Van Aken, Doolen, & Worley, 2008). Los cuales son un proyecto de mejoramiento estructurado, con un dedicado equipo interdisciplinario para mejorar áreas de trabajo específicas, con metas definidas en un marco de tiempo acelerado -1 semana o menos- (Doolen, Van Aken, Farris, Worley, & Huwe, 2008; Farris et al., 2008; Glover et al., 2011). Su objetivo es tanto la transformación del área de trabajo como el desarrollo de los empleados (Farris et al., 2008).

Se afirma que un empleado será capaz de sentir y percibir que su trabajo es significativo, en la medida en que tenga oportunidad de desempeñar actividades que desafíen sus habilidades (Duchon & Plowman, 2005). Entre las líneas sugeridas, surge precisamente el estudio del espíritu de trabajo, y es por ello que en la actualidad se observa un marcado incremento en la teoría y la investigación sobre la influencia de la espiritualidad en el área de trabajo (Duchon & Plowman, 2005; Weinberg & Locander, 2014). Kinjerski and Skrypnek (2008) definen el espíritu de trabajo como un estado distinto que se caracteriza por cuatro dimensiones; en lo referente a la presente investigación solo se analiza el compromiso con el trabajo, el cual dichos autores precisan se caracteriza por un profundo sentimiento de bienestar, una creencia de que el individuo está comprometido en un trabajo significativo que tiene un propósito más grande, una conciencia de alineación entre los valores y creencias propios y los del trabajo mismo. Desafortunadamente, la espiritualidad del ser humano ha sido reportada como un área poco estudiada (Duchon & Plowman, 2005). A partir de lo antes planteado, se infiere la existencia de una asociación entre el espíritu de trabajo y su empleo en organizaciones que laboran bajo un ambiente *Lean-Kaizen*.

La diversidad demográfica de las organizaciones genera diferentes efectos sobre las actitudes de los empleados (Riordan & McFarlane Shore, 1997), por lo que en la literatura se reportan diversos estudios que analizan la relación existente entre variables demográficas y organizacionales respecto de ciertos comportamientos. Sin embargo, en relación al espíritu de trabajo no se localizaron trabajos en los que se hayan estudiado la influencia de variables demográficas u organizacionales. A partir de lo antes descrito, se considera relevante indagar sobre este tipo de variables, y se propone la siguiente pregunta de investigación: ¿Existen diferencias significativas en el espíritu de trabajo en función de la edad, la escolaridad, la antigüedad y la posición organizacional del personal que labora en una planta maquiladora de artículos electrónicos localizada en Ciudad Juárez, Chihuahua?

METODOLOGÍA

Se diseñó una investigación empírica, cuantitativa y de sección transversal, basada en la revisión de literatura respecto de la variable Espíritu de Trabajo, los Eventos *Kaizen* y algunas variables demográficas y organizacionales. La muestra fue no probabilística y se realizó un muestreo por conveniencia. Se aplicó un cuestionario auto-administrado de forma individual y en total se recabaron 100 cuestionarios. En ellos se incluyeron ítems con un formato tipo Likert, de cinco puntos de asignación de respuesta donde 1 significó “totalmente en desacuerdo” y 5 “totalmente de acuerdo”. El constructo Espíritu de Trabajo se evaluó respecto de la dimensión de compromiso de trabajo a través de siete ítems: *Existe un balance entre los requerimientos de mi trabajo y mis valores, creencias y comportamiento; le encuentro un propósito a mi trabajo; mi trabajo me apasiona; a través de mi trabajo, siento que estoy cumpliendo mi vocación; tengo un sentido de misión personal en la vida, que mi trabajo me ayuda a cumplir; me siento agradecido de tener un trabajo como el mío; actualmente estoy donde quiero estar.*

RESULTADOS

Se llevó a cabo un análisis de la varianza –ANOVA- de un factor, en el cual los resultados reflejaron que existen diferencias estadísticamente significativas en cuanto a los cuatro factores analizados: *edad, escolaridad, antigüedad y puesto*. Respecto del factor *Edad* recodificado en cinco grupos [menor de 20 años, entre 20 y 30 años, entre 31 y 40 años, entre 41 y 50 años, y más de 51 años], los resultados de la prueba ANOVA evidencian diferencias estadísticamente significativas en el ítem 4: *A través de mi trabajo, siento que estoy cumpliendo mi vocación*. Las pruebas post hoc, en particular Tukey HSD, demuestran que las diferencias ocurren entre el grupo 2 [$\bar{x}=3.70$, $\sigma=1.02$], y los grupos 4 [$\bar{x}=4.46$, $\sigma=0.932$] y 5 [$\bar{x}=4.60$, $\sigma=0.828$]. En cuanto al factor *Escolaridad*, recodificado a 4 categorías [preparatoria terminada y carrera profesional no terminada, carrera profesional terminada y maestría, doctorado, otra] la prueba ANOVA reflejó diferencias estadísticamente significativas para el ítem 1: *Existe un balance entre los requerimientos de mi trabajo y mis valores, creencias y comportamiento*. Las pruebas post hoc, en específico Tukey HSD, demostró que las diferencias ocurren entre el grupo 1 [$\bar{x}=3.88$, $\sigma=0.516$] y el grupo 2 [$\bar{x}=4.39$, $\sigma=0.651$].

Para el factor *Antigüedad*, el cual consta de 4 categorías [menos de un año, entre 1 y 3 años, entre 4 y 7 años, más de 8 años], la prueba ANOVA mostró diferencias significativas en los ítems 4, 5 y 6: *A través de mi trabajo, siento que estoy cumpliendo mi vocación; Tengo un sentido de misión personal en la vida, que mi trabajo me ayuda a cumplir; y Me siento agradecido de tener un trabajo como el mío*. Las pruebas post hoc, en particular Tukey HSD, demostraron que las diferencias ocurren solamente en el ítem 4, entre el grupo 2 [$\bar{x}=3.5$, $\sigma=1.080$] y el grupo 4 [$\bar{x}=4.37$, $\sigma=0.859$].

En el caso del *Puesto* [el cual se midió en 5 categorías: gerente, ingeniero, supervisor, operador, otro], la prueba ANOVA reflejó diferencias significativas casi en todos los ítems [1, 3, 5, 6 y 7]: *Existe un balance entre los requerimientos de mi trabajo y mis valores, creencias y comportamiento; Mi trabajo me apasiona; Tengo un sentido de misión personal en la vida, que mi trabajo me ayuda a cumplir; Me siento agradecido de tener un trabajo como el mío; y Actualmente estoy donde quiero estar*. Las pruebas post hoc, en particular Tukey HSD, demostraron que existen diferencias para los ítems 1, 3, 5, 6 y 7 entre los grupos 1 [$\bar{x}\geq 4.73$, $\sigma\leq 0.688$] y 4 [$\bar{x}\leq 3.73$, $\sigma\leq 1.457$]. Además, en el caso del ítem 3, existe diferencia estadística también entre los grupos 3 [$\bar{x}=4.41$, $\sigma=0.560$] y 4 [$\bar{x}=3.60$, $\sigma=1.298$], y en el ítem 6, también hay diferencia entre los grupos 4 [$\bar{x}=3.73$, $\sigma=1.100$] y 5 [$\bar{x}=4.67$, $\sigma=0.617$].

CONCLUSIONES

El propósito de este trabajo fue analizar si existían diferencias estadísticamente significativas en el espíritu de trabajo en función de la edad, la escolaridad, la antigüedad y la posición en la organización, del personal que labora en una planta maquiladora de artículos electrónicos localizada en Ciudad Juárez, Chihuahua; la cual opera específicamente bajo un ambiente *Lean-Kaizen*. Los resultados obtenidos de forma empírica indican que el espíritu de trabajo es distinto respecto de las cuatro variables analizadas. En este trabajo los resultados evidencian que bajo un ambiente *Lean-Kaizen* los trabajadores más jóvenes perciben de forma menos favorable el estar cumpliendo su vocación a través del trabajo que desempeñan. Se sugiere que los esfuerzos gerenciales presten atención a este aspecto y se busquen formas de empatar las funciones laborales de los sujetos más jóvenes en la organización con las aptitudes y gustos de dicha fuerza laboral. En lo referente a la escolaridad, en los resultados se encontró que bajo un ambiente *Lean-Kaizen* aquellos empleados cuya preparación académica es más baja tienen dificultad para percibir que existe un balance entre los requerimientos de su trabajo y sus valores, creencias y comportamiento.

En relación a la antigüedad, los resultados revelan que bajo un ambiente *Lean-Kaizen* los trabajadores con menor tiempo laborando en la organización expresan un nivel bajo de espíritu de trabajo; dicha diferencia recae en que los sujetos no perciben que exista una afinidad entre su vocación y las funciones laborales que actualmente llevan a cabo. Con respecto a la posición organizacional, los resultados revelan que bajo un ambiente *Lean-Kaizen*, los sujetos con un nivel jerárquico gerencial manifiestan un mayor espíritu de trabajo respecto de aquellos que laboran a nivel operativo. En base a lo encontrado, se recomienda que en las organizaciones se originen esfuerzos para elevar el sentido de autenticidad y significancia de las tareas productivas de los operadores, a fin de elevar su espíritu de trabajo y con ello favorecer su deseo de permanencia y compromiso con la organización. Cabe señalar que los resultados encontrados no pueden ser generalizados, ya que el estudio se realizó de forma transversal y con una muestra no probabilística. Se sugiere realizar investigaciones que contrasten lo encontrado a partir de nuevos contextos y sujetos de estudio.

RESUMEN

Con la Reforma Fiscal 2014, se produjeron cambios relevantes en cuestión fiscal, los cuales se ven reflejados en las empresas a nivel nacional. El objetivo de esta investigación es el de analizar los cambios que trae consigo la Reforma Fiscal, y su impacto en la productividad y en la competitividad en las empresas de servicios dedicadas al giro de la seguridad privada en Ciudad Juárez, Chihuahua, México. Este sector empresarial refleja poca relevancia al poder político del país, y por lo mismo no es estudiado en sus afectaciones ni por ser estas una fuente de empleo para las familias juarenses. El análisis de este estudio se logró mediante la aplicación de un instrumento de diagnóstico en formato de encuesta. Con los datos del instrumento de diagnóstico, se obtiene que la reforma fiscal tiene una relación causa-efecto con la productividad y la competitividad de las empresas de este giro y, tiene un impacto favorable a este sector empresarial, al ser afectado indirectamente por los cambios de la misma.

PALABRAS CLAVE: Reforma Fiscal, Productividad, Competitividad, Seguridad Privada

IMPACT OF THE FISCAL REFORM IN THE PRODUCTIVITY AND COMPETITIVENESS OF ENTERPRISES OF SERVICES FOCUSED ON PRIVATE SECURITY IN CIUDAD JUÁREZ, CHIHUAHUA, MÉXICO

ABSTRACT

With the 2014 Tax Reform, there were significant changes in tax issue, which are reflected in the companies at the national level. The objective of this research is to analyze the changes that it brings with it the Fiscal Reform, and its impact on productivity and competitiveness in the business dedicated to provide private security in Ciudad Juarez, Chihuahua, Mexico. This business sector reflects little relevance to the political power of the country, and by the same it is not studied in your damages or for being such a source of employment for the families from Juarez. The analysis of this study was achieved through the implementation of a diagnostic instrument in survey format. With the data on the diagnostic instrument, the results obtained show that fiscal reform has a cause-effect relationship with the productivity and competitiveness of this business, and has a favorable impact in this business sector, to be indirectly affected by the changes of the same.

INTRODUCCIÓN

La reforma fiscal en México desde hace 30 años ha sido un tema de discusión y debate público, ya que ha pasado de ser una economía cerrada a una muy abierta, pero en la recaudación de impuesto el país se ha estancado desde 1970 hasta la fecha y el PIB ha aumentado de 8.1% a 15% pero gracias al petróleo (Sobarzo, 2007). En México una reforma fiscal exitosa debe ser capaz de eliminar que los ingresos del gobierno dependan del petróleo, aunado a esto, revisar el presupuesto del gasto público en los tres gobiernos, federal, estatal y municipal. Desde 1980 que se aplicó el impuesto al valor agregado (IVA), el porcentaje del PIB se ha estancado, sin embargo, el sistema tributario se hizo más moderno y eficiente, pero más complicado y costoso debido a una base tributaria muy reducida.

Durante el ejercicio fiscal 2013, se observó un panorama económico y financiero un poco complicado a nivel nacional, por ello, el paquete económico del 2014 pretende preservar y fortalecer la solidez de la Hacienda Pública Nacional, con la finalidad de enfrentar un entorno económico complicado internacionalmente, se pretende el aumento del PIB anual en un 3.9% aproximadamente, incluir nuevos impuestos, modificar los impuestos ya existentes y derogar el IETU y el IDE. Con esta reforma se aumenta la base de recaudación y el control en la evasión de impuestos y la franja fronteriza es doblemente afectada por la estandarización del IVA con el resto del país. En relación a la competitividad de estas empresas, intervienen la competencia directa ya existente, ya que algunas de estas son internacionales y cuentan con un historial dentro de toda América Latina, algunas otras de origen local, que cuentan con más prestigio y una cartera de clientes más amplia; los proveedores, estos son importantes, ya que de ellos depende la calidad de los materiales con que cuentan los guardias de seguridad, así como servicios adicionales que estas empresas ofrecen; los clientes, de estos dependen los costos que se den a las empresas, ya que algunos piden el servicio y demandan costos bajos, negándose a pagar el costo real de este servicio; la amenaza de nuevos competidores, en la actualidad han surgido muchas empresas de servicio de seguridad privada, algunas de ellas incluso no cuentan con los permisos necesarios para dar este servicio, ofrecen costos muy bajos y esto afecta a las empresas ya establecidas.

Lo anterior afecta a la competitividad de estas empresas, puesto que se deben analizar todas estas variantes al momento de realizar una cotización, y resaltar el costo-beneficio al momento de brindar este servicio. La trascendencia de esta investigación radica en establecer un parámetro sobre cómo afecta la actual aprobación de la reforma fiscal que toma efectos a partir del ejercicio 2014 en las empresas de la República Mexicana, es importante analizar y dar una visión de cómo se encuentran las empresas y cómo afecta a estas los cambios que se están llevando a cabo en el país hablando de materia fiscal.

REVISIÓN LITERARIA

Para comprender la reforma fiscal, debemos adentrarnos en la historia de la recaudación fiscal en México. El estudio de las finanzas públicas del siglo XIX muestra una problemática constante de la concurrencia hacendaria entre la federación y los estados, los ordenamientos del año 1824 y 1857 no establecieron los preceptos en materia de competencias impositivas entre ambos, cuando surge como pacto político entre las regiones del país que lucharon contra el poder colonial centralista. Este pacto original fue reformulado con la constitución de 1857 y, entre otros aspectos, permitió construir y dar vida a dos órdenes de gobierno, el estatal y el federal, quienes establecieron cuáles impuestos correspondía a la federación y cuáles a los estados. Los impuestos y derechos sobre el comercio exterior fueron federales y el resto de los tributos quedaban al libre albedrío de las autoridades federales, estatales o municipales, concurrencia tributaria plenamente reconocida en nuestra Constitución hasta nuestros días (Calderón, 2004).

Al triunfo de la Revolución de 1910-1917 sin duda esa misma necesidad de llegarse recursos para atender el cumplimiento de sus objetivos llevó al replanteamiento de reordenar las finanzas federales y a establecer

nuevos atributos, tales como los impuestos sobre la propiedad raíz y sobre la renta, por lo que el panorama de nuestro país no podía ser otro que el de la múltiple tributación, es decir, tres niveles de gobierno incidiendo sobre una misma fuente tributaria. De lo expresado hasta aquí se puede interpretar que el gobierno federal no tiene restricción en cuanto a las fuentes impositivas que pueden elegir para cobrar contribuciones (Uthoff, 2004). El gobierno federal por conducto de la Secretaría de Hacienda, convocó para agosto de 1925 a la Primera Convención Nacional Fiscal la cual se adoptaron varias recomendaciones entre las cuales destaca la propuesta de delimitar los campos de imposición entre la federación y las entidades federativas de acuerdo a ciertas bases (Pani, 1955). En los seis años de la administración del presidente Felipe Calderón, la Secretaría de Hacienda y Crédito Público (SHCP) tomó decisiones fundamentales para el presente y futuro del México, mismas que permiten al país enfrentar los retos y desafíos impuestos por sus propias necesidades de desarrollo y por la situación económica internacional. Utilizando los recursos y mecanismos disponibles y generando nuevos esquemas e instrumentos cuando fue necesario (Memorias SHCP 2006-2012, 2012).

El Plan Nacional de Desarrollo (PND), estableció los objetivos, estrategias y prioridades de la administración del titular del Poder Ejecutivo, y son la base de los programas sectoriales, especiales, institucionales y regionales. El objetivo principal de dicho Plan es el desarrollo humano sustentable, entendido como “el proceso permanente de ampliación de capacidades y libertades que permita a todos los mexicanos tener una vida digna sin comprometer el patrimonio de las generaciones futuras” (Huerta, 2008). Como toda reforma fiscal, la de 2007 inicialmente se concibió como una base recaudatoria; sin embargo, el equipo de la SHCP rápidamente supo que era necesario formular una reforma integral que, además de recaudar, modernizara todas las etapas del ciclo hacendario. Una de las principales innovaciones fue la introducción del Impuesto Empresarial a Tasa Única (IETU). Inicialmente el IETU se propuso como un gravamen que sustituyera al Impuesto Sobre la Renta Empresarial (ISR). Su objetivo fundamental era reducir los regímenes especiales y limitar las planeaciones fiscales. Para el combate a la evasión fiscal, el contrabando y la informalidad para elevar el número de contribuyentes. Se introdujo el Impuesto a los Depósitos en Efectivo (IDE) como contribución complementaria del ISR y auxiliar en el control de la elusión fiscal (Memorias SHCP 2006-2012, 2012).

En 2009, el país se enfrentaba a una caída en la plataforma de producción petrolera, lo que se traducía en una pérdida permanente de recursos. Esto forzaba a las autoridades hacendarias a tomar medidas estructurales que contrarrestaran el descenso permanente en los ingresos. Se diseñó un paquete económico para 2010 que incluía la creación de un nuevo impuesto llamado “contribución para el combate a la pobreza” (CCP). Este consistió en aprovechar la oportunidad para generalizar de modo gradual el Impuesto al Valor Agregado (IVA) (Memorias SHCP 2006-2012, 2012). Los días 29 y 31 de octubre pasado (2013), el Congreso de la Unión aprobó finalmente diversos decretos que conforman la reforma fiscal para 2014. Los más importantes se mencionan a continuación: Decreto por el que se reforman, adicionan y derogan diversas disposiciones del Código Fiscal de la Federación. Las modificaciones entrarán en vigor el 1º de enero de 2014. Decreto por el que se reforman, adicionan y derogan diversas disposiciones de la Ley del Impuesto al Valor Agregado; de la Ley del Impuesto Especial sobre Producción y Servicios; de la Ley Federal de Derechos; se expide la Ley del Impuesto Sobre la Renta, y se abrogan la Ley del Impuesto Empresarial a Tasa Única y la Ley del Impuesto a los Depósitos en Efectivo. Las modificaciones entrarán en vigor el 1º de enero de 2014 (Valdés, 2013).

Código Fiscal de la Federación

Los principales cambios de la reforma fiscal en el Código Fiscal de la Federación, son los siguientes:

Domicilio fiscal: Se considera domicilio fiscal de las personas físicas el que proporcionen a los bancos y otras instituciones financieras, en su caso, cuando no hayan manifestado al SAT el domicilio correcto que establece el Código Fiscal de la Federación o no se les localice en el mismo (Valdés, 2013).

Medios electrónicos: Se eliminan los comprobantes impresos con código de barras bidimensional, los simplificados, los estados de cuenta como comprobantes fiscales, entre otros.

Dictamen fiscal: Los contribuyentes que opten por presentar dictamen fiscal lo informarán al presentar la declaración anual del impuesto sobre la renta que corresponda al ejercicio por el que se opta por dictaminar. Quienes apliquen esta opción se considera que cumplieron con la obligación de presentar la declaración informativa sobre su situación fiscal (Anzo, 2013).

Contabilidad: La contabilidad se integra por: los libros, sistemas y registros contables, papeles de trabajo, estados de cuenta, cuentas especiales, libros y registros sociales, control de inventarios y método de valuación, discos y cintas o cualquier otro medio de almacenamiento de datos, los equipos o sistemas electrónicos de registro fiscal, la documentación comprobatoria de los asientos respectivos, así como la documentación e información relacionada con el cumplimiento de las disposiciones fiscales, comprobantes de sus ingresos y deducciones y la que obliguen otras leyes. El contribuyente ingresará mensualmente su información contable a través del portal de internet (Pichardo, 2013).

Revisiones electrónicas: Se establece la facultad de las autoridades fiscales de llevar a cabo revisiones electrónicas a los contribuyentes, basándose en la información y documentación que tengan dichas autoridades.

Impuesto Sobre la Renta

Los cambios más relevantes de la reforma fiscal en la Ley del Impuesto Sobre la Renta, se mencionan a continuación: Cálculo de la participación de los trabajadores en las utilidades de las empresas (PTU): Se modifica y simplifica el procedimiento para determinar la renta gravable con la cual se calcula la PTU. A los ingresos obtenidos en el año se restan las deducciones autorizadas, así como conceptos que no son deducibles para el ISR. El resultado es la renta gravable que sirve de base para el cálculo de la PTU. No se debe restar la PTU de las empresas pagada en el año ni las pérdidas fiscales pendientes de aplicar (Lomeli, 2013). Aportaciones a fondos de pensiones y jubilaciones: Se limita la deducción de las aportaciones que realizan las empresas para la creación o incremento de las reservas destinadas a fondos de pensiones o jubilaciones, complementarias a las que establece la Ley del IMSS, así como de primas de antigüedad en los términos de la misma ley, el monto que se podrá deducir no debe exceder de 47% sobre el monto de la aportación realizada en el ejercicio de que se trate. El porcentaje de deducción es de 53% cuando las prestaciones otorgadas a los trabajadores en el año, no disminuyan con relación a las del año anterior. Vales de despensa: Se establece como requisito para la deducción de los vales de despensa, que se proporcionen a los trabajadores a través de monederos electrónicos autorizados por el SAT.

Cuotas de seguridad social del trabajador pagadas por los patrones: No se consideran deducibles las cuotas de seguridad social a cargo del trabajador que hayan sido pagadas por el patrón (Pichardo, 2013). Inversiones y gastos en automóviles: Se reduce el monto deducible por concepto de inversiones en automóviles hasta en 130 mil pesos por unidad, sin incluir el IVA. Asimismo, se ajusta el monto deducible por la renta de automóviles de 65 a 200 pesos diarios por unidad (Valdés, 2013). Consumo en restaurantes: Se reduce el porcentaje de gastos que se puede deducir por consumo en restaurantes para quedar en el 8.5% y continúa el requisito de que el pago se realice mediante tarjeta de crédito, de débito o de servicios, o a través de los monederos electrónicos que al efecto autorice el SAT. Tarifa del ISR anual de las personas físicas: En el caso de la tarifa anual, quienes persigan ingresos mayores de 750 mil pesos anuales tributan a una tasa de 32%, los ingresos superiores a 1 millón de pesos pagan una tasa de 34%, quienes obtengan ingresos por encima de 3 millones de pesos anuales se gravan con la tasa de 35%. Servicios profesionales (honorarios): Se suprime la opción que tenían los contribuyentes del régimen de actividades profesionales con menores ingresos que consistía en deducir la mayoría de sus inversiones como erogaciones o gastos, por los que se deben sujetar al

procedimiento general para la deducción de inversiones, es decir, aplicando el porcentaje de deducción anual correspondiente, según el tipo de bien (Lomeli, 2013).

Impuesto al Valor Agregado

En la Ley del Impuesto al Valor Agregado, los cambios más importantes son los siguientes: Tasa del 16%, en la región fronteriza: Se elimina la tasa preferencial de 11% en la región fronteriza. Con lo anterior, se uniforma la aplicación de la tasa de 16% en todo el territorio nacional (Union, 2014).

Intereses: Se exenta a los intereses que reciban o paguen las sociedades cooperativas de ahorro y préstamo, las sociedades financieras populares, las sociedades financieras comunitarias y los organismos de integración financiera rural; así como a los organismos descentralizados de la administración pública federal y a los fideicomisos de fomento económico del gobierno federal, sujetos a supervisión de la comisión nacional bancaria y de valores.

Competitividad en las Organizaciones

La competitividad se define por la productividad con la que un país utiliza sus recursos humanos, económicos y naturales. Para comprender la competitividad, el punto de partida son las fuentes subyacentes de prosperidad que posee un país. El nivel de vida de un país se determina por la productividad de su economía, que se mide por el valor de los bienes y servicios producidos por unidad de sus recursos humanos, económicos y naturales. La productividad depende tanto del valor de los productos y servicios de un país –medido por los precios que se pagan por ellos en los mercados libres- como por la eficiencia con la que pueden producirse. La productividad también depende de la capacidad de una economía para movilizar sus recursos humanos disponibles. (Porter, 1985).

En la era de la globalización, la palabra competitividad es cada vez más utilizada en la vida cotidiana, al referirnos al país está en función del desempeño microeconómico de sus unidades productivas, de la instrumentación de las políticas públicas, de la existencia y evolución de las ventajas territoriales y distributivas que ofrecen las ciudades para el desarrollo de sus actividades económicas. Las ciudades compiten entre sí por atracción de inversiones para la creación de nuevos empleos y generación de ingresos, la competitividad que registran las unidades económicas del territorio resultan del aprovechamiento de una serie de factores locales dinámicos que se denominan ventajas competitivas (Sobrinó, 2003). Según IMCO el Índice de Competitividad Urbana 2012 mide la capacidad de las ciudades mexicanas para atraer y retener inversiones y talento. En las ciudades, como en los países y en las regiones, el nivel de productividad de las empresas y de las personas –y por ello su prosperidad y bienestar- está estrechamente vinculado al acervo local de capital físico y humano. Tanto la inversión como el talento tienden a gravitar hacia los lugares donde pueden obtener los mejores retornos. Una ciudad competitiva que consistentemente resulta atractiva para la inversión y para el talento es una ciudad que maximiza la productividad y el bienestar de sus habitantes (IMCO, 2012).

Tabla 1: Requerimiento de las Estrategias Competitivas Genéricas

Estrategia Genérica	Habilidades y Recursos Necesarios	Requisitos Organizacionales Comunes
Liderazgo total en costos	Inversión constante de capital y acceso al capital. Habilidad en la ingeniería del proceso. Supervisión intensa de la mano de obra. Productos diseñados para facilitar su fabricación.	Rígido control de costos. Informes de control frecuentes y detallados. Organización y responsabilidades estructuradas. Incentivos basados en alcanzar objetivos estrictamente cuantitativos.
Diferenciación	Sistemas de distribución de bajo costo. Fuerte habilidad en comercialización. Ingeniería del producto. Instinto creativo. Fuerte capacidad en la investigación empresarial de liderazgo tecnológico y de calidad. Larga tradición en el sector industrial o una combinación de habilidades únicas derivadas de otros negocios. Fuerte cooperación de los canales de distribución.	Fuerte coordinación entre las funciones de I y D, desarrollo del producto y comercialización. Mediciones e incentivos subjetivos en vez de medidas cuantitativas. Fuerte motivación para allegarse a trabajadores altamente capaces, científicos o gente creativa.
Enfoque	Combinación de las capacidades anteriores dirigidas al objetivo estratégico particular.	Combinación de las políticas anteriores dirigidas al objetivo estratégico particular.

Fuente: Porter (1980) La tabla 1 muestra las estrategias competitivas genéricas, como alternativas que en gran medida son mutuamente excluyentes: "alcanzar liderazgo en costos y diferenciación [al mismo tiempo] es usualmente inconsistente, pues la diferenciación es casi siempre costosa".

La competitividad de una empresa depende de la productividad, la rentabilidad, la posición competitiva, la participación en el mercado interno y externo, las relaciones interempresariales, el sector y la infraestructura regional, varios estudiosos del tema han intentado generar modelos o metodologías con el fin de determinar la competitividad empresarial (Saavedra G, 2008). El concepto de la ventaja competitiva de la empresa es una característica esencial que le permite a la empresa generar una posición para poder competir. La capacidad de las empresas para competir internacionalmente depende de las circunstancias locales y las estrategias de la empresa. Sin embargo, depende de las empresas el aprovechar o no esta oportunidad creando un entorno donde alcancen una ventaja competitiva internacional. (Valdez, Lara, & Contreras, 2012).

En el año 2011 Ciudad Juárez se ha consolidado como polo de crecimiento en el país, resultado de su dinámica industrial, los crecientes flujos de inversión extranjera captada y de su posición geográfica estratégica, diversos estudios internacionales ubican a esta ciudad entre las más destacadas en todo el país, tanto por su proximidad con la frontera con Estados Unidos como por su capacidad instalada para proveer servicios de subcontratación. En este encuentro se informó Cd. Juárez exporta anualmente 43 mil millones de dólares de productos manufactureros, es decir 18 por ciento nacional; cuatro de cada diez empleos de sector se generan aquí, y representa a la octava ciudad del país que más inversión extranjera ha captado, al sumar ocho mil 200 millones de dólares al mes de junio del 2011 (empresario.mx, 2011). Para adecuarse al nuevo escenario de la seguridad privada el punto de partida es estratégico. Se requiere una decisión política clara, que se relaciona con:

- La elección de los mercados en los cuales competirá.
- El posicionamiento que se buscará en cada uno de ellos.
- Los productos y servicios que se ofrecerán.
- La clase de ventajas competitivas que se buscará desarrollar.

El primer concepto, claridad estratégica, es imprescindible. Para hacer negocios toda empresa de seguridad debería tener objetivos claros y comprendidos por todos los colaboradores. El segundo concepto clave es segmentación. En el mercado de la seguridad existen múltiples segmentos y nichos de clientes, cada uno de los cuales con sus propias expectativas, necesidades y criterios de compra. No todos los grupos con necesidades insatisfechas representan segmentos interesantes para la empresa. La explotación rentable de cualquier segmento de negocios requiere una estrategia clara, una mínima base de recursos, una organización

adecuada de la empresa y una cultura compatible con ese segmento (Frigo, 2010). La reforma fiscal, impulsada por el Gobierno Federal y vigente desde el 01 de enero, poco ayuda al fortalecimiento de la competitividad en México, es una modificación que impulsa la deuda y su efectividad se verá sólo si se cuidan los detalles en su implementación, expresa Juan Pardinás, director del Instituto Mexicano para la Competitividad A. C. (IMCO). Además, la lupa debe estar en donde se gaste el dinero recaudado y en que la reforma se ajuste al discurso que ha dado el presidente, Enrique Peña Nieto, en el tema de la productividad; cabe recordar que el Producto Interno Bruto (PIB) creció 1.2 por ciento los primeros nueve meses del 2013, respecto al mismo periodo de 2012, informó el Instituto Nacional de Estadística y Geografía (INEGI). (Pedroza, 2014).

La reforma fiscal podría generar una considerable pérdida de competitividad en las empresas mexicanas a cambio de un aumento muy leve en la recaudación. El proyecto propone un aumento de 1.4% del PIB en recaudación para 2014, sin embargo, la recaudación adicional generada por la reforma podría ser menor. El problema fundamental, dicen, será que las nuevas disposiciones restarán competitividad a México como destino de inversión, pues en el caso de la reducción en la deducibilidad de prestaciones salariales y el aumento en ISR, el país lucirá como un destino menos rentable para invertir (Mendoza, 2014).

METODOLOGÍA

El presente trabajo de investigación, se enfoca en el impacto que tiene la Reforma Fiscal 2014 respecto a la productividad y a la competitividad en las empresas de servicios enfocadas a la seguridad privada. Para ello se efectuó un estudio correlacional, transversal y descriptivo, de esta forma se pretende identificar los aspectos tanto positivos como negativos de la Reforma Fiscal 2014, y así conocer si el impacto a estas empresas específicas es favorable o desfavorable. Esta investigación cuenta con tres variables, una independiente y dos dependientes.

La variable independiente es: la reforma fiscal, ya que esta variable no depende de ningún factor para su aplicación; una de las variables dependientes es: la productividad, ya que esta para poder obtenerse, depende de los cambios que lleve a cabo la empresa de servicio de seguridad privada, en cuanto a las reformas fiscales, sin dejar a un lado los requerimientos y necesidades de los clientes; la segunda variable dependiente es la competitividad, esta depende de los cambios que se realicen en el país, en este caso, uno de los principales cambios ha sido la Reforma Fiscal 2014, que se aplica a todas las empresas existentes en la República Mexicana, ya sean de capital mexicano o de capital extranjero.

La población de esta investigación, son las empresas de servicios enfocadas a la seguridad privada, en Ciudad Juárez, Chihuahua, México. Esta investigación, se basa en la muestra no probabilística, puesto que se llevo a cabo en base a las características del estudio. Va dirigida a la dirección general, al departamento de contabilidad y administración, de estas empresas. El encuadre de esta investigación, es la reforma fiscal ya que esta es estática y, de acuerdo a la aplicación de sus cambios, podemos visualizar las variaciones de la productividad y de la competitividad. Para la elaboración del instrumento de diagnóstico, se tomaron en cuenta los departamentos de las empresas dedicadas al servicio de seguridad privada, en los cuales la Reforma Fiscal 2014 tiene una relación directa, los departamentos involucrados son los siguientes: Departamento de Impuestos, Departamento de Nóminas y el Departamento de Finanzas. Se destacaron los puntos más importantes de cada uno de los departamentos antes mencionados, evitando realizar preguntas que fueran de carácter confidencial.

La segunda sección del instrumento de diagnóstico, se enfocó en la productividad de las empresas de servicio de seguridad privada. Para realizar esta sección, se dividió la sección en los tres tipos de sectores a los cuales estas empresas prestan y son requeridos sus servicios. Estos sectores son: el Sector Industrial, el Sector Privado y el Sector Gubernamental. La tercera sección del instrumento de diagnóstico, se centro en la competitividad de las empresas que ofrecen los servicios de seguridad privada en Ciudad Juárez, Chihuahua,

México. El instrumento se aplicó a 17 empresas de servicio de seguridad privada durante el mes de julio 2014. La encuesta se conformó por un total de 71 ítems divididos en las tres variables anteriormente mencionadas. Para saber si el instrumento era confiable, se realizó un piloteo en el cual se mostraba una confiabilidad adecuada, este resultado se obtuvo analizando los resultados obtenidos de las encuestas, en el sistema de estadística SPSS, una vez obtenida la confiabilidad del instrumento, se procedió a la aplicación formal de la encuesta capturando los datos obtenidos en una base de datos en Microsoft Excel para posteriormente analizarlos en el software SPSS el cual utiliza herramientas descriptivas como Alfa de Cronbach, regresiones, correlación de Pearson, ANOVA y estimación de las curvas.

RESULTADOS

Los resultados arrojados en la aplicación del instrumento de diagnóstico aplicado a 17 empresas que ofrecen el servicio de seguridad privada en Ciudad Juárez, Chihuahua. Para el análisis de los datos obtenidos de las encuestas, se utilizó el sistema de estadística SPSS, el cual nos indica si el instrumento de diagnóstico aplicado a las empresas, es confiable y muestra la relación que existe entre las variables independiente y dependientes, las cuales en este estudio fueron la Reforma Fiscal 2014, la Productividad y la Competitividad; señala de igual manera la curva lineal que existe entre las variables antes mencionadas. Con los datos obtenidos mediante el sistema de estadística SPSS, en la aplicación del instrumento formal, se obtuvo una fiabilidad de 0.939, como lo observamos en la tabla 2 estadísticos de fiabilidad.

Tabla 2: Estadísticos de Fiabilidad

Alfa de Cronbach	Alfa de Cronbach Basada En los Elementos Tipificados	N de Elementos
.939	.938	70

La tabla 2, nos menciona que el coeficiente Alfa de Cronbach, es un modelo de consistencia interna, basado en el promedio de las correlaciones entre los ítems. Fuente: elaboración propia en base a resultados del SPSS.

La tabla 3 estadísticos descriptivos, nos muestra la media que existe entre las variables estudiadas teniendo como resultado para la reforma fiscal 2.8112, para la productividad 2.6576 y para la competitividad 3.1765.

Tabla 3: Estadísticos descriptivos

	Media	Desviación Típica	N
reforma fiscal	2.8112	.64998	17
productividad	2.6576	.50696	17
competitividad	3.1765	.29054	17

La tabla 3, muestra la relación que existe entre las variables analizadas, la variable independiente es la reforma fiscal, y las variables dependientes son la productividad y la competitividad. Fuente: elaboración propia en base a resultados del SPSS.

En la figura 1 curva de productividad, observamos la media de cada una de las empresas encuestadas, y vemos que existe una correlación positiva entre la variable independiente “reforma fiscal” y la primer variable dependiente “productividad” del instrumento de investigación, donde $r=.283$ como lo indica la tabla 4.17 resumen del modelo.

Figura 1: Curva de Productividad

En la figura 1 se muestra la media de cada una de las empresas encuestadas, y apreciamos que existe una correlación positiva entre la variable independiente reforma fiscal y la variable dependiente productividad.

La figura 2 curva de competitividad, apreciamos la media de cada una de empresas encuestadas, existe una correlación positiva entre la variable independiente “reforma fiscal” y la segunda variable dependiente “competitividad” del instrumento de investigación, donde $r=.054$ como lo indica la tabla 4.18 resumen del modelo.

Figura 2: Curva De Competitividad

En la figura 2 se muestra la media de cada una de las empresas encuestadas, y apreciamos que existe una correlación positiva entre la variable independiente reforma fiscal y la variable dependiente competitividad.

CONCLUSIONES

Esta investigación surge de la necesidad de analizar los cambios de la Reforma Fiscal 2014, así como también su afectación en la productividad y la competitividad de las empresas que se dedican a brindar el servicio de seguridad privada en Ciudad Juárez, Chihuahua, por ser este un sector empresarial de poca relevancia, no es

tomado en cuenta al momento de tomar decisiones que se aplican a nivel nacional a los distintos sectores empresariales del país, y por lo mismo no es estudiado en sus afectaciones, ni por ser estas sociedades una fuente de empleo para las familias juarenses. Este sector empresarial, es afectado de manera unilateral, puesto que brindan sus servicios a la industria maquiladora en su gran mayoría, y si estas se ven afectadas, el impacto es negativo reduciendo de manera importante su número de guardias de seguridad en la planta. Por lo anterior el propósito fundamental de esta investigación es analizar los cambios que traen consigo la Reforma Fiscal 2014, y su impacto en la productividad y en la competitividad en las empresas de servicios dedicadas al giro de la seguridad privada en Ciudad Juárez, Chihuahua, México. Esto es debido a que a nivel nacional todas las pequeñas y medianas empresas no fueron afectadas en su productividad, ya sea a pequeña o grande escala y enfocándonos en el sector de seguridad privada, no afecto, ya que en cualquier área dentro de la organización se presentaron cambios importantes en cuestiones fiscales. Referente a la competitividad de este grupo empresarial se puede observar que existen varias empresas activas en la ciudad, por lo cual, se tiene gran competencia entre estas para poder obtener un lugar en el mercado; pese a la competitividad, todas las empresas tienen en su cartera clientes potenciales a los cuales ofrecen un servicio de seguridad privada. Esto ayuda a permanecer en el mercado y aumentar su calidad en el servicio brindado. La hipótesis de esta investigación fue aceptada, al obtener un impacto favorable de los cambios implementados con la reforma fiscal 2014 en las empresas de servicios dedicadas a la seguridad privada en esta Ciudad.

APLICACIÓN DE LAS TECNOLOGÍAS DE LA INFORMACIÓN Y LA COMUNICACIÓN, EN EL TURISMO DE SALUD

Claudia Viviana Álvarez Vega, Universidad Autónoma de Baja California

Alberto Jabalera Oviedo, Universidad Autónoma de Baja California

Edgar Alexis Manzo Vega, Universidad Autónoma de Baja California

RESUMEN

El uso de las tecnologías de la información y la comunicación (TICs) en la vida actual ha traído grandes beneficios a diversas áreas de la ciencia. Una de las áreas en las que ha contribuido el uso de las TICs es la referente a las ciencias de la salud, en donde se han desarrollado complejos sistemas de información, con fines que van desde llevar control de expedientes e historiales médicos de los pacientes, realizar reportes estadísticos sobre epidemias, hasta hacer modelos moleculares en tercera dimensión. Los sistemas de transmisión de audio y video son tecnologías que han sido implementados en diversas áreas científicas y laborales, con fines educativos, informativos, recreativos, de comunicación, entre otros. Gracias a la demanda de turismo de salud que atrae a un estimado de 450 mil turistas anualmente, se busca implementar este tipo de sistema en el área médica, concretamente a consultorios dentales, con fines informativos y bajo términos de manejo de dicha información de manera privada y con base en leyes y tratados de cooperación en intercambio de información clínica, con el fin de crear una evidencia sobre consultas reales por parte de ciudadanos americanos asegurados. El documento comprende el desarrollo de un caso práctico sobre la implementación de un sistema web de transmisión en vivo de procedimientos dentales en hospitales del programa de turismo médico en la ciudad de Mexicali, Baja California.

PALABRAS CLAVE: transmisión En Vivo, Web, Turismo Médico, Tecnologías de la Información y La Comunicación

APPLICATION OF INFORMATION TECHNOLOGY AND COMMUNICATION IN HEALTH TOURISM

ABSTRACT

The use of information technologies and communication technologies (ICTs) in the present life has brought great benefits to different areas of science. One of the areas that has contributed the use of ICT is related to the health sciences, where they have developed complex information systems with purposes ranging from keep track of records and medical records of patients, perform statistical reports of epidemics, to make three-dimensional molecular modeling systems. Streaming audio and video are technologies that have been implemented in various scientific and industrial areas, for educational, informational, recreational, communication, among others. Thanks to the demand for health tourism that attracts an estimated 450,000 tourists annually, seeks to implement this type of system in the medical field, namely dental offices, for information purposes and under terms of handling such information privately and based on laws and treaties of cooperation in exchange of clinical information, in order to create an evidence of actual queries by uninsured Americans. This document includes the development of a case study on the implementation of a web system live broadcast of dental procedures in hospitals of medical tourism program in the city of Mexicali, Baja California.

JEL CODE: M115**KEYWORDS:** Live Broadcast, Web, Medical Tourism, Information Technology and Communication**INTRODUCCIÓN**

En el año de 2010, el gobierno federal, a través de la Secretaría de Turismo, presentó el programa de turismo médico con la finalidad de crear políticas públicas y lograr su impulso en México. Desde entonces, tanto el gobierno del estado de Baja California, como el municipal de la ciudad de Mexicali, han promovido acciones para la realización de este programa, ofreciendo servicios médicos a un importante número de usuarios extranjeros, principalmente provenientes de Estados Unidos y Canadá, a precios competitivos. El gobierno de los Estados Unidos, mediante el Departamento de Justicia de ese país, en alianza con otras dependencias, ha emprendido acciones para combatir el fraude a programas de seguros médicos tanto públicos como privados, por medio de distintas técnicas de investigación y aplicación de la ley (Department of Justice, 2013). Con el fin de detener abusos, sin afectar a los proveedores de servicios legítimos, se requieren de acciones agresivas, innovadoras y sostenidas para proteger a los beneficiarios y a los contribuyentes (Morris, 2009).

Sin embargo, después de hacer una amplia investigación, no hay casos específicos en Estados Unidos sobre el desarrollo y/o la implementación de una tecnología que permita documentar las consultas a través de la captura de video digital, con el fin de crear evidencias sobre consultas médicas en general, y de esta manera garantizar que las consultas fueron realmente llevadas a cabo en tiempo y forma, con pacientes, casos de enfermedades y tratamientos reales e información congruente y precisa, y así prevenir concretamente el problema del fraude a compañías aseguradoras. Atendiendo a esta necesidad y con la finalidad de generar evidencia de los procedimientos o consultas dentales que se realizan, se desarrollará e instalará la infraestructura tecnológica necesaria para lograr la transmisión de estos servicios por medios de comunicación informáticos. Este caso práctico tiene como objetivo desarrollar e implementar un sistema de transmisión en vivo vía web de los servicios médicos relacionados con procedimientos dentales. El sistema prototipo será desarrollado y probado en un hospital, clínica y/o consultorio que forme parte del programa de turismo médico de la ciudad de Mexicali, BC. El tiempo estimado de desarrollo comprende del periodo de mayo de 2013 a diciembre de 2014. El desarrollo de dicho sistema se limitará a los recursos económicos asignados por el cliente.

REVISIÓN LITERARIA

El uso de las tecnologías de la información y la comunicación (llamadas TICs) en la vida actual ha traído grandes beneficios a diversas áreas de la ciencia. Dichas tecnologías han ayudado en gran medida a diferentes tipos de entidades a automatizar procesos específicos, administrar información en tiempo real, crear medios de comunicación efectivos y dinámicos, entre muchas otras ventajas. Las TICs funcionan como herramientas que le brindan a dichas entidades mayor conocimiento, lo que aumenta su competitividad y capacidad para lograr sus objetivos. Sin embargo, las TICs pueden traer aún más beneficios a otras áreas de la ciencia, en las que no han sido implementadas hasta el día de hoy. Una de las áreas en las que ha contribuido el uso de las TICs es la referente a las ciencias de la salud, en donde se han desarrollado complejos sistemas de información, con fines que van desde llevar control de expedientes e historiales médicos de los pacientes, realizar reportes estadísticos sobre epidemias, hasta hacer modelos moleculares en tercera dimensión, entre muchas otras aplicaciones.

La transmisión de multimedia (audio y video) por medios informáticos data de la mitad del siglo 20. Sin embargo, en aquel tiempo existían limitaciones para su desarrollo como los altos costos y el bajo rendimiento del hardware. Fue a partir de finales de 1980 y la década de 1990 que las computadoras personales fueron suficientemente potentes para mostrar diferentes tipos de medios. A pesar de estos avances, las redes de

computadoras eran aún limitadas, y los medios eran enviados comúnmente por canales de no-transmisión, como lo es descargar un archivo desde un servidor remoto y guardarlo en la unidad de disco duro para después ser mostrado en la computadora (Bucknall, 2012).

Fue en la década de 2000 que las redes contaban ya con mayor ancho de banda, además aumentó el acceso a estas redes, como en el caso del Internet, se crearon protocolos de comunicación estandarizados, y se logró una mayor comercialización del Internet. La primera transmisión en vivo de un evento a través del Internet, en este caso un evento musical, se llevó a cabo el 24 de junio de 1993 en las instalaciones de la compañía Xerox PARC, dicho evento se pudo ver en diferentes países alrededor del mundo. A partir de este evento, se han transmitido partidos de beisbol, conciertos entre otra clase de eventos (Strauss, 1994).

Posteriormente, la transmisión de multimedia se aplicó en el área médica. Según un artículo de la Biblioteca Nacional de Medicina del Instituto Nacional de Salud de los Estados Unidos, el uso de medios informáticos con fines educativos en el área médica ha traído resultados efectivos. En el año de 2002 en la Universidad de Medicina de Wayne State se aplicó un sistema de educación por medio de transmisión de video para lecturas científicas básicas. El objetivo de este sistema era proveer recursos de enseñanza que pudieran ser vistos más de una ocasión por parte de los estudiantes, y como característica el sistema tenía la capacidad de transmitir este contenido ya sea en vivo o pregrabado (Bridge, Jackson & Robinson, 2009). Por otro lado, el programa del turismo médico fue promovido por el gobierno federal por parte de la Secretaría de Turismo (2010).

De acuerdo a la información divulgada en el portal de dicha dependencia, el entonces secretario de turismo, Rodolfo Elizondo Torres, presentó los elementos de una política para impulsar el turismo médico en México. Según datos oficiales, se estima que, por medio del nicho de mercado generado por el turismo médico, se generen para el año 2015 ingresos por mil 350 millones de dólares, atendiendo hasta 450 mil turistas y alrededor de 4,050 millones para el año 2020, atendiendo hasta 650 mil turistas. Para atender la demanda de dichos servicios, se han hecho grandes inversiones en infraestructura médica y de turismo en los últimos años en la ciudad de Mexicali, Baja California. Los usuarios pueden adquirirlos por medio de agencias en internet, quienes programan citas y se encargan del transporte y hospedaje. Ver figura 1.

Figura 1: Ganancias de 2006 A 2012 Por Concepto de Turismo Médico

En esta figura se muestra la proyección del programa Turismo Médico en 2010, se cuentan con cifras de resultados reales sobre el turismo médico en el país, las cuales son alentadoras. Fuente. Pro México & Euromonitor data, 2013.

De acuerdo a datos de Patients Beyond Borders, más de un millón de pacientes viajan a México cada año para recibir servicios médicos, posicionando a este país en el segundo lugar en turismo médico a nivel mundial, sólo por debajo de Tailandia, con 1 millón 200 mil pacientes en el año de 2012. La mayor parte de los pacientes vienen de estados de la Unión Americana como Texas, Arizona y California y el resto principalmente de Canadá y el Reino Unido. Además, de acuerdo a información de Euromonitor, se estima que el turismo médico en México generó 3 mil 880 MDD en el año de 2012, lo que representa un incremento de 5.8% comparado con el año pasado. Las fortalezas de la industria del turismo médico en México son: Costos competitivos, ofreciendo ahorros de entre el 36 y el 89% en costos médicos comparados con Estados Unidos. Ubicación geográfica, privilegiada gracias a su cercanía con Estados Unidos y Canadá, los cuales

son los principales consumidores de servicios médicos. Capital humano, que de acuerdo a datos del INEGI, el sector privado de servicios médicos cuenta con 71,717 empleados como equipo médico y otros 85,760 empleados como asistentes, paramédicos y administrativos, lo que le da la capacidad de atender tanto al mercado local como al extranjero. Infraestructura, la cual cuenta hasta el año de 2011 con hasta 13,500 consultorios médicos (62% para el área de especialidades), y 34,807 camas. Además 4,882 quirófanos, 1,344 unidades de terapia intensiva, 883 laboratorios de análisis, 225 laboratorios patológicos, 301 unidades de diálisis y 276 unidades de tomografía axial computarizada (Pro México, 2013).

Concretamente en el caso del estado de Baja California, el entonces Secretario de Turismo en 2013, Juan Tintos Funcke, dio a conocer que, de acuerdo a un estudio realizado por el Gobierno del Estado, la modalidad de Turismo Médico y de Salud atrae a Baja California un estimado de 450 mil turistas anualmente, generando una derrama económica de 86 millones de dólares, lo cual ha provocado una especial atención de parte de medios de comunicación internacionales como fue el caso reciente del diario “The New York Times”, y la cadena “CNN en español”. Además, de acuerdo a un estudio hecho por la Secretaría de Turismo de Baja California denominado “Perfil de turismo médico y de salud y su impacto en la economía de Baja California”, la derrama económica que genera el turismo médico en el estado creció 21% de 2010 a 2013, debido a factores como la mejora en la percepción de seguridad, precios y calidad de los servicios que se ofrecen. Los recursos directos de este sector en 2010 fueron por 67 millones 181 mil dólares; en el 2012, 78 millones 802 mil, y para el año 2013 se estimó que cerraría en 81 millones 334 mil (Secretaría de Turismo, 2010).

METODOLOGÍA

Para desarrollar este caso práctico, se ha decidido utilizar un modelo de desarrollo de software que sea robusto e incremental, debido a la complejidad que el sistema pueda adquirir en versiones posteriores, y a ampliación del alcance del mismo conforme se vaya adaptando a las necesidades del cliente. El modelo de desarrollo más indicado es el Rational Unified Process de IBM, el cual trata de un modelo iterativo e incremental, que puede adaptarse a las necesidades de la organización. RUP es un proceso de desarrollo de software, el cual consiste en una forma disciplinada de asignar tareas y responsabilidades en una empresa de desarrollo. El objetivo del RUP, ver figura 2, es asegurar la producción de software de calidad que cumpla con las necesidades de los usuarios finales, dentro de plazos y presupuestos predecibles (Rational Software, 1998). Dirigido por casos de uso, centrado en la arquitectura, iterativo e incremental. Está formado por 4 fases: Inicio, elaboración, construcción y transición. A su vez en cada fase se trabaja con diferentes disciplinas, las cuales pueden ser trabajadas una a una, o varias al mismo tiempo, dependiendo de la complejidad del proyecto y el equipo de trabajo.

Figura 2: Las Fases de Trabajo del RUP y Su Ejecución

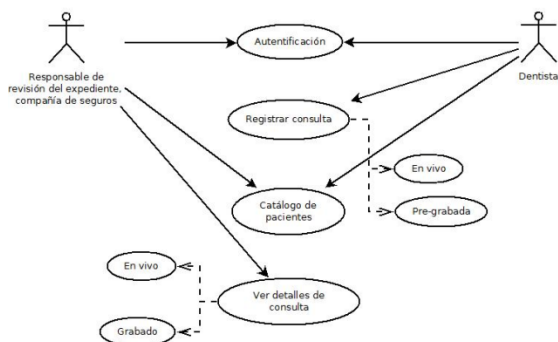

En esta figura se muestran las fases de la metodología de desarrollo de software RUP, la cual dice que el ciclo de desarrollo de software es un método iterativo, es decir, al término de cada fase se cumplen los objetivos previstos de lo contrario no pasa a la siguiente. Fuente. RUP 2001

Durante el proceso se utilizaron las disciplinas que forman parte del flujo de trabajo primario (Core Process Workflow): Modelado de negocio, Análisis de requerimientos, Análisis y diseño, Implementación, Pruebas.

Debido a que se trata de un sistema prototipo, sólo se generó una parte de los artefactos que forman parte del RUP, con el fin de generar documentación y permitir que el proyecto pueda ser retomado y darle mantenimiento por parte de un equipo de desarrollo mayor: Diagrama de casos de uso, Diagrama de clases, Diagrama de componentes. En la figura 3 se muestra una visión general de las funcionalidades que conforman el sistema.

Figura 3: Diagrama de Casos de Uso del Sistema

Esta figura muestra el flujo que lleva el proceso de la consulta, donde el dentista registra la consulta, en vivo o revisa la consulta ya grabada, tiene acceso al catálogo de pacientes; la compañía aseguradora por su parte, puede ver el catálogo de pacientes y a su vez los detalles de la consulta respetando la privacidad de cada paciente. Fuente propia.

Por otra parte, se utilizarán las siguientes tecnologías para desarrollar el sistema de transmisión web: Adobe Media Server. Permite realizar transmisiones de video en vivo y sobre demanda e incorporarlas a aplicaciones web. Los contenidos transmitidos por medio de Adobe Media Server puede ser visualizados tanto en sistemas que cuenten con soporte para Adobe Flash Player como en sistemas iOS, los cuales cuentan con soporte para HTML 5. Amazon Web Services. Se utilizarán los servicios de Amazon Web Services, ya que se trata de una de las empresas más innovadoras y de prestigio de los últimos años. Amazon Web Services cuenta con soporte para hospedar aplicaciones web que cuenten con servicios de transmisión sobre demanda y en vivo, además de contar con otros servicios adicionales como hospedaje de archivos en la nube, seguridad y comercio electrónico, por mencionar algunos. Cámara de video. De acuerdo a las necesidades del sistema, puede ser utilizada cualquier cámara que tenga habilitada la característica de enviar el video capturado a una PC. La cámara a utilizar se conectará a la PC que sea asignada para la transmisión de video, por medio de la aplicación Adobe Flash Media Live Encoder.

Adobe Flash Media Live Encoder. Esta aplicación se encargará de capturar el video desde la cámara y, por medio de parámetros de video específicos, transmitirá el video al servidor de video indicado, para ser mostrado en la aplicación web VSDC. PHP. PHP es hoy por hoy, el lenguaje de programación de aplicaciones web con mayor aceptación en la industria. Este lenguaje permite desarrollar sitios web dinámicos, en los que se pueden integrar conexiones con bases de datos y de esta manera crear sistemas de información hospedados en el internet (PHP, 2014) Durante el desarrollo de este caso práctico se realizaron investigaciones en uno de los consultorios pertenecientes al programa de Turismo Médico en la ciudad, de acuerdo a la Guía de Servicios Médicos en Mexicali (COTUCO, 2012). Se investigó cuáles son los seguros médicos que se aceptan en dicho consultorio, así como cuál es el procedimiento de reclamación para un seguro por parte de un dentista.

RESULTADOS

Es importante mencionar, que el producto aún se encuentra en construcción. A continuación se muestran algunos puntos que ya están definidos. El nombre del sistema será Electronic Video Data Streaming and Storage System for Dental Care Services Across Borders. Debido a lo largo del nombre, se hará referencia a

él en su fase de prototipo como VSDC, tomando del nombre las iniciales de las palabras Video Streaming Dental Care. En la figura 4.1 se muestra el logo que se diseñó para utilizarse en el sistema.

Figura 3: Logotipo Para el Sistema VSDC

Fuente. Propia, diseñado por Alexis Manzo

El funcionamiento del sistema es el siguiente: Tanto el Dentista como el Responsable de la revisión de los expedientes deben contar con las credenciales necesarias para tener acceso al sistema. Al momento de entrar al mismo, deben autenticarse en la pantalla de Log in.

Figura 4: Pantalla de Log in

Por otro lado, el Dentista registra la consulta por medio de la cámara, y el uso del Adobe Flash Media Live Encoder, mostrado en la figura 8, el cual le permite producir la transmisión en vivo de la consulta, así como crear un archivo de video como respaldo en el equipo de cómputo del Dentista.

Figura 8: La Aplicación Adobe Flash Media Live Encoder Permite la Producción de la Transmisión de La Consulta al Sistema Web VSDC

Fuente. Propia, diseñado por Alexis Manzo

CONCLUSIONES

Se presume que el sector económico del turismo médico tiene grandes oportunidades para que en él se implemente un mayor número de tecnologías de la información de manera estratégica para hacerlo crecer. Este sistema puede ser considerado para ampliar su uso como un sistema de expedientes dentales electrónicos, y su información pueda ser exportada a otros sistemas de expedientes electrónicos para pacientes de EE.UU. Por último, por medio de este proyecto se promueve el uso de servicios dentales y de desarrollo de software hechos en México.

EL CAMBIO INSTITUCIONAL DESDE LA PERSPECTIVA DE LOS ESTUDIANTES EN LOS PROGRAMAS ACADÉMICOS DE CONTADURÍA PÚBLICA Y ADMINISTRACIÓN DE EMPRESAS DE UNA UNIVERSIDAD PÚBLICA COLOMBIANA

Maritza Rengifo Millán, Universidad del Valle

Los problemas asociados a la calidad, la autoevaluación y los procesos de implementación del plan de mejoramiento, asimismo el cambio institucional, se han convertido en una preocupación constante para las universidades, el Estado y las agencias encargadas del impulso de estos procesos en los diferentes países de Latinoamérica, en Colombia y el mundo. Conocer las experiencias de algunos estudios de caso y sus resultados, aporta a la comprensión de los procesos de calidad y evaluación con fines de acreditación, que deben desarrollar los planes de estudio o programas académicos que pertenecen a las Instituciones de Educación Superior (IES). Comprender principalmente, la autoevaluación o evaluación interna, permite estructurar las bases que se requieren para el desarrollo de una observación permanente de los programas académicos y de la propia institución, con el propósito de identificar hasta qué grado se ha cumplido con los objetivos, la misión y el proyecto institucional. De esta forma, se posibilita establecer los criterios necesarios para que la comunidad estudiantil pueda emitir juicios de opinión acerca de los avances y logros que se han generado en estos procesos.

INSTITUTIONAL CHANGE FROM THE PERSPECTIVE OF PUBLIC ACCOUNTING AND BUSINESS ADMINISTRATION STUDENTS AT A COLOMBIAN PUBLIC UNIVERSITY

ABSTRACT

The issues associated with the quality, self-evaluation, and implementation of educational institutional improvement processes have become key elements for universities, states, and agencies responsible for bringing about positive transformations in Colombia, Latin America, and the rest of the world. Thus, being familiar with some related-case studies and their findings may contribute to a better understanding of educational quality and evaluation processes aimed at accrediting Institutions of Higher Education (IHE) and their corresponding academic programs. Likewise, an understanding of self-evaluation or internal evaluation is instrumental in structuring the foundations necessary for permanent follow-up of both institutions and academic programs, as a way to find out whether and to what extent institutional objectives, mission, and goals have been met. In other words, this may lead to setting up the necessary criteria for student judgment of current achievements resulting from educational institutional processes.

COMERCIO INFORMAL, ESTRATEGIAS FISCALES TENDIENTES A SU DISMINUCION

Adriana Guadalupe Chávez Macías, Universidad Autónoma de Coahuila-México

Maricela Carolina Peña Cárdenas, Universidad Autónoma de Coahuila-México

Natalia Abigail Velazco Sandoval, Universidad Autónoma de Coahuila-México

RESUMEN

A través de los años, en México se han implementado estrategias tendientes a la disminución de la informalidad en las microempresas, iniciamos este año con la creación de un nuevo régimen de tributación dirigido a éstas, y recientemente con la publicación de un decreto que contiene atractivos beneficios que van desde el financiamiento hasta seguridad social. El objetivo de este estudio corresponde a la fundamentación teórica de un proyecto de investigación, cuyo propósito es identificar los factores que impiden la disminución del comercio informal en las microempresas. La metodología utilizada es de carácter documental efectuada mediante una revisión literaria analizando las disposiciones fiscales vigentes, contenidos de artículos de revistas científicas, investigaciones, libros de texto, así como de las demás información relacionadas, que permita identificar los factores que impiden a las microempresas dejar la informalidad. Los resultados en la presente investigación, muestran que son múltiples los factores involucrados que evitan que las microempresas consideren dejar la informalidad para entrar a una dinámica de contribución al gasto público.

PALABRAS CLAVE: Comercio Informal, Estrategias Fiscales

INFORMAL TRADE, STRATEGIES AIMED AT TAX REDUCTION

ABSTRACT

Over the years, Mexico has been implemented strategies aimed at reducing informality in micro, started this year with the creation of a new tax regime aimed at them, and recently with the publication of a decree containing attractive benefits ranging from funding to social security. The aim of this study is the theoretical foundation of a research project whose purpose is to identify the factors impeding the reduction of informal trade in micro. The methodology used is documentary made by a literature review examining the tax rules, contained in journal articles, research, textbooks, as well as other related information, to identify the factors that prevent micro leave informality. The results of this research indicate that multiple factors involved that prevent micro informality consider leaving to enter a dynamic contribution to public spending.

KEY WORDS: Informal Trade, Tax Strategies

INTRODUCCION

En México, han sido diversas las estrategias tendientes a la disminución del comercio informal, en los últimos años particularmente la simplificación del Régimen de Pequeños Contribuyentes que hasta diciembre del 2013 permitía el pago del Impuesto Sobre la Renta, Impuesto al Valor Agregado e Impuesto Empresarial a Tasa Única en una sola cuota fija bimestral, así como de la exención de otras obligaciones administrativas. Sin embargo derivado de estudios que las autoridades fiscales realizaron, se obtiene como resultado que bajo ese régimen la evasión fiscal representaba hasta un 98% y no se reducían las tasas de informalidad en las microempresas.

Por tal motivo a partir de enero de 2014, se crea el Régimen de Incorporación Fiscal en sustitución del Régimen de Pequeños Contribuyentes, con la intención de captar a esos comercios que trabajan de manera informal y reducir los índices de evasión fiscal. La presente investigación se centra en la identificación de los factores que impiden la disminución del comercio informal en las microempresas.

REVISION LITERARIA

Comercio Informal

La economía informal es un fenómeno complejo y persistente que atañe no sólo a México sino a numerosos países del mundo. Este fenómeno se asocia con el crecimiento demográfico y la imposibilidad de la economía para generar los empleos que satisfagan plenamente las necesidades básicas de grandes grupos de población. (Rius, Atlán Pérez, & Compeán Flores, 2009). En el 2012, 70 de cada 100 microempresas no contaban con registro ante alguna autoridad, (INEGI, 2013). Alejandro Portes define al sector informal como todas las actividades con ingresos-ganancias no reguladas por el Estado, en contextos donde actividades similares sí lo están. (Miranda Camarena & Rizo Orozco, 2010) Rius, Atlán Pérez & Compeán Flores citan a Shetino, 2007, que el desarrollo de la actividad económica requiere de reglas claras y seguridad del pleno acatamiento de sus normas. Un país con un sistema de derecho que carezca de estos elementos genera costos de transacción más elevados tanto para los individuos como para las empresas que lleven o deseen llevar a cabo una actividad económica.

El exceso de trámites y normas obstaculiza la iniciativa individual y burocratiza la actividad productiva, además aumenta la corrupción. Genera oficiales corruptos y menores ingresos para el Estado; propicia el crecimiento de la economía informal y de mercados negros; aumenta el riesgo de realizar negocios y elevan los costos de transacción. Lo anterior no sólo representa una pérdida de bienestar sino que limita el crecimiento y la competitividad del país y la calidad de vida de sus habitantes. Entre más grande sea el sector informal menos responde la economía a políticas económicas y fiscales; contribuye a la reducción de la base impositiva, y desincentiva el cumplimiento fiscal; generar una percepción de injusticia por parte de los pagadores de impuestos y un tipo de competencia desleal, al presentar costos operativos más bajos (los impuestos no pagados y en algunos otros casos, hasta insumos robados como mercancías y electricidad (Rius, Atlán Pérez, & Compeán Flores, 2009)

Evasión Fiscal: Contribuyentes pertenecientes al Régimen de Pequeños Contribuyentes tienen niveles de evasión superiores a los estimados a nivel nacional en otro tipo de contribuyentes, lo cual es otro factor importante para que decidan dejar fuera del pago de impuestos gran parte de sus operaciones realizadas. Según el estudio de Evasión Fiscal en el Régimen de Pequeños Contribuyentes, (ITESM, 2011) menciona que la evasión fiscal como proporción del impuesto potencial para el periodo 2000 - 2010 se encuentra por encima del 90% a partir del año 2002, teniendo un máximo en el 2005 de 98.75%. Para el periodo analizado las cifras son: 89.71% en 2000; 82.09% en 2001; 93.12% en 2002; 92.5% en 2003; 98.6% en 2004; 98.75% en 2005; 97.59% en 2006; 97.16% para 2007; 96.46% en 2008; 96.92% en 2009 y 96.23% en 2010.

Estrategias fiscales: La disminución de la economía informal fue uno de los puntos señalados en la exposición de motivos de la reforma fiscal para el ejercicio 2014, la cual contiene entre otras disposiciones la creación de un nuevo Régimen de tributación enfocado a las microempresas y que a continuación se resume:

Régimen de Incorporación Fiscal: A partir del 1 de enero de 2014 entra en vigor la nueva Ley del Impuesto Sobre la Renta, la cual contiene en su Título IV Capítulo I Sección II el Régimen de Incorporación Fiscal, con el cual se pretende que los contribuyentes que hasta diciembre de 2013 tributaban en el Régimen de Pequeños Contribuyentes, continúen tributando de manera similar, y para aquellas microempresas que no se encuentren inscritos, lo hagan y poco a poco aprender a pagar sus impuestos y a su vez, accedan a todos los

beneficios que ofrece, en el cual solo podrán permanecer hasta por 10 años, y al término de este plazo, iniciarán el cumplimiento de sus obligaciones en el Régimen de Actividad Empresarial y Profesional, como el resto de los contribuyentes, incluye entre otras las reglas:

a) Podrán tributar contribuyentes personas físicas con actividades empresariales, siempre que sus ingresos propios obtenidos en el ejercicio inmediato anterior, no hubieran excedido de \$ 2,000,000. b) Se calcularán y enterarán el impuesto en forma bimestral, el cual será un pago definitivo, a más tardar el día 17 de los meses de marzo, mayo, julio, septiembre, noviembre y enero del año siguiente, mediante declaración que presentarán a través de los sistemas que disponga el Servicio de Administración Tributaria en su página de Internet. c) Determinarán una utilidad fiscal restando de la totalidad de sus ingresos las erogaciones realizadas en el mismo periodo, así como la participación de los trabajadores en las utilidades de las empresas. Para determinar el impuesto, los contribuyentes de esta Sección considerarán los ingresos cuando se cobren efectivamente y deducirán las erogaciones efectivamente realizadas en el ejercicio para la adquisición de activos fijos, gastos o cargos diferidos. A la utilidad fiscal que se obtenga conforme al quinto párrafo de este artículo, se le aplicará la tarifa bimestral del artículo 111 de la Ley del Impuesto Sobre la Renta. El impuesto que se determine se podrá disminuir conforme a los porcentajes y de acuerdo al número de años que tengan tributando en el régimen previsto en esta Sección, conforme a la Tabla 1:

Tabla 1: Reducción del Impuesto Sobre la Renta a Pagar En el Régimen de Incorporación

TABLA										
Reducción del Impuesto Sobre la Renta a Pagar En el Régimen de Incorporación										
Años	1	2	3	4	5	6	7	8	9	10
Por la presentación de Información de ingresos, Erogaciones y proveedores:	100%	90%	80%	70%	60%	50%	40%	30%	20%	10%

Tabla 1. Porcentaje de disminución del Impuesto Sobre la Renta. Art. 111 (Ley del Impuesto Sobre la Renta, 2014)

Contra el impuesto reducido, no podrá deducirse crédito o rebaja alguno por concepto de exenciones o subsidios. También contempla las obligaciones:

Inscribirse en el Registro Federal de Contribuyentes.

Conservar comprobantes que reúnan requisitos fiscales.

Registrar en los medios electrónicos señalados por la autoridad fiscal, los ingresos, egresos, inversiones y deducciones del ejercicio.

Entregar a los clientes factura electrónica.

Efectuar pagos superiores a \$2,000.00 con cheque, tarjeta de crédito, débito o de servicios.

Presentar declaraciones bimestrales definitivas, a más tardar el día 17 del mes inmediato posterior.

Efectuar retenciones de impuestos a sus trabajadores, así como su entero conjuntamente con su declaración bimestral. Presentar conjuntamente con su declaración bimestral ante el Servicio de Administración Tributaria, los ingresos obtenidos y erogaciones realizadas, inversiones e información de las operaciones realizadas con sus proveedores.

Cabe mencionar que si compramos con el régimen anterior, algunas reglas subsisten pero las facilidades que se otorgaban en materia de expedición de comprobantes fiscales, comprobación de compras y gastos y

registros contables, prácticamente desaparecen, en estos aspectos se presenta el mayor impacto del cambio de régimen.

Decreto “Crezcamos Juntos”

Publicado en el Diario Oficial de la Federación el mes de Septiembre de 2014, prácticamente se centra en beneficios a todas aquellas operaciones realizadas con el público en general en materia de Impuesto al Valor Agregado e Impuesto Especial Sobre Producción y Servicios, entrará en vigor a partir del 1 de enero de 2015, se destaca la exención al 100% de dichos impuestos para aquellos microempresarios cuyos ingresos anuales no excedan de \$100,000. Adicionalmente, contempla beneficios en materia de seguridad social con una serie de requisitos, que en algunos casos es difícil reunirlos, así también, la difusión masiva en medios de comunicación lo muestran como la solución para todas aquellas microempresas que actualmente trabajan en la informalidad.

METODOLOGIA

La metodología para esta fase del proyecto de investigación, consistió en la realización de una investigación de tipo documental, mediante revisión literaria analizando las normas jurídicas relativas tanto al Régimen de Incorporación vigente a partir del 1 de enero de 2014 y al Régimen de Pequeños Contribuyentes vigente hasta el 31 de diciembre de 2013, así como también las más recientes disposiciones fiscales al respecto emitidas por las autoridades fiscales, contenido de artículos de revistas científicas, investigaciones y libros de texto que permitan identificar los factores que impiden la disminución del comercio informal en las microempresas.

RESUMEN

La relevancia de analizar e identificar el impacto de las incubadoras en el desarrollo económico y social en los países que buscan la generación de empleos, garantizando una mejor calidad de vida, es todo un reto para las instancias que participan en ello, sobre todo visualizar todas las variables: tendencia de crecimiento de la población, índices de desempleo, programas de apoyo, financiamiento, etc. El espíritu emprendedor, expresado como el proceso de creación de empresas en una economía, que coadyuva en la generación de empleos y fortalecimiento en el desarrollo económico y social, es un aspecto relevante para los gobiernos que han integrado dentro de sus proyectos el fomento a las incubadoras de negocios para apoyar a los emprendedores. Querétaro, no es ajeno a estos fenómenos, por ello, con esta investigación evaluamos las acciones emprendidas en su desarrollo económico y social, presentando información actualizada, objetiva y confiable que permita tener bases para el desarrollo de la actividad emprendedora y el diseño de estrategias en la incubación de negocios, considerando como un factor determinante para la generación de estos proyectos la labor del docente en el nivel universitario como elemento fundamental de enseñanza, apoyo, enlace y motivación para la generación de estos procesos.

PALABRAS CLAVE: Actividad Emprendedora, Incubadora de Negocios, Labor Docente, Desarrollo Económico y Social

TEACHERS 'INVOLVEMENT IN THE DEVELOPMENT OF ENTREPRENEURSHIP AND BUSINESS INCUBATION IN GENERATING EMPLOYMENT AS

ABSTRACT

The importance of analyzing and identifying the impact of incubators in the economic and social development in countries seeking job creation, ensuring a better quality of life is a challenge for the actors involved in it, especially view all variables: trend of population growth, unemployment, support programs, financing, etc. Entrepreneurship, expressed as the process of business creation in an economy, which contributes to job creation and strengthening the economic and social development is an important issue for governments that have integrated into their projects promoting the business incubators to help entrepreneurs. Querétaro, is no stranger to these phenomena, therefore, this research evaluated the actions taken in its social and economic development, featuring date, objective and reliable information, to keep foundation for the development of entrepreneurship and design strategies business incubation, considered as a determining factor for the generation of these projects the work of teachers at the university level as an essential element of education, support, liaison and motivation for generating these processes.

INTRODUCCION

Este trabajo se enfoca en destacar como los docentes en el nivel universitario tienen una gran responsabilidad, jugando un papel relevante en la interrelación del alumno-escuela-gobierno-sociedad y siendo el punto de partida en el desarrollo de incubadoras de negocios en las instituciones de educación superior que finalmente dentro de sus objetivos buscan que en el futuro sus alumnos al terminar su educación universitaria no presenten un grave problema de desempleo y desarrollo. De manera tradicional los alumnos buscan al terminar su licenciatura ubicarse en las empresas del entorno geográfico, sin embargo dadas las condiciones actuales de nuestro país las instituciones deberán generar programas bien estructurados y con objetivos muy claros y hacer conciencia con sus docentes de la responsabilidad de mejorar en estos aspectos y proponer alternativas de academia, investigación y extensión para que los alumnos sean generadores de sus propios ingresos y de nuevos empleos, teniendo sus bases desde el nivel educativo. Finalmente presentamos los resultados actuales en relación a la situación actual en el estado de Querétaro, presentando una propuesta para las instituciones educativas de nivel superior a fin de que los docentes puedan aplicarlas en beneficio de sus educandos para el desarrollo de emprendedores. Contando con actividades generales a desarrollar dentro de las instituciones académicas y como parte del programa académico de los docentes, la idea es ir más allá de solo dar una materia al final del programa académico inclusive en ocasiones como materia optativa, el punto es prepararlos durante todo el proceso de su academia para que realmente desarrollen una cultura emprendedora.

REVISIÓN LITERARIA

En el contexto mundial, el problema de desempleo se ha extendido de manera relevante siendo tarea de todos los gobiernos buscar alternativas que ayuden a generar el empleo que la sociedad demanda, mediante la aplicación de políticas económicas que con lleven a incrementar tanto la inversión pública como privada, y con ello, impulsar el desarrollo económico y social. Dentro del objetivo de la política de empleo, su principal función es mejorar el nivel de vida generando fuentes de trabajo productivos que mejoren la distribución del ingreso, por ello, uno de los compromisos del gobierno es apoyar a los emprendedores que son quienes a final de cuentas proporcionan los puestos de trabajo, ya sea con el desarrollo empresarial o la creación de empresas (www.oie-emp.org., 2003).

Aun cuando académicos y políticos difieren sobre la naturaleza del emprendimiento, concuerdan en dos aspectos: en primer lugar, el reconocimiento de que las iniciativas emprendedoras constituyen un factor instrumental para el desarrollo económico, social e incluso el desarrollo sustentable de los países y regiones (Hall, et al., 2010; Murphy, et al., 2006; Sternberg y Wennekers, 2005), y el segundo, que los individuos ostentan un papel importante en el proceso de creación de empresas. (Carland, et al., 1988; Murphy et al., 1991; Rache y Frese, 2007) considerando que el emprendimiento provee de un extenso conjunto de relevancia sobre cómo incentivar el espíritu empresarial.

Recientemente, en la búsqueda para mejorar la comprensión del fenómeno emprendedor, la investigación se ha centrado en diversos factores que influyen en la decisión del individuo sobre la puesta en marcha de una empresa (Baum et al., 2007; Delmar y Davidsson, 2000; Katz y Shepherd, 2003; Mitchell et al., 2002). En este sentido, las tareas de un país que se diga emprendedor deberán girar en relación al mantenimiento y mejora de su cultura emprendedora. Y en la preparación de los docentes en estos temas: como el conocimiento, las habilidades y las actitudes requeridas en la formación de emprendedores gozan de una creciente atención entre académicos, investigadores y agendas políticas, tanto en economías desarrolladas -particularmente en Estados Unidos y Europa (Bécharde y Toulouse, 1991; Kuratko, 2005; OECD, 2010)- como en economías emergentes (West et al., 2008).

En este contexto, en los países de América Latina una reconfiguración de las políticas de desarrollo empresarial ha permitido un incremento en el fomento de la creación de nuevas empresas y, en general, en la valoración de la actividad emprendedora como generadora de empleos (Kantis, 2004).

Por su parte, la Secretaría de Economía (SE) fomenta acciones que coadyuven la creación y desarrollo económico y social, a través de un mecanismo de atención empresarial que considera cinco segmentos: emprendedores, microempresas, pequeñas y medianas empresas, empresa gacela y empresas tractoras. Este tipo de empresas se apoyan mediante las siguientes cinco estrategias fundamentales; financiamiento, comercialización, capacitación y consultoría, gestión e innovación, y desarrollo tecnológico:

De 2008 a 2010 se han apoyado 131 proyectos con 628.6 millones de pesos, para crear 213 incubadoras, 18,101 empresas y 56,053 nuevos empleos de empresas beneficiadas, en 62.3%; y el de recursos en 42%, en términos reales.

Estas empresas aportan el 15% del Producto Interno Bruto (PIB) del país y están integradas por negocios, es importante mencionar que casi no cuentan con base tecnológica, infraestructura o planeación, tanto en su creación como en su desarrollo.

De 2010 a 2013 a través del fondo se han apoyado 185 proyectos con 408.4 millones de pesos, que han beneficiado a 48,623 empresas y permitiendo la conservación de 117 mil empleos. (www.oie-emp.org.,2013)

Estos datos reflejan el impulso por parte de las instancias gubernamentales hacia una cultura emprendedora, vislumbrando el cambio de paradigma entre generar empleo y autoempleo, buscando evolucionar por medio de incubadoras de negocios, adquirir y crear empresas, es la visión integral que tiene los programas de incubadoras de negocios, los cuales le apuestan a lograr una nueva generación de emprendedores como parte relevante en la contribución al desarrollo económico y social. En la actualidad, dentro de la actividad económica, es importante la consolidación de nuevas empresas apoyadas por diversos programas gubernamentales, educativos y de instituciones financieras, como el de incubación de negocios, siendo uno de los aspectos más importantes, considerando que las nuevas iniciativas empresariales generen fuentes de empleo, intensificando la competencia en los mercados e impulsar la Innovación, es decir, favorecen el desarrollo económico y social en todos los planos, además de crear empresas, las incubadoras se asesora para que sobrevivan en mercado tan competitivo. En México, por ejemplo, el número de incubadoras de empresas ha ido en aumento a lo largo de los años, de acuerdo al Sistema Nacional de Incubación de Empresas, se tienen los siguientes datos, SNIE, (2010):

Figura 1: Crecimiento de Incubadoras En México

Fuente: Elaboración propia con base en datos de la Secretaría de Economía

El estado de Querétaro, tiene una población de 1, 097,028 habitantes en la zona metropolitana, de acuerdo a los resultados del XIII Censo de Población y Vivienda (2010). El nivel de vida en la cd. De Querétaro es considerado de los más altos de México y Latinoamérica, por colocarse el 3er. Lugar de las ciudades con mejor costo-efectividad de Norteamérica de acuerdo a la publicación de la revista brasileña Desarrollo de Ejecutivos y empresas (FDC), sin embargo es importante la generación de empleo para reactivación de la economía nacional, estatal y municipal.

En este contexto nacional el nivel desempleo ha sido cada vez mayor, los apoyos programas para las incubadoras de negocios uno de los objetivos principales es revertir el índice de desempleo generado año con año, y en la ciudad de Querétaro las instancias gubernamentales y privadas hacen esfuerzos para la generación de empleo y autoempleo con bases consolidadas. Sin embargo, el desempleo creciente causa incertidumbre en el ámbito laboral, al incremento de la inseguridad en todo el país, antes de la propia implementación de las políticas de estabilización. Trazando una línea hacia los ejes rectores de desarrollo del gobierno del estado de Querétaro se señala que el empleo y desarrollo sostenible está orientado a fortalecer la economía a través de la competitividad y la inversión productiva, en un marco de protección al medio ambiente, el eje abarca el desarrollo agropecuario, industria, comercio, servicios, turismo y medio ambiente. Hasta el 2010, según datos publicados en el Anuario Económico de la SEDESU, en el estado de Querétaro, se tenían registradas 12 incubadoras de empresas para un tipo de tecnología tradicional e intermedia, y sólo una para alta tecnología. Estas lograron crear e impulsar 250 empresas de las cuales 200 se apoyaron con recursos del Fondo Pyme, de la Secretaría de Economía. La banca de desarrollo ha registrado una actividad moderada en cuanto a los financiamientos y las asesorías de empresas. En el 2007 se otorgaron 6,814 créditos por un monto total de 2,607 millones de pesos. Para el 2008 la cantidad llegó a 3,727 para un total de 10,304 créditos, mientras que en el 2009 los otorgados sumaron 19,314 por una cantidad de 5,796 millones de pesos.

Incubadora de Negocios

De acuerdo al concepto del Sistema Nacional de Incubadoras de Empresas (SNIE), son centros donde proporcionan asesoría, así como apoyo a preparar el plan de negocio y acompañamiento en el proceso de creación de una empresa proporcionándote consultoría en las diversas áreas (mercadotecnia, contabilidad, diseño gráfico e industrial, etc.). Algunas de ellas incluso ofrecen espacios físicos para que se emprenda el negocio como verdadero empresario. Lo que te ofrece una incubadora **no es financiamiento**, sino la oportunidad de entrenar para enfrentar la vida empresarial de manera más sólida y estructurada a través de la capacitación y consultoría especializadas con Modelos de incubación de negocios, de acuerdo al tipo de negocio, que ya están reconocidos por la Secretaria de Economía.

Modelos de Incubación Tradicional reconocidos para Transferencia

Modelos de Incubación de Tecnología reconocidos para Transferencia

Modelos de Incubación de Alta Tecnología reconocidos para Transferencia

Las incubadoras se encargan de evaluar la viabilidad técnica, financiera y de mercado de tu proyecto empresarial, así también proporcionan servicios integrales de asesoría legal y administrativa, así como planes de mercadotecnia y ventas, e incluso espacio físico, equipo, logística y hasta acceso a financiamiento y capital semilla. “Las incubadoras ayudan a las empresas emergentes, proporcionando una variedad de servicios de apoyo como la asistencia en el desarrollo de negocios y planes de marketing, creación de equipos de gestión, la obtención de capital, y el acceso a otros servicios profesionales más especializadas. Además, las incubadoras proporcionan flexibilidad de espacio para compartir, equipos y servicios administrativos.” (Grimaldi & Grandi 2005:111)

Tipos de Incubadora de Negocios

Existen incubadoras privadas, universitarias y gubernamentales, todas ellas avaladas por la Secretaría de Economía. Cada tipo de incubadora tiene diferentes estructuras y cada una tiene enfoques específicos.

Tipos de Incubadoras Por Giro

Incubadoras tradicionales: se enfocan al comercio, servicios y algunas industrias ligeras; por ejemplo, papelerías, confección y maquila de ropa, loncherías, farmacias, etcétera. Prácticamente no necesitan infraestructura tecnológica, su implantación es más sencilla y el tiempo de incubación promedio es de hasta tres meses, no brindan dinero en efectivo sino las herramientas necesarias para arrancar su empresa y posteriormente le pueden ayudar a obtener el capital de riesgo para continuar su desarrollo fuera de la incubadora.

Incubadoras de tecnología intermedia: las empresas incubadas bajo este diseño incorporan elementos de innovación por lo que deben vincularse a centros e institutos de conocimiento, fuentes generadoras de proyectos, grandes empresas o redes estratégicas de innovación. Ejemplos de este tipo de incubadoras son el desarrollo de software para el control de inventarios, servicios basados en tecnologías de la información y diseño, desarrollo de tintes y colorantes especiales, nuevas máquinas y herramientas para la industria, etc. Emplean un tiempo máximo de incubación de 12 meses.

Incubadoras de Alta Tecnología: en este tipo de incubadoras se incluye a los negocios enfocados a los sectores de software especializado, computación, consultoría en Tecnologías de la información. Las incubadoras de alta tecnología requieren de mayor tiempo de incubación, amplia infraestructura física y tecnológica y operación altamente especializada.

Definición de Emprendedor y sus Características

Antes de revisar las definiciones de emprendedor de diversos autores, es necesario establecer la diferencia entre emprendedor y empresario, dos términos que tienen la misma raíz etimológica, pero que semánticamente son diferentes. Para el maestro Furnham (1995) un “empresario es un individuo que establece y maneja los negocios con el propósito principal de obtener ganancias y de crecer. El emprendedor se caracteriza principalmente por mostrar comportamientos innovadores y por el deseo de emplear estrategias de gestión prácticas”. Esto es, un emprendedor es alguien, una persona o varias, que con ímpetu realizan o forman algo nuevo y ello generalmente, tiene un impacto positivo. Estos actos realizados por el emprendedor pueden consolidarse en la creación de una empresa. Por el otro lado, en ocasiones que no cualquier emprendedor logra ser un empresario. A su vez, ayudar a la gente joven a adquirir un espíritu emprendedor fomenta el desarrollo empresarial y propiciar que los individuos busquen ser empleadores y no empleados. (Roy Thomasson, 2003).

METODOLOGIA

Realizamos una investigación documental considerando aspectos a interpretar mediante datos y estadísticas de las diferentes variables, informes oficiales y revisión documental como fuente de información. Se investiga las tendencias del desarrollo económico y social en México en relación a las incubadoras de negocios y la generación de empleo. Las condiciones y escenarios del desempleo en el Estado de Querétaro y la situación que guarda las incubadoras de negocios y los trabajos realizados al respecto en instituciones educativas de educación superior. Analizando los años de 2008 al 2013. Es importante mencionar que existen investigaciones relacionadas con la contribución de los programas de apoyo incubadoras para impulso del emprendedurismo, sin embargo pocas lo relacionan con el impacto que tiene en el desarrollo económico y social a nivel nacional, regional y municipal, y la vinculación con la generación de empleo y con las

instituciones educativas. Por ello, surge la propuesta de analizar la interrelación de las variables de la investigación: las incubadoras de negocios, desarrollo económico y social, emprendedores, empleo, los docentes y las instituciones educativas.

RESULTADOS

La economía de nuestro país y la de Querétaro viven un intenso proceso de cambio y de apertura donde se deberá tener como objetivo primordial mejorar la eficiencia y competitividad, aumentando con ello el ritmo de crecimiento y empleo, a los niveles que demanda la población mundial. Desafío que enfrentan de manera relevante las instituciones de educación superior y demás organismos gubernamentales. Los planes educativos deben modernizarse a fin de mejorar los resultados logrados a la fecha por el sistema educativo de nivel superior en el Estado de Querétaro ya que no han sido positivos en la generación de empleos por sus egresados. Es necesario conocer las causas y proponer estrategias académicas y administrativas que fortalezcan a las instituciones que realizan actividades emprendedoras.

Las instituciones educativas dentro de sus programas académicos realizan en general actividades paralelas como programas emprendedores, ferias de negocios de los alumnos, entre otros, lo que significa un gran esfuerzo en beneficio de sus alumnos. En su proyecto general de planeación y objetivos, no se establece como prioritario un perfil institucional con enfoque de educación empresarial teniendo como objetivos el desarrollo emprendedor de sus alumnos y por ende la generación de nuevos empleos. En algunas instituciones apenas se ha establecido el programa emprendedor pero aún no se tienen con claridad las metas a seguir dejando a un lado los apoyos que de manera importante pudieran conseguir. Por lo que se sugiere hacer una revisión a la planeación educativa de las instituciones integrando desde su misión y visión la cultura del proyecto emprendedor de igual forma tener dentro de sus planes la capacitación docente integrando personal capacitado y con la experiencia suficiente en los temas. Se deberá realizar a una revisión los programas de estudio y así mismo integrar la asesoría relacionadas con estos temas, que además se tenga como parte del currículo el desarrollo de un plan de negocios y la participación en las exposiciones, de eventos ferias, congresos, cursos, talleres.

A continuación se presenta una propuesta para las instituciones educativas de nivel superior para que a través de sus docentes puedan aplicarlas en beneficio de sus educandos para el desarrollo de emprendedores: Actividades específicas a desarrollar dentro de las instituciones académicas y como parte del programa académico de los docentes que deben de ir más allá de solo dar una materia al final del programa académico inclusive en ocasiones como materia optativa, el punto es preparar a los alumnos durante todo el proceso de su academia para que realmente desarrollen una cultura emprendedora apoyándose en los siguientes aspectos:

Preparación del docente a nivel general en aspectos relacionados con: el emprendedurismo, incubación de empresa, situaciones en las cuales se encuentra estos aspectos en su localidad y como transmitir estos conocimientos a sus alumnos. Es importante contar con especialistas en la materia que brinden asesoría a otros maestros.

Docentes con experiencia en negocios: deben contar con una certificación docente en emprendedor o experiencia docente en materias de otras disciplinas, siendo relevante el contar con vasta experiencia adquirida en su propio quehacer.

Paciencia en proceso enseñanza-aprendizaje: el docente debe mostrar paciencia y flexibilidad, ya que está trabajando con un estudiante que pocas veces recibe una preparación como precedente para cursar la materia.

Planes de negocios: asesorar al alumno a fin de realizar un proyecto integrador como parte de su acreditación final de la carrera, que sirva de punto de partida de la creación de su empresa.

Ferias de emprendedor o muestras de negocio: es el trabajo que se realiza para crear y para exhibir los productos. El estudiante percibe con esto los resultados de su idea y que su negocio es exitoso.

Testimonios de éxito: lograr que emprendedores lleven su historia real a los alumnos generando en ellos confianza.

Soporte y redes informáticas: contar con un adecuado y suficiente servicio de internet para los alumnos y docentes en este sitio deben estar a disposición de los alumnos los materiales didácticos (el manual del emprendedor, los formatos, los ejemplos, las rúbricas, etc.), y documentos electrónicos.

Financiamiento emprendedor: conseguir patrocinios de gobierno del estado, proveedores o empresas de bienes y servicios de la localidad o de la misma institución educativa, es una manera de ganar en experiencia, relaciones institucionales y compromiso entre los participantes generando una vinculación entre todos los actores.

Disposición de tiempo: para el acompañamiento en el plan de negocio.

Programa de educación continua: la necesidad de diplomados, cursos, seminarios, foros, conferencias, etc., como parte de un programa de educación continua es muy importante e enriquecedor.

Plan de trabajo: contar con un plan de trabajo para difundir la cultura emprendedora.

Planeación didáctica: el programa del curso emprendedor y su planeación didáctica, adecuado a las necesidades de sus alumnos.

Capacitación y actualización permanente: La participación en eventos de actualización docente para incorporar nuevas prácticas, metodologías, técnicas, operaciones o procesos en la enseñanza-aprendizaje, así como modelos para la generación de la creatividad, la innovación, negocios, etc.

Evaluación permanente: establecer los criterios de evaluación, incluir el lado práctico y teórico del contenido de la asignatura, incorporando la evaluación en equipo y la evaluación individual, para generar el interés por la materia en todos los alumnos.

Lectura de publicaciones: impresas, en línea o electrónicas, es esencial para mantenerse al día en libros, artículos, manuales, guías, etc., que permitan al docente sugerir o recomendar a sus alumnos la lectura de documentos relacionados.

Presentar publicaciones y resultados de sus trabajos: un docente que escribe contribuye a la cultura emprendedora. Y le da imagen y autoridad institucional.

Mantener la imagen institucional: El docente que se identifica con los valores institucionales y el modelo educativo, y por lo mismo, los manifiesta en sus enseñanzas, queda más en la mente del estudiante.

Búsqueda de talentos en la institución: el docente debe estar pendiente de los eventos académicos organizados por sus colegas, docentes de asignaturas diferentes a emprendedor, ya que en dichas actividades los alumnos de la comunidad universitaria presentan proyectos en donde las ideas pueden ser relevantes para convertirlas en negocios. Es esos momentos, cuando el docente puede registrar las ideas y brindar seguimiento motivando a los alumnos para que inicien la elaboración de su plan de negocios.

Módulo de información: área específica destinada como centro de negocios o incubadora de empresas, con disponibilidad de información sobre las actividades de la asignatura emprendedora.

Fomentar la práctica-emprendedor: llámese “club del empresario”, “escuela emprendedora”, “programa emprendedor”, etc., promoviendo acciones desde Diplomados, Foros, Cursos, Ciclos de Conferencias, Mesas de Trabajo, etc., que contemplen la Certificación del Emprendedor de la propia institución educativa,

CONCLUSIONES

El espíritu emprendedor, expresado como el proceso de creación de empresas en una economía, coadyuva en la generación de empleo y fortalecimiento en el desarrollo económico y social de ahí, que los gobiernos han integrado dentro de sus proyectos propuestos el fomento las incubadoras de negocios para apoyar a emprendedores. La relevancia de analizar e identificar el impacto de las incubadoras en el desarrollo económico y social, en contribuir a la generación de empleo en una entidad garantiza una mejor calidad de vida, es todo un reto de para las instancias que participan en ello, sobre todo visualizar todas las variables (tendencia de crecimiento de la población, índices de desempleo, programas de apoyo a incubación de negocios financiamiento, etc.). La ciudad de Querétaro, no es ajena a este fenómeno, por ello, en la presente investigación presentamos información actualizada, objetiva y confiable, que permita diseñar estrategias para incrementar la actividad emprendedora, la incubación de negocios y evaluar las acciones emprendidas en el desarrollo económico y social para la generación de empleo.

El trabajo comprometido de los docentes en las instituciones educativas se convierte en un proceso de alta valía para el desarrollo de los alumnos futuros emprendedores así como del beneficio de los gobiernos y de un país. Deben tener experiencia empresarial y en el proceso enseñanza-aprendizaje a fin de llevar al alumno hacia el trabajo productivo. La asesoría sobre el desarrollo del emprendedor, independientemente de nivel o plan de estudios, debe generar como producto final un plan de negocios susceptible de participar en concursos y competencias, con una visión de futuro para obtener beneficios reales y con posibilidades de acreditar las evaluaciones de las instituciones que otorgan financiamientos. La educación de emprendedor no debe limitarse al solo el hecho de cursar la materia, debiendo preocuparse la institución educativa apoyada por instancias del gobiernos de promover actividades de educación continua realizadas por la incubadora de empresas o centro de negocios. Incluso debieran integrarse estas acciones de manera formal a sus programas académicos.

RESUMEN

En México actualmente se está dando un renovado dinamismo en la política pública de vinculación universidad-empresa en el país y, paralelamente, en la evaluación de su impacto en el aumento de la competitividad del país y respecto a sus beneficios para la sociedad. El presente trabajo tiene como objetivo ofrecer un panorama de las percepciones de vinculación dentro de las Instituciones de Educación Superior (IES) y el sector productivo en México, con una aplicación a la Universidad Autónoma de Baja California Sur, en el noroeste mexicano. La intención es contribuir al desarrollo de un modelo de vinculación para la Universidad que aporte al desarrollo de la región, mediante una más efectiva generación y aplicación del conocimiento científico-tecnológico.

PALABRAS CLAVE: Percepciones de Vinculación, Instituciones de Educación Superior, Sector Productivo, Aplicación y Generación del Conocimiento En México

A UNIVERSITY-INDUSTRY LINKAGE MODEL

ABSTRACT

A renewed dynamism has been sponsored currently in Mexico regarding public policy towards university-industry linkage and, in parallel, about the evaluation of its impact in increasing the competitiveness of the country and its benefits to society. This paper aims to provide an overview of the perceptions by researchers in Higher Education Institutions (HEI) about its cooperation with the productive sectors in Mexico, with an application to the Autonomous University of Baja California Sur, in Mexico's northwest. The intention is to contribute to the development of a linkage model for the University so as to contribute to the region's development through a more effective generation of scientific knowledge and technology transfer.

INTRODUCCIÓN

A partir del 2014, el gobierno federal de México ha resaltado la importancia del involucramiento de las Instituciones de Educación Superior (IES) en las actividades del sector productivo como mecanismo para elevar la competitividad nacional, y mejorar la posición del país en los mercados internacionales. El Consejo Nacional de Ciencia y Tecnología (CONACyT), encargado de ejecutar las políticas mexicanas en materia Ciencia, Tecnología e Innovación (CTI), ha enmarcado sus programas de acción en la Meta III. *México con Educación de Calidad* dentro del Plan Nacional de Desarrollo 2013-2018. El Consejo destaca el papel fundamental de la educación en el desarrollo integral para transitar hacia una sociedad que pueda basar su economía en el conocimiento y la innovación. Esto ha significado la canalización de recursos para crear y fortalecer capital humano nacional, infraestructura, así como la capacidad para generar nuevos conocimientos, productos y servicios con un alto valor agregado. Una meta es alcanzar, al final de la administración federal actual, un presupuesto para CTI de uno por ciento del producto interno bruto mexicano

(PIB) (CONACYT, 2014).

En su Programa Institucional 2014-2018, el CONACyT retoma el Objetivo 3.5 del PND "*Hacer del desarrollo científico, tecnológico y la innovación pilares para el progreso económico y social sostenible*", que desarrolla en su Programa Especial de Ciencia, Tecnología e Innovación 2014-2018 (PECiTI). En éste establece las diferentes acciones de política pública de los temas de ciencia, tecnología e innovación. Así, en materia de vinculación destacan tres objetivos del PECiTI: a) contribuir a que la inversión nacional en investigación científica y desarrollo tecnológico crezca anualmente y alcance un nivel de 1% del PIB, b) impulsar el desarrollo de las vocaciones y capacidades científicas, tecnológicas y de innovación locales para fortalecer el desarrollo regional sustentable e incluyente; c) contribuir a la transferencia y aprovechamiento del conocimiento, vinculando a las instituciones de educación superior y los centros de investigación con los sectores público, social y privado, y; d) contribuir al fortalecimiento de la infraestructura científica y tecnológica del país (Ibidem).

Detrás de lo anterior está el reconocimiento de que en México no se ha logrado estructurar un modelo económico que posibilite la creación de un sistema científico-tecnológico para vincular las investigaciones que se realizan desde la IES y transformar el sector productivo con bienes y servicios de más alto valor agregado (Avilés, 2014). De acuerdo con evaluaciones sobre el tema, la mayoría de las empresas mexicanas no logran niveles adecuados de competitividad principalmente por falta de inversión y de sustentabilidad en las industrias, deficiencia en la transferencia de conocimientos y tecnología, y carencia de innovación (Laclette, 2009). Como herramienta para mejorar la competitividad de las empresas mexicanas, se adelanta una mayor generación, aplicación y transferencia de los conocimientos de las IES hacia el sector productivo, así como el fortalecimiento del sistema nacional de innovación.

En este trabajo se presenta un análisis de las percepciones de los investigadores en la Universidad Autónoma de Baja California Sur (UABCS) respecto a la función de vinculación con la empresa, que permitan contribuir a desentrañar elementos para el establecimiento de un modelo de vinculación con el sector privado, público y social que contribuya al desarrollo de la región. La UABCS es la única IES en Baja California Sur (BCS) que combina las funciones de investigación, docencia, y extensión y difusión de la cultura en el ámbito de las ciencias agropecuarias, del mar y sociales, así como de tecnologías de la información. Con campus en los cinco municipios de la entidad y una matrícula de 5400 alumnos, es la de mayor alcance y de cobertura, en un estado geográficamente alejado y vulnerable pero con un alto potencial acuícola y pesquero en razón de sus amplios litorales (DIIP, 2004).

Lo anterior hace de esa institución un espacio natural para el desarrollo de la vinculación con los sectores privado, público y social, situación que no existe al presente en mucho por la ausencia de mecanismos internos que promueven y consoliden una oferta científica tecnológica sólida. Sin embargo, la institucionalización de las actividades de vinculación con el entorno requiere del conocimiento de los factores que potenciarían esa vinculación pero también de los obstáculos a su desarrollo. Conocer las percepciones contribuiría al diseño de un modelo efectivo para generar y sistematizar la información, los procesos administrativos internos y la relación con los actores externos a la institución que permitan establecer lazos significativos entre estudiantes e investigadores de la comunidad universitaria con los potenciales usuarios de los productos académicos realizados en la UABCS.

REVISIÓN LITERARIA

Los sistemas de innovación surgen a partir de las condiciones productivas e institucionales en que distintos agentes interactúan para crear, acumular, transmitir y consumir conocimiento y los productos derivados de éste; y generar nuevas ideas que permitan resolver los problemas existentes u oportunidades para nuevos negocios, productos y servicios. La idea de impulsar el crecimiento económico y mejorar la situación de la economía (subnacional, nacional, regional), frente a otras con base en el desarrollo científico y tecnológico

aplicado a la producción se ha estructurado en una propuesta conceptual: la Economía Basada en el Conocimiento o Economía del Conocimiento, que surge en el contexto de la segunda posguerra mundial. Sin embargo, la vinculación entre el sector productivo con las instituciones generadoras de conocimiento, o vínculo Universidad-Empresa, enfrenta ha probado ser elusiva. Casalet y Casas (1996) señalan la importancia de reconocer que el concepto de vinculación es muy amplio, identificado alternativamente nociones como colaboración, cooperación o simplemente relaciones con diferentes sectores sociales. Un problema de inicio es la definición misma de vinculación y los pasos que se deben desarrollar para conseguirla. Autores como Corona (1994) y Payán (1997) señalan que, además de la docencia, la investigación y la extensión, la vinculación es otra función sustantiva de las IES, por lo que éstas deben:

Construir “redes de acción” que incluyan un programa fuertemente relacionado con otros agentes, como el gobierno, las entidades productoras, el sistema educativo en su conjunto y sobre todo, los centros de investigación del nivel superior, e incluso, sectores de la sociedad que puedan colaborar en una estructura realmente operativa (Gould, 1997). Esto lleva a que las actividades de vinculación que se realizan desde el ámbito educativo y empresarial se fortalezcan, de tal manera que formen parte de su quehacer y den respuesta a las necesidades presentes y futuras de la sociedad. En ese marco, uno de los principales desafíos de las IES consiste en encontrar los mecanismos de vinculación con el sector privado, público y social, adoptando o creando modelos de vinculación acordes con los objetivos y políticas institucionales, y que les permitan aprovechar mejor los recursos disponibles.

De esta manera se puede lograr el reconocimiento de la vinculación, con el objeto de que las contribuciones de las investigaciones surtan efectos multiplicadores en las propias instituciones y en el entorno social (Diario Milenio, 2013). Este tipo de acciones puede generar beneficios mutuos, ya que las universidades obtendrían recursos de las empresas para desarrollar investigación en ciencia y tecnología y para formar profesionales altamente calificados, y las empresas pueden encontrar un aliado estratégico en las capacidades científicas y tecnológicas e infraestructura de las universidades necesarias para aumentar su competitividad, tarea hasta la actualidad pendiente por resolver.

Un elemento importante en la consecución de una mejor vinculación es el financiero. El presupuesto que se ha destinado al gasto en materia de ciencia, tecnología e innovación alcanza los 881 mil 660 millones de pesos, es decir, 28.6 por ciento más en términos reales que en 2012. Pero aun así es insuficiente, si se consideran las brechas con otros países similares a México. El CONACyT tiene el compromiso de impulsar la inversión y la aplicación de estos recursos en investigación que, desde las IES se realiza determinando las áreas de la ciencia en las que se debe trabajar y en las que se debe desarrollar la investigación. Sin embargo, como en el caso de programas recientes tales como Cátedras para Jóvenes Investigadores o de apoyo a la investigación para la Resolución de Problemas Nacionales, existe poca conversación sobre las necesidades regionales, que necesariamente tienen particularidades a veces no reconocidas.

Por otra parte, considerando que 84% de las empresas en México no desarrollan acuerdo de cooperación para la innovación (Stezano, 2011), es claro que el interés por la vinculación debe provenir también desde el sector privado. Para el CONACyT, el proceso de vinculación se genera con la participación de las instituciones de educación superior, centros de investigación, gobierno, entidades financieras y empresas en un escenario en donde deben interactuar y participar de manera coordinada y en beneficio mutuo. Los temas de vinculación para México se fomentan dentro de los objetivos del PI del CONACyT, el objetivo 4 “*Contribuir a la transferencia y aprovechamiento del conocimiento científico y tecnológico para favorecer la innovación*”, se define la vinculación academia-empresa como un factor que incide en las ventajas competitivas, la productividad y el crecimiento económico nacional. En la siguiente tabla se describen las líneas de acción que enmarcan las estrategias concretadas para lograr los objetivos del Consejo.

Tabla 1: Programa Institucional 2014-2018 del Consejo Nacional de Ciencia y Tecnología (Conacyt)

Objetivo 4 “Contribuir a la Transferencia y Aprovechamiento del Conocimiento Científico y Tecnológico Para Favorecer la Innovación”	
Estrategia	Líneas de acción
4.1 Fomentar el desarrollo tecnológico y la innovación en prioridades del sector CTI	<ol style="list-style-type: none"> 1. Promover el capital emprendedor para favorecer el desarrollo de negocios tecnológicos 2. Promover la participación de las empresas en el esfuerzo nacional de inversión en actividades de IDE 3. Apoyar la creación de nuevos centros y fondos de investigación con base tecnológica 4. Incrementar la base de empresas innovadoras de alto impacto tecnológico 5. Impulsar la apropiación del conocimiento a través del registro de la propiedad industrial
4.2 Facilitar la vinculación de las IES y centros de investigación con las empresas	<ol style="list-style-type: none"> 1. Crear programas de apoyo que induzcan la comercialización del conocimiento 2. Fortalecer a las instancias encargadas de la vinculación y transferencia de tecnología 3. Crear redes de innovación con infraestructura tecnológica de alto valor agregado y recursos humanos especializados

En esta tabla se muestra las estrategia y líneas de acción que se han emprendido por parte del CONACYT y que tiene que ver con aprovechar el conocimiento y aprovechamiento del conocimiento científico y tecnológico en México. Fuente: CONACYT (2014).

De acuerdo con esa perspectiva, uno de los principales desafíos de las IES es encontrar mecanismos efectivos de vinculación con el sector empresarial en materia de desarrollo y transferencia científico-tecnológica, con el objeto de que las contribuciones de sus investigaciones surtan efectos multiplicadores en las propias instituciones y en el entorno social. Otras aportaciones al tema, como de la asociación de universidades e IES, ANUIES (2000), en el ámbito de la vinculación son: la Formación de unidades institucionales; la Capacitación, profesionalización, diagnósticos, publicaciones; los Proyectos conjuntos Gobierno Federal y Sector Productivo; el Diseño y propuesta de un Consejo Nacional de Vinculación; la Formación de redes regionales; la Red Nacional de Vinculación; y la realización de diferentes foros, seminarios y eventos realizados en esos temas.

En algunos casos esos esfuerzos se han manifestado, como en la Universidad Autónoma del Estado de Morelos (UAEM, 2014), que se ha proyectado como un modelo en el desarrollo de un ecosistema de innovación-emprendimiento, diseñado para la transferencia de ideas, desarrollos científicos, prototipos, necesidades de investigación y consultoría e incluso la creación de empresas basadas en el conocimiento. Su respaldo son las investigaciones científicas y tecnológicas de los profesores investigadores de tiempo completo y alianzas estratégicas con los tres niveles de gobierno, centros de investigación CONACyT, y cámaras empresariales del país y el extranjero. Así, ha estructurado una instancia universitaria con facultades de decisión, financiamiento, y procesos de organización institucional y de capacitación de su personal. Sin embargo, son contadas las IES del país que repliquen esos resultados.

Como en el resto de México, en la región noreste –que incluye los estados de Sonora, Sinaloa, Baja California y Baja California Sur–, la institucionalización de la vinculación IES-empresa ha seguido patrones desiguales. Siendo una de las zonas económicas más dinámicas del país por su cercanía geográfica con los Estados Unidos, se tienen casos de una estrecha relación como respecto a la industria aeronáutica en Sonora o la orientada a otros procesos de exportación y ensamblaje en Baja California. La Universidad de Sonora, a través de la Dirección de Vinculación y Difusión, cuenta con el Centro Integral CIEV para promover y facilitar a todos los sectores de la sociedad, los productos y servicios, científicos y tecnológicos de la institución, contribuye a expandir y afianzar la vinculación universitaria con los sectores educativo, social, gubernamental, así como productivo, de servicio y cámaras empresariales, a través de sus áreas de apoyo a la vinculación (USON, 2014). Por su parte, la Universidad Autónoma de Baja California dispone de una Coordinación de Formación Profesional y Vinculación Universitaria, cuya misión es contribuir a las actividades de vinculación, difusión y extensión de la cultura y los servicios de la universidad, así como a la formulación de las etapas disciplinaria y terminal de los planes de estudio y la formación docente requerida (UABC, 2014).

En el caso de Baja California Sur, donde se centra este trabajo, la situación de heterogeneidad entre CIs e IES se manifiesta pese al alto desarrollo de investigación orientada a los recursos marinos. Este estado, a diferencia de los otros de la región, es una de las entidades que menos aporta al producto nacional (0.6% en 2010, de acuerdo a INEGI), lo que va en sintonía con su pequeña población aunque no con su amplia geografía. Los ejes de la economía sudcaliforniana por más de 30 años han sido el comercio, el turismo y el gobierno ante un sector primario que no rebasa 4% del producto interno bruto estatal (PIB) y uno secundario tradicionalmente reducido, pero que repuntó con la alta participación del sector construcción en la década actual (por el florecimiento de empresas constructoras de vivienda social y plazas comerciales, ante el declive turístico de 2009) (Gámez *et al*, 2014).

Así, a finales de los primeros 10 años del nuevo siglo, cerca de 40% de la economía sudcaliforniana depende de las actividades relacionadas con el turismo, que también contribuyen con aproximadamente 30% del empleo estatal (GBCS, 2012). Sin embargo ese panorama se vio comprometido por el estallido de la crisis global manifestada en 2008 en Estados Unidos que afectó especialmente los sectores de construcción, de bienes raíces, y de restaurantes y hoteles. En 2010 hubo una recuperación en el nivel del producto de BCS, pero el valor de la producción en el último sector era aún 8% menor que en 2007. A finales de diciembre de 2012, el desempleo abierto de BCS, fluctuante entre 6 y 7%, era uno de los más altos del país (Angeles y Cabral, 2012).

La centralidad de los servicios, impulsada federalmente, ha opacado el desarrollo de los sectores primario y secundario. De los cuatro centros de investigación sobre recursos acuícolas y marinos el Centro de Investigaciones Biológicas del Noroeste, SC (CIBNOR, 2014) (centro CONACYT enfocado a las ciencias biológicas y el uso, manejo y preservación de los recursos naturales) por el alcance de su vinculación con la empresa. En noviembre de 2011 crea la primera Unidad de Vinculación y Transferencia del Conocimiento, bajo el nombre “BAJAINNOVA” en conjunto con el Centro de Investigación Científica y de Educación Superior de Ensenada (CICESE) y la empresa Avanza Capital. Con una Coordinación de Servicios Especializados y Proyectos Institucionales (COSEPI) el CIBNOR facilita la transferencia del conocimiento científico y tecnológico; que se fortalece con el Parque Científico y Tecnológico (BioHelis), y la Oficina de Propiedad Intelectual y Comercialización Tecnológica (OTT/CEPAT) que ha establecido.

El CIBNOR se ha tornado un ejemplo de éxito en el desarrollo de la vinculación con la empresa en el estado de Baja California Sur. Desde luego, en la evaluación del diferenciado impacto productivo de las IES y CIs es menester realizar consideraciones relacionadas con el perfil exclusivamente orientado a la investigación y la educación de posgrado de estos últimos, y la que se realiza en la Universidad Autónoma de Baja California Sur (UABCS), única IES que atiende la dimensión de la investigación básica y aplicada, además de la docencia de licenciatura y posgrado (en las áreas de ciencias sociales, del mar, agropecuarias, y de tecnología computacionales), así como la extensión y difusión de la cultura en el estado. En todo caso, un reto presente es lograr institucionalizar la vinculación y el acercamiento de los conocimientos a la sociedad de una manera más efectiva a la hasta ahora lograda. En ese sentido, el Programa de Planeación y Desarrollo 2013-2018 de la UABCS ha integrado a la vinculación en las políticas generales de desarrollo de la institución (UABCS, 2011).

En la UABCS se efectúan algunas actividades de vinculación con empresas, universidades nacionales y extranjeras, dependencias gubernamentales, y organizaciones de la sociedad civil, pero de manera aislada. Asimismo, se carece de un programa institucional de vinculación que promueva y facilite estas actividades de vinculación, así como la sistematización de la información y procesos para el registro, seguimiento y evaluación de las actividades y productos de investigación. Considerando la infraestructura científico-tecnológica disponible en la Universidad, subsanar esto podría potenciar una mayor vinculación y resultados. Actualmente existen 18 cuerpos académicos (o grupos de investigación) estructurados para atender líneas de generación y aplicación de conocimiento en la UABCS, reconocidos por la Secretaría de Educación Pública federal. Diez de ellos, organizados en los temas relacionados con las ciencias del mar, las ciencias

agropecuarias y las tecnologías de información tienen potencial para desarrollar propuestas de transferencia científico-tecnológica. Al presente, la Universidad tiene registrados 100 proyectos de investigación vigentes por 66.1 millones de pesos desde 2011 en esas áreas, pero sólo 12 convenios se han desarrollado con el sector privado, principalmente en el campo de la acuicultura (DIIP. 2014).

Tabla 2: UABCS. Proyectos de investigación vigentes con financiamiento externo, 2011-2014

Departamento Académico	No. Proyectos Vigentes	Principales Fuentes de Financiamiento	Monto (Pesos)
Agronomía	18	Fundación PRODUCE, SAGARPA	5,937,766.49
Biología marina	57	SEMARNAT, CONACYT, CONABIO, CONANP	31,487,600.44
Geología	3	SEMARNAT	215,400.00
Pesquerías	14	CONAFOVI-CONACYT, SEPESCA	24,444,954.00
Zootecnia	8	Fundación PRODUCE	4,028,776.00

En esta tabla se muestran los proyectos de investigación de la UABCS en sus diferentes departamentos y en la cual se indican el monto de financiamiento que se han obtenido según la institución. Fuente: DIIP (2014).

METODOLOGÍA

Este trabajo se basa en la revisión de literatura respecto a los modelos de sistemas de innovación y de vinculación; documentos disponibles en línea de instituciones de educación superior sobre sus estructuras de organización interna en esa materia. Considerando que un elemento relevante en la evaluación de la vinculación universitaria reside en la percepción de los profesores-investigadores de tiempo completo que pueden o potencialmente podrían desarrollar procesos de innovación y vinculación, se encuestó a los responsables de los 10 cuerpos académicos relacionados con áreas de potencial o actual desarrollo científico y tecnológico. Los encuestados se ubican en los departamentos de Sistema Computacionales, Biología Marina, Geología, Pesquerías, Zootecnia y Agronomía. Las preguntas, con base en respuestas a partir de una escala de Likert, se relacionaron con si su función debe incluir la vinculación con el sector productivo; su conocimiento del marco normativo institucional en materia de vinculación con el sector productivo; las condiciones de administración universitaria de las actividades de investigación y vinculación; su acceso a información oportuna de convocatorias y/o financiamiento a la investigación; la infraestructura científica disponible; las acciones que la universidad debiera tomar para satisfacer sus necesidades en materia de vinculación; y la autovaloración de su interés y acciones para vincularse con el sector empresarial. Las respuestas fueron agrupadas de acuerdo a su incidencia para identificar tendencias en las percepciones de los investigadores.

RESULTADOS

El conocimiento científico y la investigación generados por las IES son aspectos que no han sido explotados ni apropiados del todo, y no se les ha dado la importancia en su dimensión en términos de beneficios que podría representar por el sector empresarial y las distintas instancias gubernamentales. La solución a muchos de los grandes problemas nacionales descansa en el saber y el quehacer científico-tecnológico y en las capacidades para innovar que tengan y desarrollen las instituciones de educación superior del país. Sin embargo, en la evaluación de las condiciones reales es necesaria mayor investigación para conocer los elementos que requieren atención. Uno de ellos es la percepción que los propios desarrolladores del conocimiento científico y tecnológico tienen de su quehacer y de la situación institucional en que se desempeñan. En el caso de la UABCS, las encuestas a profesores-investigadores, y la revisión de acciones en otras IES muestran los siguientes resultados: en los ítem sobre la inclusión de la vinculación con el sector productivo, la mayoría de los investigadores (80%) considera estar totalmente de acuerdo con ello, en el caso del conocimiento del marco normativo institucional en materia de vinculación con el sector productivo, el 60% de los entrevistados manifiestan la no existencia, en el ítem de las condiciones de administración universitaria de las actividades de investigación y vinculación; en el apartado de acceso a la información oportuna de convocatorias y/o financiamiento a la investigación manifiestan, en 100%, que cuentan con

información oportuna; en cuanto al ítem de la infraestructura científica disponible, 40% de los investigadores entrevistados consideran que la infraestructura disponible es buena, el resto considera de regular a inadecuada; las acciones que la universidad debiera tomar para satisfacer sus necesidades en materia de vinculación; y la autovaloración de su interés y acciones para vincularse con el sector empresarial. Las respuestas fueron agrupadas para identificar tendencias en las percepciones de los investigadores, resaltando en promedio la necesidad de contar con un área especializada que se dedique a realizar las actividades de acercamiento y gestión que favorezcan la vinculación universidad-empresa.

Esto es compatible con los resultados encontrados por Avilés (2014) respecto al estado en su conjunto, lo que muestra que es necesario impulsar el desarrollo productivo, mediante el estímulo de actividades innovadoras, crear redes de apoyo a estructuras e instrumentos destinados a aumentar la vinculación entre los agentes del sistema sudcaliforniano de innovación, que en el contexto de la Economía Basada en Conocimiento, el papel de la universidades, institutos tecnológicos y centros de investigación, será contribuir a tres funciones claves: 1. Generación del conocimiento, mediante el desarrollo de investigación, 2. Transmisión del conocimiento, mediante la educación y la formación de recursos humanos y 3. Transferencia del conocimiento, mediante la difusión socioeconómica del conocimiento para resolver problemas, a través de líneas de acción como: Impulsar proyectos de investigación científica y tecnológica ante instancias de financiamiento, promover el desarrollo y agrupamiento de los sistemas-producto, para incentivar la innovación tecnológica y aprovechamiento de economías de escala y fortalecer la articulación entre instituciones de educación superior, centros de investigación, innovación y desarrollo tecnológico con el sector productivo del estado.

CONCLUSIONES

La economía basada en el conocimiento tiene una estructura productiva que en la mayoría de sus actividades utiliza investigación científica y desarrollo tecnológico. La capacidad para dirigir estos esfuerzos hacia el sector productivo con un uso intenso del conocimiento se mide con indicadores como la cantidad y calidad de redes de vinculación que establecen los agentes de la innovación (IES-sector productivo), en las que las empresas utilizan cada vez más conocimiento externo que se genera en las universidades y centros de investigación. A pesar de que a lo largo de los años las IES han desarrollado diversos mecanismos y modalidades de integración con las empresas, vincularlas es complicado por varias razones; algunas de carácter interno y otras externas, relacionadas con objetivos y prioridades diferentes.

Esto en la mayoría de los casos presenta problemas que van desde la orientación o enfoque que le da cada uno a la vinculación hasta aspectos éticos y de dinámica organizacional. Por un lado, la universidad pretende formar recursos humanos, y generar conocimientos y difundirlos en la búsqueda del bienestar social. Sin embargo estas instituciones enfrentan presiones financieras y estructurales tenido libertad de cátedra para la impartición de materias y de investigación. Por otro, en un contexto de producción de bienes y servicios y búsqueda del éxito económico, la empresa ha mostrado una tendencia baja en la participación con las IES. Así, a los problemas y orientaciones de cada sector se añade un ambiente institucional y cultural y de política pública poco propicio para la vinculación.

En el marco de lo anterior, el sistema sudcaliforniano de innovación se caracteriza por tener una estructura de generación, transferencia y uso de conocimiento local muy desigual, con pocos flujos entre los centros de investigación y las universidades. En el caso de la UABCS, esto refleja la necesidad de desarrollar un modelo de vinculación que le permita detonar el potencial de sus investigaciones y actividades, abriendo espacios sólidos de trabajo y desarrollo para la comunidad científica, y una mayor difusión de los alcances que pueden tener la innovación y la tecnología en la sociedad. Actualmente, la Universidad tiene una relación relativamente amplia en materia de convenios y redes con instancias públicas y educativas, pero muy baja con el sector privado, lo que muestra el bajo perfil de las actividades de vinculación con las empresas. Esto

se refuerza con los resultados de encuestas a investigadores, que indican la baja participación (30%) de inserción de actividades al sector productivo.

Con respecto a lo anterior, se pueden adelantar algunas estrategias y áreas de oportunidad relacionadas con la socialización universitaria y hacia el exterior de la orientación de la vinculación y de relación con la empresa que se busca promover en la UABCS. Esto implica la necesidad de establecer formalmente una oficina de vinculación que se oriente a la identificación de la oferta científica y tecnológica transferible a la sociedad; la realización de catálogos de servicios profesionales, talleres y encuentros de emprendimiento para estudiantes y personal académico de la UABCS; desarrollar un sistema de organización y procesos claros para promover servicios de asesorías, consultorías y estudios a organismos gubernamentales, industriales, comerciales y de servicios, así como cursos y talleres de actualización, capacitación y superación a profesionales en activo y a la sociedad en general.

La promoción e integración de redes de cooperación y colaboración organismos para el desarrollo social, económico y cultural del estado, la región y el país sería un eje central en una estrategia de vinculación efectiva, que requeriría de establecer mecanismos de difusión interna y externa de las acciones de vinculación de la UABCS con los sectores público, privado y social.

Judith Juárez Mancilla, Universidad Autónoma de Baja California Sur

RESUMEN

La fiscalización es un tema que atañe al sector privado, así como al sector público en el interés de la ciudadanía por conocer el destino y uso de los recursos públicos. Con este mismo enfoque se centró la presente investigación en el ámbito de la transparencia y la rendición de cuentas que deben realizar los partidos políticos al Instituto Nacional Electoral.

THE AUDIT AS FACTOR OF RELIANCE OF THE CITIZEN IN BAJA CALIFORNIA SUR

ABSTRACT

The audit is an issue that concerns the private sector and the public sector in the interest of the public to know the destination and use of public resources. The same approach this research focuses on the area of transparency and accountability to be made by political parties to the National Electoral Institute .

INTRODUCCIÓN

Toda organización que desee tener una estabilidad financiera redituable debe mantener una constante vigilancia en sus procesos de fiscalización. Es decir, realizar constantes balances de supervisión a sus ingresos y egresos para efectos de conocer la situación económica de la misma y con ello tomar las mejores decisiones en su ámbito empresarial en el que se desarrolla. Por ello su política financiera debe de ser sólida y eficaz para poder brindar ese blindaje financiero que redundará en su imagen competitiva externa. En el sector público es necesario consolidar una política de fiscalización pertinente para efecto de controlar lo concerniente al gasto público, máxime si dicho gasto público deriva de los impuestos de los contribuyentes y por ende se entiende que se debe de ejercer con mayor eficacia y precisión.

En este sentido, con la transformación del Instituto Federal Electoral al Instituto Nacional Electoral (INE), uno de los rubros que se adecuarán con los nuevos lineamientos del INE será el relativo a la fiscalización. Con la implementación de una minuciosa y rigurosa examinación del recurso público económico destinado a los candidatos y candidatas independientes, así como a los partidos políticos, se pretende lograr que se informe en tiempo real lo relativo a los gastos generados. La intención es regular los topes de campaña y que efectivamente no sean rebasados estos montos asignados, así como también no se reciba ningún otro tipo de recurso económico que no esté regulado por el Instituto a favor de un candidato o candidata o partido político.

El objetivo del presente trabajo fue conocer de identificar los mecanismos más efectivos en el control de los recursos destinados a los procesos electorales, a efecto de considerar que no se realicen anomalías o faltas graves que puedan anular un proceso de votación. Se consideró que es de interés la actual investigación para la ciudadanía que se interese en los procesos electorales, los partidos políticos y las Instituciones vinculadas a los procesos electorales como el propio Instituto Nacional Electoral.

Marco Teórico

Con esta visión fiscalizadora denominada *in situ* por el propio Consejero Electoral, Benito Nacif quien integra la Comisión de Fiscalización del INE se proyecta, además del mencionado control del gasto público de campaña, reintegrar a la ciudadanía la confianza y credibilidad en las Instituciones políticas involucradas en los procesos electorales. Esto es importante porque de acuerdo con el Informe País (Informe País, 2014) uno de los derroteros a vencer es el abstencionismo que es un fenómeno que deriva en la falta de interés en las cuestiones electorales *el abstencionismo hace que la política pública se sesgue en favor de quienes participan, porque “los políticos y funcionarios no tienen la presión para poner atención y atender las demandas de quienes no participan”* (Key, 1949: 527). En materia electoral podemos concretar que se ha avanzado mucho en las últimas décadas en México, pero también se ha cuestionado demasiado el destino y el uso de los recursos económicos designados para gastos de campaña. Es por ello que el objetivo de este trabajo es medir el impacto de la fiscalización en Baja California Sur como indicador de confianza de la ciudadanía en los procesos electorales, por medio de una revisión documental y encuestas de percepción.

La preocupación de regular los recursos económicos con los que cuentan los partidos políticos para efecto de sus campañas y proselitismos no es un tema novedoso pues tenemos el antecedente que nos refiere Alcocer (1993:18) *“Las primeras medidas legislativas adoptadas para controlar los gastos e ingresos de los partidos políticos se remontan a finales del siglo XIX (Inglaterra, Francia) y principios del XX (Estados Unidos).”* Por ello consideramos que el tema continúa tendiendo vigencia en la medida que se ha ido avanzando paulatinamente en este ámbito puesto que el referente a seguir es el costo que generan las democracias al gasto público, ya sea de la Federación o de las Entidades Federativas.

Es ahí el punto medular que interesa a las Instituciones encargadas de vigilar y coordinar los procesos electorales: el reducir los costos de campaña y atender que efectivamente se ejerzan los recursos económicos para el fin al que se hallan destinados. Este interés de vigilar los gastos de proselitismo y su destino al que se encuentran canalizados derivan del antecedente al que se refiere Alcocer *“Ya en 1907 la onerosa campaña de Theodore Roosevelt en Estados Unidos había suscitado un movimiento de opinión pública a favor de la limitación de los gastos de campaña de los candidatos.”* Considerando este referente que se dio a inicios del siglo pasado podemos advertir que ninguna economía ni Estado se substraen a la poderosa tentación de inclinar una contienda electoral a favor de un partido, candidato o candidata en especial. Es por ello que se debe de instar a los participantes de una disensión electiva a conducirse con transparencia, ética y disciplina a fin de lograr comicios más sanos a favor de una democracia reflejada en una elección despojada de artimañas tendenciosas.

En el caso de México se ha tenido, por bastante tiempo, el deterioro del compromiso por parte de las Instituciones partidistas de brindar a la ciudadanía procesos electorales transparentes, puesto que en los comicios se ha observado *la falta reiterada de respeto al escrutinio de la votación que en múltiples ocasiones ha resultado en una falsificación de resultados; la falta de competitividad electoral que ha privado en nuestro país; las diferencias sustanciales entre las diferentes regiones del país en cuanto a respetar el secreto del voto la libertad del elector para ejercer su derecho a votar; las diferencias sustanciales del financiamiento y apoyo a los diversos partidos políticos durante la contienda electoral; el acceso equitativo a los medios de comunicación por mencionar los más relevantes* (Sánchez Mota, 1996,: 13-14). Desde la perspectiva nacional ésta es la realidad, la cual no dista mucho de la visión de la Entidad de Baja California Sur, que en materia electoral tiene una vida política más reciente, al igual que Quintana Roo, puesto que su transición de Territorio

a Entidad Federativa fue hasta hace apenas 40 años, lo que es relativamente nuevo en comparación con el resto de las Entidades Federativas de la República Mexicana. En ese acomodo federativo acelerado de transición, se tuvieron que gestar diversos ajustes en materia jurídica, legislativa (Sánchez Mota, 1996, :32) y por ende política que permitirían a la naciente Entidad gestar todo la infraestructura propia de las demás Entidades que en comparación con ellas se encontraba en desventaja.

Como parte de la adecuación estatal para afrontar la transformación política fue la tendiente a generar toda la infraestructura operativa relacionada a la votación de los futuros candidatos a ocupar puestos de elección popular, contrario a lo que anteriormente se realizaba ya que los funcionarios encargados de dirigir la administración del Territorio eran designados directamente por el Ejecutivo Federal. Como refiere la profesora Sánchez Mota (1989:141) *“Baja California Sur pasa prácticamente de la inactividad política por más de cuarenta años a una acelerada actividad en unos cuantos meses que produciría la formación incipiente de grupos por acceder a las candidaturas desde dentro del propio partido oficial.”*

Antes de su conversión a Entidad Federativa y por casi 25 años posteriores a su integración a la Federación, Baja California Sur tuvo una casi hegemonía partidista, tanto en el gobierno estatal como en los gobiernos municipales, detentada por el Partido Revolucionario Institucional, pero fue en las elecciones de 1999 que hubo un cambio de estafeta en el gobierno federal, quedando como ganador un partido de origen izquierdista, el Partido de la Revolución Democrática, que detentó la gubernatura por dos sexenios consecutivos, siendo el caso que en la siguiente contienda electoral del 2011 hubo otro relevo de estafeta partidista, tomando el control del Estado en este actual periodo gubernamental el Partido Acción Nacional. Hacer referencia a este breve repaso histórico político de sucesiones partidistas en Baja California Sur es con el fin de mencionar que en su breve vida político-electoral la

Entidad ha experimentado, a diferencia de algunas otras Entidades con mayor historia electoral, la transición de tener en su encargo gubernamental a los tres partidos políticos más fuertes a nivel nacional, con ello se puede observar que los sudcalifornianos hemos sancionado con el llamado *“voto de castigo”* a los partidos políticos y en su caso a los candidatos que no han cumplido con las expectativas ideológicas, políticas, económicas, educativas, entre otras, que la misma sociedad de la Entidad demanda. Es en ese sentido que se debe recobrar la credibilidad del electorado sudcaliforniano en los comicios a través de campañas sanas en los sentidos de transparencia, equidad, respeto al sufragio y compromiso de parte de los candidatos y candidatas que aspiren a los cargos de elección popular.

En su corta actividad político-electoral Baja California Sur ha tenido como principal partido político al Partido Revolucionario Institucional (PRI) que de una u otra manera se ha mantenido en constante actividad política aun después de haber perdido la titularidad en el mando del gobierno del Estado. El Partido de Acción Nacional (PAN) ha sido la segunda fuerza política que se ha mantenido vigente desde el inicio de la transformación política de la Entidad. De igual manera se ha contado también con partidos de tendencia izquierdista como es el caso del Partido Socialista Unificado de México (PSUM) que quedaría constituido en la entidad en 1982 (Sánchez Mota, 1996, :85), de igual manera figura el Partido Revolucionario de los Trabajadores (PRT) al cual se le concede la mayor antigüedad izquierdista en la recién formada entidad federativa, puesto que su estructura partidista fue gestada en 1976, de acuerdo a lo referido por Sánchez Mota (1996, p. 76).

También figuraron otros partidos políticos de esta misma tendencia izquierdista a los que hace referencia Sánchez Mota (1996) pero que no reflejaron tanto impacto en el ámbito político sudcaliforniano. El Partido de la Revolución Democrática (PRD) lo enuncia Sánchez Mota pero solamente de manera somera refiriendo que *“solo aglutina una vieja clientela de ideología de izquierda y su importancia está más relacionada con su posición combativa antisistémica”* (Sánchez Mota, 1996, :201), siendo el caso contrario a lo vaticinado llegó a convertirse en la primera fuerza política de la entidad y en la actualidad figura dentro de las tres primeras.

Estos cambios partidistas que se han presentado en la Entidad tanto el Gobierno estatal como en los gobiernos municipales responden a una serie de demandas ciudadanas que se reflejan al momento de la emisión del voto. En las democracias el sufragio es la vía libre y pacífica que tienen los ciudadanos y ciudadanas para ejercer su aprobación o desaprobación del sistema político al que se encuentran sujetos en ese momento, el cual, de manera incorrecta, es detentado por un partido político. Consagrado en la Constitución Política de los Estados Unidos Mexicanos en sus Artículos 35, I fracción y 36, III fracción el votar es un derecho y una obligación por tratarse de un interés supremo que es la designación de las ciudadanas y los ciudadanos que van a ocupar los diferentes cargos de elección popular. Es en este sentido del ejercicio del derecho y la obligación ciudadana a emitir el sufragio que Baja California Sur ha sido un claro ejemplo de cambios drásticos que han culminado con el rechazo a las fuerzas políticas que no han cumplido con las expectativas que les fueron depositadas con ese voto de confianza ciudadana, tal y como lo señala Sánchez Mota (1996, :199):

“Estos cambios, aunque puedan ser ubicados en el contexto histórico, observados a la luz de los cambios en la legislación propia de la entidad requieren de mayor profundización a fin de conocer los factores que hacen que los electores acudan a las urnas y realicen la selección de su preferencia al emitir su voto.”

De acuerdo con la historia reciente de la Entidad podemos encontrar que un factor determinante para consolidar la confianza en las Instituciones es la rendición de las cuentas públicas a través de la fiscalización, concepto que enuncia *Ruelas Rangel (2002, :39)* como *“el acto de verificar que los recursos públicos se apliquen a los fines que la ley establece, implica la vigilancia, control, revisión y evaluación de la aplicación de los recursos públicos. Esta actividad se lleva a cabo mediante diversas acciones como son: prevenir, capacitar, detectar, corregir, notificar y si fuese necesario sancionar.”*, pues estos componentes van a permitir la continuidad o no de una ideología partidista o en su caso de la aprobación o rechazo posterior de un funcionario o funcionaria que no responda a las demandas ciudadanas como debe de ser, dentro de los diferentes niveles de gobierno.

Coincidiendo con lo que menciona *Ceseña Romero (2005: 3)* en su propuesta de Tesis de Licenciatura *“En México, se tuvieron que dar una serie de acontecimientos a lo largo de la historia para poder construir instituciones electorales imparciales y cuyo ejemplo más inmediato son las elecciones de 1999 en Baja California Sur y del 2000 en la elección presidencial. Una vez alcanzada la democracia electoral, se tiene la urgencia de promover la transparencia y una verdadera rendición de cuentas. Porque como sabemos la democracia electoral no garantiza que los gobernantes electos por la vía del voto se ‘corrompan’ y mucho menos que rindan cuentas de sus actos a menos que se cuenten con leyes más severas y claras.”* se observa una clara falta de lucidez en las cuentas públicas de los

Ayuntamientos lo cual es reflejo y consecuencia de una prevención política adecuada desde el momento mismo de las elecciones. En el aspecto particular de Baja California Sur se ha advertido un fenómeno muy peculiar que ha sido el hecho de que en las últimas elecciones se han votado a los candidatos a ocupar puestos de elección popular en razón de las cualidades, simpatía o cercanía de la propia persona para con la ciudadanía, es decir, la postulación por conducto del partido político no ha sido determinante en el triunfo o derrota en la contienda electoral. Como reflejo de ello se está dando cada vez más un fenómeno que denomina la profesora Sánchez Mota como los *“votos liberados”*, que son aquellos votantes que no tienen un compromiso directo con ningún partido político o que no figuran en una militancia aprensiva. Este fenómeno *“significa que los votos libres deben ser capturados a través de la ‘competencia’, la oferta de los partidos políticos y sus candidatos” (Sánchez Mota, 1996, :200)*

A estos votantes libres son a los que deben convencer los partidos políticos con su discurso y su compromiso, y es ahí en donde ese acuerdo se hace extensivo al rubro comprendido en la asignación a gastos de campaña,

así como a su rendición de cuentas, las cuales pueden reflejar la pretensión del partido o candidato y por ende el impacto que permeé en el electorado para su aceptación o rechazo.

METODOLOGÍA

Con el propósito de conocer el impacto de la transformación Institucional del IFE al INE, se revisó las Leyes aplicables tales como el Código de Procedimientos Electorales, la nueva Ley General de Instituciones y Procedimientos Electorales, una tabla comparativa entre ambas Legislaciones, además de bibliografía relativa a los Partidos Políticos, así como bibliografía especializada para el caso de Baja California Sur. Con ello tuvimos un referente en la transformación de las Instituciones encargadas de los procesos electorales y la implicación directa al caso de Baja California Sur.

RESULTADOS

Como comparativo entre la nueva Ley General de Instituciones y Procedimientos Electorales (Mayo, 2014) y el anterior Código Federal de Instituciones y Procedimientos Electorales (Abril, 2006) podemos encontrar grandes transformaciones en la Ley vigente, lo cual representamos en la siguiente figura para efecto de aplicar un parámetro de conocimiento en la ciudadanía entre la actual Institución y el anterior IFE: En general con esta Reforma Electoral se dotan de mayores atribuciones a la Comisión de Fiscalización para efecto de vigilar y en su caso sancionar las faltas cometidas por las Instituciones políticas ya sea por conducto de sus dirigentes, simpatizantes, partidistas o algún otro ciudadano vinculado a las mismas, llegando incluso las sanciones a declarar la anulación de la elección, situación que puede darse en el caso de los supuestos siguientes:

- Exceder el gasto de campaña autorizado en un 5%.
- Comprar tiempo o cobertura informativa en radio y televisión.
- Recibir o usar recursos ilícitos o públicos.”(INE, 2014)

Tabla 1: Comparativo de Leyes, Reglamentos y Procedimientos En México En Materia Electoral

Ley General de Instituciones y Procedimientos Electorales LGIPE	Código Federal de Instituciones y Procedimientos Electorales COFIPE
<p>Artículo 32. 1. El Instituto tendrá las siguientes atribuciones: VI. La fiscalización de los ingresos y egresos de los partidos políticos y candidatos.</p> <p>CAPÍTULO III De la Fiscalización de Partidos Políticos Artículo 190. 1. La fiscalización de los partidos políticos se realizará en los términos y conforme a los procedimientos previstos por esta Ley y de conformidad con las obligaciones previstas en la Ley General de Partidos Políticos. 2. La fiscalización de las finanzas de los partidos políticos y de las campañas de los candidatos estará a cargo del Consejo General por conducto de su comisión de fiscalización. 3. En el cumplimiento de sus atribuciones, el Consejo General no estará limitado por los secretos bancario, fiduciario y fiscal, y para ello contará con la unidad técnica de fiscalización, que será el conducto para superar la limitación referida, incluso en el caso de que el Instituto delegue esta función. Artículo 191. 1. Son facultades del Consejo General del Instituto las siguientes: a) Emitir los lineamientos específicos en materia de fiscalización, contabilidad y registro de operaciones de los partidos políticos; b) En función de la capacidad técnica y financiera del Instituto, desarrollar, implementar y administrar un sistema en línea de contabilidad de los partidos políticos, así como establecer</p>	<p>Artículo 49 1. El régimen de financiamiento de los partidos políticos tendrá las siguientes modalidades: [...] 6. Para la revisión de los informes que los partidos políticos y las agrupaciones políticas presenten sobre el origen y destino de sus recursos anuales y de campaña, según corresponda, así como para la vigilancia del manejo de sus recursos, se constituirá la Comisión de Fiscalización de los Recursos de los Partidos y Agrupaciones Políticas. Esta comisión funcionará de manera permanente.</p> <p>Artículo 49-A 1. Los partidos políticos y las agrupaciones políticas deberán presentar ante la comisión del Instituto Federal Electoral a que se refiere el párrafo 6 del artículo anterior, los informes del origen y monto de los ingresos que reciban por cualquier modalidad de financiamiento, así como su empleo y aplicación, atendiendo a las siguientes reglas: [...] III. En cada informe será reportado el origen de los recursos que se hayan utilizado para financiar los gastos correspondientes a los rubros señalados en el artículo 182-A de este Código, así como el monto y destino de dichas erogaciones. 2. El procedimiento para la presentación y revisión de los informes de los partidos políticos y las agrupaciones políticas se sujetará a las siguientes reglas: a) La Comisión de Fiscalización de los Recursos de los Partidos y Agrupaciones Políticas contará con sesenta días para revisar los informes anuales y con ciento veinte días para revisar los informes de campaña presentados por los partidos políticos y, en su caso, por las agrupaciones políticas. Tendrá en todo momento la facultad de solicitar a los órganos responsables del financiamiento de cada partido político y a las agrupaciones políticas,</p>

mecanismos electrónicos para el cumplimiento de las obligaciones de éstos en materia de fiscalización;

c) Resolver en definitiva el proyecto de dictamen consolidado, así como la resolución de cada uno de los informes que están obligados a presentar los partidos políticos;

d) Vigilar que el origen y aplicación de los recursos de los partidos políticos observen las disposiciones legales;

e) Designar a los Consejeros Electorales que formarán parte de la Comisión de Fiscalización;

f) Designar al titular de la Unidad Técnica de Fiscalización;

g) En caso de incumplimiento de obligaciones en materia de fiscalización y contabilidad, imponer las sanciones que procedan conforme a la normatividad aplicable, y

h) Recibir y requerir para efectos de seguimiento los avisos de contratación, previo a la entrega de bienes o servicios que celebren durante las campañas o los procesos electorales, en los que se deberá incluir la información que establezcan los lineamientos generales aplicables.

2. En el caso de que el Instituto delegue en los Organismos Públicos Locales la función de la fiscalización ordinaria de los partidos políticos locales, deberá verificar la capacidad técnica y operativa de los mismos para desempeñar dicha función, conforme a lo dispuesto en la Ley General de Partidos Políticos.

Artículo 192.

1. El Consejo General del Instituto ejercerá las facultades de supervisión, seguimiento y control técnico y, en general, todos aquellos actos preparatorios a través de la Comisión de Fiscalización, la cual estará integrada por cinco consejeros electorales y tendrá como facultades las siguientes:

[...]

CAPÍTULO V
De la Unidad Técnica de Fiscalización de la Comisión de Fiscalización
Artículo 196- Artículo 200

la documentación necesaria para comprobar la veracidad de lo reportado en los informes;

Artículo 49-B
1. Para la fiscalización del manejo de los recursos de los partidos políticos y las agrupaciones políticas, así como la recepción, revisión y dictamen a que se refiere el artículo anterior, la comisión prevista en el párrafo 6 del artículo 49 de este Código, contará con el apoyo y soporte de la Dirección Ejecutiva de Prerrogativas y Partidos Políticos del Instituto Federal Electoral, cuyo titular fungirá como secretario técnico de la propia comisión.

En esta tabla se muestra el comparativo de leyes, reglamento y comparamos las diferencias medulares que se dieron entre las Leyes que estuvieron y están a cargo de regular los comicios en la República Mexicana, y en el caso especial en Baja California Sur. Fuente: INE, 2014.

CONCLUSIÓN

El anterior organismo encargado de instaurar las elecciones a nivel federal, el Instituto Federal Electoral, así como en el ámbito estatal eran los Institutos Estatales Electorales, que duraron en su función del 11 de Octubre de 1990 al 4 de Abril del 2014, cumplieron con un proceso inicial de consolidación de la democracia en México, fue titánica su función pues se lidiaba con un sistema unipartidista prácticamente, así como una muy conocida corrupción en los procesos electorales, de la cual incluso fue cuestionado el propio organismos federal, pero aun y con todos estos bemoles en contra también se tuvieron grandes aciertos en materia electoral.

Toca el turno ahora de asumir el compromiso al Instituto Nacional Electoral que afrontará prontamente un proceso electoral pues “En las elecciones del próximo año se renovará la totalidad de las 500 curules de la Cámara de Diputados, 9 gubernaturas, 641 diputaciones en 17 entidades, 993 alcaldías en 16 estados y las 16 jefaturas delegaciones en el Distrito Federal.”, de acuerdo a lo informado por la cadena de noticias de CNN México en su nota periodística del martes 7 de Octubre del presente 2014. Este reto significa en gran medida devolver a la ciudadanía la confianza en los comicios, así como en los actores que intervienen en estos procesos electorales, atendiendo para ello que ahora “*la fiscalización [será] de forma expedita, es decir, en el transcurso de las campañas y no una vez que terminen.*” (INE, 2014)

RESUMEN

En los años 90's con la apertura comercial el gobierno mexicano promueve nuevas formas de asociación productiva, tomando como ejemplo la experiencia de otros países europeos, entre ellas la "Empresa Integradora". Es por ello, que el objetivo de este trabajo fue analizar la trayectoria del modelo de empresas integradoras en México, analizar su funcionamiento y proponer acciones de mejora para tener mayores beneficios económicos entre las empresas. Esto es importante porque los beneficios se pueden traducir en consolidar su presencia en el mercado interno e incrementar su concurrencia en los mercados de exportación. Este artículo pretende retomar las operaciones y las implicaciones administrativas, financieras, contables y fiscales a efecto de considerar un incremento competitivo de las MIPYMES.

PALABRAS CLAVE: Empresas Integradoras, Agrupación de Interés Económico, Micro Pequeñas y Medianas Empresas

INCLUSIVE BUSINESS: A BUSINESS OPTION IN MEXICO

ABSTRACT

In the 90's with the Mexican government openness promotes new forms of productive partnership, as exemplified by the experience of other European countries, including the "Enterprise Integrator". It is therefore the aim of this study was to analyze the path model integrating companies in Mexico, analyze their performance and propose improvement actions to have greater economic benefits among firms. This is important because the benefits can be translated to consolidate its presence in the domestic market and increase competition in export markets. This article aims to resume operations and the administrative, financial, accounting and tax effect of considering increasing competitive business implications.

INTRODUCCIÓN

Desde el siglo XIX existe un gran interés en el desarrollo productivo especialmente de la micro, pequeña y mediana empresa (MIPYME), a nivel internacional destacan países como Alemania, Japón e Italia en donde las pequeñas empresas figuran como la columna vertebral de la economía. En Alemania la industria funciona como una red que articula a las grandes y pequeñas empresas generando el 95% de empleos; en Japón el gobierno emitió una serie de leyes, medidas financieras, fiscales y de desarrollo tecnológico para que las micro, pequeñas y medianas empresas se conformaran en cooperativas para fortalecer su actividad mediante dinámicas grupales; el modelo de Italia surge desde el renacimiento en donde iniciaron trabajos organizados en talleres dirigidos por un maestro que enseñaba sus habilidades a un grupo de aprendices, esta formación contribuyó a una cultura organizacional en su población permitiendo el desarrollo de las micro, pequeñas y

medianas empresas. Sin embargo en 1992 México firma el Tratado de Libre Comercio con Estados Unidos y Canadá y en mayo de 1993 se da a conocer el Decreto que promueve la organización de las MIPYME en Empresas Integradoras adoptando influencias europeas, con el objeto de fortalecer a las pequeñas empresas en cuanto a la comercialización, producción y distribución consolidándose en el mercado interno y dándose a conocer en los mercados de exportación. Es por eso que la Secretaria de Economía ha desarrollado instrumentos de forma permanente que permita a la comunidad empresarial la mejor aceptación y comprensión de este tema, apoyando a los empresarios a la conformación de empresas integradoras. (Rodríguez, 2008) Es por ello, que el objetivo de este trabajo fue analizar la trayectoria del modelo de empresas integradoras en México, analizar su funcionamiento y proponer acciones de mejora para tener mayores beneficios económicos entre las empresas.

REVISIÓN DE LITERATURA

“En nuestro país una buena parte de las MIPYMES son familiares, con algunos rasgos de informalidad y con tecnología rudimentaria o artesanal, con bajos niveles de capacitación técnica para su personal, con mercados locales o fragmentados, como en muchos casos sin una buena organización y con una producción intermitente por la inestabilidad de la provisión de materia prima y la fluctuación de los ingresos y la demanda de los consumidores”. (Ramírez, 2006:1)

Algunos autores opinan que las alianzas son un modelo de colaboración importante de muchas empresas debido a las ventajas de conservar recursos, compartir riesgos, tiene por objeto la integración o agrupación de varias empresas para crear una nueva, y que ésta *“realice gestiones y promociones orientadas a modernizar y ampliar la participación de las empresas agrupadas/integradas en todos los ámbitos de la vida nacional”.* (Rodríguez, 2008:543)

En el caso mexicano, la Empresa Integradora tiene asignada una clara y específica función: actuar como institución auxiliar apoyando a los socios, coordinando voluntades, iniciativas, esfuerzos y proyectos, pero de ningún modo, con poder para controlar las actividades productivas de los socios/ integrados, menos aún con la capacidad necesaria para inspeccionar dichas actividades, y por supuesto, carentes totalmente de potestad sancionadora. Obviamente, los socios/integrados pueden pactar en el documento constitutivo de la Empresa Integradora, ciertas reglas que permitan o faculten una potestad jerárquica a un órgano específico para actuar en consecuencia, subordinando así los intereses particulares de los socios al colectivo de la Empresa Integradora, aunque como se observa en el decreto, éste no parece ser el objetivo del legislador, quien expresa claramente que deben ser prestadoras de servicios especializados de apoyo (DOF, 1995).

En este estudio la Empresa Integradora debe proporcionar algunos servicios especializados como pueden ser Tecnológicos, cuyo objetivo será facilitar el uso sistemático de información técnica especializada, de equipo y maquinaria moderna, de laboratorios científicos y tecnológicos, así como de personal calificado, entre otros, para elevar la productividad y la calidad de los productos de las empresas integradas; A) Promoción y comercialización de los productos y servicios de las empresas integradas, con el propósito de incrementar y diversificar su participación en los mercados internos y de exportación, así como para abatir los costos de distribución, mediante la consolidación de ofertas, elaboración conjunta de estudios de mercado y catálogos promocionales y la participación en ferias y exposiciones; b) Diseño, que contribuya a la diferenciación de los productos de las empresas integradas, para mejorar su competitividad. Igualmente, el desarrollo y aplicación de innovaciones y elementos de originalidad que impriman a los productos características peculiares y propias; c) Subcontratación de productos y procesos industriales, con el fin de complementar cadenas productivas y apoyar la articulación de diversos tamaños de planta, promoviendo la especialización, así como la homologación de la producción y, en consecuencia, una mayor competitividad; d) Promover la obtención de financiamiento en condiciones de fomento a efecto de favorecer el cambio tecnológico de productos y procesos, equipamiento y modernización de las empresas, con base en esquemas especiales de carácter integral que incluyan aspectos de capacitación y asesoría técnica, medio ambiente, calidad total y de

seguridad industrial, orientados a incrementar la competitividad; e) Actividades en común, que eviten el intermediarismo y permitan a las empresas integradas la adquisición de materias primas, insumos, activos y tecnología en común, en condiciones favorables de precio, calidad y oportunidad de entrega; f) Fomentar el aprovechamiento de residuos industriales, con el propósito de utilizar los materiales susceptibles de reciclaje y contribuir a la preservación del medio ambiente; Otros servicios que se requieran para el óptimo desempeño de las empresas integradas, como son los de tipo administrativo, fiscal, jurídico, informático, formación empresarial, capacitación de la mano de obra, mandos medios y gerencial. (DOF, 1995)

METODOLOGÍA

Para identificar el funcionamiento de las empresas integradoras en México se procedió a hacer una revisión documental en los principales libros, artículos y tesis a nivel nacional e internacional. Para sintetizar la información recabada se procedió a la elaboración de un diagrama que apoyan la comprensión y el desarrollo del modelo de negocios de empresas integradoras.

Cuando se reúne un grupo de empresarios o productores primeramente pasan por la etapa de sensibilización en donde se les da a conocer la importancia y los beneficios que se tienen al conformarse como empresa integradora, así como la forma de operar y los requisitos que se requieren; después deben elaborar un documento breve y sencillo donde perfilen su proyecto de factibilidad económica-financiera y visualizar de manera rápida si el proyecto contiene elementos necesarios para garantizar el éxito.

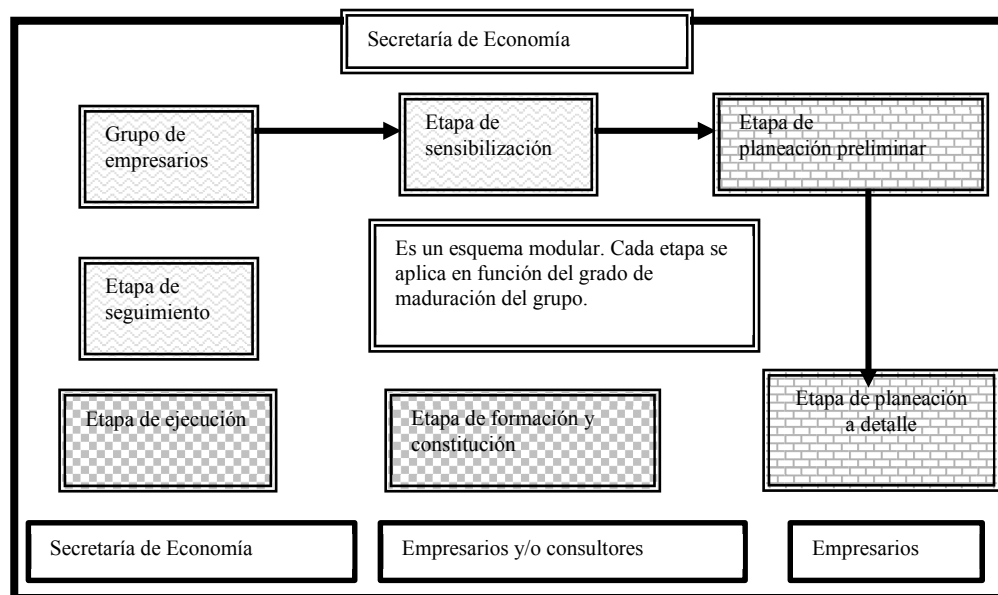

Con bases del primer proyecto, se elaborará otro proyecto económico-financiero en donde se indicará cual el recurso humano, materiales y financieros los cuales se utilizarán de forma organizada y eficiente para el mejor resultado describiendo la manera de cómo se debe hacer, cuando se debe hacer y donde se deben llevar a cabo ; una vez organizado se iniciarán los trámites para su formación y constitución formal con todos los requisitos que se solicitan por la Secretaría de Economía así como registrarse en el padrón de Empresas Integradoras; en la etapa de ejecución se debe estar preparado para cualquier imprevisto económico-financiero que deba resolverse y ser viable para modificar o replantear el proyecto; una vez en operación la empresa integradora será monitoreada por la Secretaría de Economía para que continúe con su funcionamiento.

RESULTADOS

Una vez revisado los principales hallazgos de investigación de autores y especialistas en el tema, nos percatamos que el análisis de los resultados los podemos dividir en partes: Una el funcionamiento del modelo y dos, las ventajas del modelo y 3, las limitantes. En el funcionamiento del modelo podemos encontrar que el proceso de conformación es sencillo, teniendo en cuenta lo establecido en el mencionado decreto, la Empresa Integradora es “aquella persona moral cuyo objeto social preponderante será la prestación de servicios especializados a cuatro micro, pequeñas o medianas empresas como mínimo, de quienes integrará su capital social por un valor no inferior a 50,000.00 pesos y de quienes obtendrá como mínimo el 90% de sus ingresos”. Específicamente dice el decreto, que: “Podrán participar en el capital de las empresas integradoras las instituciones de la banca de desarrollo, el Fondo Nacional de Empresas de Solidaridad, y en general, cualquier otro socio, siempre y cuando la participación de las empresas integradas represente por lo menos un 75% del capital social de la integradora”. Con la expresión, “cualquier otro socio”, las Empresas Integradoras están abiertas a cualquier empresa no pyme; este nuevo tipo de socio puede participar hasta con el 25% del capital social (las pymes pueden tener hasta el 30%). (Guía SE, 2001)

Según la Secretaria de Economía las etapas para conformar un proyecto de empresa integradora son:

Figura 1: Etapas para conformar un proyecto de empresa integradora en México

En esta figura se presentan las etapas para formar la empresa integradora, la cual apoya la secretaria de economía, donde un grupo de empresarios entra en una etapa de sensibilización y de planeación de sus esquemas de negocios. Posterior pasan a una etapa de de formación y constitución de la empresa para la ejecución del negocio. Esto permite realizar la ejecución en la producción de bienes y servicios. Para ello la secretaria de economía puede apoyar en la asesoría y constitución de la empresa. Cabe aclarar que durante este proceso interviene la secretaria de hacienda y crédito público. Fuente: Secretaría de economía, 2001.

Las ventajas que se observaron en este modelo son: a) Mejora la calidad de procesos productivos y operación empresarial, b) Se optimiza la compra de materias primas, insumos y productos, c) Mejor acceso a los servicios de información técnica especializada d) Mayor oportunidad para financiamientos, e) Incremento en la competitividad del mercado, f) Los empresarios se dedican a producir, mientras la empresa integradora se encarga de realizar otras actividades especializadas que requieran los asociados, g) Las empresas asociadas podrán adquirir hasta el 30% del capital social, h) Contribuye al desarrollo regional. (Reyes, 2011)

Las limitantes del modelo son: a) Poco capital de inicio, b) Los empresarios no tienen conocimientos empresariales, c) Las relaciones interpersonales son difíciles, d) falta de cultura empresarial e) Poca difusión del modelo, f) Las empresas no cuentan con una estructura organizacional adecuada. Los retos son que no todas las empresas pueden adoptar desde un inicio un régimen de empresa integradora, ya que algunas veces son estructuras demasiado complejas para la organización en grupos de empresarios de escalas muy pequeñas. Por tal motivo, deberán incursionar en alternativas más sencillas de agrupación de tal forma que vayan asimilando de manera paulatina una cultura de trabajo en equipo con otras empresas.

CONCLUSIONES

En base a la investigación aplicada considero que este modelo de negocio posee beneficios para la economía nacional e individual siempre y cuando todas y cada una de las partes que se conjuntan trabajen con sinergia; el hecho de que los gobiernos sigan dando apoyos a este tipo de empresas da pie para que las personas y los empresarios quieran agruparse para obtener mejores beneficios, pero es importante que las instituciones de gobierno o secretarías sigan promoviendo entre la población todos los programas de apoyo que se tengan para darle mayor credibilidad.

También se requiere que los empresarios sigan buscando la vinculación con el sector público para aprovechar los apoyos o recursos que se generen a favor de sus empresas para que puedan desarrollar nuevas formas de

agrupación, administración y distribución, además de que estimulen su capacidad de innovación. (Camargo, 2011)

Además que pueden consolidar su presencia en el mercado interno para promover nuevas fuentes de empleo y con los beneficios que se otorgan con los tratados de libre comercio se puede incrementar su participación en la exportación, generando economías a escala y el fomento a la especialización en productos o procesos. Es por eso que es importante que las MIPYMES no se limiten para que puedan seguir creciendo en conjunto. “Porque la unión hace la fuerza”. (Campos, 2007)

LA MICROINNOVACIÓN: FACTOR DE COMPETITIVIDAD PARA LAS PYMES DE LA CIUDAD DE OAXACA DE JÚAREZ

Joas Gómez García, Instituto Politécnico Nacional
Armando Pérez Delgado, Universidad Autónoma Benito Juárez de Oaxaca
Dulce María Pérez Rodríguez, Universidad Autónoma Benito Juárez de Oaxaca

RESUMEN

En este artículo se investiga la innovación desde un aspecto económico, enmarcado en la microinnovación como un modelo, que a su vez derive competitividad para la pequeña y mediana empresa localizadas en la Ciudad de Oaxaca, por lo cual se estudiarán las teorías de valor en sus dos posiciones: la teoría clásica del valor trabajo y la posterior teoría del valor utilidad. Una vez aclarado el significado de valor entonces se procederá a estudiar la forma en que este valor crece en la economía, a través de la teoría del crecimiento económico, siendo la forma en cómo visualiza J. Schumpeter a la innovación a la innovación y finalmente se realizará el análisis de la microinnovación, para describir las siete etapas por las que puede transitar el empresario. Se espera que el modelo de la microinnovación genere un crecimiento económico a nivel estatal en el caso del Estado de Oaxaca y que sea una herramienta que detone competitividad para la pequeña empresa.

PALABRAS CLAVE: Microinnovación, Competitividad, Crecimiento Económico

MICRO INNOVATION FACTOR OF COMPETITIVENESS FOR SMES CITY Oaxaca

ABSTRACT

This paper investigates innovation from an economic aspect, framed in microinnovation as a model, which allows in turn derive competitiveness for SMEs located in the City of Oaxaca, so theories of value is addressed in their two positions: the classical theory of value and utility theory of value back. Having clarified the meaning of value then proceed to study how this value grows in the economy, through the theory of economic growth, with the way how displayed Schumpeter Innovation and finally address the microinnovation analysis to describe the seven stages that can use the entrepreneur. It is expected that the model generates a microinnovation statewide economic growth in the case of State of Oaxaca and is a tool that detonates competitiveness for SMEs.

KEYWORDS: Microinnovation, Competitiveness, Economic Growth

INTRODUCCIÓN

La competitividad es un aspecto que adquiere cada vez mayor relevancia en el campo de las empresas, lo cual se deriva de las exigencias del entorno económico actual enmarcado en el proceso de globalización. Por otra parte, en el estado actual de la economía internacional, las PyMES, son fundamentales para el desarrollo económico de los países, tanto por su contribución al empleo, como por su aportación al Producto Interno Bruto. En el caso de México, las Pymes, generan el 52 por ciento del Producto Interno Bruto y contribuyen con el 72 por ciento de los empleos formales. Secretaria de Economía, sin embargo, estas empresas se enfrentan a diversos obstáculos para sobrevivir y desarrollarse en un mercado cada vez más competitivo y controlado por las grandes empresas transnacionales. Conjuntamente con su operatividad y administración, así

como la carencia de valor en sus productos, que no le permiten estar en un nivel de competitividad que requiere el comercio global. Por ello la importancia de estudiar la innovación desde el punto de vista de las empresas, es decir, a través de las etapas de la Microinnovación, lo cual es un factor en el esquema de la competitividad.

Dado que durante el último siglo, fue quedando claro que el incremento de la riqueza de una nación tiene su origen en la innovación, en los medios universitarios y en el ámbito de la gobernanza, se inició un proceso de análisis para determinar cómo sucede el fenómeno. Por una parte, los estudiosos descubrieron que las revoluciones tecnológicas se han presentado a partir, no siempre, de inventos, pero de descubrimientos, y que han dado paso a la utilización de elementos que intervienen en el proceso productivo, aumentando la productividad de las empresas y por lo tanto la riqueza social, tal fue el caso de la aparición del hierro, el carbón el acero, petróleo y los microchips, (Pérez, 2004).

El modelo microinnovación tiene sus orígenes en el proyecto de investigación denominado “Mapa estratégico para la microinnovación coordinado por el Doctor Joas Gómez García. Como resultado de la investigación se identifican siete etapas necesarias para que se dé el proceso de innovación: 1) Búsqueda de oportunidades en el mercado, 2) Invento tecnológico del producto o de una parte del proceso, 3) Generación del prototipo industrial, o del servicio, 4) Diseño de las inversiones requeridas, 5) Esquema de financiación de la inversión, 6) Construcción del proyecto industrial o de servicios y 7) Penetración del mercado, incluyendo dos etapas: distribución del producto y evaluación de la satisfacción del cliente (mercado de factores) (Gómez, 2012).

REVISIÓN DE LITERATURA

Joseph Schumpeter el primero en identificar a la innovación como el motor del cambio económico. En su clásico libro “Teoría del desarrollo económico”, publicado en 1911, postuló que el desarrollo económico es la derivación del desequilibrio dinámico producido por el empresario innovador. La gestión tecnológica en las Pymes y posteriormente el tema de la Triple Hélice, descrito por Jorge A. Sabato. Además, surgió la necesidad de revisar el término innovación puesto en boga por Joseph A. Schumpeter en su libro sobre la Teoría del Desarrollo Económico (1912), donde él sospechó que en este proceso algo tienen que ver los empresarios y clasifica las posibilidades de innovación, tales como la innovación de producto, innovación de proceso, innovación incremental e innovación radical, además de los cambios tecnológicos donde destacan los cambios organizacionales y los de mercadotecnia.

Al parecer el primer uso del término "micro-innovación (微创新)" se menciona por primera vez por Hongyi Zhou cofundador de Qihoo durante su discurso en la Conferencia Internet en China en el año 2010. Destacó que "micro- innovación " no se trata de invención revolucionaria del modelo de negocio o de tecnología, sino más bien la orientación a la experiencia del cliente y retoques sobre los productos existentes. En ambos casos, tanto en inglés como en español, se refieren a la micro-innovación como a “la actividad innovadora en servicios que tienden a ser un proceso continuo, consistente en una serie de pequeños cambios incrementales en productos y procesos” (OCDE-Eurostat, 2006). Joas Gómez García (2014) la innovación es considerada como la riqueza generada por los cambios que suceden en el proceso de producción. Por lo tanto se asocian a la creación de valor y son fenómenos económicos., no políticos ni sólo sociales, aunque el gobierno y la sociedad participen. Lo más importante son los mercados, quienes pueden hacer que un invento sea asimilado socialmente y por lo tanto aumente la generación de riqueza social. Con lo que respecta al ámbito de la competitividad, Michael Porter en su libro “La ventaja competitiva de las naciones”(1990), presenta el estudio más profundo, sistemático y documentado que se ha realizado respecto de las razones del éxito competitivo de las empresas a nivel mundial. Asimismo se han estudiado a demás autores enfocados al estudio de la competitividad como J.P. Sallenave (1995), Pérez (1996).

METODOLOGÍA

La investigación se basará en el estudio de pequeñas y medianas empresas, localizadas en la Ciudad de Oaxaca de Juárez, las cuales pertenecen en su mayoría al sector servicios, seguida del sector manufactura y comercio, la dinámica empresarial en la Ciudad de Oaxaca es un tema a parte debido a las características de estas empresas y al desarrollo mismo que genera.

Las variables identificadas son: variable dependiente competitividad, variable independiente microinnovación. Para el desarrollo de la metodología se determinaron las siguientes fases:

En una primera etapa se realizará investigación documental, para conocer aspectos relacionados con la innovación y la competitividad.

Después el estudio de campo. Para lo cual se diseñarán Aplicación de entrevistas y cuestionarios a directivos y dueños de pequeñas empresas.

Visitas a empresas. Con el fin de observar los procesos e identificar la parte de innovación

Análisis de los resultados para evaluar el tipo de innovación.

Análisis y conformidad del modelo de Microinnovación, para determinar si el modelo permita derivar competitividad en las PYMES.

RESULTADOS ESPERADOS

En los resultados se espera que la investigación planteada permita derivar un crecimiento económico y desarrollo en las empresas, que finalmente derive en competitividad para la pequeña y mediana empresa de la Ciudad de Oaxaca, apoyadas del modelo de microinnovación, el cual es una propuesta nueva, basada en siete pasos que parte de identificar nuevas oportunidades en el mercado derivadas de las necesidades de los clientes, para lo cual se plantea la herramienta de la microinnovación. A través de este modelo, los empresarios podrán identificar que el proceso de innovación, desde la perspectiva de la microeconomía, o mejor llamada microinnovación, se inicia en el mercado y termina en el mercado; es decir, las empresas deben conocer el mercado y luego identificar las necesidades u oportunidades de ese ámbito. (Gómez, 2012).

CONCLUSIONES

Las empresas requieren contar con una herramienta que les permita transitar a un crecimiento económico y ser competitivas ante el mercado global al que se enfrentan, ello a través de la innovación, que coadyuva a obtener alcances económicos a nivel estatal, sobre todo en la pequeña empresa, que de acuerdo al planteamiento de J. Schumpeter, la innovación debe aumentar tanto el valor del producto final que llega a los consumidores, como los ingresos por la producción, en sentido de aumentar la riqueza social. Ante lo expuesto el presente trabajo de investigación pretende presentar una herramienta que permita a los empresarios llegar al futuro deseado de capitalización, crecimiento y riqueza social por medio de la innovación. En otras palabras, si no hay innovación que se refleje en los productos, no puede haber un aumento de la riqueza social. (Gómez, 2012).

FACTORES DE ATRACCIÓN COMERCIAL QUE DETERMINAN LA DECISIÓN DE COMPRA EN TIENDAS O SUPERMERCADOS, POR PARTE DE LOS CONSUMIDORES DE ESTRATO 3, 4 Y 5 EN LA CIUDAD DE CALI – COLOMBIA

Madeline Melchor Cardona, Universidad Autónoma de Occidente, Cali - Colombia

Carmen Elisa Lerma Cruz, Universidad Autónoma de Occidente, Cali - Colombia

RESUMEN

En la estrategia de marketing se planifica el control sobre cuatro variables: precio, producto, promoción y plaza. Esta última permite tener el contacto con el producto y comprarlo. Por lo tanto, en ella se contemplan los canales de distribución minoristas formales e informales. Y aunque, en Colombia se incrementa la penetración de las grandes superficies, el canal tradicional, o tiendas de barrios siguen teniendo gran importancia. Lo anterior debido a una serie de factores económicos y culturales. La presente investigación se centró en la identificación de los “Factores de atracción comercial que determinan la decisión de compra en tiendas o supermercados, por parte de los consumidores de estrato 3, 4 y 5, en la ciudad de Cali”. Es un estudio de carácter mixto (cualitativa - cuantitativa) que reconoce los factores externos e internos que influyen en el comportamiento de los consumidores. En los factores externos se consideran los estímulos ambientales tales como las características del entorno y los determinantes del establecimiento. En los factores del individuo se consideran los aspectos que definen las características o condiciones personales y psicológicas en su función como consumidores. Los resultados muestran que los consumidores visitan y/o compran simultáneamente en supermercados y tiendas de barrio. Además en los estratos bajos, la visita a la tienda de barrio es más frecuente, en los altos la frecuencia de visita al supermercado es mayor y utilizan las tiendas de barrio sólo para comprar productos agotados en el hogar que necesitan en un momento dado. La conveniencia de la ubicación es un factor de atracción alto en las tiendas. Para los supermercados, las variables más relevantes son las características del establecimiento.

PALABRAS CLAVE: Atracción Comercial, Distribución Minorista, Comportamiento de Ir de Compras

BUSINESS ATTRACTION FACTORS DETERMINING THE PURCHASE DECISION OF CONSUMERS IN THE CITY OF CALI - COLOMBIA

Marketing strategy should be planned over four variables: price, product, promotion and place marketing. This last factor allows having contact with the product and buying it. Therefore, in this channel allocation formal and informal retailers are contemplated. And although in Colombia supermarkets grow on penetration, the traditional channel, or neighborhood stores are still important. This is due to a number of economic and cultural factors. This research focuses on the identification of "commercial attraction factors that determine the buying decision, in traditional stores and supermarkets, for the consumers in the city of Cali." It is a study of a mixed nature (qualitative - quantitative) that recognizes external and internal factors that influence consumer behavior. The external factors considered environmental stimuli such as environmental characteristics and determinants of the establishment. In the case of individual factors are considered all aspects that define the characteristics or personal and psychological conditions of individuals in their role as consumers. The results show that consumers visit and purchase simultaneously in supermarkets and traditional stores. Also, in the lower strata, the visit to the traditional store is more frequent. In the upper strata frequency is higher supermarkets and they use the traditional stores to buy just

exhausted at home when they need products. The convenience of the location is a high attraction factor in the stores, to supermarkets; the most important variable is the characteristics of the property.

INTRODUCCIÓN

Los canales de distribución minorista de productos de consumo masivo en Colombia, se dividen en formales e informales. Las tiendas de barrio hacen parte del segundo grupo y los supermercados del primero. Las tiendas son pequeños espacios comerciales en los cuales se distribuyen productos principalmente de la canasta básica, bebidas y confitería. El segundo, a pesar de encontrarse dentro del canal de distribución minorista, cuenta con una planta física sofisticada que le permiten especializarse en ventas de productos de todas las categorías y marcas. Además los que cumplen la función de ancla quedan involucrados en el escenario de la compra como actividad de ocio. En Colombia, de acuerdo con los estudios de Nielsen, durante el 2010, el 51% de las ventas se realizaron a través el canal tradicional (tiendas de barrio). Con relación a los supermercados, en la Tabla 1 se puede observar su distribución desde el año 2004. Una de las principales cadenas de supermercados en el país, Almacenes Éxito, cuenta, al 2011, con 260 puntos de venta entre los que se encuentran hipermercados (con la marca EXITO), supermercados (Carulla y POMONA) y tiendas de descuento (Bodega Surtimax).

Tabla 1: Distribución de los Principales Supermercados En Colombia

Compañía*	Cantidad De Supermercados

Se observa entonces una tendencia de las grandes cadenas de supermercados a acercarse al concepto de tienda de barrio, movidos por la dinámica que ellas muestran tanto en la economía como en el comportamiento del consumidor colombiano. En este panorama altamente competitivo, el consumidor es quien tiene la palabra. Surge entonces la inquietud acerca de que es lo que realmente busca el consumidor a la hora de elegir entre la tienda o el supermercado para efectuar sus compras, teniendo en cuenta que no es una decisión excluyente sino que es afectada por diferentes variables como la necesidad de compra, el tiempo, entre otras. La presente investigación profundiza en el comportamiento de compra del consumidor caleño en tiendas y supermercados, entregando información precisa y actualizada acerca de cuáles son los factores que hacen atractiva la compra en una tienda o en un supermercado y en consecuencia ayuda a entender que aspectos son los que tiene en cuenta el consumidor a la hora de decidirse por uno u otro lugar.

El comportamiento del consumidor, se define como “el estudio de las personas, grupos u organizaciones y los procesos que siguen para seleccionar, conseguir, usar y disponer productos, servicios, experiencias o ideas para satisfacer las necesidades y los impactos que estos procesos tienen en el consumidor y la sociedad”, teniendo en cuenta que los procesos de decisión de los consumidores están influenciados por variables de los individuos (personales, psicológicas), variables del entorno (económicas) y políticas de marketing de las empresas.

REVISIÓN LITERARIA

Indiscutiblemente, el éxito del canal minorista depende directamente de su capacidad para atraer el mayor número de compradores potenciales. Es decir, del grado de atracción comercial que dicho establecimiento es capaz de generar. Así, desde las primeras investigaciones sobre el tema se logra establecer que en la atracción comercial está implicado el factor de atracción comercial y el factor disuasorio o de restricción del consumidor al desplazamiento por motivo de compra. Este último aspecto se mide al operacionalizar lo que implica el esfuerzo de desplazamiento de los consumidores para realizar sus compras. En la misma línea, Reilly y Converse identificaron la distancia como variable de restricción. Además, las grandes transformaciones del comercio, los cambios en los hábitos de compra y de preferencias de los consumidores, conducen a que la medida de la atracción comercial sea una prioridad para el canal minorista.

Por otro lado, el estudio de la atracción comercial está fuertemente relacionado con el análisis del comportamiento de compra del consumidor. Por lo tanto, la elección del establecimiento se convierte en el centro de los modelos de atracción comercial. Así, el comportamiento de ir de compras y básicamente el comportamiento espacial del consumidor es un campo de la conducta humana que es abordado desde una óptica multidisciplinaria. De esta forma, el eje del estudio del Comportamiento Espacial es el conocimiento de los factores que afectan las decisiones de los consumidores, los cuales generan los desplazamientos hacia ciertos establecimientos minoristas y determinan la movilidad que constituyen las leyes del comportamiento espacial. Y la aglomeración de la oferta minorista da lugar a la concentración de ciertas zonas comerciales, y a su vez, las preferencias de los consumidores se concentra en la atracción comercial que ejercen las zonas comerciales. Por lo tanto la atracción comercial puede ser definida como una actitud, teniendo en cuenta que existe una estrecha relación entre las actitudes y el comportamiento del consumidor. Lo que implica que se debe reconocer el ambiente percibido y no el ambiente físico del establecimiento como tal.

Medidas de la Atracción Comercial

Entre los diferentes modelos para la medición de la atracción comercial se encuentra inicialmente el modelo de Huff (1964), el cual mide la atracción en función de los viajes de compra, los gastos realizados en dichos viajes y la combinación de ambos factores. Así mismo, Gautschi (1981) propone añadir al modelo de Huff dos factores más que son: las características del establecimiento y el modo de transporte para dirigirse al establecimiento. Por otro lado, Nevin y Houston (1980), Wee (1986), MacGoldrick (1992) y Más (1996) pretenden determinar las dimensiones de la imagen del canal y la relación entre la imagen y el comportamiento de compra como criterio para medición de la atracción comercial. De allí que, desde este enfoque, la atracción comercial se mide desde las siguientes variables: las intenciones de comportamiento de compra y el comportamiento real de la compra, la frecuencia relativa de viajes de compra durante los últimos dos meses (Más, 1996); el número de viajes y los gastos realizados en cada viaje (Wee, 1986); y la frecuencia de visitas a cada establecimiento y la duración de las mismas (McGoldrick, 1986).

Otra línea de investigación analiza los aspectos motivacionales y demográficos de los consumidores para explicar la atracción de los consumidores hacia los establecimientos. En esta línea se encuentran Stolman, Gentry y Anglin (1991), quienes miden la frecuencia de compra y lo reciente de su realización, además de las intenciones de compra para el mes siguiente. Además, Meoli, Feinberg y Westgate (1991) incluyeron los sentimientos de los consumidores en relación con la atracción. Finn, McQuitty y Rigby (1994) midieron la

atracción comercial según la frecuencia de visitas (porcentaje de asistencia) y los motivos de compra. Al respecto, De Juan de Vigaray (1998) plantea que la atracción sobre los consumidores se basa en el análisis del comportamiento espacial y su interdependencia con la estructura espacial del comercio minorista. Pero esta situación ha sido estudiada desde diferentes enfoques:

El enfoque macroeconómico, que tiene como unidad de análisis a las ciudades.

Desde el enfoque microeconómico que toma como unidad de análisis a la empresa comercial, la cual utiliza estos estudios para seleccionar el área comercial más conveniente para su punto de venta.

Así, la delimitación de las áreas comerciales es el primer paso para medir la atracción comercial; donde las preferencias de los consumidores en su proceso de selección de las diferentes alternativas de compra delimitan los contornos de las áreas de mercado (Tabla 2).

Tabla 2: Estudios Sobre las Medidas de la Atracción Comercial

Variable*	Autores**
Frecuencia relativa de viajes, medida como proporción del total de viajes realizados a los centros comerciales "evocados" y el gasto por visita.	Wee y Pearce (1985); Wee (1986)
Frecuencia relativa de viajes medida por el número de viajes durante el último año.	Gaustschi (1981); Más (1996 a).
Combinación de afecto, intenciones de comportamiento y comportamiento real.	Nevin y Houston (1980)
Frecuencia de visitas medida por el gasto realizado y la duración de la visita.	McGoldrick (1992)
Frecuencia de viajes en función de las preferencias y la accesibilidad (distancia en kilómetros) durante los últimos doce meses.	Hause y Koppelman (1979); Howell y Rogers (1980); Stoltman, Gentry y Anglin (1991); McGoldrick (1992)
Frecuencia de compra (escala 6 ítems) e intenciones de compra (escala 4 ítems).	Stoltman, Gentry y Anglin (1991)
Frecuencia de visita, medida por el número de viajes de compra en la semana anterior.	Weisbrod, Parcels y Kern (1984)
Frecuencia relativa de visitas medida por el número de visitas, duración, motivación del consumidor y características demográficas en los últimos tres años.	Fina, McQuitty y Rigby (1994)
Combinación de la frecuencia de visitas, gastos realizados y número de semanas transcurridos desde la última compra.	Howell Y Rogers (1990).

* Variables que se miden para establecer el nivel de atracción comercial. ** Investigadores que han realizado estudios para medir la atracción comercial. Fuente: De Juan de Vigaray (1998).

Por otro lado, Calvo Porras y Calvo Dopico (2014) hacen una revisión de las investigaciones sobre este tema y reconocen que el constructo atracción comercial es una consecuencia de cómo gestionan las variables de marketing los canales minoristas y de cómo responden los consumidores a dichas variables y actuaciones. Así, la respuesta de atracción de un consumidor ante las estrategias de marketing puede ser modificada por sus características personales y por las variables del macro-entorno (De Juan y Rivera, 1999). Desde estos autores, la definición de la atracción comercial, como un constructo multidimensional, presenta dos aportes al estudio del tema. Desde una perspectiva práctica, el hecho de que atracción está formada por los tres componentes de la actitud facilita que las empresas diseñen políticas de marketing para influir en cada uno de ellos. Por otro lado, también permite recordar a las empresas que las estrategias diseñadas para influir en los distintos componentes de la actitud deberán ser diferentes, según el componente que pretendan movilizar para generar la atracción en los consumidores.

Desde una perspectiva teórica, este modelo plantea que el estudio de la atracción se extienda a las variables que pueden influir en su formación. Teniendo en cuenta que la actitud es solamente un predictor de un determinado comportamiento, Calvo Porras y Calvo Dopico (2014) consideran que es importante integrar las variables directas e indirectas que pueden moderar la formación de la "atracción comercial".

Esta propuesta considera que una actitud positiva puede ser modificada tanto por las políticas de marketing (falta de productos, escasa accesibilidad, etc.) como por las variables propias de los individuos (personalidad, ciclo de vida, etc.) y éstas, a su vez, también pueden ser influenciadas por los ciclos económicos y/o variables culturales. De Juan y Rivera (1999) para analizar la atracción comercial y las variables que influyen en ella, recurren al estudio del comportamiento del consumidor y más concretamente, a la identificación de los componentes de la actitud (el cognoscitivo, el efectivo y el comportamiento) de los individuos.

Tabla 3: Componentes de la Actitud y Atracción Comercial

cognoscitivo*	afectivo*	conductual*
El establecimiento minorista pertenece al conjunto evocado por el consumidor. ** Asociación de recompensa con el establecimiento. ** Notoriedad positiva**	Grado de satisfacción del consumidor.** Preferencia por otro establecimiento**	Dificultad de cambio.** Probabilidad de beneficio posible por regresar al establecimiento.**

* Componente de la actitud. ** Evidencia de la presencia del componente en el comportamiento del consumidor. Fuente: elaboración propia a partir de la teoría de De Juan de Vigaray (1998).

El componente cognoscitivo representa la información, creencias y conocimiento de un consumidor hacia el establecimiento minorista, el afectivo refleja sus sentimientos y emociones, y finalmente el componente conativo refleja la tendencia a la acción e impulsa al consumidor a actuar, invitándolo a aproximarse o rechazar el punto de venta. De ahí que estos autores consideren que la atracción comercial puede ser definida como una actitud, dado que existe una relación estrecha entre las actitudes y el comportamiento de los consumidores.

Tabla 4: Atributos de los Componentes de la Actitud Aplicados a la Atracción Comercial de los Establecimientos

Referente	Componente	Manifestación*	Balance**
Establecimientos comerciales	Cognoscitivo	Experiencias de compras pasadas. Notoriedad del establecimiento. Opiniones acerca del establecimiento	Actitud hacia los establecimientos comerciales
	Afectivo	Sentimientos positivos o negativos hacia las compras. Emociones referentes a los establecimientos. Valoraciones sobre los establecimientos	
	Conativo o comportamental	Intención de compra. Respuesta de recompra. Respuesta de rechazo.	

* Manifestaciones de los componentes de las actitudes en comportamientos y reacciones emocionales del consumidor. ** Integración de los componentes de la actitud. Fuente: adaptación del modelo de De Juan de Vigaray (1998).

Factores de Atracción Comercial

Howard (1997) identifica los siguientes factores de atracción comercial: acceso o accesibilidad; el surtido; la especialización, y el entorno interno y servicio. Pero plantea que la gestión del punto de venta está condicionada por los cambios en las variables del entorno tales como: los consumidores y el cambio en sus hábitos; las expectativas económicas; la evolución de la competencia, y la innovación en los formatos comerciales. Por otro lado Ruiz (1999), propone los siguientes factores de atracción de centros comerciales, los cuales podrían asimilarse a los establecimientos minoristas en general: su imagen; la distancia, y las

preferencias de los consumidores. Además, este autor reconoce que la gestión del canal está condicionada por la evolución de las siguientes variables del entorno:

- Los consumidores y el cambio en sus hábitos.
- Las expectativas económicas
- La evolución de la competencia.
- La innovación en los formatos comerciales.

Así mismo, Ruiz (1999) afirma que los factores de atracción de un canal están conformados por; la imagen, la distancia y las preferencias de los consumidores. Frasquet y Frasquet (2000) también, resaltan los factores de accesibilidad, el surtido, el entorno interno, los servicios y la habilidad de marketing del canal. Finalmente, Calvo Porras y Calvo Dopico (2014) reconocen cuatro factores que determinan la capacidad de atracción comercial: la accesibilidad, que está directamente relacionado con la localización, el surtido o variedad de productos y servicios que ofrecen, los relacionados con el entorno interno o las características físicas y ambientales, y finalmente, las variables de marketing como son la comunicación y promoción.

Accesibilidad: Existe un principio comercial el cual plantea que el éxito de un establecimiento comercial es su localización, pero este deben estar estrechamente relacionado con la facilidad de acceso, el horario de apertura y cierre y con una buena identificación del sitio.

El surtido o variedad comercial: este factor implica la oferta de variedad de productos y servicios, identificando los productos “gancho”, los cuales no deben faltar.

El entorno interno: aspectos relacionados con el diseño y el ambiente, pues cada vez más importantes para lograr una mayor atracción. El diseño, tanto externo como interno, tiene connotaciones funcionales estéticas. Otros factores incluidos en este aspecto son: la luminosidad, limpieza, higiene, seguridad. Por último, es importante destacar que los espacios vacíos deben ocuparse con la mayor prontitud posible para evitar zonas muertas y dar así una mala imagen a los usuarios.

La comunicación y promoción: las actividades de comunicación son importantes en todas las etapas de la vida del establecimiento. Las actividades de comunicación y promoción estimulan y mantienen los cambios en los hábitos de compra del consumidor. Entre las actividades de comunicación tienen un papel importante las promociones de ventas, el material P.O.P. y otra serie de actividades de impulso.

DISEÑO METODOLÓGICO

La investigación se enmarca en una perspectiva trans-disciplinar, que integra la mirada de la atracción comercial como un fenómeno que exige una valoración desde una perspectiva más amplia, la cual que es resultado de la intervención de una serie de variables de diferentes campos, lo cual implica un acercamiento desde varios campos disciplinares. Su enfoque mixto: cualitativo y cuantitativo y se realizó en tres etapas.

Etapas 1: de carácter cualitativo, se interpretó el sentido y el significado del comportamiento del consumidor y de los factores externos e internos que lo afectan. Y se implementaron como métodos: La Observación participante en tiendas y supermercados, con la cual se detectaron las situaciones en que se generan los universos culturales y sociales. Entrevistas en profundidad con tenderos. Entrevistas en profundidad con consumidores de la población objeto de estudio para identificar opiniones, comportamientos y actitudes de los consumidores directamente relacionadas con la decisión de compra en tiendas y supermercados.

Etapas 2: de tipo cuantitativa, se obtuvo una medición de los factores que influyen en la decisión de compra. El instrumento se aplicó a una muestra representativa de la población objeto de estudio 600 hombres y mujeres mayores de 18 años, de los estratos socioeconómicos 3 y 4 de la ciudad de Cali. Se realizó Muestreo

por Conglomerados y las técnicas de análisis aplicados fueron el análisis estadístico descriptivo, análisis multivariado y la teoría microeconómica para el estudio del consumidor.

$$n' = \frac{(1.96)^2 * 0.25}{(0.04)^2} = 600$$

Etapa 3: se implementó el Análisis de Componentes Principales (ACP) es una de las técnicas de análisis multi-variante más utilizadas que tiene como principal objetivo la síntesis de la información o reducción de la dimensionalidad en número de variables.

RESULTADOS

Los consumidores caleños visitan las tiendas de barrio y los supermercados para la compra de los productos de la canasta familiar. Pero indiscutiblemente, la mayoría de productos son comprados en los supermercados, teniendo en cuenta factores de atracción como las características del establecimiento y la variedad de productos de oferta. (Tabla 6). El anterior hallazgo se refuerza con el hecho que en este establecimiento comercial es en el cual mayor dinero se invierte (Tabla 7).

Tabla 5: Establecimientos Frecuentados Para la Compra de Productos de la Canasta Familiar

Sitio de Compra	TOTAL	EDAD				ESTRATO		
		25 a 34	35 a 44	45 a 54	55 y más	Tres	Cuatro	Cinco
Supermercado	99,7%	99,8%	100,0%	99,3%	99,8%	100,0%	98,1%	100,0%
Tienda	90,6%	98,8%	92,4%	78,4%	95,1%	89,7%	93,6%	91,9%
Panadería	29,6%	26,8%	36,9%	19,4%	34,9%	28,4%	46,6%	18,1%
Rapitienda*	12,1%	4,9%	12,9%	19,9%	8,7%	10,7%	6,7%	24,3%
Galería / plaza de mercado**	18,2%	7,8%	20,9%	24,7%	16,5%	21,2%	13,8%	7,8%
Granero	13,5%	8,2%	16,3%	12,1%	16,0%	16,7%	7,8%	4,2%
Móvil***	8,7%	2,4%	5,0%	21,0%	4,3%	11,5%	1,3%	2,6%
Fruver****	,6%	,0%	1,4%	,0%	,8%	,8%	,0%	,0%

* La rapitienda – superete o minimercado son establecimientos minoristas que hacen parte del canal tradicional, junto con las tiendas de barrio. ** Galería o plaza de mercado: es un lugar, construido o destinado por el municipio, para servir de centro de expendio o abastecimiento de artículos de primera necesidad, limitando la presencia de intermediarios. ***Fruver: establecimiento que hace parte del canal tradicional que solo comercializa frutas y verduras. Fuente: elaboración propia.

Tabla 6: Dinero Invertido en la Compra Mensual de Mercado

	Total	Estrato	Tres	Cuatro	Cinco
	Dinero invertido mensualmente en el supermercado	Promedio	\$ 401.978,96	\$ 360.350,92	\$ 412.866,79
	Mediana	\$ 400.000,00	\$ 350.000,00	\$ 400.000,00	\$ 500.000,00
BASE		600	199	199	202
Dinero invertido mensualmente en la tienda	Promedio	\$ 80.854,79	\$ 82.434,11	\$ 91.526,63	\$ 62.389,41
	Mediana	\$ 50.000,00	\$ 50.000,00	\$ 50.000,00	\$ 50.000,00
BASE		600	199	199	202

Los datos de la tabla 6 muestran que el supermercado es el punto de venta en el cual se invierte mayor cantidad de dinero mensual, pues a su vez el sitio donde se compran la mayoría de productos de la canasta familiar. Fuente: elaboración propia.

La relación del consumidor con los establecimientos minoristas, tanto tiendas como supermercados, trasciende el componente económico racional, está afectada, también, por aspectos sociales y culturales.

En el presente estudio se consideraron entre los aspectos culturales y sociales, aquellos que trascienden a la relación de intercambio que se establece el comprador y el vendedor y que influyen en la elección y/o preferencia de un tipo de establecimiento minorista: tienda - supermercado. Además, se asume la cultura como la programación colectiva de la mente que diferencia a un grupo humano de otro, pero que deja espacio para las expresiones individuales y sub-culturales como normales, estando estas fundamentadas en cada grupo humano. Así, pues la tienda como espacio que pertenece y se integra a las prácticas sociales y culturales maneja horarios, presentación de productos, estrategias de pago y costumbres acordes al grupo social en el cual está anclada. De otro lado, Los atributos que desde el establecimiento inciden en la elección de compra de los consumidores se definen desde la mezcla del marketing: productos y servicios (naturaleza, calidad del surtido y servicio al cliente), distribución comercial (localización), precio y comunicación (publicidad, promoción y atmosfera del establecimiento).

CONCLUSIONES

Se identificaron elementos que el consumidor tiene en cuenta cuando va a comprar en la tienda y en el supermercado. Se realizó un agrupamiento en factores con las variables definidas, encontrando los siguientes para la tienda: Con las relaciones que se pueden establecer durante la compra; (Factor externo – características del entorno: cultural social) Con la forma como se entrega el servicio (factor interno: psicológico) y el producto en la tienda, (factor externo: características del establecimiento). El valor agregado relacionado con horarios, economía y servicio a domicilio (factor externo: características del establecimiento). La disponibilidad asociado con variedad de productos y la posibilidad de encontrar de todo, el hacer compras de urgencia y calidad de los productos. (Factor externo – característica del entorno: económico). Para el caso de los supermercados se obtuvieron cuatro factores que agrupan:

Características físicas del supermercado (factor externo – características del establecimiento-distribución comercial). La variedad en productos y marcas (factor externo – características del establecimiento – productos y servicios). La calidad y economía en los productos y los servicios que ofrecen (factor externo – características del establecimiento y el entorno). Comodidad (factor interno – psicológico) Los factores externos (económicos y del establecimiento) están presentes en la elección de cualquiera de los dos establecimientos. Los factores del individuo y el componente cultural social se identifican más en la elección de la tienda. De acuerdo con el análisis cualitativo el tendero cuenta con una buen autoimagen tanto en su capacidad para gestionar la tienda, como en sus características para atender al cliente (es un líder en su comunidad, está informado y se siente en capacidad de discutir diversos temas y en dar consejos a sus clientes). De igual forma, se caracterizó la población en estudio identificándolos como compradores reflexivos (compran en la medida de sus posibilidades - buscan la optimización del dinero aprovechando promociones, descuentos y precios favorables), les gusta guardar lo tradicional y las costumbres, (comprar siempre en la misma tienda, tiende a comprar las mismas marcas).

La comodidad, por la cercanía y el ahorro del tiempo es un aspecto que favorece a los clientes, puesto que realizan la compra “del día a día” en las tiendas por restricciones presupuestales o menor disponibilidad de recursos. Otro aspecto que genera comodidad es la variedad de servicios prestados: recepción y transmisión de mensajes entre los vecinos, publicación de información de interés general, hasta vigilancia respecto al movimiento de gente extraña o de personas sospechosas. Si bien el crédito o fiado, es una variable que diferencia a la tienda del supermercado, éste comienza a perder protagonismo. En los estratos más altos, la tienda se ha transformado en un medio de salir del apuro frente a agotados u olvidos de última hora que inciden en el bienestar familiar, ya sea por la dificultad para preparar las comidas (ingredientes o productos de los que no se dispone), la necesidad inmediata de mantener la casa arreglada (productos de aseo) o finalmente, la solución inmediata al aseo personal de los miembros de la familia.

Para la compra en la tienda, los atributos del establecimiento que consideran los clientes como determinantes son: la localización, consistente en la comodidad que brinda por la cercanía y ahorro de tiempo; la naturaleza

del surtido y los servicios adicionales, puesto que ellos encuentran los productos que de la canasta familiar, satisfacen las necesidades básicas, en las presentaciones por unidad y tamaño que requieren, aspectos que se traducen en beneficios psicológicos asociados con satisfacción hacia la misma, favoreciendo una mediana fidelidad hacia la tienda; las relaciones con el tendero que generan confianza, seguridad y empatía; la atmosfera del local, consistente en la limpieza, presentación física de los empleados y la organización de los productos. Finalmente se identifica que la publicidad no es un factor determinante para los clientes.

EL DESARROLLO DE UNA VENTAJA COMPETITIVA A PARTIR DEL CAPITAL HUMANO EN LAS EMPRESAS EMERGENTES

Andrés Garibaldi Munguía, Universidad Estatal de Sonora
Sergio Rivera Rodríguez, Universidad Estatal de Sonora

RESUMEN

Los cambios que se suscitan dentro de las economías en la actualidad presentan nuevos retos que obligan a las empresas de dichas economías a replantear su manera de operar, sin embargo estos cambios para los países en vías de desarrollo parecieran ser mas dramáticos, esto como resultados de que en estas economías la mayoría de las empresas (alrededor del 98%), están dentro de la clasificación de Micros, Pequeñas y Medianas empresas (MiPyMes). Este tipo de empresas que logran prevalecer o incluso crecer de manera sostenida por mas de un periodo de cinco años, se le conoce como empresas emergente. Con el movimiento de Globalización, los mercados de las economías en desarrollo resultaron ser un blanco muy atractivo y por las condiciones de las empresas que los atendían, altamente vulnerables. Los gobiernos de esta parte de la aldea global, han desarrollado programas para apoyar estas empresas pero gran parte de estos apoyos se limitan a asesorías y platicas motivacionales. Sin embargo al estudiar algunas de las propuestas de los estudiosos de las Ciencias Administrativas, en especial Michael E. Porter, es posible ver que ante las situaciones de constante cambio, la mejor manera de salir es contando con una Ventaja Competitiva. La cual puede desarrollarse en el área de Personal mediante el uso del Desarrollo Organizacional..

PALABRAS CLAVE: Empresas emergentes, ventaja competitiva, desarrollo organizacional y recursos humanos.

DEVELOPMENT OF A COMPETITIVE ADVANTAGE FROM HUMAN CAPITAL IN EMERGING COMPANIES

ABSTRACT

The changes that arise within economies currently facing new challenges that require businesses in these economies to rethink the way they operate, however these changes for developing countries appear to be more dramatic, as this results these economies in most companies (about 98%) are within the classification of Micro, Small and Medium enterprises (MSMEs). Such companies that manage to prevail or even grow steadily for over a period of five years, is known as an emerging enterprises. With the movement of globalization, markets in developing economies proved to be a very attractive target and the conditions of the companies that attended, highly vulnerable. Governments in this part of the global village, have developed programs to support these businesses but do not seem to be sufficient, since much of this support is limited to counseling & motivational talks. However by studying some of the proposals from scholars of Administrative Sciences, particularly Michael E. Porter, one can see that in situations of constant change, the best way out is expecting a Competitive Strategy. Which may develop in the area of Human Resources using the Organizational Development (OD).

KEYWORDS: *Emerging Business, competitive advantage, organizational development and human resources.*

INTRODUCCION

Los hallazgos de las investigaciones realizadas en las últimas décadas en lo que a ciencias administrativas se refiere, sugieren que para que una empresa ya sea industrial, comercial o de servicios, pueda ingresar, mantenerse o crecer en el mercado, es necesario que esta cuente con una ventaja competitiva, entendiendo por ventaja competitiva una estrategia que permita a la empresa ir un paso delante de sus competidores o dicho de otro modo, que facilite el posicionamiento de la misma en el o los segmentos de mercado a los cuales enfoca sus esfuerzos mercadológicos (Michael E. Porter. 1985).

Los cambios propiciados por el movimiento de Globalización han puesto a prueba la capacidad de los directivos de las empresas de todos los niveles, es decir tanto de los grandes corporativos como de la micro, pequeña y mediana empresa; como es de suponerse, si para los grandes corporativos los retos que se presentan son difíciles de sortear, esta problemática se potencializa al momento de hablar de las empresas de menor rango, pues las limitantes son mayores en todo sentido. Al escuchar la propuesta de desarrollar una ventaja competitiva, no es difícil pensar que para el desarrollo de las mismas es necesario contar con grandes inversiones, sin embargo revisando las propuestas que han hecho otros estudiosos de las ciencias propias de la administración, es posible encontrar otras áreas de oportunidad que rebasan el paradigma propuesto por Michael E. Porter.

REVISION LITERARIA

Las aportaciones al respecto plantean tres grandes áreas en las cuales se debe basar una organización para el desarrollo de una ventaja competitiva, las áreas en cuestión son las siguientes:

La cadena de valor: En este sentido la fortaleza puede consistir en llevar a cabo un meticuloso análisis de los costos en los que se incurre durante el proceso de la generación de sus productos (bienes o servicios) con la finalidad de optimizar la inversión hecha durante el giro normal de la empresa y así poder determinar el costo total del producto.

El determinar el costo total del producto, no necesariamente implica que la empresa pretenda penetrar en el mercado con el precio más bajo conocido también como precio líder, esto dependerá del posicionamiento que se quiera hacer del producto, ya que en contraposición al precio líder, existe también la opción de fijar al producto el precio más alto en su género, con la finalidad de posicionarlo como un producto exclusivo, el cual ira dirigido a un segmento de mercado reducido que esté dispuesto a pagar un precio alto digno de la elite a la que pertenece, a esta estrategia se le conoce como “Precio de desplume”. También se cuenta con la opción de fijar el precio promedio y esto consiste, como su nombre lo sugiere, en tomar el precio mas alto del mercado y el mas bajo para sacar un precio promedio logrando así un precio al cual se le denomina “Justo”, por último se cuenta con la opción (y probablemente la mas utilizada) de fijar el precio considerando el costo total, es la de fijar un precio aproximado al precio de venta del producto líder, siempre y cuando el costo resultante del análisis lo permita.

Lo anterior es una de las acepciones de la cadena de valor, ya que también puede referirse al desarrollo de alianzas o acuerdos con los proveedores de materia prima, mano de obra, suministros y demás empresas que intervienen en el canal de distribución, esta estrategia permite una consolidación de la operación de las organizaciones desde antes de la producción de sus satisfactores, hasta hacerlos llegar al consumidor final.

Diferenciación: El desarrollo de la estrategia o ventaja competitiva basada en la diferenciación, consiste en lograr que el bien o servicio que ofrece la organización a sus consumidores, debe contar con una característica positiva que lo distinga del resto de los competidores alcanzando así el posicionamiento por si mismo, la característica distintiva puede ir desde la presentación (variedad de medidas en las que se ofrece o bien

consistencias del producto pasta, gel, cremas, etc.), versiones (fragancias, sabores, colores, etc.) o cualquier otra innovación.

En ocasiones una compañía logra la diferenciación a través de contar con un producto único dentro de su mezcla de productos, a este se le conoce como producto diferenciado, por ejemplo, la compañía Unilever de México S. de R.L. de C.V., dentro de su familia de marcas cuenta con la marca Maizena y esta marca es la única que ofrece la fécula de maíz.

El contar con un producto diferenciado o único en su género ofrece numerosas ventajas como lo es baja o nula inversión para mantener su lugar en el mercado, esto como consecuencia de ser único, de tal manera que no cuenta con competencia directa, siendo la competencia más cercana la que se da con productos sustitutos, por ejemplo: en el caso de citado de Maizena, dependiendo del uso que se le vaya a dar, contara con competencia únicamente de productos sustitutos, es decir, si es para espesar, se podrá utilizar harina de trigo o maíz.

Enfoque: Por ultimo Michael E. Porter, sugiere la utilización del enfoque para trabajar en el diseño de la estrategia competitiva, el enfoque consiste precisamente en focalizar alguno de los aspectos en lo que a satisfacción de necesidades se refiere, por una parte la empresa puede enfocarse en el producto o la mezcla de productos que serán la base de su operación, esto implica la especialización de toda la organización en los distintos aspectos de los productos que maneja ya sean bienes o servicios, permitiendo así una fortaleza al cumplir con una de las premisas de ventas “conoce tu producto”.

El enfoque también se puede llevar a cabo en la segmentación clara y puntual de la parte del mercado a la que se va a dedicar, para ello se sugiere la utilización de los criterios básicos para la segmentación de mercados sugeridos por Philip Kotler y Gary Armstrong que son: Geográficas, Demográfica, Psicográfica, De la conducta o Estilo de Vida.

La importancia de considerar el enfoque como un área para desarrollar la ventaja competitiva es importante y su pertinencia se puede justificar partiendo de uno los principios de la economía el cual estipula que “tanto para los individuos, como para las empresas, los recursos son limitados y las necesidades infinitas”.

La experiencia ha dejado en claro la utilidad de las aportaciones de Michael E. Porter, pues hoy en día no es difícil identificar algunas de las ventajas competitivas desarrolladas tanto en las micro, pequeñas y medianas empresas, así como en los grandes corporativos.

De igual manera, es fácil identificar cuando alguna empresa recién constituida o que ha logrado subsistir a los cambios externos cada vez más frecuentes y más dramáticos, carecen de una fortaleza que los distinga y que permita al consumidor, incluirlo en su abanico de opciones al momento de satisfacer sus necesidades.

Aun con todas las bondades que ha traído la corriente porteriana, se pueden identificar los aspectos negativos que acarrea un paradigma como lo son el tomar las propuestas como marco único de acción, limitar la creatividad empresarial para reaccionar a los retos del entorno al contar con lineamientos preconcebidos los cuales se toman como verdades absolutas, infalibles e indiscutibles, en ocasiones tomar dichos paradigmas para calificar a las empresas como organizaciones eficientes, competitivas y de éxito, de ninguna manera se pretende descalificar las aportaciones de los estudiosos de la administración, pero la alta dirección no debe perder de vista que el comportamiento empresarial y los hallazgos que han surgido como resultado del estudio de dichos comportamientos, obedecen a una realidad y a un contexto específico, de tal manera que aun cuando las aportaciones parezcan sensacionalmente innovadoras, no gozan de un carácter universal.

VENTAJA COMPETITIVA, SU ORIGEN Y EVOLUCION

Si bien Michael E. Porter, es considerado como el primero en acuñar y definir el termino de ventaja competitiva (Competitive Strategy), es posible identificar la concepción del mismo concepto en distintas áreas de las ciencias y disciplinas de la administración, para ilustrar esta situación se rescata la evolución del enfoque mercadológico propuesto por Philip Kotler y Gary Armstrong.

Ellos definen a la Mercadotecnia, como el conjunto de actividades encaminadas a la identificación de las necesidades del cliente para desarrollar los bienes o servicios capaces de satisfacer dichas necesidades, para poder lograr una mayor efectividad en la aplicación de la Mercadotecnia, los autores antes mencionados proponen, para una mejor comprensión de la misma, analizar la el Marketing a partir de cuatro grandes áreas conocidas como las cuatro “P” y estas son: Precio, Plaza (Distribución), Promoción y Producto (bien o servicio).

Si se hace una comparación entre las aportaciones de los estudiosos de mercadotecnia y las de la administración estratégica hechas por Michael E. Porter, encontramos que ambas propuestas están encaminadas a desarrollar una fortaleza distintiva que permita el posicionamiento positivo de las organizaciones ante el público consumidor, ha dicha fortaleza se le llama ventaja competitiva.

EL DESARROLLO DE UNA VENTAJA COMPETITIVA A PARTIR DE LAS AREAS Y RECURSOS DE LA EMPRESA

Analizando otros factores o elementos que dan paso o que justifican la existencia de la administración, se puede apreciar de manera clara como el desarrollo de una ventaja competitiva difícilmente se puede sujetar o hacer exclusiva de determinadas áreas específicas, pues todo lo que tenga que ver con la empresa u organización puede representar un espacio para el desarrollo de las mismas, por ejemplo al revisar las funciones básicas de una empresa, las cuales tradicionalmente se clasifican en: Producción, Mercadotecnia-Ventas, Finanzas y Recursos Humanos.

Recordando de manera sucinta, cada una de las funciones de la empresa y sin hacer un análisis muy concienzudo, podemos discernir que en cada una de estas funciones y de las actividades que comprenden, es posible edificar una fortaleza, una situación muy parecida encontraremos al recordar los recursos de la empresa: Materiales, Financieros, Tecnológicos y Capital Humano.

Como se puede apreciar, cada una de las funciones y cada uno de los recursos de la organización son áreas fértiles para llevar a cabo el desarrollo de ventajas competitivas, el siguiente reto, es no perder de vista la sustentabilidad o durabilidad de las estrategias o ventajas desarrolladas.

De acuerdo con Charles W. L. Hill y Gareth R. Jones, la durabilidad de la ventaja competitiva de una organización dependerá de tres factores, por una parte se tiene la dificultad de las barreras para la imitación, esto incluye barreras tanto externas como internas que enfrenta la competencia.

En segundo término esta la capacidad de los competidores para imitar la innovación, esta ira en función de las fortalezas y debilidades de la competencia para responder a la acción estratégica de la organización mediante el desarrollo de una estrategia similar o superior a la que ha diseñado, y por último el nivel general de dinamismo en el ambiente industrial, en este sentido, la durabilidad de la ventaja competitiva dependerá del tamaño de la industria (entendiendo por industria el conjunto de empresas dedicadas al mismo giro, por ejemplo el conjunto de empresas que se dedica a la producción de automóviles, conforman la industria automotriz, etc.), así como el grado de agresividad de las empresas que constituyen dicha industria.

Tomando en cuenta las barreras o retos que enfrenta la durabilidad de una ventaja competitiva, podemos concluir que mientras más creatividad, tiempo, dinero y esfuerzo se inviertan en el proceso para la elaboración de la estrategia, mayor será la durabilidad (sustentabilidad) de la misma.

EL CAPITAL HUMANO COMO BASE PARA EL DESARROLLO DE UNA VENTAJA COMPETITIVA

Actualmente, las corrientes administrativas acuñan el termino “Capital Humano”, puntualizando que si bien los individuos que conforman la fuerza de trabajo dentro de la organización no son propiedad de la misma, siguen siendo un recurso que puede y debe ser capitalizado a través del desarrollo de sus potencialidades, habilidades, conocimientos y actitudes que le otorgan tanto la educación formal, como la experiencia.

Para algunos autores, el recurso humano es el recurso más importante de una organización, partiendo de la premisa de que este recurso es el único que puede administrar el resto de los recursos, y es por ese mismo hecho que se debe procurar tener personal que cuente con los conocimientos, habilidades y actitudes necesarios para obtener el máximo aprovechamiento del manejo de los recursos, con un alto grado de eficiencia y eficacia para poder ser una empresa productiva.

La experiencia ha sugerido que una ventaja competitiva, también puede desarrollarse tomando como elemento principal al capital humano, encaminando sus esfuerzos hacia el posicionamiento de la empresa mediante la calidad y calidez en el servicio.

Para lograr el desarrollo de las potencialidades del capital humano en las organizaciones, es necesario llevar a cabo una evaluación diagnóstica que permita determinar la posición de la empresa en relación con los requerimientos que el entorno está demandando de ella, de esta manera los directivos de la empresa estarán en posición de tomar decisiones más acertadas para lograr la competitividad.

Una vez que se tiene la información de la situación actual de la empresa, se puede proceder a investigar los requerimientos del contexto de la empresa a fin de determinar las debilidades donde se tiene que trabajar; para lograr tanto el diagnóstico, la identificación de las debilidades de la empresa y proceder al diseño de una estrategia que permita dar respuestas al entorno de la organización, es recomendable recordar la estrategia de cambio planeado que recomendada por las ciencias administrativas y que se conoce como Desarrollo Organizacional (DO).

La propuesta de este documento, es precisamente utilizar esta herramienta administrativa (el DO) para llevar a cabo el diseño de una estrategia de cambio planeado así como el cambio mismo, que permita a las empresas emergentes poder optimizar los resultados de sus esfuerzos, así como la aplicación de recursos.

LAS EMPRESAS EMERGENTES Y EL DESARROLLO ORGANIZACIONAL

La fundéu BBVA (fundación del español urgente), define a la empresa emergente como la “empresa o sociedad que, pese a su juventud y falta de recursos, consigue obtener resultados en el mercado y pasar a un siguiente nivel estructural al ser impulsada por otros inversionistas o absorbida por empresas ya consolidadas”, es decir, empresas emergentes son aquellas que aun con lo adversa que pueda parecer las condiciones de crecimiento del mercado al que pertenecen, sostienen un crecimiento constante el cual les permite brincar de una clasificación de empresa a otra clasificación superior, por ejemplo de micro empresa a pequeña empresa, de pequeña a mediana y de mediana a gran empresa.

Las empresas emergentes (también conocidas como start-up), se encuentran en importante desventaja con los competidores que han aparecido con el movimiento de globalización, pues por lo general el movimiento de

globalización atrae a las grandes transnacionales y con ello se incrementan los retos para las empresas tradicionales u originarias de los mercados que son blanco de dicho movimiento.

Los estudios realizados a la micro, pequeña y mediana empresa (MiPyMes), han arrojado que este tipo de empresas encuentra entre sus múltiples retos, el de tener con muy poco capital, de tal manera que la suerte que experimentan al sortear las desavenencias que enfrenta cualquier empresa considerada grande, internacional y/o transnacional, se le debe agregar el de la falta de capital.

Aun cuando el gobierno se ha esforzado en la creación de programas que tienen como objetivo principal el dar asesoría administrativa y financiera a las MiPyMes, los empresarios de este sector, centran su atención en otras limitantes las cuales ellos consideran que son el verdadero problema y son las relacionadas con el dinero, por un lado se encuentra la liquidez y por otro la falta de solvencia.

Joaquín Rodríguez Valencia en su obra “Como Administrar Pequeñas y Medianas Empresas”, enuncia que la liquidez es un problema muy común dentro de las pequeñas y medianas empresas, y se refiere a que en ocasiones una empresa puede tener activos suficientes para poder pagar sus deudas, pero no contar con efectivo para hacerlo. Es por ello que se deben establecer políticas de crédito, para que de esa manera se tenga un poco más protegida a la empresa de mencionado problema.

El segundo problema relacionado con el dinero es el de la falta de solvencia, este problema resulta más dramático que la falta de liquidez, ya que esto significa que no se cuenta con activos suficientes para pagar las deudas. Este problema es la principal consecuencia de no contar con una planeación dentro de la empresa.

Como consecuencia de la falta de liquidez y solvencia, las MiPyMes se ven obligadas a agudizar su ingenio y creatividad para el desarrollo de una ventaja competitiva, pues no les es factible el invertir en grandes cantidades de mercancías o materia prima que les permita una economía en escala para mejorar su precio de venta o bien el margen de ganancias.

bien invertir en el diseño e innovación de productos únicos o diferenciados, mejorar precios, lanzar promociones atractivas que atraigan a los consumidores reales y potenciales o desarrollar una fortaleza mediante el diseño de un canal de distribución óptimo o invertir en equipo de reparto para vencer la barrera de el punto de venta mediante la entrega de productos a domicilio.

Y no solo es el desarrollar una ventaja competitiva pues hay que cuidar la sustentabilidad de la misma y su crecimiento.

Las situaciones antes mencionadas sugieren que la mejor opción para el desarrollo de la ventaja competitiva es, el equipo de trabajo o capital humano y esto se puede lograr con la aplicación del DO.

El desarrollo organizacional se define como aquellas actuaciones dentro de la organización destinadas a aumentar su eficacia. Según Warren Bennis, el desarrollo organizacional es una compleja estrategia que pretende cambiar las creencias, actitudes, valores y estructura de las organizaciones para que puedan adaptarse mejor a las nuevas tecnologías, mercados y desafíos. Por tanto no es cualquier cosa hecha para mejorar una organización, ni la función de capacitación de la organización, es un tipo particular de cambio en el proceso destinado a lograr un determinado tipo de resultado final.

Con la finalidad de facilitar la visualización y comprensión de las actividades o etapas que comprenden un DO, es conveniente realizar un debate epistemológico de las tres propuestas más aceptadas por los estudiosos de la materia de Recursos Humanos:

El modelo de Kurt Lewin.

Kurt Lewin (1940) introduce dos ideas fundamentales sobre el cambio planificado:

Lo que está ocurriendo en cualquier punto en el tiempo es una resultante de un campo de fuerzas opuestas, de donde el fenómeno se presenta como un equilibrio resultante de ambas fuerzas, dicho fenómeno es el punto de equilibrio alcanzado por el empuje de las fuerzas.

El modelo de cambio planteado por Lewin, es un proceso compuesto de tres etapas: a) descongelar la antigua conducta (o la situación), b) moverla a un nuevo nivel de conducta y c) volver a congelar o recongelamiento de la conducta en el nuevo nivel.

Para implementar el modelo se requiere:

Determinar el problema –la situación a superar, identificar la situación actual, identificar el meta por alcanzar, identificar las fuerzas positivas y negativas que inciden sobre él mediante el análisis del campo de fuerzas, y desarrollar una estrategia para lograr el cambio de la situación actual dirigiéndolo hacia la meta.

El modelo de Planeación de Lippitt, Watson y Westley

El modelo de estos autores plantea 7 etapas durante el proceso de cambio, dichas etapas –debido al enfoque psicológico de los autores- incluyen la necesidad de un agente “externo” al sistema –consultor-, así como una fase de “diagnóstico” inicial: Exploración, Entrada, Diagnóstico, Planeación, Acción, Estabilización y Evaluación y Terminación.

Como se ve, el modelo de Lippitt, Watson y Westley enfatiza el papel del facilitador, el cual es alguien externo a la organización, lo que le permite tener mayor objetividad el momento de apoyar y guiar el cambio. Este modelo es uno de los primeros modelos en DO, y muestra claramente el rol del consultor como alguien externo a la organización.

Modelo de Faria Mello: Este está dividido en fases o etapas de consultoría como los demás modelos de cambio. Ella dice que: Contacto, contrato y entrada se funden en una gran fase inicial de multicontactos, precontratos y subcontratos, con diferentes grados de profundidad o como extensión de entrada.

Así el Desarrollo Organizacional (DO) puede implicar intervenciones en la organización de procesos, la utilización de habilidades englobadas dentro de la economía, así como la reflexión, la mejora de los sistemas, la planificación y el auto-análisis.

Gracias al DO, es posible conocer cuáles son los requerimientos de un entorno cambiante en las distintas variables o fuerzas externas que rodean a una organización como lo son la economía, el ámbito político-legal, los cambios tecnológicos, culturales, etc. para poder así identificar la situación de la empresa y de este modo diseñar estrategias o planes de acción que permitan optimizar los esfuerzos de la organización para satisfacer de la mejor manera los requerimientos en cuestión.

Una vez que se inicia el proceso de DO, es posible identificar las áreas de oportunidad de la empresa y se empieza a trabajar en ellas, de tal manera que a través del diagnóstico, descongelamiento, inserción de la nueva conducta o cultura organizacional, una vez que se han sugerido los cambios deseados para la nueva postura de la organización, se procederá al congelamiento, los pasos del proceso que se acaban de citar se llevan a cabo por medio de la intervención del agente de cambio.

METODOLOGIA

El presente documento, es el resultado de una investigación propia del paradigma cualitativo, ya que se pretende identificar la factibilidad de poder llevar a cabo el desarrollo de una ventaja competitiva a través de la utilización de una de las herramientas de cambio planeado, propio del área de recursos humanos como lo es el desarrollo organizacional. De la misma manera es importante señalar que para poder llevar a cabo la

presente investigación, se utilizó la consulta de bibliografía física y electrónica, por lo que se trata de una investigación tanto documental como de campo, ya que para su realización se aplicó un cuestionario el cual fungió como instrumento de recolección de datos primarios.

Dicho cuestionario se aplicó a una muestra de micros, pequeñas y medianas empresas del universo de empresas de estos rangos, registradas en el padrón del Municipio de la comunidad fronteriza de San Luis Río Colorado, Sonora, México.

RESULTADOS

Los comerciantes encuestados, coincidieron en que la alternativa que tenían para poder competir con las empresas transnacionales o extranjeras que hicieron su aparición en esta ciudad fronteriza, era el ofrecer un mejor servicio o un servicio de calidad, lo cual creían se podía lograr únicamente a través del trabajo en equipo, pero para ello era necesario sensibilizar y motivar a su personal, logrando con ello ser más competitivos dentro de su giro o industria; en el apartado de conclusiones, se presentan los resultados de la presente investigación de manera concreta.

CONCLUSIONES

El DO, no necesariamente implica grandes inversiones para poderse llevar a cabo, esta situación ofrece una alternativa confiable para poder desarrollar una ventaja competitiva tomando como base el Capital Humano.

El DO, permite potencializar al Capital Humano al formarlo mediante la capacitación y otras intervenciones, para que desarrolle los conocimientos, habilidades y actitudes que coadyuven al logro de los objetivos de la organización.

Conociendo los requerimientos del entorno, es posible que las empresas pertenecientes a la MiPyMes (emergentes), puedan optimizar sus esfuerzos y aplicación de recursos al enfocar los mismos a satisfacer necesidades claramente identificadas.

A través de un cambio en el Capital Humano, es posible despertar un sentido de compromiso con la organización que permita asegurar la calidad en el servicio.

Es importante destacar que de acuerdo con el cliente, un servicio de calidad puede amortiguar el impacto negativo de las deficiencias en la calidad de un producto, sin embargo, un producto de calidad difícilmente puede amortiguar el impacto negativo de las deficiencias en la calidad de un servicio.

Si bien el DO, no se limita únicamente a la capacitación del capital humano, la capacitación sigue siendo una de las estrategias de intervención más importantes dentro del DO.

El contar con un capital humano con la preparación que le permita reaccionar a un entorno cambiante, brinda a las MiPyMes una ventaja competitiva que le permitirá hacer frente incluso a los retos que representa el enfrentarse a los grandes corporativos.

Dora Aguilascho Montoya, Universidad Michoacana de San Nicolás de Hidalgo

RESUMEN

En las últimas décadas la matrícula de la educación superior ha crecido como nunca en su historia. Por otro lado se cuenta con un mercado de trabajo que ha mostrado un incipiente crecimiento que ha sido incapaz de ofrecer el número de oportunidades que se requieren para satisfacer a una población económicamente activa, altamente demandante, esto ha provocado que cada vez sea más común ver que algún individuo que ostente el título universitario se enfrente al problema del desempleo, esta situación tan común ha llevado a que muchas personas y organizaciones cuestionen el incremento de la matrícula de la educación superior en nuestro país. Hacemos una revisión de la situación actual que enfrentan los egresados de las carreras de contabilidad y administración a nivel nacional y por otro lado los rendimientos de la inversión en educación superior, para poder obtener conclusiones y proponer algunas recomendaciones.

PALABRAS CLAVE: Inserción, Mercado Laboral, Rentabilidad, Inversión En Educación Superior

LABOR MARKET ANALYSIS FOR GRADUATES OF THE CAREERS OF ACCOUNTING AND MANAGEMENT IN MEXICO.

ABSTRACT

In recent decades, the enrollment in higher education has grown as never before in its history. On the other hand it has a labor market that has shown an incipient growth has been unable to provide the number of opportunities that are required to satisfy an economically active, highly demanding population, this has meant that it is increasingly common to see that any individual holding a university degree faces the problem of unemployment, this common situation has led many individuals and organizations challenge the increase in enrollment in higher education in our country. We review the current situation facing graduates for careers in accounting and management at national level and on the other hand returns to investment in higher education, in order to draw conclusions and propose recommendations.

INTRODUCCIÓN

Se ha concebido a la educación como uno de los elementos más virtuosos de la humanidad y por tanto se ha depositado en ella, la esperanza de toda sociedad, esperando se resuelvan un sin fin de problemáticas mediante el fomento y ampliación de su matrícula en todos sus niveles y particularmente en el nivel superior. Sin embargo, la insuficiente oferta que presenta el mercado laboral para una sociedad altamente demandante, da como resultado a un nutrido grupo de egresados de nivel superior en situación de desempleo, lo cual deriva en el cuestionamiento de la puesta en práctica de esta política pública. Adicional a este problema se ha considerado a la educación y particularmente a la educación superior como el principal elemento de

movilidad social, esperando también, abatir de esta manera la desigualdad abismal que existe en la distribución de los ingresos, sin embargo la naturaleza de este fenómeno de expansión de la matrícula de la educación superior ha dado como consecuencia que el problema se agrave, la explicación es que la participación de los individuos en la educación superior resulta ser más importante por parte de aquellos sectores cuyos ingresos no son tan malos, mientras que la participación en este nivel educativo por parte de los de más bajos ingresos es menor. Así, los cuestionamientos acérrimos acerca de la inversión en la educación superior son cada vez más duros y precisos.

Por otro lado, de todas las áreas del conocimiento, se promueve de manera insistente y de forma preferencial, las áreas duras, es decir; las áreas de ciencias puras (física y matemáticas) e ingenierías, como una necesidad evidente de tener elementos para poder aspirar al desarrollo propio de tecnología y promover la investigación y el desarrollo. En este contexto no se habla mucho del papel de las carreras tradicionales como la contaduría y la administración. Por lo que en este trabajo realizamos una revisión exhaustiva de los elementos relacionados con dicha problemática a fin de analizar la situación con el mayor número de elementos posibles y poder exponer las conclusiones.

Evidencia Empírica de la Relación Existente Entre Escolaridad y Riqueza de una Nación Mediante el Modelado

Existe basta evidencia empírica alrededor del vínculo entre escolaridad de una población y su riqueza, particularmente hacemos referencia a los resultados más recientes obtenidos para México. La culminación de los estudios de educación primaria son bien recibidos por el mercado laboral, caso contrario de los estudios de educación secundaria los cuales no observan una ventaja respecto de los primeros. Sin embargo, los estudios de bachillerato manifiestan un repunte, y el reconocimiento a la preparación académica se observa en el hecho de que, en promedio, un individuo que ostente el grado universitario recibe un salario 78% superior al de una persona sin instrucción, del mismo modo los estudios de posgrado tienden a elevar significativamente el salario recibido en 33% en promedio respecto a un individuo con grado universitario. Rojas, M., Angulo, H. Velázquez, I. (2000).

Para describir de una manera completa el escenario no debemos pasar por alto que los individuos que deciden estudiar en lugar de insertarse en el mercado laboral incrementan sus costos indirectos de la inversión en educación, asociados con los salarios que dejan de percibir debido a su elección. Lo cual eleva los costos y la rentabilidad derivada de la inversión en capital humano cae. Rojas, M., Angulo, H. Velázquez, I. (2000). Sin embargo, un hecho que debilita al mismo tiempo el argumento, de los costos indirectos de la inversión en capital humano, disminuyen su rentabilidad, es que, más del 80% de los individuos con educación superior están empleados en comparación con los ocupados en el grupo de los individuos con bachillerato que representan menos del 60%. Y la brecha de empleo entre estos dos grupos de individuos es de 30 puntos porcentuales en muchos países. OCDE (2014). Este importante hecho direcciona la discusión en el sentido positivo de la inversión en capital humano.

Clasificación de las 10 Carreras con Mejores Ingresos

En este caso las carreras de contaduría y administración no aparecen propiamente como tales en las listas, sin embargo debido a la versatilidad de aplicación de ellas no es raro que algunos profesionistas del área puedan ejercer en varios de los rubros mencionados en la Figura 1, principalmente en el caso del rubro 3 (finanzas, banca y seguros). STPS (2014). Es evidente que el área de minería y extracción sea considerada principalmente para el área de ingeniería de la minería y de la extracción, o algunas otras ingenierías afines como la metalúrgica, pero todas las empresas requieren de un administrador y de un contador. STPS (2014). Lo mismo en cualquiera de los siguientes casos pero definitivamente un espacio de mayor necesidad del área administrativa y contable es el rubro 3 para finanzas, la banca y seguros. Así mediante una consideración

pecuniaria observamos una situación promisorio para aquellos estudiantes que hayan elegido las carreras de contabilidad o administración.

Figura 1: Carreras con Mayor Número de Ocupados

	Carreras con mayor número de ocupados	Miles de personas (2014)	De los cuales se ocupan en lo que estudiaron (%)
1	Administración y gestión de empresas	758,707	69.6
2	Contabilidad y fiscalización	732,136	81.1
3	Derecho	683,260	82.1
4	Formación docente para educación básica, nivel primaria	320,474	94.5
5	Medicina	287,862	95.8
6	Ingeniería industrial, mecánica, electrónica y tecnología, programas multidisciplinarios o generales	260,292	66.5
7	Tecnologías de la información y la comunicación	257,951	83.5
8	Ciencias de la computación	251,347	79.0
9	Psicología	220,063	85.9
10	Ingeniería mecánica y metalurgia	193,734	69.3

* Son las carreras que cuentan con el mayor número de ocupados.

Cifras actualizadas al segundo trimestre 2014, Encuesta Nacional de Ocupación y Empleo.

Fuente: STPSI (2014).

CONCLUSIONES

En ésta revisión se ha pretendido citar a documentos oficiales y trabajos de investigación más reconocidos y recientes con el propósito de vestir algunos comentarios al respecto: A pesar de tener información no se puede ser categórico y decir que la inversión en educación sea la respuesta a todas las problemáticas que se presentan en un país como el nuestro. Sin embargo es lo más cercano a eso. La problemática tiene muchas aristas y difícilmente podemos visualizar todas al mismo tiempo. Es conveniente reflexionar en cuanto a la calidad de la educación que se imparte en el nivel superior, y esto resulta delicado. Sin embargo, y a pesar de lo anteriormente expuesto no creo que sea conveniente proponer una política pública de mediocridad donde pensemos como nación que los niveles de cobertura de educación superior son suficientes y que no vale la pena aspirar a incrementar, pues como dicen al final no hay trabajo para los que egresan.

Desde luego aunque la obligación es compartida, está claro que muchas de las iniciativas le corresponden al gobierno, pues las características del mercado laboral con el que contamos son el resultado del olvido de una política clara que busque mejores condiciones para que las empresas se establezcan en el estado, existen ejemplos de estados vecinos que muestran condiciones muy diferentes al nuestro. Razón por la cual muchos de los egresados se ven obligados a emigrar en busca de un mejor empleo. En cuanto a nosotros los profesores nuestra labor en el aula es definitiva para alcanzar mejores estándares de calidad educativa y conseguir por añadidura una fuerza de trabajo más calificada misma que debe de reflejarse en el incremento de la productividad de las empresas y en general del bien social. Son tantas las tareas por hacer y muchas más las mejoras que se pueden obtener y todo esto a partir de apostar por la inversión en educación superior.

LA RESPONSABILIDAD SOCIAL UNIVERSITARIA: ESTUDIO DIAGNÓSTICO PRELIMINAR EN LA UNIDAD SALTILLO, DE UNIVERSIDAD AUTÓNOMA DE COAHUILA

Jesús Alberto Montalvo Morales, Universidad Autónoma de Coahuila
Yanet Villanueva Armenteros, Universidad Autónoma de Coahuila
María del Carmen Armenteros Acosta, Universidad Autónoma de Coahuila
Gabriela Margarita Reyna García, Universidad Autónoma de Coahuila
José Refugio Duque Retiz, Universidad Autónoma de Coahuila

RESUMEN

La Responsabilidad Social Universitaria ha adquirido gran significación en el presente siglo como parte de la reflexión integral de su misión en la formación, investigación y participación en el desarrollo económico, social y ambiental de la sociedad. Ello plantea un cambio organizacional, estrategias y acciones orientadas a generar sinergias entre los diferentes grupos de interés al interior de la institución y con los agentes del entorno. Por ello el objetivo de este trabajo es mostrar la percepción de la responsabilidad social desde la perspectiva de los maestros y alumnos de la Facultad de Ciencias de la Administración de la UAdeC. La metodología utilizada son los instrumentos desarrollados por el BID para universidades latinoamericanas sobre el diagnóstico de efectividad de la relación de la universidad con la sociedad. Para ello aplicó cuestionarios en dos de sus ámbitos: organizacional y educativo en la FCA Unidad Saltillo, como primera fase del proyecto de investigación general. Los datos obtenidos fueron procesados con técnicas estadísticas descriptivas. Los resultados muestran, desde una perspectiva cuantitativa, las diversas percepciones de los docentes, estudiantes y personal de dirección y administrativo tanto de los aspectos de la RSU en la misión, estrategia y acciones de la organización objeto de estudio y en el ámbito de la formación de los estudiantes. Los resultados servirán como información para establecer el compromiso institucional, identificar acciones a corto y largo plazo dentro de los objetivos estratégicos y en la elaboración de indicadores que midan la efectividad de la acción socialmente responsable de universidad.

PALABRAS CLAVE: Responsabilidad Social Universitaria, ámbito organizacional, ámbito educativo.

THE UNIVERSITY SOCIAL RESPONSIBILITY: PRELIMINARY DIAGNOSTIC STUDY IN SALTILLO UNIT, AUTONOMOUS UNIVERSITY OF COAHUILA

ABSTRACT

The University Social Responsibility has acquired great significance in this century as part of the comprehensive reflection of its mission in education, research and participation in the economic, social and environmental development of society. This poses an organizational change, strategies and actions to create synergies between different stakeholders within the institution and with agents in the environment. Thus, the aim of this paper is to show the perception of social responsibility from the perspective of teachers and students of the Faculty of Administration Sciences UAdeC. The methodology used are the tools developed by the IDB Latin American universities on the diagnostic effectiveness of the relationship between the university and society. This applied questionnaires in two of its areas: organizational and educational in Saltillo Unit FCA, as the first phase of the overall research project. The data obtained were processed using

descriptive statistical techniques. The results show, from a quantitative perspective, of perceptions of teachers, students and administrative staff address both aspects of MSW in the mission, strategy and actions of the organization under study and in the field of training students. The results will serve as input to establish the institutional commitment, identify actions in the short and medium-term strategic objectives and the development of indicators to measure the effectiveness of college socially responsible action.

INTRODUCCIÓN

El concepto de Responsabilidad Social se ha desarrollado principalmente en los quehaceres de las empresas, donde se ha encontrado la necesidad de construir comportamientos socialmente responsables en organizaciones de servicios públicos (Gaete, 2008), Organizaciones no lucrativas (Marcuello Servós, 2008), y las Instituciones de Educación Superior. (De la Cruz & Sasía, 2008; Gaete, 2008; Quezada, 2011). El concepto de responsabilidad social no supuso el inicio de actividades socialmente responsables en la universidad, sino que algunas instituciones ya tenían iniciativas relacionadas en particular en el ámbito ambiental (Dominguez, 2009).

La Universidad según Morín et al (2003) desde una visión holística, debe tratar de articular las diversas partes que la conforman en un proyecto de promoción social de principios éticos y de desarrollo social equitativo y sostenible; para la producción y transmisión de conocimiento responsable y la formación de profesores ciudadanos igualmente responsables.

El término de Responsabilidad Social Universitaria (RSU), como concepto en construcción, que cuenta con buenas prácticas entre organizaciones y empresas., que comprende a la universidad en la reflexión integral de su misión de formación, investigación y participación en la sociedad. Según F. Vallaeys (2013: 189) “La Responsabilidad Social Universitaria supera el enfoque de la proyección social y extensión universitaria y apuesta por una reflexión integral de la Universidad como institución académica que influye en el entorno social. Universitaria”.

La noción de responsabilidad social universitaria (RSU) ha adquirido un sentido distinto en el siglo XXI y ha pasado a referirse a la relación entre el papel desempeñado por las Instituciones de Educación Superior en la formación de personas que posean perfiles multidisciplinarios, generando conocimiento en el contexto de su aplicación y vinculándose organizadamente con el entorno y lo que la sociedad demanda en beneficio de sus mayorías. Su resultado se concreta con el diseño y puesta en marcha tanto de proyectos de desarrollo humano sostenible como de estrategias cuyo propósito es el acortamiento de las brechas cognitivas entre sectores, instituciones y países, por lo que su efecto provoca cambios tanto en la reconfiguración de la estructura institucional y la naturaleza de sus funciones sustantivas, como en el diseño de nuevos dispositivos que hacen accesible la operación de innovadores mecanismos de cooperación internacional, organización de red y vinculación con sectores sociales y económicos diversos (Peer Revieweed, 2012).

La Responsabilidad Social Universitaria ha adquirido gran significación en el presente siglo como parte de la reflexión integral de su misión en la formación, investigación y participación en el desarrollo económico, social y ambiental de la sociedad. Ello plantea un cambio organizacional, estrategias y acciones orientadas a generar sinergias entre los diferentes grupos de interés al interior de la institución y con los agentes del entorno.

Si bien, las instituciones educativas representan un centro del saber, de concentración del conocimiento para beneficio de la sociedad o comunidad en general, es realmente importante aportar mucho más que eso y ser un factor clave para detonar una sociedad integrada con otros participantes, como gobierno y empresas,

para poder dar soporte a un desarrollo sustentable de manera global, en un marco económico que prometa un crecimiento que lleve a la región, el estado y el país a visionarse a través del tiempo.

Consideramos que el Decálogo del CEMEFI y los principios del Pacto Mundial México, reflejan la línea de orientación hacia dónde dirigir las acciones para detonar la Responsabilidad Social, adaptándolo a lo que una universidad de acuerdo a sus áreas que trabaja, como lo es la educación, investigación, programas de apoyo comunitario, etc., a partir del cual podrá definir su propio modelo o estructura para integrarla a los objetivos institucionales.

El Banco Internacional de Desarrollo (BID) elaboró un manual para los primeros pasos de la Responsabilidad Social Universitaria (RSU) que se ha tomado como punto de partida por instituciones mexicanas, y en particular para la presente investigación.

En la Universidad Autónoma de Coahuila (UAdeC), Unidad Saltillo existen diferentes facultades que agrupan a Ciencias Económicas y administrativas, Medicina, Derecho, Educación e Ingenierías, entre otras, cada una de las cuales tiene diferentes actores locales con los cuales interactúan. La UAdeC tiene definida dentro de su misión, visión y objetivos estratégicos que expresan los compromisos de responsabilidad social con las empresas, con las instituciones sociales, de salud, políticas, entre otras, con las comunidades y con el medio ambiente, a sí como en la visión estratégica de cada facultad. Sin embargo no existe un seguimiento y evaluación de esas actividades ni de sus indicadores principales. Por lo que se proyectó realizar un estudio diagnóstico de las actividades de la responsabilidad social en la Facultad de Ciencias de la Administración, la cual se hará extensiva después a otras facultades del Área de Ciencias Económicas y Administrativas.

Por ello el objetivo de este trabajo es mostrar la percepción de la responsabilidad social desde la perspectiva de los maestros y alumnos en el ámbito organizacional y educativo.

En este marco, se estructura el trabajo de la siguiente forma: en la introducción una breve descripción teórica de las diferentes perspectivas de la RSU, la metodología seguida en el estudio de caso, resultados y análisis de los instrumentos aplicados y las conclusiones.

METODOLOGÍA

La investigación exploratoria y descriptiva, realiza un estudio empírico utilizando la metodología desarrollada por el BID para universidades latinoamericanas sobre el diagnóstico de efectividad de la relación de la universidad con la sociedad, la cual comprende cuatro pasos que se muestran en el Gráfico No. 1.

Figura 1: Los cuatro pasos de la responsabilidad social universitaria

En esta figura se muestra el esquema de la metodología propuesta en el Manual de RSU y se describen los cuatro pasos de la RSU. Fuente: Vallae, F. et al. 2009.

La metodología del BID para la responsabilidad social de las universidades abarca cuatro ámbitos (Vallaey, F. et al, 2009):

El auto diagnóstico, segundo paso de la metodología que se evidencia en este trabajo, comprende diferentes tipos de datos, de los cuales se expondrán los primeros:

- a) Las percepciones de los actores internos a la universidad (indicadores cualitativos)
- b) Los resultados de desempeño de la universidad (indicadores cuantitativos)
- c) Las expectativas de los grupos de interés externos a la universidad (opiniones y sugerencias)

El estudio empírico, comprende dos de los ámbitos: organizacional y educativo, realizado a través de encuestas aplicadas a estudiantes, docentes y trabajadores y personal directivo de la facultad. Se diseñó una muestra con las siguientes características, que se refleja en la tabla No.1

Universo: Estudiantes , maestros y personal adminsitrativo.

Ámbito: Facultad de Ciencias de la Administracion, carreras de Administracion y Contaduria Publica.

Muestra estructurada con el siguiente tamaño: 308 encuestas distribuidas de la siguiente forma: estudiantes maestros, trabajadores y personal directivo.

Selección de la muestra: aleatorio proporcional al tamaño de las poblaciones e intencional.

Muestreo: nivel de confianza de 95% con un error máximo de 5%.

La muestra a obtener de la institución se determinó por (Cochran, 1963) donde recomienda que para poblaciones grandes se emplea el juego de ecuaciones que se muestra a continuación para obtener una muestra representativa de las proporciones. En este caso $N=1556$ personas, cuando se toma un nivel de confianza del 95% el valor de $n=308$, como se refleja en las siguientes ecuaciones:

$$n_0 = (Z^2pq)/e^2 = (1.96)^2(0.5)(0.5) / (0.05)^2 = 384 \quad (1)$$

$$n = n_0 / (1 + (n_0/N)) = 384 / (1 + (384/1556)) = 308 \quad (2)$$

Tabla No. 1 Estructura de la muestra

Total	Muestra	Población	%
Maestros	25	120	20.8
Trabajadores	12	44	27.3
Estudiantes	349	1392	25.1
Total	386	1556	24.8

En esta tabla se describe la muestra a la que se le aplicó la encuesta del estudio empírico. Fuente: Elaboración propia

Los instrumentos fueron adoptados del estudio de referencia del BID (2009), validado en su creación por grupo de expertos y en su aplicación en diferentes contextos latinoamericanos. Contiene afirmaciones positivas y un formato de respuesta tipo Likert con cinco opciones ascendente. Se construyó una base de datos en hoja de cálculo con la datos obtenidos en los cuestionarios. Para el procesamiento se utilizaron técnicas estadísticas descriptivas de tendencia central atendiendo a las variables de control: año, carrera, puesto de trabajo.

RESULTADOS

Percepción Por Ámbitos De Estudio.

Como primera fase del trabajo se realizó una actividad de reflexión grupal en el Consejo Directivo Ampliado, con la participación de los diversos actores de la comunidad universitaria de la facultad en torno a la pregunta: ¿qué quiere decir ser una universidad socialmente responsable?, ¿qué universidad queremos ser?, a partir de lo cual se revisó la misión, visión y valores de la facultad vinculados a la responsabilidad social.

El segundo paso fue la aplicación de los cuestionarios como parte del auto diagnóstico a través de la percepción de los diversos actores que responde a la pregunta: ¿cómo estamos ahora en cuanto a nuestra responsabilidad social? Sus resultados fueron los siguientes.

Figura 2: Ámbito Organizacional

En esta figura se reflejan los resultados de la encuesta aplicada a estudiantes, no docentes y docentes-investigadores en el ámbito organizacional.

En esta figura se muestran reflejan un nivel bajo de los indicadores en Campus responsable. Siendo los estudiantes y trabajadores no docentes los de niveles más bajos y los indicadores de medio ambiente y nivel de desarrollo personal y profesional los menos reconocidos. Se muestra un nivel bajo de la gestión social del conocimiento, siendo los estudiantes los de niveles más bajos y el indicador difusión y transferencia de conocimientos socialmente útiles hacia públicos desfavorecidos el menos reconocido.

Figura 3: Ámbito Educativo

En esta figura se reflejan los resultados de la encuesta aplicada a estudiantes e investigadores en el ámbito educativo.

En esta figura se muestra un nivel bajo en la formación profesional y ciudadana, siendo los estudiantes los de niveles más bajos y el indicador articulación entre profesionalización y voluntariado solidario el menos reconocido.

CONCLUSIONES

Los resultados del auto diagnóstico a los actores internos de la universidad como segundo paso de la metodología, reflejan un nivel bajo de los indicadores en Campus responsable. Siendo los estudiantes y trabajadores no docentes los de niveles más bajos y los indicadores de medio ambiente y nivel de desarrollo personal y profesional los menos reconocidos.

Los resultados del auto diagnóstico a los actores internos de la universidad como segundo paso de la metodología, reflejan un nivel bajo en la formación profesional y ciudadana, siendo los estudiantes los de niveles más bajos y el indicador articulación entre profesionalización y voluntariado solidario el menos reconocido.

Los resultados del auto diagnóstico a los actores internos de la universidad como segundo paso de la metodología, refleja un nivel bajo de la gestión social del conocimiento, siendo los estudiantes los de niveles más bajos y el indicador difusión y transferencia de conocimientos socialmente útiles hacia públicos desfavorecidos el menos reconocido.

Los resultados del auto diagnóstico a los actores internos de la universidad como segundo paso de la metodología, reflejan un nivel bajo de los indicadores lo cual indica que hay que establecer objetivos y planes de acciones específicos para evaluar su cumplimiento por etapas en el futuro.

La presente investigación está en etapa de proceso por lo que debe continuar con todos los ámbitos de la metodología e incorporar otras técnicas como la entrevista y el trabajo grupal. Sus resultados servirán como información para la orientación a corto y largo plazo de los objetivos estratégicos, y la elaboración de indicadores objetivos medibles de la responsabilidad social que se integren a la estrategia global de las

facultades y la universidad. Es decir, permitirá pasar a la identificación de las acciones y las estrategias conducentes al logro institucional para mejorar la responsabilidad social universitaria en la facultad.

LAS TECNOLOGÍAS DE LA INFORMACIÓN Y LA COMUNICACIÓN, EN BUSCA DE UNA MEJOR CALIDAD DE VIDA

María Belén Murillo Pedraza, Universidad Autónoma de Baja California
Claudia Viviana Álvarez Vega, Universidad Autónoma de Baja California
Carlos Ignacio Espinoza Romero, Universidad Autónoma de Baja California

RESUMEN

En este trabajo se plantea el uso de la Domótica en los hogares como una alternativa que permita proporcionar una mejor calidad de vida a sus habitantes. Los avances tecnológicos han modificado la forma de trabajar, relacionarse socialmente, divertirse y porque no hasta el trabajo doméstico se ha modificado permitiendo elevar la calidad de vida de las amas de casa, con las diferentes tecnologías se tienen alternativas que mejoran y proporcionan comodidades, tal es el caso de las casas inteligentes, por esto la necesidad de plantear un proyecto que dé a conocer una forma de vivir diferente con la utilización de las nuevas tecnologías de la información y la comunicación, como en su momento sucedió con los electrodomésticos. Casa inteligente o domótica es el conjunto integrado de servicios proporcionados por Sistemas Tecnológicos Integrados como medio para satisfacer necesidades básicas de: seguridad, comunicación, gestión energética y confort de las personas y su entorno inmediato.

PALABRAS CLAVE: Domótica, Nuevas tecnologías, electrodomésticos, avances tecnológicos.

ABSTRACT

INFORMATION TECHNOLOGY AND COMMUNICATION: QUALITY OF LIFE

This project talks about the use of Home Automation as a new choice to provide a better quality of life. The recent developments in technology have changed the ways to work, the ways to socialize. Having fun and even domestic duties have changed as well. These changes allow housewives to increase their quality of life. All these developments offer new choices to improve duties at home and provide comfort. Smart Houses are the best example of development and comfort. We feel the necessity to start a project that shows everyone a different way to live, using Information Technology and Communication advances, as happened with electrical appliances in their moment. Home Automation or Smart House, is the integrated combination of services provided by Integrated Technological Services as the better way to satisfy basic needs of security, communication, energy and comfort of people and their environment.

INTRODUCCIÓN

Este trabajo plantea el uso de la domótica, con el objetivo de tener un mayor confort y comodidad en el hogar y en la vida cotidiana es un propósito que los seres humanos desean lograr en algún. Debido al gran avance tecnológico de la época en la que se vive actualmente las tecnologías de la información y la comunicación brindan herramientas que permiten lograr estas y otros beneficios.

Proporcionan a las familias distintas alternativas para el uso de las tecnologías y así con esto estar a la vanguardia en aspectos tecnológicos y contar con los innumerables beneficios que se pueden obtener con la creación de casas inteligentes.

Planteamiento Del Problema

Con el paso de los años y la evolución de la humanidad el hombre ha tratado de tener una mejor calidad de vida y por eso ha adoptado la tecnología en muchos aspectos de la vida cotidiana, por esto la necesidad de plantear un proyecto que dé a conocer de una forma diferente la adopción de tecnología como los aparatos electrodomésticos. Definición de Casa inteligente (Domótica) Es un conjunto de servicios proporcionado por sistemas tecnológicos integrados, como el mejor medio para satisfacer estas necesidades básicas de seguridad, comunicación, gestión energética y confort de las personas y su entorno más cercano. En México el encargado de evaluar el grado de inteligencia de un edificio o construcción es el IMEI2 quien define una construcción inteligente como (Saúl Rosas Acosta 2012) “aquel que esta centralmente automatizado para optimizar su operación y administración de forma eléctrica es altamente eficiente para minimizar el uso de energía altamente seguro y confortable que respetan las normas tecnológicas”.

En México el encargado de evaluar el grado de inteligencia de un edificio o construcción es el IMEI2 quien define una construcción inteligente como (Saúl Rosas Acosta 2012) “aquel que esta centralmente automatizado para optimizar su operación y administración de forma eléctrica es altamente eficiente para minimizar el uso de energía altamente seguro y confortable que respetan las normas tecnológicas”.

Debido a la nueva tendencia que tienen las empresas constructoras al realizar lotes de vivienda cada vez más pequeñas es que se pretende implementar las casas inteligente para llegar a una mayor comodidad en los hogares es que se pretende elaborar sistemas como este donde se controle aspectos cotidianos en el hogar y tener una mayor comodidad en los hogares ,poder prender y apagar la iluminación de tu hogar bajar y subir las persianas o prender el sistema de audio sin tener que llegar físicamente a cualquiera de estos puntos.

Se ha identificado esto como un problema en personas discapacitadas que en ocasiones se quedan solos en sus casas y que debido a su discapacidad no pueden tener control sobre este tipo de situaciones , con estos sistemas automatizados ellos podrían realizar este tipo de labores sin ningún inconveniente , teniendo las herramientas necesarias para hacerlo. Pero no solo a personas como estas beneficiaria una solución de casa inteligente, si no también se ve por el lado de los grandes índices de inseguridad y robos que se presentan a casa habitación que se han incrementado en estos tiempos, sería un medida de seguridad poder controlar estos 3 aspectos desde manera remota y así simular la presencia de personas dentro del hogar.

Otro de los problemas que se vive hoy en día son los altos índices de inseguridad que se han presentado a nivel general y Mexicali no es la excepción con un total de 8,251 eventos de este tipo en el municipio de Mexicali , según datos proporcionados por la Secretaria de Seguridad Pública del Estado de Baja California, el uso de casas inteligentes impactarían de gran manera en aspectos como estos creando un ambiente de control de factores internos en la casa como la iluminación se podría reducir la perceptibilidad de una vivienda sola y desprotegida , esto solo sería una herramienta más para tratar de evitar estos incidentes.

Justificación

El presente trabajo de investigación nace con la necesidad de conocer los diferentes dispositivos necesarios para automatizar procesos cotidianos en los hogares, y tener un control de diferentes componentes de la casa desde un punto remoto, así como conocer cuáles son los diferentes elementos de una casa que serían importantes y relevantes para ser automatizados.

Hoy en día debido a los grandes índices de inseguridad que vivimos en la comunidad es bastante importante tomar medidas de seguridad en los hogares por eso sería de gran beneficio instalar este tipo de sistemas y

tener controlada y monitoreada la vivienda desde cualquier punto remoto con una muy buena conexión de datos.

Alcances y Limitaciones

En una primera fase se prevé la elaboración del sistema que controle los dispositivos mecánicos de la casa desarrollado bajo una plataforma JAVA que correrá bajo el sistema operativo Android, este diseño se aplicara a una habitación de la vivienda. El proyecto debido a su inversión tecnológica, está dirigido principalmente a un sector social donde su economía sea solvente.

La implementación de un solución de este tipo conlleva a que en los hogares se cuente con equipo tecnológico, como computadoras sistemas eléctricos modernos y que los usuarios cuenten con teléfonos que soporten el sistema con el que se va a desarrollar así como con una buena conexión de datos para los mismos, una de las principales limitaciones en este tipo de proyecto es:

a)- El financiamiento para arrancar con la elaboración de los prototipos. b)- Otra limitación sería que los hogares no contarán con acceso a una conexión de internet.

CONCLUSIONES

Actualmente la convergencia del internet, las tecnologías de información y los servicios hace que las personas estén conectadas entre sí, el futuro y la evolución de estas tecnologías es llegar a conectar nuestros dispositivos eléctricos para también estar conectados con ellos lo que se denomina el internet de las cosas. Otra de las cosas que son a favor de este tipo de proyectos es que a todos nos gusta la comodidad y mantener un sentido tecnológico avanzado en cada uno de los procesos rutinarios que hacemos y las nuevas generación cada vez son familiares a la tecnología y no les cuesta nada de trabajo manejar este tipo de aplicaciones.

EL DISEÑO GRÁFICO COMO HERRAMIENTA PARA EL DESARROLLO COMUNITARIO: CULTURAS NATIVAS DE BAJA CALIFORNIA

Isabel Salinas Gutiérrez, Universidad Autónoma de Baja California
Ervey Leonel Hernández Torres, Universidad Autónoma de Baja California
Ixchel Astrid Camacho Ixta, Universidad Autónoma de Baja California
Susana Rodríguez Gutiérrez, Universidad Autónoma de Baja California

RESUMEN

Los pueblos Kumiai ubicados en los poblados de San Antonio de Necua y San José de la Zorra, en Baja California México, representan una oportunidad para demostrar cómo el diseño de una identidad gráfica puede ser una herramienta para el desarrollo comunitario. La problemática a la que se enfrenta actualmente dicha comunidad es el desaprovechamiento de su identidad nativa como ancla para una correcta identificación del grupo y posicionamiento turístico de sus sitios de interés. Visitantes de Ensenada, Tijuana, Tecate y Estados Unidos dejan una derrama económica importante sobre los destinos turísticos del Valle de Guadalupe relacionados con la industria vitivinícola, restaurantes y hospedaje, sin embargo es poco conocido que uno de los asentamientos nativos se encuentra justo en el sitio entre viñedos y que se encuentran abiertos a recibir visitante que quieran acampar en sus tierras o solo visitarlas. Este fenómeno se debe a que tradicionalmente se ha relacionado el nombre de Valle de Guadalupe con la imagen del vino, pero no se vincula con el asentamiento nativo, sus pinturas rupestres y sitios de interés; el posicionamiento del lugar se está basando en uno sólo de los atractivos. El presente trabajo trata del diseño con causa social, mismo que puede proveer de una identidad gráfica adecuada, entre otras necesidades de identificación, que resulte en un adecuado posicionamiento para el aparato turístico así como el rescate y difusión de la cultura nativa.

GRAPHIC DESIGN AS A TOOL FOR COMMUNITY DEVELOPMENT: NATIVE CULTURES OF BAJA CALIFORNIA

ABSTRACC

The Kumiai village of San Antonio Necua located in Valle de Guadalupe, Baja California México, become an opportunity to demonstrate how graphic design could be an instrument for community development. The current issue that face this ethnic group is the wastage of their native heritage as an identity in the tourist industry. Visitors of Ensenada, Tijuana, Tecate and the United States leave an important economic benefit on the tourist destinations in Valle de Guadalupe related to wine industry, restaurants and lodging. However it's nearly unknow that the native settlements are right at the site between vineyards and is open to receive visitors. The name Valle de Guadalupe has been linked with the image of wine industry, but not

related to the native settlement, cave paintings, etc.; positioning instead, is relying on only one of the attractions. This document discusses how the graphic design can take social causes and it can provide adequate identification, and other visual requirements, resulting in a suitable positioning for the tourism system and the recovery and broadcast of native culture.

INTRODUCCIÓN

El tema central de toda identidad es el sentido de pertenencia de los individuos a su grupo de origen. Este proyecto de identidad gráfica y branding, propone primero una valoración estético-comunicativa del diseño nativo, para lograr que los descendientes sientan orgullo por sus raíces. Los Kumiai de esta zona están abandonando sus actividades tradicionales para dedicarse a labores agrícolas. En realidad la pérdida de las tradiciones es un problema histórica que tiene implicaciones económicas, culturales, y de otras índoles que no son el motivo de esta investigación, pero que debemos entenderlas y considerarlas como una variable a observar. Al respecto Olmos apunta: El proceso de desintegración y de aculturación entre estos grupos está impulsando por razones diversas. Inicialmente, desde tiempo de la Colonia, se distingue la mala administración de las primeras misiones, así como la concentración de la población fuera de sus lugares de origen, lo cual tuvo como resultado el exterminio de su propio medio ecológico y de su cultura. A partir del siglo XVIII la mayor parte de los grupos del sur de la península había desaparecido.(Olmos 2012) Los indígenas de la familia yumana de Baja California no suman más de un millar de personas entre los cinco pueblos autóctonos (ver tabla 1). Sin embargo, pese a la caída vertiginosa de la población indígena sobreviviente de la asimilación y la aculturación, existe todavía una población cuyas características culturales permiten hacer analogías y relaciones entre estos grupos y otros que viven en los Estados Unidos (del grupo llamados Kumeyaay-Diegueño, que se encuentran en las reservas de Sycuan, Viejas, Barona, Campo, Capitán Grande, Cuyapaipe, Inaja, Jamul, La Posta, Manzanita, Mesa Grande, San Pascual, y Santa Ysabel) Para los k'miai, son los diegueños de la Alta California sus parientes cercanos con una lengua común (Olmos 2012).

Y esos Kumiai-diegueños están aprovechando eficazmente su raíz identitaria en la promoción de sus casinos y centros de convenciones como Sycuan, Barona, Viejas, y el branding del lugar está apoyado en la idea de conocer la vida en la reserva nativa. Por lo tanto la problemática que sí podemos atender desde la función social del diseño gráfico es transmitir la idea de prevalecer, de distinguir el 'nosotros' por medio de la oposición a un 'ellos'. Utilizar la identidad gráfica como un paradigma del sistema estético-económico y comunicar que alguien está consolidado, como cultura, como comunidad y como producto cultural. Suele considerarse a la identidad gráfica como una necesidad del mundo industrializado principalmente porque se ha convertido en una herramienta básica de la mercadotecnia y es esencial para las formas de comercialización moderna. Sin embargo la identificación por medio de gráficos existe desde la antigüedad. El grado de iconicidad o abstracción de los conceptos y las técnicas son las que han variado dependiendo de los propósitos a comunicarse.

La tendencia ancestral de los humanos a marcar su propio cuerpo para incorporar señales distintivas, tenía una función esencial identitaria: la de reconocerse —y manifestarse a los demás— como integrante de un grupo o una tribu. Otras intenciones se unían a esta autoexpresión marcaría de pertenencia, ya fueran de significación jerárquica en el grupo, ya tuvieran carácter ornamental, decorativo o estético. (Costa, 2013) Esta práctica de marcaje del propio cuerpo en los pueblos primitivos es evidente que no tiene relación alguna con el marcaje de los productos en la actualidad. Pero sí existe algo que es común a ambas prácticas: la función identitaria de dar a conocer, hacer reconocer y recordar la pertenencia de un individuo a un grupo,

o de un conjunto diverso de productos y servicios a una organización mediante signos característicos tipificados. La costumbre de identificar es pues inherente a la sociedad humana por lo que se comprueba que existe una relación imagen-sociedad. Sin embargo cuando el diseñador obra como codificador de la relación entre emisor y receptor es cuando el logotipo adquiere unas condiciones propias que son “producto de una muy refinada profesionalización de lo gráfico” (Tapia, 1999) Por otra parte el branding de lugares y la identidad de las comunidades se construye y comunica en gran medida través de los objetos cotidianos generados en la misma. En ese sentido, podemos considerar entonces que la imagen que percibimos de una cultura se fortalece o debilita en medida que se socializa la identidad gráfica de sus objetos. Vasijas, vestidos, manteles, objetos de la vida diaria pueden convertirse en canales de comunicación visual que transmiten la esencia cultural de los pueblos (Julier, 2010). Dicha identidad estará invariablemente dotada de una estética particular que gozará de la aceptación o rechazo de determinados receptores. Si apelamos a este paradigma, esta estética llega a convertirse en un objeto deseado, que a través del branding puede materializarse en un objeto de consumo. En este mismo tenor, Ehrenberg (1991) argumenta que si el artista no aprende a hacer acto de presencia en el mercado y ante su sociedad, no logrará añadir sus aportaciones a nuestra historia del arte. Los artistas deben generar mecanismos que den razón y fuerza a su cultura, convirtiéndola en un centro de importancia regional.

En términos de diseño, la estética de los pueblos yumanos ha sido poco estudiada. Entre los que se han ocupado del tema está Miguel Olmos Aguilera, investigador del COLEF, quien recomienda revisar el potencial de la estética del objeto en algunos grupos indígenas del norte de México y “realizar el análisis directo de las imágenes de las artes indígenas, lo que nos da un campo sólido sobre el que se cimentan conclusiones e hipótesis a propósito del sistema estético de los pueblos del noroeste” (Olmos, 2011) Por otra parte el Instituto de Investigaciones Culturales-Uabc Museo con la colaboración del Instituto Nacional de Antropología e Historia (INAH) han impactado en el rescate de la producción artesanal y del aspecto de sus códigos visuales resultando en la exposición “Yumanos: Jalkutat, el Mundo y la Serpiente Divina” una exhibición que logró mostrar la vida cotidiana y presencia actual de los pueblos indígenas de Baja California, a través de una colección de objetos que en su mayoría son parte del patrimonio de la UABC y que estuvo montada hasta mayo de 2013. Esta exhibición logró socializar en la región la estética de los pueblos yumanos. Existen también asociaciones civiles que participan del negocio de las artesanías, como la marca registrada *Cuatro Etnias: fibras ancestrales* que se identifica como una agrupación de los Artesanos indígenas Nativos de Baja California, con sede en Ensenada Baja California. Por lo consiguiente, los diversos grupos yumanos, poseen un mercado restringido para sus productos artísticos, mismos que son comprados a menudo por instituciones gubernamentales que aseguran su difusión hacia otros mercados. Con la implementación de una identidad gráfica y branding adecuado que logre dar presencia en el mercado y ante su sociedad, los artistas nativos pueden generar mecanismos que den razón y fuerza a su cultura, convirtiéndola en un centro de importancia regional puesto que los intereses gubernamentales los apoyan, por ejemplo con la reciente introducción de proyectos ecoturísticos en la comunidades kumiai que abren un espacio importante para la obtención de recursos económicos, en particular para San Jose de la Zorra.

REVISION LITERARIA

Se analizaron diversas aproximaciones de actores externos al grupo étnico, mismos que se involucran en la difusión y transmisión del conocimiento sobre las etnias colaborando desde sus muy particulares fines y objetivos, entre ellos: el Gobierno Federal de México, el Gobierno del Estado de Baja California, Instituciones paraestatales como el Instituto Nacional de Antropología e Historia (INAH), la Comisión Nacional para el Desarrollo de los Pueblos Indígenas (CDI), el Instituto de Investigaciones Culturales (ICC) Uabc-Museo y Medios de Comunicación. El propósito de analizar las acciones de estos actores externos es tener un panorama de la información que llega al gran público relativa a la cultura Kumiai, para establecer el punto de partida respecto de la necesidad de identificación. La página web del Gobierno del estado brinda información sobre el perfil sociodemográfico: “Han evolucionado demográficamente desde el momento de su creación esto fue en el año de (1995), en el municipio de Rosarito. De acuerdo a datos del CONAPO,

en el año 2010 el municipio contó con 77,661 habitantes”. (Baja California, Gobierno del Estado, 2013). En el mismo sitio se menciona a través de su apartado Periodo Histórico que “para subsistir durante una época del año vivían de la recolección de plantas, hierbas y semillas y en el invierno se dedicaban a la cacería y pesca. Actualmente esta comunidad indígena Kumiai ha quedado reducida a un pequeño núcleo estimado de 93 personas, concentradas en tierras comunales en un poblado llamado San José de la Zorra. Las actividades a las que se dedican son: las mujeres elaboran cestos de junco y rama tierna de sauce para su comercialización, y los hombres al trabajo en el campo como vaqueros, pescadores o constructores de cercos, además que están inscritos al programa de autoempleo, este consiste en ejecutar caminos rurales por tiempo de 6 a 7 meses al año” (Baja California, Gobierno del Estado, 2013). También se menciona en la página web del Gobierno del Estado que “a la fecha cuentan con una Escuela Primaria de la comunidad, un Jardín de niños apoyado por el programa PAEPI y CONAFE, una Escuela Secundaria que actualmente funciona sólo como sala de juntas, un museo que contiene la historia y archivos de la comunidad. Cuentan además con una línea de radio de onda corta, una línea telefónica del sistema satelital, y una iglesia católica llamada iglesia de la comunidad de San José de la Zorra”. (Baja California, Gobierno del estado, 2013).

El Comité de Planeación para el Desarrollo del Estado de Baja California (COPLADE), a través de su revista Estado en Movimiento pública: “Estado en Movimiento Comunidades Indígenas Septiembre 2013”. Esta publicación consta de 21 páginas destinadas a los pueblos indígenas yumanos de Baja California, COPLADE nos dice acerca de la lengua de los Kumiai que “Esta lengua se encuentra en peligro de extinción, solamente la gente mayor la habla, el INALI también la ubica en muy alto riesgo de desaparición ya que el censo nacional de población y vivienda 2010, reporta la existencia de 381 hablantes” (COPLADE, 2013) COPLADE añade que “Eventualmente dichos proyectos suelen ser muy exitosos, en particular la renta de las cabañas, la venta de las artesanías y la creación de museos comunitarios que visitan turistas, estudiantes e interesados en las culturas indígenas. Por otra parte se encuentran los que tienen pequeñas actividades comerciales a pequeña escala, como tiendas, camiones. Finalmente están aquellos que lo único que tienen para sobrevivir es su fuerza de trabajo. Esta población, al igual que otras comunidades, trabaja en la reparación de los caminos de terracería y sobre todo en la producción de la vid y el procesamiento del vino” (COPLADE, 2013).

En el artículo de COPLADE también se habla acerca de la economía y la subsistencia de los Kumiai. Menciona que una parte de las personas asalariadas en los cultivos de compañías vitivinícolas en el Valle de Guadalupe son Kumiai o descendientes. Menciona lo paradójico de que los indígenas eran dueños originarios del territorio de todo el Valle de Guadalupe antes de la llegada en 1905 de inmigrantes rusos a quienes se les concedieron 100 años de las tierras. Se menciona que en la actualidad hay una situación de lucha en San Antonio Necua por 80 hectáreas, los Kumiai aseveran que los territorios fueron invadidos por la vinícola L.A. Cetto (COPLADE, 2013). La Comisión Nacional para el Desarrollo de los pueblos Indígenas hace mención en un comunicado de prensa número 077 llamado Presencia de las Culturas indígenas del norte de México en el Castillo de Chapultepec, que la CDI y el INAH “Inauguran una muestra museográfica de los 13 pueblos indígenas del norte del país en el Museo Nacional de Historia. Que con esta muestra se busca generar una visión de México como una nación multicultural, así como sensibilizar al público sobre el daño que significa la pérdida de los idiomas originarios y las expresiones artísticas milenarias”. (CDI, 2014) A través de la red social de la Asociación civil llamada Instituto de Culturas Nativas (CUNA), se nos da a conocer información acerca de los Kumiai, esta Asociación está dedicada a trabajar por la preservación de las culturas indígenas nativas de la península de Baja California. Por ende se conoce que esta Asociación convive muy frecuentemente con esta etnia.

Una de las muchas publicaciones que se tiene sobre los Kumiai es que el viernes 13 de junio del presente año en San Antonio Necua se celebrará una fiesta donde habrá cantos, danzas, juegos y alimentos tradicionales de los Kumiai. (Instituto de Culturas Nativas, 2014) Toda esta información se divulga entre el gran público ya sea a través de videos producidos por INAH, por antropólogos de San Diego State University, entre otros muchos estudiosos del tema, y se encuentra disponible a través de sus páginas web

y localizables a través de las redes sociales. También se ha hecho la difusión al público no especializado por medio de exposiciones como la mencionada “Yumanos:Jalkutat, el Mundo y la Serpiente Divina”, o por medio de eventos como las ferias artesanales y por supuesto con el trabajo del Museo Comunitario Kumiai por lo que podemos concluir que “La imagen no es una cuestión de emisión, sino de recepción. Una última concepción sostiene que la imagen es "una representación mental, concepto o idea" que tiene un público acerca de la empresa, marca o producto.” Así Joan Costa define la imagen como " la representación mental, en la memoria colectiva, de un estereotipo o conjunto significativo de atributos, capaces de influir en los comportamiento y modificarlos". (Costa Johan , 1999) Y es esa representación mental la que podemos desde la disciplina del diseño gráfico ayudar a establecer.

METODOLOGIA

Se identifica la incidencia sobre tres segmentos. Por un aparte es de beneficio regional rescatar el patrimonio de todos los grupos indígenas del Estado, quienes representan el origen de todos los bajacalifornianos. Por otra se beneficia el sector turístico del Valle de Guadalupe, al tener una expansión del perfil del turista, que hasta el momento se ha basado en la cata del vino, dejando fuera el potencial de ofertar visitas al turismo familiar y cultural. Y se beneficia a las comunidades nativas de Baja California que se encuentran en los municipios de Ensenada, Tecate. En Baja California, la población se encuentra dispersa en pequeños pueblos tal como se muestra en la Tabla 1.

Tabla 1: Población Indígena de Baja California

Grupo	Localidad	Población	Municipio	Habitantes De Lengua Indígena
Cucapá	Cucapá el Mayor	300	Mexicali	75

Tabla 1. (Olmos 2011) a partir de la información publicada por CDI. Delegación Baja California. Responsable Norma Alicia Carbajal Acosta. 2010.

Mientras que se beneficia directamente al centro recreativo Kumiai Siñaw Kumatay perteneciente a la comunidad de San Antonio de Necuá para quienes se diseñará una identidad gráfica lo cual significa dotarlos de las herramientas para mejorar el branding del lugar.

Objetivo General

Describir cómo la identidad gráfica y el branding puede ser un instrumentos que contribuyan al desarrollo comunitario.

Objetivo Específico

El diseño de una identidad gráfica para el centro recreativo Kumiai Siñaw Kumatay perteneciente a la comunidad de San Antonio de Neucá, como base para el branding del lugar.

Para cumplir el Objetivo se pretende:

Realizar análisis directo de las imágenes de las artes indígenas para obtener una caracterización del sistema estético de los pueblos del noroeste.

Realizar la conceptualización, proceso de bocetaje, y reticulado.

Elaborar un manual de identidad

Elaboración de aplicaciones según las necesidades actuales y/o futuras del centro recreativo Kumiai Siñaw Kumatay.

La categorización de la información se realizó en base al método de Barret (1994) para el análisis de arte y artes menores. Tomando en cuenta el primer nivel de descripción que considera los siguientes aspectos:

Forma de arte: Forma de arte tanto si es arquitectura, escultura, pintura o alguna de las artes menores.

B. Medio y técnica: Medio de trabajo ya sea barro, piedra, acero, pintura, etc., y la técnica (herramientas usadas).

Tamaño: Tamaño y escala de trabajo (relación con la persona y/o el marco y/o el contexto)

Elementos: Elementos o formas generales (sistema estructural de arquitectura) dentro de la composición, incluyendo construcciones de poste y dintel o pinturas con muchas figuras alineadas en una fila; identificación de objetos.

Eje: Descripción del eje sea vertical, diagonal, horizontal, etc

Línea: Descripción de la línea, incluyendo si el contorno es suave, plano, irregular, etc.

Contorno: Descripción del modo en que la línea forma el contorno de la forma y el espacio (volumen); distinguir entre líneas de objetos y líneas de composición, por ejemplo: grueso, delgado, variable, irregular, intermitente, indistinto, etc.

Relación entre formas: Las relaciones entre las formas, por ejemplo: grandes y pequeñas, si se superponen, etc.

Color: Descripción del color y la combinación de la paleta de colores.

Textura y comentarios: Textura de la superficie o de otros comentarios acerca de la ejecución del trabajo.

Contexto: Contexto del objeto: ubicación original y fecha.

Esta investigación se sustenta sobre el marco teórico de la sociología del diseño, la estética, la imagen corporativa, identidad gráfica y branding de lugares. Es un estudio descriptivo con el cual se obtiene un panorama más preciso del problema a partir del cual se estructuran las estrategias operativas, conociendo las variables que se asocian y poniendo a prueba la hipótesis. Se realiza primero una caracterización de la estética kumiai por lo que es necesario revisar su morfología que, designa primeramente el conjunto de rasgos o grafemas tipificados y a partir de ello proponer un estudio multidisciplinario donde se involucra no solo el diseñador, sino el mercadólogo, el museógrafo y el comunicólogo.

RESULTADOS

En la figura 1 observamos un jilú elaborado en junco enrollado en forma helicoidal. La figura 2 muestra el proceso de elaboración de un jilú de junco sin ornamentación, esta pieza facilita la identificación del tramado y textura. La figura 3 presenta un sawil con tapadera con el mismo tramado helicoidal y diferentes motivos ornamentales. En esta parte de la investigación se realizó el estudio de la estética kumiai a partir de las piezas originales de la colección particular del Instituto de Investigaciones Culturales UABC-Museo y de piezas elaboradas por los artesanos del poblado estudiado, información con la que se realizó la observación, registro y caracterización de las formas.

En las figuras 4 y 5 observamos el proceso de abstracción de las formas utilizando el método de bocejate a mano alzada del tramado, separando figura de fondo, después de este paso se procede a la vectorización de los trazos donde se reduce aún más la abstracción, para finalmente incorporar los datos a la creación de una identidad gráfica.

Por su parte la visita de campo al asentamiento de San Antonio de Necua (Figuras 6-9) permitió elaborar un registro del sitio incluyendo el acceso desde la carretera, estado y tipo de uso de las instalaciones, señalización, e identificación del centro recreativo, así como el entorno natural.

CONCLUSIONES

Al momento del cierre de esta publicación el equipo de investigación se encuentra por una parte desarrollando la caracterización del sistema estético yumano-kumiai a partir de sus piezas artesanales y por otra parte dando inicio con la gestión de la identidad gráfica para el al centro recreativo Kumiai Siñaw Kuatay perteneciente a la comunidad de San Antonio de Necua, que eventualmente necesitará de los servicios de otras actividades como publicidad, redes sociales, prensa, diseño, entre otras acciones estructuradas que ayudarán al cumplimiento del objetivo y a la idea que nos motiva de que el diseño gráfico no sólo puede generar extraordinarios éxitos comerciales, sino que tiene toda la capacidad de apoyar causas sociales de identidad. Esto Para probar una hipótesis de correlación entre las variables: identidad gráfica - estética yumana- objeto deseado- objeto de consumo.

BIOGRAFIA

Isabel Salinas Gutiérrez. Comunicóloga por formación quien después de colaborar en equipos de diseño gráfico y entender la necesidad de crear profesionistas interdisciplinarios, se titula de la Maestría en Comunicación y Diseño Gráfico afirmando su interés por la investigación formal del diseño. En junio de

2014 fue aceptada al programa de Doctorado en Diseño en la Línea de Investigación, Nuevas Tecnologías de la Universidad Autónoma Metropolitana Azcapotzalco. Actualmente profesor- investigador en el Centro de Ingeniería y Tecnología de la Universidad Autónoma de Baja California, adscrita al programa educativo en Diseño Gráfico, Líder del Cuerpo Académico Diseño y Comunicación y responsable de la Academia de Humanidades para Diseño. Ha trabajado colaborativamente en el diseño de libros digitales para el CA de Química Aplicada, con el del CA Diseño Integral Ambiental produjo un método sustentable para la realización de exposiciones, y tiene proyectos sobre la utilización de la identidad gráfica para el desarrollo de las etnias bajacalifornianas. En 2012 fue seleccionada por el Comité Nacional de Evaluación (CENEVAL) para conformar el Consejo Académico del EGEL DISEG. Como docente ha sido asesora y sinodal de tesis sobre diseño, ex -Directora de la Escuela de Comunicación y Mercadotecnia de Universidad Xochicalco y promotora de la Difusión Cultural en la unidad académica de Valle las Palmas de UABC.

Ervey Leonel Hernández Torres. Maestro en Tecnología Educativa y Lic. en Comunicación. Profesor-Investigador de Tiempo Completo en el Centro de Ingeniería y Tecnología de la UABC, Responsable de la Academia de Tecnología para Diseño Gráfico y Coord. del Depto. de Educación Continua (CITEC). Amplia formación en torno a la producción audiovisual y diseño multimedia. Colaborador en proyectos de divulgación científica para la SIFyQA (España). Ha participado como ponente en distintos eventos internacionales como el Encuentro Latinoamericano de Docentes del Diseño (Argentina), el Congreso Internacional de Educación Continua (AMECYD, México) y el Congreso Virtual sobre Tecnología, Educación y Sociedad (CENID, México) entre otros. Miembro del CA Diseño y Comunicación.

Ixchel Astrid Camacho Ixta. Profesora de Tiempo Completo en el área de Tronco Común de Arquitectura y Diseño del Centro de Ingeniería y Tecnología, Unidad Valle de las Palmas, de la Universidad Autónoma de Baja California. Es licenciada en Arquitectura, Maestra en Ciencias de la Ingeniería de la Construcción. Ha presentado ponencias relacionadas con la Construcción en la Asociación de Instituciones de la Enseñanza de la Arquitectura de República Mexicana, A.C. En la línea de comunicación y divulgación ha promovido Exposiciones Colectivas en el museo interactivo el Trompo y la Gestión de campañas de recaudación para el Hospital Infantil de las Californias, El Club de leones y La fundación BANATI. Miembro del CA Diseño y Comunicación.

Susana Rodríguez Gutiérrez. Originaria de Ensenada, Baja California cuenta con Maestría en Diseño Gráfico Digital de la Universidad Iberoamericana. Maestría en Mutlimedia y web, en Instituto de Artes Visuales, España. Licenciatura en Diseño, Xochicalco. Diplomados y cursos, actualización docente, Actualización de planes curriculares. Sinodal de exámenes profesionales. Parte de Comité de investigación y comité técnico de Universidad Xochicalco. Ponencias internacionales, nacionales y estatales. Impulso proyectos educativos, concursos de diseño entre otros. Desarrollo de páginas web, Animación en flash, Ilustración vectorial. 14 años de experiencia en diseño editorial, corporativo, multimedia y especialista en el cartel de concienciación. (Ganando en varios concursos) Formó parte del equipo de diseño de PRONATURA, CICESE entre otros. Actualmente, es docente de Tiempo Completo en la Facultad de Diseño gráfico en Valle de las Palmas, se especializa en talleres de diseño gráfico y digitales.

EL ÉXITO DE LOS NEGOCIOS DE SUBSISTENCIA DE ARTESANÍA Y SU RELACIÓN CON EL DESEMPEÑO

Arcelia Toledo-López, Instituto Politécnico Nacional-Oaxaca, México

Luis Mendoza-Ramírez, Instituto Politécnico Nacional-Oaxaca & Universidad Veracruzana

Julio Cesar Jiménez-Castañeda, Instituto Politécnico Nacional-Oaxaca, México

RESUMEN

El objetivo de este trabajo fue analizar cómo la definición de éxito de los emprendedores de subsistencia se relaciona con el desempeño financiero y no financiero de los negocios de artesanías. Siguiendo las cinco tipologías de éxito en negocios de subsistencia (familiares, arriesgados, históricos, nuevos entrantes al mercado y los líderes de la industria) propuestos por Toledo-López et al., (2012) en el contexto de negocios de subsistencia: mercado local, ingresos de subsistencia, falta de acceso a recursos básicos y de apoyo del gobierno y las redes informales, se plantean que (1) la definición de éxito se determina por el desempeño financiero, (2) la definición de éxito se relaciona con las metas y los motivos del emprendedor para iniciar su negocio. Para probar las hipótesis, se hizo un estudio exploratorio y transversal, se entrevistaron a 76 negocios de subsistencia de artesanías en Oaxaca, México. Se encontró que la definición de éxito de los negocios está determinado por la meta de orientación al cliente y por la motivación de emprendedor de autorrealización para iniciar su negocio y por continuar para transmitir su identidad cultural, así como con el desempeño no financiero, pero no se encontró relación significativa con desempeño financiero.

PALABRAS CLAVE: Éxito, Emprendedores de Subsistencia, Desempeño, Artesanías

SUCCESS OF THE HANDICRAFT SUBSISTENCE BUSINESS AND ITS RELATIONSHIP WITH BUSINESS PERFORMANCE

ABSTRACT

The research objective was to analyze how the definition of subsistence entrepreneur's success is related to financial and non-financial business performance handicraft business. Following the five typology's success in subsistence business (family limited businesses, motivationally limited businesses, past boom businesses, followers and leaders) proposed by Toledo-Lopez et al., (2012) in the context of business of subsistence: local market, income for subsistence, lack of access to basic resources and government support and informal networks, the proposition are (1) the definition of success is determined by the financial performance (2) the definition of success is related to the entrepreneur's goals and motives to start his/her business. To test the hypothesis, an exploratory and cross-sectional study were done, 76 subsistence handicraft businesses were interviewed in Oaxaca, Mexico. We found that the definition of business success is determined by goal of customer-oriented and entrepreneurial motivation to self-realization and to transmit a cultural identity, as well as no financial business performance, but we didn't find significant relationship with financial performance.

INTRODUCCIÓN

En los últimos años ha aumentado las investigaciones e interés de los consultores por explicar los modelos de negocios de los mercados de bajos ingresos (Burgess & Nyajeka, 2007), los cuales Prahalad (2006) denomina como la base de la pirámide del ingreso (BoP). En esta base se supone que viven al alrededor de 4 billones de personas en condiciones de subsistencia, las cuales representan las dos terceras partes de la población mundial. Lo que genera un ambiente de oportunidades de negocio para las empresas multinacionales. No obstante, también representa una oportunidad para los productores de esta BoP (Karnani, 2007), quienes hoy en día están entrando en los mercados nacionales en compañía de las multinacionales, etiquetados como responsables socialmente. Esta oportunidad de negocio en la BOP no solo es como consumidores sino también como productores que pueden darle valor agregado a sus productos para satisfacer las necesidades de los consumidores de otros niveles del BoP. Estos modelos de negocio representan un potencial de crecimiento para las economías emergentes donde las oportunidad de industrialización son limitadas (Toledo, Hernández & Griffin, 2010), pues entender cómo hacer negocio en mercados de subsistencia puede ayudar a aliviar la pobreza.

El emprendimiento, según Kacou (2010) es una de las actividades más comunes de las personas de la BoP, quienes luchan todos los días para crear oportunidades económicas que les dé la oportunidad de superar su problema de pobreza. Estos emprendedores crean pequeños negocios que operan en mercados de subsistencia, donde compiten día a día para llevar una moneda de regreso a casa, para contribuir a la alimentación de la familia y cubrir sus necesidades básicas (Viswanathan, Gajendiran, & Venkatesan, 2008). Al mismo tiempo, estos negocios contribuyen directa e indirectamente al desarrollo económico y social de las comunidades y mercados en donde operan (Crawford-Mathis, Darr, & Farmer, 2010; Toledo et al., 2010). En economías emergentes como la de México, existen una gran diversidad de pequeños negocios que operan en condiciones de subsistencia, que luchan día a día por obtener ingresos para la alimentar a la familia, tal es el caso de los pequeños productores de artesanía, los cuales representan para el país grandes oportunidades de negocio para el desarrollo, por su vinculación con el turismo, porque son los principales promotores de cultura e identidad del pueblo mexicano, pero también representan a la población más marginada, olvidada y abandonada, con limitado apoyo de las instituciones, con un comercio local que atiende a los turistas que visitan el mercado con la intención conocer un poco de historia y tradiciones de los pueblos. Estos pequeños productores que Viswanathan et al., (2008) los denomina como emprendedores de subsistencia, venden sus productos de manera directa (cara a cara), en este mercado de subsistencia llevan a cabo no solo un intercambio económico, sino también sociales y culturales, aquí se forman redes sociales donde la confianza y las relaciones interpresonales son las principales fortaleza para el éxito de estos pequeños negocios.

El éxito de estos pequeños negocios de subsistencia ha sido uno de interrogantes discutidos en este contexto, pues para estudiosos de economías desarrolladas el éxito está directamente relacionado con el desempeño financiero del negocio ((Fairlie & Robb, 2009). No obstante investigaciones sobre pequeños negocios refieren que el éxito en este tipo de negocio está relacionado con los objetivos y metas personales del emprendedor para crear su empresa (Hernández, Yescas & Domínguez, 2007; Paige & Littrell, 2002; Toledo-López, Díaz-Pichado, Jiménez-Castañeda & Sánchez-Medina, 2012). Por lo que el objetivo de este estudio es analizar cómo la definición de éxito de los emprendedores de subsistencia se relaciona con el desempeño financiero y no financiero del negocio de artesanías. Para entender el comportamiento de los emprendedores de los negocios de subsistencia de artesanía en Oaxaca México y así contribuir a la literatura de los modelos de negocio de la BoP y de micro análisis de los mercados de subsistencia.

REVISIÓN DE LA LITERATURA

En la literatura de las pequeñas y medianas empresas en economías desarrolladas, refiere que el éxito de los negocios está relacionado con mediciones objetivas, como el crecimiento financiero (número de

empleados e incremento en ventas), estructura organizacional y las exportaciones, los cuales se reflejan en el monto de facturación anual de la empresa (Fairlie & Robb, 2009). Pero no todas las empresas responden a las mismas medidas para concebir el éxito, la forma de hacer negocios en la base de la BoP difiere de los negocios en mercados desarrollados y competitivos. Por ejemplo, en la industria artesanal es muy difícil observar que un negocio es exitoso por el incremento del número de empleados, cuando su conformación es familiar y su personal aumenta casi siempre cuando se casan o alguien se muda a vivir con la familia; las exportaciones son un buen deseo y se presentan regularmente con la intervención de los intermediarios, sean turistas ocasionales o personas dedicadas a ese negocio; la estructura organizacional permanece inmutable por muchos años y el incremento en el volumen de facturación, no es una constante más bien es la excepción; la tecnología utilizada es rudimentaria, y los ingresos es de autoconsumo.

Reijonen (2008) refiere que la meta es la medida más importante para medir el éxito. Una meta definida es esencial para que un emprendedor logre el éxito independientemente de lo que la meta persiga. Para Reijonen (2008) el éxito es directamente relacionado con las metas del individuo, cuando el individuo establece metas existe una inspiración natural para lograrlo. En los pequeños negocios las metas son motivadores esenciales para entrar en nuevos negocios y/o continuar con empresa, emprendedor puede definirse exitosos cuando perciba que sus esfuerzos y recursos asignados a la empresa lograron los resultados que él quiere para su empresa. Las metas comerciales orientadas a resultados financieros puede ser secundarios para emprendedores de los pequeños negocios, más para quienes operan en contextos rurales o en subsistencia (Viswanathan et al., 2008), así ambas medidas comerciales (financieras) y no comerciales (no financieras) se pueden usar para medir el éxito de los negocios (Hernández et al., 2007; Paige & Littrell, 2002; Reijonen, 2008; Tregear, 2003). La medición del éxito en términos de metas comerciales está relacionado con el desempeño financiero del negocio, tales como crecimiento en ventas, ganancias, empleos, clientes, exportación, activos y participación en el mercado (Hernández et al., 2007; Paige & Littrell, 2002; Reijonen, 2008; Tregear, 2003). En metas no comerciales el éxito se mide en relación a resultados no financieros como satisfacción del emprendedor, del cliente, conservación de una tradición cultural, autonomía, libertad de trabajo, logro de metas personales, imagen, logro de vida, etc. (Paige & Littrell, 2002; Reijonen, 2008; Tregear, 2003).

Siguiendo las bases de los factores relacionados con el éxito del negocio, arriba mencionados, según Toledo-López et al., (2012) estos marcan diferencias y similitudes significativas entre los negocios de artesanías. Toledo-López et al., (2012) en un contexto de negocios de subsistencia clasifica a los negocios de artesanías en cinco tipologías de éxito, agrupados en dos grupos según la orientación del negocio. En el primer grupo que se ubican los pequeños negocios orientados al crecimiento de mercado, denominados como los nuevos entrantes al mercado y los líderes de la industria y en el segundo grupo se encuentran los negocios orientados a las metas personales denominados como, exitosos históricos, arriesgados y los familiares. Los nuevos entrantes son aquellos negocios en los que sus emprendedores trabajan duramente para lograr metas financieras y en un futuro llegar a ser líderes del negocio. Los líderes de la industria son aquellos negocios en el que sus emprendedores están motivados por el buen nivel de vida que han alcanzado y por el reconocimiento social que sus artesanías les brindan, viven orientados a conservar una tradición que saben que son la base para un mantener sus nivel económico y social como artesanos. Los exitosos históricos, son negocios que en el pasado alcanzaron el éxito y sus emprendedores están satisfechos con lo que lograron y viven del sus hechos históricos, de la experiencia y de mantener sus más clientes leales, su participación es en un mercado local. Los arriesgados, son pequeños negocios que han intentado entrar a otros mercados y crecer pero han fracasado, el emprendedor se siente exitoso porque a pesar de su fracaso sigue luchando y se mantiene en el mercado, el emprendedor tienen intenciones de crecer pero no saben cómo lograrlo, y por último se identifican a los exitosos familiares, que son aquellos negocios con un local comercial en la misma casa habitacional, su emprendedor generalmente son mujeres jefas de familia que complementan sus ingresos y actividades propias del hogar con el negocio, con poca posibilidad y deseos de expandir en otros mercados y no busca el crecimiento de su negocio para no descuidar a su familia (Toledo-López et al., 2012).

Tregrear (2003), refiere que el conjunto de valores de los emprendedores para percibir el éxito de su negocio está relacionado con las fuentes claves de satisfacción y realización, así como de la percepción de las intenciones de negocio del emprendedor (i.e. metas del emprendedor, resultados que él quiere en su negocio), los cuales influyen en la cantidad de esfuerzos y recursos que asigna para llevar a cabo ciertas actividades de negocio para lograr resultados, que influyen en la percepción de éxito de los pequeños negocios. De aquí que en esta investigación, el éxito de las pequeñas empresas se examina desde dos puntos de vista: financiero y no financiero (Reijonen, 2008). El primero se refiere a los resultados financieros y el segundo se basa en las expectativas y satisfacción personal (Reijonen, 2008; Paige & Littrell, 2002, Toledo-López et al., 2012). Además se supone que el éxito de los pequeños negocios se define por las metas personales del emprendedor, y por la orientación del negocio (Figura 1). De aquí se plantean tres hipótesis:

Figura 1: Modelo Conceptual de Investigación

H1: la definición de éxito se determina por el desempeño financiero del negocio de subsistencia, H2: la definición de éxito se relaciona directamente con las metas personales del emprendedor para iniciar su negocio

H3: la definición de éxito se relaciona directamente con la orientación del negocio.

METODOLOGÍA

El método de investigación fue cuantitativo, exploratorio, tipo transversal, la unidad de análisis fueron los pequeños negocios de subsistencia de artesanías en los Valles Centrales de Oaxaca, México, la unidad de respuesta fueron los emprendedores de estos pequeños negocios. El instrumento de medición fue un cuestionario estructurado, la técnica de recopilación de información fueron entrevistas cara- cara. El método de selección de la muestra fue no probabilista, por bola de nieve y el tamaño de la muestra fue a conveniencia.

Descripción de la muestra: La muestra quedó integrada por 76 pequeños negocios de subsistencia, de 3 ramas artesanales alfarería, tallado de madera y textiles de los valles centrales del Estado de Oaxaca, de los cuales el 39.5% en textiles, 31.6% en tallado de madera y el 28.9% en alfarería. El 35.5% de estos negocios tiene una antigüedad entre 1 y 21 años. En cuanto a la creación del negocio el 67.1% de los negocios de artesanías fueron creados por los propios emprendedores. De los 76 emprendedores entrevistados, el 80.3% fueron dueños del negocio, el 53.9% fueron mujeres y 46.1% fueron hombres. El 36.8% de los entrevistados tienen entre 43 y 56 años de edad. En términos de escolaridad el 30.3% de los entrevistado tienen estudios de primaria terminada, el 25% la secundaria, el 15.8% primaria incompleta, el 14.5% tiene estudios de bachillerato o técnico profesional, el 7.9% Licenciatura, y tan solo el 6.6% de los encuestados no tienen estudios. En cuanto a la experiencia en la elaboración de artesanías, el 35.5% de los artesanos tienen entre 15 y 28 años de experiencia en la elaboración de artesanías, otro 35.5% entre 29 y 42 años.

Operacionalización de variables: El desempeño de los negocios de artesanías se definió operacionalmente los resultados financieros y no financieros del pequeño negocio de subsistencia. Desempeño financiero, se definió como el crecimiento del negocio en empleados, producción y en ventas. Para medir esta dimensión

se le preguntó al emprendedor del negocio sobre sus ventas semanales, número de empleados y volumen de producción en el año actual y el año anterior. Estos datos fueron tratados mediante una operación aritmética y recodificados en una escala de tipo Likert de 5 puntos, donde 1= decrecimiento, 2= estancamiento, 3= creció poco, 4= creció regularmente, 5 creció mucho. Desempeño no financiero: Se definió como el grado de satisfacción que el artesano siente con aspectos personales como artesano, con el cumplimiento de sus necesidades familiares y con el desempeño del negocio.

La escala utilizada fue de Likert 5 puntos, donde 1 nada satisfecho, 2 poco satisfecho, 3 más o menos satisfecho, 4 satisfecho y 5 completamente satisfecho. Éxito del negocio, se definió operacionalmente como la medida en que los emprendedores de subsistencia definen el éxito de su negocio dentro de las cinco tipologías de éxito de negocios de subsistencia propuesto por Toledo-López et al., (2012): familiares, arriesgados, históricos, nuevos entrantes y líderes de la industria. Se le preguntó al emprendedor que tanto su definición de éxito coincide con cada tipología, la escala fue de tipo Likert de 5 puntos, donde 1 no coincide en nada, 2 coincidimos un poco pero no es significativo, 3 más o menos parecido pero diferimos en algunos aspectos, 4 coincidimos mucho pero tenemos diferencias, y 5 coincidimos completamente. Orientación del negocio, se definió operacionalmente como la medida en que los objetivos del negocio se enfocan hacia una meta comercial, como la entrada a nuevos mercados, conseguir más clientes, diseño de nuevos productos y el aumento ventas. La escala utilizada fue tipo Likert de 5 puntos, donde 1 es nada, 2 es poco, 3 es regular, 4 mucho y 5 muchísimo. Metas personales para iniciar el negocio, se definió operacionalmente como los motivos que llevaron a emprender su negocio. Para su medición, se le preguntó al emprendedor de una serie de factores personales, culturales y comerciales, el grado de importancia que le da a cada uno de estos motivos para iniciar su negocio, la escala utilizada fue tipo Likert de 5 puntos, donde 1 es nada importante, 2 poco importante, 3 más o menos importante, 4 importante y 5 muy importante.

Confiabilidad y validez de las escalas: La validez de las escalas se determinó con un análisis de reducción de factores mediante la técnica de componentes principales con Rotación Varimax y Normalización de Kaiser. La confiabilidad se determinó mediante el alfa de Cronbach de cada una de las variables. El desempeño se distribuyó en 4 factores etiquetados como satisfacción con el desempeño del negocio (Factor 1), satisfacción con las necesidades de la familia (Factor 2), satisfacción con el desempeño del negocio (Factor 3), y desempeño financiero como crecimiento del negocio (Factor 4). La varianza total explicada de la variable fue 67.055% con un alfa de Cronbach de 0.930 (Tabla 1). De aquí se integraron las 2 dimensiones del desempeño: el desempeño no financiero y el desempeño financiero.

Tabla 1: Análisis Factorial de Desempeño Global

Desempeño	Factor 1	Factor 2	Factor 3	Factor 4
Satisfacción Personal				
Con su reputación por ser artesano	.108	-.068	.749	.062
Con el logro de metas personales	.243	.520	.631	.079
Con su reconocimiento como artesano	.132	.219	.849	-.101
Con su trabajo como artesano	.041	.255	.634	-.097
Satisfacción con las Necesidades de la Familia				
Educación de los hijos	.390	.557	-.057	-.142
Cobertura de necesidades básicas	.070	.693	.426	-.233
Mejoras a su vivienda	.333	.791	.056	.115
Bienes adquiridos	.383	.727	.123	-.023
Nivel de vida	.288	.629	.409	.187
Estilo de vida	.288	.616	.418	.151
Comodidades de la vivienda	.443	.534	.297	.182
Satisfacción con el Desempeño del Negocio				
Logro de metas económicas	.668	.457	.093	.082
Dinero que gana por las artesanías	.832	.277	.145	.118
Ventas del negocio	.885	.196	.104	.059
Cantidad de clientes	.877	.160	.192	.084
Desempeño económico del negocio	.869	.212	.164	.082
Mejoras al local/taller	.749	.386	.014	-.001

RESULTADOS

De los resultados se encontró que de los 76 pequeños negocios de subsistencia encuestados, el 52.6% corresponde a la tipología de Exitosos Familiares, el 14.5% son definidos como arriesgados, otro 14.5% como históricos, 11.8% como nuevos entrantes y el 6.6% restante se define como líderes de la industria. El grado de éxito que cada artesano percibe en su negocio quedo distribuido de la siguiente forma: el 52.6% considera que su negocio es más o menos exitoso, el 35.5% lo considera exitoso, el 5.3% muy exitoso, 3.9% poco exitoso y tan solo 2.6% de los negocios son considerados como nada exitosos. A través de un análisis cruzada entre el éxito antes y la metas de negocio se encontró la mayoría de los líderes definen su negocio como exitoso (80%) al igual que los nuevos entrantes (55.6%), así como los arriesgados (54.5%). Sin embargo los negocios familiares (62.5 %) y los históricos (63.4%) se califican como más o menos éxitos (Tabla 4). La meta personal más importante para continuar con el negocio es el valor de la familia con un 52.6%, la identidad cultural o conservación de la tradición quedo con un 26.3%, la motivación por ganar más dinero fue el 18.4% y las preferencias de los clientes quedaron en último lugar (18.4%). A través de un análisis cruzado entre las tipologías de éxito y las metas personales para continuar con el negocio se encontró que la principal motivación para los negocios arriesgados es el valor de la familia (63.6%), al igual que los familiares (60%) y los nuevos entrantes (55.6%). Para el caso de los líderes el 80% se siente motivado por la identidad cultural y la conservación cultural, al igual que el 45.5% de los históricos (Tabla 4).

Tabla 4: Tipologías de Éxito

Tipologías de Éxito	Metas Personales Para Continuar Con el Negocio					Grado de Éxito				
		El valor de la Familia	Preferencias de los clientes	Ganar más dinero	Identidad cultural	Nada Exitoso	Poco Exitoso	Más o menos Exitoso	Exitoso	Muy Exitoso
Familiares	Recuento	24	0	7	9	2	3	25	8	2

	%	55.6%	11.1%	33.3%	.0%	.0%	.0%	22.2%	55.6%	22.2%
Líderes de la Industria	Recuento	0	1	0	4	0	0	1	4	0
	%	.0%	20.0%	.0%	80.0%	.0%	.0%	20.0%	80.0%	.0%

Para la prueba de las hipótesis se hizo un análisis de correlación bivariada de Pearson. En la tabla 5, se muestra una relación positiva y significativa entre el éxito y el desempeño del negocio global ($r=489$, $p=0.01$), pero sólo se encontró una relación positiva y significativa entre el éxito y el desempeño no financiero ($r=.493$, $p=0.01$), el desempeño financiero no se relacionó con el éxito, metas y orientación del negocio. Sólo se encontró que relación positiva y significativa entre el desempeño no financiero con la orientación del negocio ($r=.331$, $p=0.01$), específicamente con la orientación al cliente ($r=.300$, $p=0.01$) y el crecimiento en ventas ($r=.281$, $p=0.05$). Estos resultados indican que la satisfacción del artesano por su trabajo, su estilo de vida, la cobertura de sus necesidades y en general el logro de sus metas personales está ligado con la definición de éxito de los negocios de artesanías. Pero no perciben el éxito de su negocio relacionando con el crecimiento en ventas, empleo y producción, por lo que se rechaza la H1.

También se encontró una relación positiva y significativa entre el éxito y las metas personales de autorrealización del emprendedor para iniciar su negocio ($r=.233$, $p=0.05$), pero no se encontró relación significativa con la autonomía, tradición y por aspectos familiares, lo que indica que los emprendedores se sienten exitosos porque su negocio les ha dado la oportunidad de ser libres y auto-realizados, pues pueden trabajar a su ritmo sin la presión de un jefe y se sienten satisfechos de ser su propio jefe y lograr sus metas personales. Lo que prueba la H2. Además se encontró que la orientación del negocio está relacionado positiva y significativamente con la definición de éxito de ($r=.402$, $p=0.01$), específicamente con la orientación al cliente ($r=.332$, $p=0.01$) y con el crecimiento de mercado ($r=.357$, $p=0.01$), lo que prueba la hipótesis 3 (tabla 5).

Los resultados del análisis de regresión lineal múltiple indican que los emprendedores de subsistencia determinan el éxito de su negocio en función del desempeño no financiero ($\beta=.044$, $p=0.012$) y la orientación del negocio ($\beta=.044$, $p=0.017$), este modelo se explica en 27.5 % (R^2 ajustada =.275, $F=8.125$, $p=0.00$).

CONCLUSIONES

El establecimiento y logro de metas dentro de los pequeños negocios de subsistencia como las artesanías son factores relacionados con la definición de éxito. Pero la orientación del negocio y la percepción del dueño sobre los resultados no financieros de su negocio como la satisfacción que siente por su oficio, el logro de sus metas personales, la satisfacción por cubrir sus necesidades familiares y la satisfacción por el buen funcionamiento de su negocio influyen significativamente para la percepción del éxito de su negocio, tal como lo plantea Reijonen (2008), no obstante este éxito no es igual para todos, pues cada emprendedor tiene sus propios objetivos y metas para continuar con su negocio, lo que los ubica en una de las cinco tipologías de éxito: familiares, arriesgados, históricos, nuevos entrantes o líderes y esto se relaciona con el grado de éxito percibido. El valor familia es el motivo similar entre las cinco tipologías de éxito.

La orientación del negocio en esta investigación y la percepción de los resultados financieros del negocio son determinantes para definir el éxito en los negocios de subsistencia. En cuanto a las metas del negocio los exitosos familiares e históricos se conforman con ganar dinero suficiente para cubrir las necesidades de su familia. La mayoría de estos negocios no tienen planes, no buscan salir del mercado local y por lo general, lo único que desean es que llegue más turismo a sus comunidades para que compren sus artesanías. El grado de éxito que perciben de sus negocios es más o menos exitoso, ya que no se encuentran completamente satisfechos con el logro de sus metas. Por otro lado, los exitosos arriesgados, los nuevos entrantes y los líderes, establecen constantemente planes para su negocio, saben cuáles son los recursos que deben utilizar para el logro de sus objetivos, siempre están en la búsqueda de nuevos mercados, clientes, tratan de innovar y mejorar sus artesanías para transmitir a través de ellas el legado de sus antepasados. El grado de éxito que perciben en sus negocios los artesanos de esta categoría es exitoso, debido a que están satisfechos con el cumplimiento de sus metas personales, y la mayoría no definió a su negocio como muy exitoso, porque consideran que siempre deben estar en búsqueda de nuevas metas y siempre pueden superar lo que ya han conseguido. Esta última categoría de negocios exitosos tienen una mayor orientación de sus objetivos hacia el cliente ya que consideran que la satisfacción de los gustos del cliente, el buen trato y servicio, y la mejora constante de sus artesanías les permitirá comunicar a los demás su tradición artesanal. Los resultados financieros no presentan gran importancia para definir el éxito. Los negocios artesanales están más

enfocados a satisfacer las expectativas y necesidades de sus clientes, a lograr sus metas personales como el reconocimiento de su trabajo, a satisfacer las necesidades de su familia.

María Del Consuelo Medina García, Universidad Autónoma de Ciudad Juárez

Mario Narciso Ávila Melgar, Universidad Autónoma de Ciudad Juárez

RESUMEN

La Responsabilidad Social Universitaria (RSU) es un tema que destaca por sus múltiples relaciones tanto con el campo laboral como en las necesidades de la comunidad, es concebida como la o las políticas implementadas por las universidades para generar personas solidarias y responsables con el medio que les rodea, enfocados a lograr la sustentabilidad tanto el trabajo como el medio ambiente. El presente trabajo constituye la primera fase de un proyecto de investigación más amplio, en donde se pretende determinar en qué medida la RSU está incluida dentro de la misión, visión, valores y objetivos declarados en las páginas WEB de las universidades públicas en México, para lo cual se ha realizado una búsqueda en revistas científicas, recatando artículos tanto empíricos como teóricos, mismos que concluyen que la RESU es fundamental para el desarrollo de estudiantes éticos y comprometidos con su entorno, además de que permite crear una visión más amplia de las necesidades de la comunidad.

PALABRAS CLAVE: Responsabilidad Social Universitaria, Pensamiento Estratégico y Universidades Públicas

SOCIAL RESPONSABILITY IN HIGHER EDUCATION

ABSTRACT

University Social Responsibility is an issue that stands out for its multiple relationships with both the workplace and the needs of the community, is conceived as the policies implemented by universities to generate solidarity and responsible people with the environment around them, focused on achieving sustainability both labor and the environment. This work constitutes the first phase of a larger project research, which aims to determine to what extent the University Social Responsibility is included within the mission, vision, values and objectives stated in the websites of public universities in Mexico, for what it has done a search in scientific journals, in empirical and theoretical articles, conclude that it is essential for the development of students ethical and committed to their environment as well as for creating a broader view of the needs community.

KEYWORDS: University Social University, Strategic Thinking and Publics Universities

INTRODUCCIÓN

A pesar de que tanto al interior como al exterior de las instituciones de educación superior (IES) aun no se ha reflexionado lo suficiente sobre la dimensión de su Responsabilidad Social (Moscoso y Vargas, 2013), en los últimos años, ésta ha adquirido una mayor importancia, lo que ha hecho que la universidad no sólo esté en correspondencia con el sector productivo, sino también con las necesidades sociales e individuales

que se pretende satisfacer con la educación superior (Herrera, Didriksson y Sánchez (2009), no limitando su participación únicamente a la enseñanza de la responsabilidad social sino ir más allá, intentando atender y mejorar las condiciones de la comunidad (Serap y Tutku, 2007), pues la única forma de explotar el potencial de las universidades es a través de la aplicación de principios de responsabilidad social universitaria (Liběna, 2010), como respuesta de la realización de su proyecto institucional, donde declara a través de su visión y misión, la orientación y coherencia de sus valores (Martínez y Picco 2001), como parte del pensamiento estratégico (Morrissey, 1996), que es el que se aplica constantemente por parte de los directores y rectores de manera creativa, con el fin de generar ideas estratégicamente viables que garanticen el éxito de la universidad, siendo ésta una de las principales competencias que se debe desarrollar no sólo a nivel profesional, sino también en lo personal (Mendoza y Rojano, 2013). Teniendo como base la construcción de un marco teórico que comprenda estudios teóricos y empíricos, lo cual forma parte de la primera fase que se presenta en este trabajo, para su posterior levantamiento de datos, análisis y resultados, se pretende determinar en qué medida la RSU está incluida dentro de la misión, visión, valores y objetivos declarados en las páginas WEB de las universidades públicas en México.

REVISIÓN DE LITERATURA

El tema de la responsabilidad social lo han tomado en cuenta de manera reciente las instituciones de Educación Superior (IES). Es definida por Herrera, Didriksson y Sánchez (2009) como la relación entre el papel desempeñado por las instituciones de educación superior para formar recursos humanos y generar conocimiento, y lo que la sociedad demanda; Vallaeys (2008) agrega que es la política de mejora continua hacia el cumplimiento efectivo de su misión social, mediante cuatro procesos de gestión: ética y ambiental de la institución; formación de ciudadanos responsables y solidarios; difusión de conocimientos socialmente pertinentes; y participación social en promoción de un desarrollo más humano y sostenible. Por su parte, El Proyecto Universitario País (2006) define la Responsabilidad Social Universitaria (RSU) como “la capacidad que tiene la universidad para difundir y poner en práctica un conjunto de principios y valores generales y específicos”.

Triguero (2009) señala que la Responsabilidad Social es una política de gestión de la calidad ética de la Universidad, la cual busca alinear los procesos de gestión, docencia, investigación y extensión, con la misión universitaria, sus valores y el compromiso social, con la participación de toda la comunidad universitaria que incluye a las autoridades, los estudiantes, personal académico/investigador y personal administrativo y de servicios, no tratándose únicamente de la participación desorganizada de acciones que tienen un impacto social, que se reducen a actividades filantrópicas, sino que deben incorporar principios de sustentabilidad en todo su actuar como institución, sin perder de vista su objetivo primario que es la formación (Moscoso y Vargas, 2013). Vallaeys (2008) sugiere que es importante considerar estrategias específicas socialmente responsables para una mejora continua en las Instituciones de Educación Superior, a saber:

La participación activa y coordinada de los grupos de interés internos y externos en el quehacer universitario.

La integración de los planes de estudios, la investigación, la extensión y los métodos de enseñanza con la solución de los problemas de la sociedad.

La evaluación regular de la institución con herramientas apropiadas de medición para la rendición de cuentas a los “stakeholders”, que de acuerdo con Vallaeys, De La cruz y Sasía (2009), incluye personal docente, personal docente-investigador, autoridades universitarias, estudiantes, egresados, empleadores, competidores, comunidades locales, organizaciones sociales y Estado. Las universidades han realizado esfuerzos para coadyuvar en esta aventura de cumplir con el compromiso o responsabilidad social tanto en el diseño de planes y programas de estudio como en la investigación y en la extensión universitaria, así lo

señalan Herrera, Didriksson y Sánchez (2009) quienes tomando como base la misión Institucional de las universidades que forman parte de la Red de Macrouiversidades, en la que figuran la Universidad Nacional de Córdoba, la Universidad de Río de Janeiro, la Universidad Nacional de Colombia, la Universidad de Costa Rica, la Benemérita Universidad Autónoma de Puebla, la Universidad Autónoma de Sinaloa, la Universidad Nacional Autónoma de Nicaragua y la Universidad Autónoma de Santo Domingo, determinaron algunos rasgos principales, los cuales se mencionan a continuación:

Contribuir a la elaboración y resignificación del proyecto de Nación.

Formar profesionales de alto nivel, portadores de una cultura científica y humanística, capaces de resolver problemas con racionalidad y objetividad.

Formar profesionales con dignidad, autonomía personal, desempeño profesional superior, corresponsabilidad ciudadana, justicia social, equidad, respeto a la diversidad, tolerancia y cuidado del ambiente.

Generar, adaptar, recrear y aplicar conocimientos.

Difundir la ciencia y la cultura bajo el principio de libertad y compromiso social, para responder a los problemas de su entorno regional y nacional.

Contribuir al el desarrollo económico y la democratización de la sociedad.

Reafirmar y recrear la cultura y a enriquecer el patrimonio cultural, natural y ambiental del país.

Construir una sociedad productiva, innovadora, justa y segura.

Contribuir para el pleno ejercicio de la ciudadanía mediante la formación humanística, crítica y reflexiva. Promover la actuación del universitario en el seno del pueblo al que pertenece, destacando su sensibilidad para los problemas de su época y las soluciones de los mismos.

Proponer soluciones viables ante la problemática científica, educativa, política, económica y social.

Estar abierta a todos los sectores sociales con lazos de cooperación alianzas estratégicas con centros líderes nacionales, regionales e internacionales del saber científico-técnico, manteniendo su identidad Institucional y proyectando la misión corporativa, para aportar en la construcción de una sociedad, justa y solidaria.

Formar una conciencia crítica de la sociedad, no dependiente, enmarcada solidariamente en los principios sustentados por los pueblos que luchan por su independencia y bienestar.

Desentrañar las causas fundamentales del subdesarrollo y la dependencia y los problemas que como consecuencia de ello afectan a la sociedad y sugerir soluciones.

Aumentar el acervo de conocimiento de la humanidad.

Difundir los ideales de paz, de progreso, de justicia social y de respeto a los derechos del hombre, a fin de contribuir a la formación de una conciencia colectiva basada en esos valores.

Ser agente de cambio en la comunidad en general.

Formar integralmente a hombres y mujeres, articulando una sólida cultura general con el compromiso hacia la nación y hacia las mejores causas de la sociedad.

Así pues, la universidad tiene como función social el generar conocimientos, difundirlos y formar personas que capaces de conducir los destinos de una nación, de ahí que no puedan alejarse de los aspectos éticos y de los valores necesarios para el desarrollo, así como de la responsabilidad para transmitirlo a los estudiantes (Castro y Núñez, 2003), en ese sentido, la Organización de las Naciones Unidas para la Educación, la Ciencia y la Cultura (UNESCO, 1998) recomienda a las universidades que fortalezcan sus funciones de servicio a la sociedad, especialmente las que están enfocadas a erradicar la pobreza, la intolerancia, la violencia, el analfabetismo, el hambre, el deterioro del medio ambiente y las enfermedades.

METODOLOGÍA

Se trata de bajo de un tipo de investigación descriptiva con diseño transversal, no experimental. El proyecto completo se realizará como un estudio mixto, de, para lo cual, en una primera fase se realiza una comprensiva búsqueda de información en diversas bases de datos y libros disponibles, con la localización y análisis de artículos científicos tanto teóricos como empíricos.

La muestra estará determinada por universidades públicas establecidas en México.

CONCLUSIONES.

La inclusión de la RS en las universidades es fundamental para el desarrollo de estudiantes éticos y comprometidos con su entorno, así mismo permite crear una visión más amplia de las necesidades de la comunidad y generar profesionistas capaces de satisfacerlas, causando un impacto positivo en el medio ambiente y la sociedad de la que depende la máxima casa de estudios. La RSU debe ser el vínculo entre la Universidad y la sociedad, enfocándose no solamente en la formación profesional de sus estudiantes, sino también involucrándose en la solución de problemas que aquejan a la sociedad.

LAS VENTAJAS COMPARATIVAS REVELADAS EN EL COMERCIO EXTERIOR DE MÉXICO Y TURQUÍA

Alberto Francisco Torres García, Universidad Autónoma de Baja California Sur

Sarha Leticia Romero Martínez, Universidad Autónoma de Baja California Sur

Gustavo Rodolfo Cruz Chávez, Universidad Autónoma de Baja California Sur

RESUMEN

México y Turquía son países geoestratégicamente ubicados, que comparten perspectivas sobre la apertura comercial y la promoción de la inversión. Al ser un país transcontinental, Turquía representa una puerta de acceso a mercados dinámicos y complejos en Asia y Europa, situación que resulta favorable para las metas económicas de México. En la presente investigación se desarrollará un análisis sincrónico con indicadores económicos que revelan el grado de apertura de México y Turquía, así como su capacidad de adaptación al comercio mundial, su convergencia y sus ventajas comparativas reveladas, buscando afianzar estrategias pertinentes para su integración económica.

PALABRAS CLAVE: Comercio Exterior, Tratado de Libre Comercio, Ventaja Comparativa Revelada

COMPARATIVE ADVANTAGES REVEALED IN THE FOREIGN TRADE FROM MEXICO AND TURKEY

ABSTRACT

Mexico and Turkey are two economies that have a strategically geographic position and shared perspectives on trade liberalization and investment promotion. Turkey is a gateway to dynamic and complex markets in Asia and Europe, this situation is favorable to the economic goals of Mexico. In the present investigation we will do a synchronic analysis with economic indicators showing the degree of openness of Mexico and Turkey as well as its ability to adapt to international trade, their convergence and their comparative advantages revealed, seeking to strengthen relevant strategies for economic integration.

KEYWORDS: Comercio Exterior, Tratado de Libre Comercio, Ventaja Comparativa Revelada

INTRODUCCIÓN

En las últimas dos décadas del siglo XX, la política económica de México fue caracterizada por la liberalización comercial y financiera. En este nuevo proceso se adoptó el modelo neoliberal que promulga, entre otros principios, la no intervención del Estado, la privatización de las empresas nacionales y la apertura comercial y financiera, estableciéndose una serie de medidas basadas en la competencia económica, productiva y tecnológica. En el ámbito del comercio exterior, el fomento a las exportaciones, la búsqueda de socios estratégicos y la reducción de aranceles fueron delineadas por la firma de Tratados de Libre Comercio (TLC's). Teniendo como antecedente un Acuerdo de Cooperación Económica y Comercial, firmado el 28 de septiembre de 1998, y en vigor a partir del 02 de febrero en 2001, el pasado 16 julio concluyó la primera ronda de negociaciones para la celebración de un TLC entre México y Turquía. El acercamiento entre ambas economías se encuentra destinado a fortalecer los lazos comerciales y las oportunidades de inversión, abarcando temáticas como el comercio de bienes y servicios, propiedad intelectual, inversión, competencia y solución de controversias, entre otros asuntos legales e institucionales.

Conforme a cifras del Banco Mundial (2014a), Turquía cuenta con un Producto Interno Bruto (PIB) de \$820,207 millones de dólares y una población de 74.93 millones de habitantes, siendo considerada como una economía de ingreso mediano alto. Según cifras de la Organización Mundial del Comercio (OMC), Turquía ocupó el trigésimo segundo puesto como exportador a nivel mundial y el decimonoveno en importaciones al finalizar el 2013. En ese mismo año, sus exportaciones ascendieron a 151,787 millones de dólares, concentrándose principalmente en manufacturas (76.10%), seguido por productos de la agricultura (11.50%), así como combustibles y productos de la minería (8.70%), teniendo como principales destinos a la Unión Europea, Iraq, Rusia, Estados Unidos y los Emiratos Árabes Unidos. En el caso de sus importaciones, éstas tuvieron un valor de 251,650 millones de dólares, distribuyéndose en manufacturas (57.90%), combustibles y productos de la minería (25.10%) y productos de la agricultura (6.70%) esencialmente, procedentes de la Unión Europea, Rusia, China, Estados Unidos e Irán mayoritariamente (OMC, 2014). De acuerdo a información publicada por el Ministerio de Economía turco, hasta el 2014, Turquía cuenta con 17 acuerdos de libre comercio (Turquía ha firmado acuerdos de libre comercio con la Asociación Europea de Libre Comercio, Israel, Macedonia, Bosnia-Herzegovina, Palestina, Túnez, Marruecos, Siria, Egipto, Albania, Georgia, Montenegro, Serbia, Chile, Jordania, Mauricio y Corea del Sur. Además, los acuerdos de libre comercio firmados con el Líbano, Kosovo, Malasia y Moldavia están en proceso de ratificación. Por otra parte, una vez concluidas las negociaciones con Ghana y las Islas Feroe, se espera que los acuerdos de libre comercio se firmen durante 2014. De igual manera, hay 13 países o bloques de países con los que Turquía ha iniciado negociaciones de acuerdos de libre comercio, específicamente con Perú, Ucrania, Colombia, Ecuador, México, Japón, Singapur, República Democrática del Congo, Camerún, la República de las Seychelles, el Consejo de Cooperación del Golfo, Libia y el Mercado Común del Sur, y se espera iniciar negociaciones con Estados Unidos, Canadá, Tailandia, la India, Indonesia, Vietnam, Argelia, Sudáfrica y otros países de América Central), pues dicha economía está convencida de que los procesos de integración ofrecen menores costos y una mayor productividad, permitiendo alcanzar economías de escala, aumentar el ingreso nacional, la inversión, el bienestar social y la competitividad (Ministry of Economy, 2014)

Por su parte, México tiene un PIB de 1,260,915 millones de dólares y una población de 122.3 millones de habitantes, catalogándose también como una economía de ingreso mediano alto (Banco Mundial, 2014b). En cuanto a comercio exterior se refiere, esta economía ocupó la decimoquinta posición en exportaciones y la decimocuarta en importaciones de mercancías, a nivel mundial en 2013. Sus principales destinos de exportación fueron los Estados Unidos, la Unión Europea, Canadá, China y Brasil, mientras que Estados Unidos, China, la Unión Europea, Japón y Corea del Sur fungieron como los principales proveedores de importaciones (OMC, 2014). Al cierre del 2013, sus exportaciones ascendieron a los 380,189 millones de dólares, concentrándose en manufacturas (74.90%), combustibles y productos de la minería (15.90%) y productos de la agricultura (6.60%), principalmente. Para ese mismo año, sus importaciones registraron un valor de 390,965 millones de dólares, compuestas básicamente por manufacturas (79.10%), combustibles y productos minerales (10.90%) y productos de la agricultura (7.70%). Para el 2014, México ya cuenta con 10 TLC's (Con Estados Unidos, Canadá, Nicaragua, Costa Rica, Honduras, Guatemala, El Salvador, Colombia, Chile, Uruguay, Israel, la Unión Europea y la Asociación Europea de Libre Comercio), un Acuerdo para el Fortalecimiento de la Asociación Económica con Japón y un Acuerdo de Integración Comercial con Perú, además de encontrarse en ratificación el TLC con Panamá. En lo que respecta a las relaciones bilaterales, y según datos de la OMC (2014), al cierre del 2013 el comercio total entre México y Turquía fue de 886.06 millones de dólares, representando un déficit comercial para nuestro país (-168.15 millones de dólares). Las importaciones de México provenientes de Turquía fueron encabezadas por cables, trenzas y artículos similares de cobre sin aislar, para electricidad; partes para motores de émbolo (pistón) de encendido por chispa; maquinaria, partes o componentes para la fabricación de productos destinados al Programa de Promoción Sectorial de la Industria Textil y de la Confección; artículos de joyería de metales preciosos (incluso revestidos o chapados) y varillas corrugadas o barras para armadura, para cemento u hormigón, entre otros. Por otro lado, en las exportaciones de nuestro país hacia Turquía figuraron polímeros

de cloruro de vinilo obtenidos por los procesos de polimerización en masa o suspensión; trigo y morcajo; vehículos automóviles para el transporte de mercancías; automóviles concebidos principalmente para el transporte de personas de cilindrada superior a 1,500 cm³ pero inferior o igual a 2,500 cm³ y garbanzos, entre otros productos (Secretaría de Economía, 2014). En cuanto a la inversión extranjera directa (IED), los flujos de Turquía hacia México son históricamente recientes y muy bajos; al concluir el 2013, la IED fue apenas superior a 1.5 millones de dólares.

REVISIÓN LITERARIA

A decir de las teorías que explican las causas del comercio internacional, las diferencias en la dotación de recursos, capacidades y productos originan el intercambio entre los países promoviendo la especialización y la división del trabajo, las cuales inciden favorablemente sobre la creación de economías de escala, mayores volúmenes de producción a menores costos y mayor acceso a productos que de otra forma sería difícil acceder. Según destaca Adam Smith, esta división del trabajo, es como una consecuencia necesaria, aunque lenta y gradual, de cierta propensión genial del hombre que tiene por objeto una utilidad menos extensiva (Smith, 1987). Justamente, la reflexión más importante de toda la economía internacional es la idea de que existen ganancias del comercio, es decir, cuando los países venden bienes y servicios entre ellos, se produce casi siempre un beneficio mutuo (Krugman, 1999). Y es que, aún en forma de trueque, la actividad comercial apareció como la manera más sencilla para que los individuos pudiesen intercambiar bienes y servicios sobrantes por bienes y servicios escasos.

Pese a las diversas conjeturas que intentaban explicar las causas del comercio entre naciones, y los beneficios de esta actividad, fue hasta finales del siglo XVIII y principios del siglo XIX cuando aparecen dos personajes cuyas ideas dieron origen a la Teoría moderna del Comercio Internacional: Adam Smith y David Ricardo. Smith (Su trabajo más destacado lo encontramos en su obra *An Inquiry on the Nature and Causes of the Wealth of Nations* (1776)) formuló la teoría de la Ventaja Absoluta señalando que, por medio de los tratados de comercio ventajosos se procura conseguir de un país extranjero algunos privilegios para los comerciantes y las mercancías del propio, además de los que aquella nación concede a otros países (Smith, 1987). Bajo esta teoría, cada país debería especializarse en el bien cuya producción le resulta más eficiente, es decir, aquel bien en el que tiene ventaja absoluta de costos con respecto a otro país con el que guarda una relación de intercambio e intervienen dos bienes. Con estas proposiciones, el comercio internacional tomó un nuevo sentido para los gobiernos y comerciantes pues, más allá de las posturas de acumulación de metales desarrolladas por el mercantilismo, se trazaron nuevas rutas para el intercambio, el aprovisionamiento y las relaciones comerciales.

Para reducir la amplitud y el grado de interpretación de la teoría de Adam Smith, la teoría de la Ventaja Comparativa vino a definir, con más precisión, las causas y los beneficios del comercio internacional. Ricardo apuntaba que ninguna extensión del comercio exterior aumentará inmediatamente la suma del valor que posee un país, aun cuando contribuirá en gran medida a aumentar la masa de bienes y, por consiguiente, la suma de disfrutes (Ricardo, 1985). Con este argumento, Ricardo sostuvo que era posible que el comercio fuese mutuamente beneficioso, incluso si una nación padecía de una desventaja absoluta en la producción de mercancías, en comparación con otra. Para ello, Ricardo utilizó los siguientes supuestos:

Existen dos países y dos productos.

El precio de una mercancía viene determinado por el número de horas de trabajo que lleva incorporadas, siendo el factor trabajo inmóvil entre países.

Los costos unitarios son constantes.

No existen costos de transporte ni barreras al intercambio internacional de mercancías (Sanjinés, Vargas y Herrera, 2002).

Bajo estos supuestos, un país obtendría los beneficios del comercio internacional especializándose en la producción del bien sobre el cual tiene una ventaja comparativa. Esto es, aquel bien cuyo costo de producción es más bajo en términos de otros bienes. Así las cosas, la especialización entre los países se origina reconociendo aquello que cada país es capaz de hacer comparativamente mejor, en otras palabras, considerando en qué actividad su ventaja es mayor o su desventaja es menor (Los suecos Eli Hecksher (1879-1952) y Bertil Ohlin (1899-1979) complementaron los trabajos de David Ricardo determinando que, las diferencias en la dotación de factores de producción (tierra, capital y trabajo) son concluyentes para alcanzar la llamada “Ventaja Comparativa”.) Consecuentemente, cuando los países se concentran en las áreas en las que tienen una ventaja comparativa en condiciones de libre comercio, mejora la situación de todo el mundo (Samuelson y Nordhaus, 1999).

Los argumentos de la teoría de la Ventaja Comparativa han permitido explicar con efectividad las razones del comercio internacional, siendo sometida a numerosas contrastaciones empíricas que abordan tópicos relacionados a la distinta dotación de factores de producción, el equilibrio de los precios internacionales, los tipos de cambio, los costos de transportación y las ventajas competitivas, entre otros, que dan sustento al intercambio internacional, a la integración económica y a la cooperación en materia comercial. Entre los trabajos más notables se encuentran los de G.D.A. MacDougall (1951), Robert Stern (1962), Bela Balassa (1963) y Jagdish Bhagwati (1964), entre otros (Sanjinés, Vargas y Herrera, 2002). En la presente investigación se tomará como base la principal aportación de Balassa, denominada Ventaja Comparativa Revelada (VCR). Balassa (1965) acuñó el término de VCR para indicar que las ventajas comparativas pueden ser reveladas por el flujo actual del comercio de mercancías, por cuanto el intercambio real de bienes refleja costos relativos y también diferencias que existen entre los países, por factores no necesariamente de mercado (Arias y Segura, 2004).

A decir de Celaya y González (2008), el índice de la VCR esbozado por Balassa es un enfoque para medir la empíricamente la competitividad de un producto en el mercado internacional. El indicador de la VCR se ha utilizado como una medida de ventajas o desventajas competitivas, indicando la aptitud de un país para competir en el ámbito internacional en un producto en particular (Depetris, García y Rossini, 2009). Precisamente, la determinación empírica de si un país tiene o no ventajas comparativas ayuda a orientar la inversión y el comercio y, por consiguiente, permite tomar mayor ventaja de las diferencias que existen del lado de la demanda y de la oferta internacional de productos y factores de producción (Arias y Segura, 2004). De esta manera, un país se considera competitivo en la exportación de un producto si su peso relativo en las exportaciones es mayor que la misma proporción en el comercio mundial (Organización para la Cooperación y el Desarrollo Económico, 2013), es decir cuando el índice de VCR es mayor a 1.

METODOLOGÍA

Actualmente, el indicador de la VCR ha sido enriquecido con diversos estudios aplicados, pero para el caso de la presente investigación se utilizará su forma más simple:

$$VCR_{ij}^k = \frac{x_{ij}^k / XT_{ij}}{x_{iw}^k / XT_{iw}} \quad (1)$$

Donde:

VCR_{ij}^k = Mide el grado de importancia de un producto dentro de las exportaciones de un mercado a otro mercado, frente a la importancia de las exportaciones del mismo producto en las exportaciones totales hacia el mundo.

x_{ij}^k = Exportaciones del producto k realizadas por el país i hacia el país j

XT_{ij} = Exportaciones totales del país i hacia el país j

x_{iw}^k = Exportaciones del producto k realizadas por el país i al mundo (w)

XT_{iw} = Exportaciones totales del país i hacia el país j al mundo (w)

Buscando consolidar los resultados, se utilizará una variante del índice de la VCR, tal es el caso del Índice de Balanza Comercial Relativa (IBCR). El IBCR es utilizado para analizar las ventajas o desventajas comparativas de los intercambios comerciales de un país con sus socios comerciales o diversos grupos de países (Durán y Álvarez, 2008):

$$IBCR_{it}^k = \frac{X_{ijt}^k - M_{ijt}^k}{|X_{iwt} + M_{iwt}|} \quad (2)$$

Donde:

X_{ijt}^k = Exportaciones del producto k realizadas por el país i al mercado j en el año t

X_{iwt} = Exportaciones del producto k realizadas por el país i al mundo en el año t

M_{ijt}^k = Importaciones del producto k realizadas por el país i desde el mercado j en el año t

M_{iwt} = Importaciones del producto k realizadas por el país i desde el mundo en el año t

Para su interpretación, debe considerarse que el índice puede tomar valores positivos o negativos. En el primer caso, mayor a cero, será indicativo de la existencia de un sector competitivo con potencial, mientras que en el segundo caso, menor a cero, expresará la existencia de un sector importador neto carente de competitividad frente a terceros países. Adicionalmente, para un estudio más profundo de las relaciones comerciales, se recomienda analizar los indicadores de posicionamiento y dinamismo en materia de comercio exterior, tanto para determinar el impacto de las exportaciones en las economías, como para identificar su peso a nivel mundial. Por un lado, los indicadores de posicionamiento permiten analizar el grado de internacionalización de una economía. Estos indicadores son referenciados en términos relativos. De esta manera, los indicadores relativos del comercio exterior muestran el promedio de exportaciones, importaciones y valor total por habitante y PIB de cada país. La utilidad de estos indicadores es que permiten comparar la posición relativa de un país frente otros países, así como analizar la evolución del crecimiento del volumen exportado, importado, y/o comercializado en términos relativos; mientras que, en cuanto al nivel de apertura, los índices dan cuenta del nivel o grado de internacionalización de la economía analizada (Durán y Álvarez, 2008). Para ello, se recomienda utilizar las siguientes fórmulas:

$$\text{Exportaciones por habitante} = XT_{it}/P_{it} \quad (3)$$

$$\text{Importaciones por habitante} = MT_{it}/P_{it} \quad (4)$$

$$\text{Intercambio comercial por habitante} = (XT_{it} - MT_{it})/P_{it} \quad (5)$$

$$\text{Apertura medida por exportaciones} = XT_{it}/PIB_{it} \quad (6)$$

$$\text{Apertura medida por importaciones} = MT_{it}/PIB_{it} \quad (7)$$

$$\text{Apertura medida por el intercambio comercial} = (XT_{it} + MT_{it})/PIB_{it} \quad (8)$$

Donde:

XT_{it} = Exportaciones realizadas por el país i al mundo en el año t

MT_{it} = Importaciones del país i desde el mundo en el año t

P_{it} = Número de habitantes del país i en el año t

PIB_{it} = Producto interno bruto del país i en el año t

En cuanto al dinamismo, el indicador de participación en intercambios mundiales permite medir la adaptación de una economía al desarrollo y dinamismo del comercio internacional relacionando las exportaciones/importaciones del país con el total de las exportaciones mundiales de bienes y/o servicios (Durán y Álvarez, 2008). Para su estimación, se proponen las siguientes fórmulas:

$$\text{Apertura medida por exportaciones} = XT_{it}/XT_{wt} \quad (9)$$

$$\text{Apertura medida por importaciones} = MT_{it}/MT_{wt} \quad (10)$$

$$\text{Apertura por el peso de los intercambios locales en el comercio mundial} = (XT_{it} + MT_{it})/(XT_{wt} + MT_{wt}) \quad (11)$$

Donde:

XT_{it} = Exportaciones realizadas por el país i al mundo en el año t

MT_{it} = Importaciones del país i desde el mundo en el año t

XT_{wt} = Exportaciones realizadas en el mundo en el año t

MT_{wt} = Importaciones en el mundo en el año t

RESULTADOS

Aplicando las formulas sobre posicionamiento y dinamismo para el comercio exterior de México y Turquía, se obtiene la Tabla 1.

Tabla 1: Indicadores de Posicionamiento y Dinamismo del Comercio Exterior Por País Seleccionado, 2013

Indicadores		México	Turquía
Indicadores per cápita (Posicionamiento)	Exportaciones por habitante	3,108.66	2,025.72
	Importaciones por habitante	3,196.77	3,358.47
	Intercambio comercial por habitante	6,305.43	5,384.19
Indicadores de Apertura (Posicionamiento)	Apertura medida por exportaciones	30.15%	18.51%
	Apertura medida por importaciones	31.01%	30.68%
	Apertura media por el intercambio comercial	61.16%	49.19%
	Apertura medida por exportaciones	2.02%	0.81%
Dinamismo (Participación)	Apertura medida por importaciones	2.07%	1.33%
	Apertura por el peso de los Intercambios locales en el comercio mundial	2.05%	1.07%

Fuente: Elaboración propia con datos de la OMC (2014). La Tabla 1 muestra los indicadores de posicionamiento y dinamismo comercial para México y Turquía, conforme a participación per cápita (en dólares), contribuciones al PIB (en porcentaje) y a la contribución dentro de los intercambios mundiales (en porcentaje).

La Tabla 1 revela que México y Turquía son economías convergentes en la participación per cápita dentro de los intercambios comerciales, aunque con una mayor injerencia para el caso de México. La participación por habitante en las importaciones de Turquía es relativamente más alta que la de los mexicanos. En términos de la apertura media por el intercambio comercial también existen convergencias entre México y Turquía, sin embargo hay una mayor contribución de las exportaciones mexicanas al PIB. La apertura por el peso de los intercambios locales corrobora la significativa participación de ambos países en el comercio mundial, aunque se demuestra que México experimenta una inserción más completa, al duplicar los indicadores de Turquía. Dicho lo anterior, y buscando consolidar estrategias pertinentes para la integración económica entre México y Turquía mediante la celebración de un TLC, se aplicará el indicador de la VCR y el IBCR para los flujos comerciales entre ambas economías en el 2013, sobre la base de las XXI secciones del Sistema Armonizado reconocido por la OMC.

Con base a los indicadores obtenidos en la Tabla 2, se observa una profunda VCR para México en productos del reino vegetal, productos de las industrias químicas, plástico y caucho, perlas finas y metales preciosos, metales comunes y objetos de arte y antigüedades, correspondientes a las secciones II, VI, VII, XIV y XXI, respectivamente, al mostrar valores mayor a uno y con tendencia creciente. Tanto los materiales de transporte, contenidos en la sección XVII, como los productos de las industrias alimentarias, bebidas y líquidos alcohólicos, tabaco, de la sección IV, muestran una significativa VCR. Estos resultados coinciden con el flujo de mercancías de México a Turquía, por lo que empíricamente se comprueba que las exportaciones mexicanas hacia el mercado turco siguen un patrón sustentando en ventajas competitivas. No

obstante lo anterior, conforme a los resultados del IBCR, el saldo es deficitario, lo que revela la existencia de sectores carentes de competitividad frente al mercado turco.

Tabla 2: Indicadores de Ventaja Comparativa Revelada En el Comercio Exterior Entre México y Turquía, 2013

Secciones del Sistema Armonizado Reconocido Por la OMC	VCR	IBCR	IBCR Normalizado
Sección I (animales vivos y productos del reino animal)	0.00	0.00	-1.00
Sección II (productos del reino vegetal)	8.13	0.00	-0.99
Sección III (grasas y aceites animales o vegetales)	0.01	0.00	-1.00
Sección IV (productos de las industrias alimentarias, bebidas y líquidos alcohólicos, tabaco)	0.74	0.00	-1.00
Sección V (productos minerales)	0.12	0.00	-1.00
Sección VI (productos de las industrias químicas)	1.93	0.00	-1.00
Sección VII (plástico y caucho)	7.81	0.00	-1.00
Sección VIII (cueros y artículos de viaje)	0.29	0.00	-1.00
Sección IX (madera, carbón vegetal, corcho)	0.00	0.00	-1.00
Sección X (pasta de madera, papel y cartón)	0.05	0.00	-1.00
Sección XI (materias textiles y sus manufacturas)	0.19	-0.01	-1.01
Sección XII (calzado, paraguas, flores artificiales)	0.10	0.00	-1.00
Sección XIII (piedra, cemento, productos cerámicos, vidrio)	0.25	0.00	-1.00
Sección XIV (perlas finas, metales preciosos)	1.69	0.00	-1.00
Sección XV (metales comunes)	1.47	0.00	-1.00
Sección XVI (máquinas eléctricas)	0.42	0.00	-1.00
Sección XVII (material de transporte)	0.92	0.00	-1.00
Sección XVIII (instrumentos de óptica, aparatos de relojería, instrumentos musicales)	0.12	0.00	-1.00
Sección XIX (armas y municiones)	0.00	0.00	-1.01
Sección XX (muebles, juguetes, manufacturas diversas)	0.11	0.00	-1.00
Sección XXI (objetos de arte, antigüedades)	2.01	0.00	-1.00

Fuente: Elaboración propia con datos de Naciones Unidas (2014). La Tabla 2 muestra los indicadores VCR e IBCR para el comercio exterior entre México y Turquía, dando cuenta de los sectores en los que la economía mexicana tiene ventajas competitivas. Como producto de los bajos flujos de comercio entre ambas economías, se introduce el IBCR normalizado para una facilitar el tratamiento de los datos.

CONCLUSIONES

México y Turquía son dos países geoestratégicamente ubicados y con entornos demográficos similares, además de compartir perspectivas sobre la apertura comercial y la promoción de la inversión como instrumentos de política para fomentar el crecimiento económico y el empleo. Turquía es un país transcontinental cuya superficie se encuentra entre Asia y Europa, por lo que su condición como puerta de acceso a mercados tan dinámicos y complejos resulta favorable para las metas económicas de México y la internacionalización de las empresas mexicanas. Al realizar un estudio empírico sobre el comercio exterior de México y Turquía, se pudo observar que dichas economías muestran convergencias en sus indicadores de posicionamiento, con una mayor participación per cápita de los mexicanos en las exportaciones (3,108.66 dólares por habitante). En términos de dinamismo, en su conjunto las dos economías participan con el 3.12% de los intercambios mundiales, siendo mayor la apertura medida por exportaciones en el caso de México (2.02%). Al realizar un estudio empírico de las ventajas comparativas reveladas con el indicador de Balassa (VCR) y el IBCR como variante, se pudo observar que el flujo de las exportaciones mexicanas hacia Turquía se dan bajo condiciones de ventajas competitivas en siete de las veintiún secciones analizadas (mayormente en las secciones II, VI, VII, XIV y XXI, y significativamente en las secciones XVII y IV), pese a que el saldo comercial es deficitario (-168.15 millones de dólares) y en todas las secciones analizadas se obtuvo un IBCR normalizado con valor negativo (-1). Por tal motivo, es indispensable concertar apropiadamente el TLC entre México y Turquía, identificando si el estrechamiento de las relaciones comerciales obedece a la búsqueda de la especialización y la división del trabajo para intensificar las ventajas comparativas y competitivas, o simplemente se constituirá como un puente de acceso a mercados estrictos, con mayor demanda y atractivo comercial.

ANÁLISIS DE LA CARGA TOTAL DE TRABAJO DE LAS MUJERES TRABAJADORAS DE LA CIUDAD DE CHIHUAHUA Y LA REPERCUSIÓN EN SU CALIDAD DE VIDA

Liliana Granillo Marín, Instituto Tecnológico de Chihuahua
Virginia Ibarvo Urista, Instituto Tecnológico de Chihuahua
Luis Cardona Chacón, Instituto Tecnológico de Chihuahua
Gaspar Alonso Jiménez Rentería, Instituto Tecnológico de Chihuahua

RESUMEN

La presente investigación tiene como finalidad realizar un análisis de la carga total de trabajo de las mujeres de la ciudad de Chihuahua, considerando el tiempo que dedican al trabajo remunerado y al no remunerado, con lo cual se podrá determinar si desempeñan una doble jornada de trabajo (la laboral y la familiar) y la repercusión que esto pueda traer en su salud, la relación con su familia y la satisfacción con su trabajo. Se llevó a cabo una investigación cuantitativa mediante un instrumento que analiza los conflictos Trabajo-Familia y el Conflicto Familia-Trabajo. Se puede decir que los resultados obtenidos confirman que la salud mental y el estrés repercuten en la salud física, que las mujeres con hijos menores de 6 años observan un estado de salud menor y una carga de trabajo mayor.

PALABRAS CLAVE: Trabajo, Mujeres, Conflicto, Salud, Chihuahua

ABSTRACT

The present study aims to conduct an analysis of total workload of women in the city of Chihuahua, considering the time spent on paid work and unpaid, which may determine whether they play a double workday (work and family) and the impact this may bring in your health, relationships with family and job satisfaction. Quantitative research was conducted using an instrument that analyzes the work-family conflict and family-work conflict. One can say that these results confirm that mental health and stress impact on the physical health, women with children under 6 years observe a lower health status and higher workload.

KEYWORDS: Work, Women, Conflict, Health, Chihuahua.

INTRODUCCIÓN

Para elaborar este análisis se partió de la recopilación bibliográfica y documental sobre el tema de la doble jornada de trabajo que experimentan las mujeres en América Latina, al trabajar para el mercado y a la vez seguir siendo las mayores responsables de las labores domésticas y el cuidado de los miembros de la familia, repercutiendo esta situación en su salud, la relación familiar y su desempeño laboral. Uno de los estudios que se mencionan, fueron realizados por Eduardo Barros y María Cecilia Barros en la ciudad de Santiago de Chile, por medio del cual analizaron el impacto potencial del conflicto entre trabajo y familia en la salud y resultados laborales (Barros, Eduardo; Barros, María Cecilia, 2008). Dicha investigación sirvió como referencia para realizar el presente estudio y poder confirmar si la mujer trabajadora experimenta una doble jornada de trabajo y las consecuencias que esto pueda tener en su salud, la relación con su familia y su

desempeño laboral a fin de hacer evidente si existe una problemática y propiciar el establecimiento de políticas públicas que ofrezcan una solución a este conflicto.

ANTECEDENTES

La incursión de las mujeres en el mercado de trabajo fue el resultado de distintos procesos económicos y sociales; crisis económicas y cambios tecnológicos, transformaciones en la salud y la educación, disminución de la mortalidad y la fecundidad, elevación de la esperanza de vida y el nivel educativo de la población, entre otros, los cuales propiciaron las condiciones para desarrollar la participación de la mujer en el ámbito laboral y otros espacios públicos (Pedrero Nieto, 2004).

En la última década la participación de la mujer en el mercado laboral de América Latina y el Caribe se ha incrementado grandemente. Según datos de la Organización Internacional del Trabajo, la tasa de participación femenina ha subido de 48.0 en el 2000 a 53.0 en el 2010, en contraste con la tasa de participación masculina que se ha reducido de 80.7 a 79.7 en el mismo período de tiempo (International Labour Office, 2014). Independientemente del nivel de formación académica, cada vez más mujeres con responsabilidades familiares buscan trabajo fuera del hogar, algunas para lograr un mayor crecimiento y aprendizaje y otras para lograr subsistir.

Sin embargo, los roles de género en la esfera familiar no cambiaron en la misma proporción que lo hizo la participación de las mujeres en la fuerza laboral ya que las mujeres después de ejercer su trabajo remunerado deben continuar realizando trabajos domésticos para poder seguir teniendo su hogar inalterado. Esto a pesar de que los hombres hayan empezado a ayudar en ciertas labores domésticas, la gran responsabilidad aún recae sobre la mujer, aunque trabaje parcial o completamente (Rodríguez Montaña, 2008).

Se habla entonces de una doble jornada de trabajo que experimentan las mujeres que combinan ambos roles, el laboral y el familiar, el trabajo remunerado y el no remunerado, lo cual ha traído consigo el fenómeno de tensión entre ambos roles, esto es, el grado de sobrecarga de trabajo y/o el conflicto emocional que puede aparecer en la mujer al intentar satisfacer al mismo tiempo las demandas familiares y las de trabajo. Esta situación ha generado la necesidad de hacer compatible el empleo con el cuidado de la familia, obligando a la mujer a conciliar las demandas asociadas a cada uno de sus roles y a evitar conflictos que puedan afectar su salud física y mental e influir en su calidad de vida (Barros, Eduardo; Barros, María Cecilia, 2008).

Con base a lo anterior, la presente investigación busca realizar un análisis de la carga total de trabajo de las mujeres con trabajo remunerado, al considerar también el tiempo que dedican al trabajo no remunerado, con lo cual se podrá determinar si desempeñan una doble jornada de trabajo (la laboral y la familiar) y el impacto que esto pueda traer en su salud, la relación con su familia y su trabajo.

Situación Actual

En México hay 82.3 millones de personas de 14 y más años, de las cuales 79 millones trabajan, es decir, nueve de cada diez participan en la producción de bienes y servicios y de ellas, 42.3 millones son mujeres (53.5%) y 36.7 millones son hombres (46.5%). La mayor presencia de las mujeres en el trabajo total (remunerado y no remunerado) es resultado de la participación que tienen en el trabajo no remunerado y de su creciente inserción en el mercado, lo cual significa un avance en la participación de la mujer en el terreno laboral (INEGI/ INMujeres, 2012).

No obstante este avance, las mujeres con trabajo remunerado combinan su participación en la fuerza laboral con la responsabilidad de las actividades de sus propios hogares cubriendo una doble jornada de trabajo, la familiar y la laboral, manifestándose y haciéndose visible de esta manera la participación mayor de las

mujeres en el trabajo, como resultado de la distribución inequitativa del trabajo familiar y una inserción desigual en el trabajo remunerado (INEGI/ INMujeres, 2012).

La doble jornada de trabajo queda manifiesta en estudios recientes realizados en México por parte del Instituto Nacional de Estadística y Geografía en conjunto con la Secretaría del Trabajo y Previsión Social y el Instituto Nacional de las Mujeres. Los estudios en mención son la Encuesta Nacional de Ocupación y Empleo 2010 (INEGI-STPS, 2011) y la Encuesta Nacional sobre Uso del Tiempo 2009 (INEGI, INM, 2012).

En el estado de Chihuahua también se confirma esta situación. De acuerdo con datos del cuarto trimestre de 2012 de la Encuesta Nacional de Ocupación y Empleo (ENOE), el 39.0% de las mujeres de 14 años y más forman parte de la población económicamente activa (PEA) en el estado, de las cuales, 92.0% combina sus actividades extra domésticas (trabajo y estudio) con quehaceres domésticos.

Los datos anteriores ponen de manifiesto una característica que se da en la mayoría de las mujeres que participan en el mercado laboral que es la de seguir siendo responsables de las tareas asociadas a las labores domésticas, la crianza de los hijos, así como el cuidado de enfermos, ancianos y personas discapacitadas, por lo que se puede hablar de la existencia de una doble jornada de trabajo (doméstico y extra doméstico).

La sobrecarga de trabajo a que están expuestas las mujeres trabajadoras les deja escaso tiempo para descansar, por lo que suelen sufrir de fatiga crónica, debilidad y estrés (Saxena, 1997). El estrés sostenido en el tiempo puede conducir a hipertensión arterial, problemas cardíacos y úlceras; o depresión, fatiga e insomnio (Saxena, 1997). Además, de los riesgos asociados al agotamiento, puede existir el conflicto de roles que experimentan muchas mujeres que tiende a generarles sentimientos de culpa tanto hacia la familia como hacia el trabajo (Avendaño y Grau, 1997).

Objetivos

Con base a lo anterior, la presente investigación pretende alcanzar los siguientes objetivos:

Objetivo general

Analizar la carga total de trabajo de las mujeres de la ciudad de Chihuahua y las repercusiones en su salud, la relación con su familia y la organización para la que laboran.

Objetivos específicos

Medir las horas promedio semanales destinadas por las mujeres de la ciudad de Chihuahua al trabajo remunerado y al no remunerado.

Determinar si las mujeres experimentan el conflicto trabajo familia y el de familia trabajo

Determinar si la carga total de trabajo afecta la salud física o la salud mental.

Determinar si la satisfacción con la vida se ve afectada por el desempeño laboral, la salud física o la salud mental.

Determinar si la carga total de trabajo afecta el desempeño laboral.

MARCO TEÓRICO

Estudios de investigación sobre la incursión de la mujer al mercado laboral y sus repercusiones

En los últimos 30 años el estudio de la relación trabajo-familia ha recibido gran atención por parte de investigadores de diferentes países de América Latina entre los que se encuentran Chile, Colombia, Venezuela, Argentina y México. Para efectos de esta investigación, fueron tomados como referencia los estudios realizados por Eduardo Barros y María Cecilia Barros en Chile (Barros, Eduardo; Barros, María Cecilia, 2008), Guillermo Otálora Montenegro (Otálora Montenegro, 2007) y María Fernanda Rodríguez Montaña (Rodríguez Montaña, 2008) en Colombia, Feldman en Caracas Venezuela (Feldman, 2008), Elsa

López en Argentina (López, y otros, 2011) y otros más realizados en México por Irma Lourdes Alarcón (Alarcón, 2012), María Antonieta Covarrubias (Covarrubias Terán, 2012) y María de los Ángeles Padilla Lavín (Padilla Lavín, 2010), principalmente.

En Chile, Eduardo Barros y María Cecilia Barros realizaron una investigación para conocer el impacto potencial en la salud y los resultados laborales que presentaron 206 mujeres trabajadoras de la ciudad de Santiago debido al conflicto entre trabajo y familia. Los resultados arrojaron que: 1) el conflicto entre trabajo y familia repercute en la salud, principalmente la salud mental; 2) la duración de la jornada laboral tiene un efecto sobre la salud de las mujeres que es, sin embargo, mediado por el conflicto entre trabajo y familia; y (c) el conflicto entre trabajo y familia se asocia con resultados laborales tales como satisfacción y desempeño. (Barros, Eduardo; Barros, María Cecilia, 2008).

De este mismo tema, Otálora Montenegro, en su trabajo doctoral realiza una investigación donde explica como los conflictos relación trabajo-familia se relacionan con el estrés individual, en dos casos distintos de organizaciones colombianas, en la ciudad de Bogotá. El trabajo fue dirigido bajo la siguientes hipótesis: la carga laboral y las responsabilidades familiares están positivamente relacionadas con el conflicto trabajo-familia y conflicto trabajo-familia esta positivamente relacionado con el estrés individual. El trabajo concluye con la siguiente sugerencia: la importancia de considerar el apoyo de la familia como una variable moderadora en la relación entre las responsabilidades de la familia y el conflicto trabajo-familia, y el conflicto trabajo-familia y el estrés (Otálora Montenegro, 2007).

En Venezuela, se realizó un estudio sobre la asociación existente entre las gratificaciones y las interferencias generadas en la relación trabajo-familia y su impacto en la salud de mujeres trabajadoras. Se utilizó un diseño no experimental correlacional. Se aplicó en Caracas, Venezuela, durante el año 2006, a un grupo de 402 mujeres trabajadoras con edades comprendidas entre 27 y 71 años, una batería de pruebas para medir relación trabajo-familia, autoestima, ansiedad, depresión, bienestar, percepción de salud y número de síntomas. Los resultados fueron que se encontró que las gratificaciones en la relación trabajo-familia están relacionadas con un mayor bienestar y autoestima, así como con menor depresión, ansiedad y síntomas reportados. Una mayor interferencia se asoció a una mayor depresión, ansiedad y número de síntomas. (Feldman, 2008).

La autora María Fernanda Rodríguez Montaña (Rodríguez Montaña, 2008) refiere estudios relacionados con el tema en donde cita el que realizó Bosch (Bosch Fio, Ferrer, & Gili Planas, 1998) en el cual encuestó a 540 mujeres casadas, amas de casa y empleadas asalariadas, encontrando que ambos grupos realizan una doble jornada. También menciona otro estudio realizado en 1998 en donde se encontró que las amas de casa tienen hábitos más saludables, pero presentan mayores síntomas agudos y enfermedades crónicas debido a las altas horas de trabajo doméstico el cual no es remunerado, encontrando también por otro lado que el trabajo remunerado resulta beneficioso para el estado de salud (Rohlf, De Andres, Artazcoz, Ribalta, & Borrel, 1997).

En México, Irma de Lourdes Alarcón realizó un estudio en el que participaron 10 parejas heterosexuales que viven en la ciudad de México en el que se explora la relación entre géneros tendiente a la equidad y cómo concilian su participación en la vida familiar y en el ámbito laboral. Los hallazgos presentados abarcan la participación en el trabajo doméstico, extradoméstico, el cuidado de los hijos y la conciliación de su participación en su vida personal. Las características de las parejas fueron la edad entre 29 y 53 años, con título universitario y en ejercicio profesional, con o sin hijos (Alarcón, 2012).

También en México, Martha Carrario realizó otro estudio que aborda el tema de la dificultad para conciliar las esferas del trabajo y la familia. Dicha autora presenta en su artículo varios testimonios de mujeres que viven la situación de participar en el ámbito público y sus efectos de conciliar este rol con su ámbito privado. La autora explora la conciliación entre vida pública/ laboral y vida privada/doméstica que sufren las mujeres en ambas esferas (Carrario, 2008).

Otro estudio realizado en México fue hecho por María Antonieta Covarrubias quien aborda el tema de madres-padres contemporáneos y su ejercicio de la maternidad y el trabajo. Se realizó un estudio cualitativo a través de entrevistas a padres y madres de clase media, residentes de la zona conurbana de la ciudad de México. Se presentan las reflexiones que hicieron madres de familia que tuvieron que abandonar el campo laboral y la autora presenta una crítica sobre el tema al igual que propone alternativas (Covarrubias Terán, 2012).

Marco conceptual

En el desarrollo de la presente investigación se utilizaron los conceptos de trabajo remunerado, trabajo no remunerado, carga total de trabajo los cuales se tomaron del Glosario de Instituto Nacional de Estadística y Geografía.

Trabajo remunerado o trabajo para el mercado: Actividades que realizan las personas para producir bienes y servicios a cambio de un pago o remuneración, incluye a los trabajadores familiares sin recibir pago.

Trabajo no remunerado: Comprende los servicios domésticos y personales no remunerados proporcionados y consumidos dentro del mismo hogar, esto es, el trabajo doméstico, los cuidados y apoyos a los integrantes de ese mismo hogar; el apoyo no remunerado a otros hogares y a la comunidad.

Carga total de trabajo: Integra el trabajo remunerado y el trabajo no remunerado.

METODOLOGÍA

La metodología utilizada para alcanzar los objetivos planteados en la investigación fue la que se describe a continuación:

Diseño de la investigación: Estudio piloto de tipo cuantitativo de corte transversal.

Universo de estudio: Población económicamente activa femenina de la ciudad de Chihuahua, Chihuahua, México, con una edad entre 26 y 65 años.

Recolección y procesamiento de datos: La técnica utilizada en esta investigación fue una encuesta de 66 items que miden 8 dimensiones la cual fue diseñada con base a instrumentos de medición adaptados a los objetivos del estudio, las cuales se mencionan en la siguiente tabla:

DIMENSIÓN	INSTRUMENTO ORIGEN	REFERENCIA
Carga total de trabajo: Trabajo remunerado y trabajo no remunerado	Encuesta Nacional sobre Uso del Tiempo 2009, versión 18, 25 de Septiembre de 2009	Instituto Nacional de Estadística y Geografía; Instituto Nacional de las Mujeres México
Conflicto trabajo familia y conflicto familia trabajo	Rational Versus Gender Role Explanations for Work-Family Conflict	Journal of Applied Psychology 1991, Vol. 76, No. 4, 560-568
Salud física y salud mental	SF-12 Health Survey	Ware JE Jr, Kosinski M, Keller SD. A 12-Item Short-form Health Survey: construction of scales and preliminary tests of reliability and validity. Med Care. 1996;34:220-33
Satisfacción en el trabajo	Minnesota Satisfaction Questionnaire (MSQ Short form)	Vocational Psychology Research, University of Minnesota, Copyright 1977
Satisfacción con la vida	Escala de satisfacción con la vida (SWLS)	Reproducido con permiso de Ed Diener, Ph.D. Copyright © Ed Diener. Situado en el dominio público por Ed Diener. Traducido y diseñado en Español por José A. Reyes-Torres, PsyD.

La muestra fueron mujeres de la ciudad de Chihuahua, que trabajan en un ambiente formal, con un horario de trabajo fijo, con un promedio de 40 horas de trabajo a la semana, de 27 a 65 años de edad, en promedio de 41 años. Tienen 1.5 hijos, y 34% de ellas tienen hijos menores de 6 años. El promedio de nivel educativo es el de educación media y superior y el nivel de ingresos se encuentra en el rango de \$5,000.00 a \$10,000.00 pesos mensuales.

El alfa de Cronbach del instrumento de medición obtuvo una calificación de 0.85.

RESULTADOS

Carga Total De Trabajo: Los resultados obtenidos afirman, que las mujeres realizan una doble jornada de trabajo al destinar 44.98 horas en promedio a la semana al trabajo no remunerado y 39.56 horas en promedio a la semana al trabajo remunerado, es decir, su carga total de trabajo es de 84.54 horas promedio a la semana. De lo anterior se puede deducir que las mujeres destinan más tiempo al trabajo no remunerado que al trabajo remunerado. En cuanto a las horas de sueño, las mujeres destinan 6.03 horas en promedio diarias y permanecen despiertas 17.43 horas promedio al día.

Conflicto Trabajo Familia Y Familia Trabajo: El 92% de las mujeres encuestadas refieren cansancio al salir del trabajo y tener que realizar actividades necesarias para el hogar y un porcentaje poco menor refieren sentirse cansadas en el trabajo debido a las cosas que tienen que hacer en la casa.

Salud Física Y Salud Mental: La salud física y la salud mental están íntimamente relacionadas con una correlación del 0.93. También las madres que tienen hijos menores de 6 años presentan un índice de salud física menor que aquellas que tienen hijos de entre 6 y 18 años. Por otro lado, las mujeres que tienen hijos mayores de 18 años presentan un índice de salud ligeramente menor que los dos grupos anteriores, lo cual puede obedecer a que la edad de los hijos es mayor.

Satisfacción Y Desempeño Laboral: La satisfacción con la vida se ve afectada por la satisfacción laboral con un coeficiente de correlación bajo pero significativo.

Satisfacción Con La Vida: La satisfacción con la vida está siendo afectada por la salud mental.

CONCLUSIONES

Los resultados confirman la existencia de una doble jornada de trabajo de las mujeres de la ciudad de Chihuahua lo cual trae como consecuencia el conflicto trabajo familia, ya que la mayoría de las mujeres manifiestan su cansancio al llegar a su casa después de haber cumplido con su jornada laboral y tener que atender las labores domésticas. Esta situación se observa más en las mujeres con hijos menores de 6 años, debido al tiempo de atención que requieren los niños de esa edad. También la salud mental es la más afectada en estos casos, debido al estrés que puedan experimentar por no alcanzar a satisfacer todas las demandas. También la satisfacción con la vida que va ligada a la salud mental, afecta de una manera directa al desempeño y satisfacción en el trabajo.

RESUMEN

La presente investigación tuvo como objetivo analizar la relación que existe entre la información financiera y el desarrollo de las organizaciones en Mexicali, Baja California, México. El diseño de investigación fue descriptivo, no experimental, transversal, para obtener la información se utilizó un cuestionario que se aplicó a una muestra de ochenta empresas, los datos obtenidos se procesaron y analizaron por medio del programa SPSS. Entre los resultados obtenidos se encontró que se elabora información financiera en forma periódica, sin embargo no se aprovecha mediante la utilización de técnicas financieras de control y planeación, siendo estos factores importantes para el mejor desempeño y competitividad de cualquier organización.

FINANCIAL REPORTING AND ITS SIGNIFICANCE IN THE PERFORMANCE OF ORGANIZATIONS

ABSTRACT

This research aimed to analyze the relationship between financial reporting and the development of organizations in Mexicali, Baja California, Mexico. The research design was descriptive, not experimental, cross, to obtain information a questionnaire applied to a sample of eighty companies, the data obtained were processed and analyzed using the SPSS program was used. Among the results was found that financial information is prepared periodically, but not exploited by using financial planning and control techniques, these being important for the best performance and competitiveness of any organization factors.

KEYWORDS: Financial Reporting, Performance Organizations.

INTRODUCCIÓN

La necesidad de supervivencia de los negocios obliga a que las organizaciones sean creativas e innovadoras y a aplicar todas las herramientas administrativas existentes para mejorar el desempeño de las mismas.

La composición de las organizaciones a nivel mundial, y en México se basa en pequeñas y medianas empresas (Pymes), participando en el desarrollo económico tanto por su contribución al empleo, como por su aportación al Producto Interno Bruto (PIB), sin embargo, debe reconocerse que su gestión administrativa y financiera no funciona dentro de los paradigmas de eficiencia empresarial ya que cuentan con sistemas administrativos obsoletos, así como la falta de preparación gerencial y una contabilidad orientada sólo al cumplimiento de la norma tributaria, siendo estos algunos de los factores que las afectan. (Mosqueda, 2008).

De acuerdo a un estudio realizado por Zevallos en 2007 las empresas latinoamericanas señalan como principales limitantes en su desarrollo los siguientes aspectos: funcionamiento del estado, problemas sociales y el área financiera, los dos primeros aspectos han sido constantes siendo los problema sociales una sorpresa en este tipo de estudios (Saavedra, 2014).

La operación financiera como su administración son factores muy importantes para el trabajo diario de la toma de decisiones del pequeño empresario, que garantizan que una empresa tenga éxito en una economía de crecimiento y desarrollo continuo (Mercado, 2007).

El área financiera de las organizaciones tanto públicas como privadas, incluye registro y control de las operaciones, elaboración de información financiera, obtención y utilización eficiente de los recursos, aplicación de herramientas financieras y administrativas, todo esto con la intención de tomar decisiones adecuadas para lograr el objetivo planteado por la organización. La elaboración adecuada y oportuna de la información financiera son características necesarias para contar con los elementos y aplicar herramientas financieras y administras que aseguren una mejor toma de decisiones, promoviendo el mejor desempeño de las organizaciones.

El objetivo general de esta investigación fue identificar las herramientas financieras y administrativas utilizadas por los administradores, conocer que información financiera elaboran y si era utilizada para tomar decisiones.

REVISIÓN LITERARIA

Para fomentar el desarrollo de las organizaciones los gerentes o directivos deben apoyarse en la información financiera para tomar decisiones adecuadas, encaminadas a lograr los objetivos de las empresas, mediante una administración eficiente.

De acuerdo a las Normas de Información Financiera la información financiera emana de la contabilidad, es información cuantitativa y descriptiva, que muestra la posición y desempeño financiero de una entidad y se representa por medio de los estados financieros. Utilizando los estados financieros y otros elementos de juicio los usuarios de la información financiera podrán evaluar las perspectivas de la entidad y tomar decisiones de carácter económico sobre la misma. (CINIF, 2014)

Teniendo en cuenta que la capacidad gerencial puede marcar la diferencia entre una empresa y otra; porque de la capacidad de los líderes para tomar decisiones acertadas, de su visión de negocio, de su habilidad para responder de manera creativa y flexible a nuevas oportunidades de mercado; se lograran mayores ventajas competitivas, necesarias para el desarrollo organizacional (Jiménez, 2006 citado en Sarmiento, Sánchez y Cruz 2009).

La capacidad gerencial es factor indispensable para el desarrollo y desempeño de cualquier organización, la buena gestión administrativa y financiera requiere tomar en cuenta la información financiera para aplicar estrategias, controles adecuados y utilizar herramientas para optimizar los recursos.

METODOLOGÍA

El método que se utilizó en esta investigación fue descriptivo, no experimental transversal, la información se obtuvo de forma documental y de campo, recolectándose los datos de las empresa en un solo momento.

Se elaboró un cuestionario 84 ítems con preguntas cerradas de opción múltiple en su mayoría, a excepción de preguntas de información general de la organización. La muestra a la que se aplicó el instrumento fue

de 80 empresas considerando como marco muestral el padrón del Sistema de Información Empresarial Mexicano SIEM.

RESULTADOS

A continuación se describen los principales resultados obtenidos de la aplicación del cuestionario a ochenta organizaciones establecidas en Mexicali, Baja California México.

En un 54% de los casos se encuentran constituidas como personas morales, teniendo una estructura legal como persona física el 46%, las personas entrevistadas fueron gerentes 63% y propietarios 37%. En cuanto a la información financiera generada el 58% elaboran tanto información financiera como fiscal, siendo el 14% de las empresas que genera únicamente información fiscal. Principalmente elaboran el Balance General y el Estado de resultados, y en menor porcentaje elaboran los cuatro estados financieros básicos, mensualmente elaboran los estados financieros. Un 65% de las empresas utiliza los estados financieros para tomar decisiones, solo un 4% menciona no utilizar nunca la información del área de contabilidad o finanzas, y utilizan poco las herramientas financieras de control y planeación, resalta el hecho de que la necesidades de efectivo en 38% de los caos se determina por experiencia, en 25 % según se presente la situación, y solo el 30% lo determina mediante un presupuesto de efectivo.

CONCLUSIONES

Las organizaciones elaboran información financiera pero no en forma completa como lo establecen las normas de información financiera, además no la aprovechan en la aplicación de herramientas financieras de control y planeación, que les daría elementos para una mejor toma de decisiones y ayudaría a eficientizar todos los recursos y realizar las operaciones y actividades que impacten positivamente en mejorar su desempeño y competitividad.

ESTADO DEL ARTE Y RELEVANCIA DEL SÍNDROME BURNOUT CON ENFOQUE EN LAS PEQUEÑAS Y MEDIANAS EMPRESAS DE CD. JUÁREZ CHIHUAHUA

Norma Liden Altamirano Ramos, Universidad Autónoma de Ciudad Juárez
Flor Rocío Ramírez Martínez, Universidad Autónoma de Ciudad Juárez
Blanca Lidia Márquez Miramontes, Universidad Autónoma de Ciudad Juárez

RESUMEN

Durante varios años se ha intentado analizar el comportamiento del ser humano en el campo laboral, Herbert Freudenberger durante el año de 1974 utilizó la palabra burnout por primera vez, definiendo el término como cansancio excesivo, pérdida de energía y motivación de una persona. Al prolongarse los síntomas en el tiempo, se afectan las actitudes de servicio, los modales de una persona, así como el comportamiento de la misma, lo cual perjudica su ámbito laboral. Dentro de las investigaciones que se han realizado sobre el síndrome de burnout se destacan Maslach & Jackson (1981) con el instrumento de medición Maslach Burnout Inventory (MBI) y Gil- Monte (2005) quien creó el Cuestionario para la Evaluación del Síndrome de Quemarse por el Trabajo (CESQT), el cual permite evaluar el síndrome de burnout en trabajadores de habla hispana. Estos instrumentos apoyan en el diagnóstico del síndrome de burnout, sin embargo los estudios se han realizado principalmente en hospitales y escuelas. Hace falta realizar estudios en otras poblaciones como pymes de servicio en donde se han documentado malos tratos del personal hacia los clientes, este comportamiento puede deberse al síndrome de burnout y puede frenar el emprendimiento. PALABRAS CLAVES: Burnout, Pymes, Emprendimiento.

STATE OF THE ART AND RELEVANCE OF THE BURNOUT SYNDROME FOCUSED ON SMALL AND MEDIUM BUSINESSES IN CD. JUAREZ, CHIHUAHUA

ABSTRACT

We have tried to analyze the behavior of human beings in the workplace for several years. Herbert Freudenberger in 1974 used the word “burnout” for the first time to define the excessive tiredness, energy loss, and a person’s motivation. When these symptoms extend, personnel’s service attitude and modals get affected, as well as their behavior which damages their work environment. Among the research that have been carried out about the burnout syndrome, we can highlight Maslach & Jackson (1981), with the Maslach Burnout Inventory (MBI) measuring instrument and Gil- Monte (2005) who created the Questionnaire for the Evaluation of Work Burnout Syndrome (CESQT), which allows the evaluation of the burnout syndrome in Spanish speaking workforce. These instruments support the burnout syndrome diagnosis, however, these studies have been performed mainly in hospitals and schools. It is still necessary to make these studies in other sectors of the population as service “pymes” (small and medium size businesses) where personnel mistreatment towards customers has been documented. This behavior could be derived from the burnout syndrome and could hold back entrepreneurship.

INTRODUCCION

Las pequeñas y medianas empresas en Ciudad Juárez, además de la problemática que enfrentan para ser competitivas y seguir en el mercado están siendo afectadas por dificultades en la atención a sus clientes. Las largas filas para ser atendidos, la aglomeración de personas, un servicio deficiente y poco personalizado y el maltrato del personal hacia los clientes pueden ser ocasionados por la presencia del síndrome de burnout.

Existen varias explicaciones que pudieran darse a este fenómeno, se tienen aportaciones de Herbet Freudenberger (1974) quien determina el síndrome de burnout o Síndrome de Quemarse por el Trabajo (SQT) como el causante de dichos maltratos, Maslach & Jackson (1981) por su parte proporcionan una definición concreta de este síndrome y elaboran un instrumento que permite evaluar si un trabajador presenta burnout. En la actualidad Gil-Monte (2005) ha fortalecido estas aportaciones creando el Cuestionario para la Evaluación del Síndrome de Quemarse por el Trabajo (CESQP), que permite medir el síndrome de burnout en trabajadores de habla hispana.

La presente investigación se divide en tres apartados: en la sección de revisión de literatura se plasman los inicios del burnout, las definiciones del término y los modelos y autores que lo abordan. En el segundo apartado se presenta el análisis del síndrome de burnout en Pequeñas y medianas empresas (Pymes). En el apartado final se presentan las conclusiones de la investigación.

REVISION DE LITERATURA

Definiciones y Antecedentes del Burnout

La palabra burnout fue utilizada por primera vez en el ámbito psicológico por Herbert Freudenberger (1974) quien se percató que en la clínica en la que trabajaba los voluntarios no tenían el mismo rendimiento ni el mismo entusiasmo después de un año de servicio. Los voluntarios mostraban síntomas de ansiedad y depresión, así como agresividad en el trato a los pacientes. Freudenberger estudió dicho fenómeno dando como resultado la primera definición del síndrome de burnout, describiéndolo como el deterioro y cansancio excesivo progresivo unido a una ausencia drástica de energía. Este síndrome va acompañado a menudo de una pérdida de motivación que a lo largo del tiempo afecta las actitudes, modales y el comportamiento en general.

Pines & Kafry (1978) concuerdan con Freudenberger al mencionar que el síndrome de burnout consiste en una pérdida considerada de motivación, actitud y agotamiento físico. Dale (1979) uno de los pioneros de este concepto, define el burnout como una consecuencia del estrés laboral y señala que podría variar en relación a la intensidad y duración de una jornada de trabajo.

Durante los años 80's, el término burnout fue relacionado cada vez más con el aspecto laboral, por lo tanto todas las aportaciones que se realizaron fueron con un enfoque productivo. El primero en definir el término de burnout en el ámbito laboral fue Machlowitz (1980) quien menciona que el burnout, es un estado en el que la persona es apasionada de su trabajo y pasa mucho tiempo en el mismo, lo que conlleva a un desequilibrio productivo y como consecuencia, en un determinado periodo se presenta una reacción aversiva hacia el trabajo.

Freudenberger (1980) complementa el término señalando que es un "vaciamiento de sí mismo" palabras que define como consecuencia del esfuerzo excesivo por alcanzar determinada expectativa, esta puede no ser realista y puede ser puesta por la misma persona o por la sociedad, dando como consecuencia el agotamiento de los recursos físicos y mentales. Cherniss (1993) coincide con la primera definición que manifiesta Freudenberger en el año de 1974, donde señala que el síndrome de burnout ocurre con los

cambios que pasan en el transcurso de un largo tiempo, en trabajadores cuyos trabajos son frustrantes o con una demanda excesiva.

Pines & Kafry (1981) realizaron una nueva aportación al término burnout. La nueva aportación no solo lo define como un estado de agotamiento físico y mental, sino también lo relacionan con el factor tiempo, señalan que se presenta en personas que trabajan durante largos periodos de tiempo y esta situación afecta directamente las emociones de los trabajadores.

Maslach & Jackson (1981) definen el término burnout como un síndrome tridimensional caracterizado por agotamiento emocional, despersonalización y reducida realización personal. El síndrome de burnout tiene tres dimensiones y las personas que trabajan directamente con otras personas son más propensas a sufrirlo, por ejemplo: doctores, maestros, policías etc. A diferencia de Maslach & Jackson, Gil- Monte (2005) considera que el SQT o burnout es un síndrome multimensional, menciona que esta compuesto por cuatro elementos principales, la ilusión por el trabajo, el desgaste psíquico, la indolencia y la culpa.

Los años 90's fueron un escalón para el planteamiento de nuevas definiciones sobre el término burnout. Starrin & Larsson (1990) señalan que todos saben lo que el burnout es, sin embargo la mayoría puede ignorar su definición, tiene un enfoque social, es decir, que el burnout depende del papel que represente en dicho momento para la sociedad y las condiciones sociales que este fenómeno produzca. Los autores parten de que el burnout afecta de forma individual a una sociedad abstracta.

Gil Monte & Peiro (1997) consideran al burnout como "una respuesta al estrés laboral crónico, acompañado de una experiencia subjetiva de sentimientos, cogniciones y actitudes, las cuales provocan alteraciones psicofisiológicas en la persona y consecuencias negativas para las instituciones laborales." Debido a la complejidad del síndrome de burnout se han realizado diversos modelos desde diferentes enfoques, los cuales se encuentran fundamentados en investigaciones y estudios empíricos que intentan explicar las causas, consecuencias y desarrollo del burnout. Algunos de los modelos más significativos se mencionan a continuación:

Kyricou et al (1978) realizó un estudio con 127 profesores a los cuales les provocó diferentes reacciones relacionadas con el estrés, burnout y síntomas de ansiedad. En base a los resultados obtenidos en el estudio se determinó que las causas del burnout se encuentran relacionadas con el estrés, el cual surge como un desequilibrio entre las estrategias que el docente realiza durante su jornada de trabajo contra las demandas laborales. El modelo Kyricou & Sutcliffe hace hincapié en los factores personales, organizacionales y profesionales los cuales son determinantes e influyen durante todo el proceso. Rudow (1999) tomó como referencia el estudio del profesor Kyricou y analizó estudios que relacionaron aspectos fisiológicos y bioquímicos del síndrome de quemarse por el trabajo. Según Rudow la sobrecarga laboral y el estrés crónico son causas principales del burnout lo que provoca la reducción de la actividad laboral.

Leithwood, Menzies et al (1999) realizaron 18 estudios empíricos sobre el burnout en el área educativa. Partiendo de los datos obtenidos generaron un modelo que explica el síndrome burnout en profesores. Dicho modelo contiene tres conceptos principales interrelacionados: las transformaciones en la escuela, las decisiones de los administradores, y los factores organizacionales y personales.

Maslach & Jackson (1981) señalan que el burnout es un síndrome psicológico constituido por el agotamiento emocional, componente de estrés que implica una capacidad para obtener de uno mismo los suficientes recursos emocionales necesarios para afrontar el trabajo; la despersonalización, este concepto está asociado a la evaluación de los demás en la que afloran sentimientos negativos de distanciamiento y cinismo con respecto a los clientes y una baja realización personal, aspecto relacionado con la evaluación negativa de uno mismo y con sentimientos de insatisfacción sobre el resultado de su trabajo. Lo primero que aparece en el sujeto es el cansancio emocional dando paso posteriormente a la despersonalización y a la baja realización personal.

Los instrumentos de medición permiten obtener la información cuantitativa para analizar e interpretar los factores que forman parte de un estudio. Dentro de las investigaciones del síndrome de burnout, son los instrumentos de medición los que permitirán evaluar y conocer los factores que afectan a los individuos en dicho padecimiento, comprendiendo diversos enfoques según la teoría que los sustente.

El cuestionario (MBI) elaborado por Maslach & Jackson (1981), el cual tuvo una duración de ocho años hasta llegar a su estructura actual, en un inicio estaba constituido por 47 ítems, que fueron reducidos a 25, hasta quedar conformado por 22 ítems en una escala de Likert de siete puntos, comprende desde nunca – hasta diario, El MBI se divide en tres subescalas de acuerdo a las dimensiones definidas. La primera es el cansancio emocional integrado por 9 ítems, la segunda es la despersonalización constituido por 5 ítems y por último la baja realización personal, formada por 8 ítems. Cada una de las subescalas mide el síndrome de burnout en tres niveles bajo, medio y alto, lo cual permite determinar el grado que está presente en los individuos.

Debido a las diferentes adaptaciones que ha sufrido dicho instrumento se ha logrado medir el burnout en diversas áreas profesionales, razón por lo cual es uno de los instrumentos más utilizados. Gil-Monte (2005) difiere con el cuestionario de Maslach & Jackson, por lo cual diseñó el Cuestionario para la Evaluación del Síndrome de Quemarse por el Trabajo (CESQT), este instrumento evalúa las cogniciones, las emociones y las actitudes de las personas y de una manera estratégica las relaciona con el ámbito laboral mediante cuatro escalas, la ilusión por el trabajo (It) con 5 ítems, la cual consiste en el deseo que tiene el trabajador por alcanzar las metas laborales dada la satisfacción que estas producen para sí mismo. Los ítems están formulados de forma positiva, lo cual significa que las bajas puntuaciones dan origen al burnout.

El Desgaste psíquico (Dp) con 4 ítems que mide el deterioro físico y mental producido por la convivencia diaria con las personas, las cuales tienden a ser o generar los problemas del trabajador; la Indolencia (In) se caracteriza por la indiferencia y el cinismo del trabajador hacia los clientes, dentro del instrumento corresponden 6 ítems a dicha escala. Al evaluar al trabajador con una puntuación alta es caracterizado como insensible ante los problemas de otras personas. En el cuestionario además se mide el sentimiento de Culpa (C) con 5 ítems. Dicho sentimiento comprende la culpa que siente el trabajador por su comportamiento laboral, principalmente el trato indigno que ha brindado a los clientes o usuarios de su servicio.

Los primeros 15 ítems del instrumento determinan el síndrome de quemarse por el trabajo. Los cinco ítems de la culpa (escala) determinan únicamente si el trabajador presenta sentimientos de culpa en su comportamiento laboral. Este cuestionario tiene dos modelos, la primer versión (CESQT) está destinada a la evaluación de profesionales que tienen trato directo con personas en su área de trabajo, y otro de ellos para la versión de Desencanto profesional (CESQT-DO), dirigida a los profesionales que no tienen contacto habitual con personas en su lugar de trabajo. Ambos instrumentos tanto el de Maslach & Jackson (1981) como el de Gil-Monte (2005) son de gran utilidad pero falta adaptarlos para estudiar el síndrome en otras entidades y poblaciones.

El Burnout y las Pequeñas y Medianas Empresas (PYMEs)

La creación y el desarrollo de nuevos proyectos emprendedores han tomado gran importancia en los últimos años, dada su repercusión en el crecimiento económico del país. Wenekers et al (2005) señalan que el emprendimiento es uno de los principales impulsores de la competitividad, la innovación, el desarrollo económico y social.

El emprendimiento es un elemento clave para el desarrollo económico y social, Shane & Venkataraman (2000) señalan implica estudiar las fuentes de oportunidades existentes, los procesos de descubrimiento y la evaluación y explotación de oportunidades.

Para Cueva (2012) el emprendimiento es una actividad que involucra el proceso de creación de nuevas empresas, la consolidación de las actuales y la expansión de las firmas en los mercados globales, entre otros aspectos clave. Guarda una estrecha relación con la dinámica productiva de los países, el crecimiento económico, el desarrollo social y la formación de una fuerte cultura empresarial necesaria para el progreso. Durante varias décadas el crecimiento económico de un país, en especial el empleo, estuvo relacionado con grandes empresas y corporativos, a partir de la década de los 90's, se incrementó la participación de pequeñas y medianas empresas (Pymes). Las Pymes mexicanas cerraron en cifras del 2013 con una plantilla laboral de 12.29 millones de personas, cifra 0.81% menor a los 12.39 millones al cierre de 2012, señalan datos de la Encuesta Nacional de Ocupación y Empleo (ENOE) elaborada por el Instituto Nacional de Estadística y Geografía (INEGI).

Las pequeñas y medianas empresas toman el riesgo de entrar al mercado, invierten capital y recursos, detonan la creación de empresas, y todo este esfuerzo puede venirse abajo simplemente por no saber detectar la presencia del síndrome de burnout en sus trabajadores.

CONCLUSIONES

Es necesario evaluar el síndrome de burnout en las pequeñas y medianas empresas de Ciudad Juárez, ya que la presencia de este síndrome puede inhibir el emprendimiento. Un cliente que recibe un mal trato por parte de un empleado de una pyme generalmente no realiza una queja pero no vuelve a consumir en el establecimiento, lo que representa el inicio del fracaso de las empresas de nueva creación.

Un adecuado diagnóstico del síndrome de burnout ayudaría a que las pymes encontraran a tiempo una solución a este síndrome, generador de malos tratos, en lugar de despedirse de buenos clientes. Es difícil emprender un negocio y aún más lograr clientes leales, por lo cual identificar y erradicar el síndrome de burnout de los empleados debiera ser una prioridad para las pequeñas y medianas empresas.

LA TEORÍA DEL ESTADO DE BIENESTAR COMO ORIGEN DE LOS PROGRAMAS SOCIALES DEDICADOS A LA VEJEZ

Flor Rocío Ramírez Martínez, Universidad Autónoma de Ciudad Juárez
Luis Flores Padilla, El Colegio de Chihuahua.

RESUMEN

La ayuda económica que surge en la Edad Media para apoyar a los desprotegidos y que actualmente llamamos beneficencia es el primer acercamiento que se tiene a lo que hoy conocemos como programas sociales, que tienen su fundamento en el estado de bienestar. Uno de los principales objetivos del estado de bienestar es proporcionar niveles de vida digna a los ciudadanos que no sean capaces de mantenerla por sus propios medios. El INEGI (2014) determinó que la esperanza de vida de las mujeres en México se incrementó a 77.5 años y la de los hombres a 72.1 años. La importancia de este incremento nos hace remontarnos 125 años atrás para analizar las bases del estado de bienestar, en las que se sustenta el que llamaremos “estado de bienestar para la vejez” del cual el canciller alemán Otto Von Bismarck instauró las bases en Alemania al crear el seguro de invalidez y vejez en 1889. Una de las etapas más predecibles en la vida es la vejez, pero es difícil saber en qué condiciones se llegará, aquí es donde tienen un papel fundamental los programas sociales dentro del estado de bienestar.

PALABRAS CLAVES: Bienestar, Vejez, Salud, Programas sociales.

THE WELFARE STATE THEORY AS THE SOURCE OF SOCIAL PROGRAMS DEDICATED TO THE ELDERLY.

ABSTRACT

The economical help that arises from the Middle Ages to support the underprivileged and that we currently refer to as charity, is the first approach to what we know today as social programs which foundations reside in a welfare state. One of the main objectives of the welfare state is to provide dignified living standards to those citizens that are not capable of obtaining it on their own. INEGI (National Statistics and Geography Institute – 2014) found that life expectancy for women in Mexico increased up to 77.5 years and men’s up to 72.1 years. The importance of this increase makes us go 125 back to analyze the basis for the welfare state on which stands what we call “welfare state for the elderly” on which Otto Von Bismarck, German Chancellor, established the basis in Germany to create the disability and old age insurance program in 1889. One of the most predictable stages in life is old age, but it is difficult to foresee in which condition one will get there. Here is where social programs within a welfare state play a key role.

INTRODUCCIÓN

El estado de bienestar es uno de los principales logros de nuestra civilización. El estado de bienestar enfocado en los adultos mayores al que llamaremos estado de bienestar para la vejez ha permitido que los ancianos en condiciones de pobreza encuentren mejores condiciones de vida. De acuerdo a las proyecciones

de la pirámide poblacional, en México la población de adultos mayores tendrá el crecimiento más alto en la primera mitad del siglo XXI. De tal manera que en el año 2050 habrá 25.9 millones de personas mayores de 60 años, lo que representa un grave problema para los programas sociales para adultos mayores, por los recursos que se tendrán que aplicar en base al aumento de los beneficiarios. Esta investigación dentro de la revisión de literatura está dividida en tres apartados en donde se analiza el origen del estado de bienestar, la crisis del estado de bienestar y el estado de bienestar de la salud en la vejez. Los gobiernos deben fortalecer el estado de bienestar para los adultos mayores a través de programas sociales con condiciones para que los adultos mayores puedan lograr una vida digna.

REVISIÓN DE LITERATURA

Origen Del Estado De Bienestar

Desde la Edad Media y hasta alrededor del siglo dieciocho en Europa la sociedad comienza a considerar la ayuda económica a modo de “limosna” como una manera de ayudar a las personas más necesitadas. Para Evangelista (2001) ahí se inicia lo que constituye una de las formas de ayuda social más importantes de hoy en día: la beneficencia, que es definida como el acto de prestar algún modo de asistencia a las personas en necesidad, otorgando cierta protección a los grupos vulnerables dentro de la sociedad.

Evangelista (2001) y Nina (2008) concuerdan en la definición de beneficencia como un sistema de protección social que tiene su base en la asistencia a grupos desprotegidos y que aunque principalmente es llevado a cabo por instituciones del estado, también puede efectuarse por organismos privados o instituciones religiosas. Esta definición del perfil de los beneficiarios, quienes son los usuarios de los programas sociales, revela otra necesidad: distribuir muy pocos recursos entre un gran número de personas.

Esta ayuda económica que surge en la Edad Media y que hoy llamamos beneficencia es el primer acercamiento que se tiene a lo que hoy conocemos como programas sociales que tienen su fundamento en el estado de bienestar. Uno de los principales objetivos del estado de bienestar es proporcionar niveles de vida digna a los ciudadanos que no sean capaces de mantenerla por sus propios medios. El estado proporciona protección sobre riesgos derivados de situaciones esperadas como la vejez o de situaciones inesperadas como la pérdida del empleo, de la salud, o necesidades económicas.

Con respecto a la vejez en México el Instituto Nacional de Estadística y Geografía (INEGI) determinó que la esperanza de vida de las mujeres en 2014 se incrementó a 77.5 años y la de los hombres a 72.1 años. La importancia de este incremento en la esperanza de vida nos hace remontarnos 125 años atrás para analizar las bases del estado de bienestar, en las que se sustenta el que llamaremos estado de bienestar para la vejez del cual el canciller alemán Otto Von Bismarck instauró las bases al crear el seguro de invalidez y vejez en 1889.

Una de las situaciones más esperadas de la vida es la vejez; en el mejor de los casos se espera su llegada, pero es difícil saber en qué condiciones se llegará, y es aquí en donde tiene un papel fundamental el estado de bienestar.

Briceño & Gillezeau (2012) señalan que entre la corriente liberal y socialista que predominaron en Europa a finales del siglo XVIII y comienzos del XIX, se creó un nuevo concepto que apoyaba la necesidad de desarrollar políticas sociales que disminuyeran los problemas que estaba generando el capitalismo. Esta nueva corriente recibió el nombre de estado benefactor, estado providencia (del Francés L'Etat Providence) o estado de bienestar (del Inglés Welfare State).

Los programas sociales tienen relación con el origen de las políticas públicas de desarrollo social, las llamadas “políticas sociales”. Vara-Horna (2007) indica que las políticas sociales fueron impulsadas por

los gobiernos europeos al finalizar la Segunda Guerra Mundial y se orientaron a procurar condiciones de vida aceptables para el conjunto de la sociedad. Esto implicó intentar, mediante su intervención, resolver los más diversos problemas sociales: desempleo, bajos salarios, analfabetismo, baja escolaridad, carencia de servicios básicos, enfermedades, etc.

El modelo Keynesiano de intervención estatal se reconoce como un importante antecedente del estado de bienestar, fue concebido por el economista británico John M. Keynes como consecuencia de la Gran Depresión Económica de los años treinta y se consolidó en los países desarrollados, después de la segunda guerra mundial. Después de la postguerra, el mundo obtuvo una de sus más grandes conquistas: el estado de bienestar, el cual ha sido replicado por varios países en el mundo con buenos resultados para disminuir la pobreza de sus ciudadanos. Por bienestar podemos entender las condiciones que se necesitan para tener una vida digna y por lo tanto en esta visión entra el gobierno para crear las condiciones necesarias para que la ciudadanía pueda lograrlo.

El estado de bienestar se ocupa de proporcionar la satisfacción de necesidades básicas para la vida tales como económicas, educativas y de salud, siendo el estado el que las rige. El origen de la intervención del estado en este tema aparece en la época del canciller Bismark, quien es considerado por muchos el fundador del estado alemán moderno. A él se debe en gran medida que Alemania fuera el primer país en crear una política social de estado, su obra es abordada por varios autores que se mencionan a continuación.

Después de la segunda guerra mundial surge la necesidad de que el estado intervenga no sólo en el plano económico sino en el plano social. Para Moreno (2001) se puede hablar de los orígenes del estado de bienestar a partir de la legislación social alemana en el periodo de gobierno del canciller, estadista y militar Otto von Bismarck, quien a fines del siglo XIX aprueba la primera legislación social alemana que entre sus leyes incluía la ley de seguro de enfermedad y maternidad de 1833, la ley de accidentes de trabajo de 1884 y la ley de jubilación y defunción de 1889. A finales del siglo XIX Europa empieza a ayudar a sus ciudadanos realizando un cambio en su manera de conceptualizar la pobreza, y se empieza a apoyar a la población buscando su bienestar, se comienzan a crear políticas públicas que regulen las desigualdades sociales.

Villarrespe (2002) señala que en el siglo XIX, la revolución industrial introdujo un cambio de percepción sobre la pobreza, asimilando a los pobres con los obreros industriales, es decir, tratando de incluirlos en la vida productiva, ya que se tenía la idea de que pobreza era igual a delincuencia. Debido a esta situación se implementaron controles para garantizar la honestidad, la dignidad y el apego social al trabajo de las personas menos favorecidas. Para el autor lo esencialmente importante es que el problema de los pobres se integra de forma estructural al estado. La caridad decreció cuando el estado asumió un nuevo centralismo con las siguientes variantes: a) como represor de vagos, b) como patrón de los verdaderamente necesitados, avalándolos en las posibilidades de empleo y, ocasionalmente, como proveedor de trabajos públicos, y c) como recopilador de información acerca de los pobres.

En Reino Unido los poderes públicos estatales fueron asumiendo funciones tradicionalmente desempeñadas por los concejos municipales o las iglesias, previo a la promulgación en 1834 de la New Poor Law. Para algunos historiadores esta fecha marcó los inicios de la construcción de los sistemas contemporáneos del bienestar. Las leyes en Gran Bretaña se modificaron estableciendo un sistema de ayuda a los pobres, los cuales antes sólo habían recibido apoyo a través de instituciones de beneficencia o de la iglesia. Estos cambios legales permitieron crear un marco jurídico reglamentario para apoyar a los más necesitados (Moreno, 2001).

A finales del siglos XIX, según la revisión de literatura, empiezan a generarse opiniones sobre el estado de bienestar, por ejemplo según documenta Krmpotic (2002) en el Congreso Internacional de Asistencia Pública y Privada, celebrado en París en 1889, se plantea el sostenimiento de la intervención del estado

como contralor de las instituciones privadas, y se empieza a considerar el asistencialismo como una actividad más racional.

Moreno (2001) indica que las bases del estado de bienestar en Estados Unidos se establecieron después de la depresión de 1929 y sobre todo con la aprobación, en 1935, de la Social Security Act, aunque posteriormente unos programas sociales menos comprensivos, y la carencia de un sistema nacional de salud pública, han configurado el welfare estadounidense, como un modelo de mínimos dentro de lo que se conoce como modelo anglosajón.

Marshall (1950) señala que la ciudadanía actual es resultado de un proceso histórico. Él examina este proceso a la luz de la experiencia inglesa, donde de manera no uniforme se han ido incorporando diferentes derechos en diferentes momentos de la historia. En este sentido, diferencia los derechos en tres grupos, a cada uno de los cuales les corresponde un siglo en el que fueron consolidados: derechos civiles (siglo XVIII), derechos políticos (siglo XIX) y derechos sociales (siglo XX). Pero para Marshall son los derechos sociales los que hacen de la ciudadanía una institución única y digna de ser defendida. Los derechos sociales son derechos universales que le asisten al ciudadano por su mera pertenencia a la comunidad, que se otorgan sin vinculación alguna con el lugar que éste ocupe en la división del trabajo o en los sistemas de jerarquías sociales.

El sociólogo Esping-Andersen apoyado en los planteamientos de Marshall se basa en el concepto de ciudadanía social para desarrollar su propio concepto sobre el estado de bienestar. Esping-Andersen (1993) construyó una tipología que identifica tres regímenes de bienestar, según el peso del estado y su intensidad redistributiva. De acuerdo al autor un régimen de bienestar es una combinación institucional de producción mixta de bienestar entre el estado, la familia, el mercado y la sociedad civil que depende de tres factores: la naturaleza de la movilización de las clases sociales, las estructuras de coalición de la clase política y el legado histórico.

a) El liberal-anglosajón: Es heredero del siglo XIX y la visión de “aliviar a los pobres”, el elemento central es el mercado y se aplica en los países anglosajones. Tiene un enfoque de asistencia social basado en necesidades y, en consecuencia, un sesgo hacia la focalización. En este régimen típico en los Estados Unidos, el mercado es la estructura fundamental y dominante del bienestar. La intervención del estado es limitada y la redistribución de la riqueza es un objetivo secundario. Los programas sociales sólo cubren a la población más pobre, los subsidios son modestos y duran poco, la sanidad es mayoritariamente privada, con programas públicos sólo para jubilados o con ingresos muy bajos. El mercado de trabajo está desregulado, con salarios mínimos irrisorios y escasa protección laboral.

b) El socialdemócrata: Desarrollado en los países escandinavos, se fundamenta en la búsqueda de la protección pública integral con una tendencia al igualitarismo. En ese sentido tiene una alta provisión de servicios sociales y se centra en el estado. Un país representativo de este esquema es Suecia, aquí el estado interviene con fuerza en la economía y su prioridad es la redistribución del ingreso y la igualdad en las oportunidades. Los programas sociales son extensivos, están bien financiados y cubren a toda la población. Los servicios públicos suelen ser excelentes. A pesar de que la regulación del mercado laboral es escasa, existen generosos subsidios de desempleo y agresivas políticas de inserción laboral. El resultado de este modelo es el de sociedades extremadamente igualitarias, con altos niveles de movilidad social, muy bajos niveles de pobreza y envidiables niveles de competitividad e innovación industrial gracias a una mano de obra bien calificada.

c) El conservador: Su mayor impacto se ha dado en la Europa continental y sus raíces son de carácter estatista, con influencia de la religión católica. Lo que busca es proteger individualmente a los trabajadores asegurándoles la ocupación mediante estrictas normas de contratación y despido. En este modelo se incluyen países como Alemania, Francia y Bélgica. La intervención del estado es considerable, pero sin

embargo la disposición redistributiva es limitada. Como los programas universales no acostumbran tener una buena calidad, los ciudadanos de clase alta recurren al sector privado. En este modelo existen agresivas políticas sociales de empleo y guarderías gratuitas, con mercados de trabajo muy regulado a fin de proteger a los que tienen empleo. El resultado de este modelo son sociedades igualitarias, con niveles de movilidad social no demasiado altos, con niveles de pobreza no excesivos pero con altas tasas de desempleo.

Para Pico (1999) el estado de bienestar comienza con mayor auge a partir de 1945 cuando la mayoría de los países capitalistas adoptan la doctrina del Reporte Beveridge y los postulados de política macroeconómica de Keynes. La teoría Keynesiana intentaba disminuir los efectos de la depresión actuando sobre la demanda agregada a través del estado. De ahí que la expansión de los programas de bienestar actuados desde arriba se justificaba no sólo con el fin de cubrir las necesidades básicas de la población, sino también como política económica para regular el mercado y reavivar el consumo.

Con respecto al Reporte Beveridge su autor fue William Beveridge, un inglés que en 1942 en plena guerra mundial creó varias obras que planteaban la necesidad de cambiar las políticas sociales para evitar que después de la guerra siguieran subsistiendo las desigualdades sociales. Beveridge quería evitar la pobreza, decía que el estado debe ofrecer un modelo de seguridad social donde se pueda contar con la oportunidad de un trabajo remunerado que permita estar a salvo de la misma.

Según Bustelo & Minujin (1997), el Reporte Beveridge plantea la convicción de evitar que después de la guerra se retomara el sistema de desigualdades sociales del pasado, promoviendo un programa completo de seguros sociales para trabajadores y no trabajadores que cubrieran la desocupación, la incapacidad, la maternidad, la viudez, etc. Asimismo propone la intervención estatal en la seguridad social y el otorgamiento de subsidios a las clases más necesitadas. A partir del reporte se abandona la idea de Bismark del seguro social sólo para trabajadores, para pasar a la idea de una protección mínima para todos, independientemente de si las personas contribuyeron o no.

Luhmann (1993), expone que si es posible hablar de una lógica del estado de bienestar, esta sólo puede ser comprendida mediante el principio de compensación. Se trata de la compensación de aquellas desventajas que recaen sobre cada cual como consecuencia de un determinado sistema de vida. En el siglo XIX, en Europa se impuso la tesis de la separación entre estado y sociedad, pero el estado no es nada fuera de la sociedad, según el autor constituye uno de sus sistemas funcionales.

Sen (2002) señala que en ocasiones las enfermedades, la pérdida del trabajo, la discapacidad o el bajo nivel salarial pueden ser motivo para que las personas se hundan en la pobreza extrema, y es entonces cuando el estado de bienestar impide que las personas lleguen a tal estado apoyando a solucionar en parte sus necesidades. Según el autor en la Europa de los años veinte a los cuarenta o principios del período de posguerra la expectativa de vida era muy baja, aunado con la incidencia de enfermedades y pobreza. Ahora gracias al estado de bienestar generado por la asistencia sanitaria, la seguridad social, los programas contra la pobreza, el seguro del desempleo y los planes de pensión, esta expectativa de vida ha cambiado radicalmente. Para Sen el estado de bienestar ha sido quizás la mayor aportación de la civilización europea al mundo.

La Crisis Del Estado De Bienestar

El crecimiento económico no puede separarse del crecimiento social, el libre mercado que hemos experimentado en los últimos años no ha proporcionado por sí solo un beneficio global en la población. El bienestar de los ciudadanos está plasmado como un derecho en la Constitución de la mayoría de los países y este derecho en parte es subsanado por el estado de bienestar. La era neoliberal trajo consigo beneficios económicos para el estado, pero no necesariamente traducidos en beneficios económicos para sus

ciudadanos, y sí en cambio trajo una mayor desigualdad social y una brecha más grande entre las clases sociales.

Para Sen (2002) la naturaleza del estado de bienestar consiste en ofrecer algún tipo de protección a las personas que sin la ayuda del estado puede que no sean capaces de tener una vida mínimamente aceptable, según los criterios de la sociedad moderna. Dentro de este nuevo concepto de estado de bienestar en la modernidad se cuenta con varios estudios críticos que se empiezan a gestar con mayor fuerza a partir de 1970.

Un criterio original de estos estudios según Myles et al (2002) ha sido la identificación del industrialismo como un factor causal del planteamiento de políticas sociales. El autor analiza cómo la industrialización instituyó nuevas demandas sociales que cambiaron las instituciones agrarias tradicionales, se tuvo un acceso al empleo y por consiguiente al salario, lo que creó una dependencia al mismo.

Durante los años setenta se gestó lo que puede llamarse una “crisis del estado de bienestar”. La escasez de recursos, el aumento de la inflación y la el cambio del patrón oro-dólar comenzaron la crisis. Los críticos más importantes de la época, Huntington, Crozier & Watanuky (1975), se refirieron a la crisis fiscal de los estados de bienestar como una crisis de democracia, ya que señalaban que el gobierno estaba adquiriendo demasiadas cargas sociales, lo que significaba déficit público; esto aunado a los problemas con los sindicatos, los hizo considerar el estado de bienestar como inviable.

Para Mulas-Granados (2010) la profunda crisis económica internacional que venimos experimentando en los últimos años, fundamentalmente, en los países desarrollados, como consecuencia de la economía de mercado capitalista y de la insuficiente regulación del mercado financiero, está agudizando la crisis del estado de bienestar que comienza a experimentarse con la crisis económica de la década de los setenta. De tal forma, que se hace necesario plantear diferentes alternativas para afrontar esta crisis, así como las nuevas demandas y riesgos sociales que comienzan a aparecer en las actuales sociedades desarrolladas tales como inmigración, acceso a la vivienda, envejecimiento, desempleo, etc.

Los nuevos fenómenos laborales y sociales que repercutieron en la crisis del estado de bienestar han generado que en los últimos años se transforme para adecuarse a los nuevos tiempos; incluso el envejecimiento poblacional no ha sido suficientemente explorado a la luz del estado de bienestar para que éste se adecue a las nuevas políticas sociales. A continuación se realizará un análisis de los tres modelos antes expuestos por Esping-Andersen bajo los nuevos cambios surgidos:

El modelo liberal o anglosajón que se expuso anteriormente se retoma en la década de los 90 a través de la contracción “workfare” o “welfare to work” sobre todo en Estados Unidos y Gran Bretaña. Según Lodemel y Trickey (2001) el workfare estaría compuesto por programas o medidas que requieren el retorno al mercado laboral para que la persona pueda cobrar las prestaciones sociales. En Estados Unidos esta reforma la realiza el Presidente Bill Clinton en 1996 y el primer ministro Anthony “Tony” Blair en Inglaterra sigue sus pasos, eliminando los apoyos y dándole prioridad al empleo, en donde se condiciona las ayudas que pudiera otorgar el estado a tener un trabajo.

Waddan (2003) señala que entre las reformas de Clinton se encuentra la desaparición de la Aid to Families With Dependent Children (AFDC), que era el programa más conocido en el sistema de asistencia social estadounidense. El AFDC atendía antes de la reforma a cinco millones de familias. Este programa fue sustituido por el Temporary Assistance for Needy Families (TANF), como resultado se aumenta el empleo se disminuyen los programas sociales, pero lo interesante de esta situación es que representó una disminución en la pobreza.

Michalopoulos & Berlín (2001) señalan que a raíz de este cambio en algunos casos, ciertas familias que ahora trabajan a jornada completa están en una situación peor que cuando recibían las prestaciones sociales. El premio Nobel de economía Joseph Stiglitz (2009) acuñó la frase “ahora somos todos Keynesianos” para hacer referencia a la intervención del estado en la crisis financiera de los Estados Unidos del 2009, como política económica, aceptada tanto por las fuerzas políticas de la derecha como por los del bando Keynesiano.

Las llamadas “rentas mínimas” que son mejor conocidas en México como “subsidios” y que son nuestro caso de estudio, surgieron con la crisis del estado del bienestar cuando las personas perdían sus empleos. O se dejaba a las personas fuera de la asistencia social o se debía reformar el modelo de protección social. Es ahí donde se crean estos subsidios para grupos vulnerables los cuales hoy en día en muchos de los países sobre todo latinoamericanos, se han convertido en una nueva manera de reestructurar el estado de bienestar.

Para Euzéby (1991) este modelo tiene cuatro características fundamentales: Los subsidios son complementarios a la seguridad social, son la última opción de seguridad para ciudadanos de escasos recursos. Son de carácter condicional. De este modo, hay que cumplir ciertas exigencias como por ejemplo la edad, la residencia o la nacionalidad, con el compromiso a participar en programas de inserción. Más que de un derecho habría que hablar de un “cuasi-derecho”, ya que muchas veces en algunos países, dependiendo de la coyuntura económica, se han introducido más o menos restricciones en la gestión del programa. Generalmente no hay limitación temporal a la hora de percibir el subsidio.

Moreno (2008) señala que inicialmente los subsidios son creados para las personas que no han cotizado al sistema de Seguridad Social, que lo han hecho de forma insuficiente o que no cumplen algunos de los requisitos establecidos. Es decir, que nacen con el objetivo de cubrir los “agujeros” que deja el sistema contributivo dentro del estado del bienestar. A pesar de esto, con el paso del tiempo los subsidios han sido una pieza fundamental en la lucha contra la vulnerabilidad y la pobreza. Los subsidios han mejorado las condiciones de vida de sus usuarios y en ciertos casos han servido para poner en marcha procesos de acompañamiento e inserción social. Según el autor no puede dejarse a un lado que la valoración de las personas beneficiarias suele ser por lo general positiva y altamente satisfactoria con respecto a dichos programas.

Los subsidios otorgados por los gobiernos no siempre son suficientes para cubrir las necesidades básicas de la vida diaria, por lo cual toma relevancia una adecuada selección de los beneficiarios mediante mecanismos de focalización.

Para Martínez (2000) el estado de bienestar debe estar conformado en primer lugar por una serie de gastos en bienes preferentes: como educación, salud, vivienda y empleo, luego por un segundo grupo de gastos en programas de transferencias de recursos tales como pensiones, seguros de enfermedad, seguros de desempleo y subsidios familiares entre otros. Se trata de cubrir riesgos individuales por el conjunto de la sociedad. Estos riesgos son la indigencia, el desempleo, la vejez, la invalidez o la carencia de una educación mínima. Cuando un estado intenta garantizar estos riesgos, estamos ante un estado del bienestar.

El estado de bienestar les asegura a los ciudadanos las condiciones necesarias para una vida digna. Se debe pensar en construir un nuevo estado de bienestar del siglo XXI, con las bases del estado de bienestar del pasado pero con la visión del futuro en el cual políticas sociales no estén peleadas con la viabilidad financiera de los países, donde los ciudadanos tengan un compromiso y se genere un asistencialismo proporcionado por el estado de bienestar, pero con corresponsabilidad por parte de la ciudadanía. El estado de bienestar de la salud en la vejez.

La Organización Mundial de la Salud (OMS) define salud como un estado completo de bienestar físico, mental y social, y no solamente como la ausencia de afecciones o enfermedades. En esta definición al hablar de salud también se habla de bienestar, por lo que es pertinente analizar la relación entre los constructos.

Para Sen (2002) la salud es esencial para nuestro bienestar, ya que son pocas cosas las que se pueden lograr cuando la salud se pierde. Lo que es injusto es que algunos pueden perder su salud debido a problemas económicos y no por una decisión personal como la de no preocuparse por su salud. Sen analiza cómo una enfermedad que no es prevenida o tratada por encontrarse en situación de pobreza y no por una elección personal como el tabaquismo, es una situación que va en contra de la justicia social.

Briceño & Gillezeau (2012) señalan que tanto la planeación como la gestión de la salud por parte de los distintos regímenes del estado de bienestar, deben basarse en alargar el máximo posible dicho estado completo de bienestar y en intentar evitar que disminuya o incluso que desaparezca. Los autores señalan que la salud, al igual que la educación, la seguridad social, y el trabajo, tienen un origen institucional en cuanto a las actividades que el estado como expresión organizada de la sociedad ha ido adoptando para hacer frente colectivamente a las necesidades básicas de la población, estén o no relacionadas entre sí.

El estado de bienestar tiene su fundamento en que los gobiernos tienen la responsabilidad frente a su población de crear instituciones y programas sociales que les permitan a los ciudadanos un buen nivel de bienestar. Sen (2002) señala que la enfermedad y la salud deben tener un lugar destacado en cualquier discusión sobre la equidad y la justicia social. Tomando como punto de partida esta ubicuidad de la salud como consideración social, se advierte que la equidad en salud no puede dejar de ser una característica central de la justicia de los acuerdos sociales en general. La equidad en la salud no concierne únicamente a la salud, sino que debe abordarse desde el ámbito más amplio de la imparcialidad y la justicia de los acuerdos sociales, incluida la distribución económica y prestando la debida atención al papel de la salud en la vida y la libertad humanas.

CONCLUSIONES

El modelo de bienestar en México está en espera de sufrir varios cambios obligados derivados del envejecimiento poblacional que va en aumento. Las enfermedades y el cuidado de los adultos mayores representan un nuevo reto de salud pública. Si no se realiza una adecuada planeación de las políticas públicas para atender esta situación se tendrán carencias muy importantes para este sector poblacional que generalmente está desprotegido. Cuando se presenta el envejecimiento los gastos en cuestiones de salud se incrementan y la capacidad para generar ingresos del adulto mayor disminuye. La vejez va generalmente acompañada de la enfermedad por el desgaste natural del paso de los años, pero si a esto le sumamos la pobreza, el adulto mayor se inmerso en el peor de los escenarios. Por lo anterior es necesario que los gobiernos asuman un compromiso en la planeación de un estado de bienestar para la vejez para apoyar a los adultos mayores en pobreza que constituyen una población vulnerable.

CREACIÓN DE CADENAS PRODUCTIVAS USANDO EL FACTORAJE FINANCIERO EN LAS MIPYMES PROVEEDORAS DE LA INDUSTRIA MAQUILADORA

Ricardo Melgoza Ramos, Universidad Autonoma de Cd. Juarez. Mexico
Carlos Omar Cuevas Lopez, Universidad Autonoma de Cd. Juarez. Mexico

RESUMEN

La presente investigación realiza un análisis respecto a la situación que guardan las micro, pequeñas y medianas empresas, reflejando la importancia de las mismas, así mismo se mencionan algunas de las causas del fracaso de estas empresas, se revisa el proceso del factoraje financiero y se propone como una opción de financiamiento que pueda ayudarles a las pequeñas empresas a mejorar su desempeño, prolongar su existencia y lograr sus objetivos. Al mismo tiempo se hace un análisis de la industria maquiladora, su importancia, su participación en el mercado nacional, el tiempo que tarda en pagarles a sus proveedores y la posibilidad de integrar cadenas productivas para poder aprovechar los esquemas que ofrece la banca de desarrollo en apoyo de las pequeñas empresas. Se revisa la posibilidad de establecer cadenas productivas que ayuden a mejorar la situación del financiamiento de las pequeñas empresas en Cd. Juárez, sobre todo las que proveen directamente a las empresas de la Industria maquiladora.

PALABRAS CLAVE: Factoraje Financiero, Cadenas Productivas, Proveedores, Industria Maquiladora.

CREATING SUPPLY CHAIN USING THE FINANCIAL FACTORING IN MSMES SUPPLIERS MAQUILADORA INDUSTRY.

ABSTRACT

This research makes an analysis regarding the situation that micro, small and medium enterprises, reflecting the importance of them, also are some of the causes of failure of these companies, financial factoring process is reviewed and proposed as a financing option that can help small businesses improve their performance, prolong its life and achieve their goals. At the same time an analysis of the maquiladora industry, its importance, its share in the domestic market, the time it takes to pay its suppliers and the possibility of integrating supply chains in order to benefit schemes offering banking development is support small businesses. The possibility of establishing supply chains that help improve the funding situation of small businesses in Cd. Juárez, especially those provided directly to companies in the maquiladora industry is reviewed.

JEL: M10

KEYWORDS: Factoring Finance, Supply Chain, Suppliers, Maquiladora Industry.

INTRODUCCION

La presente investigación realiza un análisis respecto a la situación que guardan las micro, pequeñas y medianas empresas, reflejando la importancia de las mismas, así mismo se mencionan algunas de las causas del fracaso de estas empresas, se revisa el proceso del factoraje financiero y se propone como una opción de financiamiento que pueda ayudarles a las pequeñas empresas a mejorar su desempeño, prolongar su existencia y lograr sus objetivos.

Se hace un análisis de la industria maquiladora, su importancia, su participación en el mercado nacional, el tiempo que tarda en pagarles a sus proveedores y la posibilidad de integrar cadenas productivas para poder aprovechar los esquemas que ofrece la banca de desarrollo en apoyo de las pequeñas empresas.

Las micro, pequeñas y medianas empresas representan la mayoría de las empresas establecidas en varios países, de acuerdo con (Pavón, 2010) “Las pymes constituyen más del 90% de las empresas en la mayoría de los países del mundo. En la Unión Europea y en los Estados Unidos representan 95% de las unidades económicas y proveen más del 75% de los puestos de trabajo. En América Latina, estudios empíricos estiman que éstas contribuyen entre 35% y 40% a la generación de empleo en la región, 33% del PIB y 25% de la inversión. A nivel nacional, en México las pymes generan 52 % del PIB y 72 % del empleo y en Argentina representan 60% de la mano de obra ocupada y contribuyen al PIB en cerca del 30%”.

Velázquez (2006) por su parte menciona que en México hay un estimado de 3.5 millones de pymes que aportan 64% de la fuerza laboral y contribuyen con 40% del Producto Interno Bruto (PIB). Con estos datos resulta evidente la importancia que tiene para la economía en México este tipo de empresas, ya que aun y cuando los números pueden discrepar el impacto de las micro, pequeñas y medianas empresas es evidente. Y todo lo que ayude a mejorar su desempeño finalmente ayuda a la economía nacional.

Table 1. Fuente: INEGI Micro pequeña, mediana y gran empresa. Estratificación de empresas 2009.

Total Nacional Estrato	Unidades Económicas	Personal Ocupado Total	Remuneraciones	Producción Bruta Total	Activos Fijos
Nacional	100.0	100.0	100.0	100.0	100.0
Micro	95.3	45.6	11.5	5.9	9.8
Pequeños	4.3	23.8	24.9	13.0	12.2
Medianos	0.3	9.1	14.0	7.7	8.4
Grandes	0.2	21.5	49.6	73.4	69.5

Como se puede ver en el cuadro anterior el número de empresas que pertenecen a las micro y pequeñas empresas representan el 99.6% del total de las empresas y ocupan al 69.4% es decir casi el 70% del total de las empresas contratadas, lo que indica lo estratégico que representa este sector para la economía nacional y que su desempeño va ligado íntimamente al desempeño de esta misma.

El lector encontrará la explicación del factoraje financiero, su marco legal y como puede ser utilizado por las micro y pequeñas empresas mexicanas como una estrategia para reducir sus problemas de liquidez y flujo de efectivo, analizando cómo se encuentra el mundo al revés en donde las pequeñas empresas financian a las grandes, algunas de ellas subsidiarias de multinacionales.

Finalmente se encontrarán los resultados de la investigación de campo realizada, con algunas de las gráficas más importantes, las recomendaciones que se sugieren en base a la investigación realizada y la conclusión del trabajo en donde se refleja el resultado del planteamiento del problema y de las hipótesis planteadas.

Objetivo General

Determinar la factibilidad de establecer cadenas productivas entre las MIPYMES de Cd. Juárez que venden sus productos y/o servicios a la industria maquiladora.

Preguntas de investigación

- ¿Cuántas empresas ofrecen servicio de factoraje en Cd. Juárez?
- ¿Cuántas MYPIMES venden sus productos y/o servicios a la industria maquiladora en la ciudad?
- ¿Cuántas MIPYMES que venden sus productos y/o servicios a la industria maquiladora usan el servicio de factoraje?
- ¿Cuál es el costo del servicio de factoraje que ofrecen las instituciones financieras de la ciudad?
- ¿Cuál es el monto de las transacciones (ventas) que hacen las MIPYMES a la industria maquiladora?
- ¿Se pueden crear cadenas productivas con las principales empresas de la industria maquiladora de la ciudad? (Delphi, Bosh, Lear, etc.)
- ¿Cómo está participando la banca de desarrollo en el financiamiento a las MIPYMES?
- ¿Qué regulaciones existen respecto al factoraje financiero en México?
- ¿Cómo es el factoraje financiero en otros países?
- ¿Cuántos días tarda la industria maquiladora en pagarle a sus proveedores?

REVISION LITERARIA

Historia del factoraje financiero

Es incierto establecer una fecha fija de la invención del factoraje, ya que al igual que la actividad comercial, nace a partir del surgimiento de una necesidad. Según algunos investigadores los inicios del factoraje se dan en la antigua babilonia, aproximadamente 600 años antes de cristo; o en Roma en el 240 A.C. donde existían personas que, bajo el encargo de otra, se encargaban de cobrar las deudas, asumiendo ellas mismas el riesgo del pago. Otros autores afirman que el factoraje nace a partir de la comercialización internacional (Vasilescu, 2010).

Según una tesis de la Universidad Michoacana de San Nicolás de Hidalgo (Hernandez, 2009) el “factoraje” nace en el siglo XVII, cuando empresas en el sector industrial de Inglaterra en su mayoría del ramo textil, hacían esfuerzos considerables para ampliar su mercado fuera de los límites del país. Por la necesidad de ampliar y que exigía el mercado de los factores comenzaron a viajar hasta América para vender sus productos. Fue por ello que las empresas de los Estados Unidos (bancos), durante los años 60’s promovieron la formación de sociedades de “factoring” de diversos países de Europa occidental, creando sus propias cadenas de “factoring”. La traducción de “factoring” en México es factoraje.

A partir de 1970 algunos países comienzan a legislar para regular el comercio entre fronteras, dándole auge a la industria de factoraje como una alternativa de financiamiento.

El factoraje financiero en México

En México el factoraje financiero se remonta a la década de los 60’s y tiene un gran impulso en 1985 gracias a las reformas realizadas al sistema financiero mexicano. En 1988 se crea la Asociación Mexicana de Factoraje Financiero (AMEFAC). El 3 de enero de 1990 se publica en el Diario Oficial de la Federación la inclusión de las empresas de factoraje a las reglamentaciones de la Ley General de Organizaciones y Actividades Auxiliares del Crédito (LGOAAC).

Según Hernández (2009) en 1990 el número de empresas de factoraje tuvo un gran crecimiento, ya que la Asociación de Empresas de Factoraje registraba 69 empresas y aproximadamente existían 25 mas no registradas. El volumen operado por dichas empresas ese año fue por más de 5 billones de pesos.

En la actualidad la AMEFAC está conformada por 16 asociados, 10 bancos y 6 sociedades financieras de objeto múltiple (SOFOMES) los cuales representan el 90% de la actividad de factoraje en México. Según

la siguiente estratificación por número de empleados creada por el Sistema de Información Empresarial Mexicano (SIEM):

Table 2. Fuente: (SIEM) Estratificación por Número de Trabajadores (SIEM, ley para el desarrollo de la competitividad de la micro, pequeña y mediana empresa)

Sector/Tamaño	Industria	Comercio	Servicios
Micro	0-10	0-10	0-10
Pequeña	11-50	11-30	11-50
Mediana	51-250	31-100	51-100

En Ciudad Juárez las MIPYMES se encuentran repartidas como muestra la tabla 3, dando un total de 34,936 unidades económicas.

Table 2. Fuente: Elaboración propia con datos de INEGI-DENUE. Estratificación de MIPYMES de Cd. Juárez.

Sector/Tamaño	Industria	Comercio	Servicios	Total
Micro	1,965	16,238	14,204	32,407
Pequeña	186	448	1,493	2,127
Mediana	140	131	131	402
Total	2,291	16,817	14,828	34,936

Planteamiento Del Problema

Las pequeñas empresas en México carecen de esquemas de financiamiento atractivos y accesibles que les permitan crecer de acuerdo al ritmo del mercado y enfrentar sus desafíos de una manera más tranquila, que redunde en un incremento de su productividad y competitividad; ante la escasez de esquemas de financiamiento las empresas MIPYMES deben enfrentar los retos que les plantea la operación de sus organizaciones.

La industria maquiladora es cliente de muchas pequeñas empresas a las cuales les entrega un contra recibo para poder pagarles sus productos o servicios en un tiempo que va, desde los 30 a los 60 días, sin embargo generalmente las pequeñas empresas ya habrán pagado a sus empleados y a sus proveedores cuando terminan y entregan el producto a la industria maquiladora, por lo que al fin de cuentas la pequeña empresa termina subsidiando a la gran empresa, que muchas veces es subsidiaria de una multinacional, lo que resulta absurdo y financieramente perverso, algo que en lugar de ayudar al desarrollo de las pequeñas empresas, se convierte en otro distractor en el mejor de los casos u obstáculo para su crecimiento y desarrollo.

En la industria maquiladora no existen programas que ayuden a la creación de cadenas productivas utilizando el factoraje financiero, como las que ha creado NAFIN con otro tipo de empresa, si se establecieran estos esquemas las pequeñas empresas tendrían un gran respiro financiero, ya que sus administradores podrían enfocarse a resolver problemas relacionados con el crecimiento de su negocio, la productividad del mismo o la competitividad en lugar de estarse preocupando por el pago de la nómina, o como pagarle a los proveedores los que muchas veces solo les otorgan 15 días de gracia, lo cual no deja muy claro de dónde tomara el dinero la MIPYME para cubrir sus obligaciones.

METODOLOGIA

Hipotesis

H1. El 50% de las MIPYMES que suplen a la industria maquiladora tienen problemas financieros porque los plazos de pago de la industria son muy largos.

H2. El 75% de las empresas de la industria maquiladora pagan a sus proveedores en un plazo de 30 días.

H3. La creación de cadenas productivas a través del factoraje financiero ayuda a las MIPYMES que proveen a la industria maquiladora a disminuir sus problemas financieros.

La presente investigación es de tipo descriptivo y transversal, se realiza en las unidades económicas denominadas MIPYMES (Micro, Pequeña y Medianas Empresas), la industria maquiladora y la banca privada de Ciudad Juárez, Chihuahua, México.

El enfoque de la investigación es de tipo cuantitativo. Se estudia el estado actual de las relaciones entre la industria y las MIPYMES con respecto al cobro de los productos y/o servicios vendidos mediante la aplicación de un instrumento de medición (encuesta auto aplicada). A su vez, se realizan entrevistas con representantes de la industria en la ciudad para determinar su perspectiva ante esta propuesta. También se aplica un instrumento a la banca para determinar variables que serán determinantes, como el costo, requerimientos y comisiones, para establecer las cadenas productivas.

Se enviaron 312 cuestionarios a empresas establecidas en Cd. Juárez, que reúnen las características de ser MIPYMES, con la finalidad de obtener información de primera mano, que refleje el sentir del gremio, así mismo obtener suficiente información para poder validar las hipótesis que se plantean en la presente investigación.

De la misma manera, se hizo una revisión exhaustiva del estado del arte respecto al tema de factoraje financiero; se buscaron artículos en las diferentes bases de datos científicas, se consultó la legislación vigente respecto al tema, se revisaron las investigaciones publicadas en la red, por diferentes universidades, tesis para obtener un grado de licenciatura o maestría, se consultó la bibliografía impresa perteneciente a las distintas bibliotecas de la ciudad.

Los resultados de los instrumentos de medición son procesados en el software estadístico SPSS Statistics (versión 19), de donde se analizaron sus variables y correlaciones entre las mismas que permitió validar las hipótesis.

Los recursos utilizados para esta investigación provienen de los propios autores, es decir, no está patrocinada por ninguna institución, ya sea pública o privada.

LAS PEQUEÑAS EMPRESAS FRACASAN

Todos los emprendedores que inician su pequeña empresa, ya sea en la industria, el comercio o en el área de servicios, no consideran que su negocio vaya a cerrar de inmediato, todos piensan que la empresa será un éxito y que permanecerá por muchos años en el mercado y ganarán mucho dinero con ella, lo que les permitirá mejorar su nivel de vida y con un poco de suerte podrán volverse ricos.

Sin embargo la realidad es muy diferente. Marker (2013) señala lo siguiente: “De acuerdo a las cifras difundidas por el Centro para el Desarrollo de la Competitividad Empresarial (CETRO-CRECE), sólo el 10% de las PyMES mexicanas llegan a los diez años de vida y logran el éxito esperado, mientras que el

75% de las nueva empresas del país fracasan y deben cerrar sus negocios sólo dos años después de haber iniciado sus actividades”.

“Puntualmente, según diversas consultoras del país, se ha demostrado que el 50% de las empresas quiebran durante el primer año de actividad a causa de una mala gestión. Asimismo, el 90% fracasan antes de llegar a los cinco años de vida por la misma causa”.

Causas del fracaso de las micro y pequeñas empresas

Las principales causas del fracaso de acuerdo con Maldonado (2010) y menciona que las principales causas del fracaso de las empresas son:

Negligencia de los Administradores al no darse cuenta de los cambios que se están generando en el ambiente y que afectan a la empresa.

Falta de experiencia administrativa de los responsables de la organización.

Problemas de mercado, no realizan suficiente promoción de sus productos, ni hay renovación de los factores de producción.

Falta de capacitación, no se tiene personal capacitado para enfrentar los retos de la competitividad.

Falta de cultura empresarial, se descuidan muchos de los aspectos de la administración.

Problemas relacionados con el financiamiento, altas tasas de interés, no hay instituciones que las apoyen, la mayoría de los financiamientos están dirigidos a las grandes empresas.

Problemas relacionados con la comercialización, las empresas grandes marcan la pauta en muchos aspectos y el poco estímulo de desarrollo de proveedores de las entidades gubernamentales afectan estas organizaciones.

De acuerdo con Macías (2011) las causas del fracaso de las MIPYMES Existen cinco causas comunes que contribuyen al fracaso de la PYMES.

La primera es la incompetencia o falta de experiencia de los administradores. En ocasiones, algunas empresas surgen de una corazonada más que de un conocimiento significativo del negocio y sus características. Es común que los propietarios se sientan con los conocimientos suficientes en todas las áreas del negocio, y rechacen cualquier insinuación de asesoría o apoyo, considerando que ellos tienen lo necesario para hacer funcionar su negocio.

Una segunda causa, un tanto relacionada con la anterior, es la negligencia que muchas veces sigue al "glamur" o emoción de inicio del negocio. Es común observar que después de la "magna" apertura, algunos empresarios se sienten descorazonados y no se concentran tanto en el negocio como lo deberían hacer, algunas veces es por ignorancia de que hacer y en otras ocasiones por su deficiente formación como empresario, emprendedor o administrador.

La falta de controles adecuados es la tercera causa común de fracaso. El empresario al frente de la PYME, por lo general, ignora la necesidad de mantener controles que le permitan anticiparse a los problemas. Es común observar que los administradores son tomados por sorpresa en situaciones que pudieran haber sido anticipadas de contar con un sistema de control adecuado, pero su deficiencia de formación no les permite detectarlo.

La cuarta causa de fracaso es la falta de capital suficiente, situación que generalmente surge por la ausencia de una planeación adecuada de las necesidades de recursos. Es común aquí observar que los administradores se concentran en anticipar las inversiones en activos fijos y algunos de los gastos de operación; sin embargo, no planean las necesidades de capital de trabajo, ni otro tipo de gastos o inversiones.

La quinta y última causa de fracaso es la falta de una identificación correcta del riesgo. En ocasiones, el entusiasmo desmedido hace que únicamente se evalúen de manera parcial los retos futuros, ignorando muchos de los riesgos posibles. Además, es muy común observar que la necesidad de atender los problemas cotidianos impide planear para el futuro y, por lo mismo, reflexionar respecto a los riesgos latentes. En este tipo de actividad, es normal escuchar aquella frase, "lo urgente no deja tiempo para lo importante".

El problema del financiamiento

Como se menciona anteriormente el financiamiento es una de las causas que provocan que las MIPYMES fracasen, en el 2007 la CANACINTRA en la 70ª convención bancaria expuso la problemática presentada por la MIPYMES para poder acceder al crédito. (García, 2007)

- a) "No cuentan con las garantías requeridas por las instituciones financieras".
- b) "No cuentan con formación, información y capacidad de gestión financiera".
- c) "Tienen mayores costos del financiamiento con relación a las grandes empresas".
- d) "Existen escasas fuentes de financiamiento para Pymes".
- e) "Renuencia de las instituciones financieras para financiar proyectos de bajo monto".
- f) "Abrumadoras exigencias de trámites".
- g) "Los trámites insumen tanto tiempo que, cuando finalmente se recibe el crédito, es demasiado tarde para utilizarlo".
- h) "Se niegan posibilidades a empresas con menos de dos años de existencia y aquellas que tienen el tiempo, por lo regular se encuentran en el buró de crédito".
- i) "Aunque se anuncia frecuentemente que existen programas de financiamiento, estos no llegan a la Pymes"

De acuerdo con Domínguez, Abelino y Ceniceros, (2012) quienes mencionan que es importante recalcar que el acceso al crédito por parte de las MIPYMES es un proceso lento, deficiente y muchas veces imposible de obtener, ya que, las tasas preferenciales de interés solo son asequibles para las grandes corporaciones o capitales consolidados, por lo tanto, las MIPYMES se convierten en unidades económicas rechazadas para acceder al financiamiento, y si a esto se agrega el manejo deficiente de los recursos con los que cuentan estas organizaciones, se agrava el problema.

Resulta incongruente que estas empresas que tanto aportan a la economía de un país reciban tan poca atención por parte de las instituciones financieras como lo menciona Lecuona (2009), "la baja participación de las Pymes en el crédito de los bancos múltiples contrasta con su importancia en la economía como generadoras de producción y de empleo. Según datos del Centro de Estudios Económicos de la Cámara Nacional de la Industria de la Transformación (CANACINTRA), basados en información del Instituto Nacional de Estadística Geografía e Informática (INEGI) y de los Censos Económicos del 2004, había más de 118 mil pequeñas empresas y más de 27 mil medianas en el año 2004. En conjunto, estas Pymes empleaban a 5.3 millones de personas, monto superior a los 4.7 millones de empleados por las empresas grandes. Por su parte, las microempresas ocupaba 6.2 millones de personas. Así, más de 70% del empleo generado por las empresas correspondía a las de menor tamaño."

(Lecouana, 2009) Debe recordarse que casi un tercio de la cartera de la banca de desarrollo está colocada con otros intermediarios financieros que a su vez lo colocan en buena medida en el sector empresarial. En todo caso, el impacto conjunto de banca comercial y de fomento es limitado como se mostró: 23% del total del financiamiento en las empresas pequeñas y 25% en las medianas en el 2008.

Si bien es cierto que el problema del financiamiento de las organizaciones no es el único problema que impide el crecimiento de las MIPYMES, ya que las causas del fracaso de las mismas es multifactorial, sin embargo si se ayudaría enormemente a este sector y podrían sus administradores dedicar su tiempo a resolver otros problemas que les resten competitividad y les permita prolongar su existencias más allá de lo que marcan las estadísticas.

¿QUE ES EL FACTORAJE?

Según Lawrence J. Gitman: La factorización de cuentas por cobrar implica la venta directa de las cuentas por cobrar, a un precio de descuento, a una institución financiera. Un factor es una institución financiera que se especializa en comprar las cuentas por cobrar de las empresas. Algunos bancos comerciales y empresas de finanzas comerciales también factorizan las cuentas por cobrar. Costo de la factorización: Entre los costos de la factorización están las comisiones, el interés cobrado sobre los adelantos y el interés ganado sobre los excedentes. El factor deposita en la cuenta de la empresa el valor en libros de las cuentas cobradas o vencidas que adquirió, menos las comisiones. Las comisiones establecen generalmente como un descuento del 1 al 3 por ciento del valor en libros de las cuentas por cobrar factorizadas. El interés impuesto sobre los porcentajes es generalmente del 2 a 4 por ciento por arriba de la tasa preferencial. Se impone sobre el monto real prestado. El interés pagado sobre los excedentes es usualmente del 0.2 a 0.5 por ciento mensual.

Aunque su costo puede parecer alto, la factorización tienen ciertas ventajas que la hacen atractiva para las empresas. Una es la capacidad que da a la empresa de convertir inmediatamente las cuentas por cobrar en efectivo sin tener que preocuparse por el reembolso. Otra ventaja de la factorización es que garantiza un patrón conocido de flujos de efectivo. Además, si la factorización se realiza en forma continua, la empresa puede eliminar su departamento de crédito y cobranza. (Gitman, 2007) Dentro del Sistema Financiero Mexicano, se encuentra una sección en la cual se encuentran los organismos Auxiliares de Crédito, los cuales están integrados por Casas de Cambio, Uniones de Crédito, Arrendadoras Financieras y Empresas de Factoraje Financiero.

El Factoraje Financiero es una opción de financiamiento muy poco explorada por las empresas, no sólo las grandes sino las micro y pequeñas empresas y sin embargo pueden ser de gran utilidad tanto para mejorar el desempeño de las mismas, como para ayudar a su supervivencia que como se mencionó anteriormente un gran número no rebasa los 2 años.

De acuerdo con Ruiz (2009) el factoraje financiero, es un instrumento de financiamiento a través del cual se puede adelantar el cobro de una factura.

El colegio de Contadores Públicos de México establece que “El factoraje financiero es una operación de naturaleza mercantil que permite disponer de manera anticipada los recursos, materializando cuentas por cobrar futuras que se encuentran documentadas, con lo cual se hacen más ágiles las operaciones entre los comerciantes”.

Citando a las Asociación Mexicana de Factoraje Financiero (AMEFAC) que se encarga de congrega a las entidades financieras que prestan este servicio financiero a las empresas y organizaciones que lo solicitan, cuyo objetivo es promover el desarrollo firme y sano de las actividades del gremio de financiamiento comercial tipo factoraje financiero, financiamiento de cuentas por cobrar u otras similares dentro de la República Mexicana, la definición de factoraje es la siguiente:

“Es un mecanismo de financiamiento a corto plazo mediante el cual una empresa comercial, industrial, de servicios o persona física con actividad empresarial, promueve su crecimiento a partir de la venta de sus cuentas por cobrar vigentes a una empresa de factoraje.”

En otras palabras una empresa que ha vendido un servicio o producto a otra empresa, contrata los servicios financieros de una empresa de factoraje para que le pague las facturas de inmediato y después la entidad financiera vaya y le cobre a la empresa que recibió el producto o el servicio, ayudando de esa manera a mantener la liquidez de la empresa que contrato.

LOS PEQUEÑOS FINANCIAN A LOS GRANDES

Cualquier organización requiere de un financiamiento para sus operaciones, ya sea pequeña o mediana siempre necesitara un apoyo financiero para poder vender y comprar sus materias primas y sus productos terminados. En la mayoría de los estudios de los expertos el principal obstáculo para el funcionamiento óptimo de las mismas es el financiamiento, no solo para poder iniciar sus operaciones, sino también para poder aumentar sus ventas vendiéndoles a clientes más grandes de los normales.

De acuerdo con el Instituto PYME (2013) “El acceso al crédito es fundamental para el crecimiento económico sostenible y el desarrollo social. Las micro, pequeñas y medianas empresas son capaces de aprovechar mayores oportunidades empresariales sólo cuando existe la disponibilidad de productos y servicios financieros diseñados de acuerdo a sus necesidades”.

El Instituto presenta 10 esquemas para realizar el financiamiento a las MIPYMES, sin embargo en ninguno de ellos se presenta el factoraje financiero como parte del apoyo para las empresas nacionales.

Las empresas que quieren venderle sus productos o servicios a la Industria maquiladora deben de tener capital para poder afrontar los gastos financieros que su negocio requiere mientras recibe el pago por lo que proveyó.

Este esquema es muy desventajoso para las micro y pequeñas empresas, ya que los esquemas de financiamiento son pocos, caros y complicados, y plantea un escenario absurdo, en el cual las pequeñas empresas cuyo capital es escaso, tienen que financiar a las empresas más grandes que ellas, muchas de ellas subsidiarias de grandes corporativos multinacionales, que bien podrían apoyar a las pequeñas empresas, sin embargo en el mundo real, son las pequeñas empresas, fronterizas o no, las que están financiando a estos grandes corporativos, lo que desde luego, es en contra de los pequeños emprendedores.

Dentro de la investigación que se realizó, una de las empresas consultadas señaló los tiempos en que le pagan las empresas a las que provee sus productos o servicios. Del total de sus 50 clientes la mayoría de las empresas tardan 30 días en pagarle una vez que estos entregaron el producto o realizaron el servicio, es decir una vez que recibió el contra recibo por parte de la empresa maquiladora.

15 Días	1 Empresa	2%
30 Días	37 Empresas	74%
45 Días	5 Empresas	10%
60 Días	7 Empresas	14%

CONCLUSION

Las micro y pequeñas empresas son uno de los motores importantes para cualquier economía en cualquier país del mundo, México no es la excepción, por lo que cualquier acción que les permita mejorar su desempeño es bienvenida. Desafortunadamente y pese a los diferentes esfuerzos que se han realizado sobre todo de parte de las entidades gubernamentales, aun así las pequeñas empresas en México no tienen un soporte solido que les permita crecer y mantenerse competitivas durante su permanencia en el mercado, la mortandad tan grande antes de los 2 años así lo demuestran.

En cuanto a las hipótesis, la primera de ellas indica que el 50% de las pequeñas empresas tienen problemas financieros debido a los plazos tan largos en que paga la maquiladora. El resultado obtenido en el análisis de las encuestas indica que es el 60% de las empresas, a las que se les dificulta pagar a sus proveedores o pagar la nómina de los empleados por esta razón, por lo que la hipótesis se valida.

En la segunda hipótesis se señala que el 75% de las empresas reciben su pago de parte de la industria maquiladora en 30 días, la encuesta revela que solo el 67% de las empresas reciben en ese lapso de tiempo, por lo que la hipótesis no se valida, al realizar el levantamiento de los datos, varios de los encuestados señalaron que si bien la maquiladora establece en el contrato que pagara a 30 días, eso no es del todo cierto, ya que muchas veces el pago se retrasa y en lugar de ser 30 días, el plazo se extiende hasta 45 días. El 74% de los encuestados declararon haber sufrido esta circunstancia. También señalaron que algunas maquiladoras están moviendo sus plazos de pago a 45 días de manera definitiva. Por lo que sí existe un retraso el pago se obtendría a 50 o 60 días.

Respecto a la tercera hipótesis en donde se menciona que la creación de cadenas productivas utilizando el factoraje financiero ayudaría a disminuir los problemas financieros de las pequeñas empresas que le surten a la maquiladora, se valida, ya que el 60% de los encuestados menciono que tienen problemas para liquidarle a sus proveedores o pagar la nómina debido a estos periodos tan largos y de ese 60% el 74% dijo que las maquiladoras no pagan en la fecha establecida, por lo que establecer cadenas productivas reduciría grandemente el problema, ya que las empresas recibirían rápidamente su pago.

Además se concluye que, no existen apoyos adecuados para financiar a las pequeñas empresas, los márgenes entre lo que pagan los bancos (4%) y lo que cobran por prestamos (14%), es de cerca de los 10 puntos porcentuales, aun no existen mecanismos en la cámara de diputados, de senadores o el ejecutivo que hayan intervenido para mejorar tal situación. Para las MIPYMES, el crédito es caro, escaso y complicado.

La industria maquiladora, es un sector muy importante para la economía nacional, ya que alrededor de ella se encuentran muchas empresas pequeñas nacionales que le proporcionan servicios y que necesitan apoyo para seguir creciendo y puede crecer aún más el número de empresas nacionales que provean a esta industria, si se logra detonar la proveeduría mexicana a las empresas multinacionales establecidas en territorio nacional; sin embargo es necesario que la maquiladora tome conciencia de su importancia estratégica y apoye más a las pequeñas empresas mexicanas reduciendo y cumpliendo sus plazos de pago a sus pequeños proveedores. Pues sus proveedores nacionales son, pocos, débiles financieramente hablando y con bajo nivel de competitividad.

POLÍTICAS PÚBLICAS PARA EL DESARROLLO REGIONAL: EL CASO DEL SECTOR INDUSTRIAL EN BAJA CALIFORNIA SUR

Alberto Francisco Torres García, Universidad Autónoma de Baja California Sur
Sarha Leticia Romero Martínez, Universidad Autónoma de Baja California Sur
Plácido Roberto Cruz Chávez, Universidad Autónoma de Baja California Sur

RESUMEN

El desarrollo regional constituye un complejo estudio en los ámbitos cultural, social, político, ambiental y económico de un territorio, dando la pauta para el análisis de diversos fenómenos con el objetivo de contribuir a la alineación de políticas públicas para su consolidación y crecimiento, la presente investigación versa sobre el desarrollo del sector industrial en Baja California Sur como un área de oportunidad para detonar la diversificación productiva, el empleo y la internacionalización.

PALABRAS CLAVE: Política Públicas, Manufacturas, Desarrollo Regional

PUBLIC POLICIES FOR REGIONAL DEVELOPMENT: THE CASE OF THE INDUSTRY IN BAJA CALIFORNIA SUR

ABSTRACT

Regional development is a complex study of the cultural, social, political, environmental and economic areas of territory, setting the standard for the analysis of various phenomena with the aim of contributing to the alignment of public policies for consolidation and growth. This research deals with the development of industry in Baja California Sur as an area of opportunity to strengthen productive diversification, employment and internationalization.

JEL: L50, L52, L60, L69

KEYWORDS: Public Policy, Manufacturing, Regional Development

INTRODUCCIÓN

Baja California Sur (BCS) es una entidad cuya vocación productiva se centra particularmente en el turismo y los establecimientos comerciales. Ante esta situación, el sector secundario ha encontrado un desarrollo sosegado. No obstante lo anterior, debido a que la producción agrícola, minera y pesquera destaca por su excelente calidad, se ha sabido aprovechar su potencial para la formación de valor agregado y comercialización, lo que le ha permitido incursionar en mercados exigentes, incluyendo los extranjeros. El presente documento tiene como objetivo presentar una breve propuesta para el análisis de la industria en Baja California Sur como un territorio particularizado donde convergen políticas, acciones y estrategias para la promoción del desarrollo económico. De esta manera, el documento se compone de tres partes. En el primer segmento se asistirá a la definición de los conceptos principales en los que habrá de enmarcarse la región, enunciando brevemente las opciones teóricas para abordar el desarrollo regional, así como la metodología aplicada. En un segundo apartado se analizará la industria en Baja California Sur y su aporte en materia económica, definiendo fortalezas y debilidades de la misma. La tercera parte de este trabajo comprende una concisa propuesta para la construcción de políticas regionales para la competitividad industrial.

REVISIÓN LITERARIA

La globalización es un concepto presente y el cual ha logrado permear en todo discurso actual. En general, ésta se expresa como la unificación de factores, eliminación de barreras y el desarrollo estrechamente relacionado con la liberación del comercio, la competencia en los mercados y deslocalización de los procesos productivos. Bajo las consideraciones anteriores al hablar de desarrollo regional, distintos autores mencionan a la localización de las actividades productivas, así como la distribución de factores, como los principales componentes que determinan el desarrollo regional. Por ello, es importante la puntualización del concepto región y las principales teorías sobre el desarrollo regional. Con base a Tello (2006), se muestra la siguiente clasificación:

Teorías de Localización, Espacio Geográfico y Desarrollo Regional: Estas teorías se concentran en el conjunto de factores internos, tales como las áreas de la geografía económica tradicional o las teorías de localización y la de la economía regional o del espacio. En mayor medida, estos cuerpos teóricos han contribuido en la determinación del sector básico de una región o área local.

Teorías de Organización, Instituciones y Distorsiones de los Mercados: A diferencia del primer grupo de teorías de desarrollo económico local, estas teorías aplican a nivel de áreas geográficas locales las teorías de organización y distorsión de mercados a nivel de países. Así, los problemas de información y otras distorsiones de mercado a nivel de las localidades al interior de los países pueden obstaculizar el desarrollo de estas. Consecuentemente, debido a la importancia de los fracasos o distorsiones del mercado en el desarrollo económico local, el papel de la política económica de desarrollo económico local es esencial.

Teorías Basadas en Los Comportamientos de los Agentes: Una de la mayores distinciones en el análisis del desarrollo económico local es la introducción específica de incidencia de las acciones, interacciones y del papel de los agentes económicos. La empresa y su capacidad empresarial, el capital social, las mujeres, los grupos de interés, etc., son sólo ejemplos de tales agentes. En esta perspectiva, el gobierno, ha tenido diversas formas de intervención, las cuales se explican mejor desde el concepto de descentralización.

Teorías Eclécticas o Multifactoriales: Estas teorías consideran que el desarrollo económico local requiere de una serie de factores de implementación simultánea para la consecución del crecimiento y desarrollo de las áreas locales. El enfoque multifactorial puede dividirse en tres particulares enfoques eclécticos del desarrollo económico local: las Teorías Basadas en la Competitividad de las Áreas Locales; la Teoría de las Ciudades Interiores y la Teoría de Clusters.

Estado y Desarrollo Económico Local: Desde sus inicios el Estado a través de sus entes gubernamentales (central, regional y local) ha tenido un papel central en el desarrollo económico local de las áreas locales. Su participación ha sido a través de la atracción de la inversión a las áreas geográficas determinadas en función de la dotación de los factores de localización; el desarrollo interno de las áreas geográficas en función del crecimiento y, finalmente, la incidencia en sectores específicos bajo estrategias industriales e internas a las áreas geográficas. Tomando en consideración las clasificaciones anteriores, la presente investigación versa sobre aquella donde el Estado tiene un rol fundamental para la atracción de la inversión, el desarrollo de determinados espacios geográficos y la implementación de estrategias focalizadas al despliegue industrial. Concretamente, se llevará a cabo una propuesta para el desarrollo de la industria en BCS.

METODOLOGÍA

El método usado para el presente trabajo está basado en la investigación documental, con la indagación de teorías aplicables; el análisis de datos duros referentes a la industria en Baja California Sur y, finalmente,

la presentación de recomendaciones puntuales, a manera de conclusiones, basadas en las políticas de fomento productivo como base del desarrollo local.

RESULTADOS

Según datos del Directorio Estadístico Nacional de Unidades Económicas, del Instituto Nacional de Estadística y Geografía (INEGI), en BCS existen 28,265 unidades económicas, de las cuales 814 se ubican en agricultura, cría y explotación de animales, aprovechamiento forestal, pesca y caza; 28 en minería; 2,641 en actividades industriales relacionadas a la generación, transmisión y distribución de energía eléctrica, suministro de agua y de gas por ductos al consumidor final, construcción e industrias manufactureras y 24,782 dedicadas a comercio y servicios (INEGI, 2014a).

Ahora bien, siendo la industria manufacturera la actividad que aglutina a más unidades económicas en el sector secundario, podemos destacar que las ramas pertenecientes a la industria alimentaria, a la fabricación de productos metálicos, a la fabricación de productos a base de minerales no metálicos, a las bebidas y el tabaco, a la fabricación de muebles, colchones y persianas, a la madera, a la fabricación de prendas de vestir y a la impresión e industrias conexas son las más representativas. La participación de unidades económicas por rama del sector industrial se muestra en la siguiente Tabla 1.

Tabla 1: Participación de Unidades Económicas En BCS, Por Rama del Sector Industrial

Minería*	28
Generación, transmisión y distribución de energía eléctrica, suministro de agua y de gas por ductos al consumidor final	32
Construcción	343
Industria Manufacturera	2,266
Industria alimentaria	679
Industrias de las bebidas y del tabaco	178
Fabricación de insumos textiles y acabado de textiles	0
Fabricación de productos textiles, excepto prendas de vestir	17
Fabricación de prendas de vestir	137
Curtido y acabado de cuero y piel, y fabricación de productos de cuero, piel y materiales sucedáneos	0
Industria de la madera	144
Industria del papel	20
Impresión e industrias conexas	126
Fabricación de productos derivados del petróleo y del carbón	2
Industria química	13
Industria del plástico y del hule	19
Fabricación de productos a base de minerales no metálicos	202
Industrias metálicas básicas	0
Fabricación de productos metálicos	467
Fabricación de maquinaria y equipo	9
Fabricación de equipo de computación, comunicación, medición y de otros equipos, componentes y accesorios electrónicos	0
Fabricación de accesorios, aparatos eléctricos y equipo de generación de energía eléctrica	0
Fabricación de equipo de transporte	9
Fabricación de muebles, colchones y persianas	163
Otras industrias manufactureras	81
Total	2,669

Fuente: Elaboración propia con base al INEGI, 2014a. *Se incluye en el sector secundario por la estrecha relación que tiene en la producción de diversos bienes. La Tabla 1 muestra el número de unidades económicas en BCS que participan en actividades industriales, conforme a la rama o sector en la que se identifican. La minería, la generación, transmisión y distribución de energía eléctrica, suministro de agua y de gas por ductos al consumidor final, la construcción y la industria manufacturera constituyen los principales grupos

De conformidad con los datos expuestos, la minería abarca el 1.05% de las actividades industriales; la generación, transmisión y distribución de energía eléctrica, así como el suministro de agua y de gas por ductos al consumidor final el 1.20%; la construcción el 12.85% y la industria manufacturera el 84.90%. Otro rasgo importante del sector industrial en BCS tiene que ver con el tamaño y la ubicación de las empresas, así como la población ocupada. De acuerdo a la estratificación establecida en la fracción III del artículo 3 de la Ley para el Desarrollo de la Competitividad de la Micro, Pequeña y Mediana Empresa y en

el Acuerdo por el que se establece la estratificación de las micro, pequeñas y medianas empresas, publicado en el Diario Oficial de la Federación el 30 de junio de 2009, la micro empresa en el sector industrial va de 0 a 10 empleados; la pequeña, desde 11 hasta 50; la mediana, entre 51 y 250 y, finalmente, se puede considerar que las grandes empresas son aquellas que superan los 250 empleados. Tomando como base lo anterior, la industria en BCS muestra la siguiente composición:

Tabla 2: Composición de la Industria En BCS 2014, Por Tamaño de la Unidad Económica

Rama y Tamaño	Micro	Pequeña	Mediana	Grande
Minería	23	3	2	0
Generación, transmisión y distribución de energía eléctrica, suministro de agua y de gas por ductos al consumidor final	23	8	0	1
Construcción	232	84	24	3
Industria manufacturera	2,136	113	16	1
Total	2,414	208	42	5

Fuente: *Elaboración propia con base al INEGI, 2014a. La Tabla 2 muestra el número de unidades económicas que participan en los 4 grandes grupos de la industria en BCS, conforme a su tamaño. El tamaño de las unidades económicas se encuentra determinado por el número de empleados.*

Con base a la Tabla 2, se puede constatar que el 90.45% de las empresas del sector industrial en BCS son micro; el 7.79%, corresponden a pequeñas; el 1.57%, son medianas y el 0.19%, son grandes. Complementado la información, sólo 139 de las 2,669 unidades económicas ubicadas en el sector industrial se encuentran adscritas al Sistema de Información Empresarial Mexicano, de las cuales 124 son micro, 8 pequeñas, 5 medianas y 2 grandes (SIEM, 2014). De esta manera, sólo el 5.21% de las empresas del sector industrial en BCS pertenecen a una asociación o cámara empresarial. Por otro lado, la ubicación de las unidades económicas del sector industrial en BCS es otro factor importante en el análisis, pues en buena medida permite inferir sobre la dinámica económica, la generación de empleos, el abasto de recursos naturales y el potencial productivo con el que cuenta cada municipio. Con base a la Tabla 3, se puede observar la distribución de las unidades económicas a lo largo y ancho de la entidad.

Tabla 3: Ubicación de la Industria En BCS, Por Municipio

Municipio Y Actividad	Comondú	la Paz	Loreto	los Cabos	Mulegé
Minería	2	10	1	8	7
Generación, transmisión y distribución de energía eléctrica, suministro de agua y de gas por ductos al consumidor final	6	15	2	4	5
Construcción	7	225	11	95	5
Industria manufacturera	242	926	61	720	317
Total	257	1176	75	827	334

Fuente: *Elaboración propia con base al INEGI, 2014 La Tabla 3 muestra el número de unidades económicas que participan en los 4 grandes grupos de la industria en BCS, conforme a ubicación. La ubicación de las unidades económicas se encuentra determinada por el municipio donde se registra su domicilio fiscal.*

De acuerdo a las cifras de la Tabla 3, el Municipio de La Paz aglutina al 44% de las unidades económicas del sector industrial en BCS; le sigue el Municipio de Los Cabos con 31%; Comondú, con 12%; Mulegé, con el 10% y, finalmente, Loreto con apenas 3%. De esta manera, y tal como se manifiesta en el Programa Estatal de Desarrollo Industrial Sustentable, emitido por el Gobierno del Estado de BCS, el desarrollo de la industria se concentra principalmente en las cabeceras municipales, excepto la industria pesquera, que se encuentra ubicada principalmente en comunidades de la Zona Pacífico Norte, en donde se llevan a cabo procesos de enlatado de diversos productos del mar; mientras que la agroindustria está representada por plantas pasteurizadoras de leche y sus derivados, empaque de diversas hortalizas y productos orgánicos en empresas industriales que se sitúan en los Municipios de Mulegé, Comondú, La Paz y Los Cabos. (Gobierno de BCS, 2011: 7). Finalmente, la distribución del sector industrial guarda una estrecha relación con la dinámica poblacional, donde la Población Económicamente Activa encuentra en este sector la segunda fuente de empleo más importante para la entidad, después del sector terciario. Con base a los datos del

INEGI, el Producto Interno Bruto (PIB) del sector secundario ascendió a 10, 931,152 miles de pesos en 2011 y a 22, 044,000 miles de pesos en 2012, representado el 22.30% del PIB estatal en ese último año (INEGI, 2014b). La población económicamente activa y ocupada por municipio, se reflejan en la siguiente Tabla 4.

Tabla 4: Población Económicamente Activa y Ocupada, Por Municipio de BCS

Municipio Legación	Población Total	PEA	PEA Masculina	PEA Femenina	Población Ocupada	Población Masculina Ocupada	Población Femenina Ocupada
Comondú	70,816	29,846	20,822	9,024	29,231	20,333	8,898
Mulegé	59,114	26,117	18,012	8,105	25,565	17,567	7,998
La Paz	251,871	114,212	72,656	41,556	109,157	68,887	40,270
Los Cabos	238,487	110,085	72,384	37,701	102,849	66,425	36,424
Loreto	16,738	7,475	5,287	2,188	7,225	5,067	2,158

Fuente: Elaboración propia con base al INEGI, 2014 La Tabla 4 muestra la población total, población económicamente activa (por género) y la población ocupada (por género).

Con base a la Encuesta Nacional de Ocupación y Empleo, para el segundo trimestre del 2014 la población ocupada en el sector industrial fue de 61,097 personas, donde la participación corresponde al 21.6% de mujeres y el 78.4% de hombres (STPS-INEGI, 2014). Los cinco municipios muestran el mismo comportamiento, tal como se aprecia en la Tabla 4.

CONCLUSIONES

Derivado del análisis de la industria en BCS, se propone una Política de Fomento Productivo para el desarrollo regional que, basada en las recomendaciones de la Comisión Económico para América Latina y el Caribe, promueva nuevas inversiones para la instalación de industria secundaria, aumentando el empleo, las exportaciones y el desarrollo tecnológico para tener como resultado un crecimiento económico sostenido y sustentable. Teniendo como áreas de oportunidad la explotación eficiente de los factores de producción con los que se cuenta, como un extenso territorio (tierra) y la mano de obra (trabajo), así como la aplicación de inteligencia institucional para la correcta selección de mercados nacionales e internacionales, BCS puede aprovechar sus ventajas competitivas para mejorar las cadenas productivas y de valor en los sectores tradicionales o identificados con potencial, mediante la concesión de apoyos y atracción de la inversión para la creación de clústeres, la apertura de un parque tecnológico, el establecimiento de un recinto fiscalizado estratégico, la promoción de buenas prácticas de manufactura, acompañándose de políticas públicas que permitan la armonización del desarrollo industrial y económico con el medio ambiente.

EL AHORRO EN MÉXICO SÍNTESIS DE LA INVESTIGACIÓN EMPÍRICA

José Isabel Urciaga García, Universidad Autónoma de Baja California Sur
Claudia Lorena Lauterio Martínez, Universidad Autónoma de Baja California Sur

RESUMEN

La investigación sobre ahorro y desarrollo económico representa uno de los temas centrales en los diferentes enfoques teóricos de la economía. En efecto, la evidencia internacional muestra una estrecha asociación entre tasas de ahorro y tasas de crecimiento, aunque la dirección de causalidad es controversial. En el caso de México, la historia económica registra una amplia experiencia de inflación, déficits crónicos en la cuenta corriente de la balanza de pagos y crisis recurrentes. Con el modelo de industrialización sustitutiva, y sin él, los mexicanos han conocido los impactos adversos de la baja tasa de ahorro nacional, los persistentes desequilibrios en el saldo externo, la fuerte dependencia de la inversión extranjera y los efectos de los caprichosos movimientos internacionales de capital. La literatura económica para los países en desarrollo asocia sus bajos niveles de ahorro con el problema de la deuda externa, la inestabilidad macroeconómica, el desahorro del gobierno, los choques externos y la represión financiera. Esta misma literatura, recientemente empieza a cuestionar las bondades de los programas de ajuste y estabilización implantados en tales economías, por sus impactos sociales adversos y por lo ineficientes que resultan para aumentar el ahorro interno. El objetivo de este trabajo es determinar los principales factores explicativos que están detrás de las bajas tasas de ahorro y destacar los elementos clave para el diseño e instrumentación de la política de desarrollo a través del modelo del ciclo vital.

PALABRAS CLAVES: Ahorro Y Consumo, Ingreso Familiar, México, Modelo Del Ciclo De Vital

SAVING IN MEXICO SYNTHESIS OF THE EMPIRICAL INVESTIGATION

ABSTRACT

The research on savings and economic development represents one of the central topics in the different theoretical approaches of the economy. As a matter of fact, the international evidence shows a narrow association between rates of saving and rates of growth, though the direction of chance is controversial. In the case of Mexico, the economic history registers a wide experience of inflation, chronic deficits in the current account of the scale of payments and constant crisis. With and without the model of substitute industrialization, the Mexicans have known the adverse impacts of the low rate of national saving, the persistent imbalances in the external balance, the strong dependence of the foreign investment and the impact of the capricious international movements of the capital. The economic literature for the developing countries associates its lows levels of saving with the problem of the foreign debt, the macroeconomic instability, the dissaving of the government, the external shocks and the financial repression. The same literature, recently it starts questioning the kindness of the programs of adjustment and stabilization implanted in such economies, for his social adverse impacts and for the proved inefficiency to increase the internal saving. The goal of this work is to determine the principal explanatory factors that are behind the low rates of saving and to emphasize the key elements for the design and instrumentation of the politics of development across the model of the vital cycle.

INTRODUCCIÓN

La investigación sobre ahorro y desarrollo económico representa uno de los temas centrales en los diferentes enfoques teóricos de la economía. En efecto, la evidencia internacional muestra una estrecha asociación entre tasas de ahorro y tasas de crecimiento, aunque la dirección de causalidad es controversial. La visión de los modelos neoclásicos tradicionales, tipo Solow, Lewis o aquellos más recientes de crecimiento endógeno, indican que a mayor ahorro corresponde un crecimiento más acelerado, debido a la acumulación de capital. En contraste, los modelos de corte keynesiano, neokeynesiano y de ciclo vital sugieren que el crecimiento es la causa principal de la elevación del ahorro. De hecho, las trayectorias de crecimiento dependen de la asociación y retroalimentación de sendas variables y darán como resultado, bien el círculo virtuoso de la riqueza o su opuesto, el vicioso de la pobreza (Urciaga, 2002). En el caso de México, la historia económica registra una amplia experiencia de inflación, déficits crónicos en la cuenta corriente de la balanza de pagos y crisis recurrentes. Con el modelo de industrialización sustitutiva, y sin él, los mexicanos hemos conocido los impactos adversos de la baja tasa de ahorro nacional, los persistentes desequilibrios en el saldo externo, la fuerte dependencia de la inversión extranjera y los efectos de los caprichosos movimientos internacionales de capital. A excepción de períodos de corta duración, el saldo exterior en cuenta corriente ha sido negativo, con la consecuencia de que se incrementaron las necesidades de financiación externa. Los problemas crónicos de saldo exterior indican que la insuficiencia de ahorro interno es uno de los “hechos estilizados” de México y la restricción más importante al crecimiento sostenido. Los ajustes frecuentes del tipo de cambio nominal reflejan la lucha por superar los crónicos déficits en la cuenta corriente, de tal forma que déficits más allá de 3-4% del Producto Interno Bruto (PIB) usualmente desembocan en sobrevaluación cambiaria, aumentos en las tasas de interés, ataques especulativos y, finalmente, macro devaluaciones y programas de ajuste (Weale, 1990).

REVISIÓN DE LA LITERATURA

Para el enfoque neoclásico la causalidad entre ahorro y crecimiento adopta el sentido de elevadas tasas de ahorro a mayor crecimiento mediante la acumulación de capital, idea reforzada por los actuales modelos de crecimiento endógeno (De Long y Summers 1991, Roemer 1986, Barro 1991). En contraste, los enfoques keynesianos, Neokeynesianos y de Ciclo Vital sugieren que la dirección de causalidad va del crecimiento al ahorro. En consecuencia, existen diferentes lecturas de los resultados empíricos, en particular a las regresiones que usan al crecimiento como la variable dependiente y a la tasa de ahorro como la independiente, porque la propia tasa de ahorro puede estar influida por la tasa de crecimiento. Los elementos anteriores indican la falta de consenso sobre el sentido de causalidad del ahorro y crecimiento, no obstante, todos los enfoques coinciden en destacar la importancia que reviste el ahorro para el crecimiento de largo plazo (Avery y Kennickell, 1991)

En el enfoque neoclásico el volumen de ahorro e inversión se determinan con cargo a variaciones en la tasa de interés. Enseña que el ahorro se transforma automáticamente en inversión y de esta manera se logra mayor crecimiento. El ahorro es resultado de la elección entre consumo presente y futuro y la tasa de preferencia temporal es un elemento clave en esta decisión. Si no existen obstáculos para el desplazamiento intertemporal en el consumo, ocasionados por restricciones o incertidumbre, el consumo óptimo de un individuo involucrará igualar la tasa de cambio de la utilidad marginal del consumo a la diferencia entre la tasa de preferencia temporal y la tasa de interés. En este marco, el consumo depende de los recursos disponibles de ciclo vital. El ahorro permite añadir activos financieros o el desahorro puede reducirlos o endeudarse con cargo a los ingresos futuros para alcanzar un patrón de consumo óptimo (Ros y Vázquez, 1980).

El Modelo de Ciclo Vital: Desarrollo e Implicaciones

La investigación sobre los determinantes del ahorro y su papel en el desarrollo económico, ha representado tradicionalmente un papel central en los diferentes enfoques teóricos de la macroeconomía, interés renovado por la contribución de los modelos de crecimiento endógeno y la caída de las tasas de ahorro en la mayoría de los países (Barro, 1991). Los esfuerzos de refinar la teoría del ahorro desde la perspectiva del enfoque neoclásico intentan dotarla de visión de futuro y asirla al comportamiento racional del consumidor. Por una parte, se orienta a adaptar el patrón de consumo a alguna noción más estable, de largo plazo, y por otra, adoptan la planeación racional como base de las decisiones de ahorro familiar. En esta dirección resaltan los planteamientos de las hipótesis del Ingreso Permanente y de Ciclo Vital. La idea fuerza que sostiene ambas teorías es que el consumo depende de una noción de largo plazo en lugar de un flujo de ingreso que se perciba entre un año y otro. En la hipótesis del ingreso permanente, Friedman (1957) incorpora la batería microeconómica de maximización intertemporal de la utilidad, en la que el ahorro se interpreta como un residual después de que se tomó la decisión de consumir en cada período. Esta hipótesis se apoya en supuestos de completa certidumbre, sin racionamiento de capital y agentes inmortales. La idea esencial de esta hipótesis es que el ingreso tiene dos componentes: uno normal o permanente y otro transitorio, inesperado "accidental o casual" (Modigliani, *et al* 1985).

Asimismo, el consumo se divide en una parte permanente y otra transitoria. El consumo permanente depende de la riqueza del individuo y de la tasa real de interés. Además, asume que los componentes transitorios del ingreso y el consumo no están correlacionados, ni entre sí ni con los correspondientes componentes permanentes. Este supuesto -el más restrictivo de su planteamiento, indica Friedman - es el más relevante: "el supuesto de nula correlación entre componentes transitorios del ingreso y del consumo, es muy fuerte, pero es el que introduce un contenido sustantivo importante en la hipótesis y lo hace susceptible de ser contrastado" (Friedman, 1957). La hipótesis de proporcionalidad es el aspecto que más controversia ha generado, pues implica que los gustos son independientes del stock de riqueza. Si las diferencias en las preferencias de los individuos están correlacionadas con el ingreso permanente, la estimación empírica usual puede atribuir las diferencias al ingreso permanente, cuando en realidad se trata de los efectos de las diferencias en los gustos y hasta ahora no existe una forma satisfactoria de medir las preferencias. La hipótesis se traduce en dos importantes derivaciones: por un lado, que la elasticidad del consumo respecto al ingreso permanente sea unitaria, y por otro, que todo el ingreso transitorio se ahorra (Mayer, 1972). Los supuestos básicos del modelo simplificado son los siguientes:

En principio, el modelo se sustenta en una función de utilidad *homogénea*; supuesto conocido como de proporcionalidad, que Ando y Modigliani lo interpretan de la siguiente manera: "Si el individuo recibe un dólar adicional de recursos, lo asignará en consumo a diferentes momentos en la misma proporción en que asignaba sus recursos antes de la adición" (Ando y Modigliani, 1963). En segundo lugar, la versión simplificada *no incluye herencias*. No existe riqueza heredada al inicio del período ni se dejan legados al morir, el consumo depende de la forma específica de la función de utilidad, de la tasa de interés, y de la edad del individuo, pero no del total de sus recursos. (Modigliani y Brumberg, 1979). En tercer lugar, se supone que la *tasa de interés es cero* y *no existe incertidumbre*, y finalmente, se planea *consumir el ingreso a una tasa constante* durante toda su vida. Existen otros supuestos que se relacionan con las condiciones a cumplir para pasar *de una función individual a una agregada*, para agregar al interior de cada grupo de edad y luego entre todos los grupos (misma renta media de cada grupo, igual ingreso esperado para cada grupo durante su período activo e igual período activo y esperanza de vida). Así se obtiene la formulación estándar de la función de consumo:

$$C_i = \beta_0 Y_i^d + \beta_1 Y_i^e + \beta_2 W_i$$

Bajo los supuestos considerados la función de ahorro (consumo) agregado en cualquier año es una función lineal y homogénea del ingreso corriente, del ingreso esperado y de la riqueza, con coeficientes que dependen de la edad. El Modelo de Ciclo Vital (La propuesta del Modelo de Ciclo Vital se contiene en los trabajos clásicos de Modigliani con Brumberg, en el artículo con Ando de 1963, en la conferencia que Franco Modigliani dictó al recibir el premio nobel de economía en 1985 que posteriormente se publicó como artículo en *The American Economic Review* (1986), Vl. 76, No.3, p.297-313; y en los trabajos más recientes de los noventas, publicado en *Revista Di Política Económica*, en 1990, No. 12, p. 5-42 en que trata de explicar las caídas en las tasas de ahorro con cargo al modelo MCV) genera algunas implicaciones importantes que han motivado una amplia controversia, resumimos aquellas de mayor relevancia:

El nivel de consumo es proporcional al ingreso esperado e independiente del ingreso corriente. Es decir, se espera que la elasticidad del consumo respecto al componente permanente del ingreso sea unitaria.

La razón consumo e ingreso permanente para diferentes grupos de edad, está gobernada por la relación entre ingreso permanente de ese grupo de edad y su ingreso de ciclo vital, la cual depende del tamaño de la familia.

La tasa agregada de ahorro es función del crecimiento económico (población y productividad) y no de la frugalidad de los agentes.

La primera proposición se deriva directamente de la estructura de preferencias (homotéticas) y de la estabilidad del patrón edad-ingreso. Estas preferencias implican que la razón riqueza-ingreso es independiente del ingreso. Los autores del Modelo de Ciclo Vital demuestran las implicaciones que se derivan para condiciones de una economía estacionaria y de crecimiento sostenido. Para el primer caso, el ingreso es constante durante el período de vida activa y cero en la fase de jubilado, el consumo es estable en todo el ciclo vital y el ingreso nacional estacionario, bajo tales condiciones el modelo MCV implica que se ahorra hasta la jubilación y se desahorra posteriormente en un monto igual al ahorro anterior, así, la razón riqueza-ingreso es independiente del ingreso e igual a la mitad del número de años de jubilado. Es decir, MCV implica que la razón de ahorro y consumo a ingreso, depende del peso relativo del período de jubilado, de la razón período de jubilado al total del ciclo vital y del período activo al ciclo vital, la que supone constante e independiente del ingreso como de la edad (Modigliani y Brumberg 1979). Es decir, no hay ahorro neto, toda vez que el ahorro de las familias en período activo se ve compensado exactamente por el desahorro de los jubilados.

En contraste, en crecimiento sostenido, el MCV implica que la proporción de ahorro agregado no depende del nivel de ingreso sino de su tasa de crecimiento y, para un crecimiento dado, la tasa de ahorro con independencia del origen del crecimiento, bien resulte de una expansión de la población (efecto Neisser), del incremento en la productividad (efecto Bentzel) o ambos. En otras palabras, si la población crece sostenidamente aumentará el número relativo de ahorradores con relación a las personas de la tercera edad, por tanto, el ahorro será positivo y aumentará con el crecimiento de la población. De la misma forma, si aumenta el ingreso como consecuencia del aumento de la productividad, aún si la población es estacionaria, aumentará el ahorro, porque los jóvenes que están en sus fases de ahorro disfrutarán de mayores recursos de ciclo vital que la generación anterior (Hurd, 1995).

METODOLOGÍA

El contraste del Modelo de Ciclo Vital es elaborado con datos de hogares de varios niveles, como el ingreso disponible, la renta esperada y la riqueza junto con atributos del hogar y la propiedad de la vivienda. Un modelo de esta naturaleza se restringe para identificar las variables básicas que sugiere el Modelo de Ciclo Vital, y posteriormente, se segmenta en distintas muestras (por grupos de edad, territorio, y finalmente, por niveles de ingreso).

$$c_t = \beta_0 + \beta_1 y_d + \beta_2 y^e + \beta_3 w_t + \beta_4 Ed_t + \beta_5 Ef_t + \beta_6 Res_t + \varepsilon_t$$

La especificación que se emplea se diferencia de la mayoría del trabajo empírico desarrollado para México. En particular por el aporte de la riqueza, ingreso permanente, estructura y tamaño de la familia, el territorio y la vivienda, todos ellos, argumentos que nos permiten enriquecer las formulaciones tradicionales del consumo familiar de México. El modelo estadístico anterior recoge las variables principales que plantea MCV. El ingreso disponible (y_d), la renta permanente (y^e), la riqueza (w), la edad (Ed), la estructura de la familia (Ef), y el habitat (Res).

Con el modelo econométrico que se propone, será posible probar algunas hipótesis de interés. El caso keynesiano puede contrastarse a partir de algunas restricciones en los coeficientes, en particular si $0 < \beta_1 < 1$ y $\beta_2 = \beta_3 = 0$. En la medida que el ingreso disponible sea la única variable que explica el consumo de los hogares, y que el consumo de las familias sea muy sensible a cambios en el ingreso disponible, además que los agentes, no consideren las expectativas de ingreso al tomar sus decisiones de consumo y su nivel de riqueza no influye en su consumo (quizás restringidos por liquidez y riqueza). Si $\beta_1 = 0$ y $\beta_2 = 1$, nos da el caso perfectamente racional de que los cambios en el consumo responden exclusiva y proporcionalmente al ingreso permanente. Si $0 < \beta_1 < 1$, $\beta_1 > \beta_2 > 0$ y $\beta_3 > 0$, nos acercaría al caso de consumidores de ciclo vital con restricciones de liquidez, en el que los agentes consideran el futuro en sus decisiones, consideran a la riqueza pero por limitaciones institucionales (racionamientos de crédito y riqueza), responden rápidamente al ingreso disponible. Se espera que los hogares en una sociedad heterogénea como la mexicana registren diferentes pautas en el comportamiento del ahorro como respuesta a consideraciones de riqueza, liquidez, ingreso y atributos ligados al territorio y la familia.

A efectos de analizar los impactos relativos a la edad, la clasificación se realizó en tres grupos: los jefes de hogar hasta 45 años, aquellos entre 46 y 65, y los mayores de 65 años, las personas de la tercera edad es el grupo de referencia. Se espera que los cabezas de familia más jóvenes ahorren más que los viejos, que las personas de la tercera edad desahorren, y que los cabezas de familia entre 45 y 65 años registren las tasas mayores de ahorro. En este grupo se encuentran aquellos que se supone finalizaron la crianza y educación de los hijos a la par que alcanzan los máximos ingresos. Para dar cuenta del impacto de la estructura de la familia en el patrón de ahorro, se utilizó la tasa de dependencia de los jóvenes que residen en el hogar menores de 15 años, el número de perceptores de ingreso, el tamaño del hogar y la situación civil del jefe de hogar. Se supone que el aumento en el número de hijos eleva el nivel de consumo en los años de crianza y educación, y por tanto reduce el ahorro. Adicionalmente, para estudiar el impacto que ejercen el territorio en el patrón de ahorro de los hogares se realizaron algunas aproximaciones al habitat en que reside la familia: el grado de urbanización y la región. En principio, mediante un grupo de variables ficticias que recogen el nivel de urbanización del lugar de residencia. Las grandes urbes y sus áreas metropolitanas, las ciudades grandes y capitales de estado mayores de 100 mil personas, las ciudades medias entre 15 mil y 100 mil habitantes, las ciudades pequeñas entre 2,500 y 15 mil habitantes, y finalmente, las zonas eminentemente rurales menores de 2,500 personas. El grupo

de referencia es las grandes ciudades y sus áreas metropolitanas. En segundo lugar, aproximamos el habitat mediante las regiones de México. Se espera que las familias que residen en zonas o regiones con mayor nivel de urbanización ahorren menos que las familias en ambientes rurales (*ceteris paribus*).

Por otra parte, es necesario contrastar si existen efectos riqueza vinculados a la propiedad de la vivienda, el efecto riqueza es una de las razones más socorridas que intenta explicar la reducción en el ahorro privado. Si la hipótesis es correcta, se espera que los propietarios de vivienda registren tasas de ahorro menores que los no propietarios. Es necesario distinguir a través de encuestas varias formas de tenencia de vivienda que permiten contrastar tal hipótesis, las encuestas deben distinguir a los propietarios de acuerdo al tipo de propiedad de la vivienda y del terreno en que se localiza: vivienda en propiedad en terreno propio, propia en terreno ejidal o comunal, propia en terreno jurídicamente irregular y propia con hipoteca. A los no propietarios los clasifica como: vivienda en alquiler, prestada y recibida como parte de los beneficios (prestaciones en los contratos colectivos mexicanos) que otorga la empresa. Trabajamos la variable a dos niveles, en el primero a nivel de propietarios y no propietarios, y en una segunda aproximación refinamos entre los diversos tipos de tenencia. Para el primero, es necesario obtener la propiedad de la vivienda, mediante una variable ficticia que adopta el valor de uno si es propietario de la vivienda en que reside, con independencia del tipo de lugar en que localiza la vivienda. Los resultados de las estimaciones estarán condicionadas por el ingreso y la riqueza.

RESULTADOS

En México, parece existir una relación inversa entre el tamaño del hogar y la tasa de ahorro, por arriba del tamaño medio de la familia mexicana. Los hogares hasta 5 miembros ahorran más que hogares más numerosos, la tasa de ahorro se cifra en 11% a 23%. Lo que indica que los hogares más grandes registran mayor consumo y pueden ahorrar más o menos en función de que los miembros adicionales contribuyan con más ingresos. Esto es, si aumenta el número de perceptores de ingresos y o de dependientes. Esta relación básica desde la perspectiva de Ciclo Vital, apenas empieza a documentarse en México.

El Modelo de Ciclo Vital es una aproximación adecuada del proceso de generación de datos de consumo de los hogares. Los resultados del modelo nos indican que tanto el ingreso disponible, la riqueza, la renta permanente, y otros atributos territoriales y del hogar son elementos importantes en la explicación del ahorro de las familias. La elasticidad del consumo respecto a los cambios en el ingreso disponible entre el Año 1 y Año 4 se ubica entre 0.93 y 0.96, la de la riqueza entre 0.01 y 0.021, y del ingreso permanente entre 0.018 y 0.063. Los valores de las elasticidades que acompañan al ingreso esperado sugieren que los cambios en el consumo no son proporcionales a la renta permanente, indica que sólo una pequeña proporción del consumo se modifica (menos del 6%) ante una variación del ingreso permanente, cuando se espera que sea del 100%. La elasticidad del consumo al ingreso disponible es muy elevada, indica que un cambio en el ingreso disponible de un peso conducirá a aumentar el consumo entre 93 y 96 centavos.

El ingreso disponible es la variable más importante en el consumo familiar. La propensión marginal al ahorro del ingreso disponible se cifra alrededor de 14% al 20% (con excepción de los atípicos resultados para Año 3), en todas las encuestas tiene el signo esperado y es significativa. Las familias tienen una propensión marginal al consumo de su ingreso permanente cifrada entre 10 y 24%. La propensión marginal a consumir la riqueza es de alrededor de 1.2% aunque para los últimos dos años no resulta significativa. Un aspecto que sorprende, se refiere al grado en que las variables que se incluyen en el modelo explican el consumo de las familias, en todos los casos supera el 80%. En principio es contraintuitivo, dado que los datos son de corte transversal y parecería que el modelo registra problemas de especificación. Sin embargo, las pruebas básicas de especificación del modelo propuesto no lo rechazan así que hay dos explicaciones

que apoyan el resultado. En principio las principales variables del modelo recogen tendencia y en todos los casos la asociación entre el ingreso y consumo familiar es muy estrecha. En segundo lugar, el ingreso disponible considera en todos los casos los componentes no monetarios, que en una sociedad con elevado contenido de informalidad y economía familiar, son muy importantes, el concepto de gastos e ingresos no monetarios son equivalentes y se incluyen en ambos lados de la ecuación. La Tabla 1 muestra las funciones del consumo para México, demostrando diferencias importantes en el comportamiento del ahorro de los hogares según el criterio de segmentación. La tasa de ahorro es mayor en los hogares cuyo cabeza de familia es varón, al parecer las mujeres registran un exceso de sensibilidad al ingreso corriente mientras que los varones se comportan como agentes de ciclo vital.

Tabla. 1: Funciones de Consumo Para México, (Comparativa Cuatro Años)

Variable	AÑO 1	AÑO 2	AÑO 3	AÑO 4
C	9.734 (1.5)	740.97 (2.0)	-1,998.7 (-1.9)	1923.4 (1.5)

Observaciones	4,735	10,510	12,815	14,042

En esta tabla se describe el análisis empírico de las variables con una variación en cuatro años distintos, se incluyen las principales variables de consumo para México. Fuente: Elaboración propia. Estimaciones corregidas por el método de White.

Una de las definiciones frecuentes en México, se concentra en la diferencia entre los ingresos y gastos corrientes (incluye el componente monetario y no monetario de los gastos e ingresos y excluye las operaciones financieras y de capital), el cálculo del ahorro por esta vía tiene varios inconvenientes entre los que destacan la consideración de la compra de bienes duraderos y la educación como gasto, cuando en realidad es una inversión. Se han propuesto muchos ajustes a la medición anterior para destacar el ahorro, el más frecuente, redefine algunos componentes del gasto y los transfiere a ahorro, en esta dirección se reclasifican algunos componentes del gasto en bienes durables y no durables, y se define el ahorro como la diferencia entre ingreso corriente y gasto en no durables (incluyendo una estimación de los intereses por

las deudas contratadas). Asimismo, se puede ampliar el contenido conceptual del ahorro al considerar algunos componentes del gasto como ahorro y agregarlos, como los bienes durables (vivienda, autos, electrodomésticos y otros), de la educación, del ahorro financiero y el préstamo en efectivo a otros agentes fuera de la familia. Para así finalmente, definir el ahorro como la suma de una serie de rubros de gastos de la encuesta, por ejemplo, el gasto en bienes de consumo durable, el gasto en inversión y el ahorro en efectivo. Los resultados sugieren que mayor grado de urbanización implica mayor consumo. La aproximación de las diez grandes regiones de México (considerando a la región Centro Sur que incluye al Distrito Federal, y los Estados México y Morelos como punto de referencia), sugiere que todas las regiones de México ahorran más que la región Centro Sur, esta situación simplemente nos reafirma los impactos adversos en el ahorro, de vivir en las grandes urbes metropolitanas, que concentran casi todos los servicios. El menor ahorro del hábitat urbano no sólo se explica por la mayor cobertura de servicios, sino también por a las diferencias de costos, precios y salarios entre las regiones que integran el país, y al comportamiento más precautorio que se asocia con las zonas rurales. Este comportamiento deriva de la mayor incertidumbre sobre sus ingresos en gran medida dependientes de la producción agropecuaria e influidos por factores incontrolables y aleatorios como la meteorología. De los resultados anteriores se deriva que existen diferencias importantes en el comportamiento del ahorro de los hogares de acuerdo a ciertos criterios de segmentación. La función de consumo es heterogénea y tendrá que estudiarse a la luz de una gran variedad de circunstancias como territorio, propiedad de vivienda y otros aspectos de la familia.

CONCLUSIONES

La caída en la tasa de ahorro constituye una fuente notable de preocupación para muchos países, dadas sus consecuencias negativas en el crecimiento sostenido y sus resultados de desequilibrio externo. El esfuerzo por documentar el comportamiento del ahorro se ha visto limitado por la información existente. La mayor parte de los trabajos en este campo se concentran en las series temporales del consumo o ahorro privado y, generalmente, estudian algún período que concluye hacia principios de los noventa. Las cifras de las Cuentas Nacionales de México tienen el problema de consolidar el comportamiento de las empresas y las familias en el agregado “sector privado”, no ofrecen series históricas del ahorro de las familias y proporcionan poca información detallada sobre el ahorro familiar. No obstante, este componente del ahorro es susceptible de estudiarse mediante los microdatos de las encuestas de presupuestos familiares que muy pocos trabajos han utilizado.

Las funciones de consumo estimadas abarcan las especificaciones de corte keynesiano y las de ciclo vital concentradas en dos tipos de segmentaciones: por nivel de renta las primeras, y por grupos de edad, las segundas. Las segmentaciones por edad permiten contrastar las principales implicaciones del Modelo de Ciclo Vital sobre la triangulación de los ingresos durante el ciclo de vida, mientras que las segmentaciones por niveles de ingreso o la restricción de los coeficientes de riqueza e ingreso permanente del Modelo de Ciclo Vital nos facilitan aproximarnos a la versión keynesiana que subraya la importancia del ingreso disponible sobre el comportamiento del consumo, o el grado en que las restricciones de liquidez que sugieren las tesis de Hall, Flavin y Mishkin pueden condicionar la función de consumo en México. Es decir, hasta que punto las restricciones de liquidez impuestas por el funcionamiento del mercado de crédito y/o el nivel de pobreza generan que el consumo sea muy volátil a los cambios en el ingreso. La principal implicación que sugiere esta segmentación radica en que el grueso del ahorro lo realizan los hogares que se ubican en la parte alta de la escala distributiva, hecho muy importante desde la perspectiva de la política económica. El ahorro de las familias está determinado fundamentalmente por las decisiones de unos pocos individuos en la escala superior de rentas, y si la mayoría no tiene posibilidades de acumulación para la jubilación, los recursos públicos futuros tendrán fuertes presiones debido a la demanda de protección social. La reforma del sistema de pensiones no tiene impacto directo en amplios sectores de la población para los que simplemente no existe acceso a los mecanismos de jubilación, como los campesinos y los trabajadores de la economía informal. Los jefes de hogar con ingresos próximos al nivel de subsistencia no pueden realizar un acervo amortiguador de ahorro o acumular para la jubilación. El modelo que mejor refleja la realidad mexicana se puede comparar con un modelo 60-30-10, es decir, 60% de la población bajo restricciones de liquidez, 30% se comporta como lo sugiere el MCV y el 10% restante puede explicar su acumulación de riqueza mediante herencias.

RESUMEN

La industria del ladrillo artesanal, está directamente relacionada con la construcción de vivienda y edificios. En México, esta ocupación se viene practicando desde hace varios siglos. La fabricación de ladrillo rojo cocido en hornos (tabique y lozeta), se ha desempeñado sin cambios sustanciales desde épocas ancestrales, principalmente en la zona surponiente de la ciudad de Saltillo, Coahuila, México. No obstante, el tiempo transcurrido, esta industria no ha modernizado totalmente sus procesos de operación y, consecuentemente, continúa contaminando, sin una regulación apropiada. Sin embargo, a partir de los 90's se deja de consumir la quema de llantas y acumuladores de autos de desecho para reconvertir el proceso de combustión, utilizando el aceite residual, la leña y la madera de desecho. El 90% de la producción, se exporta a EEUU, el 8% se distribuye regional y nacionalmente y el 2% se vende localmente. Como consecuencia de la crisis hipotecaria, en los últimos 6 años las exportaciones han disminuido considerablemente y más del 60 % de los productores, han desaparecido del mercado. El principal objetivo de esta investigación es, por lo tanto, conocer y analizar los factores que influyen en la gestión empresarial de los productores de ladrillo, para poder contribuir al diseño de políticas públicas y de fortalecer su estrategia en la toma de decisiones. Se plantea como hipótesis analítica que la gestión empresarial, la infraestructura, la formalización y los factores ambientales limitan a los micros y pequeños productores de ladrillo, para ser competitivos. Se diseñó un instrumento de medición (con escalamiento Likert, diferencial semántico y preguntas dicotómicas), considerando las variables de dirección empresarial, infraestructura, capacitación, trámites y formalización, factores institucionales y ambientales. La encuesta, se aplicó a 74 propietarios. El diseño de la investigación fue no experimental. En cuanto a la temporalidad de la recolección de los datos, es transversal. Fue descriptivo, ya que solamente se analizaron cómo son y cómo se manifestaron algunos fenómenos y sus componentes. Los datos se procesaron en excell y paquete SPSS versión 18. Los resultados arrojan que el 84 % de los productores no cuentan con los servicios básicos municipales. El 89 % no cuenta con teléfono fijo, en cambio el 88 % tiene celular; el 62 % carece de correo electrónico; el 95 % no utilizan la banca electrónica y el 100 % de la muestra, no dispone de página web. Predomina la informalidad, ya que el 91 % no facturan; al 89 % no les alcanza para pagar todos sus gastos. El 40 % no identifica los gastos familiares, personales y del negocio y el 93 % reconoció no estar inscrito en el Registro Mercantil. Las necesidades más sentidas se dan en el aspecto de formalización, gestión empresarial, comercialización, finanzas y producción. Si no se toman las medidas adecuadas, en general, esta actividad no es sustentable para el medio ambiente regional porque implica una degradación constante de los ecosistemas urbanos y rurales.

STRATEGIC ANALYSIS FOR DEVELOPMENT OF BRICK PRODUCERS IN SALTILLO CITY, COAHUILA, MEXICO

ABSTRACT

The handmade brick industry, is directly related to the construction of housing and buildings. In Mexico, this occupation has been practiced for several centuries. The manufacturing of red brick baked in ovens (septum and tile) has played substantially unchanged since ancient times, especially in the southwest area of Saltillo city, Coahuila, Mexico. Despite the time elapsed, the industry has not totally modernized its operating processes and, consequently, continues to pollute without proper regulation. However, from the 90's it stop consuming burning tires and scrap car batteries to convert the combustion process using waste oil, firewood and scrap wood. The 90% of production is exported to the USA, 8% is distributed regionally and nationally, and 2% is sold locally. As a result of the mortgage crisis in the last six years, exports have declined significantly and more than 60% of producers have disappeared from the market. The main objective of this research is, therefore, to understand and analyze the factors that influence the business management of the brick producers, to contribute to the design of public policies and strengthen its strategy in decision making. Arises as analytical hypothesis that the business management, the infrastructure, the formalization and the environmental factors limited micro and small brick producers to be competitive. A measuring instrument (with Likert scaling, semantic differential and dichotomous questions) was designed, considering the corporate governance variables, infrastructure, training, procedures and formalization, institutional and environmental factors. The survey was applied to 74 owners. The research design was not experimental. As for the timing of data collection, is transversal. It was descriptive, since they were only analyzed of how they are and how some phenomena manifested and their components were made. The data was processed in excel and SPSS package version 18. The results show that 84% of producers do not have the basic municipal services. 89% doesn't have landline, however 88% have a cell phone; 62% have no email; 95% do not use online banking and 100% of the sample did not have a website. Informality prevails, because the 91% do not bill; 89% can not afford to pay all their expenses. The 40% does not identify the family, personal and business expenses and 93% admitted not be registered in the Commercial Register. The most pressing needs are given in the aspect of formalization, business management, marketing, finance and production. If appropriate measures are not taken, in general, this activity is not sustainable for the regional environment because it implies a constant degradation of urban and rural ecosystems.

INTRODUCCIÓN

La industria del ladrillo y sobretodo artesanal, está directamente relacionada con la construcción de vivienda, por lo que en México, esta actividad se viene practicando desde hace varios siglos. La fabricación de ladrillo rojo cocido (tabique o “cuachota” y el piso de barro), por lo tanto, es una actividad artesanal que se ha desempeñado sin cambios sustanciales desde épocas ancestrales, en la zona surponiente de la ciudad de Saltillo, Coahuila. No obstante, el tiempo transcurrido y debido a diferentes factores, esta industria no ha modernizado totalmente sus procesos de producción y, consecuentemente, continúa contaminando con sus emisiones de humo a la atmósfera sin una regulación apropiada por parte de las autoridades. El ladrillo de piso producido en Saltillo, Coahuila México, es principalmente de exportación (sur de EUA) aunque minoritariamente se abastece al mercado local y regional. Se cuenta con dos marcas registradas: Saltillo Tile MR (México) y Castizo TM (USA). Derivado de la crisis nacional e internacional (por el impacto de las deudas hipotecarias en EEUU), se contrajo la industria de la construcción y evidentemente la demanda

de ladrillo local disminuyó considerablemente, provocando, entre otros factores, la desaparición de más del 60% de los productores.

Como parte fundamental de este proyecto de investigación, se espera por lo tanto, después de realizar un diagnóstico de la actividad, el poder contribuir a la formulación de políticas públicas y a fortalecer la toma de decisiones estratégicas de los productores de ladrillo. Este trabajo está estructurado como sigue: en la primera parte se presenta el marco teórico referencial que brinda el soporte conceptual al tema central y a las variables o eventos. Posteriormente se define el planteamiento del problema y la formulación de las hipótesis. Después, en el apartado de metodología, se describe el diseño de la investigación, el tamaño de la muestra y de la población, así como las técnicas e instrumentos de medición y de recolección de los datos. Finalmente, se presentan y analizan los datos recabados para terminar con las conclusiones y recomendaciones.

REVISION DE LITERATURA

El oficio de ladrillero puede ser considerado como una de las actividades laborales más olvidadas y quizás menos reconocidas de la sociedad mexicana. Como mencionan González, Pérez, Ojeda, Matamoros y González (2005) son pocos quienes se detienen a pensar que este oficio tan sencillo es fuente de abasto de una de las industrias de mayor importancia en el desarrollo económico y social de México y de otras naciones en el mundo: la industria de la construcción. Una característica encontrada al estudiar este oficio, se manifiesta cuando se adopta como actividad familiar en la que participan padres e hijos; lo que es de resaltar es la participación de la mujer y de los hijos menores de edad que por necesidad tienen que integrarse a un trabajo en el que resultan más vulnerables a los daños de la salud a consecuencia de los riesgos y de las exigencias de esta actividad. En el caso de la mujer, se debe tomar en consideración el enfoque de género y no olvidar que cuando se involucra en otra actividad laboral para obtener un ingreso económico, no significa que abandone las actividades del trabajo del hogar, sino que se le convierte en una carga laboral más. Lebel J. (2003) menciona que el género dentro del enfoque de Ecosalud, es un factor que muestra cómo la relación hombre-mujer puede afectar la salud de todos, y afirma que fuera del contexto biológico la dimensión del género abarca características culturales que definen el comportamiento social tanto de los hombres como de las mujeres y sus relaciones entre sí, lo que lleva a la renegociación constante a nivel del hogar, en los lugares de trabajo y en las comunidades.

Respecto a la situación del trabajo de los hijos menores de edad que por necesidad tienen que integrarse a la actividad familiar de elaboración de ladrillos, es una condición que los margina de un desarrollo normal de su niñez y adolescencia, los aleja de su formación educativa y aumenta el impacto negativo sobre sus condiciones de salud. De acuerdo con el informe “La Acción del Programa Internacional para la Erradicación del Trabajo Infantil en América Latina y el Caribe 1996-2004, Avances y Prioridades Futuras”, de la Organización Internacional del Trabajo (OIT, 2003), la definición de trabajo infantil “se refiere a cualquier trabajo o actividad que es física, mental, social o moralmente perjudicial o dañina para el niño o la niña y que además interfiere en su escolarización privándole de la oportunidad de ir a la escuela, obligándole a abandonar prematuramente las aulas o exigiendo que intente combinar la asistencia a la escuela con largas jornadas de trabajo pesado”.

Por otra parte, es necesario retomar los conceptos que Karl Marx señalaba como **relaciones de producción**, así, mencionaba Marx K. (1859) “en la producción social de su existencia, los hombres entran en relaciones determinadas, necesarias, independientes de su voluntad; estas relaciones de producción, corresponden a un grado determinado de desarrollo de sus fuerzas productivas materiales. El modo de producción de la vida material condiciona el proceso de vida social, política e intelectual en general”. Para Putterman L. (1994), el modelo marxista se distingue en la consideración de la propiedad de los medios de producción, y la dirección del proceso de producción que tal propiedad permite, resulta fundamental para analizar el propio proceso de producción. En el sector ladrillero, los instrumentos de trabajo se traducen en las herramientas fundamentales: (picos, azadones, carretillas, moldes, cuchillos, recortadora, etc.) y el obrador.

En un estudio realizado por el Consejo Estatal de Ciencia y Tecnología (COECYT) (2000), se define un obrador como “un horno de combustión abierto a la atmósfera y más adelante menciona, por su misma naturaleza son equipos con una eficiencia térmica muy baja”. Respecto al horno, las formas de propiedad son diversas, COECYT (2000) y en muchos casos tienen alto grado de complejidad por el suelo (terreno) en que éstos se encuentran. La relación de propiedad se enmarca bajo las siguientes características: El terreno adquiere dos tipos de propiedad: la propiedad privada y la propiedad pública. Esta última forma de propiedad está referida en lo que la ley de aguas y terrenos federales establece como propiedad de la Nación, respecto a las riberas de los ríos y arroyos.

Sobre estas propiedades, la federación y en caso concreto de la zona ladrillera, la Comisión Nacional del Agua, (CONAGUA), es quién está facultada para su administración. La CONAGUA ha otorgado concesión de uso y usufructo de las riveras de los arroyos a particulares, sin importar si son o no dueños de terrenos o si la explorarán directamente. Bajo este régimen de concesión es posible la explotación de la arcilla existente y de las aguas que pasan por los arroyos. La conjunción de la propiedad privada y de la propiedad federal se ha dado debido a que los dueños de los terrenos colindantes con la propiedad federal han obtenido la concesión de éstas áreas con el objeto de explotar la arcilla y el agua para poder producir. Tal como lo señala el COECYT (2000), en el caso de la producción de ladrillo el objeto de trabajo lo constituye la arcilla, con la cual se elabora el ladrillo. El proceso productivo que se establece en el sector la convierte en producto y materia prima a la vez, esto se explica de la siguiente manera: La arcilla se encuentra en su estado natural en el barranco, el cual es excavado para convertirla en materia prima para la elaboración de ladrillo. La arcilla es propiedad del dueño del suelo. Si esto fuera así no habría ningún problema, sin embargo el carácter del proceso productivo que se establece en el sector, le da un carácter de propiedad privada al barro. Esto queda más claro para los dueños de la tierra o concesión al tomar conciencia que la renta que cobran al trabajador es por el barro que utilizan y no por el uso del horno, (como hacen creer al trabajador). Por lo tanto, el barro y el horno adquieren la forma de capital.

Sobre la necesidad de coordinación de los recursos, Langlois y Robertson (2000), mencionan que la coordinación eficiente de los recursos, no sólo permite el funcionamiento eficiente en la producción y distribución de los bienes y servicios, sino que es vital para aquellas estrategias que requieren nuevas, y no siempre evidentes a simple vista, combinaciones de recursos. Por otra parte, Holmstrom y Tirole (1989), citados por Langlois y Robertson (2000), han apuntado los criterios que debería tener una teoría de la empresa (que son válidos para otros tipos de organizaciones), desde su punto de vista, se necesita examinar dos cuestiones fundamentales: en primer lugar, la teoría debe referirse al propósito en sí de las organizaciones, la razón última de su existencia. En segundo lugar, la teoría debe explicar los límites de la organización – su escala y diversificación. Para entender las relaciones de producción, es conveniente entender que es una organización, diversos autores han definido el concepto, sin embargo, se toma la de Reyes, (1961) citado por Gallardo (2012) quien señala que una organización es la estructura de las relaciones que deben existir entre las funciones, niveles y actividades de los elementos materiales y humanos de un organismo social, con el fin de lograr su máxima eficiencia dentro de los planes y objetivos señalados. Las relaciones sociales de producción son las que se dan entre los propietarios de los medios de producción y los trabajadores directos. Están determinadas por el nivel de desarrollo alcanzado por el sistema económico históricamente determinado.

Putterman L. (1994), al respecto, señala que el modelo marxista se distingue de otros modelos, en que la consideración de la propiedad de los medios de producción y la dirección del proceso de producción que tal propiedad permite, resulta fundamental para analizar el propio proceso de producción y para el análisis del equilibrio en un mercado concurrente. Las relaciones sociales de producción que se establecen aparentan una relación entre productores y comerciantes los cuales únicamente se relacionan en la comercialización y no establecen relaciones de trabajo, conforme lo establece la Ley Federal del Trabajo, esto se da por las siguientes razones:

En la producción y comercialización del ladrillo toman parte una serie de personas que realizan actividades dependiendo de la propiedad o no de los medios de producción.

El propietario de la tierra que no tiene como principal fuente de ingresos las actividades del sector, renta el terreno para que otros lo exploten.

Existen personas que siendo dueñas del terreno, vieron la necesidad de contar con concesión de terreno federal con el objeto de tener acceso rápido a las aguas y aprovechar los barrancos para la fabricación de los hornos. Estos tienen su fuente de ingresos en el sector.

Por otra parte están los arrendatarios de terreno particular que combinan con concesión de terreno federal y que sus ingresos fundamentalmente provienen del sector.

Por último están las personas que sin ser dueñas del terreno, ni concesionarios, se dedican a financiar y comercializar la producción al trabajador directo con el objeto de obtener una ganancia.

Como mayoría de los ladrilleros se encuentran aquellos que para producir tienen que arrendar un horno y buscar un "coyote", (que es el nombre con que se le conoce en el sector a la persona que se dedica a financiar, comprar la producción y comercializarla. La mayoría de los patrones caen dentro de ésta denominación.) que les financie la producción, convirtiéndose de esta manera en arrendatario, obligándose a pagar una cantidad que va de las 700 a las 2000 piezas y al coyote toda la producción de primera a cuenta de la deuda. Dentro de este grupo es normal que se utilice uno o dos ayudantes por horno para responder a los requerimientos, en tiempo y en cantidad, del intermediario.

Por lo anterior, para poder producir se establece en un inicio una relación entre el dueño del obrador y el trabajador para celebrar un contrato de renta, en el cual el arrendador es el dueño del terreno y del horno; y el arrendatario es el trabajador. La segunda relación que se establece está dada en el ámbito del financiamiento de la producción, en la cual el intermediario proporciona los recursos monetarios y el trabajador recibe el préstamo para producir, en el entendimiento de que al final del proceso la deuda será pagada con producción, llegando a la situación en que se ven obligados a traspasar la concesión y vender el horno. Estas dos relaciones encubren las relaciones obrero-patronales e impiden la aplicación de la Ley Federal de Trabajo en el sector. Finalmente, se puede mencionar que derivado de la crisis nacional e internacional (por el impacto de las deudas hipotecarias en EEUU), se contrajo la industria de la construcción y evidentemente la demanda de ladrillo local disminuyó considerablemente, provocando, entre otros factores, la desaparición de más del 60% de los productores.

Krugman (2012) menciona que aún vivimos, en buena medida, eclipsados por la catástrofe económica que golpeó tanto a Europa, como Estados Unidos. El Producto Interno Bruto, que normalmente crece unos dos puntos porcentuales, señala, apenas supera el máximo previo a la crisis, incluso países que han vivido una recuperación relativamente fuerte; y en varios países europeos, se ha reducido en cifras de dos dígitos. Entretanto, el desempleo, en los dos lados del Atlántico, sigue remontándose a niveles que antes de la crisis, nos habrían parecido inconcebibles. Pero ¿porque fracasan los países?, tal es el título de la obra de Acemoglu y Robinson (2013) quienes señalan que la razón de que algunas regiones del mundo sean mucho más ricas que otras, incluso estando en la misma zona geográfica, se debe "a las diferencias existentes entre las instituciones de ambos lados de la frontera, que crean incentivos muy distintos para sus habitantes". De acuerdo con estos autores, Estados Unidos, es un país mucho más rico que México o Perú, debido a que sus instituciones, tanto económicas, como políticas, determinan de forma distinta, los incentivos para empresas, individuos y políticos. La teoría para explicar la desigualdad mundial de estos autores, señala como interactúan las instituciones políticas y económicas para crear pobreza o prosperidad y cómo las distintas partes del mundo acabaron con conjuntos de instituciones tan distintos.

METODOLOGÍA

El objetivo general de esta investigación es, conocer y analizar los factores que influyen en la gestión empresarial de los productores de ladrillo en la ciudad de Saltillo, Coahuila, México, para contribuir al diseño de políticas públicas y por otra parte, de buscar alternativas para fortalecer la gestión empresarial en la toma de decisiones. El diseño de la investigación fue no experimental, ya que no se manipularon variables. En cuanto a la temporalidad de la recolección de los datos, el estudio es transeccional o transversal. Fue descriptivo, ya que solamente se analizaron cómo son y cómo se manifestaron algunos fenómenos y sus componentes. La hipótesis principal que se plantea es que la gestión empresarial, la infraestructura, la formalización y los factores ambientales limitan a los micros y pequeños productores de ladrillo de la ciudad de Saltillo, Coahuila, para ser competitivos.

Para lograr el objetivo propuesto, se diseñó y utilizó un instrumento de medición (encuesta o cuestionario) que incluyó 39 reactivos, los cuales se dividieron en 6 bloques: I.- Datos Generales y de Identificación de la Empresa. II.- Infraestructura y Tecnologías de la Información y Comunicación, III.- Administración de la Empresa IV.- Expectativas V.- Formalización VI.-Factores Institucionales y Ambientales. Para diseñar el instrumento se utilizaron varias técnicas: escalamiento tipo Likert, diferencial semántico y preguntas dicotómicas. Las variables identificadas para el estudio son la gestión empresarial, la infraestructura y tecnologías de la información, las expectativas y la formalización. Con relación al universo o tamaño de la población, se tomó como base el Directorio de la Unión de Productores de Ladrillo de Saltillo y la Región, Similares y Conexos, S.C., la cual agrupa alrededor de 450 productores con horno para combustión, de ladrillo. En base a los métodos estadísticos utilizados, la muestra probabilística aleatoria, fue de 70, finalmente, se aplicaron 74 cuestionarios. Los cuestionarios se levantaron en los meses de Agosto y Septiembre de 2014. En el mes de Octubre de 2014, se revisó, organizó y analizó la información. En el procesamiento de la información se utilizó el paquete Excell y el software estadístico SPSS en su versión 18. Se aplicaron fundamentalmente dos tipos de criterios; uno relativo a los ponderados que se usaron para verificar los resultados y otro para conocer los hallazgos con relación a los objetivos.

RESULTADOS

En relación a los obradores (hornos de combustión), se puede mencionar que de 1,250 que existieron hace 15 o 20 años (en la época de bonanza), ahora quedan solamente 450 activos, que representan el 36%; en otras palabras, han desaparecido por diversas causas, 800 obradores, (64%). Un obrador es operado por 5 personas en promedio, por lo que 2,250 trabajadores están directamente vinculados con el proceso productivo, pero existen otras personas que trabajan paralelamente con esta actividad, como son los papeleros, choferes para el traslado de los productos, acarreo del barro, del agua y de los materiales combustibles para el horno, principalmente leña, madera y aceite residual, los cuales se calculan en 500 personas. De tal manera que 2,750 personas, mantienen en promedio a 5 dependientes, por lo que se podría afirmar que más de 13,750 personas, dependen directamente de la producción de ladrillo. De las entrevistas realizadas se obtuvo que el 92% de las personas son originarias de Coahuila y el porcentaje restante proviene de otras Entidades, como se puede observar en la siguiente tabla:

Tabla 1: Estado de Origen de los Productores de Ladrillo

Estado de Origen	Número de Productores	Porcentaje %
México		
Coahuila	67	90.5
Zacatecas	4	5.4
San Luis Potosí	2	2.7
Otros	1	1.4
Totales	74	100.00

Fuente: Elaboración Propia. Rodríguez B. Vázquez y Mejía 2014.

La mayoría de los ladrilleros viven en colonias aledañas al área de trabajo. Por las condiciones técnicas de producción los trabajadores jóvenes aspiran a encontrar empleo en otros sectores productivos. Aproximadamente el 69% de los trabajadores son mayores de 30 años: se encontró que el más alto porcentaje de trabajadores está entre los 30 y 39 años, después los jóvenes entre 17 y 29 años y finalmente los adultos de entre 40 y 49 años. Es de destacar que aunque los menores de 16 años representan el 4%, se estima que el porcentaje aumenta, en la fase de carga de los productos.

Se estima que los 450 hornos activos, tienen una capacidad de 6,000 piezas en promedio por quema, es decir 2'700,000 productos; si se considera que los hornos operan una vez por mes, entonces la producción anual de ladrillos estimada, es de 32'400,000 piezas, lo cual genera una importante cantidad de recursos. De esta producción, el 90% se exporta a EEUU, el 8% se distribuye regional y nacionalmente y el 2% se vende localmente. Cabe mencionar que Home Depot en EEUU llegó a ser su cliente principal, al vender el 60% de la producción, sin embargo esta empresa decide ya no comprar más productos saltillenses y esto trajo como consecuencia que las ventas disminuyeran drásticamente, provocando el cierre de numerosas empresas. En el caso del sector ladrillero, el carácter de propiedad privada distintivo del sistema de producción capitalista sobre los llamados medios de producción, queda traslapado de la siguiente manera: De los casos investigados el 61% de los obradores (hornos) es propiedad privada del trabajador, el 35% son rentados y el 4% son prestados a otro trabajador.

El barro o arcilla es el principal insumo para la producción de ladrillos. El barro se ha ido agotando, sin embargo, existen productores que cuentan con mantos o bancos de arcilla pero no lo explotan y prefieren comprar el barro de otras partes y dejar el que tienen como reserva. El agua es uno de los insumos indispensables para las diferentes etapas del proceso productivo. Anteriormente, estos insumos se encontraban en cantidades suficientes, debido a que en los arroyos corrían de manera abundante aguas negras. Existen también corrientes subterráneas de las cuales se extraen por medio de pozos y veneros que surgen a manera de pequeños manantiales. Actualmente, se utiliza el agua de pipas debido a que las fuentes naturales se han estado agotando. El 38 % de los productores (28) utilizan el agua de los arroyos; el 28 % (20) de las norias y el 27 % (20 productores) consume el agua transportada por pipas; de la muestra seleccionada, el 7 % restante está constituido por 5 ladrilleros que usan el agua de la red pública.

Para la combustión de los obradores, actualmente se utiliza el aceite residual, la leña, el aserrín y la madera de pino y mezquite; se permiten este tipo de vegetales. Todos los hornos reconvirtieron su proceso de combustión en el año de 2002. Actualmente, 56 productores entrevistados (78.4%) manifestaron no haber recibido financiamiento de instituciones formales, mientras que 16 (21.6%), señaló haberlo recibido.

La mayoría de los ladrilleros están sin financiamiento oficial y esto facilita la acción de los intermediarios (denominados "coyotes"), los cuales se ven beneficiados por la desorganización de los productores directos y la estructura actual de las áreas de producción.

Actualmente, existe solamente una agrupación de ladrilleros: La Unión de Productores de Ladrillo de Saltillo y la Región, Similares y Conexos, S.C. su misión está enfocada a la defensa de los intereses de sus representados. Durante la gestión de esta Unión se han obtenido importantes logros. El Bloque II del instrumento de medición, se refiere a la infraestructura y a la utilización de tecnologías de la información y comunicación (TIC'S), en la empresa. La mayoría de las ladrilleras, se ubican en zonas consideradas semiurbanas, algunas incluso en zonas rurales, por lo que el 84 % (62 productores) señalaron no contar con servicios básicos, como son agua, sanitario, descarga de drenaje y electrificación. Respecto a la utilización de las tecnologías de la información, los resultados muestran que el 89.19 % (66) de los productores, no cuenta con servicio de telefonía fija, en cambio el 87.84 % (65) tiene celular; el 62.16 % (46) carece de correo electrónico; el 94.6 % (70) reconocieron no utilizar la banca electrónica y el 100 % de la muestra, no dispone de página web. En relación al Bloque III Administración de la Empresa, estos fueron los resultados:

Tabla 2: Prácticas de Administración, Contable, Económica y Financiera

En Relación a Su Administración Contable, Económica y Financiera:	Frecuencia			
	SI	%	No	%
¿Lleva un registro de lo que cobra y paga?	52	70.27	22	29.73
¿Cuenta con facturas o recibos fiscales para la venta de sus productos o servicios?	7	9.46	67	90.54
¿Identifica cuánto le cuesta comprar sus mercancías o productos?	58	78.38	16	21.62
¿Identifica claramente los gastos familiares, personales y del negocio?	30	40.54	44	59.46
¿Con lo que vende actualmente o servicio que presta le alcanza para pagar todos sus gastos?	8	10.81	66	89.19
¿Recibe quejas por parte de sus clientes con mucha frecuencia?	4	5.40	70	94.60
¿Se adapta fácilmente a los cambios importantes?	16	21.62	58	78.38
¿Considera que su negocio brinda prestaciones y sueldos similares a las de otros negocios?	56	75.68	18	24.32
¿Sabe cuánto debe vender o servicios prestar para no perder?	23	31.08	51	68.92
¿Su empresa está inscrita en el Registro Mercantil?	5	6.76	69	93.24

Fuente: Elaboración Propia. Rodríguez B. Vázquez y Mejía 2014.

Cuatro aspectos resaltan en estos resultados: el 90.54 % (67) productores no facturan; al 89.19 % (66) no les alcanza para pagar todos sus gastos; el 40.54 % (30) no identifica claramente los gastos familiares, personales y del negocio y congruente con la no facturación, el 93.24 % (69) reconoció no estar inscrito en el Registro Mercantil. Por otra parte, las áreas de capacitación más solicitadas (de importante a muy importante) fueron casi con el mismo porcentaje: Comercialización y marketing con un 75.68 % (56) El área de contabilidad y finanzas con un 70.27 % (52); y producción con 67.57 % (50). Respecto al Bloque IV Expectativas y Satisfacción con la Empresa, los resultados fueron los siguientes: con relación a las expectativas de empleo para 2015 el 48.65 % (36) respondió que esperan que se mantenga igual; el 44.59 % (33) contestaron que aumentará y solo el 6.76% (5) espera que disminuya. Por otra parte, con relación a las expectativas de ventas para 2015, el 67.57 % (50) espera que aumenten; el 25.67 % (19) manifestó que permanecerán igual y el 6.76% (5) contestó que van a disminuir. Con referencia al Bloque V Requisitos Ambientales y Aspectos de Formalización, el 87.84 % (65) reconocieron desconocer los requisitos ambientales y aspectos de formalización de las ladrilleras. Finalmente, con relación al Bloque VI Factores Institucionales, el 91.89 % (68), de los productores de ladrillo, desconocen las ventajas de la inscripción y los beneficios que se podrían obtener en el Sistema Empresarial Mexicano y el 79.73 % (59) no sabe de la funciones de Protección Civil.

CONCLUSIONES

La fabricación de ladrillos, losetas y tabiques artesanales en la ciudad de Saltillo, Coahuila, México, se hace con mínima tecnología y bajo las condiciones de intemperie que prevalecen estacionalmente y con jornadas de trabajo superiores a las que marca la ley. Dado que la mayoría de la producción se exporta a EEUU, la crisis hipotecaria y la dependencia de un solo comprador, entre otros factores, en los últimos 15 años, han influido para que hayan desaparecido del mercado, más del 60% de los productores. Sin embargo, sigue siendo una actividad importante porque se estima que dependen directamente de este sector más de 13,750 personas. La estructura de la producción, las relaciones sociales y la conciencia de clase que existe entre los ladrilleros han impedido una organización que permita optimizar el uso de los factores de la producción y distribuir de una mejor manera la riqueza generada en el sector. No existe una organización productiva fuerte, que responda a los intereses de los trabajadores, originando que cada trabajador organice la producción de acuerdo a procesos individuales, limitando el desarrollo técnico, de división del trabajo, financiamiento, de asistencia social y de gestión empresarial. Aunque hay conciencia del daño ecológico, los productores no están en condiciones de invertir recursos en equipos eficientes de combustión. Esta

escasez de recursos hace que los productores no comercialicen directamente, originando la aparición de intermediarios (coyotes). Las necesidades más sentidas se dan en el aspecto de formalización, gestión empresarial, comercialización, finanzas y producción. Si no se toman las medidas adecuadas, en general, esta actividad no es sustentable para el medio ambiente regional porque implica una degradación constante de los ecosistemas urbanos y rurales.

LIMITACIONES

El estudio se limitó a la región sureste del Estado de Coahuila, México, pero puede extenderse a nivel estatal. Se decidió darle énfasis a la gestión empresarial, sin embargo, existen otras variables que afectan esta actividad, como son el aspecto comercial, medioambiental y de salud de los trabajadores. Por otra parte, en este trabajo de diagnóstico, solamente se incluyeron específicamente a los productores de ladrillo, pero puede ampliarse a otros sectores económicos, como el de comercio y servicios.

FUTURAS LINEAS DE INVESTIGACION

Los resultados de esta investigación, abren la oportunidad para actuar en nuevas líneas de investigación, como son; la comercialización del producto, la calidad, los aspectos del capital humano y la estrategia de cooperación y asociación empresarial; pero por otra parte, sería conveniente estudios sobre higiene y seguridad y la salud de los trabajadores que se dedican a esta actividad.

AGRADECIMIENTOS

Los autores agradecen, sinceramente, los comentarios de los árbitros del Comité Científico y a los editores del IBFR, los cuales contribuyeron sin duda a mejorar la calidad de la presente investigación.

RESUMEN

Este trabajo es parte de una investigación que se encuentra en desarrollo la cual tiene como objetivo establecer una valoración de la situación actual en los estudiantes respecto a la utilización que realizan de las Redes Sociales, así como de la participación de los padres de familia y docentes en cuanto a la creación y fomento de métodos y hábitos para un uso seguro de las nuevas tecnologías con especial interés en Internet. Asimismo la medición de conductas o comportamientos que presentan los jóvenes por el uso excesivo de estas o por el mal uso. El diseño de investigación es descriptivo, no experimental, transversal. Utilizando como instrumento de medición un cuestionario el cual fue sometido a pruebas estadísticas a través del alfa de Cronbach para determinar su confiabilidad y poner a prueba la hipótesis de este estudio. El tamaño de la muestra para esta investigación es de 194 estudiantes. Dentro de los resultados obtenidos hasta este momento se tiene que a los alumnos se les facilita más relacionarse por medio de las redes sociales que físicamente, asimismo la mayoría utiliza más de una red social para comunicarse. Adicionalmente el 41% permanece más de tres horas en línea y el 35% de una a tres horas, siendo una cantidad muy alta el tiempo que dedican al uso de las redes sociales, afectando su relación familiar y académica, en algunos de los casos.

PALABRAS CLAVE: Redes Sociales, Aprovechamiento Académico, Estudiantes

SOCIAL MEDIA AND IMPACT ON ESTUDIANTES LEARNING

ABSTRACT

This work is part of an investigation that is being developed which aims to establish an assessment of the current situation in regard to students who perform utilization of social networks as well as the participation of parents and teachers regarding the creation and promotion of methods and habits for safe use of new technologies with a focus on Internet. Also measuring behaviors that present youth overuse of these or misuse. The research design is descriptive, non-experimental, cross. Using the meter as a questionnaire which was submitted to statistical tests through Cronbach's alpha to determine reliability and test the hypothesis of this study. The sample size for this study is 194 students. Among the results obtained until now have those students have an easier interact through social networks that physically, most also use more than one social network to communicate. Additionally 41% remains more than three hours online and 35% for one to three hours, with a very high amount which time they spend using social networks, affecting their family and academic relationship in some cases.

KEYWORDS: Social networks, academic achievement, students.

JEL: I00

INTRODUCCIÓN

En las últimas décadas se ha producido un vertiginoso cambio científico-tecnológico, que ha dado lugar a la sociedad de la información. La aparición a mediados de los años 90 de las llamadas nuevas tecnologías entre las que se incluyen el ordenador, el teléfono móvil, e internet, ha producido una verdadera revolución social; principalmente, porque ofrecen posibilidades de comunicación e información con el mundo y posibilitan el desarrollo de nuevas habilidades y formas de construcción del conocimiento que anteriormente eran desconocidas y que además plantean nuevos desafíos sociales que se deben asumir de forma responsable. Dentro del contexto social, la adolescencia mantiene una estrecha relación con las tecnologías de la información y comunicación debido a que se han convertido en una poderosa herramienta que les facilita la información, comunicación y potencia el desarrollo de habilidades y nuevas formas de construcción del conocimiento. En otras palabras la adolescencia de hoy, práctica nuevas formas de construir una cultura digital. Ante esta postura favorable del uso de las TIC's por los adolescentes, existe una postura opuesta, la cual indica los posibles problemas que puede causar el uso inadecuado de las TIC's. Por ello es necesario conocer el impacto de las tecnologías de la comunicación e información, en especial las redes sociales que son utilizadas por los jóvenes.

Antecedentes

En la actualidad el uso de las Tecnologías de la Información y Comunicación por los adolescentes ha sido objeto de discusión de varios autores tanto en nuestro país como en el mundo. Existen diversos estudios, los cuales señalan que los adolescentes son los usuarios principales en el uso de estas nuevas tecnologías. La Organización de las Naciones Unidas para la Educación y la Ciencia y la Cultura (UNESCO) realizó un estudio sobre la relación de los jóvenes de diversos países con las tecnologías de la información y la comunicación, el cual destaca que el 95% de los adolescentes europeos y el 85% de los latinoamericanos utilizan las TIC's, y que sus usos son semejantes: el chateo, la búsqueda de información, el correo electrónico y la música. Adicionalmente señala que, con la edad, crece también el uso de internet en la escuela. Uno de los aspectos más novedosos, según Morduchowicz (2014), es el uso simultáneo que los jóvenes hacen de los distintos medios. Por ejemplo, en Francia, el 60% de los jóvenes ve televisión o DVD mientras navega por internet y habla por teléfono. Sin embargo, en Argentina esta tendencia está más rezagada, ya que sólo el 20% de los adolescentes admite utilizar un medio a la vez. Asimismo señala que la desigualdad en el acceso a internet entre los jóvenes europeos y los latinoamericanos. “Solo un 11% de los adolescentes británicos no tiene internet en su casa, siendo que en las ciudades de América latina, una cifra similar (15%) es la que sí la tiene.

Esta menor frecuencia empobrece también las formas de uso: los jóvenes latinoamericanos usan el internet principalmente para chatear y jugar, y mucho menos para buscar información, escuchar música y hacer tareas”. En los últimos años, se han realizado investigaciones en España que ofrecen datos de interés. El nivel de conexión a internet en la adolescencia es muy elevado, en este sentido, Castells y Díaz (2001) en Naval, Sádaba y Bringué (2003), refieren que un 73.9% de los jóvenes de Barcelona entre 15 y 19 años son usuarios de internet y se conectan aproximadamente unos 5 días a la semana, pasan en total unas siete horas y media conectados semanalmente, y dedican sus horas de navegación principalmente a utilizar los servicios de mensajería MSN y Chat con un 82%, jugar online 62% y utilizar el correo electrónico el 55%. Mientras que el estudio de Naval, Sádaba y Bringué (2003) indica que un 55.9% de los adolescentes utilizan internet y un 75.7% posee un ordenador personal. En este mismo sentido las investigaciones de Amorós, Buxarras y Casas (2002) y Naval, Sádaba y Bringué (2003) coinciden en señalar que alrededor de 80% de los jóvenes de 12 a 19 años tanto de Barcelona como de Navarra tienen teléfono móvil.

Además, el estudio de Naval, Sádaba y Bringué (2003) otorga datos relacionados con las actividades que realizan los adolescentes entre 15 y 19 años con el móvil: el 90.2% lo emplea para enviar mensajes cortos de texto y un 75.7% lo utiliza para llamadas a la familia y a sus amigos. Amorós, Buxarrais y Casas (2002) aportan datos sobre las horas semanales que la adolescencia de 12 a 16 años utiliza las tecnologías. Según los resultados las más utilizadas son: el teléfono móvil, un 71.8% y lo utilizan menos de 10 horas y un 13.4% más de 30 horas; el ordenador un 74.2% de las y los adolescentes lo utilizan menos de 5 horas semanales y un 14.2% entre 6 a 10 horas a la semana mientras que el 83.3% de ellos utilizan internet menos de 5 horas y entre 6 y 10 horas semanales.

Planteamiento del Problema

Se vive en una sociedad que está inmersa en el desarrollo tecnológico, donde el avance de las TIC's ha cambiado la forma de vida, impactando en muchas áreas del conocimiento. Para los nuevos jóvenes de este siglo las nuevas tecnologías de la información y comunicación son tan cotidianas como lo eran hace unas décadas el teléfono y la televisión. El problema se agrava al mal uso de estas tecnologías por los adolescentes la mayoría de ellos la utiliza para chatear con sus amigos, escuchar música, juegos, redes sociales, y no para aspectos más favorables para el estudiante como por ejemplo lectura de libros vía internet, estudiar y realizar tareas.

Otro de los problemas que se observan es que el uso inadecuado de estas tecnologías puede causar riesgos en la vida de estos jóvenes, como por ejemplo el aislamiento por parte del adolescente el cual ya no convive con su familia y amigos por el tiempo excesivo de estar en el ordenador o bien puede causar depresión, así como ansiedad. Autores como Kraut (1998) en Naval, Sádaba y Bringué (2003), advierte que pueden producir aislamiento o agudizar fenómenos como la soledad y la depresión; mientras que Gil (2003) menciona cuatro aspectos que pueden tener efectos negativos: adicción, aislamiento, contenidos perversos y violencia. Por otro lado, Naval, Sádaba y Bringué (2003) señalan tres efectos negativos: pérdida de la privacidad, fomento del consumo y adicción. Por su parte, Castells (2001) señala la identidad en los entornos virtuales. Finalmente, Amorós, Buxarrais y Casas (2002), indican como riesgo el fomento del consumo. Por lo anteriormente expuesto se señala la necesidad de llevar a cabo esta investigación; siendo indispensable conocer y comprender en profundidad ¿Cuál es el uso que realizan de estas tecnologías en especial las redes sociales los alumnos de 3er grado del turno matutino y vespertino de la Escuela Secundaria General #4 de la Ciudad de Mexicali, Baja California; México, en especial los grupos A, B, C, y D (matutino) y G, H, I y J (vespertino)? ¿Cómo las utilizan?, ¿Para qué? y ¿Con qué frecuencia lo hacen?. Con esto se pretende informar a los padres de familia, profesorado de la situación en la que se encuentran los jóvenes con el uso de las TIC'S así como los comportamientos resultantes de esta investigación.

Objetivo General

El objetivo de esta investigación es identificar el impacto de las redes sociales en los alumnos de tercer grado de los grupos (A, B, C, D) turno matutino y (G, H, I, J) turno vespertino de la escuela Secundaria General # 4 "Jesús Reyes Heróles". De este objetivo se derivan los siguientes objetivos específicos:

Elaborar una muestra de la Población de los alumnos del 3er. Grado turno matutino y vespertino de la Escuela Secundaria General #4 "Jesús Reyes Heróles".

Aplicar el Cuestionario en la muestra de los alumnos del 3er. Grado turno matutino y vespertino de la Escuela Secundaria General #4 "Jesús Reyes Heróles"

Mostrar los resultados obtenidos de esta investigación al Director de la Escuela, así como a los maestros y padres de familia.

HIPÓTESIS

Derivado del planteamiento del problema y la revisión literaria se establece la siguiente hipótesis:

Hipótesis de Trabajo: El uso de las redes sociales por los jóvenes adolescentes afecta su rendimiento escolar.

Hipótesis Nula: El uso de las redes sociales por los jóvenes adolescentes no afecta su rendimiento escolar.

REVISIÓN LITERARIA

Introducción a las Tecnologías de la Información y Comunicación

El auge de las Tecnologías de la Información y la Comunicación (TICs en adelante) es uno de los fenómenos socio-culturales más importantes del siglo XXI. Como afirman algunos autores, “para bien o para mal, hoy en día, quien no está conectado no existe” (Graner, Castellana, Sánchez-Carbonell, Beranuy & Chamorro, 2006). De acuerdo con los razonamientos que comentan estos autores actualmente las vidas de las personas han cambiado con la aparición de estas nuevas Tecnologías modernas. Las personas han tenido que ir adaptándose a estas nuevas herramientas tecnológicas en la medida en que han surgido, suponiendo una transformación de la vida cotidiana de los sujetos cuando deben aplicarlas para enfrentarse a nuevos desafíos (Zermeño, Arellano & Ramírez, 2005). Así como también hay personas que aceptan estos cambios tecnológicos, hay quienes que no se adaptan y se da frecuentemente en personas adultas.

Definición de las TIC'S

En este trabajo de investigación las TIC's se definen colectivamente como innovaciones en microelectrónica, computación (hardware y software), telecomunicaciones y optoelectrónica microprocesadores, semiconductores, fibra óptica que permiten el procesamiento y acumulación de enormes cantidades de información, además de una rápida distribución de la información a través de redes de comunicación. La vinculación de estos dispositivos electrónicos, permitiendo que se comuniquen entre sí, crea sistemas de información en red basados en un protocolo en común. Esto va cambiando radicalmente el acceso a la información y la estructura de la comunicación, extendiendo el alcance de la red a casi todo de mundo. Estas herramientas las utilizan las personas para compartir, distribuir y reunir información, y comunicarse entre sí, o en grupos, por medio de las computadoras o las redes de computadoras interconectadas. Se trata de medios que utilizan tanto las telecomunicaciones como las tecnologías de la computación para transmitir información.

Concepto de Adolescencia

Es una etapa que generalmente es descrita como una fase de transición en el desarrollo del ser entre la niñez y la adultez, que se inicia por los cambios puberales y se caracteriza por profundas transformaciones biológicas, psicológicas y sociales, muchas de ellas generadoras de crisis, conflictos y contradicciones (Spear HJ, Kulbok PA. 2001). Muchas de las veces los problemas de los adolescentes se encuentran vinculados con sus comportamientos y con el contexto social que los rodea. Sin embargo hay excepciones, la mayoría de los adolescentes viven esta etapa de crecimiento y maduración con resultados positivos, y en otros se transforma en una etapa conflictiva, con comportamientos que pueden causar resultados negativos como la enfermedad y la muerte. En consecuencia la psicología, como ciencia

y como práctica profesional no puede permanecer ajena a esta transformación (Saldaña, 2001). Con referencia a lo anterior los padres de familia, maestros, hermanos mayores deben de investigar d estas nuevas tecnologías y estar al pendiente del uso que le dan los jóvenes adolescentes. Tecnologías como internet, el móvil y los videojuegos presentan tanto beneficios potenciales como riesgos para los adolescentes y jóvenes.

La Tecnología y los Adolescentes

El aumento de la presencia y uso de éstas en la sociedad actual se da en todos los colectivos y sectores, especialmente, entre los adolescentes y jóvenes (Mut & Morey, 2008). Los jóvenes del siglo XXI son los que han crecido con estas nuevas herramientas tecnológicas y por lo tanto las han aceptado excelentemente y han aprendido muy rápidamente a utilizarlas. La adolescencia y la juventud merecen una atención especial respecto a su relación con las TIC's, ya que tecnología como internet, los móviles y los videojuegos ocupan un espacio importante en los procesos de socialización, influyendo en comportamiento y actitudes (Levis, 2002). Estos grupos de edad son muy sensibles al momento y al entorno social en el que viven, en el cual estas tecnologías se han convertido en un elemento importante e imprescindible en sus vidas (Castellana, Sánchez-Carbonell, Beranuy & Graner, 2006; Marchargo, Luján, León, López & Martín, 2003).

El uso de los medios por parte de niños y jóvenes no ocurre en un entorno social aislado. La familia, los amigos e, incluso, las comunidades son factores de vital importancia en la socialización del joven y en su aprendizaje de un uso correcto de las TIC's. En primer lugar, son importantes las expectativas de los padres hacia el uso de las tecnologías por parte de los hijos. El uso escolar o académico está altamente relacionado con cuestiones tales como: el grado de implicación y la frecuencia de participación de los padres en las tareas escolares de los hijos; el grado de uso de estas tecnologías por parte de los padres; el valor que atribuyen los progenitores al uso de ordenadores y a internet como herramienta de aprendizaje escolar; etc. (Giacquinta & Lane, 1990). Asimismo existe una coincidencia entre jóvenes con limitado acceso a las TIC's con padres escasamente familiarizados con estas tecnologías, y que delegan de forma mayoritaria en la escuela la formación en su uso y aprovechamiento.

Por otro lado, Roberts et al. (1999) destacan las diferentes relaciones sociales que se dan en el hogar, según el tipo de medio que se utilice. La televisión, los vídeos o las películas suponen momentos de uso común, donde se fomenta la relación entre los miembros de la familia. En el caso de los medios interactivos, ordenador, internet, videojuegos, chat, etc. se rompe esta pauta y, por lo general, el uso pasa a ser individual. Estos autores también refieren el hecho de que, según aumenta la edad de los hijos, menos frecuente es que se dé un uso compartido de las TIC's entre padres e hijos. Aunque la mediación de adultos en el acceso a las TIC puede tener significativos efectos positivos, niños y adolescentes conocen con frecuencia mucho mejor que sus padres los aspectos técnicos relacionados con el uso de ordenadores, internet, o teléfonos móviles. Esta desventaja tecnológica tiene un efecto negativo evidente: lleva a que los progenitores se inhiban, por desconocimiento, de su responsabilidad educativa en este ámbito. Un segundo punto de interés ha sido estudiar cómo el uso de las TIC's afecta a las relaciones sociales de los jóvenes con sus iguales. Esta interacción se produce con mayor frecuencia cuando el acceso a estas tecnologías está relacionado con actividades de ocio. Por otro lado, diversos estudios (Orleans y Laney (2000), Van Schie y Wiegman (1997) no han encontrado relación entre el uso de las TIC's y pautas de aislamiento, salvo en casos particulares donde ese aislamiento ya estaba presente en otras facetas de la vida de los jóvenes.

El uso compartido de las TIC's con amigos presenta pautas diferentes entre chicos y chicas. Generalmente, para los primeros, el atractivo principal es el ocio lúdico compartir juegos, etc, mientras que para las jóvenes el interés común se centra en el ocio comunicativo conversaciones on-line, chats, email, etc. Junto a esto, también aparece cierta evidencia de que las chicas utilizan con mayor

frecuencia internet para tareas escolares y académicas (AAUW, 2000) y (NSBF, 2000). Por último, es evidente que las TIC's pueden proporcionar nuevos espacios y oportunidades de participación y colaboración entre los jóvenes (Mayer, Quilici et al., 1999) y (Schustack et al., 1999). El acceso a las TIC's puede satisfacer diversas necesidades individuales y sociales. Sin duda, estas tecnologías ofrecen a los jóvenes nuevos contextos de relación social e interacción personal (Parks y Roberts, 1998). Otros investigadores ponen de manifiesto la posibilidad de que, con el uso de estas tecnologías, se produzca aislamiento (Nie y Erbring, 2000) y (Stoll, 1995) o se agudicen fenómenos como la soledad o la depresión (Kraut, Patterson, et al., 1998). En definitiva, la posibilidad de que se produzcan estos efectos positivos y negativos está en estrecha relación con el uso particular del medio y las características personales de los usuarios. A continuación, se reseñan las conclusiones de los principales estudios internacionales elaborados sobre estos puntos.

Una de las principales virtudes del internet o del teléfono móvil es su capacidad de construir “redes sociales”, de poner en contacto y relacionar a una multitud de personas. Este hecho está constatado por varias investigaciones que demuestran cómo el uso de las TIC's en los hogares adquiere gran protagonismo en la comunicación interpersonal: sirven como vehículo para un contacto estrecho con los demás, vía llamadas, mensajes, e-mail o chats (Kraut et al., 1996). Es conocido que la comunicación on-line carece de las características básicas que definen el desarrollo de relaciones personales tradicionales: no hay proximidad física entre los interlocutores, tampoco se da una referencia real sobre su apariencia o no se conoce, de manera clara, el contexto social que les envuelve. Estas características pueden entorpecer, en algunos casos, la verdadera relación o también favorecerla. Su ausencia puede ser positiva en momentos donde la relación personal está sesgada o se inhibe por el contacto real (Sproull y Kiesler, 1991) característica que, sin duda, afecta bastante a los jóvenes por la importancia que dan a la imagen y a las primeras impresiones. Sin olvidar el efecto negativo que pueda tener para el desarrollo de la relación personal el anonimato de los interlocutores, son varias las investigaciones que inciden en sus efectos positivos.

El desarrollo de contactos sociales on-line puede ser una oportunidad rica para sujetos que, por sus limitaciones, tienen dificultades para el diálogo interpersonal en el mundo off-line (Bremer y Rauch, 1998). En definitiva, el beneficio de la relación social que se establece a través de las TIC's no es más que un reflejo de las características individuales de quien las utiliza. Si hay equilibrio personal, vida social rica, etc., sólo cabe esperar que esas mismos aspectos tengan una influencia importante en el uso de las nuevas tecnologías (Wartella, O'Keefe y Scantlin, 2000). Mediante el uso de las TIC's la relación social amplía sus fronteras y también adquiere nuevas características que no se dan en el ámbito real de la comunicación interpersonal.

Además, las TIC's permiten construir identidades nuevas y los jóvenes pueden adquirir roles que la vida real les niega. Esto puede llevar a poseer “vidas paralelas” o distintas identidades que, en algunos casos, tendrán efectos nocivos. Cabe la posibilidad de que el joven se encuentre mucho más satisfecho con su identidad on-line, renuncie a su imagen personal auténtica y termine huyendo de la realidad hacia el mundo virtual, síntomas todos ellos presentes en los casos de adicción severa a las TIC's (Turkle, 1997). Frente a esto, también se describen casos beneficiosos que se desprenden de la identidad personal que el joven puede construir en los entornos virtuales. En definitiva, parecen existir indicios de que el reflejo de la identidad personal de los jóvenes en los entornos virtuales no siempre conlleva efectos negativos. Sin embargo, las noticias que llegan desde los medios de comunicación al respecto van con frecuencia en una línea contraria al enfatizar casos de aislamiento, enfermedades mentales o de pederastia entre los jóvenes internautas. Sin duda, se trata de hechos reales y dolorosos que hay que tener en cuenta pero que, de ningún modo, pueden suponer la “patologización” generalizada del uso de las TIC's entre los jóvenes. Tal como propone Laney (2000), es necesario conocer bien el contexto en el que ocurren estos problemas y seguir avanzando en el estudio de sus causas y en la propuesta de medidas que puedan evitarlos.

Las TIC's tienen un inmenso potencial positivo en muchas facetas de la vida de los jóvenes y en sus relaciones sociales. Pero también aparece una clara conciencia, por parte de jóvenes y padres, acerca de sus posibles efectos negativos, como pueden ser el acceso a la violencia, la pornografía u otros contenidos inapropiados. Así, en primer lugar, proporcionan beneficios incuestionables, tales como un medio extraordinario de conocimiento científico, abren nuevos tipos de relación y comunicación, facilitan un material casi inagotable para la diversión y entretenimiento y un potente instrumento para el aprendizaje y la información intelectual (Castellana et al., 2006) y contribuye, en la mayoría de las ocasiones, a mejorar la calidad de vida de las personas (Labrador & Villadangos, 2009). No obstante, diversos autores llaman la atención sobre los efectos negativos que pueden derivarse del uso de las TICs (Shaffer, 2002). El aspecto más controvertido, y que mayor alarma social crea, es el potencial adictivo de estas tecnologías, especialmente entre los menores, los que mayor uso hacen de ellas (Echeburúa, E. y de Corral, 2010; Labrador y Villadangos, 2010). Algunos estudios señalan la dirección contraria, proponiendo modelos explicativos en los que la psicopatología previa es considerada como la causa distal o predisponente al uso excesivo o adicción a las TIC's (Caplan, 2002). Además, cada día adquieren más importancia las respuestas que los usuarios tienen frente a la implantación de las TIC's (Castellana et al., 2006). Este trabajo se centra exclusivamente en tres TIC's, cuyo uso es más frecuente: internet, el móvil y los videojuegos.

Redes Sociales

Existen redes de todo tipo. Las hay artísticas, profesionales, musicales, de universidades. Hay redes para cada tema. Sin embargo, las redes más populares en los últimos años no responden a un tema específico. Las redes sociales más visitadas por los jóvenes y con mayor crecimiento en los últimos años son Facebook, y Twitter.

Facebook

(www.facebook.com): Es la más popular en la actualidad. Fue creada en el año 2004 por estudiantes de la Universidad de Harvard, en Estados Unidos. Hoy en día funciona como una red para hacer nuevos amigos o reencontrarse con antiguos. Los usuarios publican información personal y profesional, suben fotos, comparten música o videos, chatean y son parte de grupos según intereses afines.

Twitter

(www.twitter.com): No es aun de las más masivas. Pero es posiblemente, una de las que más creció en los últimos años, desde que nació en el 2006. Su particularidad es que permite a los usuarios enviar mini-textos, mensajes muy breves denominados "tweets", de no más de 140 caracteres. Las estadísticas dicen que circulan más de 3 millones de "tweets" por día (www.ite.educacion.es).

MÉTODO

La investigación acerca del impacto de las redes sociales de internet en los Jóvenes de la Escuela Secundaria General. # 4, es de tipo cuantitativo, no experimental, con un diseño de tipo transeccional o transversal. Esta investigación es no experimental en virtud de que no existe una manipulación de las variables, lo cual es una de las características de este tipo de investigación de acuerdo a lo establecido por (Hernández & Fernández, 2006). Asimismo el diseño es de una investigación transeccional o transversal, es decir, los datos se recolectaron en un solo momento, es decir en un tiempo único, con el propósito de describir las variables y posteriormente analizar su interrelación. La metodología empleada para el desarrollo de esta investigación se efectuó en dos etapas, en la primera parte se llevó a cabo la revisión y análisis de bibliografía en libros, revistas, periódicos y documentos electrónicos relacionados con el tema

de estudio. En la segunda parte se realizó un estudio de campo, mediante la aplicación de un cuestionario a las personas a cargo de la administración y funcionamiento de las empresas.

Instrumentos

El instrumento de medición que se elaboró para medir las variables es un cuestionario con veinticinco ítems. Utilizando una escala de Likert. Una vez elaborado el cuestionario se revisó por expertos en el área, para determinar si los ítems eran adecuados para obtener resultados confiables. Posteriormente se modificaron aquellos ítems a los cuales se le hicieron observaciones, las cuales fueron de forma de contenido. Los cuestionarios se aplicaron a los estudiantes de tercer grado. Los informantes son personas relacionadas con el tema de investigación conocedoras y con amplia experiencia en el mismo, lo que proporcionó validez y confiabilidad a los datos recabados.

Población y Muestra

El universo o población que fue seleccionado está formado por los alumnos de tercer grado turno matutino y vespertino de la Escuela Secundaria General # 4 “Jesús Reyes Heróles”. Se seleccionó a los alumnos de tercer grado porque están en la edad o en la etapa difícil de la adolescencia, donde empiezan a surgir todos los problemas por los cambios hormonales, psicológicos y emocionales, y tener una actitud indiferente hacia casi todo. De acuerdo a la información proporcionada por la Dirección de la Secundaria Gral. #4 “Jesús Reyes Heróles” la población de este estudio es de 391 alumnos. Para la determinación y tamaño de la muestra se aplicó la fórmula para poblaciones finitas considerando un nivel de confianza del 95%, un margen de error del 5%, con un grado de confiabilidad del 95% y una distribución del 50%. Obteniendo como resultado de su aplicación una muestra de 194 alumnos.

RESULTADOS

A continuación se presentan algunos de los principales resultados obtenidos hasta el momento de la aplicación del instrumento de medición. De los 194 alumnos encuestados en la escuela Secundaria General #4 “Jesús Reyes Heróles” el 79% cuenta con una computadora con acceso a internet en su casa y el 21% restante no. El 99% de los alumnos tiene una cuenta de redes sociales en internet. El 63% de los estudiantes tiene Facebook, el 21% Twitter y el 16% tiene otras. El 50% cuenta con un perfil solo para amigos, el 32% abierto para todos, el 11% amigos de mis amigos, el 6% privado, y el 1% otro. El 74% visita diariamente su cuenta de red social, el 18% tres veces por semana. El 41% pasa más de 3 horas en su cuenta, el 35% de 1-3 horas, y el 24% menos de 1 hora. El 56% utiliza las redes sociales para estar en contacto con sus amigos. El 33% de los estudiantes está de acuerdo que es más fácil relacionarse con las personas por medio de las redes sociales que físicamente, el 37% permanece neutral. El 34% de los estudiantes ha dejado de hacer actividades cotidianas por pasar tiempo en internet, el 26% la mayoría de las veces sí, algunas veces no; el 25% la mayoría de las veces no, el 12% la mayoría de las veces sí, el 3% nunca.

El 44% ha recibido algún comentario en un tono desagradable, el 37% no ha recibido ningún comentario desagradable, el 19% ni de acuerdo, ni en desacuerdo. El 47% ha sido insultado, el 22% inventado historias, el 13% ha sido acosado, el 9% ha sido amenazado, el 8% ninguna y el 1% chantajeado. El 69% no sube fotos insinuantes en las redes sociales para ser más popular, el 14% probablemente no, el 9% indeciso, 6% probablemente sí y el 2% definitivamente sí. El 59% definitivamente no ha tenido citas con alguien que conoció en las redes sociales, 16% definitivamente sí ha tenido citas con alguien que conoció en las redes sociales, 13% probablemente sí ha tenido citas, el 6% indeciso y el 6% probablemente no. El 38% no ha disminuido sus calificaciones a causa de las redes sociales, el 27% ni de acuerdo, ni en desacuerdo, el 21% en desacuerdo, el 14% si ha tenido citas. El 68% dedica menos de 1 hora a visitar páginas educativas, 17% de 1-3 horas y el 15% más de 3 horas.

CONCLUSIONES

En base a los resultados obtenidos de la aplicación del instrumento de medición se presentan las siguientes conclusiones: En primer instancia el objetivo general de esta investigación que es identificar el impacto de las redes sociales en los jóvenes de tercer grado del turno matutino y vespertino de la Secundaria General # 4 "Jesús Reyes Heróles" si se cumplió ya que se logró reconocer la influencia que se genera en estos adolescentes por el efecto del uso de las redes sociales. De acuerdo al cuestionario aplicado se identificó que el 79% de los jóvenes cuenta con una computadora en su casa y el 21% no. Sin embargo no por el hecho que este 21% de alumnos no cuente con computadora en casa no significa que no utilice una, ya que en las instalaciones de la Secundaria se cuenta con un laboratorio de computadoras, asimismo estos pueden acudir a los sitios de café internet. Las redes preferidas por los adolescentes son Facebook y twitter. El 63% utiliza facebook, 16% twitter y el 21% restante otras como instgram, likedln, youtube entre otras. El 45% de los jóvenes no solicita permiso a sus padres de familia o tutor al momento de abrir una cuenta de red social, es una cifra importante, ya que al no solicitar permiso, los padres de familia no están enterados y por lo cual no pueden estar supervisar en el uso de esta y mucho menos poner reglas de uso.

El 32% de los jóvenes mantiene su estado de cuenta configurado como abierto para todos y unos de los propósitos de esta investigación es concientizar a los jóvenes de los riesgos que pueden estar expuestos en el mal uso de las redes sociales, al tener su perfil abierto para todos corren el riesgo de que personas con malas intenciones hagan mal uso de la información, aprovecharse del acceso que tiene al perfil del joven, acosarlos, etc. El 74% de los alumnos visita diariamente su cuenta de red social, permaneciendo el 41% más de tres horas en línea, el 35% de una a tres horas en línea, como se observa es una cantidad muy alta el que permanecen y visitan sus cuentas, lo que puede provocar que deje de participar en la vida familiar, con sus amigos y se queden reclusos en sus habitaciones. Otro de los comportamientos que dan cuenta de esta adicción se encuentran el declive en el rendimiento en el trabajo o académico, el aislamiento social y el debilitamiento funcional en las actividades diarias. El 57% de los alumnos se les facilita más relacionarse por medio de las redes sociales que físicamente, esto es porque los adolescentes más introvertidos están fuertemente motivados a comunicarse por estos medios que físicamente, para compensar el vacío de habilidades sociales, lo que incentiva a proporcionar más información sobre sí mismos a sus amigos virtuales. Asimismo el 50% de los alumnos ha proporcionado datos personales en su cuenta de red social, actualmente, los programas de comunicación de que disponen los niños y jóvenes permiten tener contacto con un sin número de personas en todo el mundo. Ello favorece la cesión de datos personales, citas con desconocidos y comunicación con personas que aprovechan la red para actividades ilícitas

Esta realidad puede poner en riesgo a niños y jóvenes de encontrarse con depredadores en línea, quienes pueden esconder su edad, estado civil, sexo o aspecto. Adicionalmente el 94% de los alumnos ha tenido una mala situación en las redes sociales, algunos han sido insultados, amenazados, chantajeados, inventado historias e incluso acosados. En este sentido la Procuraduría General de Justicia del Estado de Baja California ha implementado un plan piloto con el programa denominado "TECAE", el cual va dirigido a alumnos de sexto grado de primaria para enseñarles a distinguir y evitar ser víctimas del acoso escolar, conocido como "bullying". En base a los resultados obtenidos se puede afirmar que el uso de las redes sociales si afecta las relaciones sociales de los alumnos.

LOS SERVICIOS DE LOS ECOSISTEMAS EN EL CONTEXTO DE LA POLÍTICA PÚBLICA

Claudia Lorena Lauterio Martínez, Universidad Autónoma de Baja California Sur
José Isabel Urciaga García, Universidad Autónoma de Baja California Sur

RESUMEN

El creciente interés de los gobiernos e instituciones especializadas por mitigar la pérdida de biodiversidad motiva la necesidad de crear y desarrollar información sobre el estado de los ecosistemas naturales, que facilite el análisis de sus usos y el diseño de políticas públicas ya que pesar de la relación estrecha entre los servicios de los ecosistemas y el bienestar social, las formas convencionales que miden el bienestar de la sociedad aún no integran el valor económico y social de los servicios de los ecosistemas, valor que tampoco se considera como instrumento que soporte la política pública. En respuesta a la creciente preocupación ambiental, los mercados para los servicios de los ecosistemas, terrestres, forestales, marinos y costeros están emergiendo en el mundo, sin embargo, existen una serie de oportunidades y amenazas que es necesario identificar para la gestión más adecuada de los recursos. El objetivo de este trabajo es reconocer los ecosistemas y sus servicios, incluyendo su biodiversidad y el capital natural e identificar el papel que cumplen en la generación de bienestar humano, desde el punto de vista turístico-económico, para elaborar estrategias y políticas racionales para su manejo.

ECOSYSTEM SERVICES IN THE CONTEXT OF PUBLIC POLICY

ABSTRACT

The growing interest of the governments and specialized institutions to soften the loss of biodiversity motivates the need to create and develop information about the condition of the natural ecosystems, which facilitates the analysis of its uses and the design of public policies that even the close relation between the services of the ecosystems and the social well-being, the conventional forms that measure the well-being of the company still do not integrate the economic and social value of the services of the ecosystems, value that is not considered to be an instrument that should support the public politics yet . As a response to the increasing environmental concern, the markets for the services of the ecosystems, soil , forest, marines and coastal are emerging in the world, nevertheless, exist a series of opportunities and threats that it is necessary to identify for the most suitable management of the resources. The goal of this work is to recognize the ecosystems and its services, including its biodiversity and the natural capital and to identify the roll that they fulfill in the generation of human well-being, from the tourist - economic point of view, to elaborate strategies and rational policies for its managing.

INTRODUCCIÓN

El creciente interés de los gobiernos e instituciones especializadas por mitigar la pérdida de biodiversidad motiva la necesidad de crear y desarrollar información sobre el estado de los ecosistemas naturales que facilite el análisis de sus usos y el diseño de políticas públicas para tener parámetros claros en materia

económica, social, ambiental y cultural y con ello brindar las herramientas necesarias para tomar decisiones técnicas y operativas que conlleven a invertir en los recursos naturales, especialmente aquellos considerados como degradados y por consecuencia escasos (EEA, 2006). En términos económicos, los ecosistemas se consideran una forma especial de capital, al cual se le denomina capital natural, y este al igual que el capital manufacturado (carreteras, edificios y maquinaria) se deprecia si se utiliza en exceso. La diferencia entre dichos capitales radica en que la depreciación del capital natural es irreversible en la mayoría de los casos y los sistemas pueden tardar mucho tiempo para recuperarse, considerando además que los costos relacionados con la degradación o impactos, a menudo no son parte de la economía tradicional. En términos generales, no es posible sustituir un ecosistema agotado o degradado por uno nuevo y los ecosistemas pueden sufrir un colapso repentino, sin aviso previo (Dasgupta, 2008).

Al igual que los ecosistemas pueden ser analizados desde una perspectiva económico ecológica como capital natural, los productos de su estructura y funcionamiento con incidencia potencial o real en el bienestar humano pueden ser conceptualizados respectivamente como funciones y servicios de los ecosistemas, los cuales son definidos como los beneficios que los humanos obtenemos de los ecosistemas (de Groot *et al.*, 2002; MA, 2005) o como contribuciones directas o indirectas de los ecosistemas al bienestar humano (TEEB, 2010). Bajo su acepción más extendida, el concepto engloba tanto bienes tangibles como servicios intangibles, tengan o no un valor de mercado directo. Aunque, la relación entre el bienestar humano y servicios de los ecosistemas no es lineal. Cuando un servicio de determinado ecosistema es abundante en relación a la demanda, un aumento marginal de los servicios del ecosistema en general, contribuye muy poco al bienestar humano. Sin embargo, cuando el servicio es relativamente escaso, una pequeña disminución puede reducir substancialmente el bienestar humano, por tanto la degradación de los servicios ecosistémicos, representa la pérdida de un bien de capital (Farber, 1987).

Una de las interpretaciones que más atención ha acaparado para explicar de la pérdida de biodiversidad es la que enfatiza que el deterioro de los ecosistemas puede entenderse en términos de fallos de mercado, que resultarían del carácter de bien público de muchos servicios de los ecosistemas (Costanza *et al.*, 1997; TEEB, 2010). En la teoría institucional, los bienes de carácter público se definen como aquellos que presentan características de no rivalidad (cuando su uso por una persona no reduce la posibilidad de uso por otras personas) y no exclusión (cuando resulta difícil o muy costoso impedir su uso por parte de otras personas). En ese sentido, la mayoría de los servicios de los ecosistemas son representados como externalidades de mercado que escapan a los sistemas de precios y por tanto su valor económico queda invisibilizado al no estimarse en la contabilidad económica (Ostrom, 1990). En ese sentido, la mayoría de los servicios de los ecosistemas son representados como externalidades de mercado que escapan a los sistemas de precios y por tanto su valor económico queda invisibilizado al no estimarse en la contabilidad económica (Costanza *et al.*, 1997; TEEB, 2010).

REVISION DE LA LITERATURA

El concepto de ecosistema y sus servicios poco a poco va ganando aceptación y permite una aproximación al desarrollo bajo consideraciones explícitas de precios, cantidades y políticas asociadas al capital natural, a pesar de ciertas diferencias asociadas a puntos de vista biocéntrico o antropocéntrico (Stanley, 1994). Entre los conceptos base en la gestión de ecosistemas, han tenido un especial crecimiento los denominados servicios de los ecosistemas, los cuales se definen como aquellas funciones que generan beneficios y bienestar para las personas y comunidades (Huetting *et al.*, 1998). El estudio de los ecosistemas, especialmente los servicios que proveen se ha convertido en las últimas décadas en una importante área de investigación, la definición de los servicios de los ecosistemas y su clasificación no ha sido tarea fácil y se ha convertido en el eje central de numerosas investigaciones y publicaciones (Daily, 1997; MEA, 2003; Boyd y Banzhaf, 2007; Vandewalle *et al.*, 2008; Fisher *et al.*, 2008). La literatura científica reciente muestra el papel esencial que los ecosistemas y la biodiversidad suministran para el mantenimiento del bienestar humano. La aproximación a la naturaleza desde los servicios de los ecosistemas viene dada de la

perspectiva antropocéntrica en la cual los ecosistemas y la biodiversidad que albergan se vincula directamente con el bienestar humano. Desde este contexto antropocéntrico, los ecosistemas son entendidos como un capital natural, es decir como aquellos ecosistemas con integridad ecológica y resilientes, capaces de generar un flujo de servicios que contribuyen al bienestar humano a través de la generación de una amplia variedad de funciones, las cuales son definidas como la capacidad de proveer servicios que satisfagan a la sociedad (Martín-López et al. 2007; de Groot et al. 2002).

La integración de la economía y la ecología en un sistema común e integrado de apoyo al análisis científico y la definición de políticas y decisiones operativas, es un paso clave hacia la conservación y la sostenibilidad (MEA, 2005). El mercado debe reconocer la escasez de los recursos antes de que se agoten, circunstancia que demanda la internalización de las externalidades negativas al sistema de mercado. La internalización de externalidades ambientales genera un costo social mayor al costo privado justamente en la misma externalidad, lo que hace menor la ganancia privada pero mayor a la ganancia social, lo que hace viable todas las consideraciones de conciencia social de la degradación ambiental y de la pérdida del capital natural. Tales argumentos apoyan el equilibrio y la armonía entre la actividad económica y el medio ambiente, compatibles a través del progreso en la comprensión científica y en la técnica del manejo de los ecosistemas y sus servicios (Fisher *et al.* 2009). El papel crucial que desempeñan los sistemas naturales en el sustento de la actividad económica y el bienestar humano es motivo de creciente preocupación, ya que aumenta la evidencia de las crecientes presiones que se instalen en este tipo de sistemas por la actividad humana (MEA, 2005).

Clasificaciones de los Servicios de los Ecosistemas

A pesar de las dificultades para definir qué son exactamente los servicios de los ecosistemas, muchos autores han intentado proporcionar tipologías y listados de los principales beneficios para ayudar a describir la amplia esfera de interés. El término servicios de los ecosistemas fue especialmente notorio a partir del proyecto de la Evaluación de los Ecosistemas del Milenio (MEA, por sus siglas en inglés) estudio que fue auspiciado por el Programa de las Naciones Unidas para el Medio Ambiente (PNUMA), con la finalidad generar información y divulgar conocimiento acerca de los ecosistemas para la de decisiones políticas y de gestión (MEA, 2003). El MEA es la clasificación más conocida y ampliamente aplicada, estableció firmemente el concepto de servicios de los ecosistemas como un enfoque para vincular la función de los ecosistemas y el bienestar humano, además describió las bases científicas para generar acción necesaria, con la finalidad de alcanzar la conservación y el uso sustentable de los ecosistemas. El MEA representó los vínculos entre los ecosistemas y el bienestar humano, refiriéndose al stock de capital natural como el generador de flujos de servicios de los ecosistemas que inciden en los diversos componentes del bienestar humano tales como la salud, la seguridad y la cobertura de necesidades materiales. Con el objetivo de estructurar un marco analítico acerca de la contribución de los servicios de los ecosistemas el MEA clasificó los servicios de los ecosistemas en cuatro grandes categorías las cuales son: servicios de aprovisionamiento, servicios de regulación, servicios culturales y servicios de apoyo. Aunque esta clasificación ha sido ampliamente aceptada, se discuten las dificultades para aplicar esta definición y clasificación, sobre todo en el contexto de la valoración (de Groot et al., 2002; MA, 2005). El MEA destacó dentro de sus principales contribuciones la alteración y rápida degradación de los ecosistemas en los últimos 50 años por la demanda excesiva de los servicios generados por los mismos (dentro de los que destacan alimento, agua dulce madera, fibra, recreación y combustibles), además argumentó como el modelo actual de desarrollo basado en la explotación de los ecosistemas para generar ganancias económicas considerables ha causado un deterioro casi irreversible, poniendo en riesgo los beneficios para las generaciones venideras y en algunos países las actuales.

La Comisión Europea y el Ministerio de Medio Ambiente Alemán impulsaron la elaboración del informe TEEB, como respuesta a una propuesta de los Ministros de Medio Ambiente del G8+5. El TEEB es el primer estudio global sobre la economía de la pérdida de biodiversidad, que evalúa sus costos y lo compara

con el costos de su conservación y uso sustentable. El estudio considera que una mejor valoración de los beneficios del capital natural conducirá a mejores decisiones en áreas tan diversas como negocios, salud pública y seguridad alimentaria. Asimismo, estima que si no se actúa, el costo de la pérdida de biodiversidad terrestre será del 7% del PIB para 2050, a lo que habría que añadir la pérdida de servicios de los ecosistemas marinos (Sukhdev, 2013). A través de los estudios del TEEB se ha documentado además del valor del mundo natural en la economía global, el cambio que se debe aplicar en las políticas, ha propuesto mecanismos de mercado para integrar nuevas ideas ante los múltiples desafíos, haciendo énfasis en que las decisiones no se basan únicamente en las ganancias de corto plazo, sino construir las bases para el desarrollo sustentable.

Entre las principales recomendaciones del TEEB, se destacan la necesidad de elaborar cuentas e inventarios físicos de las reservas y servicios de los ecosistemas, incluir el valor de los cambios en el capital natural y los flujos de servicios los servicios, además establecer áreas naturales protegidas (nacionales y regionales) que sean gestionados de manera integral, representativa, eficaz y equitativa, con el fin de conservar la biodiversidad y mantener una amplia gama de servicios de los ecosistemas. El TEEB incluye también regulaciones para las empresas y otras organizaciones (minerías, petroleras, pesqueras, entre otras que se basen en la explotación de los ecosistemas como su recurso central) quienes deben incluir las externalidades (positivas y negativas) más importantes, en conjunto con análisis costo-beneficio que se basen en los principios "Sin Pérdida Neta" o "Impacto Positivo Neto". A partir de su lanzamiento el TEEB ha adquirido gran influencia en la agenda política ambiental y en la propuesta de la denominada economía verde. A diferencia del MEA, el TEEB enfatiza que el deterioro de los ecosistemas puede entenderse en términos de fallas de mercado, que resultarían del carácter de bien público de muchos servicios de los ecosistemas (Costanza et al., 1997; TEEB, 2010).

Como una vía para resolver la ausencia de precios de la naturaleza, el TEEB se ha centrado en calcular el valor monetario oculto de los servicios de los ecosistemas y diseñar instrumentos económicos que permitan internalizar dicho valor en los mercados y sistemas de precios, el estudio integra y clasifica los servicios de los ecosistemas en base a la distinción entre los procesos ecológicos y los beneficios finales obtenidos por los seres humanos y evita el riesgo de doble contabilidad mediante la separación de tales beneficios de procesos de los ecosistemas subyacentes A diferencia del MEA, el TEEB sustituye a los servicios de apoyo por los servicios de hábitat, debido a los argumentos sobre su equivalencia con las funciones de los ecosistemas (Figura 3) y mantiene las otras tres grandes categorías de la MEA (aprovisionamiento, regulación y culturales). Sin embargo, el fundamento de este enfoque aún presenta inconsistencias y sesgos que subyacen al enfoque que define la problemática ambiental en términos del problema de clasificación, precio cero y mercados para los servicios de los ecosistemas (Gómez-Baggeth, 2010). Como se menciona anteriormente durante el estudio de los ecosistemas y sus servicios han surgido y siguen surgiendo definiciones, estudios e investigaciones y metodologías (EPA, 2013; Common International Classification of Ecosystem Services, CICES, 2013; Haines-Young, 2013; Landers, 2013, entre otros autores), las cuales han permitido enriquecer y perfeccionar el análisis de las funciones, los flujos y beneficios que la sociedad obtiene de los ecosistemas. En este trabajo se estarán abordando los servicios de los ecosistemas culturales para su análisis, estudio y determinación de políticas y/o medidas de protección para su conservación, para ello se utilizará el marco del MEA (2005) para la clasificación de los servicios de los ecosistemas, apoyado del TEEB (2010) para el análisis económico, político y el manejo de información ante los tomadores de decisiones, ya que se consideran los más precisos para el estudio.

Los Servicios de los Ecosistemas Culturales

El MEA (2003) define los servicios culturales como los beneficios no materiales que las personas obtienen de los ecosistemas, y específicamente hace referencia a la diversidad cultural, espiritual y los valores religiosos, los sistemas del conocimiento, valores educativos, inspiración, valores estéticos, las relaciones sociales, sentido de lugar, los valores del patrimonio cultural, así como también la recreación y el

ecoturismo. Los servicios culturales pueden ser tangibles e intangibles y son producto de percepciones individuales o colectivas; son dependientes del contexto socio-cultural, e intervienen en la forma en que interactúa la sociedad con el entorno (MEA, 2005). A pesar de que algunos valores culturales pueden tener poca dependencia de los ecosistemas (por ejemplo, los asociados con los edificios históricos, pinturas y reliquias religiosas), los servicios culturales, como el resto de los servicios de los ecosistemas, deben mostrar una relación significativa entre las estructuras de los ecosistemas y las funciones a través de la caracterización biofísica y la satisfacción de las necesidades humanas. La importancia de los servicios culturales de los ecosistemas ha sido reconocida por algunos autores a nivel mundial, sin embargo son pocos los casos en los que se han considerado más allá de la de la investigación.

Los servicios culturales de los ecosistemas, al igual que otros servicios como los de regulación y soporte se caracterizan por ser intangibles, subjetivos y difíciles de cuantificar en términos biofísicos o monetarios y por ello la ausencia de un marco regulatorio y/o políticas que permitan la protección, conservación, pago e integración en la toma de decisiones es necesario. Un análisis sustancial de la investigación social y del comportamiento desarrollado dentro de los marcos de la ciencia ecológica, económica y la política en la gestión de los recursos naturales proporciona modelos, métodos y datos que puedan abordar con eficacia los servicios de los ecosistemas culturales y con ello lograr una mejor integración de los mismos en el marco regulatorio de los servicios de los ecosistemas. En este trabajo hará énfasis en distintos servicios que proveen los ecosistemas específicamente los servicios de los ecosistemas culturales marinos y costeros tomando en cuenta varios atributos (belleza escénica, recreación y turismo) de cada uno de los ecosistemas para definir variables a través de distintas actividades, productos y beneficios que la sociedad obtiene de las relaciones entre las estructuras ecológicas y las funciones.

METODOLOGIA

Zona de Estudio

Para el desarrollo del trabajo se delimitó el área de estudio que ocupa la franja costera de 10 km; se seleccionaron cinco áreas ubicadas en el estado de Baja California Sur, las cuales destacan a nivel internacional por los ecosistemas únicos que en esta región se encuentran y por lo cual es posible realizar actividades turísticas exclusivas de dichos ecosistemas marinos y costeros. Las zonas analizadas fueron: a) Cabo San Lucas, b) San José del Cabo; b) La Paz; c) Cabo Pulmo. Delimitándose el estudio a la franja costera de 10 km, de las cinco zonas ya mencionadas. Para identificar los ecosistemas y los servicios más relevantes para los usuarios principales, se realizó la identificación de actores mediante la visita a cada una de las zonas de estudio, cuyo objetivo principal fue reconocer que ecosistemas y servicios de los mismos tienen mayor demanda en el mercado turístico con base en las actividades turísticas y recreativas que se desarrollan en cada una de las áreas.

La metodología se compone de tres fases. La primera se llevó a mediante la recopilación y documentación socioeconómica, cartográfica, literatura científica y gris de distintos portales como Ecological economics, ScienceDirect, entre otros, además de información proveniente de instituciones como Conabio, CONANP, INEGI, UABCS, SEMARNAT, Catastro La Paz y Catastro los Cabos, así como también en entrevistas personalizadas con los gestores inmobiliarios (específicamente en La Paz, Los Cabos y El Sargento y La Ventana). La segunda fase se enfoca en la recopilación de datos de campo principalmente para el análisis económico, y además para caracterizar las variables y atributos claves para asignar valores a distintos bienes, para el caso específico de esta fase, se determinará mediante las variables dicotómicas la presencia y/o ausencia de atributos que intervienen en la oferta y demanda del mercado inmobiliario de cada una de las áreas analizadas.

Para realizar este análisis se utilizará el enfoque de precios hedónicos, el cual intentará explicar el precio de un bien dado a partir de la identificación de los atributos constitutivos del mismo y su importancia

relativa. Esta metodología es utilizada con frecuencia en la estimación de valores de bienes demandados tales como viviendas o predios urbanos y/o rurales dado que esta demanda no procura solo una cierta cantidad de metros cuadrados, sino que también, valora una serie de características tales como macro localización, condiciones ambientales, micro localización o bien, referidas al tipo y calidad de los servicios de los asociados a su uso, para el caso de Baja California Sur, los precios estarán determinados de acuerdo a la distancia del predio a la costa (playa).

RESULTADOS

La identificación los ecosistemas más atractivos en las diferentes zonas analizadas y donde se desarrollan actividades propias para el turismo cuentan con ecosistemas que son claves tanto para la economía local como para la nacional y es por ello que deben ser analizados e integrados en la política pública. Las playas y dunas costeras, por ejemplo constituyen uno de los principales atractivos turísticos para el estado, tanto para locales como para turistas nacionales y extranjeros. Dentro de los servicios que se brindan en los ecosistemas, se destacan la recreación, belleza escénica, protección contra fenómenos naturales (tormentas, huracanes), provisión (explotación y extracción) de arena, roca y distintos minerales, servicios de hábitat como lugares de anidación y reproducción de distintas especies marinas. Los atributos y variables que se considerarán para el análisis en cada una de las áreas de estudio en Baja California Sur, se presentan en la tabla 1.

Tabla 1: Variables y Atributos Para Baja California Sur

Atributos	Variable Dicotómica
Paisaje	Frente de playa (FF), Acceso a Playa (AP), Infraestructura Urbana (IU)
Uso Turístico	Alojamiento Turístico (AT), Desarrollo Turístico Integral (DTI), Turístico Condominal Vertical (TCV)
Recreación	Servicios Turísticos de Playa (STP), Servicios Turísticos (ST), Equipamiento Urbano y Náutico (EUN)
Biodiversidad	Pesca (PE), Observación de Flora y Fauna (FF)

Fuente: Elaboración propia

Se propone una relación funcional estadística del tipo:

$$P = f(\text{PAISAJE}, \text{INFRA}, \text{USO_TURIS}, \text{RECRE}, \text{BIODIV}) + u$$

Donde:

P precio del terreno en pesos

PAISAJE variable dicotómica que indica si el terreno se encuentra con frente de playa y con acceso a playa.

INFRA variable dicotómica que indica si el terreno cuenta con los servicios básicos (agua, luz, drenaje)

USO_TURIS variable dicotómica que determina la presencia de alojamientos, desarrollo turístico y condominios

RECRE variable dicotómica que describe los servicios turísticos de playa ofertados, la presencia y/o ausencia de equipamiento náutico y los servicios turísticos en general

BIODIV variable dicotómica que determina la presencia y/o ausencia de especies atractivas para el turismo en la zona costera

Las relaciones teóricas esperadas entre la variable dependiente (precio de los terrenos) y las diferentes variables explicativas es la siguiente. Si el terreno se encuentra ubicado cerca de la costa, se espera que el valor del mismo aumente, esta condición queda representada por $\partial P/\partial \text{PAISAJE} > 0$. Por su parte, tanto para la infraestructura, el uso turístico y las actividades recreativas queda representado a partir de las siguientes relaciones $\partial P/\partial \text{INFRA} > 0$, $\partial P/\partial \text{USO_TUR} > 0$ y $\partial P/\partial \text{USO_RECRE} > 0$.

El modelo proporcionará las características agrupadas en cinco categorías: paisaje, infraestructura, uso turístico, recreación y biodiversidad con la finalidad de reconocer cual es el factor principal para determinar el precio de los predios y por ende motivar el cambio de uso de suelo en los ecosistemas costeros en Baja California Sur. Las variables de Frente de playa (FF), Acceso a Playa (AP) e Infraestructura Urbana (IU) englobarán los atributos brindados por el paisaje costero que motiva a determinar un precio en los predios. Las variables Alojamiento Turístico (AT), Desarrollo Turístico Integral (DTI), Turístico Condominal Vertical (TCV), Servicios Turísticos de Playa (STP), Servicios Turísticos (ST), Equipamiento Urbano y Náutico (EUN) se enfocan a las actividades que permite desarrollar el ecosistema y como la sociedad ha ido adaptando los productos y beneficios que estos brindan para su satisfacción. La Pesca (PE), Observación de Flora y Fauna (FF) estarán en base al aprovisionamiento de los ecosistemas costeros que son claves no solo para actividades turísticas, si no para el motor económico local.

CONCLUSIONES

El desarrollo y aplicación de normas para la protección de los ecosistemas y sus servicios a nivel mundial es de suma importancia, ya que la creación y establecimiento de políticas públicas brindará las herramientas para los tomadores de decisiones para aplicar en México, en Baja California Sur y en los ecosistemas que así lo ameriten medidas para su preservación. Se destaca que aún hay limitaciones ya que la efectividad de ciertas estrategias de conservación ya que la presencia de actividades antrópicas como construcciones irregulares en ecosistemas frágiles e irregularidades que muestran los intereses políticos y económicos prevalecientes no internalizan los impactos negativos que son provocados a causa de los cambios en los ecosistemas por contaminación o destrucción.

Sobre las políticas que se pudieran apegar a los servicios de los ecosistemas culturales, se destaca que como medio para el desarrollo económico los ecosistemas (en su mayoría playa, dunas, matorral y arrecifes) se han orientado hacia un modelo turístico asentado es un modelo altamente excluyente de la sociedad local, por su naturaleza de gran empresa multinacional que se apropia de recursos naturales y paisajísticos para fines de explotación turística y excluye a la sociedad local del derecho a los mismos recursos. Los derechos de propiedad a recursos comunes y bienes públicos como son playas, agua y recursos pesqueros se le asignan a grandes cadenas hoteleras que modifican sustancialmente distintos ecosistemas y quienes descartan al resto de los usuarios mediante la exclusión de acceso a propiedades y playas privadas, situación que se refleja en el bienestar de las comunidades, ya que aumenta la rivalidad de los recursos comunes y los hace aún más escasos.

Baja California Sur ha sido escenario para el desarrollo de dichas actividades y como consecuencia de la demanda creciente en el mercado, especialmente turístico, se ha promovido el establecimiento de distintos esquemas de desarrollo inmobiliario, resorts, infraestructura, vías de comunicación y acceso, lo que conlleva a ejercer una fuerte presión sobre los ecosistemas marinos y costeros, donde el cambio del uso de suelo figura como la principal causa de su pérdida. La experiencia de Baja California Sur frente al desarrollo turístico muestra los desafíos de la gestión integrada para que incluya el valor económico total de los ecosistemas y sus servicios, que relacione las tendencias del mercado, sus potencialidades y sus límites y que integre instrumentos económicos para la conservación.

RESUMEN

En este artículo se analizan las mejores prácticas de la emblemática aerolínea de bajo costo Southwest y su posible aplicación al mercado mexicano. Las buenas prácticas mercadológicas de Southwest han sido esenciales dentro de su éxito. En el caso de México, Volaris es la empresa de bajo costo que lidera el sector ofreciendo el mayor número de destinos y de vuelos nacionales. Ante el existente panorama de mayor competencia se analizan las estrategias de marketing de Southwest, con el objetivo de identificar aquellas que pudieran aplicarse a la empresa mexicana y que, contribuyan a fortalecer el turismo nacional. Se llevó a cabo una investigación exploratoria. Se emplearon técnicas de recopilación de datos, análisis de documentos y benchmarking. El documento se integra de tres partes: en la primera se caracteriza el origen, la evolución de las aerolíneas de bajo costo y la descripción de la competencia en el sector. En la segunda se presenta un análisis de las estrategias de marketing implementadas por Southwest; finalmente en la tercera parte se analiza el caso mexicano y se evalúa la pertinencia de la aplicación de las estrategias seleccionadas en el apartado dos. Se encontró preliminarmente, que ante el incremento del número de aerolíneas de bajo costo, las estrategias de promoción son de suma importancia y están enfocadas a ofrecer un servicio de calidad.

PALABRAS CLAVE: Aerolínea de Bajo Costo, Turismo, Mercadotecnia, Buenas Practicas

BEST PRACTICES USING LOW COST AIRLINES FLAGSHIP OF THE UNITED STATES AND ITS APPLICATION TO THE MEXICAN MARKET

ABSTRACT

This article describes the best practices of the iconic low-cost carrier Southwest and its possible application to the Mexican market is analyzed. Good Southwest market related practices have been instrumental in its success. In the case of Mexico, Volaris is a low-cost firm led by offering more destinations and domestic flights sector. Given the existing scenario more competitive marketing strategies Southwest is analyzed in order to identify those that could be applied to the Mexican company and help strengthen domestic tourism. Was performed an exploratory research. Data collection techniques, document analysis and benchmarking were used. The paper includes three parts: first the origin, the evolution of the LCC and the description of competition in the sector is characterized. In the second analysis of the marketing strategies implemented by Southwest is presented; Finally in the third part the Mexican case is analyzed and the relevance of the implementation of the selected strategies are evaluated. in section two. He found preliminarily that with the increase in the number of low-cost airlines, promotional strategies are paramount and are focused on providing quality service.

INTRODUCCIÓN

La entrada al mercado de las aerolíneas de bajo costo (ABC) generó un gran impacto en los viajeros. Southwest fue el pionero de este tipo de aerolínea realizando su primer vuelo el 18 de junio de 1971; se enfocó en competir directamente con prestadores de servicio de transporte terrestre, mediante vuelos de bajo costo que ofrecieran los servicios de transporte aéreo, manejo de equipaje y seguridad a bordo. Esta fecha se considera por muchos como el momento en que empezó la desregularización de la industria aérea. A partir de ese momento la empresa se posicionó como una empresa líder en el mercado y tuvo una ventaja comparativa respecto a sus competidores. El transporte aéreo se convirtió en un servicio asequible para la mayoría, sea cual fuere el nivel socioeconómico de las personas. Y eso gracias principalmente al nacimiento de las aerolíneas de bajo costo.

Sin embargo, esa ventana resultó temporal. Debido al incremento en el número de vuelos, las empresas competidoras hicieron ajustes a los gastos no necesarios y también bajaron los precios. Una vez que la aerolíneas de bajo costo se introducen al mercado aéreo comercial sucede que la competencia no se quedó atrás y entonces comienza la guerra de tarifas, mejor conocida como la desregularización de precios en la industria aérea. Gracias a esto fue que las aerolíneas en general pero principalmente de bajo costo tuvieron que fomentar mejores prácticas mercadológicas para no perder el posicionamiento ya adquirido, y es ahí donde juegan un papel importante las mejores prácticas mercadológicas principalmente mediante la promoción. Características de las aerolíneas de bajo costo (ABC)

Manejo de una sola categoría (turista).

Venta de boletos principalmente por Internet, “call center” y venta directa en el aeropuerto; reduciendo costos de distribución.

No utilizan GDS (Global Distribución Systems).

La mayoría opera en aeropuertos medianos que ofrecen las condiciones adecuadas para el despegue.

Por lo general realizan vuelos directos.

Reducen costos operativos, ya que en su flota de aviones predomina un solo tipo de aeronave y sus aviones son nuevos lo que reduce el costo de mantenimiento.

Ofrecen solo vuelos domésticos

No cuentan con programas de lealtad (viajero frecuente).

La incorporación oficial de las ABC en el mercado aéreo mexicano a partir del 2005, ha permitido generar un número creciente de rutas al interior del país, lo que ha incidido favorablemente sobre la demanda turística al ofrecer a los turistas una alternativa de realizar viajes aéreos a un precio accesible, y con calidad en el servicio al interior de México. (Cestur, Analisis Estrategico de las Aerolineas de Bajo Costo en Mexico, 2007) El turismo genera cerca del 9% del PIB nacional, y es el tercer receptor de divisas de México después de los ingresos petroleros y de las remesas. Da empleo directo a 2.5 millones de personas e indirecto a 5 millones. (Massieu, 2013)

REVISIÓN DE LITERATURA

Iniciados los 60's el profesor Jerome McCarthy da origen a una definición más completa de lo que sería la mezcla de mercadotecnia. De acuerdo con Kotler y Lane (2006) la mezcla de mercadotecnia se define como “*el conjunto de herramientas que utiliza una empresa para conseguir sus objetivos de mercadotecnia*”. Estas herramientas se dividen en cuatro grupos principales: producto, precio, plaza y promoción.

La mezcla de mercadotecnia es una de las principales herramientas que ayudan tanto a las empresas como a los consumidores. Se puede definir a ésta como una asociación de variables que le ayudan a las empresas a preparar y a generar las expectativas, junto con las acciones de satisfacción para el beneficio de éstas y sus clientes. Así mismo la implementación de la mezcla de mercadotecnia dentro de las empresas se da en los inicios de campañas de introducción o promoción de productos y servicios, tratando de conseguir los mejores resultados. Este proceso al llegar a ser implementado reduce las posibilidades de fracaso y aumenta las posibilidades de éxito, por lo que cada vez son más las empresas que prefieren realizar esta mezcla.

Mezcla de Mercadotecnia Según Mccarthy

Producto	Plaza	Promocion	Precio
• Características	• Canal de distribución	• Promoción de ventas	• Precio de lista
• Variedad	• Cobertura	• Publicidad en general	• Descuentos
• Calidad	• Ubicación	• Fuerzas de ventas	• Créditos
• Diseño	• Surtido	• Marketing directo	• Bonificaciones
• Nombre o marca	• Transporte	• Publicidad tradicional	• Periodo de pago
• Empaque	• Inventarios	• Relaciones públicas	
• Tamaño			
• Garantía			
• Devolución			
• Servicio			
Solución para el cliente	Conveniencia para el cliente	Comunicación para el cliente	Costo para el cliente

Fuente: Malfitano, O, Arteaga, R, Romano, S. (2007). Neuromarketing: cerebrando negocios y servicios. Argentina. Ed. Granica

La mezcla de promoción, también conocida como la mezcla de comunicación de marketing, consiste en la combinación de herramientas específicas de fuerza de ventas, relaciones públicas, marketing directo, publicidad y promoción de ventas que la compañía utiliza para comunicar de manera persuasiva el valor a los clientes y crear relaciones con ellos informando principalmente sus productos y ofertas. (P. Kotler G. A., 2008) El director de mercadotecnia determina las metas de la estrategia de promoción con base en las metas globales de la compañía. Con estas metas globales, se combinan los elementos de la estrategia en un plan coordinado. La función principal de la estrategia de promoción, es convencer a los consumidores de que los bienes o servicios que se ofrece brindan una ventaja diferencial. Una ventaja diferencial es el conjunto de características singulares de una compañía y sus productos que el mercado meta perciben como significativas y superiores a la competencia. La promoción de ventas se refiere a las actividades de mercadotecnia que estimular la compra por parte de los consumidores. Generalmente, se utiliza como herramienta para estimular incrementos inmediatos en la demanda a corto plazo. (Charles W. Lamb)

MÉTODOLOGIA

Posterior a la entrada de Southwest al mercado aéreo de los Estados Unidos, se fueron desarrollando poco a poco más aerolíneas siguiendo el mismo esquema. En 1988 fue establecida la aerolínea mexicana TAESA la cual inició operaciones con aviones ejecutivos teniendo su sede en el Aeropuerto de México, D.F. Se llega a considerar que TAESA fue la primer aerolínea de bajo costo en México, con sus campañas de “vuele ahora y pague después” y con el slogan publicitario que manejaban, “Con TAESA te cuesta menos, mucho menos”. Y aunque oficialmente TAESA no se clasificó como ABC dentro del territorio mexicano, sus precios eran sumamente bajos, comparados con la competencia. Y sus campañas de promoción para atracción de clientes marcaron un parteaguas para lo que algún sería el establecimiento formal de las ABC alrededor del mundo. El surgimiento de las aerolíneas de bajo costo suponían convertirse en una amenaza para las aerolíneas tradicionales que ofrecían servicio completo, puesto que el concepto de aerolíneas de bajo costo o low cost se centraban principalmente en trasladar al pasajero de un lugar a otro. Con el proceso de desregulación vivido por la aviación a principios de los 90's, el concepto de aerolíneas de bajo costo llegó a Europa y surgieron las primeras empresas aéreas con este concepto Ryanair (Irlanda) y easyJet (Británica). En 1995 Air New Zealand decidió implementar su propia aerolínea low cost y la llamó

Freedom Air. En 1998 Noruega fundo su primera compañía aérea de bajo costo ColorAir. Mientras en Canadá la aerolínea nacional más importante, Air Canada, se enfrentaba a situaciones difíciles con la creación de aerolíneas de bajo costo como Canjet, Jetsgo y WestJet. La primera aerolínea de bajo costo de la India fue Air Deccan, el 25 de agosto de 2003 la cual logró posicionar tarifas hasta de un 30% más económicas que las de sus competidores tales como Indian Airlines, Air Sahara, entre otros.

La incorporación oficial de las ABC en el mercado aéreo mexicano a partir del 2005, ha permitido generar un número creciente de rutas al interior del país, lo que ha incidido favorablemente sobre la demanda turística al ofrecer a los turistas una alternativa de realizar viajes aéreos a un precio accesible, y con calidad en el servicio al interior de México. (Cestur, 2007) Las estrategias principalmente utilizadas por Southwest fueron las siguientes: Calidad en el servicio (interno), siguiendo estos lineamientos: diseño del lugar de trabajo, diseño del puesto y toma de decisiones, selección y desarrollo de empleados, premios y reconocimientos a empleados y adecuaciones de herramientas para servir al cliente; Satisfacción de los empleados, prestando especial atención a la retención de empleados y la productividad de los mismo; Valor del servicio (externo), mediante el servicio, calidad y costo; Satisfacción del cliente, que sea atractivo, con valor agregado, calidad= costo, a base de mejoras en calidad y productividad; Lealtad del cliente: mediante la retención, repetición y recomendación y; Crecimiento en ingresos utilidades.

Southwest enlista los aspectos más importantes para crear mayor ventaja comparativa con su competencia: entender lo que el cliente vale; simplificar el proceso de compra; establecer barrera de entrada a la competencia. Mediante la reducción el costo de pensar para el cliente; Maximizar el costo de cambio; Simplificar el proceso de compra; y Sostener la propuesta de valor para el cliente. Volaris es la marca comercial del grupo mexicano Concesionaria Vuela Compañía de Aviación S.A. de C.V., una línea aérea de bajo costo o ABC basada en Santa Fe, Álvaro Obregón, Ciudad de México. El nombre de Volaris fue elegido de entre más de 1000 propuestas tentativas, significando una fusión entre el verbo *volar* y la estrella Polaris, conocida por ser la guía del norte para la navegación antigua. La inauguración de las actividades comerciales de Volaris se llevó a cabo en el Aeropuerto Internacional Adolfo López Mateos (TLC) de la ciudad de Toluca por el entonces Presidente de México Vicente Fox. El primer vuelo partió de dicho aeropuerto a la ciudad de Tijuana el 13 de marzo de 2006. En menos de 10 años Volaris ha logrado posicionarse como la aerolínea número uno en México para vuelos domésticos. El *Southwest effect* al ser implementado a la aerolínea mexicana Volaris, logrará mayor éxito, principalmente debido a que las estrategias de Southwest aún no han sido implementadas en México y Volaris con la importancia que demuestra al día de hoy en la mente de los turistas nacionales sigue el patrón que Southwest tuvo a sus inicios.

RESULTADOS

La presente investigación aún no está terminada y por lo tanto no cuenta con resultados concluyentes, debido a que el estudio aún está en proceso.

RESUMEN

El presente trabajo se desarrolló con la finalidad de plasmar la forma en que la Responsabilidad Social Universitaria se manifiesta mediante la solidaridad de los estudiantes, la coordinación de sus investigadores y la extensión universitaria misma que ha permitido, a través de la donación de acervos bibliográficos materializar espacios para el fomento a la lectura, actividad que ha permitido impactar en las comunidades con más bajo índice de desarrollo humano del estado de Oaxaca, México, al mismo tiempo de ser la base para poder implementar políticas públicas que benefician a sus pobladores. En tal sentido se aborda la metodología seguida en el desarrollo conjunto de los proyectos que permiten apoyar a las localidades, el procedimiento y fines que se persiguen con estas actividades y los logros que se han obtenido en su implementación, así como las expectativas a largo plazo que se esperan replicar en localidades de similar estatus.

PALABRAS CLAVES: Desarrollo Social, Políticas Públicas, Responsabilidad Social Universitaria

THE PROMOTION OF PUBLIC SPACES FOR READING AS A MANIFESTATION OF UNIVERSITY SOCIAL RESPONSIBILITY

ABSTRACT

The present work was developed in order to capture the way the university social responsibility is manifested through the solidarity of students, coordination of its research and university extension has allowed it, through the donation of library collections materialize spaces for the promotion of reading, an activity that has allowed communities impact the lowest human development index of the state of Oaxaca, Mexico, at the same time be the basis to implement policies that benefit their people. In this sense the methodology followed in the set of projects that allow localities to support the procedure and objectives to be achieved by these activities and the achievements that have been made in its implementation development and expectations addressed long term expected to replicate in localities similar status.

INTRODUCCIÓN

Desde sus inicios un referente socio educativo lo han constituido las universidades mediante la función de extensión universitaria, sin embargo en la medida que la sociedad se ha visto inmersa en crisis y desigualdades sociales se ha hecho más palpable la necesidad de no solo ser un formador de profesionistas, sino por el contrario involucrarse más en la problemática social mediante el desarrollo de proyectos que impacten y permitan el desarrollo de sectores vulnerables de la sociedad. Así el presente trabajo aborda la forma en la cual algunos investigadores de la Universidad Autónoma “Benito Juárez” de Oaxaca han

desarrollado estrategias que permiten hacer la entrega de acervos bibliográficos a comunidades de escasos recursos, cuyo índice de desarrollo humano es muy bajo a fin de fomentar la lectura entre sus pobladores al tiempo de promover el fomento de espacios públicos para la lectura, los cuales, a través de su establecimiento en los planes de desarrollo municipal permiten convertirlos en iniciativas de políticas públicas generando un impacto positivo en su desarrollo.

REVISIÓN LITERARIA

Uno de los principales problemas de México y como consecuencia del estado de Oaxaca es el bajo nivel de educación que se tiene, lo cual incide a su vez en que muchos de sus municipios se ubiquen por una parte, en muy alto grado de marginación y por el otro, en un bajo índice de desarrollo humano. De acuerdo con el Consejo Nacional de Población (CONAPO, 2010) en el estado de Oaxaca existen municipios de muy alto grado de marginación entre los que destacan [1] San Juan Petlapa (3.794), [2] San José Tenango (3.011), [3] Coicoyán de las Flores (2.773), [4] Santiago Amoltepec (2.607), y [5] Eloxochitlán de Flores Magón (2.587) oscilando el índice de marginación entre 3.011 y 2.587, correspondiéndoles a estos mismos municipios en el contexto nacional las posiciones 3, 8, 14, 18 y 19 respectivamente. Es importante mencionar que para determinar el grado de marginación el CONAPO toma en cuenta las dimensiones de educación, vivienda, distribución de la población e ingresos por trabajo, datos que obtiene del censo nacional de población y vivienda que el INEGI realiza cada diez años. Así mismo el indicador denominado Índice de Desarrollo Humano que considera como primordial a la educación, ubica a Oaxaca en el lugar 31 de 32 posiciones con un IDH de 0.6662 solo por arriba del estado de Chiapas que ocupa el último lugar con un IDH de 0.6468.

El dato anterior, sin embargo, debe ser analizado en los componentes que lo integran y así tenemos que: en el índice de salud Oaxaca ocupa el lugar 29 con 0.8616, en el de educación el lugar 31 con 0.5679 y en el de ingreso el lugar 31 con 0.6046 (PNUD, 2012). El nivel de desarrollo humano de Oaxaca se calcula mediante los logros de la entidad, en salud (0.829), educación (0.563) e ingreso (0.638), alcanzados en relación con los parámetros observados a nivel internacional. El resultado global para el estado es un Índice de Desarrollo Humano (IDH) de 0.668 en 2010, que es comparable con el nivel de desarrollo de países como Estado de Plurinacional de Bolivia y Estado de Palestina. En 2010, San Sebastián Tutla es el municipio con mayor desarrollo humano en Oaxaca, con un IDH de 0.852. En contraste, el municipio con menor desempeño en la entidad es San Miguel Santa Flor, cuyo IDH es de 0.367. La brecha en desarrollo entre ambos municipios es de 56.9%. Si se compara el desempeño de los municipios con mayor y menor desarrollo, es posible reconocer que en Oaxaca coexisten condiciones de desarrollo similares a las de Brunéi Darussalam y Liberia. La mayor brecha entre los municipios de Oaxaca se encuentra en la dimensión de educación. Por lo tanto, la educación es la dimensión que mayor influye en el desarrollo del estado de Oaxaca y la brecha que se tiene entre el municipio con mayor IDH del estado y último con el menor IDH es de 2.3 veces lo que manifiesta una gran desigualdad dentro de los municipios del estado.

La educación, menciona el Programa de las Naciones Unidas para el Desarrollo (PNUD), promueve el desarrollo humano por dos vías: proporciona al individuo los elementos para actuar con autonomía y aumenta las oportunidades a su alcance para ejercerla. La libertad de las personas requiere la formación de valores propios, pero también requiere de la información y el aprendizaje de habilidades que permitan desplegar las destrezas que se valoran (PNUD, 2006). Así mismo Esquer (2012) indica que la educación empodera a la población, particularmente a los pobres y a los débiles, al reducir la ignorancia, erigir habilidades e introducir actitudes acordes con la época en que se vive. El enfoque de desarrollo humano, en último término, provee una guía general para las políticas públicas con una implicación simple y directa: la educación debe recibir un alto nivel de prioridad política, pues la educación es en parte fin y en parte instrumento para el desarrollo. La escolaridad es uno de los principales determinantes del ingreso laboral, y en los hogares pobres el ingreso por trabajo es la principal fuente de recursos. En particular, el acceso a la educación superior destaca en la determinación de la movilidad socioeconómica entre generaciones. La

Universidad Autónoma “Benito Juárez” de Oaxaca (UABJO) ha sido desde sus orígenes base de grandes proyectos que han permitido a la sociedad oaxaqueña tener a través de la vinculación con dicha institución un apoyo invaluable para el desarrollo de sus comunidades. Uno de estos proyectos es la Agencia de Desarrollo Social (ADIS) establecido en convenio con la Secretaría de Desarrollo Social (SEDESOL) en el año 2004 cuya visión establece “Aprovechar las oportunidades de desarrollo de la población de los municipios con menor Índice de Desarrollo Humano (IDH) del estado de Oaxaca, con participación corresponsable y articulada de la UABJO, las dependencias federales, autoridades estatales, municipales y la sociedad en general”. De igual forma la ADIS pretende en su visión “Ser la Agencia de Desarrollo Integral líder en la región que coadyuve a transformar los municipios de menor IDH y de muy alto Índice de Marginación (IM)”; con el objetivo de: “Asumir una visión inter-multidisciplinaria que se manifieste en acciones que promuevan el desarrollo social en cinco grandes vertientes: Educación; Salud; Infraestructura Social y Vivienda; Medio Ambiente; Productividad y Generación de Empleo”.

Lo anterior se complementa con los servicios que ofrece a la población mediante:

Elaboración de Diagnósticos y Planes de Desarrollo Municipal, por vertientes:

Educación; Salud; Infraestructura Social y Vivienda; Medio Ambiente; Productividad y Generación de Empleo.

Asesorías y consultorías de servicios profesionales (Arquitectos, Economistas, Odontólogos, Médicos, Ingenieros Químicos)

Elaboración de proyectos de factibilidad

Seguimiento de proyectos

Elaboración de programas de capacitación, de cursos y talleres

Proyectos de servicio social en conjunto con alumnos de las diferentes facultades y escuelas de la UABJO

Brigadas de análisis de estudios químicos de agua

Brigadas de análisis clínicos.

En este sentido y retomando la vertiente de educación, en el año 2011 se inscribe ante el Instituto Mexicano de la Juventud (IMJUVE) el proyecto denominado “La guelaguetza de acervo bibliográfico para municipios marginados del estado de Oaxaca”, el cual tiene como objetivo general dotar de acervos bibliográficos a municipios marginados del estado de Oaxaca, dichos municipios susceptibles de ser beneficiados son escogidos debido al bajo IDH en el cual se encuentran. Para el año 2013 el proyecto se institucionaliza en la UABJO mediante su participación en la convocatoria del Programa de Fomento a la Investigación 2013 (PROFI-2013) del cual es beneficiado con apoyo económico para su continuidad ahora bajo el nombre de “Revaloremos la Universidad Autónoma “Benito Juárez” de Oaxaca, una propuesta de Responsabilidad Social Universitaria”. Derivado de esta situación y con apoyo en los resultados obtenidos hasta el momento se considera viable la posibilidad de que este proyecto se transforme en una propuesta de política pública educativa que genere una administración municipal con responsabilidad social para las comunidades del estado, y determinar su factibilidad como política pública educativa.

METODOLOGÍA

Para estar en condiciones de poder establecer los espacios de lectura en las comunidades más necesitadas se motivó a la comunidad universitaria y a la sociedad en su conjunto para donar los libros que tienen almacenados en casa y no utilizan, sin importar el nivel académico de los mismos ya que se catalogan e integran a los acervos bibliográficos que se entregan a las autoridades de los municipios beneficiados verificando que cada uno de dichos acervos contenga material bibliográfico de los diferentes niveles académicos con la finalidad de que sean útiles a todos los pobladores de las comunidades beneficiadas. De igual forma el grado de deterioro en el que se encuentren no resulta ser un obstáculo para su recepción ya que se ingresan al hospital del libro ubicado en la Dirección de Servicios Editoriales de la misma universidad, en donde son restaurados, para más adelante ser integrados en bloques que oscilan entre las 500 a 650 unidades a las autoridades municipales de las poblaciones con características de marginación.

Para la selección de municipios sujetos a beneficiar se toma en cuenta a aquellos con más alto grado de marginación (GM) y menor Índice de Desarrollo Humano (IDH) para confirmar que los acervos se entreguen a quienes más necesidades de mejora posean. La entrega de los acervos bibliográficos se realiza por el rector de la UABJO firmándose para tal efecto un acta de entrega que ampara lo ejemplares que conforman los mencionados acervos de tal forma que ambas partes cuenten con el soporte documental correspondiente.

RESULTADOS

Desde la fecha de la puesta en marcha del proyecto se han recolectado alrededor de 7,000 libros entre los cuales se encuentran ejemplares de nivel preescolar, primaria, secundaria y bachillerato así como libros de nivel profesional y de tipo general como novelas, cuentos, leyes, bloques de revistas tanto populares como de carácter científico. Las comunidades apoyadas, la población beneficiada y la distribución del número de ejemplares entregados se muestra en la tabla siguiente:

Tabla 1: Comunidades y Población Beneficiadas

Comunidad	Habitantes beneficiados	Ejemplares entregados
San Pedro y San Pablo Ayutla	5,602	600
San Martín Peras	11,361	600
San Juan Bautista Jayacatlán	1,462	600
San Juan Tepeuxila	2,773	600
Santo Domingo Tlatinalgo	791	600
Santiago Apóstol	4,220	500
San Pedro Apóstol	1,544	600
Yogana	1,308	650
El Ciruelo Pinotepa Nal.	2,185	650
Santo Domingo Tomaltepec	2,790	600
Bajos de Coyula Santa María Huatulco	719	600

Fuente: Elaboración propia con resultados de la investigación

CONCLUSIONES

Las universidades y en especial la UABJO a través de sus investigadores tiene como responsabilidad social el generar proyectos que incidan directamente en la población ya que al estar inmersa en un estado donde muchas de las poblaciones son de escasos recursos, se requiere que el impacto y esfuerzos sean encauzados hacia esos fines. El proyecto generador de los acervos bibliográficos ha generado el establecimiento de pequeñas bibliotecas en las comunidades con mayores necesidades educativas, lo cual ha permitido que sus habitantes tengan un apoyo más para cultivar su intelectualidad a la vez de ser un incentivo para sus autoridades, quienes toman como base estos esfuerzos para plasmarlos en sus planes de desarrollo municipal y con ello mejorar su situación académica. El conjuntar proyectos que a través de su interrelación incidan en la sociedad es una clara manifestación de la responsabilidad social universitaria que todas las instituciones de nivel superior pueden establecer para incidir a través de sus docentes, investigadores y alumnos con lo cual se logra tener una mayor presencia y brindar apoyo a quienes más los necesitan. Actividades como la elaboración de los planes de desarrollo sirven de base para el posterior desarrollo de políticas públicas que beneficien a los pobladores de municipios, estados y países de la mano de los académicos de las universidades.

GESTIÓN DE LAS ADQUISICIONES EN LAS INSTITUCIONES PÚBLICAS DE EDUCACIÓN SUPERIOR DE MÉXICO

Ana Ma. Guillén Jiménez, Universidad Autónoma de Baja California
Rafael Ernesto Carranza Prieto, Universidad Autónoma de Baja California
Sonia Elizabeth Maldonado-Radillo, Universidad Autónoma de Baja California

RESUMEN

El propósito de este trabajo es describir la gestión de las adquisiciones de bienes y servicios en instituciones de educación superior mexicanas. Para ello se realizó una investigación documental con diseño bibliográfico de los requerimientos del marco jurídico establecidos para esta gestión. Para el análisis de la información se reunió e integró toda la normatividad y documentos empleados en las contrataciones. Los resultados empíricos muestran que, en México, las instituciones de educación superior para comprar, vender o arrendar cualquier bien o servicio deben adoptar procedimientos preestablecidos en leyes y reglamentos, que son: Licitación Pública, Invitación a cuando menos tres personas y Adjudicación directa. Esta investigación contribuirá a la construcción de un marco referencial teórico sobre los procedimientos de contratación de bienes y servicios utilizados por las universidades públicas mexicanas.

ACQUISITION MANAGEMENT IN PUBLIC INSTITUTIONS ON HIGHER EDUCATION OF MEXICO

ABSTRACT

The purpose of this paper is to describe the management of acquisition of goods and services effects by Mexican higher education institutions. We realized desk research with bibliographical design from requirements of the legal framework established for this management. For the analysis of the information gathered and integrated all regulations and documents are used in hiring. The empirical results show that, in Mexico, higher education institutions, to buy, sell or lease any goods or services, must adopt established procedures in laws and regulations, which are: Public bidding procedure, Invitation for at least three persons and Direct adjudication. This research will contribute to the construction of a theoretical reference framework on procurement procedures for goods and services used by the Mexican public universities.

EL DESARROLLO HUMANO DESDE LA PERSPECTIVA ECONÓMICA Y AMBIENTAL

María Guadalupe Oropeza Cortés, Universidad Autónoma de Baja California Sur
José Isabel Urciaga García, Universidad Autónoma de Baja California Sur

RESUMEN

Desde el enfoque económico, los temas de análisis se han centrado en alcanzar altas tasas de crecimiento económico, en diseñar y ejecutar políticas de expansión económica o contracción, en la obtención del máximo beneficio económico a nivel empresarial y desde hace algunos años el desarrollo económico, que más tarde sería abordado incorporando tres categorías: ingreso, educación y salud, bajo el concepto de desarrollo humano, el cual se mide a partir del conocido Índice de Desarrollo Humano del PNUD. Si bien el IDH enfatiza en el bienestar de la sociedad posee una seria limitante, no incorpora la parte ambiental, en específico de los servicios que proveen los ecosistemas, que con o sin transformación contribuyen directa e indirectamente al bienestar humano. Por ello el objetivo de este trabajo es realizar una revisión de los índices de desarrollo humano existentes y analizar una propuesta de variable(s) que puedan incorporarse y que reflejen la contribución de los servicios de los ecosistemas al desarrollo humano. La importancia de la incorporación de los servicios de los ecosistemas al análisis del desarrollo humano radica en la enorme contribución cuantitativa y cualitativa a las actividades económicas y no económicas.

ECONOMIC AND ENVIRONMENTAL APPROACHES OF THE HUMAN DEVELOPMENT

ABSTRACT

From an economic approach, the topics generally analyzed have been focused on achieving high economic growth rates, designing and executing economic expansion or contraction policies, to obtaining the maximum economic profit on an enterprise level, and, in the last few years, on economical development; The latter was addressed in the context of Human Development in three categories: income, education and health. This is measured from the known Human Development Index (HDI) by the UNDP. Although the index emphasizes the welfare of society, it has a serious limitation: it does not consider the environment. Specifically, the services provided by ecosystem, with or without transformation contributes directly and indirectly to human welfare. Therefore, the objective of this paper is to review the existing HDI and to analyze a proposal of variables that could be incorporated in the HDI and reflect the contribution of the ecosystem services to human development. The importance of adding ecosystem services to the analysis of Human Development lies in the enormous qualitative and quantitative contributions they bring to both economic and non-economic activities.

INTRODUCCIÓN

Indudablemente el tema ambiental esta hoy en la agenda de investigación de diversas ciencias y es así porque es quizá el único problema que atañe a todos por igual. Es decir, no es materia de análisis exclusivo

de la biología o la economía o la ecología. En este sentido, no se debe excluir del análisis de desarrollo humano, si bien este concepto va ligado a una mejor calidad de vida, cabe señalar que de nada serviría una alta calidad de vida si los ecosistemas siguen degradándose. Por ello el objetivo de este trabajo ha sido realizar una revisión de los trabajos en tórnos al IDH con el fin de observar si alguno incorpora la parte ambiental tanto en su análisis como en su medición, se encontró que efectivamente ya hay documentos que centran su atención en incorporar estas variables, no obstante que solo se encontraron documentos que incorporan la emisión de gases, los cuales se relacionan con altas tasas de crecimiento e índices de desarrollo alto.

REVISIÓN DE LITERATURA

Al analizar el desarrollo de una sociedad indudablemente es necesario echar un vistazo a la teoría del crecimiento económico, recuerde que décadas atrás hablar de desarrollo implicaba hablar de crecimiento económico. Sin embargo, actualmente no es así, el crecimiento económico se refiere solo al aumento sostenido de la producción de bienes y servicios de una sociedad, a la riqueza en sí misma, mientras que el desarrollo incorpora elementos económicos y no económicos, entre ellos el bienestar humano, en este sentido para tener desarrollo es necesario el crecimiento pero no es suficiente. Empíricamente el crecimiento se puede medir a partir de la producción, la inversión y el empleo, no obstante que la medida universalmente aceptada es el producto interno bruto (PIB) que en términos cuantitativos captura la capacidad de un país para la generación de riqueza.

Aunque hay diversas políticas que estimulan el crecimiento económico, en términos teóricos o empíricos no hay una receta única para lograr el crecimiento económico, hay diversas formas de lograrlo, que dependen de los recursos con que cuenta cada país en términos económicos, sociales, políticos, ambientales y culturales (Sen 2000). Desde el enfoque de la teoría neoclásica se enfatiza en la movilidad de factores, quienes tenderán a migrar de las regiones de baja rentabilidad a las regiones de mayor rentabilidad hasta llegar al punto de eliminar la brecha. La teoría de los polos de desarrollo indica que el crecimiento no se da en todos los lugares a la vez sino por el contrario, la actividad económica se concentra en las regiones centrales, donde se focaliza la política regional, cabe mencionar que si estas regiones presentan una falta de planeación económica y urbana se genera un caos económico y social (Perroux, 1955). Un ejemplo que se puede citar es el corredor turístico Cabo San Lucas-San José del Cabo, en el municipio de Los Cabos, Baja California Sur, ambas localidades concentran al 58% de la población total del municipio, por tanto la política se focaliza a este destino turístico (INEGI, 2010).

Myrdal (1957) y Hirschman (1958) en su teoría de la causación acumulativa señalan que el mercado, lejos de disminuir la brecha de desigualdad tiende a aumentarla generándose crecientes desequilibrios a nivel regional. Por su parte, North (1955, 1956) señala que el crecimiento económico regional se determina por el crecimiento en las actividades básicas (actividades que producen bienes y servicios de exportación) las que, a su vez dependen de la demanda externa, por otro lado las denominadas actividades no básicas dependen del ingreso generado por las primeras, es decir, indirectamente dependen de la demanda externa.

Finalmente la teoría del desarrollo endógeno considera al desarrollo como un proceso territorial, es decir, éste toma un papel activo en el proceso de desarrollo constituyendo un lugar de transformación social, un lugar que integra la expresión de la realidad socioespacial y construcción social (Mella Márquez 1998). El desarrollo se integra por aspectos económicos y no económicos (sociales, ambientales, políticos, culturales e históricos), además las políticas son más eficaces cuando son diseñadas y ejecutadas por agentes locales, después de todo los recursos locales son el potencial de desarrollo de cada región.

En lo que respecta al crecimiento económico, puede afirmarse que es sencillo medirse ya que solo recoge la generación de riqueza y se hace a través del PIB, sin embargo en el caso del desarrollo su medición es más compleja, ya que recoge elementos tanto cuantitativos como cualitativos, puesto que el desarrollo no

se limita a la esfera económica sino que se extiende a reflejar otras dimensiones como la social, ambiental y política; el Índice de Desarrollo Humano (IDH) es una medida que trata de reflejar el desarrollo de las regiones. El IDH es una propuesta del Programa de las Naciones Unidas para el Desarrollo (PNUD), se compone de tres categorías: ingreso, educación y salud, como se muestra en la Tabla 1. Y el alcance para el caso mexicano es a nivel nacional, estatal y municipal, no obstante que esta última ha sufrido adecuaciones, al no contar con el PIB per cápita a nivel de municipios.

Tabla 1: Componentes del IDH

Categoría	Descripción	Variable
Ingresos	Disposición de recursos suficientes para disfrutar de un nivel digno de vida	PIB per cápita
Educación	Adquisición de conocimiento	Tasa de alfabetización de la población de 15 años y más Tasa de matriculación escolar de la población de 6 a 24 años
Salud	Goce de una vida larga y saludable	Esperanza de vida

fuelle: elaboración propia con base en pnud 2005

Aunque a nivel global el IDH concentra estas tres categorías, cabe señalar que calcula un índice por cada una de ellas: índice de ingresos, índice de educación e índice de salud, a fin de observar el nivel de desarrollo en cada rubro. Puede observarse que solo da énfasis a la parte económica y social, esta última reflejada en educación y salud, pero en ningún momento incorpora alguna variable de tipo ambiental, la importancia de incluir al ambiente radica en el hecho de que de él obtenemos todo lo necesario para el bienestar humano, sino entonces ¿cómo hablar de desarrollo humano en un planeta que se degrada cada día?

Además del PNUD, hay otros trabajos para el caso mexicano. CONAPO (2001) calcula el IDH para los 32 estados bajo la misma metodología que PNUD. Jarque y Medina (1998) proponen una variación del IDH, le llaman Índice de Desarrollo Humano Ampliado (IDHA). Utiliza la metodología del PNUD, no obstante que en la categoría salud incluye la variable servicio de agua potable, por considerar que hay una correlación positiva entre el servicio y la salud de la población infantil, con repercusión en el promedio de vida de la población. Si se observa de manera general, resulta una buena inclusión de los servicios de los ecosistemas, sin embargo más acertado sería incluir el servicio en términos de calidad en el agua.

Por su parte, De la Torre (1997) calcula dos índices: Índice de Desarrollo Humano Simple e Índice de Desarrollo Humano Elaborado. A diferencia del IDH del PNUD el Índice Simple en la categoría de educación solo incorpora la tasa de alfabetización. El Índice Ampliado incorpora en la categoría educación tanto la tasa de alfabetización como la tasa de escolaridad, sin embargo en la categoría ingresos el PIB per cápita es ajustado a la línea de pobreza mundial. En este caso no incluye alguna variable que incorpore en lo general al ambiente y en lo particular algún servicio de los ecosistemas.

Otro trabajo es el de Ramírez Magaña (1999), quien excluye al PIB per cápita así como la tasa de matriculación pero incorpora las viviendas que cuentan con drenaje, electricidad y agua potable, en términos de porcentaje, lo que podría llamarse un IDH con servicios. Si bien adiciona los servicios públicos cabe mencionar que no resulta ser una medida tan confiable, sobre todo en lugares donde la mayor parte de la población se concentra en zonas urbanas, al ser así el porcentaje de viviendas con servicios resulta mayor al 90%, un ejemplo claro de ello lo presentan los municipios de Baja California Sur, en cada municipio la población se concentra en las cabeceras municipales y en alguna delegación, en este sentido las viviendas se concentran en esas zonas urbanas por lo que el porcentaje de viviendas con drenaje, electricidad y agua potable resulta mayor al 90%, no refleja al resto de localidades dispersas que no cuentan con dichos servicios. García-Verdú (2002) considera también a la población alfabetizada, no obstante que no indica algún rango de edad mientras que la tasa de matriculación la incluye para la población de 15 a 19 años. La

Universidad de Chapingo a través de su Departamento de Estadística, Matemática y Cómputo propone cuatro índices relacionados directamente con el desarrollo humano: i) Índice de Desarrollo Humano con Servicios (IDHS), ii) Índice de Desarrollo Humano con Servicios Modificado (IDHSM), iii) Índice de Desarrollo Humano con Producto Interno Bruto (IDHP) y iv) Índice de Inequidad en Desarrollo Humano (InQiDHP). Zamudio, Pérez y Vargas (2001) propone dos índices: i) Índice de Desarrollo Humano con PIB per cápita y, ii) Índice de Desarrollo Humano con Servicios. Serrano y López *et. al.* (2003) en su IDH para la dimensión de ingreso usa el logaritmo del ingreso salarial promedio de los habitantes de cada municipio y lo ajusta a dólares, y en la dimensión de educación utiliza la tasa de alfabetización en adultos y tasas combinadas de asistencia escolar.

Hasta aquí los diversos trabajos del IDH se centran básicamente en las tres dimensiones propuestas de inicio por PNUD, algunos han modificado algunas variables para incorporar servicios, sin embargo en ningún trabajo se ve claramente la incorporación de la dimensión ambiental. Como era de esperarse la teoría económica ha evolucionado con la evolución de la sociedad y el desarrollo no debe quedarse atrás. Sin embargo, cierto es que su análisis, pero sobre todo su medición es muy compleja, mientras algunos autores (Ramírez Magaña 1999; Zamudio, Pérez y Vargas 2001) enfatizan en los servicios públicos otros autores lo hacen la edad de la población alfabeta, de tal manera que incorporar la dimensión ambiental no será una tarea sencilla pero tampoco se puede seguir ignorando, ya que hacerlo sería demeritar la contribución al desarrollo humano de la población.

METODOLOGÍA

La búsqueda de material bibliográfico se realizó en tres etapas, en la primera etapa se buscaron documentos en los sitios Science Direct, JSTOR, BioOne, Wiley Online Library y Academi Press, para ello se utilizaron los conceptos IDH, desarrollo humano, medición del desarrollo humano y, desarrollo humano y ambiente. En la segunda etapa se realizó la búsqueda de informes publicados por PNUD y la tercera etapa consistió en la búsqueda por título de artículos citados en los documentos encontrados y revisados, producto de la etapa 1. De los documentos encontrados se agruparon en dos categorías: aquellos documentos que abordan al IDH en su forma original (con sus tres categorías, tal como lo propuso PNUD) y los documentos que incorporan una variable vinculada a los servicios de los ecosistemas. Con este agrupamiento de documentos, se procedió a la revisión exhaustiva con el fin de identificar aquellos trabajos que ya incorporan alguna o algunas variables vinculadas directamente, no solo con el ambiente sino con los servicios que proveen los ecosistemas.

RESULTADOS

En los trabajos revisados se encontró que ya existe un esfuerzo por incorporar al ambiente no solo en el análisis del desarrollo humano sino también en su medición. Reusser y colaboradores (2013) incorporan la emisión de gases de efecto invernadero al análisis del desarrollo humano, Steinberger y su equipo de trabajo (2012) analizan la relación entre las emisiones y el desarrollo, la longevidad humana está asociada a bajas emisiones, pero los ingresos van asociados a altas emisiones. En esta misma línea Costa *et.al.* (2011), encuentra un incremento exponencial entre las emisiones y el incremento del IDH con datos históricos y actuales. Cabe mencionar que hay puntos de acuerdo en que las economías con altas tasas de crecimiento están vinculadas a altas emisiones, varias de dichas economías presentan, también altos índices de desarrollo humano, entonces economías desarrolladas también implican economías con altas emisiones.

La investigación en torno al desarrollo humano y ambiente es muy escasa, la que se encuentra se centra en las emisiones de gases, lo cual se entiende puesto que se vincula con la calidad del aire, el cual es un servicio que proveen los ecosistemas, sin embargo no es el único. De acuerdo al TEEB hay 17 servicios agrupados en 4 categorías: aprovisionamiento, apoyo, regulación y culturales, por lo que la incorporación de las

emisiones de gases al análisis del desarrollo humano es el inicio para continuar su análisis bajo la misma línea, después de todo el desarrollo humano también se logra gracias a la buena salud de los ecosistemas.

CONCLUSIONES

De la misma manera que las sociedades evolucionan la ciencia debe evolucionar. Hablar actualmente de desarrollo humano, solo considerando ingresos, educación y salud es un grave error, primero porque se ha demostrado la contribución del capital natural a la vida humana y por tanto a su bienestar, su desarrollo. Sin embargo, y pese a años de estudio esta variable apenas está siendo incorporada, de ahí que se encontraron trabajos que consideran la emisión de gases, vinculado con la calidad del aire. Altas emisiones se asocian a una mala calidad del aire, lo que afecta la salud de la población, quien disminuye sus capacidades para generar ingresos y desarrollarse por sí misma. La degradación ambiental es un problema de todos, afecta a toda la población y por tanto todos tenemos la responsabilidad de entablar acciones de conservación. En este sentido, se hace urgente incorporar esta línea de investigación a la agenda del desarrollo humano, sin una buena salud de los ecosistemas el desarrollo humano, seguramente, sería una leyenda.

LA AGRICULTURA PROTEGIDA UNA ALTERNATIVA DE DESARROLLO ECONÓMICO A LAS EMPRESAS FAMILIARES EN EL ESTADO DE MICHOACÁN, MÉXICO

Ma. Hilda Rodales Trujillo, Universidad Michoacana de San Nicolás de Hidalgo
Mario Chávez Zamora, Universidad Michoacana de San Nicolás de Hidalgo

RESUMEN

En el presente trabajo se plantea la necesidad de cambiar los modelos tradicionales de producción agrícola utilizados en la mayoría del suelo cultivable del estado de Michoacán de Ocampo, para que las empresas familiares, que son el modo general de organización de los agricultores, puedan lograr un desarrollo económico aplicando técnicas y procedimientos de agricultura protegida, debido a los diversos problemas que enfrentan día a día, detectando cómo los costos y gastos que se originan son demasiado gravosos en proporción de los márgenes de producción por área cultivada, asimismo el suelo sufre un deterioro que se refleja en menor producción y la falta de apoyos financieros también repercute en restricciones de capital para realizar inversiones y limitaciones de cobertura que los proteja de malas cosechas, sequías y otros riesgos, ocasionando desmotivación a realizar esta actividad productiva. Es por ello que se analiza si existen beneficios en su aplicación que logren el desarrollo económico en la región y por ende en el país.

PROTECTED AGRICULTURE ALTERNATIVE ECONOMIC DEVELOPMENT IN THE FAMILY BUSINESS MICHOACAN, MEXICO.

ABSTRACT

In this work the need to change traditional agricultural production models used in most of the arable land of the state of Michoacán the Ocampo, poses for family businesses, which are the general organization of farmers, can achieve a economic development by applying techniques and procedures for protected agriculture, due to the various problems faced daily by detecting how the costs and expenses arising are too burdensome in proportion to production margins for acreage, also the ground deteriorates reflected in lower production and the lack of financial support also affects capital constraints for investment and limitations of coverage that protects them from crop failures, droughts and other hazards, causing motivation to perform this production. That is why we analyze whether there are benefits in application to achieve economic development in the region and therefore in the country.

INTRODUCCIÓN

El presente trabajo de investigación surge, en primera instancia, para tratar de proponer una alternativa que permita la integración de sectores rurales del estado de Michoacán para lograr su desarrollo, partiendo en primera instancia de la conceptualización del marco teórico y posteriormente detectando factores que

permitan la incorporación de las empresas a la modernidad de sus actividades productivas en el sector agrícola. En los últimos años, se vienen realizando fuertes inversiones privadas y con apoyos públicos para la instalación y operación de estructuras con el fin de practicar algún tipo de agricultura protegida, llámese invernaderos, macro túneles y malla anti-insectos o casa sombra. Las personas se encuentran cada vez más y mejor informadas acerca del origen de los alimentos que van a consumir, la forma en que se obtuvieron, sus propiedades nutritivas, y de manera especial toman en cuenta los procesos de inocuidad empleados para su producción y, además, la población consume alimentos todos los días independientemente de que la producción agropecuaria ocurra por ciclos.

Así, en un mundo cada vez más poblado, con menor superficie disponible para la agricultura, con suelos degradados, con problemas de escasez de agua y contaminación, en un entorno de fuertes alternaciones climáticas, es que la producción de alimentos con agricultura protegida, dada sus características especiales de alta producción por unidad de superficie y control de buena parte de los factores adversos, representa una de las opciones que posibilita solventar la paradoja del crecimiento poblacional y su necesidad siempre creciente de alimentos. Los resultados de estas acciones en materia de agricultura protegida han sido muy diversos: desde casos muy exitosos con altos niveles de productividad en los que se obtienen productos de excelente calidad, así como la posibilidad de conseguir buenos precios y una alta demanda del producto, hasta casos en que no se logran las expectativas y terminan por ser estructuras abandonadas, carteras vencidas y productores decepcionados. De acuerdo con especialistas en agricultura protegida, algunos de los principales factores de éxito consisten en identificar adecuadamente el mercado, la ubicación de las instalaciones, la tecnología que debe aplicarse, así como la escala del proyecto.

Agricultura Protegida y Desarrollo

La agricultura protegida es aquella que se realiza bajo estructuras construidas con la finalidad de evitar las restricciones que el medio impone al desarrollo de las plantas cultivadas. Así, mediante el empleo de diversas estructuras y técnicas se reducen al mínimo algunas de las condiciones restrictivas del clima sobre los vegetales. A través de varios años pero sobre todo en las últimas décadas se han desarrollado varios tipos de estructuras para la protección de las plantas, que plantean diferentes alternativas para recrear condiciones ambientales óptimas para el desarrollo de los cultivos, de acuerdo a los requerimientos climáticos de cada especie y en concordancia con los factores climáticos de cada región, que han afectado gravemente a la agricultura. La horticultura protegida se define como el sistema de producción que permite modificar el ambiente natural en el que se desarrollan los cultivos hortícolas, con el propósito de alcanzar un crecimiento óptimo y con ello, un alto rendimiento. Este sistema permite ofrecer productos de alta calidad, con mejores precios de venta y con mayores niveles de inocuidad. La horticultura protegida contribuye a sustentar y fomentar el desarrollo agroindustrial, a generar divisas y empleo para el país y una vida más digna entre la gente del medio rural.

Partiendo de la idea que desarrollo sugiere o se trata de incrementar, agrandar, extender, ampliar o aumentar alguna característica de algo, entenderemos que el desarrollo económico es un proceso donde las condiciones de bienes y servicios se encuentran en estado creciente y al alcance de todos los grupos sociales que conforman la comunidad. Una sociedad donde existe un buen desarrollo económico presenta características de integración económica y social y tendría menos personas viviendo en la marginalidad. Elías (2004) propone un modelo de desarrollo económico, social y político basado en cinco importante factores que proporcionan calidad de vida a través del desarrollo sustentable:

Legitimar la participación ciudadana: La gestión urbana debe radicar en el sistema democrático, en el que el consenso ciudadano legitime en último término las políticas urbanas de mediano y largo plazo.

Asegurar la Gobernabilidad de la ciudad: Para la creación de las condiciones de una buena *gobernabilidad* que asegure estabilidad de las políticas urbanas y, en consecuencia, de las inversiones pública y privada; se

requiere de un gobierno metropolitano democrático que cuente con las atribuciones políticas, las competencias técnicas y las fuentes de financiamiento necesarias para abordar la planificación de un modo integral.

Mejorar la calidad y seguridad del espacio público: Una ciudad que pretende competir con otras, requiere de un liderazgo económico, turístico o cultural, por lo que estratégicamente hablando, es más importantes la calidad del espacio público, ya que ahí se expresa la identidad de dicha ciudad.

Modernizar los instrumentos de planificación: Resulta pertinente su modernización, ya que al actualizar los mecanismos de regulación del crecimiento urbano, desde una visión estratégica de la planeación, se incorpora al mismo tiempo en el mercado la participación ciudadana, impidiendo que la planificación territorial sea solamente ocasional.

Renovar la infraestructura urbana: Es imprescindible la renovación de la red de infraestructura vial, sanitaria, de agua potable y energética, que sea capaz de absorber las demandas de crecimiento y el ordenamiento territorial en la región de que se trate. La inmensa mayoría de los productores, trabajan en un ambiente familiar, cultivando la parcela que poseen o en algunos casos que rentan, por ello la empresa familiar adquiere una importancia significativa en el entorno territorial de México y en particular del Estado de Michoacán de Ocampo, una empresa familiar es una organización controlada y operada por los miembros de una familia (Balausteguigoitia, 2012).

Las diferentes regiones, según Trápaga (1990), citada por García, O. (2014), han marcado un comportamiento muy específico: Estados Unidos, Canadá, la Unión Europea, Australia y Nueva Zelanda han mantenido por décadas una política de protección al campo, obteniendo autosuficiencia en varios productos y son exportadores de alimentos, productores hegemónicos de cereales, carne y leche, lo que les permite controlar los mercados y la fijación de los precios. Por su parte los países que hasta 1990 funcionaron en el esquema socialista y que con su incorporación a la economía de mercado, al desplomar sus ingresos tras la eliminación de los subsidios, tuvieron que retomar a la protección del agro. América Latina y África y los países asiáticos sin considerar a Japón, Corea del Sur y Singapur, corresponden a países con bajos niveles de productividad y por lo tanto los precios son determinados por los países consumidores, además de fijar las características del producto y del proceso productivo. Lo más preocupante es que estos países son los que reúnen el mayor número de habitantes del planeta, así como la mayoría de los pobres y de los campesinos sin tierra o con pequeñas parcelas sin recursos para poder explotarlas, entre los que se encuentra México.

Según datos de Banco Mundial, para el 70% de los pobres del mundo que viven en zonas rurales, la agricultura es la principal fuente de ingresos y de trabajo. Pero el agotamiento y la degradación de la tierra y del agua afectan gravemente la capacidad de cultivar alimentos y otros productos necesarios para sustentar los medios de vida en estas zonas y satisfacer las necesidades de la población urbana. la población rural en el mundo ha disminuido claramente, así en el año 2005 era del 51% y para el año 2013 es del 47% del total, en México es del 21%, pero el indicador de empleo en la agricultura para el año de 2013 fue del 13%, lo que indica que son pocas las personas que se dedican a esta actividad productiva. Señala Moreno, R. (2011) que en México, las hectáreas protegidas han evolucionado desde 1998 a 2008 a una tasa media de crecimiento anual de 34.5%, existiendo diferentes versiones de su inventario. Los invernaderos de mediana tecnología han proliferado en la región del bajo y los de baja tecnología se han instalado, preferentemente, en los estados de Baja California y Sinaloa.

De acuerdo con la Secretaria de Agricultura, ganadería, Desarrollo Rural, Pesca y Alimentación (SAGARPA), la diferencia entre producir a cielo abierto y con agricultura protegida es de un incremento que puede llegar a ser hasta del 1250 por ciento. Adicionalmente a este sustancial incremento en la producción se tiene el valor agregado de que genera ocho empleos por hectárea. La superficie en hectáreas

de agricultura protegida según el censo agropecuario del 2011 en el estado de Michoacán fue de 1003.53 de las cuales corresponden a 859 unidades de producción, indicadas en la Tabla 1, observándose que la mayor superficie es de macro túnel, seguido por los invernaderos, de los 113 municipios en que se divide el estado, Zamora es el municipio que aprovecha el mayor espacio, contando con 319.16 Ha representando el 31.80 % del total de la superficie.

Tabla 1: Superficie de Agricultura Protegida en el Estado de Michoacán, México

Tipo de Agricultura Protegida	Ha. En Activo	Ha. Inactivas	Total de Ha. de Instalaciones	Porcentaje (%)	Unidades de Producción
Casa sombra		0.04	0.04	0.003	1
Invernadero	271.83	131.47	403.3	40.19	729
Macro túnel	453.91	136.66	590.57	58.84	112
Micro túnel	0.06		0.06	0.005	1
Techo sombra	0.17	0.28	0.45	0.04	2
Vivero	2.07	7.04	9.11	0.90	14
Total	728.04	275.49	1003.53	100.00	859

Fuente: elaboración propia en base a los datos del censo agropecuario del 2011 de la Secretaría de Agricultura, Ganadería, Desarrollo Rural, Pesca y Alimentación (SAGARPA), donde se indica el número de Ha cultivadas en agricultura protegida y las unidades de producción en el Estado de Michoacán de Ocampo, México.

CONCLUSIONES

La agricultura protegida es radicalmente diferente a la tradicional, ya que a diferencia de los cultivos a cielo abierto con esta técnica se puede calendarizar la producción y aprovechar las ventanas de oportunidad que tiene los mercados locales, regionales, nacionales e internacionales, y que los productores del estado de Michoacán saquen provecho a esa ventaja competitiva. En Michoacán el invernadero resulta una inversión rentable, y aunque tiene como desventaja su alto costo inicial, se calcula que en un periodo de seis años el productor recupera la inversión. Una estructura casa-sombra produce unas 160 toneladas por hectárea de tomate. La causa principal para la construcción de invernaderos son los cambios climáticos, pero con el tiempo se ha demostrado que se acelera la floración y madurez de los frutos, aumenta la calidad y el rendimiento de los cultivos, se produce fuera de época, ahorra agua y fertilizantes, mejora el control de los insectos y las enfermedades y la posibilidad de obtener más de un ciclo de cultivo al año.

RESUMEN

Conocer la opinión de los turistas sobre su visita al destino turístico es de gran relevancia para la toma de decisiones. Al empresario le permite ajustar su modelo de negocio y al sector público le permite orientar su política pública. Por ello, en este trabajo se abordan los resultados que se derivaron de una encuesta aplicada a los turistas. Y cuyo objetivo fue presentar la opinión de los turistas que visitaron el Pueblo Mágico de Loreto, en el 2do trimestre del 2014. Ello a partir de la metodología de Centro de Estudios en Turismo (CESTUR) y adaptada de acuerdo al entorno. Lo anterior permite identificar áreas de oportunidad y de mejora.

PALABRAS CLAVE: Turismo, Desarrollo y Visitante

EVALUATION OF VISITORS TO THE MAGICAL TOWN LORETO

ABSTRACT

Know the opinion of the tourists on their visit to tourist destination is of great relevance for decision making. The entrepreneur allows you to adjust its business model to the public sector and allows you to target your public policy. Therefore, in this work the results were derived from a survey of tourists are addressed. And whose aim was to present the views of tourists visiting the magical town of Loreto, in the 2nd Quarter of 2014. This methodology is from the Center for Studies in Tourism (CESTUR) and adapted according to the environment. This allows us to identify areas of opportunity and improvement.

INTRODUCCIÓN

Las actividades turísticas representan para los países desarrollados y en vías de desarrollo, una oportunidad para atraer recursos económicos y beneficiar a la economía en su conjunto. Es por ello, que el turismo debe ser estudiado con dos finalidades, uno el realizar diagnósticos y evaluaciones del status que guarda en determinados destinos turísticos y dos, con la finalidad de sugerir e implementar mejoras al sector. En esta ocasión, este trabajo se enfoca en un destino turístico que se caracteriza según por la Secretaría de Turismo (SECTUR) Federal en México, como Pueblo Mágico, que es el caso de Loreto. Loreto es considerado un punto de desarrollo económico y turístico importante en la región. Su desarrollo turístico fue impulsado en 1974 con la creación de los Centros Integralmente Planeados y a partir del 14 de junio de 2012 fue declarado Pueblo Mágico. Actualmente se encuentra dotado de una importante red de infraestructuras y equipamientos entre las que se encuentran el aeropuerto internacional, una estación telefónica, sub-estación eléctrica, planta de tratamiento de aguas negras y un sistema de vialidades (SECTUR, 2014). La ubicación y características del municipio de Loreto resultan ideales para el desarrollo turístico, ya que presenta

enormes extensiones de playas y zonas en estado natural. Así también, la localidad guarda una de las conformaciones de mayor contraste, por la belleza de sus playas y los imponentes y fantásticos acantilados de roca volcánica que configuran la sierra de La Giganta. Parte de su riqueza natural está conformada por una diversidad de plantas y especies propias de la sierra, el llano semidesértico y la costa (Cruz, 2014).

En los años 1970 el gobierno federal percibió un gran potencial turístico en Loreto y, a través de Fondo Nacional de Fomento al Turismo (FONATUR) y con fondos del Banco Mundial, se inició el proyecto para transformar a Loreto en un megacomplejo turístico; sin embargo no prosperó y se mantuvo como un destino de bajo volumen turístico hasta fechas recientes. El desempeño actual de la actividad económica de Loreto puede analizarse considerando el desempeño de variables vinculadas con las características de las unidades económicas, según rama sector o actividad (Rodríguez et al, 2003). El turismo es una de las principales actividades de este municipio. Esto se debe en gran medida a la presencia de una variedad de atractivo natural y cultural. Sumado a ello, la fundación de un Centro Integralmente Planeado a finales de los 70's y el decreto de Pueblo Mágico en 2013, han favorecido el desarrollo de dicha actividad. Luego de una baja sostenida de la afluencia turística a raíz de la crisis de 2008, a partir de 2010 este puerto inicia una recuperación paulatina (INEGI, 2009). Cifras de 2011 indican que Loreto recibió 84,139 turistas (INEGI, 2013), los cuales se alojaron en establecimientos de hospedaje; de estos, el 12% se alojó en establecimiento de cinco estrellas, el 39%, 32% y el 17% en establecimientos de cuatro, tres y dos estrellas, respectivamente (Juárez et al, 2012). Se estima que tan solo en el año 2012 se alojaron a 89 mil 863 visitantes, los cuales, en su mayoría correspondían al segmento de turismo nacional. No obstante lo anterior, el nivel de ocupación hotelera y la estadía promedio es baja, máxime si comparamos dichas cifras, con las de otros destinos del estado (SECTUR, 2014).

Datos de la Secretaría de Turismo Estatal de Baja California Sur, indican que la llegada de turistas a establecimientos de hospedaje en Loreto se ha incrementado en 19.05%, durante el período 2010 al 2013. Respecto al origen de los visitantes, el turismo nacional ha disminuido 4.95% en dicho periodo, mientras que el turismo internacional se ha incrementado en 240.80%, alcanzando en el último año los 25,216 turistas extranjeros de los 7399 existentes en el 2010 (INEGI, 2013), existiendo las condiciones para incrementar dichas estadísticas para este destino turístico (SIIMT, 2014). Dichas estadísticas y evolución histórica manifiestan la importancia que tiene el Pueblo Mágico de Loreto, y de la necesidad de implementar mejoras a este con miras a un desarrollo sustentable. Es por ello, que el objetivo de este trabajo fue presentar la opinión y evaluación de los turistas que visitaron el Pueblo Mágico de Loreto, en el 2do trimestre del 2014. Esto mediante la metodología que marca CESTUR, la cual fue realizada por investigadores de la Universidad Autónoma de Baja California Sur. El trabajo se encuentra estructurado en cuatro secciones, la primera muestra el marco teórico entorno a la actividad turística y el Pueblo Mágico; la segunda se aborda la metodología implementada para obtener la información; la tercer sección incluye parte de los resultados y por último, algunas consideraciones generales.

REVISIÓN DE LITERATURA

Para México el turismo es considerado como una actividad básica en los últimos años y la cual ha buscado fomentar y difundirla a nivel mundial (OMT, 1998). Producto de ello es que México es considerado como uno de los destinos líderes receptores de turistas, tal como lo expresan las estadísticas de la OMT (2010) al registrar más de 20 millones de turistas ingresados por año a partir del siglo XXI. Posterior a ello, en el 2013 según el Sistema Integral de Información de Mercados Turísticos (SIIMT), México ha caído al lugar número decimo quinto, registrando 24.2 millones de visitantes internacionales. El primer lugar lo ocupa Francia con 84.7 millones de turistas (SIIMT, 2014). Este sector contribuye de manera importante al desarrollo económico del país, tan solo ha contribuido con el 8% del Producto Interno Bruto (PIB) y los destinos de sol y playa han recobrado mucha importancia, como los destinos de Cancún, Acapulco, Puerto Vallarta, Mazatlán y Los Cabos entre los más sobresalientes. Para ello, nos centraremos en el Estado de Baja California Sur (BCS), la cual alberga al destino de Los Cabos. Dicho Estado junto con Quintana Roo,

son las entidades más jóvenes del país. Dentro del Estado de BCS que cuenta con 2 Pueblos Mágicos, se localiza el destino de Loreto, del cual se aborda en este documento. Y en el cual, se analiza la evaluación del turista sobre este destino mediante la implementación de una metodología utilizada a nivel nacional en México (Cruz, 2013).

Parte de esa metodología es retomada de la CESTUR y que tiene como finalidad conocer al turista, analizar su evaluación y hacer las mejoras correspondientes. Dicha dependencia que pertenece a SECTUR, viene evaluando desde el 2001 de manera consistente la competitividad de los destinos turísticos nacionales en niveles de satisfacción de los turistas. Por ello, en este intento de contribuir a conocer la realidad turística en el Estado de Baja California Sur, y orientar al sector empresarial y gubernamental, se decidió emprender este proyecto del diagnóstico del perfil y grado de satisfacción del visitante. El Programa de Pueblos Mágicos, desarrollado por la Secretaría de Turismo en colaboración con diversas instancias gubernamentales y gobiernos estatales y municipales, contribuye a revalorar a un conjunto de poblaciones del país que siempre han estado en el imaginario colectivo de la nación en su conjunto y que representan alternativas frescas y diferentes para los visitantes nacionales y extranjeros. Más que un rescate, es un reconocimiento a quienes habitan esos hermosos lugares de la geografía mexicana y han sabido guardar para todos, la riqueza cultural e histórica que encierran (SECTUR, 2013).

Los objetivos del Programa Pueblos Mágicos tienen alcances muy amplios, entre otros, resaltar el valor turístico de localidades en el interior del país, para estructurar una oferta turística innovadora y original, que atienda una demanda naciente de cultura, tradiciones, aventura y deporte extremo en escenarios naturales, o la simple, pero única cotidianidad de la vida rural. Un Pueblo Mágico es una localidad que tiene atributos simbólicos, leyendas, historia, hechos trascendentes, cotidianidad, un tipo de “magia” que emana en cada una de sus manifestaciones socio-culturales, y que significan hoy día una gran oportunidad para el aprovechamiento turístico. Es claro que sus repercusiones rebasan con mucho la idea de mejorar la imagen urbana y se inscriben en la necesidad de conjuntar esfuerzos para convertirlos en detonadores de la economía local y regional. El turismo y el flujo de visitantes, produce resultados sorprendentes en comunidades de gran fuerza cultural y entornos urbanos y naturales de gran impacto. Existen en total 83 pueblos mágicos en México. Baja California Sur cuenta con dos de ellos, Todos Santos y Loreto (SECTUR, 2013). Lo importante en este estudio es analizar la evaluación que realizan los visitantes al Pueblo Mágico de Loreto, pues de ella se pueden obtener propuestas de mejora para este destino y el sector en general. Como veremos la información vertida, es fuente y visión de los turistas lo cual enriquece este documento y que ilustra claramente el status del Pueblo Mágico de Loreto.

METODOLOGIA

Para poder evaluar la calificación del turista se procedió con un enfoque de tipo cuantitativa, donde el marco muestral son los visitantes (Turistas y Excursionistas) mayores de 18 años de edad que hayan tenido contacto con los servicios del destino de Pueblo Mágico de Loreto en BCS (al menos deben haber estado 3 horas en el lugar). A los cuales se les aplica una encuesta en principales puntos de afluencia de manera personal. Utilizando el muestreo probabilístico sistemático. Y considerando variables nominales, de escala, ordinales y de intervalo. Ello parte de la metodología similar implementada y sugerida por SECTUR (2013).

El cuestionario aplicado es estructurado de aproximadamente 10 minutos de duración. Donde están consideradas las áreas de perfil del turista, perfil del viaje, tipos de contratación de servicios, nivel de satisfacción y gasto de viaje. Estos aspectos están comprendidos en 24 reactivos y cuyos resultados corresponden al segundo trimestre del año 2014. Los puntos de afluencia para realizar el levantamiento de campo son zona de malecón, marina, centro y/o en zonas de afluencia. Según la determinación del tamaño de muestra con un margen de error: +/- 5.6% por destino turístico al trimestre, y de +/-2.8% anual, se realizaron 100 entrevistas efectivas en promedio por mes, con una distribución de 25 entrevistas

aproximadas por semana levantadas en un mínimo de 3 días a la semana (en promedio se realizarán de 8 a 9 entrevistas por día).

Una vez realizada la encuesta a turistas nacionales y extranjeros, se procede a codificar y establecer reacciones entre variables, ello con miras a conocer el grado de satisfacción de los turistas que visitaron Loreto. Para ello, se aplicará una fórmula para calcular el índice establecido por la Secretaría de Turismo Federal para el desarrollo del estudio. El índice de satisfacción se elabora con las respuestas a cada uno de los reactivos de satisfacción que pueden ser: excelente, bueno, malo y pésimo. La fórmula del Índice de Satisfacción (IS), considera una escala de 0 a 10 a partir de las 4 posibles respuestas (excelente, bueno, malo y pésimo) y se expresa:

$$IS = [5 + \{0.05*(\%Excelente - \%Muy Malo)\} + \{0.025*(\%Bueno - \%Malo)\}] * 10.$$

RESULTADOS

Los resultados obtenidos de la evaluación del turista en Loreto, son los siguientes y en los que podemos comentar lo siguiente. En principio las encuestas arrojaron que el 56.5% de los turistas fueron de procedencia mexicana, un 40.6% norteamericanos y un 2.9% de procedencia canadiense (Tabla 1). Además, la composición familiar indicó que la mayoría de los encuestados fue acompañado por la familia con un 47.1%, un 21.4% se hizo acompañar por amigos, un 15.7% de su cónyuge, viaja solo un 10% y con personas de trabajo un 5.7% (Tabla 2).

Tabla 1: Procedencia de los Turistas En Loreto, 2014

Procedencia	Porcentaje
USA	40.6%
México	56.5%
Canadá	2.9%

La tabla muestra la composición de turistas que visitaron el destino de Pueblo Mágico de Loreto, don de en su mayoría fueron mexicanos, le sigue en segundo lugar los turistas americanos y en tercer lugar los canadienses. Fuente: Elaboración propia, 2014.

Tabla 2: Composición Familiar del Turista En Loreto, 2014

Composición familiar	Porcentaje
Cónyuge	15.7%
Familia	47.1%
Amigos	21.4%
Personas de trabajo	5.7%
Viaja solo	10.0%

La tabla muestra la forma de viajar de los turistas, donde la mayoría se hace acompañar de la familia con 47%, en segundo lugar de los amigos con 21% y de su cónyuge un 15%, entre los más significativos. Fuente: Elaboración propia, 2014.

También podemos apreciar en la Tabla 3, que el motivo principal por el cual acuden los turistas al Pueblo Mágico de Loreto es por descanso con 65.2%, le sigue en orden de importancia visita a familiares con 20.3%, negocios 5.8%, tratamiento de salud 2.9%, eventos culturales 2.9% y eventos sociales 2.9%. Por otro lado, el tipo de alojamiento temporal utilizado por los turistas es el hotel con 65.2%, le sigue casa de huéspedes con 11.6%, tráiler park 4.3%, entre los más significativos. Por su parte el principal medio de transporte es el auto propio con 44.3%, avión 38.6%, autobús 8.6%, auto rentado 4.3% y casa rodante 4.3%. En cuanto a la calificación del destino por sus atributos del destino, encontramos que hay clientes satisfechos (Calificación entre 8.0 y 8.9) en los rubros de hospitalidad, servicios ofrecidos por el restaurantes, experiencia en general en establecimientos de alojamiento y limpieza de calles y áreas públicas.

Tabla 3: Motivo Principal del Turista En Loreto, 2014

Motivo Principal de Visita	Porcentaje
Descanso	65.2%
Visita a familiares	20.3%
Negocios	5.8%
Tratamiento de salud	2.9%
Evento cultural	2.9%
Evento social	2.9%

La tabla muestra el motivo principal de visita de los turistas al Pueblo Mágico de Loreto. Don de la mayoría acude por descanso con 65%, le sigue visita a familiares un 20%, visita de negocios 5% y en menor medida eventos culturales y sociales. Fuente: Elaboración propia, 2014.

En los rubros donde los turistas califican como poco satisfechos (Calificación entre 7.0 a 7.9) son en la relación calidad precio, el servicio ofrecido por personal de hotel y diversidad de actividades recreativas. En general todos los atributos calificaron al destino como satisfechos. Y ello se manifiesta en la satisfacción general el 58% lo califica como excelente, 41% como buena y 1.0% regular. El índice de satisfacción del turista según la metodología aplicada fue de 8.0, clasificada como turistas satisfechos. En cuanto si los turistas recomendarían visitar el destino a otras personas, el 86% dijo que definitivamente si lo recomendarían, un 13% probablemente si y un 1.0% quizás si , quizás no lo harían. En cuanto a la percepción de viajes antes de visitar el destino de Loreto y posterior a ello, los resultados fueron los siguientes.

Antes de viajar a Loreto un 78% tenía una percepción positiva del destino, un 21% era indistinta y un 1.0% era negativa. Posterior a la visita del turista, la percepción mejora, pues un 97% de los turistas tuvo una percepción positiva y un 3% indistinta. Datos generales se encontraron que la mayoría de los turistas (71.2%) se enteran del destino de Loreto por medio de referencias de amigos y un 9.1% por medio del internet, entre los datos más significativos. Lo cual manifiesta como el poder de la publicidad de boca en boca es importante en el mundo de los negocios. Otro dato importante es la estadía promedio en Loreto, que es de 2.0 noches y que la mayoría de los encuestados, su visita forma parte de un grupo con 76%, y un 24% su viaje es individual. Una ventaja competitiva de este destino, es en relación a la seguridad, pues un 97% de los encuestados indicó que no experimentó ningún síntoma de inseguridad en este destino, solo un 3% especificó que si experimentó inseguridad, cuando se les cuestionó el porqué, manifestaron que era debido a factores como el estado físico de las calles, y el desperdicio del agua que podía causar accidentes.

CONCLUSIONES

Loreto tiene una excelente oportunidad para mejorar, pues tiene atributos de recursos naturales que lo hacen único y atractivo para los visitantes. Entre los retos que tienen este destino es su ordenamiento en áreas públicas, una diversidad de atractivos y servicios que pueden ofrecer al turista, mejorar en la calidad de los servicios turísticos, propiciar mayores niveles de productividad y competitividad del destino, lo cual ayudaría a tener una mejor posición a nivel nacional e internacional. Este destino tiene ventajas competitivas que tiene que difundir y cuidar como: la seguridad pública, el paisaje marino, la fauna marina y gastronomía. Sin embargo, tiene retos por resolver, como la conectividad aérea, la difusión de diversas actividades, la diversificación de servicios turísticos, y la promoción de certificaciones en los establecimientos de negocios. Este tipo de estudios permiten identificar ventajas competitivas de los destinos turísticos y retos por resolver, más aún si es en un sector altamente activo y con gran relación con diversas economías del mundo. Por ello, este tipo de trabajos deben ser constantemente ejecutados para realizar los ajustes pertinentes al sector.

RESUMEN

Explicar las características presentes en una a empresaria, es un fenómeno multifactorial, Gibb (1982), señala Factores culturales, Educativos, la familia y las actitudes ante la sociedad, los autores Audretsch y Keilbach (2004); Wennekers, et al., (2005) señalan Racionalidad económica; McClelland, (1961) Stewart, et al., 1999; Baron, (2000) refieren aspectos Psicológicos y sociológicos (Shapero y Sokol 1982; Busenitz et al.,(2000); Habilidades y Actitudes Chell (2013). El objetivo de este trabajo, es presentar evidencia empírica del modelo teórico, de los factores Personales, Liderazgo y el Entorno de referencia y el estilo de Liderazgo, para la explicación del constructo, Certificación de Competencias Markman (2007) Administrativas (CCA), se construye un instrumento validado con un valor de .7 y se confirma que los resultados del modelo (Maximum Likelihood Estimates) cumplen con los requisitos Bollen et. Al (2014): CMIN/DF = 1.06, CFI = .996 y NFI= .93 y para RAMSEA = 0.018. Se confirma la relación ente CCA y conocimientos administrativos básicos y del giro, la calificación de habilidades directivas, calificación de actitudes, la antigüedad generacional de la empresa, estudios en el área administrativa y la experiencia como empresaria, no se comprueba la relación entre estilo de Liderazgo y Competencias Administrativas.

PALABRAS CLAVE: Certificación, Administración, Empresarias, PyME

CONFIRMATORY MODEL OF THE BUSINNES ADMINISTRATION COMPETENCES CONSTRUCT, LEADERSHIP AND ENVIROMENT IN SME, WOMEN ENTREPRENEURS IN JALISCO, MÉXICO

ABSTRACT

This paper explains the underlying characteristics that are present in an entrepreneur as a multifaceted phenomenon, Gibb (1982), reporting cultural factors, educational, the role of the family and the attitudes to society; the authors Audretsch and Keilbach (2004); Wennekers, et al., 2005; Economic Rationality; (McClelland, 1961; Stewart, et al., 1999; Baron, (2000); Psychological and Sociological aspects determined by the socio-cultural environment, Shapero and Sokol (1982), Busenitz et al., 2000; as well as assessing the skills Chell (2013). The aim of this paper is to present empirical evidence of the theoretical model, where personal factor, leadership and the reference environment and leadership undergo study, to identify their contribution to the explanation of the dataset, certification of administrative competencies Markman (2007) present in women entrepreneurs. Research is about correlation scope an instrument is constructed validated with a valor of .7, and confirmed the results of the model, CMIN/DF 1.06, CFI .996 and NFI .93, which are greater than .90, for RAMSEA 0.018; according to state of the art confirms that the skills and knowledge presented, skills and attitudes contributes entrepreneurial activity The relationship between ACC and basic administrative knowledge the evaluation of managerial abilities, attitudes, the company's age and the entrepreneur's experience.

INTRODUCCIÓN

Las mujeres que desarrollan empresas buscan lograr metas que les permitan la rentabilidad y permanencia de sus empresas y familias, por ello el espíritu emprendedor es un acto social enfocado a satisfacer las necesidades económicas, sociales e individuales de la humanidad; emprender una empresa requiere de Conocimientos, Habilidades y Actitudes que diferentes autores han estudiado Desde los estudios de McClelland (1961), Ausubel, 1993, Jack and Anderson (2002), Ardichvili, *et al.* (2003), Baron and Markman (2003), Markman, (2007), Boyatzis (2002), McKee (1961) y Goleman, 2002, Chell and Tracey (2005), Zahra, *et al.* (2006), Locke and Baum (2007), Frese (2007), Locke and Baum (2007), Chell (2008), quienes refieren a las características subyacentes para ser empresaria, resaltando principalmente las habilidades y actitudes; las cuales se someten a estudio conjuntamente con los conocimientos, para explicar a las competencias, Markman (2007). El objetivo de este trabajo, es presentar evidencia empírica en donde se someten a estudio los Factores Personales, el Entorno de referencia y el estilo de Liderazgo, para identificar su contribución a la explicación del constructo Certificación de Competencias Administrativas, presentes en la Mujer Empresaria, en la Zona Metropolitana de Guadalajara, Jalisco. México. La investigación es de alcance correlacional y corresponde a la línea de estudios de PyME.

REVISIÓN LITERARIA

El modelo de Ronstadt (1987) define el proceso empresarial de forma dinámica, el cual ocurre sobre diversos períodos que envuelve tanto pensamientos como acciones, también se ve influenciado y es definido multifactorialmente; es un proceso en el cual el papel de la empresaria está permanentemente evolucionando, por su parte, existen dos grandes percepciones que interactúan entre ellas, y que producen como efecto final la decisión de cambio de trayectoria vital, originando el proceso empresarial, Percepción de deseabilidad o gusto por el evento empresarial, Percepción de factibilidad y análisis detallado de la oportunidad de negocio; implica también un cambio de trayectoria vital que puede observarse en una educación con orientación a la vida empresarial, el conocimiento de un tipo de negocio, que determinan con un ciclo formativo (Varela, 2001).

El modelo de Gibb (1982), de la Universidad de Dirham (Gran Bretaña), generó una corriente de pensamiento reconocida en los países en vías de desarrollo, en relación a los componentes que están implícitos en la formación de empresa: Motivación y determinación, los cuales reflejan factores culturales, educativos, el papel de la familia y las actitudes ante la sociedad. Las investigaciones en el campo del emprendimiento se han constituido principalmente en tres grande enfoques. Primero, el económico que explica la creación de empresas por motivos de racionalidad económica Audretsch y Keilbach (2004); Wennekers, *et al.*, 2005; segundo, el psicológico que centra las características de los individuos como elementos que impactan en el proceso emprendedor McClelland, (1961); Stewart, *et al.*, 1999; Baron, (2000) y el tercero, el sociológico o institucional que señala que un individuo está determinado por el entorno socio-cultural en el que desarrolla, como determinantes para ser emprendedor (Shapero y Sokol 1982; Busenitz *et al.*, 2000).

En este trabajo se construye el modelo teórico con la revisión del estado del arte, que se somete a confirmación con el constructo: Certificación de Competencias en Administración como variable latente y con los constructos, como variables observadas: Conocimientos, medidos a través de los ítems: Aprendizaje, adquirido en una educación formal media y superior, cursos de educación continua, cursos independientes en temas administrativos o de especialización en la actividad principal que realiza la

empresa. Boyarzis (2002), Ronstadt, (1987) Baron, Markman, (2003), Shane (2003), Markman, (2007). Se considera como evidencia de los indicadores sometidos a estudio en Habilidades y Actitudes, a los últimos autores del trabajo de la autora Chell, (2013) en su artículo Revisión de Habilidades en Empresarios sobre diferentes autores.

Habilidades: Administración del tiempo, Trabajo bajo presión, Shane (2003), Chell (2008); Comunicación, Relaciones Humanas, Trabajo en equipo, Ardichvili et al. (2003), Baron and Markman (2003); Reconocimiento al trabajo bien realizado, Locke and Baum (2007); Automotivación y Autoconocimiento Chell and Tracey (2005), así como la habilidad para representar diferentes roles, Zahra, et al. (2006).

Actitudes: Tolerancia a la frustración, Shapero (1975); Iniciativa, Motivación; Receptiva a nuevas ideas, Locke, Baum (2007); Locus de control, Adaptabilidad, Orientada al logro de los beneficios de la empresa y su personal, Frese (2007), Markman, et al. (2002, 2005): Autoconocimiento y Automotivación. Liderazgo orientado al, trabajo en equipo, tarea, relaciones, liderazgo moderado o no liderazgo, correspondiente al Grid Gerencial, *Blake & Mounton* (1967), además de la relación mostrada de liderazgo y perfil del empresariado. Jack, Anderson (2002), Ardichvili, et al. (2003), Baron and Markman (2003).

METODOLOGIA

La investigación es descriptiva, confirmatoria de corte transversal, el marco de muestra está representado por mujeres empresarias que sus empresas que están clasificadas como PyME, aquellas que son consideradas como pequeña y mediana empresa, clasificadas de acuerdo al número de empleados y nivel de ventas., con base en la estratificación establecida en la fracción III del artículo 3 de la Ley para el Desarrollo de la Competitividad de la Micro, Pequeña y Mediana Empresa y en el Acuerdo por el que se establece la estratificación de las micro, pequeñas y medianas empresas, publicado en el Diario Oficial de la Federación de México, el 30 de junio de 2009, tabla no. 1. La extensión del tiempo a considerarse es de acuerdo a la antigüedad de la empresas se consideran desde la primera a la tercera generación, con un tipo de muestreo aleatorio estratificado considerando como criterios de selección el tamaño de la empresa. Hair, et al. (2007), se concluye para análisis con 186 instrumentos validados, con un valor de Alpha de Cronbach de .7, utilizando prueba de Normalidad y Análisis Factorial la información se codificó y tabuló en una base de datos procesada con SPSS 22 y el análisis confirmatorio con ecuaciones estructurales con el programa AMOS 22.

La presente investigación tiene para su nivel de análisis los siguientes alcances, se tiene contacto con el sujeto a estudio en una etapa posterior, donde las variables independientes, ya afectaron a las variables dependientes, ex post- facto; es transversal ya que sólo se mide una vez el estilo de Liderazgo, su alcance está delimitado para evaluar las relaciones entre las distintas variables involucradas de la Tabla No.2, así como el impacto de la dimensión Certificación de Competencias administrativas, con Conocimientos, habilidades y actitudes, experiencia empresarial y la antigüedad de la empresa El instrumento de obtención de información, se construyó a partir de la revisión del estado del arte para la medición de Competencias Administrativas, la facilidad, validez y extensión del mismo, ya que la mujer empresaria dispone de poco tiempo y fué difícil su localización en la empresa, dadas las multifunciones que realiza como mujer dentro de la sociedad.

RESULTADOS

Los resultados del modelo Máximum Likelihood Estimates, Arbuckle, (1994), son los que cumplen con los requisitos de los estimadores asintóticamente insesgados, consistentes y eficientes (Bollen, 1989), los cuales cubren los parámetros Bollen et al, (2014): Medidas de Ajuste Parsimonia CMIN/DF = 1.06, GFI .97; Medidas de Ajuste incremental NFI= .93; Medidas de ajuste absoluto RAMSEA = 0.018, los cuales son mayores que .90 y menores de .08 para RAMSEA = 0.018. La probabilidad de la distribución P es <.05

para la prueba de hipótesis, con los resultados del análisis de regresión. Las hipótesis sometidas a estudio que fueron aceptadas de acuerdo al análisis de regresión, Tabla no.2.

Tabla 1: Clasificación de Empresa Pyme

Estratificación Tamaño empresas México				
Tamaño	Sector	Rango de número de trabajadores	Rango de monto de ventas anuales (mdp)	Tope máximo combinado*
Micro	Todas	Hasta 10	Hasta \$4	4.6
Pequeña	Comercio	Desde 11 hasta 30	Desde \$4.01 hasta \$100	93
	Industria y Servicios	Desde 11 hasta 50	Desde \$4.01 hasta \$100	95
Mediana	Comercio	Desde 31 hasta 100	Desde \$100.01 hasta \$250	235
	Servicios	Desde 51 hasta 100		
	Industria	Desde 51 hasta 250	Desde \$100.01 hasta \$250	250

Fuente.- Diario Oficial de la Federación, 2014 México *Tope Máximo Combinado = (Trabajadores) X 10% + (Ventas Anuales) X 90%. El tamaño de la empresa se determinará a partir del puntaje obtenido conforme a la siguiente fórmula: Puntaje de la empresa = (Número de trabajadores) X 10% + (Monto de Ventas Anuales) X 90%, el cual debe ser igual o menor al Tope Máximo Combinado de su categoría, como criterio de clasificación también se considera el sector al que pertenece la empresa.

El grado económico administrativo contribuye positivamente a la explicación de la certificación global competencia; al analizar los resultados obtenidos, se obtuvo que el grado económico administrativo, es significativo a un 99% ($p=0.003$) de confiabilidad para explicar la certificación global competencia. La calificación por número de áreas de aprendizaje, contribuye positivamente a la explicación de la certificación global competencia; como lo muestran los resultados en el modelo propuesto, la calificación conocimientos, predice la explicación de la certificación global de competencia en Administración significativamente, a un nivel de confianza del 99%, por lo cual se acepta la hipótesis propuesta.

El tiempo como empresaria (experiencia) contribuye positivamente a la explicación de la certificación global competencia. Al evaluar los resultados obtenidos, se concluye que el tiempo como empresaria si contribuye de manera positiva a la explicación de la certificación global competencia, por lo que se acepta la hipótesis planteada con un nivel de significancia de $p=0.000$. La calificación de habilidades directivas, contribuye positivamente a la explicación de la certificación global de competencia en Administración; se comprueba a través del modelo de medición, que la calificación de habilidades directivas, es significativamente diferente de cero a un nivel de significancia menor a 0.001, por lo que se acepta la hipótesis planteada.

Tabla 2: Análisis de Regresión

Máximum Likelihood Estimates							
Regression Weights: (Group number 1 - Default model)			Estimates (Group number 1 - Default model)				
			Estimate	S.E.	C.R.	P	Label
Certificación Competencias	<---	Liderazgo	0.01	0.012	0.86	0.39	par_26
Calificación Habilidades	<---	Certificación Competencias A.	2.488	0.224	11.085	***	par_11
Calificación Actitudes	<---	Certificación Competencias A.	2.835	0.215	13.211	***	par_12
Diferentes Roles	<---	Certificación Competencias A.	-0.193	0.284	-0.68	0.497	par_15

Tiempo como empresaria	<---	Certificación Competencias A.	-5.798	1.848	-3.137	0.002	par_17
Años Promedio	<---	Certificación Competencias A.	-2.995	1.193	-2.511	0.012	par_18
Experiencia en el Giro	<---	Certificación Competencias A.	-0.379	0.205	-1.847	0.065	par_21

*Basado en los resultados del modelo teórico sometido a confirmación. Pesos de la regresión del modelo*** siendo significativamente distinta a cero a un nivel $p=0.01$, a un nivel de confiabilidad mayor al 99%, con un nivel de significancia de $p=0.000$. Predicción de explicación del constructo Certificación de Competencias Administrativas*

La calificación de actitudes contribuye positivamente a la explicación de la certificación global competencia, como lo muestran los resultados en el modelo de medición, que la calificación de actitudes es significativamente diferente de cero, a un nivel de significancia menor a 0.001, razón por la cual se acepta la hipótesis planteada. Los años promedio de creación de la empresa contribuyen positivamente a la explicación de la certificación global competencia, se comprueba por medio de los resultados obtenidos que, los años promedio de creación de la empresa contribuyen satisfactoriamente a la certificación global competencia, siendo significativamente distinta a cero a un nivel $p=0.01$, a un nivel de confiabilidad mayor al 99%. Se rechaza la hipótesis en relación a la contribución que tienen El estilo de liderazgo, Diferentes roles que desempeña en la sociedad y la experiencia en el giro o actividad a la que se dedica la empresa.

CONCLUSIÓN

La presente investigación cumple con el objetivo propuesto, de acuerdo al estado del arte se confirma que el constructo Certificación de Competencias Administrativas, puede sustentarse con el estudio de las competencias presentadas como, Conocimientos, Habilidades y Actitudes contribuyen a la actividad emprendedora, con los autores Locke and Baum (2007); Receptiva a nuevas ideas, Chell (2008); Administración del tiempo, Chell and Tracey (2005); Markman, (2007); Autoconocimiento y automotivación, Baron and Markman (2003), Jack and Anderson (2002); Liderazgo, Ardichvili, *et al.* (2003); Facilidad para las relaciones humanas, Zahra, (2006); Orientada al logro de los beneficios de la empresa y su personal, Frese (2007), Locke and Baum (2007). Se rechaza la hipótesis en relación al grado de contribución que tiene el estilo de liderazgo, hacia las competencias administrativas, ya que son valores no confirmados a nivel de modelo matemático, pero sí a nivel descriptivo, razón por la cual se recomienda ampliar el horizonte de la investigación con profundidad hacia la relación Certificación de Competencias Administrativas y Liderazgo.

RESUMEN

Este trabajo presenta una investigación de tipo descriptivo-correlacional con diseño no experimental sobre la ventaja competitiva y los factores determinantes de las capacidades organizacionales. Su objetivo es identificar la percepción de los empleados respecto a las capacidades de personalización y reconfiguración de la empresa en donde laboran y su relación con la ventaja competitiva de la firma; para alcanzarlo se trabajó con una muestra de 100 empleados del sector productivo de la ciudad de Tecate, Baja California, México. En la recolección de los datos se utilizó el cuestionario reportado por Máynez-Guaderrama, et al. 2013, cuya confiabilidad fue determinada a través del alfa de Cronbach, obteniendo un índice de confiabilidad de 0.798. Los resultados obtenidos revelan que existe una asociación positiva pero débil entre las capacidades organizacionales estudiadas y la ventaja competitiva.

PALABRAS CLAVE: Capacidad de Personalización, Capacidad de Reconfiguración, Ventaja Competitiva

COMPETITIVE ADVANTAGE FROM RESOURCE THEORY AND CAPABILITIES

ABSTRACT

This work presents a description-correlation type research with non experimental design over the competitive advantage and the determining factors of organizational capacities. Its objective is to identify the perception of employees in respect of personalization capacities and reconfiguration of the company in which they work and their relationship to the competitive advantage of the firm; to achieve this a sample size of 100 employees from the productive sector of the City of Tecate in Baja California, Mexico was used. In the recollection of data a questionnaire was used reported by Máynez-Guaderrama, et al. 2013, which its level of reliability was determined by means of Cronbach's alpha, obtaining a reliability index of .798. The results obtained reveal that a positive association exists but weak between organizational capacities studied and the competitive advantage.

KEY WORDS: Personalization Capacity, Reconfiguration Capacity, Competitive Advantage

JEL: C38, L29, M10

INTRODUCCIÓN

Los fenómenos de internacionalización y globalización han generado una serie de transformaciones en la sociedad y, por ende, en el contexto empresarial motivando a las empresas a ampliar o reconfigurar su actividad mejorando con ello sus niveles de calidad. En este escenario, es prioritario garantizar la supervivencia de las organizaciones lo cual se ha convertido en una labor extremadamente compleja porque es necesario alcanzar una posición competitiva que satisfaga de forma permanente y personalizada a los clientes (Galindo, Sanz y De Benito, 2013). De acuerdo con Cardozo, Hernández y Ramírez (2013), los

consumidores no solo requieren bienes de muy alta calidad, también exigen que estos respeten al medio ambiente y, se comporten responsablemente.

Para satisfacer los nuevos requerimientos de los clientes es necesario que las organizaciones cuenten con capacidades que se desplieguen de forma superior (Máñez-Guadarrama, et al., 2013). El concepto de capacidades organizacionales se ha desarrollado ampliamente en el campo de la estrategia y se entiende como rutina o rutinas de alto nivel que en su conjunto ofrecen a la gerencia de la organización elementos para solucionar problemas o adecuar situaciones que promuevan el logro de metas y objetivos, éstas evolucionan con el tiempo mediante un proceso de aprendizaje (Dávila 2013). Se dice que la organización posee capacidades cuando ésta tiene la habilidad para realizar cierta actividad de una forma confiable y mínimamente satisfactoria (Helfat y Winter, 2011, citados por Dávila, 2013). Esto implica la aplicación de experiencias pasadas en la solución de problemas actuales.

La literatura reporta un buen número de capacidades organizacionales, entre las que se encuentran la capacidad de personalización y la capacidad de reconfiguración, entre otras. Para Duray (2002) citado por Cardozo, et al., (2013) la capacidad de personalización se refiere a la habilidad de la organización para proporcionar bienes o servicios personalizados a precios razonables: mientras que la capacidad de reconfiguración se relaciona con las “habilidades, proceso y rutinas diferenciadas para llevar a cabo transformaciones necesarias” lo que permite ajustar el mercado a la estrategia operativa de la empresa (Máñez-Guadarrama, et al., 2013).

No obstante, pocas son las empresas mexicanas conscientes de la importancia de las capacidades como elementos relevantes para la creación de una posición competitiva de sus organizaciones, por tal motivo resulta de interés generar información que contribuya al desarrollo del conocimiento actual. En esta investigación se pretende identificar en el sector productivo localizado en la frontera noroeste de México, la percepción de los empleados respecto a la capacidad de personalización y la capacidad de reconfiguración de la empresa en donde laboran; al mismo tiempo, se busca explorar la relación entre la ventaja competitiva de la firma y las capacidades organizacionales (de personalización y reconfiguración). La estructura del trabajo es la siguiente: En principio se presenta un breve revisión de la literatura, a continuación se explica la metodología que incluye la selección de la muestra, la descripción del instrumento de medición y el análisis de los datos; posteriormente se exponen los resultados y por último las conclusiones obtenidas.

REVISION DE LA LITERATURA

El termino competitividad puede ser entendido como la capacidad de una empresa para integrarse de manera permanente a procesos de cambio e innovación, considerando en su quehacer empresarial, aspectos sociales y ambientales; logrando con ello mantenerse y sobresalir en un mercado global, a través de un desarrollo sustentable, mediante la creación de productos de valor. (Sarmiento, Sánchez y Cruz, 2009). De acuerdo a Saez de Viteri (2000) la ventaja competitiva se identifica con la capacidad de responder a la demanda e incrementar los niveles de rentabilidad, y que asentándose en competencias nucleares, se sea capaz de provocar mercados de competencia imperfecta a largo plazo, convirtiéndola así en una ventaja competitiva sostenida, logrando con ello que la empresa realice una estrategia de creación de valor que no esté siendo implementada por ninguno de sus competidores actuales o potenciales y que estos sean incapaces de imitarla.

López y Pontet, (2011) afirman que “la ventaja competitiva sostenible deberá combinar los factores basados individualmente entre recursos propios e institucionales, y como empresas la relación entre estas y el entorno institucional” explicado como el resultado de la correlación entre gestión, y acumulación de recursos, e impacto de las estrategias implementadas en el sector y el mercado. Chakraborty citado por Hernández et al. (2008) explica que existen dos líneas al hablar del concepto de ventaja competitiva una en la que se establece que las empresas sean rentables, y otra basada en la inimitabilidad siendo aquí

donde se incorpora la teoría de los recursos al definir las capacidades que se poseen para competir. “La visión basada en los recursos examina los recursos y las capacidades de las empresas que permiten generar tasas de retorno superiores a lo normal y ventajas competitivas sostenibles” (Amit y Schoemaker, Barney, Dierickx y Cool, Mahoney y Pandian, Wernerfelt citado por López y Pontet, 2011). Las empresas generan estrategias al buscar un desempeño superior o resultados que sean sustentables a través de estudiar su entorno competitivo; lo cual concuerda con lo mencionado por Porter quien afirmó que “el desempeño superior de una empresa radica en las actividades de la cadena de valor y el enfoque basado en los recursos” (De la Fuente y Muñoz; S.F.), así mismo mencionan que los recursos y actividades son diferentes, los recursos tienen que ver con las existencias, y las actividades con los flujos. El desempeño operativo y la ventaja competitiva percibida se ven influenciadas en función de las capacidades de personalización masiva y las capacidades de reconfiguración, ya que es lo que permitirá la implementación eficiente de las actividades producidas Maynes et al 2013.

Capacidad de Personalización

Este concepto describe el proceso a través del cual las empresas aplican tecnología y métodos administrativos para proporcionar productos variados y personalizados a través de una respuesta rápida y flexible (Silveira et al ., 2001),

Capacidad de Reconfiguración

Esta capacidad se posee cuando se es posible modificar o actualizar el diseño a nuevas aplicaciones muchas veces “sobre la marcha”, sin necesidad de rediseñar totalmente el sistema sino de una manera parcial o bien como define Bravo y Herrera siguiendo a Lavie, (2006). Una crítica a la teoría de los recursos son: que al principio no identifica cuáles son los recursos clave para la implementación de estrategias sino después, por ello las nuevas estrategias se basan en los resultados anteriores; en contrapunto se han encontrado relaciones entre los recursos y los procesos de una organización lo que conlleva al desarrollo de ventajas competitivas (Williamson, (Ray *et al.*, citados por López y Pontet, 2011).

METODOLOGÍA

La estrategia metodológica de esta investigación tiene un enfoque cuantitativo cuyo diseño es no experimental, específicamente transversal y descriptiva-correlacional; se dice descriptiva porque trata de especificar las características del fenómeno estudiado y correlacional porque tiene como finalidad identificar la asociación en las variables estudiadas (Hernández, Fernández y Baptista, 2010). El trabajo se desarrolló en empresas ubicadas en la ciudad de Tecate del estado de Baja California perteneciente a la región noroeste de la República Mexicana, cuyo perfil se muestra en la Tabla 1. La selección de la muestra fue a través muestreo por juicio, que es una forma de muestreo por conveniencia en el cual los elementos son seleccionados a propósito con base en el juicio del investigador procurando que sean representativos de la población (Cázares, 2008).

Tabla 1: Perfil de las empresas participantes

Característica	Frecuencia	Porcentaje (%)
Sector		
Industrial	37	37.0
Maquilador con exportación	44	44.0
Comercial	11	11.0
Servicios	7	7.0
No especificó	1	1.0
Bienes o productos que produce para la industria		
Automotriz	1	1.0
Médica	16	16.0
Telecomunicaciones	1	1.0
Alimentos y Bebidas	12	12.0
Eléctrica	20	20.0
Otras	50	50.0
Número de empleados		
Menos de 10 personas	1	1.0
Entre 11 y 30 personas	5	5.0
Entre 31 y 50 personas	1	1.0
Entre 51 y 100 personas	13	13.0
Entre 101 y 250 personas	8	8.0
Más de 250 personas	72	72.0

Esta Tabla describe el perfil demográfico de las empresas participantes de este estudio, que en su mayoría pertenecen al sector maquilador de exportación y tiene más de 250 empleado Fuente: Elaboración propia con resultados de trabajo de campo

En el estudio participó el personal de la empresa que incluyó a gerentes (10%), supervisores (30%), técnicos (30%), ingenieros (10%), analistas (9%) y otros perfiles (11%), a los cuales se les aplicó una encuesta, mediante un cuestionario auto-administrado. Como escala de medición se empleó la reportada en el trabajo de Máñez-Guadarrama, et al., (2013) integrada por 18 ítems cuya categoría de respuestas para las variables capacidad de personalización y capacidad de reconfiguración fue en escalamiento numérico de cinco valores, donde (1) corresponde a totalmente en desacuerdo y (5) a totalmente de acuerdo; mientras que para la variable ventaja competitiva, también de cinco valores, va de (1) muy pobre, por debajo de la industria a (5) muy superior que la competencia. En total se recolectaron 100 cuestionarios. La aplicación del instrumento se realizó en el transcurso de junio 2013 a febrero 2014.

Para determinar la confiabilidad del instrumento se utilizó el método de consistencia interna mediante el cálculo del alfa (α) de Cronbach. La literatura reporta que este índice oscila entre 0 y 1, donde los valores cercanos a 0 significan muy baja confiabilidad mientras que hacia 1 indica confiabilidad elevada; en este trabajo se encontró un índice de 0.798, dato que según Hernández, et al. (2010), podría considerarse aceptable para su aplicación. En el análisis de los datos se utilizó el paquete *Statistical Package for the Social Sciences* (SPSS) versión 22 para frecuencias, estadísticos descriptivos, la confiabilidad (α de Cronbach) y correlaciones.

RESULTADOS

Perfil de los encuestados. El 65% de los respondientes son hombres, el 53% cuenta con estudios a nivel profesional (licenciatura terminada), y, en su mayoría, adultos jóvenes cuya edad oscila entre los 31 y 40 años (Tabla 2)

Tabla 2: Perfil de los Encuestados

Característica	Frecuencia	Porcentaje (%)
Sexo		
Masculino	65	65.0
Femenino	35	35.0
Escolaridad		
Preparatoria terminada	19	19.0
Carrera profesional no terminada	17	17.0
Carrera profesional terminada	53	53.0
Otras	11	11.0

Análisis descriptivo: Capacidad de personalización. Los resultados de los estadísticos descriptivos de la variable personalización (Tabla 3) revelan que se perciben como fortalezas en las empresas estudiadas, dos de ellas alcanzan una media de 4.00 lo cual indica que estas las que a juicio de los encuestados son las más favorecidas.

Tabla 3: Estadísticas Descriptivas de la Capacidad de Personalización

Capacidad	Media (μ)	Desviación Estándar	Mínimo	Máximo
Identificar claramente las necesidades de nuestros clientes.	3.91	0.62	3	5
Producir exactamente lo que nuestros clientes desean	4.00	0.65	3	5
Producir a gran escala, de acuerdo a las necesidades individuales identificadas en los clientes	3.94	0.72	2	5
Ampliar nuestra variedad de productos, sin tener que incrementar costos	4.00	0.81	2	5
Incrementar nuestra variedad de productos, sin sacrificar volúmenes de producción	3.81	0.78	2	5

Esta tabla muestra la media de las variables con que se midió la Capacidad de personalización.

Fuente: Elaboración propia con datos de campo

En la tabla 3 se exhiben las medias de las variables con que se evaluó la capacidad de personalización Atendiendo al criterio de Silveira, et al., (2001) citado por Máñez-Guadarrama, et al., (2013) esto manifiesta que las empresas tienen habilidad para advertir las necesidades del cliente por lo cual producen los bienes o servicios esperados a través de una amplia variedad de productos sin incrementar los costos. Análisis descriptivo: Capacidad de reconfiguración, por lo que refiere a esta, los resultados manifiestan las variables que la integran son favorables para las empresas ya que se perciben con acuerdo entre los encuestados con valores cercanos a 4, destacando la capacidad de las organizaciones para manufacturar productos de forma simultanea o periódica (Tabla 4).

Tabla 4: Estadísticas Descriptivas de la Capacidad de Reconfiguración

Capacidad	Media (μ)	Desviación Estándar	Mínimo	Máximo
Producir distintos tipos de productos sin necesidad de realizar grandes cambios.	3.77	0.63	2	5
Construir productos diferentes, en la misma planta y al mismo tiempo.	3.98	0.76	2	5
Manufacturar productos de forma simultánea o periódica, en forma productiva estable	4.00	0.68	3	5
Cambiar nuestra combinación de productos, de un periodo a otro	3.96	0.79	2	5
Cambiar muy rápidamente la producción, de un artículo a otro	3.83	0.79	2	5

Esta tabla muestra la media de las variables con que se midió la Capacidad de reconfiguración. Fuente: Elaboración propia con datos de campo

Análisis descriptivo: Ventaja competitiva, los resultados (Tabla 5) revelan una mayor atención en lo que respecta obtener y mantener una mejor posición competitiva respecto otras organizaciones, los ítems que componen esta variable se perciben con acuerdo entre los respondientes. Para estos, la participación en el mercado y la satisfacción del cliente resultan ser aspectos que contribuyen a lograr ventaja sobre sus competidores.

Tabla 5: Estadísticas descriptivas de Ventaja Competitiva

Ventaja	Media (μ)	Desviación Estándar	Mínimo	Máximo
Rentabilidad Económica(Utilidades)	3.95	0.71	2	5
Crecimiento De Las Ventas	3.91	0.79	1	5
Participación De Mercado	4.10	0.71	1	5
Crecimiento De La Empresa	4.05	0.77	1	5
Productividad Laboral	3.98	0.80	1	5
Satisfacción Del Cliente	4.09	0.78	1	5
Satisfacción De Otros Involucrados	3.99	0.74	1	5
Fortaleza De La Posición Competitiva	4.03	0.74	2	5

Esta tabla muestra la media de las variables con que se midió la Capacidad de reconfiguración. Fuente: Elaboración propia con datos de campo.

Los estadísticos descriptivos ponen de manifiesto, desde la perspectiva de los encuestados, que el crecimiento de las ventas es el aspecto menos favorecido ($\bar{x} = 3.91$, $s = 0.79$) en relación a sus competidores, ya que de las ocho variables analizadas (gráfica 3) esta es la que se valora similar al resto de la industria. Análisis de las correlaciones. Antes de pasar a identificar la posible relación entre las variables de estudio, se comprobó el cumplimiento de la normalidad de los datos a través de la aplicación de la prueba de Kolmogorov-Smirnov. La hipótesis estadística (H_0) sostiene que las variables pueden modelarse con una distribución normal; los resultados de la prueba muestran que el nivel p para la prueba es significativo (esto es, $p < 0.05$) por tanto se rechaza la hipótesis (Alea, et al., 2005), de manera que las variables no pueden modelarse con una distribución normal.

Dado lo anterior, para valorar la asociación entre las variables de estudio se decidió calcular el coeficiente Rho de Spearman. Este coeficiente es una medida de asociación lineal que utiliza los rangos, números de orden, de cada grupo de sujetos y compara dichos rangos (Martínez, et al, 2009). Tal como se aprecia en la Tabla 6, todos los índices de correlación encontrados muestran asociaciones significativas (a $p < 0.01$) que oscilan entre 0.38 y 0.47 identificadas de fuerza débil pero positivas, según el criterio de la escala 4 reportada por Martínez, et al. (2009). La variable Ventaja competitiva tiene una mayor correlación ($\rho = 0.47$ $s = 0.00$) con la variable de reconfiguración, esto significa que sus esfuerzos por producir diferentes productos en la planta o manufacturar productos simultáneos le da cierta ventaja con sus competidores.

Tabla 6: Correlaciones Entre Variables

Variables	Correlacione	Variables			
		S	Capacidad de Personalización	Capacidad de Reconfiguración	Ventaja Competitiva
Capacidad de Personalización	Rho de Spearman	1.000	.446**	.380**	
	Sig. (bilateral)	.	.000	.000	
Capacidad de Reconfiguración	Rho de Spearman	.446**	1.000	.470**	
	Sig. (bilateral)	.000	.	.000	
Ventaja Competitiva	Rho de Spearman	.380**	.470**	1.000	
	Sig. (bilateral)	.000	.000	.	

** Correlación significativa a 0.001(bilateral). En esta tabla describen las correlaciones entre las variables, los índices de correlación entre la Ventaja competitiva y las Capacidades de personalización ($\rho=.38$) y de reconfiguración ($\rho=.47$) son positivas y débiles. Fuente: Elaboración propia

CONCLUSIONES

Como se mencionó el objetivo de este trabajo fue identificar en el sector productivo localizado en la frontera noroeste de México, la percepción de los empleados respecto a la capacidad de personalización, capacidad de reconfiguración de la empresa en donde laboran y su relación con la ventaja competitiva de la firma. En general los resultados revelan, desde la percepción de los empleados, que las firmas para la cual trabajan poseen capacidades de personalización y reconfiguración, esto es, ellos están de acuerdo en que las empresas aprovechan sus experiencias pasadas para adaptarse al contexto actual. Además se encontró una asociación positiva pero débil entre las capacidades organizacionales estudiadas y la ventaja competitiva. El aporte del presente estudio fue la identificación de las capacidades de personalización y reconfiguración de las empresas, lo cual es de gran relevancia para desarrollar estrategias que mejoren los procesos de gestión para la obtención de ventajas competitivas. Cabe señalar que este estudio, tiene algunas limitaciones como el hecho de que la muestra utilizada es por conveniencia, situación que debe ser considerada como una debilidad para la generalización de resultados.

Al crearse ventajas sostenibles se conlleva a procesos dinámicos e innovadores donde a través de la aplicación de estrategias distintivas se envuelven cambios y adaptaciones (Markides, citado por López y Pontet, 2011). Así pues se identificó la posibilidad de igualar las relaciones teóricas en donde tanto la capacidad de personalización, como la de reconfiguración incidieron en el desempeño de las operaciones, reconociéndose una gran capacidad para ampliar la variedad de los productos sin tener que incrementar los costos, así mismo se reconoció, la posesión de capacidades para producir exactamente lo que los clientes desean, y en cuanto a la capacidad de reconfiguración se identificó la posesión de capacidades para manufacturar productos de forma simultánea y dentro de la misma planta. Conseguir una ventaja sostenible en las empresas requiere de la gestión de sus recursos y tomar adecuadamente sus decisiones, lo anterior incluye su cultura, la influencia del gobierno, la sociedad y las relaciones con otras empresas (López y Pontet, 2011). Cabe añadir que mediante el análisis de los recursos y capacidades se identifican las fortalezas y debilidades de las organizaciones lo que ayuda para explotar las oportunidades y neutralizar las amenazas, constituyendo una fuente de ventaja competitiva que beneficia en el ajuste y desarrollo de las estrategias.

PROPUESTA METODOLOGICA PARA LA MEDICIÓN DE EFICIENCIA EN EL SECTOR MINERO EN MÉXICO:DEA

Yenisey Castro García, Universidad Michoacana de San Nicolás de Hidalgo

RESUMEN

En México la minería tiene una gran importancia social (por la generación de empleos) y económica (por su participación de 5.26% en el PIB). Se considera como un agente dinamizador del desarrollo del país, imprescindible para el funcionamiento de otros sectores. No obstante, su contribución al PIB en términos porcentuales ha ido disminuyendo los últimos años. El objetivo de esta investigación es proponer una metodología de evaluación de eficiencia para medir y establecer estrategias para el mejoramiento de la industria. El modelo se aplicó a cinco de las compañías mineras más importantes de México. Para ello se utilizó el enfoque mixto de dos etapas. En la primera (cuantitativa) se realizó el análisis de eficiencia mediante el análisis envolvente de datos (DEA) y después se comparó con la situación cualitativa por la que pasaban en ese momento. Los resultados muestran que las compañías que resultaron ser eficientes son las que mejor evaluaron todos los aspectos cualitativos como responsabilidad social, situación económica y otros. Mostrando así como la herramienta metodológica DEA puede utilizarse y aplicarse muy bien para este campo.

PALABRAS CLAVE: eficiencia, DEA, sector minero

METHODOLOGY TO MESUARE EFFICIENCE IN MINNING OPERATION IN MEXICO

In Mexico mining has an important economic and social role (by generating jobs) (for their participation of 5.26% in GDP). It is considered as a dynamic agent of the development of the country, which is essential for the operation of other sectors. However, its contribution to GDP in percentage terms has been declining the past few years. The objective of this study is to propose a methodology of evaluation of efficiency to measure and establish strategies for the improvement of the industry. The model was applied to five of the most important mining companies in Mexico. It was mixed two-stage approach. In the first (quantitative) the analysis of efficiency through the enveloping analysis of data (DEA) and then compared to qualitative situation that passed at that time. The results show that companies that turned out to be efficient are which better evaluated all qualitative aspects such as social responsibility, economic situation and others. Thus showing how the tool methodological DEA can be used and apply very well to this field.

KEYWORDS: Efficiency, Mining

INTRODUCCIÓN

México se caracteriza a nivel mundial por sus productos mineros, plata, carbón etc. Esta actividad l se ha practicado desde tiempos inmemorables, contribuyendo desde la elaboración de algunos pigmentos, hasta la transformación de materias primas en artículos altamente tecnificados. Hoy en día el sector minero tiene una gran importancia en el mundo para la generación de riqueza y su contribución en la economía mundial.

El sector minero mexicano tiene una gran importancia en términos económicos y sociales. En términos económicos es el sexto en importancia económica en el país, después del sector de la Industria manufacturera, Comercio, Servicios inmobiliarios y de alquiler de bienes muebles e intangibles, Transporte, correos y almacenamiento y Construcción. De acuerdo con el Instituto Nacional de Estadística y Geografía en 2003 la minería contribuía con 6.19% al PIB Nacional, presentándose un continuo decremento en los años siguientes (2004, 6.02%; 2005, 5.82%; 2006, 5.61%; 2007, 5.42%; 2008, 5.26%) (INEGI, 2010). Esto significa que en términos porcentuales, la participación de éste sector al PIB ha ido disminuyendo en los últimos años.

Sin embargo, las exportaciones de éste sector han aumentado particularmente en la última década. De manera específica a partir de 2002 comienza a reproducirse un crecimiento relativamente fuerte, con una total de 30 millones de dólares en ese año hasta alcanzar los 120 millones de dólares para 2008 (INEGI, 2010). Otro aspecto favorable ha sido el incremento de empleos formales en este sector. De acuerdo con el Banco de Información Estadística, el número de trabajadores de industrias extractivas asegurados en el Instituto Mexicano del Seguro Social pasó de 64 mil trabajadores en 2002 a 99 mil trabajadores en 2009 (Banco de Información Estadística, 2010). Aunque la industria minería en México ha generado importantes beneficios económicos y sociales, también existen varios retos que resolver. Uno de ellos es el aspecto de la Responsabilidad Social Empresarial (RSE), que está tomando gran relevancia en este sector.

De acuerdo con Heledd Jenkins históricamente la industria minera ha tomado una actitud poco cuidadosa del impacto de sus actividades, operando en áreas sin legitimidad social, causando grandes devastaciones, y dejando las zonas de operación una vez que los recursos naturales han sido explotados. El discurso acerca de los enormes beneficios económicos que genera este sector ha sido la mejor “excusa” para minimizar los daños que ha provocado esta actividad (Jenkins, 2004).

El comportamiento de las empresas deberá evaluarse a través de técnicas diseñadas para medir productividad o eficiencia, con la finalidad de que los ejecutivos encargados de la toma de decisiones estén en la posibilidad de identificar las áreas de oportunidad de mejora y conocer el uso de recursos de sus competidores. La aplicación de la técnica DEA ha sido ampliamente aplicado a diversos campos; (Camanho & Dyson, 2005) en el sector bancario; (Barros, 2005) en el sector hotelero; (Butler & Li, 2005) en hospitales, etc. La cantidad de trabajos publicados en diferentes periódicos y revistas, utilizando esta metodología, sugiere la amplia aplicación que tiene el DEA.

En este sentido, este trabajo tiene como objetivo aplicar la metodología DEA a cinco de las compañías mineras más importantes de México, con la finalidad de mostrar la aplicabilidad y factibilidad de uso de esta metodología en este sector. Es importante mencionar que esta investigación se trata de la primera aproximación en este campo para establecer este tipo de relación.

El trabajo está dividido de la siguiente manera. En la primera sección se hace un resumen de la revisión literaria realizada durante la investigación respecto de la eficiencia y los antecedentes de esta relación teórica. En la segunda se aborda la metodología llevada a cabo para el logro del objetivo utilizando técnicas cuantitativas para el análisis de la eficiencia (metodología DEA). En última sección se presentan los resultados obtenidos en el análisis.

REVISION LITERARIA

Definición De Eficiencia

En lo que respecta a la eficiencia, algunos autores distinguen distintos tipos de eficiencia de acuerdo a su inserción en el modelo teórico de la teoría de la producción. En realidad, la eficiencia económica se puede descomponer en tres medidas: eficiencia técnica, eficiencia asignativa y eficiencia de escala (García, 2002)

La eficiencia técnica, pone de manifiesto la capacidad que tiene una Unidad (DUM) para obtener el máximo Output a partir de un conjunto dado de Inputs y se obtiene al comparar el valor observado de cada Unidad con el valor óptimo que viene definido por la frontera de producción estimada (Coll y Blasco, 2006) Existe eficiencia asignativa cuando el administrador de una DUM ha sabido no solo alcanzar el conjunto frontera de producción, sino que también lo hizo eligiendo aquella combinación de factores que le permite minimizar los costos incurridos para un nivel de producción dado (Seijas, 2004).

La eficiencia técnica de escala, mide el grado en que una unidad productiva opera en la dimensión óptima; es decir, considera el tamaño de la planta y está asociada a la existencia de rendimientos variables a escala (Banker, et al 1984).

Con carácter general los métodos de estimación para construir la frontera de producción y evaluar la eficiencia pueden clasificarse, en función de que ser requiera o no especificar una forma funcional que relaciones los inputs con los outputs, en métodos paramétricos o no-paramétricos. A su vez pueden emplearse métodos estadísticos o no para estimar la frontera que, en última instancia, puede ser especificada como estocástica o determinista. Dicho esto se puede decir que el Análisis Envolvente de Datos (DEA) es una técnica no-paramétrica, determinista, que recurre a la programación matemática. (Coll & Blasco, 2006).

METODOLOGÍA

A pesar de que la técnica DEA nos sugiere el uso de más de 20 DMUs, la simulación utilizada a nuestro caso de estudio provee evidencia suficiente para ejemplificar el beneficio del uso del DEA.

La técnica utilizada para analizar la eficiencia fue el análisis envolvente de datos (DEA, por sus siglas en inglés), mencionada en la sección anterior, que es una técnica de programación matemática que nos ayuda a crear una superficie envolvente, frontera de eficiencia o una función de producción empírica, partiendo de un conjunto de Unidades que conforman la envolvente y se nombran como unidades eficientes y aquellas que no se ubican dentro de la envolvente son consideradas como no eficientes.

La importancia de la técnica DEA radica el análisis de información de inputs y outputs de las unidades de estudio y de esta manera estimar la eficiencia relativa de las unidades de decisión comparando cada una de ellas solamente con las mejores unidades de decisión DUM del mismo conjunto. En este tipo de método, se asume que si A es capaz de producir Y(A) resultados con X(A) insumos, entonces los otros productores deben de producir lo mismo que A para poder ser eficientes (Arieu 2003).

La medida de eficiencia se da en $pra^2 + b^2 = c^2a^2 + b^2 = c^2$ esencia de múltiples inputs y outputs definidos como:

Eficiencia = peso de la suma de los outputs/ peso de la suma de los inputs

Según el modelo básico de Charnes et al. 1978, se requieren tantas optimizaciones como unidades de decisión (DMU), a partir del modelo de programación lineal siguiente:

$$\begin{aligned} \text{Max } \theta &= \mu_1 y_{10} + \dots + \mu_{\text{sys}} y_{\text{0}} \\ \text{sa} \\ v_1 x_{10} + \dots + v_m x_{m0} &= 1 \\ \mu_1 y_{1j} + \dots + \mu_{\text{sys}} y_{\text{sj}} &\leq v_1 x_{1j} + \dots + v_m x_{mj} \quad (j=1, \dots, n) \\ v_1, v_2, \dots, v_m &\geq 0 \\ \mu_1, \mu_2, \dots, \mu_{\text{sys}} &\geq 0 \end{aligned}$$

Siendo v_i y μ_i respectivamente las ponderaciones para los inputs (x_i) y los outputs (y_i).

En los modelos no paramétricos, el análisis de eficiencia no requiere ninguna hipótesis sobre la frontera de producción, siendo la eficiencia de una unidad definida con respecto a las unidades “observadas” con mejor comportamiento. Este análisis se detiene en la identificación del “mejor comportamiento” en lugar de un “comportamiento medio”, como hace el análisis de regresión

Cada una de las DMUs obtiene pesos de input y de output que maximizan su valor de eficiencia. En general, una DMU se considera eficiente si obtiene un valor igual a 1 y si el valor es menor a 1 implica que la unidad es ineficiente.

El modelo aplicado para conocer la eficiencia de las compañías sujetas de estudio fue el modelo CCR ya que durante la investigación se observó que estas compañías presentan rendimientos constantes anuales.

Después se aplicó un análisis slack para conocer en qué medida las empresas ineficientes, podría mejorar. Todo con la finalidad de establecer un parámetro en la operación de estas compañías de este sector. Los cálculos se realizaron en el software DEA Frontier 2010.

Selección de las DMU: Las DMU fueron seleccionadas con base en la importancia del sector minero y según la disponibilidad de información para realizar los cálculos, ya que no todas las compañías mineras contaban con información para todas las variables seleccionadas para el año de análisis (2009). Las compañías sujetas de análisis fueron: Grupo México, Fresnillo PLC, Compañía Minera Autlán, Exportadora de Sal, Industrias Peñoles.

Selección de los Inputs y Outputs: Dadas las características de producción de las compañías mineras, varios atributos de estas podrían ser tomados en cuenta para evaluar su desempeño. Dentro de este trabajo la selección fue la siguiente; el número de empleados y el patrimonio neto de las compañías como inputs y las Ventas Netas como output ya que son las variables proxies que más representan a los factores tierra, capital y trabajo.

Para confirmar que los inputs y outputs seleccionados evalúen la eficiencia de las compañías apropiadamente, se realizó un análisis de Correlación de Pearson para demostrar que existe isotonicidad en la información. La correlación de los 2 inputs contra el output fue mayor a .6 demostrando que todos ellos se correlacionan positivamente. La base de datos para procesar los cálculos se obtuvo de la revista Expansión (2010) al año 2009.

RESULTADOS

Eficiencia: La empresa que obtuvo el 100% de eficiencia fue Industrias Peñoles, lo que representa que el uso de sus recursos es el más eficiente de las 5. Sin embargo la compañía Fresnillo obtuvo un 99% de eficiencia por lo cual para esta investigación se considera que es eficiente. Por el contrario las empresas Grupo México y Exportadora de Sal mostraron una ineficiencia técnica importante, ya que obtuvieron 54% de eficiencia. Compañía Minera Autlán obtuvo un 66% siendo no tan grave sin embargo su manejo de recursos no es el adecuado. El resumen de los resultados se aprecia en la tabla 1.

Tabla 1. Resultados del Análisis Cuantitativo

Compañías Mineras	Resultados de Eficiencia operativa
Grupo México	54%
Fresnillo PLC	99%
Compañía Minera Autlán	66%
Exportadora de Sal	54%
Industrias Peñoles	100%

Fuente: Elaboración propia

CONCLUSIONES

La utilización de la metodología no muestra fácilmente la eficiencia operativa proveyendo a los tomadores de decisiones herramientas que sirven en la planeación estratégica. Esta herramienta muestra su utilidad y fácil manejo. Se podría potencializar con alguna herramienta adicional de interpretación de resultados.

Para ser eficientes no se necesita ser la compañía con más ventas, ni tener el mayor número de empleados. Hoy en día las empresas eficientes son las que hacen mejor uso de sus recursos internos y externos. Lo anterior se demuestra con los resultados de las compañías Fresnillo PLC e Industrias Peñoles quienes en ventas obtuvieron el 9% y 36% del total de ventas de las cinco empresas mineras analizadas; y en empleos concentraron el 6% y el 23% del total de empleados éstas mismas cinco empresas.

De acuerdo con el análisis slack realizado a las compañías que obtuvieron una ineficiencia se aprecia que éstas principalmente deberán incrementar sus ventas. Adicionalmente la Compañía minera Autlán y la compañía Exportadora de sal deberán incrementar sus empleados para operar sobre la frontera de eficiencia y así poder incrementar sus ventas. Otro aspecto relevante fue que al parecer el tiempo de antigüedad de tener algún distintivo es importante en la actividad empresarial, ya que con ello mejora la eficiencia.

Todo lo anterior nos sugiere que un estudio posterior será conveniente, en la medida de lo posible, realizar una evaluación agregando más variables y poder observar el comportamiento. Será también interesante, a reserva de la disponibilidad de información, realizar estudios de corte longitudinal.

Observamos que a partir de este estudio de caso podemos utilizar esta herramienta con el sector minero mundial, generando así nuevas líneas de investigación, utilizando técnicas de medición de eficiencia.

RESPONSABILIDAD SOCIAL EN LA INDUSTRIA HOTELERA EN EL MUNICIPIO DE CIHUATLÁN, JALISCO

Myriam Arias Uribe, Universidad de Guadalajara
Marcela de Guadalupe Pelayo Velázquez, Universidad de Guadalajara
Mónica Araceli Reyes Rodríguez, Universidad de Guadalajara

RESUMEN

Este documento presenta el primer avance de un proyecto de investigación cuyo objetivo es identificar los factores que determinan el cumplimiento en materia de Responsabilidad Social de las micro, pequeñas y medianas empresas del sector hotelero en el municipio de Cihuatlán, Jalisco. Para el logro de los objetivos planteados se aplicará un cuestionario a una muestra representativa de empresas del Sector Hotelero, para lo que se diseñará un instrumento con el fin de determinar indicadores de responsabilidad social empresarial en materia de relaciones con terceros, la comunidad y el medio ambiente. Las PyMEs del sector hotelero en el municipio de Cihuatlán se caracterizan por ser empresas familiares que enfrentan presiones del entorno derivadas de aspectos económicos, sociales y ambientales; esto define su estrategia de negocios y la forma de competir en el mercado, por lo tanto resulta importante identificar aquellas con buenas prácticas y su relación con el desempeño.

PALABRAS CLAVE: Responsabilidad Social Empresarial, Pymes

SOCIAL RESPONSIBILITY IN HOTEL INDUSTRY IN CIHUATLÁN, JALISCO

ABSTRACT

The current document is an advance of a research project whose main purpose is to identify the determinant factors for compliance of Corporate Social Responsibility in small and medium enterprises of hotel industry in Cihuatlán, Jalisco. The analysis of the aspects related to social responsibility in SMEs is important due to the characteristics of these companies, operated mainly by families. The high risk level that these companies face related to the environmental, social and economic variables is the main aspect that lead us to analyze their business behavior.

Key Words: Social Responsibility, Smes

JEL M14, M10

INTRODUCCIÓN

La Responsabilidad Social Empresarial (RSE) está relacionada con la forma en la que las empresas interactúan con la sociedad, el impacto que estas tienen en el medio ambiente y la calidad de vida. A partir de esta interacción, surgen diversas iniciativas encaminadas a definir las responsabilidades que las corporaciones tienen tanto a nivel interno como externo; ampliando la perspectiva de la existencia de la empresa solo con la finalidad de generar utilidades a sus socios. Los planteamientos iniciales de la RSE se relacionaron con acciones voluntarias de las corporaciones, sin la existencia de un marco legal explícito, lo que lleva a considerarla como una alternativa de acción. Algunos aspectos han cambiado a lo largo del tiempo; modificaciones en la legislación de algunos países obligan al cumplimiento de normas ambientales,

tributarias, laborales, entre otras; sin embargo, no todos los aspectos considerados por los diferentes organismos como factores de cumplimiento por una empresa socialmente responsable, se encuentran regulados en las leyes. No se ha llegado a una definición universal de RSE, aunque existen elementos comunes entre los diferentes conceptos acuñados a lo largo del tiempo. Si bien en su origen se centraba en los grandes corporativos o las empresas multinacionales, actualmente se considera su adopción por parte de micro, pequeñas y medianas empresas, como una forma de mejorar el desempeño de las mismas en procesos internos, así como su competitividad en el mercado.

Las micro, pequeñas y medianas empresas (PyMEs) representan en promedio el 98% de las empresas en México. Estas unidades económicas son generadoras de empleo y contribuyen al desarrollo de las regiones, por lo que desempeñan un papel fundamental en la economía mexicana. El estudio de las características de estas unidades económicas ha cobrado importancia a través del tiempo, su dinámica difiere de la gran empresa, ya que enfrentan condiciones distintas en cuanto a organización interna, procesos productivos y recursos. Derivado de lo anterior, los aspectos relacionados con el ambiente externo, tales como mercados, ambiente político, económico, social y tecnológico representan retos diferentes para este tipo de organizaciones. El presente documento es un avance del proyecto de investigación que tiene como objetivo identificar las prácticas relacionadas con la Responsabilidad Social Empresarial en PyMEs hoteleras localizadas en el municipio de Cihuatlán, Jalisco. Específicamente se busca identificar las características de estas unidades de negocios, su forma de operar, las características de los administradores/empresarios y su compromiso con una gestión socialmente responsable.

REVISIÓN DE LITERATURA

Uno de los objetivos de las empresas es la generación de utilidades a sus accionistas o propietarios, sin embargo, existen otros intereses que deben tomarse en cuenta a la hora de analizar los objetivos empresariales. Los trabajadores, consumidores, proveedores, la sociedad en general, son agentes que se ven afectados de manera directa o indirecta por las acciones de las compañías. La RSE constituye una serie de prácticas que consideran a todos los intereses involucrados en la operación de una compañía (Bonilla, 2011). Puede ser definida como una contribución voluntaria al desarrollo sustentable, que va más allá de requerimientos legales (Carroll, 1999). Las empresas no solo deben dar peso a las variables económicas, sino que deben considerar aquellos aspectos no relacionados con el desempeño económico, tales como: empleo a grupos minoritarios, reducción de la contaminación, participación en programas de mejoramiento comunitario, mejoras relacionadas con el cuidado de la salud, seguridad laboral (Backman, 1975; citado en Carroll, 1999), entre otros puntos que mejoren la calidad de vida de las personas relacionadas directa o indirectamente con las empresas.

Diversos organismos definen la RSE a nivel mundial, no se tiene una definición oficial del constructo, sin embargo las propuestas comparten puntos en común. En México la definición de RSE propuesta por Centro Mexicano para la Filantropía (CEMEFI) considera que "... es el compromiso consciente y congruente de cumplir integralmente con la finalidad de la empresa, tanto en lo interno como en lo externo, considerando las expectativas económicas, sociales y ambientales de todos sus participantes, demostrando respeto por la gente, los valores éticos, la comunidad y el medio ambiente, contribuyendo así a la construcción del bien común". El Pacto Global en Argentina (2004) señala que la RSE es "...Forma de gestión organizacional que promueve mediante la fuerza de la acción colectiva, un civismo empresario responsable, para que el mundo de los negocios pase a formar parte de la solución a los retos que plantea la globalización" (Citado en López, 2013). Según la norma ISO 26000, "... es la responsabilidad de una organización ante los impactos que sus decisiones y actividades ocasionan en la sociedad y el medio ambiente, mediante un comportamiento ético y transparente que: i) contribuya al desarrollo sostenible, incluyendo la salud y el bienestar de la sociedad; ii) tome en consideración las expectativas de sus partes interesadas; iii) cumpla con la legislación aplicable y sea coherente con la normativa internacional de comportamiento; y iv) esté integrada en toda la organización y se lleve a la práctica en sus relaciones". La Comisión Europea (2001)

define la RSE como "...la integración voluntaria, por parte de las empresas, de las preocupaciones sociales y medioambientales en sus operaciones comerciales y sus relaciones con sus interlocutores. Ser socialmente responsable no significa solamente cumplir plenamente con las obligaciones jurídicas, sino también ir más allá de su cumplimiento invirtiendo más en capital humano, el entorno y las relaciones con los interlocutores" (Citado en Gomis, et al, 2009).

Aun cuando no se tiene una definición oficial o única, los elementos en común entre las diferentes propuestas coinciden en la necesidad de considerar que una empresa no solamente tiene responsabilidad en materia de rendimientos para sus propietarios o accionistas, salarios para sus trabajadores o la producción y/o prestación de servicios a sus clientes; sino que las entidades económicas tienen un compromiso superior con la sociedad y el entorno en el que desarrollan sus actividades (OECD). Derivado de lo anterior las empresas deben cumplir con las leyes, pero a la vez deben asegurar un comportamiento ético en sus relaciones tanto internas como externas. El término RSE se ha relacionado a lo largo del tiempo con la filantropía, lo que ha dado lugar a generar la idea de que una empresa socialmente responsable es aquella que contribuye con recursos económicos para el apoyo de diversas causas sociales o medioambientales. La RSE va más allá de la filantropía (CEMEFI), implica acciones más concretas de compromiso y ética empresarial, considera diversas dimensiones (OECD)

Dimensiones de la Rse

La RSE tiene varias dimensiones, a lo largo del tiempo han variado las propuestas de los diferentes autores y organismos. Para Carroll (1999) las dimensiones de la RSE son cuatro: económica, legal, ética y filantrópica. Otros autores consideran que la RSE puede analizarse desde el punto de vista de las relaciones internas y externas de las empresas, especialmente en el caso de corporativos. En la Tabla 1 se presentan las propuestas de algunos organismos.

Tabla 1: Análisis de las Dimensiones de la RSE

Institución	Propuesta	Dimensiones
Pacto Global de la ONU (2000)	Es una iniciativa voluntaria, en la cuál las empresas se comprometen a alinear sus estrategias y operaciones con diez principios universalmente aceptados en cuatro áreas temáticas	Derechos humanos Estándares laborales Medio ambiente Anti-corrupción
Norma ISO 26000	Tiene como propósito fomentar que las organizaciones vayan más allá del cumplimiento legal, reconociendo que el cumplimiento de la ley es una obligación fundamental para cualquier organización y una parte esencial de su responsabilidad social.	Gobernanza de la organización Derechos humanos Prácticas laborales Medio ambiente Prácticas justas de operación Asuntos de consumidores Participación activa y desarrollo de la comunidad
CEMEFI	Consejo Mexicano para la Filantropía	Dimensión económica interna Dimensión económica externa Dimensión social interna Dimensión sociocultural y política externa Dimensión ecológica interna Dimensión ecológica externa

Fuente: Elaboración propia con base en Pacto Global ONU, Norma ISO26000, CEMEFI.

Responsabilidad Social En la Industria Hotelera

En el caso de la industria turística la RSE puede visualizarse como una oportunidad para las empresas, las cuales en el marco de la globalización, enfrentan una demanda de productos y servicios basados en la sostenibilidad y la actuación responsable (Gomis, et al, 2009). La mayor parte de los estudios sobre el tema, se centran en aspectos relacionados al impacto ecológico de la actividad turística (Fernández y Cuadrado, 2011), sin embargo es importante analizar integralmente las actividades de RSE llevadas a cabo por empresas hoteleras considerando otras dimensiones de análisis. El estudio a realizar consistirá en el diseño

de un instrumento con el fin de aplicarlo a propietarios/administradores de hoteles en el municipio de Cihuatlán, Jalisco; se pretende identificar el nivel de compromiso de los empresarios con actividades de RSE, así como la relación de estas actividades con el desempeño de la empresa. Los resultados serán tabulados y analizados empleando el programa estadístico SPSS. El número de empresas que prestan servicios de hospedaje en el municipio según datos de INEGI (DENUE) es de 106 MiPyMEs. El tamaño de las mismas considerando el número de personas que emplean oscila entre 0 y 99 empleados.

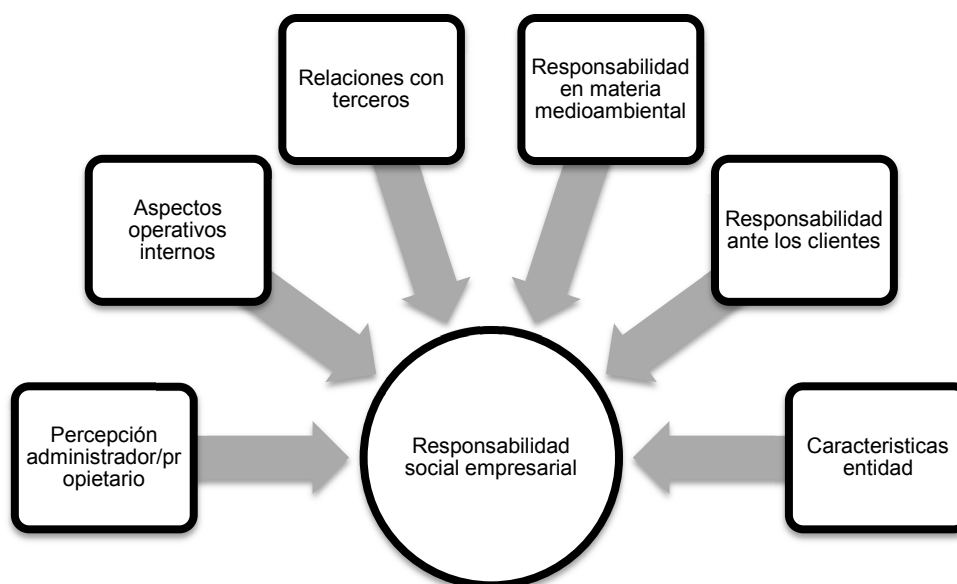

Tabla 2: Tamaño de las Empresas Que Componen la Población

Empleados	Número de unidades
0-5	86
6-10	14
11-30	5
51 -100	1

Fuente: Elaboración propia con base en datos proporcionados por DENUE (2014) INEGI

El 81.13% de las PyMEs del sector son microempresas que tienen de 0 a 5 empleados. El 13.20% de las unidades cuentan con hasta 10 empleados, cinco de los hoteles listados en el DENUE emplean de 11 a 30 personas, mientras que solo un hotel en el municipio emplea a 99 personas. Aun cuando la actividad turística es importante para el municipio, ésta se caracteriza por comprender a micro y pequeñas empresas familiares, operadas principalmente por el propietario o familiares del mismo. Estas empresas atienden principalmente turismo regional o estatal. No se cuenta con infraestructura turística en el municipio, el atractivo principal son las zonas de playa. Los empresarios enfrentan retos constantes, presiones derivadas de la estacionalidad inherente a la actividad turística, incentivos para reducción de costos, entre otros factores; estos aspectos son determinantes en la gestión empresarial y la definición de estrategias. Considerando esto, los incentivos para actuar de manera responsable no son los mismos que pueden tener los directores de corporativos hoteleros sujetos a mayor escrutinio, tanto por parte de gobierno, empleados y clientes. Derivado de lo anterior los aspectos a considerar en el análisis se presentan en la Figura 1

Figura 1: Dimensiones Consideradas Para El Análisis de la RSE en Pymes del Sector Hotelero

Las dimensiones que se considerarán en el análisis atienden tanto a aspectos internos como externos en los cuales la gestión de la empresa tiene poder de decisión. Se evaluará la percepción de la persona que realiza las actividades de gestión, así como algunos aspectos cuantitativos que den soporte a la opinión del entrevistado.

CONCLUSIÓN

La RSE es un conjunto de decisiones empresariales que llevan a una gestión ética y a una relación balanceada de las empresas con su entorno, no solo a nivel económico, si no social y ambiental. El beneficio de estas acciones para las empresas es un punto de análisis, aun cuando no se tienen resultados concluyentes sobre el mismo, la percepción de algunos líderes indica que la relación entre responsabilidad y beneficios a las entidades es positiva (ResponSable). En el caso de los grandes corporativos el acceso a certificaciones, los lleva a divulgar sus actividades para conocimiento de terceros. El caso de las PyMEs es diferente, la gestión responsable dependerá mayormente de la voluntad del propietario/administrador de la misma, los incentivos para llevar a cabo acciones de mejora son diferentes. Las actividades de este tipo de empresas no son objeto de escrutinio, impactan localmente, el mercado no necesariamente las identifica, por lo tanto, la motivación para realizarlas es menor. Como señalan Fernandez y Cuadrado (2011) es importante la concientización de los responsables de los establecimientos hoteleros en materia de RSE, de tal manera que al conocer sus dimensiones puedan identificar los beneficios resultantes de la modificación de sus procesos de gestión. Las limitantes que se han encontrado hasta el momento tienen relación con la negativa del empresario a proporcionar información, así como a la falta de padrones actualizados sobre la prestación de servicios de hospedaje en la Región de la Costa Sur de Jalisco.

LOS PROYECTOS Y LA INNOVACIÓN COMO UNA RESPONSABILIDAD SOCIAL COMPARTIDA ENTRE EL ASESORADO Y EL ASESOR

Ana Bertha Plascencia Villanueva, Universidad Autónoma de Baja California
Angelica Reyes Mendoza, Universidad Autónoma de Baja California
Fermin Guevara de la Rosa, Universidad Autónoma de Baja California

RESUMEN

Este artículo forma parte de investigación realizada a nivel educación superior durante el ejercicio 2012, y en la cual se cuestionó desde diversos ángulos a una muestra de estudiantes y empresarios acerca de los proyectos y la innovación como una responsabilidad social compartida entre el asesorado y el asesor, detectando que los profesionistas pueden tener su propia perspectiva de lo que es la innovación y su propia percepción de cuál es el impacto en los diversos sectores de la sociedad, sin embargo la visión empresarial es distinta, este artículo fue elaborado en forma empírica, de acuerdo a resultados de la investigación mencionada con la finalidad de influir en el ámbito educativo al conocer los requerimientos del asesorado y las competencias del asesor logrando cumplir las expectativas de las exigencias de las empresas

PALABRAS CLAVE: Educación, innovación, proyecto, estudiante educación superior y responsabilidad social.

SHARED BETWEEN SOCIAL RESPONSIBILITY AND ADVISORY ADVISED

ABSTRACT

This article is part of research conducted at higher education level in the year 2012, and which was challenged from different angles to a sample of students and employers about the projects and innovation as a shared responsibility between the social advice and counsel professionals detecting that may have their own perspective of what is innovation and their own perception of what is the impact on the various sectors of society, however the business vision is different, this article was developed empirically from according to research results mentioned in order to influence the educational environment to meet the requirements of advised and assessor competencies achieved to meet the expectations of business imperative.

KEYWORDS: Education, Innovation, Project, student higher education and social responsibility.

INTRODUCCIÓN

Los países en el mundo cada vez se percatan más acerca de los cambios que se tienen que dar, estos cambios se relacionan con el impacto mundial del desempleo, según reporte de la Organización para la Cooperación y el Desarrollo Económico (OCDE) de la que forman parte 34 economías mundiales, en septiembre apenas reporta una ligera baja del desempleo, sin embargo en números reporta 44.2 millones de personas que se encuentran actualmente en situación de desempleo.

De acuerdo al reporte, el desempleo juvenil, de personas con edades comprendidas entre los 15 y los 24 años, aumentó 0.3% en septiembre en la zona OCDE y se situó en el 15.1 por ciento, señalando que en algunos países como Grecia y España la mitad de los jóvenes de esas edades está desempleada y que en Italia y Portugal la tasa de desempleo juvenil supera el 42 y el 35% respectivamente

En julio pasado, la tasa de desempleo en México, de 5.2%, se mantuvo entre las más bajas según este reporte.

De acuerdo con información del organismo internacional, México se ubicó como el sexto país con la menor tasa de desempleo en julio pasado, la cual también estuvo por debajo de la tasa promedio de la OCDE, de 7.4% en el séptimo mes del año.

Ello, refiere, a pesar de que el desempleo en México aumentó de 4.9% en junio a 5.2% en julio de este año, tasa que involucró a 2 millones 703,000 personas; es decir, 179,000 más respecto del mes anterior. La OCDE detalla que el desempleo entre las mujeres mexicanas subió de 4.9% en junio a 5.0% en julio, mientras que entre los hombres la tasa pasó de 4.9 a 5.3% en igual lapso.

En tanto, añade, la tasa de desempleo entre los jóvenes mexicanos (de 15 a 24 años) disminuyó de 9.5 en junio a 9.2% en julio, y la de los adultos (más de 25 años) aumentó de 3.8 a 4.3% en el mismo periodo.

En su reporte mensual, la OCDE refiere que en julio del 2014 la tasa de desempleo para el conjunto de 34 países que la integran registró un aumento marginal de 0.1 puntos porcentuales, a 7.4 por ciento. Indica que en julio pasado había 44.8 millones de desempleados en el área de la OCDE (5.1 millones menos respecto de su nivel máximo en abril del 2010), pero todavía 10.2 millones más que en julio del 2008, mes previo al inicio de la crisis.

Al interior de la OCDE, las tasas de desempleo más altas en julio de este año fueron España, con 24.5%, y Portugal, con 14.0%; en contraste, las tasas de desempleo más bajas se registraron en Corea, 3.4%, y Japón, 3.8 por ciento. En julio, la tasa de desempleo entre las mujeres fue de 7.5%, 0.2 puntos porcentuales mayor a la de los hombres, de 7.3 por ciento.

Por otra parte el desempleo y la brecha entre ricos y pobres son los dos temas que más preocupan a los dirigentes mundiales, según el último informe del Foro Económico Mundial (FEM) “Pronóstico sobre la agenda mundial 2015”., con sede en Ginebra, organiza cada enero el Foro de Davos, cita anual de la élite política y económica mundial, y desde el 2010 realiza un sondeo sobre las 10 principales inquietudes que planean sobre la agenda internacional.

En total, 1,800 expertos del Foro respondieron cuáles serían las principales preocupaciones de los dirigentes mundiales en los próximos 12 a 18 meses. Ubicando el avance del desempleo y la desigualdad en los dos primeros puestos muestran cómo ambos problemas se han agravado a escala global; Los expertos apuntaron asimismo a la aparición de dos nuevas tendencias: la competencia geoestratégica (en cuarto puesto) y el ascenso del nacionalismo (octavo lugar).

La falta de liderazgo, en un mundo crecientemente multipolar, pasó del séptimo al tercer lugar en esta edición. La preocupación por el medio ambiente tuvo su reflejo en la lista en tres temas diferentes: el agravamiento de la contaminación en los países en desarrollo (sexto puesto), la multiplicación de desastres naturales (séptimo) y la falta de agua potable (noveno).

La importancia creciente de la salud pública para la economía cerró la lista en décimo puesto, poniendo de manifiesto cómo ha afectado la crisis del abola a la economía a nivel global.

En América Latina la corrupción, la educación y la desigualdad estuvieron a la cabeza; En Europa fueron el impulso al crecimiento económico y la innovación, el paro juvenil y las relaciones entre la Unión Europea y Rusia; En América del Norte, la desigualdad, los vaivenes geoestratégicos y el cambio climático. El continente asiático fueron las tensiones geopolíticas, las reformas económicas y la gestión del urbanismo.

Analizando investigación realizada por Plascencia (2012), en la cual plantea como un probable problema que algunos profesionistas del área contable cuentan con una falta de competencias para la toma de decisiones financieras en la gestión directiva. Bajo estos panoramas de carácter internacional es claro que el mundo atraviesa hasta la fecha por innumerables problemas de carácter económico financiero, que invariablemente afectan a sus habitantes, México, con una población de 118 millones de habitantes según datos del Consejo Nacional de Población (CONAPO), no es la excepción, son innumerables los intentos que realizan los diversos sectores de la población con la finalidad de revertir esta problemática y con ello elevar la calidad de vida de las personas.

Los requerimientos de la sociedad son claros, por una parte la administración pública buscando elevar su recaudación tributaria por otra el ámbito empresarial buscando elevar su productividad, otros tratando de trabajar en forma conjunta las instituciones educativas intentando lograr satisfacer los requerimientos de la sociedad y por último los ciudadanos que se desenvuelven en este entorno, intentando cumplir con todos los requerimientos de esta sociedad, que indudablemente siendo ciudadanos con una alta responsabilidad social se enfocan en la aportación más adecuada al gasto público para lo cual intenta educarse cada cual de acuerdo a sus posibilidades.

La administración pública en México, ha realizado intentos de generar empresa, como por ejemplo la Secretaria de Economía(SEDECO), los municipios y los estados, otorgando recursos ya sea vía financiamiento y asesorías de todo tipo persiguiendo el mismo objetivo la creación de nuevas empresas y con ello promover la creación de nuevas fuentes de empleo, considerando que es una de las probables soluciones a la falta de recursos frescos en la administración pública y como una forma de incentivar la economía, sin embargo las estrategias no han dado los resultados esperados debido a que las empresas que inician sólo logran permanecer 2 años.

Este artículo se enfoca, en los proyectos y la innovación como una responsabilidad social por parte de los futuros empleados y de los empleadores unos fungiendo como asesores y otros como asesorados, y cuál es el impacto en el entorno empresarial, debido a que se considera como una de las posibles soluciones a esta problemática el crear nuevas fuentes de empleo y de que si los estudiantes de nivel superior conocen realmente la información financiera esto probablemente permitirá generar nuevas empresas así como planeaciones y proyectos viables, además de que en determinado momento brindaran asesorías empresariales efectivas demostrando con ello una clara responsabilidad social sin embargo esta responsabilidad social no solo es por parte de los asesores sino que es una responsabilidad compartida también por los asesorados siendo ambos responsables socialmente.

Considerando como palabras clave en el presente artículo y de acuerdo a definiciones contenidas en el diccionario de la real academia española, así como Wikipedia la enciclopedia libre como sigue:

La educación es el proceso multidireccional mediante el cual se transmiten conocimientos, valores, costumbres y formas de actuar. La educación no sólo se produce a través de la palabra, pues está presente en todas nuestras acciones, sentimientos y actitudes. Es también un proceso de vinculación y concienciación cultural, moral y conductual. Así, a través de la educación, las nuevas generaciones asimilan y aprenden los conocimientos, normas de conducta, modos de ser y formas de ver el mundo de generaciones anteriores, creando además otros nuevos.

Probablemente de acuerdo al planteamiento del problema y como una definición de proyecto como una idea que se tiene de algo que se piensa hacer y cómo hacerlo y si se tiene una idea entonces se propicia la innovación que permite cambiar las cosas introduciendo novedades.

La palabra estudiante es un sustantivo masculino o femenino que se refiere al educando o alumno o alumna dentro del ámbito académico, y que se dedica a esta actividad como su ocupación principal

Si se Conjugan los conceptos responsabilidad como la capacidad u obligación de responder por los actos propios, y en algunos casos de los ajenos y social como todo lo relativo a la sociedad o las clases sociales. Entonces parafraseando en una sociedad que se encuentra formada por una reunión de personas familias o naciones, educándose con las formas de ver el mundo de generaciones anteriores y creando nuevas formas en este mundo actual tan cambiante se genera la innovación y en forma conjunta el proyecto. Que de nada serviría si no se cuenta con un proceso multidireccional de adquisición de conocimientos que permite generar la innovación.

REVISIÓN DE LITERATURA

Existe diversa literatura que habla acerca de los proyectos, la innovación y la responsabilidad social como una base argumentativa al respecto diversos autores han escrito como por ejemplo:

Barroso (2008), comenta que el éxito de los tiempos actuales no depende únicamente de la maximización de la riqueza sino del trabajo en equipo de todos los integrantes y/o participantes y ello los lleva a poderse considerar como empresas responsables socialmente.

Vroom y Deci (1979), Es importante saber delegar responsabilidades con la finalidad de desarrollar las competencias necesarias con los conocimientos adecuados y sensibilizándose con los empresarios con el objeto de brindar asesorías de calidad por parte de los LCP.

Medina (1993), Las empresas y su información financiera se puede analizar desde diferentes ángulos y visiones que podrían ser en cuanto al producto y servicio que ofrece primeramente esto tanto en lo interno como en lo externo todo ello con la posibilidad de adaptarse al mercado e identificar el punto de equilibrio y es en ese momento cuando se puede brindar una asesoría de calidad siempre y cuando sea en forma oportuna de la misma manera comenta el autor acerca de la planeación considerándola como un principio de guía de acuerdo a las actividades que realizan las empresas que se pueden ir ajustando durante el tiempo “Podría incluso cambiar de rumbo, cuando sea necesario para alcanzar el objetivo general”

Plascencia (2013), las empresas efectúan aportaciones en sus negocios con la finalidad de obtener un rendimiento y su capital invertido en un tiempo medido y un proyecto debe de ir orientado a la viabilidad de la inversión efectuada. “Un proyecto también pretende demostrar con estudios profesionalmente elaborados que existe una viabilidad de recuperación de la inversión para los que están arriesgando su capital, y demostrar también que no se estaría realizando una inversión que en determinado omento nos aleje de nuestro costo mínimo de oportunidad que una empresa debe de tener considerado”

Torres y Romero (1996) Pág. 137, comentan los autores que un valor agregado es de los componentes más importantes para evaluar la actividad económica, concluyen los autores con que “El valor agregado surge de la diferencia entre los ingresos totales de una empresa y los costos de compra de materias primas, servicios y componentes. Por lo tanto mide el valor de la empresa y agrega a esos materiales y componentes de compra, por medio de su proceso de producción”.

METODOLOGÍA

Este artículo se fundamenta principalmente en una investigación de tipo experimental etnográfica educativa realizada por Plascencia (2012), en la cual aplicó diversos instrumentos con el objeto de darle científicidad

a su investigación entre los cuales se encuentran: observación, nota de campo, cuestionario, entrevista, pretest y posttest a una muestra de 60 estudiantes de educación superior, 30 participando como grupo experimental y 30 como grupo control, el cuestionario fue categorizado y clasificado en 8 categorías de estudio para este artículo sólo se utilizó 1 categoría que es la correspondiente a proyectos e innovación categoría 7, efectuando preguntas conducentes a la hipótesis generando una hipótesis de solución.

RESULTADOS

La muestra manifestó, de acuerdo al cuestionario pre-test y post-test efectuado, en ambos grupos que si les es útil la información financiera para la toma de decisiones, con el objeto de asesorar en forma eficiente y oportuna. Así como que con ello pueden tomar decisiones que contribuyan a la mejora e innovación tanto ellos a nivel de asesoría como a los empresarios, manifiestan también que es una responsabilidad social de los profesionistas de ciencias administrativas los resultados obtenidos o no obtenidos en una empresa al utilizar o bien dejar de utilizar la información financiera para la toma de decisiones ya que con ello se propician áreas de mejora, por otra parte, ambos grupos manifiestan que el no utilizar la información financiera promueve una falta de motivación en todos los involucrados en una empresa al desconocer cuál es la situación financiera real lo que les provoca incertidumbre laboral.

La muestra considero también que los análisis previos para preparar planeaciones financieras y proyectos son importantes, ya que les permite predeterminedar los acontecimientos del futuro y podría promover el incremento de nuevas empresas, debido a que el contar con los conocimientos y habilidades de utilización de la información financiera les generan nuevas ideas, lo que propicia la innovación.

Los objetivos que se persiguen son que los profesionistas tengan oportunidad de brindar asesoría financiera de calidad, despertando una responsabilidad social de los trabajos que efectúen los egresados de una licenciatura en ciencias económico administrativa y preparar planeaciones y proyectos alcanzables contribuyendo con la administración en la generación de nuevas ideas.

Como profesionista de un área contable administrativa, se pretende de igual manera que al desarrollar un proyecto y/o planeación financiera completo motive a los involucrados en una empresa vía el conocimiento a la generación de un proyecto y/o planeación financiera ello les permitirá contar con elementos clave para la toma de decisiones que los llevara forzosamente a la innovación.

Dentro de los cuestionamientos que dirigen a las hipótesis planteadas que se efectuaron relacionados con el problema se encuentra las siguientes:

¿La falta de asesoría de carácter administrativo provoca carencia de competencias para la toma de decisiones financieras en la gestión directiva?

¿Al contar con conocimientos y habilidades de utilización de la información financiera genera nuevas ideas?

¿Cómo considera que se innova al conocer la información financiera?

Al efectuar dichos cuestionamientos se obtuvieron los siguientes comentarios reales y representativos:

Considerando la muestra que se mejora el rendimiento, además de incrementar sus utilidades, adicionalmente comentan que conforme se profundiza en el análisis de la información se generan ideas enfocadas a la mejora de la salud financiera, incluso dependiendo del caso pudieran crearse experimentos para mejora.

Cuando se les cuestiono acerca de ¿Que tan importante es la innovación empresarial? Sus Comentarios reales y representativos fueron que es útil para que una empresa tenga permanencia en el mercado y eventualmente llegar a convertirse en una ventaja competitiva así como que es tan importante porque de esta manera tendremos mucho más competencia con empresas grandes y por lo tanto tendrán más clientes que se interesen en sus servicios o productos.

En el cuestionamiento de que si ¿Considera que es una responsabilidad social el conocer la información financiera para poder asesorar a terceros? La muestra manifestó que “Pues sí, si los empresarios se lo permiten hay ocasiones que existen empresarios ricos y empresas pobres”

Al llevar a cabo el análisis de resultados en forma descriptivo de la categoría 7 Referente a la generación de nuevas ideas, se encuentra una diferencia significativa entre el pre-test y post-test en relación a las respuestas afirmativa “si” en el Grupo experimental, lo cual no sucede con el grupo Control; lo anterior sugiere un cambio en la percepción de los alumnos de LCP, para identificar la importancia en la relación entre el contar con análisis previos y conocimientos de la información financiera que les permite generar nuevas ideas y proyectos alcanzables para la administración.

Estos datos indican una posible sensibilización a este respecto como resultado del tratamiento aplicado y por ende la posible comprobación de las hipótesis No. 2. y 3. Las cuales plantean

2. Impartiendo un curso taller sensibilizando al estudiante de LCP utilizando la información financiera con el objeto de que adquiera las habilidades para brindar asesoría financiera de calidad que propicie las competencias para la toma de decisiones financieras en la gestión directiva.

3. Impartiendo un curso taller en el que se propicie en el estudiante de LCP que influya responsablemente como líder, preparando planeaciones y proyectos alcanzables para la administración aplicando las competencias para la toma de decisiones financieras en la gestión directiva

En relación a los encuestados coinciden en que una causa de cierre de empresas es el no utilizar la información financiera para la toma de decisiones, y de que las decisiones se toman en forma empírica y que es una responsabilidad social, el conocer la información financiera para poder asesorar a terceros.

CONCLUSIONES

La responsabilidad social debe de ser compartida entre el asesor y el asesorado, en un comentario representativo la muestra manifiesta al cuestionársele: ¿Considera que es una responsabilidad social el conocer la información financiera para poder asesorar a terceros? La muestra manifestó que “Pues sí, si los empresarios se lo permiten, porque hay ocasiones que existen empresarios ricos y empresas pobres”

Es realmente impactante debido a que a nivel empresarial se tuviese que tener una percepción similar acerca de los proyectos y la innovación como una responsabilidad compartida entre el asesorado y el asesor, comprobando con algunos de los comentarios vertidos por la muestra que no es así, si están considerando los empresarios incrementar su riqueza guardando discrecionalidad de información, o bien incrementan su riqueza manteniendo las empresas en forma precaria los asesores difícilmente pueden generar innovaciones por mas asesorías que brinden, y entonces si van a existir empresarios ricos y más empresas pobres, abriendo otra nueva línea de investigación ya que sería necesario sensibilizar a los empresarios con el objeto de brindar la información adecuada de tal manera que se generen innovaciones y mejoras que en realidad beneficiarían a diversos sectores de la sociedad.

El actuar con responsabilidad social quizá no se ha logrado sensibilizar a todos los actores de una sociedad determinada ya que cada cual aporta su esfuerzo en propiciar la innovación ya sea en la administración

pública que busca el beneficio general de la población, a nivel empresarial con el sueño de permanecer siendo productivo, como institución educativa transmitiendo a sus estudiantes los conocimientos adecuados a los requerimientos del entorno y como estudiante de educación superior de una licenciatura en ciencias administrativas preparándose tanto para brindar asesorías de calidad como para elevar su calidad de vida.

Esta investigación refleja que si se logra aportar a la sociedad en un corto plazo egresados con conocimientos acerca de la utilización de la información financiera desarrollando en ellos las habilidades de asesoría que propicien la generación de proyectos y/o planeaciones financieras viables para las empresas o bien para desarrollar el emprendimientos individuales invariablemente se detonara la economía en forma positiva, generando innovaciones empresariales que contribuirán en forma importante con el gasto publico elevando el prestigio de la institución por su forma de educar debido a la preparación de sus egresados impactando el entorno en forma positiva por las habilidades desarrolladas con el objeto de que a corto plazo se generen nuevas empresas y fuentes de empleo, que permanezcan en forma sana abriendo espacios donde se involucren estos estudiantes ya sea como empleados o bien como empresarios prósperos lo que contribuirá a una mejoría en la economía.

Se abre una nueva línea de investigación a la realizada por Plascencia (2012), ya que una vez aplicado el tratamiento a los profesionistas, se detecta que sería interesante dados los resultados obtenidos, aplicar el tratamiento a los empresarios siguiendo la misma metodología y contrastar los resultados finales.

Concluyendo que tanto los proyectos como la innovación son una responsabilidad compartida entre el asesorado y el asesor en cuando a que se den la oportunidad ambos de ganar ganar, y con ello no solo ganan el asesor y el asesorado, sino que todos los sectores de la sociedad se benefician por supuesto con la generación de nuevos empleos y la mejora de las empresas en las que se desempeñan jugando el rol que les toca jugar a cada cual.

LIMITACIONES

Una probable limitación sería que los empresarios no deseen generar líneas de mejora e innovaciones y los asesores no puedan contribuir a incluso elevar las utilidades para la empresa se requerirá que la empresas reaccionen en forma empática con sus asesores incrementando probablemente los sueldos como un motivador independientemente de las ofertas de empleo motivadas por el alto desempleo nacional y de esta manera, la riqueza se incrementaría aún mas y la calidad de vida tanto del asesor como del asesorado también.

COMPETENCIAS DE LIDERAZGO Y FINANCIERAS REQUERIDAS EN LA REALIZACION DE PROYECTOS

Ana Bertha Plascencia Villanueva, Universidad Autónoma de Baja California

Angelica Reyes Mendoza, Universidad Autónoma de Baja California

Fermin Guevara de la Rosa, Universidad Autónoma de Baja California

RESUMEN

Este artículo se fundamenta en resultados vertidos en investigación realizada por Plascencia (2013) en donde se considera una muestra a nivel educación superior a la cual se le aplicó una encuesta cuestionario, observando en el análisis de resultados una relación cercana entre las actitudes de liderazgo y las competencias financieras; que en su conjunto pueden influir tanto entre los estudiantes del área contable como en los empresarios ya sea en su relación netamente laboral como en la realización de proyectos financieros viables y con ello beneficiar a su entorno; fue elaborado en forma empírica, de acuerdo a resultados de la investigación mencionada, con la finalidad de influir en el ámbito educativo desarrollando las competencias financieras requeridas con el propósito de identificar áreas de oportunidad tanto a nivel finanzas personales como empresariales.

PALABRAS CLAVE: Competencias, Liderazgo, Finanzas, Proyecto.

SHARED BETWEEN SOCIAL RESPONSIBILITY AND ADVISORY ADVISED

ABSTRACT

This article is based on research conducted by discharges Plascencia (2013) in which a sample is considered a higher education level to which was applied a questionnaire survey, looking at the analysis results, a close relationship between the attitudes of leadership and results financial skills; that may influence overall among both students and employers either its purely working relationship and implementation of viable financial projects and thereby benefit the environment; was developed empirically, according to research results mentioned for the purpose of influencing in education developing financial skills required in order to identify areas of opportunity at both personal and business finances.

INTRODUCCIÓN

La educación es un proceso que permite a las personas obtener un aprendizaje que genere un cambio tanto en su persona como en la sociedad; por ello, su importancia resulta indiscutible, ya que el ser humano se convierte en dependiente de ella todos los días de su vida. Así mismo existen diversas maneras de ver y estudiar a la educación, este análisis puede realizarse desde la perspectiva sociológica, biológica, psicológica y filosófica.

En Mexico, La Secretaría de Educación Pública (SEP) es la institución encargada de administrar los distintos niveles educativos del país desde el 25 de septiembre de 1921, fecha de su creación. En el ámbito educativo además, cada una de las entidades federativas posee organismos análogos que regulan y administran la educación que se imparte en los territorios de su competencia, bajo los términos del artículo

tercero de la Constitución Política de los Estados Unidos Mexicanos, la educación se imparte en base al modelo de competencias fundamentado en los Acuerdos 250 para bachillerato y el acuerdo 279 y 244 que especifica las competencias y atributos del maestro a nivel educación superior incorporando también el acuerdo 586 que agrega la necesidad de trabajar las Tecnologías de la Información (TICS).

Este modelo de educación que se sigue de competencias, pretende la preparación de los estudiantes de cualquier nivel de educación hasta su egreso con el objetivo de que adquieran conocimientos, desarrollen habilidades así como actitudes adecuadas, sabiendo ser, hacer y convivir, pretendiendo lograr en primer término una vinculación real con el entorno externo que es lo que persigue el modelo de competencias.

Considerando como palabras clave Competencias, Liderazgo, Finanzas y Proyecto en el presente artículo y de acuerdo a definiciones de acuerdo al presente artículo y fundamentado en el planteamiento del problema como sigue:

Competencias.- Las competencias son las capacidades que requiere un individuo de acuerdo con los diferentes conocimientos a adquirir como, habilidades, pensamientos, carácter y valores de manera integral en las diferentes interacciones que tienen los seres humanos para la vida en el ámbito personal, social y laboral. En concreto las competencias son los conocimientos, habilidades, y destrezas que desarrolla una persona para comprender, transformar y practicar en el mundo en el que se desenvuelve. Wikipedia (2014)

Liderazgo.- Impulsor o iniciador de una conducta social, también como un jefe con la aceptación voluntaria de sus seguidores. Considerando también que es el que va a la cabeza de una clasificación, Diccionario Enciclopédico Ilustrado, Grupo editorial océano Barcelona España (1993).

Finanzas.- Arte o ciencia de administrar los recursos en forma eficaz ética y transparente Plascencia (2014).

Proyecto: Plan que al asignarle un determinado recurso se obtienen resultados; Es una planificación que consiste en un conjunto de actividades que se encuentran interrelacionadas y coordinadas. []La razón de un proyecto es alcanzar objetivos específicos dentro de los límites que imponen un presupuesto, calidades establecidas previamente y un lapso de tiempo previamente definido Wikipedia (2014) Las competencias deben entenderse desde un enfoque sistémico como actuaciones integrales para resolver problemas del contexto con base en el proyecto ético de vida que se plantea cada individuo.

REVISIÓN DE LITERATURA

En todo el mundo cada vez es más alto el nivel educativo requerido a hombres y mujeres para participar en la sociedad y resolver problemas de carácter práctico. En éste contexto es necesaria una educación básica que contribuya al desarrollo de competencias amplias para la manera de vivir y convivir en una sociedad que cada vez es más compleja; por ejemplo, el uso de herramientas para pensar como: el lenguaje, la tecnología, los símbolos y el conocimiento, la capacidad para actuar en un grupo diverso y de manera autónoma.

Existe diversa literatura que habla acerca del liderazgo, las competencias y de los proyectos al respecto diversos autores han escrito como por ejemplo:

Chiavenato (2014) El liderazgo es necesario en todos los tipos de organización humana, ya sea en las empresas o en cada una de sus áreas. Es esencial en todas las funciones de la administración, porque el administrador debe conocer la motivación humana y saber conducir a las personas, es decir, liderar.

De acuerdo con Godoy y Bresó (2013), la práctica de un liderazgo transformacional efectivo, determina en gran parte la motivación intrínseca de sus seguidores, lo cual repercute directamente en su rendimiento organizacional.

Fernández (2000, citado por Granados 2011), menciona que la sobrecarga laboral, se puede manifestar tanto cuantitativa como cualitativamente, ya sea por un exceso de actividades en un determinado periodo o un exceso de horas de trabajo, o bien, como una excesiva exigencia en cuanto a competencias, conocimientos y habilidades del trabajador o un gran nivel de responsabilidad en la toma de decisiones; lo anterior trae como consecuencia estrés e insatisfacción laboral.

Gómez (2008) argumenta que el líder debe interesarse en las personas, manejar las situaciones y estar interesado principalmente en las ideas y conceptos. Así mismo, debe tener las habilidades necesarias para dirigir actividades especializadas, establecer relaciones efectivas con los subordinados, supervisores, compañeros y gente externa, y además tener los conocimientos para la toma de decisiones, solucionar problemas e innovar. Esto lo faculta con factores de poder que en su ejercicio lo convierten en un líder natural.

Vroom y Deci (1979), Es importante saber delegar responsabilidades con la finalidad de desarrollar las competencias necesarias con los conocimientos adecuados y sensibilizándose con los empresarios con el objeto de brindar asesorías de calidad por parte de los LCP.

Medina (1993), Las empresas y su información financiera se puede analizar desde diferentes ángulos y visiones que podrían ser en cuanto al producto y servicio que ofrece primeramente esto tanto en lo interno como en lo externo todo ello con la posibilidad de adaptarse al mercado e identificar el punto de equilibrio y es en ese momento cuando se puede brindar una asesoría de calidad siempre y cuando sea en forma oportuna de la misma manera comenta el autor acerca de la planeación considerándola como un principio de guía de acuerdo a las actividades que realizan las empresas que se pueden ir ajustando durante el tiempo “Podría incluso cambiar de rumbo, cuando sea necesario para alcanzar el objetivo general”

Plascencia (2013), las empresas efectúan aportaciones en sus negocios con la finalidad de obtener un rendimiento y su capital invertido en un tiempo medido y un proyecto debe de ir orientado a la viabilidad de la inversión efectuada. “Un proyecto también pretende demostrar con estudios profesionalmente elaborados que existe una viabilidad de recuperación de la inversión para los que están arriesgando su capital, y demostrar también que no se estaría realizando una inversión que en determinado momento nos aleje de nuestro costo mínimo de oportunidad que una empresa debe de tener considerado”

Torres y Romero (1996) Pág. 137, comentan los autores que un valor agregado es de los componentes más importantes para evaluar la actividad económica, concluyen los autores con que “El valor agregado surge de la diferencia entre los ingresos totales de una empresa y los costos de compra de materias primas, servicios y componentes. Por lo tanto mide el valor de la empresa y agrega a esos materiales y componentes de compra, por medio de su proceso de producción”.

METODOLOGÍA

Este artículo se fundamenta principalmente en una investigación de tipo experimental etnográfica educativa realizada por Plascencia(2012), en la cual aplicó diversos instrumentos con el objeto de darle cientificidad a su investigación entre los cuales se encuentran: observación, nota de campo, cuestionario, entrevista, pretest y postest a una muestra de 60 estudiantes de educación superior, 30 participando como grupo experimental y 30 como grupo control, el cuestionario fue categorizado y clasificado en 8 categorías de estudio para este artículo sólo se utilizó la categoría cuatro que es la correspondiente a Liderazgo, efectuando preguntas conducentes a la hipótesis generando una hipótesis de solución y una de causa que impactan a esta categoría.

RESULTADOS

Analizando investigación realizada por Plascencia (2012), en la cual plantea como un probable problema con el que se enfrentan algunos profesionistas del área contable de que probablemente cuentan con una falta de competencias para la toma de decisiones financieras en la gestión directiva, identificando también que las competencias adquiridas es probable que no los orienten a contar con actitudes que demuestren liderazgo para la toma de decisiones acompañadas de las habilidades idóneas adquiridas al utilizar la información financiera para la toma de decisiones, ubicándolos en la posición de no realizar proyectos viables tanto para las empresas como en sus propios planes de vida.

Esto abre otra línea de investigación posterior a la realizada por Plascencia (2012), en la cual se reporta como conclusión que efectivamente algunos estudiantes del área contable, no utilizan la información financiera para la toma de decisiones, lo que no los coloca en posición de liderazgo.

Para demostrar lo anterior Plascencia (2012), desarrollo una hipótesis de causa y tres de solución, mediante una investigación de tipo Experimental, Etnográfico con algunos elementos Estadísticos como frecuencias y porcentajes siendo un problema que abarcó las áreas de estudio de finanzas personales, toma de decisiones, información financiera así como educación y desarrollo, aplicando un cuestionario que fue categorizado de acuerdo a escala de likert aplicado a 60 estudiantes del área contable tanto en un pre-test como en un post-test, dentro de las categorías contenidas en este cuestionario se encuentra la siguiente que es la cuatro que emite los siguientes resultados.

Categoría 4 Promover el Liderazgo quedando clasificada en dicha investigación como categoría 4, al analizar los datos vertidos en la tablas 33, 34, 35, y 36 se encuentra una diferencia significativa entre el pre-test y post-test en relación a las respuestas afirmativa “si” en el Grupo experimental, lo cual no sucede con el grupo Control; lo anterior sugiere un cambio en la percepción de los alumnos de que al entender la forma como se debe de utilizar la información financiera ubica en posición de liderazgo para la toma de decisiones a los estudiantes del área contable.

Las preguntas conducentes a las hipótesis correspondientes a esta categoría fueron:

¿Sería para usted más fácil tomar decisiones para ejercer su liderazgo el entender perfectamente la información financiera?

¿Porque considera lo anterior?

¿Considera que el conocer la información financiera ubica en posición de liderazgo?

Estos datos indican una posible sensibilización a este respecto como resultado del tratamiento aplicado y por ende la posible comprobación de las hipótesis No. 1, y 3. Las cuales plantean

1. En algunos estudiantes de Contaduría Pública, la falta de conocimientos e información sobre finanzas, así como la falta de liderazgo, provocan la carencia de competencias necesarias para la acertada toma de decisiones financieras en la gestión directiva.

3. Impartiendo un curso taller en el que se propicie en el estudiante de LCP que influya responsablemente como líder, preparando planeaciones y proyectos alcanzables para la administración aplicando las competencias para la toma de decisiones financieras en la gestión directiva

Los entrevistados manifiestan que la información financiera es poder y el poder te da liderazgo, así como que, toda empresa debe de saber hacia dónde va y eso te lo brida una planeación o un proyecto después de haber efectuado un buen análisis financiero.

CONCLUSIONES

El estudiar en modelos educativos que manejan las competencias permite a los estudiantes del área contable adquirir los conocimientos pero de la misma manera desarrollar las habilidades adquiriendo actitudes positivas.

Como hallazgos importantes se detecta que algunos de los estudiantes de séptimo semestre del área contable dicen conocer de acuerdo a la muestra utilizada, la información financiera, sin embargo desconocen la utilidad que se le debe de dar a la misma, que encamine a tomar decisiones financieras que propicien el liderazgo efectivo en las empresas.

Esta investigación arroja una nueva línea de investigación adicional a la que había planteado Plascencia(2012), que sería enfocarse a el desarrollo en específico de actitudes de liderazgo que propicien la elaboración de proyectos viables y con ello beneficiar al entorno existiendo una relación muy cercana entre las actitudes de liderazgo y las competencias financieras, que en su conjunto pueden influir tanto entre los estudiantes como en los empresarios en su relación netamente laboral en cuanto a la realización de proyectos financieros viables y con ello beneficiar a el entorno en donde se ubican.

LIMITACIONES

Las limitaciones son que quizá hace falta un cambio de paradigma en cuanto a que los estudiantes del área contable que actualmente se enfocan específicamente en lo fiscal dejando de lado actividades que permitan su desarrollo de actitudes de liderazgo, probablemente provocado por la alta concentración que se requiere en el estudio de las nuevas reformas de carácter fiscal dejando de lado aquellas actividades que les permiten desarrollar sus actitudes de liderazgo, considerándolas como una probable pérdida de tiempo, debido principalmente a que no pueden observar resultados a corto plazo.

CONTEXTO DE LA PROBLEMÁTICA DE LA CADENA DE ABASTECIMIENTO DESDE LA PERSPECTIVA LATINOAMERICANA: UNA MIRADA HACIA EL ENFOQUE DE DIRECCIONAMIENTO DE LAS EMPRESAS EN EL VALLE DEL CAUCA

Santiago Roldan Zuluaga, Universidad Autónoma de Occidente

RESUMEN

El presente artículo es resultado del análisis de una investigación que permitió caracterizar el estado de la cadena de abastecimiento en seis sectores productivos del Valle del Cauca; presentando un diagnóstico que posibilitara la construcción de una propuesta de mejoramiento de los procesos administrativos al interior de las empresas. La mirada por la cual se aborda este artículo se centra principalmente en la problemática central de la cadena de abastecimiento radica en la complejidad de los sistemas y subsistemas que agrupan la gestión de la misma desde la estructura de las organizaciones y como estas asumen sin ninguna estrategia el desarrollo de una gestión óptima de las operaciones que implica asumir el reto de los negocios internacionales.

Palabras claves: Transformación Productiva, Cadena de Abastecimiento, Logística, Procesos, Estrategias, Indicadores, Ventaja Competitiva

CONTEXT OF THE PROBLEM OF THE SUPPLY CHAIN FROM A LATIN AMERICAN PERSPECTIVE: A LOOK INTO THE ROUTING APPROACH COMPANIES IN THE VALLE DEL CAUCA

ABSTRACT

This article is the result of analysis for research that characterize the state of the supply chain in six productive sectors of the Valle del Cauca; presenting a diagnosis that would enable the construction of a proposed improvement of administrative processes within firms. The look why this article addresses main focuses in mind the central problem of the supply chain lies in the complexity of the systems and subsystems that group managing it from the structure of organizations and how are you assume no strategy development of optimal management operations involved the challenge of international business.

Keywords: Information and Communication Technology, Supply Chain, Strategy

INTRODUCCION

Una cadena de abastecimiento puede ser el resultado de un sistema complejo debido a que posee diferentes actores que forman estructuras de retroalimentación y efectos de retardos en su comportamiento. En los sectores evaluados para esta investigación la problemática central radica en los diferentes comportamientos dinámicos generados por cambios en los factores exógenos, como la forma en como la demanda de materias primas para la transformación, las habilidades del talento humano contratado para asumir los retos de la internacionalización de la organizaciones, la experiencia adquirida por las empresas y los tiempos de aprovisionamiento de las materias primas, los cuales interactúan con las variables endógenas del sistema,

y el flujo de los materiales, la información y retroalimentación. Los sistemas en la cadena de abastecimiento son evolutivos, dinámicos y adaptativos en diferentes estados, como consecuencia de las condiciones anteriores de las diferentes variables. Para Sterman la complejidad de la dinámica de estos sistemas surge porque estos se reflejan en las siguientes características:

Los sistemas son dinámicos: ya que los indicadores cambian en el tiempo en como las organizaciones empiezan a medir su productividad en aras de la competitividad. *Los sistemas están fuertemente entrelazados:* ya que los diferentes actores de la cadena interactúan entre ellos y con el mundo, todo está conectado con todo lo demás. *Los sistemas son gobernados por la retroalimentación:* la manera jerárquica de los procesos de internacionalización postulados desde las normatividad de los gobiernos hacen que los enlaces entre los diferentes actores consideren adaptarse a nuevas condiciones alterando los indicadores y proponiendo nuevas formas de medición en el desempeño de las organizaciones en momentos en donde la internacionalización es la salida económicas de un país en desarrollo. *Los sistemas no son lineales:* Sin duda, un cambio en un eslabón hace que el efecto no sea proporcional a la causa. *Los sistemas son dependientes de la historia:* muchas acciones son irreversibles, esto significa que tomar una vía u opción excluye tomar las otras y se determina el destino final. Esta investigación demuestra en algunos aspectos que la problemática también radica en el grado de apropiación que tienen las organizaciones sobre dos conceptos que son complejos.

Por un lado la productividad y del otro la competitividad. El Ministerio de Comercio, Industria y turismo (MinCIT) ha reunido los dos conceptos para dar un marco conceptual del alcance que la Dirección Nacional de Planeación (DNP) planteo en el documento CONPES 3527 en su política de Competitividad y Productividad cuyos principios prevalecen en: Atracción de la inversión a través de la promoción y difusión de mecanismos de inversión tales como los Contratos de Estabilidad Jurídica y las Zonas Francas, en los cuales la Dirección analiza las solicitudes de los CEJ y expide los conceptos sobre la viabilidad de declaratorias de las zonas francas del país. Formulación, implementación, concertación y evaluación de planes y programas, como parte de la Comisión Nacional de Competitividad, en desarrollo de la Política de Productividad y Competitividad, con el fin de mejorar la productividad de las empresas y la competitividad de los productos y servicios del país.

Coordinación nacional de la estrategia de competitividad regional en el marco de las Comisiones Regionales de Competitividad del Sistema Nacional de Competitividad (Decreto 2828/2006), a través de la formulación e implementación de Planes Regionales de Competitividad, los cuales se articulan a la Política Nacional de Productividad y Competitividad (CONPES 3527 de 2008), Contribución al desarrollo de la política de Transformación Productiva sectorial de comercio, industria y turismo en desarrollo de la política de Productividad y Competitividad. Promoción de reformas, regulación y políticas para el mejoramiento de la infraestructura, la logística y el transporte nacional, la adopción y uso de las TIC en las MIPYMES, así como el desarrollo de la CT&I en el sector productivo colombiano. Coordinación del Programa de Asociatividad Empresarial y Clusters en las diferentes regiones del país. Coordinación de los eventos de promoción a la productividad y competitividad: “Encuentro Nacional de Competitividad Colombia Compite” y “Colombia Crece”, “Consultorios Empresariales”; y realización de su seguimiento. Desarrollo y coordinación del Registro Nacional de Personas que dominan el Inglés “Ispeak” dirigido a apoyar los sectores que hacen parte del programa de Transformación Productiva. Coordinación del Portal e-regulation, quien brinda información acerca de los trámites y pasas necesarios para invertir en Colombia.

REVISION BIBLIOGRÁFICA

En el contexto la productividad está ligada a indicadores económicos que impactan a los sectores productivos y formulan derroteros para alcanzar las metas propuestas por el Gobierno Nacional de incrementar los recursos para que las organizaciones puedan operar en economías globalizadas. Elevar la productividad significa encontrar mejores formas de emplear con más eficiencia la mano de obra, el capital

físico y el capital humano que existen en la región, en el contexto del Valle del Cauca. Una de las maneras estándar de medir los aumentos de eficiencia es calcular los incrementos de la productividad total de los factores (PTF), es decir, la eficiencia con la que la economía transforma sus factores de producción acumulados en productos. Cuando se declara un crecimiento de la PTF del 1%, esto equivale a decir que se obtuvo 1% más de producto a partir de los mismos recursos productivos. Esta es la medición preferida de productividad, pese a que es difícil de calcular porque requiere medir todos los insumos empleados en la producción, algo que no siempre es factible. Si se considera que la productividad es el arte de lograr más con lo mismo, las políticas encaminadas a elevar la productividad deberían ser las favoritas de todo sistema político. Lamentablemente, el crecimiento de la productividad es una tarea compleja en la que es necesario identificar las políticas adecuadas, entender los conflictos que existen entre objetivos diferentes, conseguir los recursos para poner en práctica esas políticas, lidiar con quienes prefieren el statu quo u otras políticas y mantener esfuerzos sostenidos en ámbitos complementarios hasta que se obtengan resultados aunque la tarea se convierta en algo incierta. La productividad de un país es el resultado de la combinación de acciones de millones de empresas y trabajadores individuales. Con pocas excepciones, ninguna acción aislada de una compañía o un trabajador puede ser suficientemente importante como para tener un impacto mensurable en la productividad agregada. Pero la suma de todas las acciones es decisiva. Para entender la tragedia de la baja productividad en la región es necesario no solo entender cómo las políticas individuales (tributaria, social, comercial, crediticia) influyen en la productividad, sino también cómo influye la economía política de un país. Por otro lado la competitividad reúne una serie de variables macroeconómicas dispuestas en la metodología utilizada por la DNP, extraída del informe trimestral sobre las perspectivas de los mercados emergentes de Morgan Stanley Dean Witter de 1999.

La muestra escogida es de seis países: Argentina, Chile, Colombia, México, Perú y Venezuela. Brasil no fue incluido debido a la alta volatilidad de sus principales indicadores en la década de los noventa y a su considerable peso relativo, lo que generaría un sesgo en la muestra. Los datos provienen de diversas fuentes, siendo las más importantes: el DNP, Morgan Stanley, Cepal y Goldman Sachs. Las variables escogidas reflejan la situación macroeconómica relativa de cada país teniendo en cuenta los siguientes indicadores: Crecimiento real PIB, PIB Per cápita (US\$), Cambio anual reservas internacionales (US\$ billones), Déficit sector público no financiero (% PIB), Déficit primario del gobierno nacional central (% PIB), Tasa de desempleo por trimestres, Ahorro nacional (% PIB), Crédito de sistema financiero al sector privado (% PIB), Tasa de interés real (Depósitos), Inflación (Promedio anual), Balanza comercial (% PIB), Deuda externa total (% del PIB), Servicio de la deuda externa (% Exportaciones de B y S. no financieros), Meses de importaciones cubiertos por las reservas internacionales. Al presentar esta relación estrecha de los dos conceptos vemos como las organizaciones se deben acoplar a los modelos políticos y económicos dispuestos en el momento y la manera en como las empresas reúnen el conocimiento suficiente para que asuman el reto de internacionalizarse. El comercio impulsa la productividad (Fernandes, 2007). En ese orden de ideas se puede inferir que los costos que acarrea la internacionalización para las empresas pueden influir en la productividad como también puede influir a la distorsión de sus ingresos por la falta de preparación para asumir este tipo de procesos, lo que acarrea la reasignación de recursos en la economía por parte de entes gubernamentales.

En otra parte se encuentran los costos en aranceles, que son ciertamente los obstáculos más visibles para el comercio aunque no los únicos. En términos generales, los costos de asumir el comercio exterior como bitácora para la competitividad transmiten deterioro financiero en materia de productividad, incluyendo todos los gastos realizados para hacer llegar un bien hasta el usuario final en distintos mercados y con distintos entornos, entre ellos los costos de distribución física internacional (DFI) y los ocasionados por la reglamentación y las diferencias de moneda o de idioma como lo enuncian Anderson y van Wincoop, 2004, en un estudio sobre las variables que inciden directamente en la cadena de abastecimiento en su documento Trade Cost. Los análisis empíricos en los cuales se da seguimiento a muchos de estos costos no arancelarios en los flujos comerciales son muy diversos, pero a menudo tropiezan con dificultades para medir las barreras correctamente. No obstante, la mayoría de los estudios son inequívocos en lo que se refiere a la

importancia estadística y económica de estos costos en la restricción de los flujos comerciales, sean barreras técnicas tales como las relacionadas con la salud, la reglamentación sanitaria y ambiental o normas industriales, de calidad y de seguridad (Otsuki y Wilson, 2008), regulaciones mercantiles (Freund y Bolaky, 2008) o efectos cambiarios (Rose, 2000; Glick y Rose, 2002; Micco, Stein y Ordóñez, 2003; Frankel, 2008).

METODOLOGÍA

A partir de unas entrevistas en profundidad y encuestas con directivos de empresas de los sectores representativos del Valle del Cauca seleccionados a partir de su impacto en importaciones y exportaciones, se encontró que uno de los traspiés que sufren las empresas en la región del Valle del Cauca obedece a la falta de dimensionar los sistemas logísticos como parte central del eslabón de la cadena de abastecimiento para incursionar en procesos de internacionalización. Existen por lo menos 3 factores por los cuales los costos de transporte se diferencian de los aranceles. El primero, radica en entender que los costos de transporte son sumamente variables, dependen de una coyuntura económica y de la inversión en infraestructura vial, marítima y portuaria. La incertidumbre sobre estos costos comúnmente está asociada a estas castigando severamente los otros procesos de internacionalización de los principales clusters productivos del Valle del Cauca como lo son Azúcar, Pulpa y Papel, Construcción, Llantas y Caucho, Cosméticos, Plásticos, Textil y Confecciones.

En un segundo lugar, a diferencia de los aranceles, los costos de transporte no son un porcentaje simple y del precio de los productos. Los costos de distribución física internacional tienen un componente unitario que depende de varias características como lo son peso, volumen y carácter perecedero. Estas características varían mucho de un producto a otro y, por ende, tienen implicaciones muy diferentes para los efectos del comercio en la productividad, particularmente cuando se combinan con los rasgos geográficos y la infraestructura del país. Si los costos de transporte son suficientemente altos como para desincentivar la competencia debido a las características intrínsecas del bien, la mala infraestructura del país o una combinación de ambos factores son antecedentes suficientes para que un país no asuma una postura comercial frente a la globalización. Y un tercer lugar, los costos de transporte no se imponen de manera improvisada, sino que responden a indicadores tales como los flujos comerciales, la calidad de la infraestructura para el comercio desarrollada en el país y el grado de competencia en la industria del transporte. En consecuencia, la reducción de los costos de transporte no se limita a la economía política de la protección, sino que requiere medidas de política más complejas que aquellas que se toman en el marco habitual de la liberalización del comercio. Tomando los argumentos de juicio de estas características distintivas bastaría para justificar un análisis más detenido del efecto de los costos de transporte en la relación entre la productividad y la competitividad como proceso estratégico macro de la cadena de abastecimiento.

La figura 1 muestra cómo esta Colombia frente a otros países de Latinoamérica frente a los costos logísticos que se asumen en los procesos de internacionalización. Un estudio desarrollado por Agencia Nacional de Infraestructura retoma el tema central de los costos de distribución física internacional y como estos afectan inciden en la decisión de las organizaciones de asumir la internacionalización.

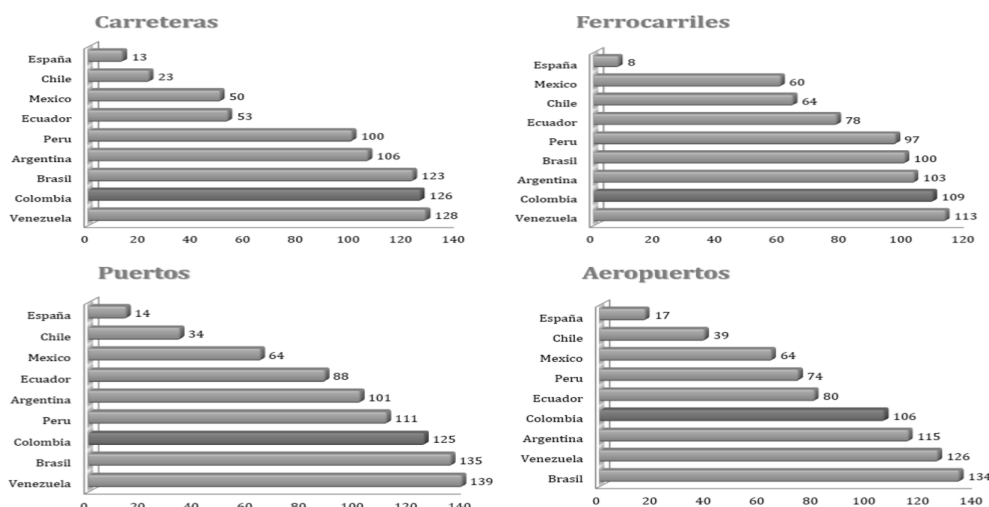

La figura 2 ilustra un punto fundamental, el tema de los costos de transporte es importante en América Latina en gran parte porque en la actualidad los fletes representan un obstáculo mucho mayor al comercio que la tasa arancelaria. Esta característica no es exclusiva de la economía colombiana sino que se observa en toda la región, pero a pesar de las circunstancias no deja de ser un foco negativo en las políticas de desarrollo comercial de los países a favor del intercambio.

Figura 1: Costos Logísticos Cómo % del PIB

Fuente: Barbero (2010). *La logística de cargas en América Latina y El Caribe, una agenda para mejorar su desarrollo.*

Figura 2: Competitividad en la Infraestructura Colombiana

Fuente: Global Competitiveness Report – 2012 / 2013 World Economic Forum

Figura 3: Relación Entre los Fletes y los Aranceles en América Latina

En el figura 3 se observa otro de los inconvenientes en la relación de costos de flete versus costos en aranceles. En Colombia se identifica como síntoma estos factores como equiparables con respecto a otros países en donde el costo del arancel porcentual es más alto pero se ve compensado desde la operación misma en materia de negociación con los fletes. El panorama general del comercio intrarregional y

extrarregional en América Latina para el caso de las importaciones, que se muestran en la figura 3, los costos de transporte son mayores que los aranceles por un gran margen. En consecuencia la mayoría de los países que están a la izquierda de la diagonal. Incluso en las pocas excepciones los países que están a la derecha de la diagonal, los aranceles son demasiado pequeños en relación con los gastos de flete como para justificar una agenda comercial basada únicamente en barreras arancelarias.

En el segundo esquema de la Figura 3 se presenta el caso de las exportaciones; en donde la composición de los productos y del mercado de estos dos flujos es notablemente diferente, los datos sobre las exportaciones podrían contar una historia distinta. Infortunadamente, solo se dispone de datos sobre los costos del comercio relacionados con las exportaciones a Estados Unidos y a cinco países de América Latina. De todas maneras, es obvio que el predominio de los gastos de flete en comparación con los aranceles es aun más pronunciado, con todos los países situados a la izquierda de la diagonal. Hasta ahora, los problemas de productividad en aras de la competitividad, se han centrado en la dimensión internacional de los costos de distribución física internacional, es decir, los gastos realizados para trasladar bienes desde el costado del buque o del avión en el puerto o aeropuerto de salida hasta el costado del buque o del avión en el puerto o aeropuerto de entrada.

La razón principal de este enfoque internacional es la conveniencia analítica, porque la recopilación de datos sobre los gastos de flete interno presenta dificultades. Sin embargo, el cómputo de los costos de transporte solo entre fronteras genera arbitrariedades y desigualdades. Igual que los costos de transporte internacional, los costos elevados de transporte dentro de un país pueden socavar el impacto positivo del comercio en la productividad, ya sea mediante los efectos de la reasignación, los efectos de disciplina de las mayores importaciones o ambos mecanismos. Por ende una reducción de los costos de transporte nacional podría mejorar la asignación de recursos entre las regiones y los sectores de la economía, lo cual aumentaría la productividad agregada de forma semejante a las ganancias clásicas del comercio internacional.

RESULTADOS

Para el análisis de los factores claves de desempeño de la cadena de abastecimiento en los sectores enunciados en el Valle del Cauca, el estudio tuvo en cuenta un análisis de los documentos en donde se esbozan indicadores de desempeño logísticos y de transporte internacional. Sobre esa base se confrontó junto con un instrumento de valoración la experiencia de profesionales que tienen responsabilidades en las áreas de negocios internacionales, comercio exterior, logística, importaciones y exportaciones de las empresas valoradas para los resultados concluyentes. Los Indicadores internacionales Logísticos y facilitación del comercio que soportan el documento fueron: Índice de desempeño logístico (LPI), Índice de la competitividad global (GCI), Índice de la Facilitación Comercial (ETI), Índice Doing Business (DB), Índice de Conectividad Marítima (LSCI).

A nivel general Colombia ha registrado una mejora significativa en el LPI, tanto en lo que respecta a su posición en el ranking (subiendo 18 posiciones), como a la puntuación en sí del índice. Al compararse con los otros países de la región, se trata con diferencia de la tendencia más positiva en Mesoamérica, impulsado por los cambios en aduanas, infraestructura, y competencia logística, principalmente. Para las importaciones realizadas por estos modos de transporte, se resalta que Colombia registra el doble de tiempo que países CIVETS (Colombia, Indonesia, Vietnam, Egipto, Turquía, y Sudáfrica), BRICS (Brasil, Rusia, India China, Singapur) y OECD (Organización para la Cooperación y el Desarrollo Económico) para hacer importaciones. Esto se debe principalmente a las dificultades que tienen los puertos marítimos hoy en día, en lo concerniente a: la salida de la mercancía del recinto portuario, a causa de la saturación de los mismos, y a las inspecciones que se realizan. Colombia y México tienen los fletes más altos de la región en lo que se refiere a comercio exterior por vía marítima/aérea. Estos mismos países también tienen costos superiores a los de países CIVETS, BRIC y OECD incluidos en los estudios soportes de esta investigación, y sólo son

superados por Bolivia y Venezuela. Para valorar apropiadamente la competitividad de los precios ofrecidos, cabe tener en cuenta el contexto económico, y las distancias recorridas, principalmente, y en especial para el modo carretero, el cual sufre de altos tiempos muertos en pasos de frontera y puertos. Asimismo., cuando son distancias cortas entre puertos, los costos de transporte son altos debido a los altos tiempos muertos, y al hecho de tener que regresar en vacío a sus origen, en algunos casos.

Figura 4: Comparativa de Resultados LPI 2007, 2010 Y 2012. Ranking Global

Fuente: LPI 2007, 2010 y 2012

Colombia se encuentra en una relativa buena posición en lo que concierne a los costos de exportación; sin embargo, su posición comparativa empeora para los costos de importación, aunque con una oferta menos competitiva que otros países latinoamericanos como México, en lo que respecta a la exportación para los transportes aéreo y marítimo. En cuanto al número de documentos para importaciones, Colombia sale muy bien librada en el índice de comercio exterior.

Figura 5: Número de Documentos Para Importar y Exportar. LPI, 2012

Fuente: LPI 2012

En línea con el anterior indicador las figuras 5 y 6 muestran que Venezuela, Panamá y Honduras son los países en donde con más frecuencia ocurren inspecciones físicas al importar mercancía, registrándose estas inspecciones físicas en un 40% de las veces, seguido por Guatemala (20%), República Dominicana (15%), Nicaragua (12,5%) y Colombia (12,5%).

La Competitividad un Paradigma En las Empresas del Valle del Cauca

Los resultados obtenidos en el presente estudio a partir de una serie de entrevistas y encuestas a las personas que tienen injerencia a nivel organizacional sobre los aspectos que involucran los procesos de internacionalización evidencian claramente que no existe una estructura adecuada para asumir los retos que enfrenta la región al insertarse de manera eficiente al intercambio comercial. Es necesario entonces desarrollar estrategias que permitan que cada uno de los sectores empresariales unifique criterios en materia de internacionalización como aparecen en la Tabla 1.

Figura 6: Tiempos con y Sin Inspección Física Para Importar LPI, (En Días)

Fuente: LPI 2012

Dado lo anterior la política de competitividad emanada en el documento CONPES plantea una profundización de la Economía mediante los acuerdos comerciales y de inversión, incorporar la asociatividad empresarial y el desarrollo de Clúster de tal forma que se incentive los negocios internacionales. Para ello se busca solucionar las deficiencias identificadas en la financiación de proyectos de infraestructura y en la regulación de la normatividad asociadas al transporte de carga, la infraestructura y la logística, el gobierno nacional plantea cinco estrategias y objetivos que garantizaran al año 2032 el mejoramiento de diferentes sectores de la economía los cuales se convertirían en sectores de clase mundial como lo son cosméticos, industrias gráficas, confecciones, tecnologías TIC's (Tecnologías de Información y Comunicación), turismo de salud, industrias farmacéuticas, papel y cartón, industria del cuero y sector de autopartes. El retraso en infraestructura se ha traducido en mayores costos para las empresas, como lo refleja la Encuesta Nacional de Logística 2008, realizada por el Departamento Nacional de Planeación (DNP), en la cual se indica que 37% de los costos logísticos en Colombia está concentrado en el transporte interno; 33%, en el transporte internacional; 11%, en costos indirectos; 8%, en costos portuarios; 5%, en costos en el contenedor; 4%, en costos aduaneros, y 2%, en costos de la documentación dado lo anterior desde este mismo año el gobierno nacional encamina sus esfuerzos al mejoramiento de la competitividad y la productividad, los diagnósticos realizados por el Doing Business del Banco Mundial para el año 2013 muestran un descenso en el factor desempeño Económico en lo que se refiere al subfactor de Comercio Internacional ocupando el puesto 49 en el año 2012 y el 52 en el presente año.

CONCLUSIONES

Los estudios analizados en la presente investigación como soporte para confrontar los hallazgos resultantes del análisis de los sectores fueron valorados individualmente, ya que cada uno está enfocado en evaluar diferentes elementos sobre el desarrollo de los procesos que intervienen en la cadena de abastecimiento, y por lo tanto no son 100% comparables todas las variables que se presentan. En este sentido, mientras el Doing Business se focaliza en evaluar aspectos relacionados con la competitividad de los países para hacer negocios, dejando a un lado los aspectos de infraestructura, logísticos (incluye un aparte de comercio transfronterizo) y aduanales, el Índice de Desempeño Logístico es en sí el conjunto de aspectos que influyen en la cadena logística de carga de un país. Un referente clave para nuestra investigación si se tienen en cuenta que el Valle del Cauca, como la región del pacífico colombiano que se perfila como una región propicia para el intercambio y el desarrollo comercial del país. De manera similar, el Índice de Competitividad Global concentra sus esfuerzos en valorar la competitividad en donde solo existe una variable que incide directamente con la evaluación logística y de transporte. Así mismo, el Índice de Facilitación Comercial valora aspectos que determinan la calidad de los procesos de facilitación del comercio.

Todo lo anterior como un referente para poder entender cómo se articulan los procesos organizacionales de las empresas del Valle del Cauca para asumir retos en materia de internacionalización. Finalmente, se debe

resaltar que la evaluación de los aspectos referentes a la infraestructura incluye no solo lo estrictamente ligado a la movilización o manejo de la carga, sino también lo concerniente al manejo de pasajeros, por lo que los resultados pueden tener igualmente una leve distorsión, y por ende, su adecuada interpretación resulta fundamental.

Tabla 1: Acciones Estratégicas Para Enfrentar la Internacionalización Empresarial

Acción	Que Se Debe Hacer	Como Se Debe Hacer	Que No Se Debe Hacer
Estrategia General	Hacer de la internacionalización comercial una política de región, alineada a los principios de competitividad de la nación.	De la mano de Gremios y Asociaciones desarrollar planes de fomento a la internacionalización empresarial vinculando a las empresas privadas y entes públicos.	Desarrollar comités aislados de los actores y de los procesos que implican la internacionalización.
	Facilitar el acceso a los recursos productivos a todos los tipos de empresas, identificando sectores emergentes en materia de productividad para llevarlos a ser competitivos con el reto del intercambio comercial.	Desarrollar presupuestos de internacionalización por clusters productivos sectoriales. Con el fin de impulsar las empresas a que alisten sus maquinarias de transformación productiva	Concentrarse solo en los sectores más productivos de la economía regional. Sin ningún proceso de selección.
	Buscar cómo aumentar la productividad dentro de las empresas vallecaucanas y entre ellas (clusterización), facilitando el movimiento de recursos de las empresas menos productivas a las más productivas.	Vincular como aliado estratégico a la Cámara de Comercio de Cali, utilizando rutas de capacitación y asesoría con expertos de otras empresas que comuniquen el valor de la productividad para fines comerciales globales.	Desarrollar programas de capacitación y asesoría aislados al proceso de desarrollo comercial de las organizaciones sin tener como referente central el entorno del sector productivo.
	Apoyar el éxito, no el fracaso; apoyar lo que tenga potencial de crecimiento, no lo que esté estancado sin perspectivas de salir adelante.	Identificar en la balanza comercial de las empresas del Valle del Cauca aquellos sectores que han demostrado indicadores de surgimiento económico en materia de intercambio comercial. Desde allí evidenciar las experiencias y buenas prácticas del reto internacionalización	Apoyar a las empresas más débiles, más improproductivas o más pequeñas, simplemente porque son pequeñas. Desplegar el programa de capacitación a todo el empresariado sin hacer un proceso de selección.
Política de Productividad hacia el Comercio Exterior	Generar condiciones para promover la eficiencia del puerto de Buenaventura como referente de competitividad de las empresas que demandan los servicios.	Implementar indicadores unificados de productividad en aras de la internacionalización para los sectores productivos del Valle del Cauca	Desarrollar solo esta estrategia para Sectores Oligopólios. Diagnosticar contantemente la cadena de abastecimiento de las empresas sin desarrollar planes de acción para contrarrestar la problemática interna de la ejecución de los procesos.
	Eliminar las deficiencias aduaneras.	Desarrollar un pacto empresarial por la productividad de la región con el ánimo de simplificar los procesos de inspección entre empresarios y entidades gubernamentales como la DIAN.	Proteger a empresas ineficientes, rechazando el uso de mecanismos como salvaguardias y aranceles antidumping.
Políticas de apoyo a las PyME	Concentrarse en las PyME con mayores posibilidades de éxito.	Desarrollar un plan de internacionalización a las Pymes que avanza en internacionalización.	No otorgar apoyo permanente o a corto plazo.
	Condicionar todos los apoyos al logro de metas mensurables y a la formalización de la empresa.	Desarrollar planes de internacionalización a Pymes.	Incluir objetivos sociales en las políticas de apoyo a las PyME. Una cosa es el impacto social otro el productivo con miras a la internacionalización
Políticas sobre innovación	Vincular la investigación a la actividad empresarial.	Desarrollar planes de vinculación a procesos investigativos liderados por las universidades para desarrollar investigación aplicada para resolución de problemas	Asignar recursos por el lado de la oferta sin evaluar los resultados.
	Conceder estímulos financieros o deducciones fiscales a los programas y servicios de tecnología que se ofrecen a las empresas.	Insertar la investigación producida en las universidades al impacto empresarial regional, compartiendo responsabilidades universidad y empresa en función de indicadores de logro.	Hacer caso omiso de las exigencias de las empresas y de las interacciones con el resto del sistema de innovación.
	Fortalecer los derechos de propiedad intelectual e industrial.	Incentivar el desarrollo del registro de productos y servicios de protección a la propiedad industrial,	Pasar por alto los procesos de protección industrial (marca, productos, diseños, proceso) ya que en los procesos de internacionalización son los que más se violan.
	Fomentar mecanismos competitivos como instrumentos para reasignar recursos por el lado de la oferta (educación profesional y técnica, universidades y centros de tecnología) y evaluar los resultados.	Desarrollar programas tecnológicos y de especialización en Comercio Exterior	No desarrollar programas académicos en función a la internacionalización.

Políticas de desarrollo productivo	Estimular el desarrollo de sectores productivos con externalidades positivas y la capacidad de impulsar otros sectores.	Desarrollar planes de acompañamiento hacia la internacionalización entre empresas que tienen mayor experiencia con empresas con menor impacto.	Dar preferencia a los sectores industriales o reciben inversión extranjera.
	Promover la exploración conjunta de oportunidades entre los sectores.	Desarrollar planes de internacionalización sectorial.	Considerar que la internacionalización va en contra a las estrategias propias de una empresa y no de un sector.

Lo más concluyente que se ha encontrado es que las empresas de los sectores analizados no determinan un seguimiento a los indicadores macro del comercio y mucho menos miden la efectividad de sus procesos comerciales con indicadores de gestión alineados desde el entorno. Si bien es cierto que la infraestructura del Valle del Cauca en materia de carreteras con el fin de conectar al país como parte de la estrategia de competitividad se puede calificar como positiva, no podemos decir lo mismo con la facilidad del acceso hacia el puerto de Buenaventura, en donde existe una transformación vial en beneficio del transporte, es claro no se ve reflejada la inversión en materia de infraestructura de la Sociedad Portuaria de Buenaventura hacia un corto plazo, ni mucho menos una alineación de los entes gubernamentales para asumir de manera oportuna los procesos administrativos involucrados al intercambio comercial que afectan desde el inicio los demás eslabones de la cadena de abastecimiento. El análisis concluyente por sectores evidencia fortalezas y debilidades entre un sector y otro: El Sector Cosmético es uno de los más dinámicos y competidos en el país al estar compuesto por 3 segmentos: productos de aseo, maquillaje y color y fragancias y perfumes en cuanto a los canales de comercialización, hay tres canales básicos: uno, conformado por supermercados, grandes superficies, tiendas y droguerías que tienen cerca del 40% de la participación del mercado. El otro es la venta directa y multinivel. El último segmento es el de los profesionales peluqueros, esteticistas y médicos dermatólogo. La caracterización empresarial de la industria es compleja por la diversidad de productos que se elaboran, diversidad de insumos, usos y procesos productivos que son variados y generalmente de baja complejidad tecnológica. Sólo después del proceso de apertura económica el flujo comercial en importaciones y exportaciones del sector ha crecido de manera importante atrayendo inversión extranjera. El sector cosmético se caracteriza por la heterogeneidad en el tamaño, la composición del capital, las características tecnoproductivas, la diversificación en las líneas de producción, así como por el gran número de empresas que lo componen y por lo tanto por una problemática diversa. En el año 2010 la producción de cosméticos, productos de aseo del hogar y absorbentes de higiene personal fue de \$5.431.341.908, donde el 47,16% de la producción del sector correspondió a cosméticos; el 26,41% a productos de aseo; y el 26,43% restante a productos absorbentes de higiene personal. Las exportaciones alcanzaron un nivel de US \$682,5 millones en el 2010, de las cuales US \$410.5 millones correspondieron a cosméticos, US \$76.7 millones a productos de aseo y US \$195.2 millones a productos absorbentes de higiene personal. Los principales productos cosméticos exportados fueron: maquillaje, color y tratamiento con un 47%; aseo personal correspondió al 34%, y las lociones y perfumes registraron un 19%. Respecto a los productos de aseo, los principales productos exportados correspondieron a detergentes con un 61%, seguido por otros productos de aseo y hogar con un 29% y jabones para lavar con un 10%. Los principales países de origen de las importaciones de productos cosméticos fueron México con un 32.53%, Estados Unidos con 12.65%, Brasil con 10.87%, Francia y Perú con 10.06% y 9.38% respectivamente. En cuanto a productos de aseo, los países destacados son: Estados Unidos con un 30.69%, México con 20.71%, Alemania con 9.87%, Ecuador con 4.95% y Brasil con 3.78%.

ANALISIS DE LAS ESTRUCTURAS ORGANIZACIONALES PARA LA TRANSFORMACION PRODUCTIVA DE LAS ORGANIZACIONES DEL VALLE DEL CAUCA

Rafael Antonio Muñoz Aguilar, Universidad Autónoma de Occidente

RESUMEN

Esta investigación tiene como fin analizar distintas estrategias para la transformación productiva de las principales organizaciones o sectores gremiales del Valle del Cauca, por ende, es necesario precisar y conocer que es y en qué consiste una cadena de transformación productiva y abastecimiento. Además de articular las múltiples definiciones y representaciones prácticas que deriva una cadena de transformación productiva y abastecimiento, es necesario correlacionarla con la noción de ventaja competitiva, principalmente como herramienta estratégica para cualquier proceso de negociación internacional.

Palabras claves: Transformación Productiva, Cadena de Abastecimiento, Logística, Procesos, Estrategias, Indicadores, Ventaja Competitiva

ANALYSIS OF ORGANIZATIONAL STRUCTURES FOR PRODUCTIVITY GROWTH OF ENTERPRISES IN VALLE DEL CAUCA

ABSTRACT

The purpose of this research aims to analyze different strategies for the productive transformation of the main trade union organizations or sectors of Valle del Cauca, therefore, it is necessary and know it is and what it consists of a chain of supply and production patterns. In addition to articulating the multiple definitions and practices that derives a string representations of productive transformation and supply, it is necessary to correlate it with the notion of competitive advantage, mainly as a strategic tool for any international negotiating process.

INTRODUCCIÓN

La logística es una variable representativa para la competitividad de un país y una región, por ello para alcanzar niveles de competitividad altos en Colombia y en especial en el Valle del Cauca, las empresas deben prepararse para desarrollar funciones y operaciones logísticas adecuadas buscando así un desarrollo óptimo de la competitividad sectorial. De ahí que, en este entorno, donde se encuentran las funciones de compras, producción, planificación y distribución física de las empresas, el mundo actual presenta continuamente nuevos retos de velocidad y flexibilidad que se debe seguir para permanecer en el mercado. Teniendo en cuenta que se está hablando de procesos de transformación productiva, la presente investigación juega un papel importante en espacios sociales, organizacionales, académicos y profesionales. El principal hallazgo es la visibilización fáctica de cada uno de los procesos o nodos que articulan la cadena de abastecimiento de los sectores objeto de estudio, con lo cual se recrean puentes comunicantes entre la

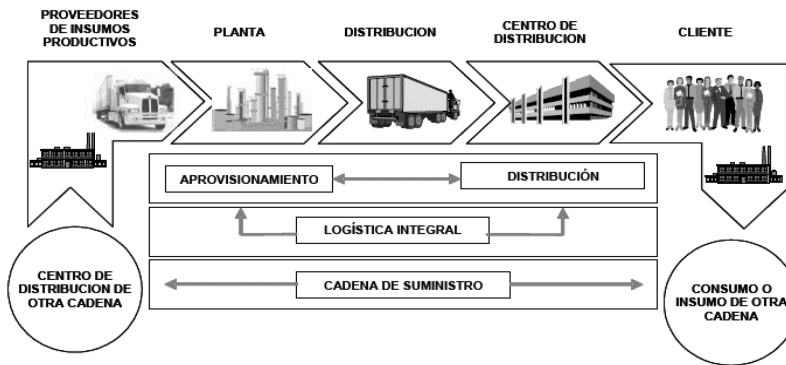

academia y las organizaciones gremiales, puentes bastante ausentes en el contexto de la realidad colombiana. Los empresarios colombianos y, para este caso, vallecaucanos, son conscientes de que los procesos de internacionalización en las empresas no son fáciles, más aún cuando los mercados externos plantean retos con organizaciones que muestran indicadores de competitividad y productividad muy altos, basados en una cadena de abastecimiento organizada y controlada en cada una de sus etapas; es por ello que, a partir de los resultados del presente estudio, los gremios vallecaucanos están invitando a las organizaciones para que desarrollen estrategias que permitan mejorar la cadena en los procesos logísticos, de tal manera que se pueda competir en el concierto internacional con mayor fortaleza y solidez. En este orden de ideas se busca que, al identificar el estado de los procesos y procedimientos en la cadena de abastecimiento, las empresas logren conocer cómo es realmente su operación, a partir de lo cual podrán definir estrategias de mejoramiento en sus procesos, posibilitando su posicionamiento nacional e internacional. Aunque se han publicado estudios específicos donde se menciona el impacto de la cadena de abastecimiento para las organizaciones colombianas y vallecaucanas, realmente no se han emitido informes que analicen los procesos y procedimientos en la cadena de abastecimiento por sectores y en el contexto del Valle del Cauca. Frecuentemente se hacen mediciones a nivel general, dando como resultado información nacional que no centra sus detalles en el Valle del Cauca, lo cual dificulta la identificación de acciones de mejora específicas al interior de las organizaciones.

REVISION BIBLIOGRAFICA

La administración de la cadena de abastecimiento es el tema principal en muchas industrias con una firme idea de la importancia de una relación integrada entre clientes y proveedores. Esta administración se ha convertido en el camino para la mejora de la competitividad por medio de la reducción de la incertidumbre y el mejoramiento del servicio al cliente. El objeto de esta investigación es analizar distintas estrategias para la transformación productiva y de abastecimiento de las principales organizaciones gremiales del Valle del Cauca; para lo cual es necesario precisar y conocer ¿qué es? y ¿en qué consiste una cadena de transformación y abastecimiento? Existen diferentes definiciones para la cadena de abastecimiento, LaLonde (1994), Cooke (1997) y Porter (1997), plantean lo siguiente: “Es la entrega al cliente de valor económico por medio de la administración sincronizada del flujo físico de bienes con información asociada de las fuentes de consumo” (LaLonde, 1994).

“Coordinación e integración de todas las actividades asociadas al movimiento de bienes, desde la materia prima hasta el usuario final, para crear una ventaja competitiva sustentable. Esto incluye la administración de sistemas, fuentes, programación de la producción, procesamiento de pedidos, dirección del inventario, transporte, almacenaje y servicio del cliente” (Cooke, 1997). “La cadena de abastecimiento es un proceso que busca alcanzar una visión clara del suministro basado en el trabajo conjunto de clientes, consumidores y vendedores para anular los costos que no agregan valor, mejorando la calidad, el cumplimiento de los pedidos, mayor velocidad y para introducir nuevos productos y tecnologías” (Anne Millen Porter, 1997). En síntesis, se puede expresar que la cadena de abastecimiento es una red de minoristas, distribuidores, transportistas, almacenes y proveedores que participan en la producción, distribución y venta de un producto para el consumidor; y su gestión no es otra cosa que el sistema de gestión que establece y controla la cadena de abastecimiento. De manera muy general, la cadena de abastecimiento está integrada por cinco elementos: Proveedores, Transportes, la Empresa, los Clientes y la Comunicación entre ellos. La rápida interacción entre estos elementos es indispensable para generar ventajas en costos y tiempos. En el siguiente gráfico se observa de forma general los componentes de la cadena de abastecimiento.

Figura 1: Componentes Básicos de la Cadena de Abastecimiento

Fuente: El autor

Vale la pena enfatizar antes de seguir con la descripción de la cadena de abastecimiento en la diferencia entre esta y la logística, ya que muchas veces se tiende a confundir o pensar que son el mismo concepto ya que uno de los principales actores en la administración de la cadena de abastecimiento es el departamento de logística. La logística tiene que ver con el movimiento de mercancías y hay que considerar entre otros factores, cómo y cuántas veces se manejan éstas, las formas de transporte, las transferencias de medios de transporte, el empaque y el tiempo en tránsito, el costo del manejo físico y el traslado de las mercancías, la cual no es solo un costo en términos de flete; también depende del tiempo de tránsito. Así pues, la logística se define como el proceso de planificar, llevar a la práctica y controlar el movimiento y almacenamiento de forma eficaz y costos efectivos de materias primas, productos en fabricación y productos terminados y la información con ellos relacionada, desde el punto de origen hasta el lugar de consumo, con el fin de actuar conforme a las necesidades del cliente. Desde esta perspectiva se desprenden los siguientes procesos diferenciales en la cadena de abastecimiento:

La Comercialización Internacional: La teoría clásica o también conocida como la primera explicación del comercio internacional, fue sustentada desde el paradigma de la ventaja absoluta, Smith menciona que dicha ventaja significa que los países exporten lo que hacen mejor que otros. Para Ricardo (1817), en oposición al concepto de ventaja absoluta como umbral de especialización productiva, propone que es la ventaja comparativa la que debe definir ese grado de especialización, la cual expresa que “un país se especializará en los productos en los cuales tiene la más alta ventaja comparativa e importará aquellos productos en los que tiene desventaja”. En la década del setenta del siglo XX, surge otra teoría del comercio internacional como refutación a las críticas del retorno decadente generado por la especialización, aunque a veces se puede ver lo contrario, entre más producción haya, los costos fijos son inferiores. Porter (1990) indica que existen cuatro elementos que le dan forma al ambiente donde se compite, ya sea con el aporte o entorpecimiento en la creación de la ventaja competitiva. (i) Dotación de factores (ii) Condiciones de la demanda (iii) Industrias de apoyo y relacionadas (iv) Estrategia, estructura y rivalidad de la firma. En resumen, el intercambio comercial depende tanto de las fuerzas de la economía inciden en el comercio global como nacional, donde las leyes de los países o su economía influyen en las importaciones y exportaciones.

Negocios Internacionales: Son todas las transacciones de negocios realizadas por entidades privadas o gubernamentales pertenecientes a dos o más países. Sin importar el tamaño de la empresa, todas sienten los efectos de la competencia mundial, ya sea por ventas o compras de productos y/o servicios internacionales. Son varias las razones por las que las empresas incursionan en los negocios internacionales, entre ellas el incremento de sus ventas, la adquisición de recursos, la diversificación de las fuentes de ventas y suministros y, la reducción al mínimo del riesgo competitivo. Cabe aclarar que para hablar de negocios

internacionales, se deben tener en cuenta las modalidades de negociación, tales como las exportaciones e importaciones y las influencias externas del entorno y factores internos propios de la organización.

Incremento de las Ventas: Es una de las principales motivaciones, dado que todas las empresas dependen del interés, la disposición y la posibilidad de compra de los clientes. Las razones por las que se ha provocado un mayor crecimiento en los negocios internacionales son: **(i)** el rápido incremento y expansión de la tecnología; **(ii)** la liberalización de las políticas gubernamentales acerca del movimiento transfronterizo, tanto comercial como de recursos; **(iii)** la integración de las instituciones necesarias para sostener y facilitar el comercio internacional, y **(iv)** mayor competencia global.

Estrategia de exportación: Además del compromiso internacional de cada empresa, la selección de la modalidad de acceso a otros países depende de:

las ventajas de propiedad de la empresa, que tienen que ver con los activos específicos, las habilidades internacionales y la facultad para desarrollar productos diferenciados,

las ventajas de ubicación del mercado que es una mezcla del potencial del mercado y el riesgo de inversión, y finalmente

las ventajas de internacionalización de la integración de las transacciones dentro de la empresa que corresponden a la integración de los beneficios de retener activos o habilidades dentro de la empresa con sus actividades.

La selección de proveedores, combinada con los clientes, crea el núcleo de la cadena de suministro (o de abastecimiento) de una empresa. La tecnología juega un papel importante al facilitar la integración con los clientes, así como con proveedores de materiales y servicios. Existe consenso del potencial-beneficio de relaciones más integradas derivadas de una administración consciente de las cadenas de abastecimiento. Los esfuerzos compartidos entre los actores en la cadena de abastecimiento conducen a una mayor satisfacción del consumidor final y al mismo tiempo eliminan duplicidad de operaciones y desperdicio de recursos. Cuando las empresas formulan estrategias para sus exportaciones deben:

evaluar su potencial de exportación, por medio del análisis de las oportunidades y recursos, es decir, si la capacidad instalada es suficiente para cumplir con la entrega del producto o servicio;

se aconseja tener asesoría especializada de expertos en exportación, tales como instituciones gubernamentales, bancos, empresas mercantiles o administradoras de exportaciones, entre otras;

seleccionar el o los mercados para concentrar la estrategia, ya sea de manera pasiva o activa, la pasiva es respuesta a las solicitudes del exterior, derivadas de las acciones de mercadeo y ventas, mientras que la activa tiene que ver cuando se selecciona un área de exportación específica o identificando compradores de productos o servicios similares; y finalmente, establecer las metas y la manera de hacer llegar el producto o servicios al mercado.

Estrategias genéricas de marketing internacional: Las estrategias genéricas de marketing internacional se refieren tanto a la manera de ingresar a mercados extranjeros, como a las estrategias que se encuentran adaptadas a los requerimientos de los mercados internacionales; existen muchas empresas que utilizan las mismas estrategias en el mercado nacional y en el internacional, otras por el contrario, modifican su enfoque. Por una parte, algunas empresas ofrecen productos personalizados y adecuados a las necesidades de los clientes en respuesta a los cambios del entorno, otras evitan las barreras de entrada por medio de la modificación de su estructura de negocio que las conlleva a conquistar el mercado externo, ofreciendo productos competitivos mediante canales de distribución diferentes, internet o venta directa, eludiendo a

mayoristas y demás intermediarios; una estrategia considerada influyente es la generación de credibilidad en los productos, permitiendo saltar las barreras de las redes de reparación y servicio técnico, además de complicar la copia por parte de los competidores. Aunque la mayoría de las empresas exitosas acogen un enfoque estratégico hacia los mercados internacionales, algunas ingresan de manera oportunista y por ende, deben asignar niveles de capacidad moderados, separar los principales mercados a nivel de organización y procesos, colocando en marcha los procesos de control. Tanto autores como especialistas durante años, hasta el día de hoy debaten si es más adecuada una estrategia de marketing de nichos o una global. En la década de los setenta se inician los debates si es posible estandarizar el marketing internacional o si los mercados nacional e internacional son realmente diferentes, hoy en día puede verse el mismo panorama.

El enfoque de estandarización, el cual resulta deseable porque la percepción de un producto consistente en los diferentes mercados puede generar aumento de las ventas. Walters and Yip (2006) consideran que pueden reducirse los costos combinando las diferentes actividades productivas, desplazándose a regiones baratas (sin perder la calidad) y beneficiándose de la economía que genera el tener un plan único y estandarizado de marketing. Asimismo, Levitt (2006) manifiesta que las empresas globales operan a costos relativamente bajos, es como si el mundo y sus principales regiones fueran una sola entidad, venden lo mismo, de distinta manera, en todas partes. En el estudio de Estandarización versus Adaptación de Estrategia de Mercadeo Internacional se destaca que es mejor que las empresas estandaricen los procesos y productos de recursos estratégicos, ya que de esta manera se pueden aprovechar las ventajas que presenta la asociación con un enfoque estandarizado para atender los diferentes mercados nacionales. La estandarización es una plataforma para alcanzar una finalidad distinta, no obstante, debe ser flexible para garantizar la dedicación continuada de la dirección.

En el enfoque de diferenciación es fundamental la adaptación de los estándares del producto, para garantizar el nivel de personalización necesario y satisfacer las necesidades de los clientes de todos los mercados. En el caso de las empresas que cuentan con amplias líneas de productos, acostumbran a tener liderazgo y ventajas tecnológicas, las cuales aprovechan al máximo (antes de caducar) para muchos de sus productos en muchos mercados, debido a la cantidad de productos, este tipo de empresas suelen aliarse estratégicamente con otras para recopilar información, distribuir o ingresar en otros mercados. Aunque puede ser difícil, en la actualidad las pequeñas empresas han demostrado la capacidad de cumplir con los pedidos internacionales, debido a la presencia en internet (permitiéndole crear una marca corporativa), la respuesta ante los pedidos y a la colaboración de servicios postales y de transporte, permitiéndoles así gestionar la respectiva entrega de los productos.

METODOLOGIA

En primera instancia se seleccionaron los sectores productivos del Valle del Cauca objeto de estudio, los cuales, luego de una depuración vía correlación de voluntades entre los investigadores y los sectores, estos son: Autopartes, Llantas y Neumáticos, Construcción, Papel y Cartón, Cosméticos y Sector Azúcar Luego se definió un instrumento de aplicación tipo encuesta, con la siguiente estructura muestral:

El criterio de selección de los sectores se dio a partir de los volúmenes de Carga de Importación-Exportación que se movilizan por el terminal Marítimo de Buenaventura, suministrados por Sociedad Portuaria Regional de Buenaventura. Esta información fue analizada en conjunto con el Comité de Logística de la Asociación de directores de Comercio Exterior – Adicomex, y las diferentes organizaciones que a él pertenecen; entre ellos Comestibles Aldor, Industrias del Maíz, Kraft Foods, Carvajal S.A. DIAN, Analdex, Universidad Icesi, Sociedad Portuaria Regional de Buenaventura, Evergreen, Proexport, Cámara de Comercio de Cali, Zona franca del Pacifico, Zona Franca de Palmaseca, Maerks Sealand, Coltrans, G-100. Agecoldex. Luego de los resultados obtenidos se generaron una serie de propuestas que tienen como propósito aportar en la construcción de una gestión eficiente de la cadena de abastecimiento de estos sectores, convirtiendo esta cadena en fuente de ventajas competitivas para cada una de las empresas de estos sectores.

Tabla 2: Población y Muestra Objeto de Estudio

No.	Sector	Empresas	Total Empresas
1	Sector azúcar	Ciamsa; Cooperativa Multiactiva; Dimpro; Disazucar	4
2	Sector papel y cartón	Propal; Cartones América S.A.; Cartón de Colombia S.A.; Sonoco	4
3	Sector llantas y neumáticos	Goodyear Colombia S.A.; Icollantas; Rubbermix S.A.; Llantas Unidas SA.	4
4	Sector cosméticos	Johnson & Johnson; Laboratorios Recamier; Unilever; Laboratorios JGB; Laboratorios Sky; Reckitt Benckiser; Belleza Express S.A.; Colgate Palmolive.	8
6	Sector construcción	Eternit; Forsa; Industrias Lenher; Adiola Lombana; Alumina; Decorceramica.	6
7	Sector autopartes	Fanalca SA.; Mac; Importadora Cali; Obyco; Motores Celeste; Motores Japoneses; SSang Yong; Motos Jialing; Multipartes; centro Mecanizado del Cauca	10

RESULTADOS

De las empresas caracterizadas en la metodología, tenemos que el 66,7% de ellas son nacionales y el 33,3% son multinacionales. Ninguna de las empresas encuestadas se encuentra afiliada al convenio de cooperación aduanera, lo cual evidencia la desarticulación entre las políticas aduaneras nacionales y la agencia misma de las agremiaciones empresariales. Respecto a la gestión de compras, se obtuvo que el principal producto que importan las empresas encuestadas son: productos terminados (46,7%), seguido de materia prima e insumos (33,3%) y por último maquinaria y equipos (13,3%). Con respecto al principal producto que exportan tenemos que los productos terminados tienen una participación del 54,54%, seguido de materias primas e insumos (27,27%) y en tercer lugar, maquinarias, equipos y/o repuestos (9,09%). Referente a la frecuencia con que realizan la compra del principal producto que importan se determinó que el 33,3% de las empresas lo hacen semanalmente, el 26,7% mensual y el 13,3% trimestral.

Ahora bien, el 36,36% de las empresas encuestadas realizan la venta de los productos que exportan diariamente, el 27,27% lo realiza semanal, el 18,18% mensual, y quincenal y bimensualmente lo realiza el 9,09% respectivamente. También se obtuvo que el 60% de las empresas encuestadas hacen uso de los acuerdos comerciales que tiene establecido Colombia actualmente con otros países en su proceso de importación, entre los más usados están: CAN, G3, MERCOSUR, CARICON, CENTROAMERICA, BRASIL Y TLC's. Siguiendo con el ámbito de la gestión de compras, se logró establecer que los medios utilizados por las empresas encuestadas para buscar posibles proveedores internacionales o intermedios se encuentra: viajes de negocio (53,3%), ferias internacionales (46,7%), buscadores Web (33,3%). Respecto a la evaluación del proveedor internacional antes de realizar la negociación internacional, el 93,3% afirman hacerlo, mientras que 6,7% no lo hace. Dentro de los quince criterios sometidos a evaluación de importancia por parte de las empresas encuestadas para la evaluación de un proveedor, se logró establecer que para estos sectores productivos el aspecto más importante es el precio y estabilidad financiera (93,4%), y el de menor importancia es, lugar de entrega (53,3%). El segundo factor de mayor importancia es, respaldo de garantía (93,3%), oportunidad en la entrega de producto (86,7%), Marca o especificaciones del producto requerido por la empresa (86,7%), retroalimentación de la información (86,7%), credibilidad en el mercado (86,6%), en séptimo lugar se ubica la información oportuna (80%). Los factores flexibilidad e inversión en nuevos proyectos, tecnología necesaria para procesar pedidos, conocimiento del negocio y empoderamiento de la persona que atiende las necesidades, fueron valoradas en el mismo nivel de importancia (80%), por último se encuentra la flexibilidad para cumplir con adelantos, atrasos o cancelaciones (73,3%).

Respecto a la gestión de transporte internacional, se tiene que de acuerdo al término de negociación que emplean las empresas encuestadas en sus procesos de importación, el 80% conoce todos los rubros que

componen el flete internacional con el que negocia. Así mismo, las empresas encuestadas consideran que el proveedor de transporte internacional debe suministrar mayor información en: recargos al flete y locales (73,3%) y cargos en el contenedor (46,7%). El 86,7% de las empresas encuestadas conocen con exactitud el tiempo de tránsito internacional de sus importaciones. El 53,3% de las empresas encuestadas afirman establecer contratos o acuerdos de servicio con su proveedor de transporte internacional. El 100% de las empresas encuestadas utilizan como medio de transporte interno el terrestre, en tanto que el modo de transporte internacional que más utilizan las empresas de los sectores productivos encuestados para su principal producto de importación, es el marítimo (86,7%).

Con respecto a la gestión aduanera, el 93,3% de las empresas encuestadas piden con anticipación la factura de lo que importó, antes de la llegada de la mercancía. Del 93,3% de las empresas que piden con anticipación la factura de la mercancía importada, al 60% le llega en un rango de anticipación de uno a diez días. El 53,3% de las empresas encuestadas, actualmente cuentan con un depósito habilitado. Por su parte, tan solo el 13,3% cuenta con una ubicación en zona franca. El 40% de las empresas encuestadas, utilizan algún software especializado para la administración y control de la gestión de aduanas. Respecto a cómo las empresas encuestadas manejan la administración y control de la gestión aduanera, se obtuvo que el 33,3% utilizan la figura de usuario aduanero permanente, mientras que el 53,3% subcontrata; esta subcontratación la realizan a través de: agente de aduana (66,7%) y otro (6,7%).

El 26,7% de las empresas encuestadas, realizan la nacionalización de la mercancía a través de UAP, por su parte, el 60% lo hace a través de agente de aduanas. Del 60% de las empresas que utilizan agente de aduana para la nacionalización de la mercancía, el 66,7% emplea uno de Nivel I. En relación a los ítems que cobra el agente de aduana, el 80% de las empresas encuestadas lo conocen, y el 73,3% ha realizado alguna negociación con ellos. El 80% de las empresas encuestadas afirman que los agentes de aduanas que emplean son certificados BASC. Frente a la declaración de importaciones y exportaciones, el 93,3% la conoce, el 93,3% la entiende y el 86,7% la aplica. Con relación al conocimiento de sanciones, las empresas encuestadas aseguran que conocen en un 93% el contrabando, en un 86,7% el régimen cambiario y aduaneras de los declarantes en el régimen de importación, en un 80% las sanciones por incumplimiento en los compromisos adquiridos en los sistemas especiales y las aduaneras del declarante como usuario aduanero permanente; en cuarto lugar se encuentran las sanciones aduaneras de los declarantes como agentes de aduana y las aduaneras en materia de valoración aduanera con un 60%, por su parte conocen en un 53,3% las sanciones aduaneras de los declarantes en el régimen de tránsito aduanero, en sexto lugar se ubican las sanciones aduaneras de los depósitos públicos y privados y las aduaneras relativas al uso del sistema informativo aduanero 40%, por último la sanción de la que menor conocimiento tienen las empresas encuestadas es la sanción aduanera de los usuarios de las zonas francas industriales de bienes y servicios con un 33,3%.

Con respecto a la gestión de Almacenamiento e Inventarios se tiene que el 66,7% de las empresas encuestadas, cuentan con un centro de distribución. La capacidad nominal de almacenamiento en las empresas encuestadas en MT2 oscila entre los 300 y 2400, en toneladas es de 3000 Tons. Con respecto al porcentaje en que estas empresas manejan el almacenamiento de materia prima, producto en proceso y terminado, se logró observar que: para el manejo de materia prima se encuentra en las proporciones entre el 20% al 40% con un 26,7%; las proporciones cambian para el almacenamiento de producto en proceso ya que el 53,3% almacena este tipo de mercancía entre un 1% a 20%. Por último para el producto terminado la proporción mayor en que se almacena es entre un 80% a 100% con un 40%.

Solo el 66,7% de las empresas encuestadas, cuentan con bodegas para el almacenamiento de productos en estado de materia prima, para esto las empresas cuentan con una bodega (40%) y con dos (20%). Para la mercancía que se encuentra en estado de producto en proceso, el 60% cuentan con bodegas para el almacenamiento de productos de este tipo. De estos el 40% cuenta con una bodega y el 6,7% con dos. El número de superficies propias con las que cuentan las empresas para el almacenamiento oscila entre una y

ocho superficies, el 33,3% cuentan con una superficie propia. Respecto al porcentaje de averías que presentan las empresas encuestadas con respecto a la capacidad de almacenamiento, se logro establecer que el valor más alto es el 9% de averías y el menor el 0,01%. El 60% de las empresas encuestadas aseguran que en sus bodegas se cumplen los estándares de BPA como aplicación de la filosofía de las 5's.

Además tenemos que el 93,3% de las empresas encuestadas conocen el lead time de su principal producto de importación y exportación. El 60% de las empresas cuentan con algún sistema que le permita conocer sus costos logísticos. Dentro de la operación de comercio exterior, para las empresas encuestadas el porcentaje que representan los costos logísticos se encuentran en un rango entre 5 a 10% y de 10 a 15% con un porcentaje de 33,3%. Por último en la identificación realizada por las empresas encuestadas para establecer en que proceso se presenta mayor demora al hacer la importación y exportación de mercancías, se logro establecer que son los procedimientos de aduanas y proceso de nacionalización (40% respectivamente), seguido del recibo de documentos (13,3%), los que presentan mayor demora en toda la cadena de abastecimiento.

CONCLUSIONES

Desde la perspectiva anterior, la problemática central de la cadena de transformación y abastecimiento en el Valle del Cauca radica en la complejidad de los sistemas y subsistemas que agrupan la gestión de la misma desde la estructura de las organizaciones y cómo estas asumen, sin ninguna estrategia formal, el desarrollo de una gestión óptima de las operaciones que implica asumir el reto de los negocios internacionales. La complejidad del sistema vista desde la estructura organizacional, no siempre se va a referir al número de elementos en el sistema que integra el desarrollo de la cadena, es conducente la definición de indicadores de gestión que posibiliten el desarrollo de la gestión hacia un buen seguimiento, pero también es importante resaltar que estos indicadores dependen de variables externas que no controlan las organizaciones, pero que pueden planearse antes de evidenciarse cambios. Asumir el reto de los mercados externos posibilita el adelantarse a los acontecimientos.

Esta investigación demuestra en algunos aspectos que la problemática también radica en el grado de apropiación que tienen las organizaciones sobre dos conceptos que son complejos. Por un lado la *productividad* y del otro la *competitividad*. El Ministerio de Comercio, Industria y Turismo (MinCIT) ha reunido los dos conceptos para dar un marco conceptual del alcance que la Dirección Nacional de Planeación (DNP) planteo en el documento CONPES 3527 en su política de competitividad y productividad. Los resultados obtenidos en el presente estudio a partir de una serie de entrevistas y encuestas a las personas que tienen injerencia a nivel organizacional sobre los aspectos que involucran los procesos de internacionalización evidencian claramente que no existe una estructura adecuada para asumir los retos que enfrenta la región al insertarse de manera eficiente al intercambio comercial. Es necesario entonces desarrollar estrategias que permitan que cada uno de los sectores empresariales unifique criterios en materia de internacionalización como lo son:

Hacer : de la internacionalización comercial una política de región, alineada a los principios de competitividad de la nación, esto de la mano de Gremios y Asociaciones a través del desarrollo de planes de fomento a la internacionalización empresarial vinculando a las empresas privadas y entes públicos.

Facilitar: el acceso a los recursos productivos a todos los tipos de empresas, identificando sectores emergentes en materia de productividad para llevarlos a ser competitivos con el reto del intercambio comercial. Para esto se deben desarrollar presupuestos de internacionalización por clústeres productivos sectoriales, con el fin de impulsar las empresas a que alisten sus maquinarias de transformación productiva

Buscar: cómo aumentar la productividad dentro de las empresas vallecaucanas y entre ellas (clusterización), facilitando el movimiento de recursos de las empresas menos productivas a las más

productivas. Esto se puede lograr a través de la vinculación, como aliado estratégico, de la Cámara de Comercio de Cali, utilizando rutas de capacitación y asesoría con expertos de otras empresas que comuniquen el valor de la productividad para fines comerciales globales.

Apoyar: todo aquello que tenga potencial de crecimiento, no lo que esté estancado sin perspectivas de salir adelante. Para esto se debe identificar en la balanza comercial de las empresas del Valle del Cauca aquellos sectores que han demostrado indicadores de surgimiento económico en materia de intercambio comercial. Desde allí evidenciar las experiencias y buenas prácticas del reto internacionalización.

Uno de los principales retos de transformación organizacional para adaptarse a las nuevas dinámicas de la internacionalización económica son las implicancias de gastos, por ende, para compensar estos costos, se requiere revisar la estructura organizacional misma, y plantearse acuerdos cooperativos entre las diferentes áreas de la organización, esto con el fin de reducir sus costos basados en la planeación de la demanda y en la correcta contratación de la tercerización de los diferentes eslabones de la cadena en la Distribución Física Internacional con el propósito de optimizar la cadena de abastecimiento. Para esto es necesario incurrir en diferentes herramientas conceptuales, de las cuales no deben propender por el ensayo y el error. Como consecuencia debe existir un análisis riguroso de índole estratégico que genere eficiencia y eficacia en los procesos de la cadena y se vea reflejado en los costos y los tiempos.

En síntesis, lo más concluyente que se ha encontrado es que las empresas de los sectores analizados no determinan un seguimiento a los indicadores macro del comercio y mucho menos miden la efectividad de sus procesos comerciales con indicadores de gestión alineados desde el entorno. Si bien es cierto que la infraestructura del Valle del Cauca en materia de carreteras con el fin de conectar al país como parte de la estrategia de competitividad se puede calificar como positiva, no se puede decir lo mismo con la facilidad del acceso hacia el puerto de Buenaventura, que aunque existe una transformación vial en beneficio del transporte, es claro no se ve reflejada la inversión en materia de infraestructura de la Sociedad Portuaria Regional de Buenaventura hacia un corto plazo, ni mucho menos una alineación de los entes gubernamentales para asumir de manera oportuna los procesos administrativos involucrados al intercambio comercial que afectan desde el inicio los demás eslabones de la cadena de abastecimiento.

RESUMEN

En las últimas décadas el estudio de las MiPYME se ha constituido como un referente para la academia debido a su impacto en el desarrollo y la competitividad de la región. La mayoría de las empresas existentes en América Latina son microempresas y resultan muy importantes desde el punto de vista de la generación de empleo y de ingresos para amplios segmentos de la población (Cardozo, 2007). Las microempresas han cobrado cada vez mayor importancia, debido a que tienen la capacidad de producir puestos de trabajo con menores requerimientos de capital, demostrando el potencial innovador para enfrentar la flexibilidad productiva (BEL, 2006). El objetivo de este estudio es elaborar una caracterización de los microempresarios de la ciudad de Torreón, Coahuila para elaborar propuestas de actuación para mejorar la competitividad y el desarrollo de la microempresa. La metodología utilizada consistió en obtener información cuantitativa mediante un cuestionario estructurado aplicado a 500 microempresas de la ciudad de Torreón, los datos obtenidos fueron analizados posteriormente a través del software estadístico SPSS. El estudio es de carácter descriptivo y exploratorio.

STRATEGIC ANALYSIS FOR THE DEVELOPMENT OF MICRO- ENTREPRENEURS IN TORREON, COAHUILA

ABSTRACT

In the last decades the study of SMEs has been a reference point for the Academy, because of its impact on the development and competitiveness of the region. Most of the companies existing in Latin America are micro-enterprises and are very important from the point of view of the generation of employment and income for large segments of the population (Cardozo, 2007). Micro-enterprises have gained increasing importance, since they have the capacity of producing jobs with lower capital requirements, demonstrating the innovative potential to face the production flexibility (BEL, 2006). The objective of this study is to develop a characterization of micro-entrepreneurs in the city of Torreón, Coahuila, to draw up proposals of action to improve their competitiveness and the development of micro-enterprises. The methodology used consisted of quantitative information by means of a structured questionnaire applied to 500 micro-enterprises in the city of Torreón, the data obtained were subsequently analyzed through SPSS statistical software. The study is exploratory and descriptive nature.

KEYWORD: Strategic Analysis, SMEs, Innovation, Technology

INTRODUCCIÓN

En la actualidad, el principal interés de los investigadores es estudiar el comportamiento de las pequeñas y medianas empresas dejando de lado a las microempresas. Estas últimas juegan un papel relevante en la economía mexicana, por el nivel de empleabilidad y auto-empleabilidad que aportan. La falta de acceso a información, desmotiva a los estudiosos el investigar los factores que se asocian al éxito o fracaso en las microempresas. Ambos aspectos pueden arrojar importante información (Hessels *et al.*, 2011; Medina, 2013; Shepherd, 2003), que pueden contribuir a la disminución de la tasa de mortalidad de las empresas (Navarrete & Sansores, 2011). Algunos de los factores de mayor interés en las MIPYME en la actualidad es el emprendimiento y la innovación, debido a su impacto en la economía de los países. México no es la excepción, los altos índices de desempleo, la falta de oportunidades de crecimiento y desarrollo profesional han promovido el incremento de incubadoras de empresas (SNIE, 2010), a pesar de lo anterior no ha sido suficiente para que México le de trabajo a los 942,000 jóvenes desempleados en edad de 20 – 29 años (INEGI, 2010). Las MiPyME constituyen el 97% del total de las empresas que generan ingresos equivalentes al 23% del Producto Interno Bruto (PIB), además de ser mayoría, representan casi el 70% de las fuentes de empleo de este (Gómez.M, 2006). El objetivo de este estudio es elaborar una caracterización de los microempresarios de la ciudad de Torreón, que permita identificar sus fortalezas y debilidades, así como hacer contrastaciones entre ellas para conocer el grado de dependencia. El estudio permitirá elaborar propuestas de actuación para mejorar la competitividad y el desarrollo de la microempresa.

REVISIÓN DE LITERATURA

Dentro de los estudios de mayor interés por los economistas se encuentran aquellos donde se busca comprender el papel de los empresarios como motor del sistema económico (Baumol, 1968). García (2003) sostiene que la creación de la riqueza y el dinamismo de un país se sustenta sobre la competitividad de sus empresas, y está depende básicamente de las capacidades de sus empresarios y directivos. El trabajo por cuenta propia puede facilitar al trabajador una apreciable autonomía, la oportunidad de realizarse y una remuneración proporcionada al esfuerzo físico y mental desplegado, a los riesgos asumidos y a los recursos financieros invertidos (Genescá & Capelleras, 2004).

Existen diversos estudios y conceptualizaciones sobre el emprendedurismo, por su parte Varela (2001) lo define como la persona o conjunto de personas que es capaz de percibir una oportunidad de producción o de servicio y ante ella formula libre e independientemente una decisión de consecución y asignación de los recursos naturales, financieros, tecnológicos y humanos necesarios para poder poner en marcha el negocio que crea valor a la economía y genera trabajo para el y muchas veces para otros. Stevenson (2000) define la actividad de emprender como perseguir la oportunidad más allá de los recursos que se controlen en la actualidad. Tal es la importancia de las MiPYME en la economía mexicana que son motivo de interés de los investigadores mexicanos. Entre los temas de mayor impacto están los factores que se asocian al éxito o fracaso en las microempresas. Ambos aspectos pueden arrojar importante información (Hessels *et al.*, 2011; Medina, 2013; Shepherd, 2003), que pueden contribuir a la disminución de la tasa de mortalidad de las empresas (Navarrete & Sansores, 2011).

La literatura muestra dos alternativas teóricas para explicar la consecución del éxito competitivo. La primera habla de aprovechar las oportunidades y sortear las amenazas que provienen de la empresa y su relación con el entorno. La otra consiste en coordinar y aprovechar de forma adecuada y eficiente los recursos con los que cuenta la empresa en relación con la competencia. La clave del éxito es coordinar de acuerdo a la Teoría de Recursos y Capacidades los elementos pertenecientes a la empresa.(Grant, 1991). Esta teoría sugiere que las diferencias entre los diferentes niveles de éxito de las empresas de las diferencias de las dotaciones de recursos y capacidades de las organizaciones y no por las características estructurales.(Barney, 1991). El conocimiento de los recursos estratégicos, permitirá conocer a las mipyme

y de esta manera mejorar el sistema de gestión que aunque en este caso sea de manera informal mejore su posición frente a la competencia. La Small Business Administration (SBA) citado por define a la pequeña empresa como aquella que posee el dueño en plena libertad, manejada automáticamente y que no es dominante en la rama que opera. De acuerdo con Excélsior (2010), una de las ventajas de estas empresas, es que pueden realizar productos individualizados en contraposición con las grandes empresas que se enfocan más a productos más estandarizados, además de que se caracterizan por auxiliar a estas últimas en sus servicios u operaciones. Acorde a la Secretaría de Economía (2011), con base en la estratificación establecida en la fracción III del artículo 3 de la Ley para el desarrollo de la competitividad de la micro, pequeña y mediana empresa y en el Acuerdo por el que se establece la estratificación de las micro, pequeñas y medianas empresas, publicado en el diario oficial de la federación el 30 de Junio de 2009, las MIPyMES se clasifican de la siguiente manera:

Tabla 1. Clasificación de las Empresas Según el DOF

Empresa	Número de Trabajadores
Microempresa	0-10
Pequeña	11-50
Mediana	51-150
Grande	151-250

Fuente: Elaboración en base al DOF del 30 Junio 2009

Se tiene que una microempresa tiene entre 0 y 10 trabajadores, independientemente del negocio al que pertenezca su actividad económica, ya sea comercio o servicio. Ese tipo de empresa constituye un motor de crecimiento económico y de empleo fundamental para el país, ya que, de acuerdo a resultados del último censo económico del INEGI (2012), de cada 100 empresas mexicanas, 96 son microempresas, contribuyen con el 40.6% del empleo y aportan el 15% del PIB.

Por lo cual Bridge, Neil, & Cromie (1998), citados por Nuñez, (1997) determinan cualitativamente que una pequeña empresa es aquella que cumple con al menos dos de las siguientes cuatro características: 1) La dirección de la empresa es independiente y los directivos son los propietarios: 2) El capital y propiedad son suministrados por un individuo o un pequeño grupo: 3) Las áreas de operación son principalmente locales, los trabajadores y los propietarios viven en la misma región, sin embargo, el mercado que atienden no necesariamente es local: 4) El tamaño relativo de la empresa dentro de la industria es pequeño comparado con la unidad más grande del sector. La comparación puede ser en términos de volumen de ventas, número de empleados u otras medidas significativas

METODOLOGÍA

Para llevar a cabo este estudio se realizó una encuesta personal a las Microempresas de Torreón, Coahuila. El marco utilizado para la selección de las empresas fue la base del Sistema de Información de Empresas Mexicanas (SIEM) del 2014. La población objeto de estudio fue de 6585 micro empresas con un nivel de confianza de 90%, un error muestral de 4.25% y una probabilidad de éxito de 50%. Por lo tanto la muestra aleatoria es de 500 microempresas de la región lagunera. Las encuestas se aplicaron en el periodo de Enero a Mayo del 2014. El objetivo de nuestro estudio es de carácter descriptivo y exploratorio. Por una parte se tomo como referencia otros estudios de investigación documental de tipo informativa, con el propósito de efectuar una revisión y análisis de la literatura existente nacional e internacional, en especial. Para el desarrollo del estudio exploratorio se aplico la encuesta de Análisis Estratégico y Desarrollo para la Micro empresas del 2014 de FAEDPYME. Los datos obtenidos se analizaron mediante técnicas de estadística descriptiva utilizando el paquete estadístico SPSS.

El análisis de los datos recolectados inicia con descriptivos por frecuencias para caracterizar la población. Cuando analizamos diferencias porcentuales se utilizan las tablas de contingencia aplicando el test de Pearson, con el fin de valorar si dos variables se encuentran relacionadas. Cuando analizamos diferencias de medias se utiliza el análisis de varianza – ANOVA- como contraste. A continuación se sintetizan los resultados mas relevantes.

RESULTADOS

De la muestra estudiada de 500 microempresas ubicadas en la ciudad de Torreón, Coahuila se elaboro una caracterización que incluye el análisis de las siguientes variables control de la empresa sector, por genero, ubicación del local, localización del local, antigüedad de la empresa, si es formal o informal la empresa, nivel de formación, motivo que dio origen a la creación de la empresa, expectativas de ventas, percepción del clima organizacional, fuentes de financiamiento, dificultades que se han presentado en el desarrollo de la empresa. La distribución de la muestra con respecto al sector económico al cual pertenece muestra que 214 empresas pertenecen a tiendas de abarrotes y misceláneas siendo la principal actividad económica como se muestra en el Figura 1. El 36.2% de las micro empresas encuestadas su actividad económica es Tortillerías y panaderías, el 8% se dedica a Salones de Belleza, el 6.6% es artes gráficas.

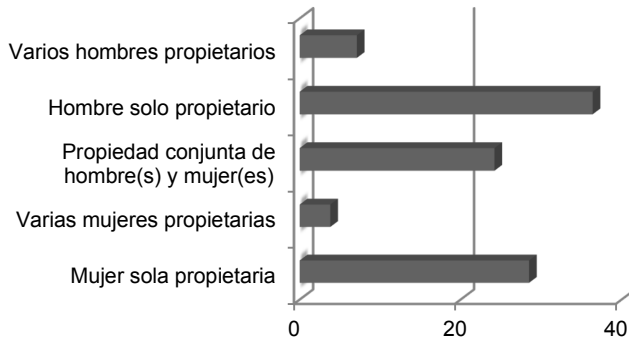

Figura 1: Frecuencias de la Distribución de la Muestra Por Sector Económico

Fuente: Elaboración propia. La gráfica muestra que la principal actividad de las empresas es tiendas de conveniencia y el menor porcentaje es para hoteles, hostales y casas.

Las micro empresas de la región se caracterizan por ser creadas en un 36,4% por un solo propietario del sexo masculino, 28,5% por una propietaria mujer, hombre y mujer en propiedad conjunta en un 24,2% de acuerdo al Figura 2.

Figura 2: El Porcentaje de Participación Por Genero en la Dirección de las Microempresas (Datos % Del 2014)

Fuente: Elaboración propia. La grafica nos muestra que el 36.4% de las empresas son creadas por hombres y en menor porcentaje de empresas fueron creadas conjunto con varias mujeres empresarias solo un 3.8%.

El 34.4% de las empresas tienen una vida mayor a 12 años como se muestra en el Figura 3, así como el 21.6% tiene 2 – 5 años y el 21.6 % de 6-11 años, de estas cifras, se determino que el promedio aritmético de la vida de estas empresas es de 10, con una desviación estándar de 9.68 años.

Figura 3: Frecuencias de Años de Operación de las Microempresas

Fuente: Elaboración propia. Este Figura se muestra la antigüedad de las 500 empresas donde la moda es de 12 o más años de vida.

Los datos socio demográficas manifiestan que la muestra estaba conformada en su mayor parte por empresas urbanas en un 86,7% y sólo un 13,3% de empresas rurales, el 58,7% están ubicados en locales independientes, el 34% espacios dentro de su misma vivienda y solo el 7,3% ubicados dentro de un kiosco en área comercial o puesto fijo y en un 9,3% empresas del sector Industrial, 74,5% del sector Comercio y 16,2% del sector Servicios. Es evidente la importancia del sector informal en términos de creación de empleos en México, por ello en el sexenio actual (2013-2018) se han implementado diversos mecanismos para concientizar y motivar a la formalización de las unidades económicas. En el Figura 4 se observa el grado de formalidad con el que cuentan las microempresas de la región. El 49.6% se encuentran constituidas de manera legal; el 36.6% trabajan de manera informal, el 29,6% de las empresas están registradas y solo el 8.1% están constituidas como sociedades.

Figura 4. Porcentaje de Empresas Registradas Como Sociedades o Informales

Fuente: Elaboración propia. La gráfica muestra si las empresas están constituidas o no bajo las normas mexicanas.

El nivel formativo de los empresarios tiene un efecto positivo sobre el rendimiento del capital humano de los trabajadores. La formación académica de quienes dirigen la empresa es un determinante en la adopción de mejoras que le permiten tener una mayor capacidad para afrontar las crisis, es por ello que los resultados que muestra el Figura 5 son un detonante para crear programas de apoyo a los microempresarios. El valor más alto es la educación básica en un 36,8%, tan solo el 28.9 % cuenta con estudios universitarios y el 24,2% solo con estudios a nivel técnicos.

Figura 5. Nivel de Formación Académica

Fuente: Elaboración Propia. En el Figura se puede observar que la mayoría de los microempresarios solo cuentan con educación básica 36.8%, con Educación Universitaria 28.9, con educación técnica 24.2%.

Entre los motivos por los cuales una persona abre una empresa se encuentran: el hecho de haber perdido un empleo, por ambición, independizarse entre otros, por tener experiencia previa en el área, por quedarse sin empleo entre otros. En el siguiente Figura 6. se puede observar, que el principal motivo para emprender es el agrado a la actividad a desempeñar con una media de 4.11, seguido por la necesidad a independizarse de ser asalariado.

Figura 6: Motivo Del Emprendimiento

Fuente: Elaboración Propia. Los valores de la media oscilan 2.68 y 4.11. El valor mas alto es de 4.11 donde el principal motivante para emprender gusto por la actividad a desarrollar, mientras que el menor es el haber encontrado una oportunidad de negocio

Si analizamos la percepción que tienen los empresarios con respecto al aumento de sus ventas para el 2014 (Figura 7) encontramos que el 72% de ellos consideran que las ventas aumentarán para el final de este año, mientras que solo el 7% espera una disminución.

Figura 7: Estimación de los Empresarios Sobre las Ventas del 2014

Fuente: Elaboración Propia. El Grafico Muestra La Relación Que Guarda La Precepción De Los Empresarios Con Respecto A Las Ventas, Donde Solo Un 7% Espera Una Disminución.

El Figura 8 muestra que la percepción que tienen los empresarios con respecto a la situación actual de las empresas es muy favorable en el 64% de los casos y relacionado al Figura anterior lo reflejan en que estiman un incremento en sus ventas.

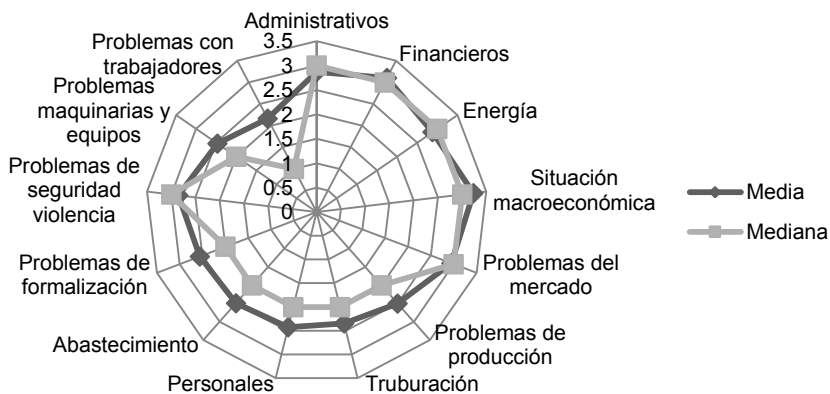

Figura 8: Clima Empresarial Que Mide La Confianza y Expectativas del Empresario En Su Entorno Económico (%)

Fuente: Elaboración propia. El 64,2% de los empresarios confían y tienen expectativas positivas de su entorno.

La percepción de los obstáculos a la gestión de una microempresa, forma un componente importante al definir la situación de los empresarios En el Figura 9. Se observa la media y mediana de los problemas principalmente a los que se enfrentan las microempresas de la región lagunera, donde la situación macroeconómica es percibida como el problema de mayor impacto seguido por los problemas del mercado con una media de 3.23 y 2.95 respectivamente.

Figura 9: Grado de Importancia de las Dificultades a las Que Se Enfrentan las Microempresas En la Región Lagunera

Fuente: Elaboración propia. Se muestra los resultados de las 500 encuestas con respecto a las principales dificultades que enfrentan los microempresarios de la región, destacando la situación macroeconómica con una media de 3.23 y los problemas del Mercado con 2.95

Se analizo si existía una relación entre la variable ubicación geográfica y el genero del propietario siendo negativa

CONCLUSIONES

Esta investigación ha permitido tener un caracterización de las micro empresas localizadas en la ciudad de Torreón, Coahuila, México. La principal causa que dio origen a las empresas fue la búsqueda por independizarse, el hacer lo que realmente les gusta, tener flexibilidad de tiempo, incrementar sus ingresos y haberse encontrado una oportunidad de negocio. El 36.2% de las micro empresas encuestadas su actividad económica es Tortillerías y panaderías. Fueron creadas en un 36,4% por un solo propietario del sexo masculino y en un 28,5% por una propietaria mujer. El nivel de educación que caracteriza a las empresas es educación básica en un 36,8%, siendo preocupante que se pierda la oportunidad de tomar decisiones certeras tener bajo nivel de conocimientos que permitan hacer frente a una situación económica difícil como la que vive el país.. Los empresarios se sienten optimistas en un 64.2% dando esperanza al crecimiento de las empresas, ya que menos del 1% de éstas lo considera negativo. Esto se refleja en que el 72% estima un crecimiento en sus ventas para el 2014. Algunas de las afectaciones para este entorno favorable que se pueden presentar son los problemas de seguridad y violencia, la situación macroeconómica y los problemas del mercado. El poder realizar una caracterización de las microempresas permite proponer políticas publicas que apoyen la formación de los lideres de las empresas para incrementar el tiempo de vida del 43.9% de las empresas que no tienen mas de 5 años de vida.

RESUMEN

El presente artículo tiene como objetivo analizar el mejoramiento de los municipios mexicanos desde la óptica del plan de desarrollo municipal, en el sentido de examinar si a través de la gestión económica, social y administrativa especificada en los ejes rectores, se puede alcanzar un bienestar sostenido y la calidad de vida de sus habitantes. Para ello, se muestra el esquema del plan de desarrollo municipal como punto central y representativo, argumentando que el progreso económico obedece a múltiples factores que surgen de acuerdo a las necesidades y características independientes, debiendo considerar bajo este contexto, los requerimientos más apremiantes y mantener una coordinación ligada a objetivos claros y alcanzables; además, se deben visualizar los posibles riesgos que pueden frenar la buena marcha de sus administraciones y tratar de medirlos desde la conformación del mismo. Se concluye que la gestión compartida, la detección de riesgos y el análisis de las necesidades territoriales, impulsan de mejor manera el desarrollo económico local.

PALABRAS CLAVE: Desarrollo Económico, Municipio, Plan Municipal

THE LOCAL DEVELOPMENT IN MEXICO FROM THE MUNICIPAL PLANNING PERSPECTIVE

ABSTRACT

This article has as an objective analyze the Mexican municipalities development from their town planning perspective in order to analyze if the economic, social and administrative management principles specified in, have achieved sustained improvement and quality on the people's life. In order to demonstrate that, we will see a diagram showing the municipal development working and representing the central hub, this way they can argue that the economic development of the territorial spaces due to many factors according to their independent needs and characteristics and not to the states 'policies, for that reason, we considered under this context, the most pressing needs and also maintaining the coordination linked to clear and achievable targets and potential risks that may affect the operation of its administrations. It concludes that shared management, risk identification and the analysis of territorial needs, encourages in a better way the local economic development.

INTRODUCCIÓN

La problemática que enfrentan los municipios mexicanos hoy en día merece ser estudiada desde diversos puntos de vista; resaltan las situaciones de carácter económico, político y social, por ser las más

representativas. El análisis del plan de desarrollo municipal puede ofrecer una idea generalizada de los puntos débiles que derivan de las administraciones, por ello, la presente investigación se presenta organizada de la siguiente manera: en la sección de la revisión de la literatura se parte de una exploración de investigaciones, teorías y conceptos existentes para ofrecer una panorámica sobre la problemática que viven los municipios mexicanos; posteriormente se presenta la metodología utilizada, en donde se describe el método para el análisis de la información, identificándose los ejes rectores del plan de desarrollo municipal, basándose para ello en las facultades concedidas por la Constitución Política de los Estados Unidos Mexicanos y disposiciones legales complementarias. Seguidamente se presentan los resultados de la investigación, así como sugerencias para el mejoramiento de los ejes rectores para finalmente presentar las conclusiones.

REVISIÓN DE LA LITERATURA

En países como México, donde los problemas económicos y sociales se han arraigado de manera sorprendente, alcanzar un desarrollo económico sostenible ha resultado difícil, ya que la contracción del PIB nacional de acuerdo al Fondo Monetario Internacional (FMI) para el 2014 será de 2.4% en lugar del 2.7% que se había pronosticado (Vélez, 2014), ello demuestra la debilidad tanto del sistema financiero como del sistema tributario que lo rige; de igual forma, problemas sociales graves han puesto al país en una verdadera encrucijada colocando en entredicho la eficacia del sistema de impartición de la justicia y la protección a los derechos humanos.

Expertos en desarrollo económico destacan que los altos costos de una mala administración por las erróneas decisiones, cuando hay riesgos involucrados, genera desafíos, provocando así la posibilidad de redirigir los recursos a la vez que se generan políticas proactivas en beneficio de las naciones (Basu, 2014). Esta situación por consecuencia, ha llegado a mermar las condiciones de la población mexicana, ya que el desarrollo local enfrenta serios problemas, sobre todo, en aspectos laborales, de salud y de seguridad, lo que aleja a los municipios de la intención contenida en el artículo 115 constitucional, el cual le otorga la responsabilidad de alcanzar el mejoramiento económico e impulsar el fortalecimiento en todas sus áreas; además, las prácticas gestoras de los ayuntamientos han puesto en juego los procesos de generación de recursos y las formas de distribución de los mismos; por ello, el plan de desarrollo bajo el cual se administra el municipio mexicano constituye un punto importante para analizar con detenimiento la gestión, manejo y aplicación de recursos, así como la administración del riesgo, al considerarlo como “ la herramienta básica de la planeación donde se materializan el programa de gobierno y las políticas institucionales, con el propósito de mejorar las condiciones de vida de los habitantes del municipio, con la participación de los sectores público y privado” (INAFED, 2013).

En este sentido el municipio mexicano como ente gubernamental, debe actuar bajo reglas autónomas ya que al concedérsele competencias que anteriormente no tenía, le permiten organizarse a través de la estructuración de un plan hecho en concordancia a las necesidades más apremiantes, sin embargo, como manifiesta Ugalde (2006) el municipio se ha erigido como objeto de estudio del derecho constitucional para analizar los fenómenos electorales, participación ciudadana y la administración pública generalizada; para ello, se han llevado a cabo estudios enfocados a determinar la aportación municipal al PIB estatal y su impacto en la economía nacional como puntos relevantes derivados de la descentralización, mas no como motor del desarrollo.

Sin duda alguna la teoría de Marshall (1890) no debe tener el mismo impacto en la actualidad, cuando se examinaban las concentraciones geográficas en torno a la industria, ya que tradicionalmente se había manejado el desarrollo económico de un municipio desde el punto de vista de la empresa, pues como lo refiere Albuquerque (2006) el territorio fue reducido a un espacio uniforme e indiferenciado y durante mucho tiempo el análisis central del desarrollo había permanecido estancado por el desarrollo de economías de escala referentes a la empresa, ahora, otros aspectos más relevantes y representativos para los gobiernos

deben ser la prioridad, analizar las características, capacidades y carencias es más representativo, detectar las potencialidades debe ser el punto de partida de un cambio incluyendo la sustentabilidad de las regiones.

Para ello, organismos internacionales han planteado diversas iniciativas como la de la Organización de Cooperación y Desarrollo Económicos (OCDE, 1999), la Organización Internacional del Trabajo (OIT) y en especial, la Unión Europea en relación con los nuevos ejes de la política económica territorial, se habla ahora del fomento al desarrollo rural y en especial al desarrollo sustentable. Asimismo, resulta importante el análisis de la descentralización de funciones, así como la puesta en marcha de los procesos de modernización de la administración municipal y de la gestión política para alcanzar los objetivos concretos. Por ello es importante preguntarse ¿Qué tipo de política local debe implementarse para ayudar a mejorar la economía?

Para dar respuesta a esta interrogante los aspectos del desarrollo municipal merecen ser estudiados con detenimiento y urgencia, máxime en estos tiempos de difícil actuación política, pues como bien afirma (Vázquez-Barquero, 2009) la estrategia de desarrollo local se debe plantear de forma diferente en cada caso, ya que las necesidades y demandas de las localidades y territorios son diferentes, las capacidades de los habitantes, empresas y comunidad local, cambian, además, cada comunidad visualiza en forma diferente las prioridades que deben incorporar a la política de desarrollo. Por tanto, el plan estratégico de desarrollo municipal debe ser analizado desde el punto de vista social, económico y político, para medir tanto el avance y detectar las áreas de riesgo y oportunidad a largo plazo.

El análisis se realiza a partir de los pilares generales bajo los cuales trabajan los municipios mexicanos, encuadrados en los siguientes aspectos de acuerdo al orden jurídico vigente:

Tabla 1. Plan municipal de desarrollo

Pilar/programas	Pilar/Programas
SEGURIDAD PÚBLICA	SEGURIDAD ECONÓMICA
Reglamentación municipal.	Empleo
Impartición de la justicia municipal.	Promoción industrial
Procuración de la justicia municipal.	Modernización comercial
Derechos humanos.	Fomento turístico
Seguridad pública y tránsito.	Modificación de las comunicaciones y el transporte
Protección civil	Desarrollo urbano
Apoyo a las políticas gubernamentales.	Agua y saneamiento
Protección jurídica de las personas y sus bienes.	Suelo
Fomento a la cultura política.	Vivienda
Fortalecimiento de la participación social.	Electrificación y alumbrado público
	Protección al ambiente.
SEGURIDAD SOCIAL	CIMIENTO PARA LA SEGURIDAD INTEGRAL
Desarrollo integral de la familia	Desarrollo de la función pública municipal
Salud	Fiscalización, control y evaluación de la gestión municipal
Educación y cultura	Planeación y conducción del desarrollo municipal
Cultura física y deporte	Fortalecimiento de la hacienda pública municipal.

En esta tabla se especifican los ejes rectores y sus respectivos puntos de trabajo en los cuales los municipios mexicanos habrán de basar sus planes de trabajo. Fuente: Elaboración propia de conformidad con los artículos 25, 26 y 115 de la Constitución Política de los Estados Unidos Mexicanos, la Ley Orgánica Municipal y la Ley de Planeación para el Desarrollo Municipal.

Seguridad Pública: Respecto al apartado de seguridad pública especificados en la Tabla 1, demuestra puntos de interés para mantener a la población protegida y segura, ya que no puede decirse que la falta de leyes, reglamentos o disposiciones es lo que caracteriza la función del municipio mexicano, sin embargo, se carecen de estadísticas oficiales y muchas veces ofrecen información distorsionada que evita identificar el riesgo inminente y el incremento de los delitos, por lo cual, es imposible señalar tendencias y patrones delictivos que pudieran ayudar a mejorar el sistema de seguridad. El manejo de datos verídicos es

importante para poder mantener un control de la criminalidad, de esta forma se reduce el riesgo de inoperancia en cuestiones de seguridad pública municipal ya que al generar cifras relacionadas con el índice de criminalidad ayudarán a minimizar el fenómeno delictivo que se ha venido incrementando.

Punto importante es la protección de los derechos humanos de la población mexicana, en este sentido los municipios deben buscar afanosamente la coordinación con las instituciones que brindan seguridad a la vez que se promuevan brigadas protectoras de los ciudadanos minimizando el riesgo para la sociedad civil vulnerable al ataque o pérdida de sus derechos. En este punto, es importante incidir en la apertura de espacios que promuevan la paz y la protección de los derechos de forma no violenta en pro de un cambio social positivo.

Para lograr una seguridad pública eficiente y eficaz, es recomendable que al momento de seleccionar policías, jefes de policías, agentes del ministerio público y demás servidores municipales se tenga en cuenta el perfil psicológico y nivel educativo de los aspirantes, ello con el afán de hacer una selección rigurosa donde las aptitudes y preparación sean relevantes para el desempeño de la función, considerando también las prestaciones y los montos salariales los cuales deben ser acordes a la responsabilidad que se asigna. En cuestión de vivienda existe poca accesibilidad para la obtención de créditos, los cuales además de ser altos se convierten en inaccesibles para el trabajador que percibe el salario mínimo quien en realidad resulta ser el más necesitado de vivienda, aunado a los espacios reducidos que conforman la construcción, lo cual resulta costoso.

Seguridad económica En cuanto a los pilares que sustentan la seguridad económica municipal se puede argumentar que los entes municipales tienen la misión de implementar políticas de tipo económico, por lo cual se forman algunas instituciones para generar el estímulo local. Si bien, este tipo de instituciones, tienen objetivos y lógica de funcionamiento, son sumamente importantes para lograr la coordinación que se busca, se tiene el ejemplo del programa Desarrollo Organizacional en Nuevo León, el programa Pasos en Sonora y Ayuntamiento Contigo en Veracruz, la Consulta Ciudadana en Baja California, Lunes Contigo en Jalisco, entre otros; se trata, en general, de un mismo tipo de política que es implementada por diversas instituciones que se diferencian, fundamentalmente, por cuestiones vinculadas a la capacidad jurídica de los municipios, las cuales varían según la región en la que se encuentran, estos programas han sido muestra de la generación de un trabajo más productivo cuando se tiene contacto con la población.

Por otro lado los problemas que el gobierno local enfrenta para obtener recursos e inversiones controladas por el gobierno estatal y federal, particularmente, el monto y la forma de obtención de las participaciones federales generalmente es inequitativa siendo además para muchos, los principales recursos de que disponen, ya que no han sido capaces de exaltar las potencialidades que los caracteriza, generando por consecuencia una estrecha dependencia.

Es importante resaltar que en la mayoría de los municipios mexicanos el sector turístico es fundamental ya que existen atractivos que son poco explotados lo que impide el desarrollo de este tipo de actividades, se tiene el ejemplo de municipios en los estados de Oaxaca, Chiapas, Veracruz y Tamaulipas. Además, existe poco estímulo para promover los productos elaborados por las etnias indígenas lo que pudiera ayudar a mejorar sus condiciones de vida. Por ello, es recomendable la promoción de las micro, pequeñas y medianas empresas ya que todos los municipios poseen riqueza en diversas formas que pueden ayudarles a conseguir el desarrollo económico.

En cuestión de vivienda existe poca accesibilidad para la obtención de créditos, los cuales además de ser altos se convierten en inaccesibles para el trabajador que percibe el salario mínimo, quien en realidad resultan ser el más necesitado de vivienda, aunado a los espacios reducidos que conforman la construcción, las cuales a la postre terminan abandonadas y bandalizadas, careciendo de un programa de rehabilitación de casas habitación.

Seguridad social: En cuanto a seguridad social se puede argumentar que las autoridades sanitarias han reducido los recursos para la asistencia médica generando con ello un desabasto en el cuadro de medicamentos y en general en los insumos para la salud, así como la reducción de servicios médicos especializados y la ausencia en la supervisión y control del proceso de la salud pública. Además, existen deficiencias en aspectos administrativos y de servicios municipales, ya que la cantidad y calidad del recurso humano en algunos municipios son excesivos pero poco eficientes. Existe poco compromiso de los alcaldes, empresas aseguradoras, instituciones prestadoras de servicios de salud y del personal asistencial, para participar en la vigilancia y el otorgamiento de servicios de calidad.

En relación a la promoción de la cultura se podría decir que existe de manera parcial, careciendo de una vinculación con instituciones educativas incluso con las comunidades. En cuanto a cultura física y deporte también muestran deficiencia, ya que no existe el apoyo económico programado por las propias administraciones municipales para fomentar dichas actividades.

Seguridad integral: En cuanto a los cimientos para la seguridad integral municipal, es importante señalar que el desarrollo de la función pública se convierte en una estrategia para avanzar en los trabajos territoriales, los problemas que aquejan a los municipios mexicanos en la actualidad deben verse como oportunidades para corregir fallas y deficiencias, para mejorar la gestión y administración, así como la forma para llegar a convertirse en municipios competitivos, en este punto, la detección de potencialidades de cada localidad, así como la detección de riesgos presentes y futuros, serían los principales renglones sobre los cuales se debe trabajar, constituyendo por el momento el modo más eficaz para poder avanzar.

En cuanto a la fiscalización, control y evaluación de la administración municipal, la cual se muestra en la actualidad como arbitraria, existen ejemplos sobrados de administraciones que han utilizado los puestos para provocar derroche y manejo oscuro de recursos, convirtiéndose en uno de los pilares más sensibles; por ello, la reforma del Estado se debe promover aplicando políticas nuevas para exigir la evaluación en relación con la eficiencia, la equidad, la honestidad y responsabilidad con que los gobernantes deben manejar los recursos.

Han sido precisamente los organismos financieros internacionales los que han señalado que la ineficiencia y la corrupción de las burocracias son verdaderos obstáculos para que los recursos otorgados promuevan el desarrollo económico y social (Worldbank, 2001). En México, no existen reglas claras para la incorporación de los mandos superiores y medios, ni tampoco de los funcionarios y los técnicos municipales. Cada tres años el equipo se renueva y los programas y proyectos no tienen necesariamente continuidad. Sin embargo, es obvio que los recursos humanos son de fundamental importancia para lograr una actuación gubernamental eficiente y democrática, por lo que la capacidad profesional depende en gran medida del tipo de relaciones que entabla el gobierno local con la ciudadanía.

De acuerdo con la legislación vigente (artículo Constitucional 115) los municipios tienen facultades muy amplias y, a la vez acotadas. Son muchos los municipios del país que manejan con dificultades un catastro actualizado; existe atraso en el cobro de impuestos, contribuciones y demás ingresos ya que las cuestiones políticas están inmersas en la administración; lo cual implica un mínimo nivel de eficiencia; los servicios de agua potable, basura, limpia, jardinería y rastros no están en condiciones de planear las formas de ocupación y usos del suelo o crear y controlar las reservas territoriales.

METODOLOGÍA

Para el desarrollo del trabajo investigativo se tomó en consideración las disposiciones legales vigentes relacionadas con la conformación del plan de desarrollo municipal. El enfoque dado al trabajo fue cualitativo basándose esencialmente en la técnica documental, por lo cual el estudio se enfocó en la exploración sobre las disposiciones que regulan el plan municipal y su impacto en el desarrollo municipal,

determinando para ello si la conformación del plan y la gestión de las autoridades han sido detonantes para el avance económico territorial, a la vez que se analizó la posibilidad de detección de riesgos tanto administrativos como económicos. A partir de la información legal se sistematizó la información y se confeccionó la tabla que contiene los puntos más representativos para la formación de un plan municipal con la intención de detectar las bondades y los puntos débiles del mismo, para, a partir de ahí, poder ofrecer una panorámica de su funcionalidad y sugerir cambios que puedan ayudar a mejorar la planeación local.

RESULTADOS

El análisis de las iniciativas de desarrollo económico local en la mayoría de los municipios mexicanos es incipiente, sin embargo, existen municipios sobre todo los pertenecientes a los Estados del norte, como Baja California, Sonora, Nuevo León y Durango, en donde se advierte mayor eficiencia en los alcaldes; esto debe atribuirse al dinamismo que poseen las actividades privadas, las cuales han estimulado el crecimiento empresarial, pues la presencia de la industria maquiladora ha sido detonante, aunado a la cultura política local que se ha desarrollado, lo cual no sucede con los municipios de sur como Oaxaca, Chiapas, Guerrero, Tamaulipas y Veracruz, careciendo de un número significativo de prácticas exitosas que hayan tenido impacto en la región, con las cuales pudieran ayudar a otros municipios vecinos a mejorar sus gestiones administrativas. En cuanto a los programas de mejora y de aplicación de recursos, se detectó que en numerosas ocasiones no obedecen a los objetivos planteados en el plan de desarrollo municipal ni en el plan de desarrollo urbano, por lo cual se requiere mayor presencia y vigilancia de las autoridades; esto con el fin de evitar que se implementen como reacción a las circunstancias y no a lo planeado. Punto importante es el derivado de la modificación al artículo 115 de la constitución, ya que a raíz de dicha reforma se otorgó a los municipios responsabilidades para impulsar su mejoramiento económico, por lo cual pueden recaudar contribuciones derivadas del impuesto predial, traslado de dominio y cobrar por la recolección de basura y agua entre otros, los cuales han ido ganando espacio, representando esto una ventaja para las administraciones. Existen crecientes demandas locales que se traducen generalmente en necesidades que han dejado de cumplirse, la falta de apoyo a las Mipymes como ejemplo, ha sido constante, además, en tiempos electorales la constante se traduce en promesas y planes de campaña, las cuales al llevar a cabo la elección, la situación vuelve a ser incipiente como al inicio. Se encontró además que las administraciones locales en términos generales, carecen de bases estadísticas eficientes que ayuden a las autoridades municipales y estatales a mantener un control estricto de la criminalidad, lo cual evita generar planes de prevención y abatimiento del delito de manera confiable; en cuanto a derechos humanos, la evidente violencia que se vive en el país ha sido muestra constante de la inoperancia de los organismos encargados de velar por la protección de los mismos, por lo que se requiere reforzar el sistema de justicia y de seguridad pública en todos los municipios del país.

De acuerdo a lo anterior, se sugiere la implementación de los siguientes programas que podrían incrementar la eficiencia en la actuación de los municipios mexicanos. Los programas alternos o complementarios que los municipios mexicanos pueden implementar son los referidos en la Tabla 2, ya que en cuestión de seguridad pública se reconoce a la capacitación y a la selección estricta del personal, como las mejores herramientas para generar un equipo de trabajo eficaz, capaz de responder a las demandas sociales; asimismo, el control estadístico puede significar una buena organización estableciendo el camino hacia la prevención del delito. En cuanto a la seguridad social, se requiere una coordinación permanente con escuelas y universidades a fin de fortalecer la cultura y el deporte, renglones que pueden ayudar a mantener ocupada a la población joven; además, dar prioridad a la implementación de programas donde la igualdad de oportunidades para hombres y mujeres sea una fortaleza. En cuanto a la seguridad económica se debe incidir en el apoyo a las Mipymes con miras a convertirlas en fuentes generadoras de producción y del empleo; de igual forma se propone que en cuestión de vivienda, se dé inicio a un programa para rehabilitar aquellas que han sido abandonadas a fin de que sean reconstruidas para ponerlas a disposición de las familias necesitadas. En cada municipio mexicano se debe implantar una verdadera coordinación que implique una vigilancia estricta de los recursos así como la vigilancia permanente de su aplicación, todo

ello con el propósito de evitar desvíos o enriquecimiento ilícito por parte de los servidores públicos, programas con los cuales se puede alcanzar el mejoramiento local.

Tabla 2. Programas Alternos De Mejoramiento Local

Pilar/programas	Pilar/programas
SEGURIDAD PÚBLICA Programa de selección de personal. Programa de capacitación permanente. Programa de estadísticas y control del delito. Coordinación con instituciones públicas y privadas para la organización de brigadas contra el delito.	SEGURIDAD ECONÓMICA Fomento a las Mipymes. Fomento turístico para municipios menos favorecidos. Programa de rehabilitación de viviendas abandonadas. Programa de igualdad de oportunidades entre hombres y mujeres.
SEGURIDAD SOCIAL Coordinación con instituciones educativas para la promoción de la educación y la cultura. Programa de fortalecimiento de cultura física y deporte. Programa de igualdad de oportunidades entre hombres y mujeres.	CIMIENTO PARA LA SEGURIDAD INTEGRAL Coordinación eficiente y aplicación adecuada de los recursos. Vigilancia permanente y evaluación de la función pública municipal.

Programas complementarios para dar mayor funcionalidad a los ejes rectores que conforman el Plan de Desarrollo Municipal. Fuente: elaboración propia en base a los resultados del estudio.

CONCLUSIONES

Se concluye por tanto que el tipo de política local que requiere el país debe derivar del avance de los procesos democráticos y la descentralización concedida, ya que en la mayoría de los municipios mexicanos se debe obligar a los responsables públicos a buscar enfoques distintos para trabajar, la visión debe cambiar. Hoy en día la población demanda una gestión gubernamental eficaz y eficiente, que sea capaz de enfrentar y responder de manera positiva a los retos en materia social, económica, administrativa y política; el propósito debe ser enfocado a responder de la mejor forma a los requerimientos sociales. En este sentido las estrategias de desarrollo local se deben abrir bajo una concepción diferente, es decir, se debe trabajar desde lo local con miras a tener impacto en el estado y finalmente en la federación con una visión más integral y de mayor organización. Al vincular los diferentes pilares o programas que conforman el plan de desarrollo municipal, el impacto generado en cada municipio así como los riesgos que pueden afectarlo las oportunidades se potencian y se eliminan los efectos negativos que detienen el desarrollo y mejoramiento municipal.

RESUMEN

La presente investigación se realizó con la finalidad de conocer los factores sociales que influyen en el comportamiento del consumidor cuando busca, evalúa, adquiere y usa o consume agua envasada en sus diferentes presentaciones y marcas. El objetivo consiste en conocer cuáles son los factores que influyen en el fortalecimiento de la industria purificadora de agua envasada en Morelia, Michoacán. El trabajo desarrollado arrojó resultados claros, apegados a la realidad y fáciles de interpretar, ya que se identificó el factor social más influyente en el consumidor, debido a que el impacto del agua embotellada y su empaque afectan el medio ambiente causando deterioro ambiental y a la economía de manera sustancial. Se utiliza el método científico, en cual se incluyeron las técnicas de observación, reglas para el razonamiento y la predicción, ideas sobre la experimentación planificada y los modos de comunicar los resultados.

PALABRAS CLAVE: *Mercadotecnia, Comportamiento del consumidor, programas sustentables.*

STRENGTHENING THE PURIFYING INDUSTRIAL SECTOR IN MORELIA MICHOACÁN

ABSTRACT

The research was elaborated with the objective to know the social factors that influence on the consumer behavior, when he try to find, evaluate, acquire, or use up bottled water in its different forms and brands. The objective is to understand the factors that influence in the purifying industrial sector in Morelia Michoacán. The developed research give us clear results, which are close to the reality, and easy to interpret. We could identify the most important influence social factor of the consumer, because the idea of bottled water and its way of have a bottle affects the environment making a deterioration on it, and affecting the economy directly. The used method is the Scientific, in which are included different techniques of observation, rules of argumentation, prediction, and ideas about planning experimentation and the way to communicate the results.

KEYWORDS: Marketing, Consumer Behavior, sustainable programs.

JEL: M13, L1, Q5.

INTRODUCCIÓN

Según estudios de Vernon (2013), el agua embotellada causa un gran daño ambiental y económico. En México, la extracción de un metro cúbico de agua cuesta en realidad \$2 pesos, pero las empresas privadas lo comercializan en \$20 mil. Fuera de que sea un robo el que se comercialice el agua de manera tan costosa, el hecho es que la producción de agua embotellada es increíblemente dañina para el medio ambiente. Al

año se queman 1.5 millones de barriles de petróleo para fabricar las botellas de plástico, 90% de las cuales no se reciclan, y por lo tanto tardan hasta 500 años en biodegradarse. Esto es el equivalente de petróleo que se usa para alimentar el motor de 100,000 automóviles en 12 meses. Además, en México el 85% de las empresas embotelladoras de agua incumplen normas sanitarias.

México tiene el mayor consumo per cápita de agua envasada en el mundo, con 173.8 litros anuales, lo que da lugar al quinto mayor mercado del orbe, con un valor de 7 mil 682.3 millones de dólares (mdd) y que aún crecerá 33.8% entre 2010 y 2015, según la consultora Euromonitor. El mercado se lo disputan gigantes mundiales, como Coca-Cola y Danone, cuyos productos llegan a todo el país; empresas medianas o de alcance regional, como Agua San Martín (Puebla), La Purísima (Morelos), Agua Modelo (Culiacán, Sinaloa) y Santa María (Coahuila), y pequeñas, además de un sinnúmero de micronegocios que montan máquinas despachadoras en modestos locales de las ciudades más pobladas del país y cuya venta no está cuantificada.

La francesa Danone (Bonafont) lidera el mercado formal con 35.7%, seguida de Coca-Cola (Ciel) con 25.1%, en tanto que Pepsico (epura) es tercera con 15.4% de cuota. Para la división de agua embotellada de Danone, el mercado mexicano crece en un rango de 15%, dijo la corporación en su reporte mundial del primer semestre de este año. Para las grandes compañías, el segmento más dinámico y atractivo son las presentaciones personales de hasta 1.5 litros. Cada vez más mexicanos llevan consigo en la calle u oficina una botella de agua, lo que ha conducido a una fuerte competencia en el segmento y por tanto a lanzamientos, ofertas y promociones en supermercados.

Por otra parte, encontramos al agua envasada en garrafón, que representa el 70% del mercado y crece a tasas de 7%, , en tanto que la vendida en botella representa 30% del mercado total pero crece a tasas de 11%. La segmentación llegará más lejos. Coca-Cola, que tiene 22 presentaciones de agua, sumó este año su producto Premium Smart Water y un botella de agua para niños con la marca Ciel Mini, en tanto que su competidor francés lanzó Bonafont Kids. El más dinámico hoy es el segmento de empaques personales (El Siglo de Torreón. “Un negocio fuera de control” Consultado en: <http://www.elsiglodetorreon.com.mx/noticia/701457.un-negocio-fuera-de-control.html>). El negocio ha registrado una fuerte expansión tanto a nivel mundial como en América Latina. Según datos del Banco Mundial, la industria del agua embotellada pasó de mil millones de litros en 1970 a comercializar 84 mil millones de litros en todo el mundo en 2000, para luego llegar a 237 mil millones en el 2010. El volumen de agua embotellada en México es el más alto del mundo en términos per cápita, seguido por Italia. Asimismo, es el segundo consumidor mundial por volumen total después de EU. A nivel regional, México es el mayor consumidor por volumen total de toda AL, con 46 por ciento del total comercializado en 2010.

Resulta pertinente precisar que uno de los grandes problemas que presenta es su impacto ambiental. Y es que además de la apropiación de agua de buena calidad y de su exportación, no es menor el consumo de energía y materiales y generación de residuos en el propio proceso industrial y de post-consumo. La producción de una botella de agua o, peor aún, de su procesamiento a bebida carbonatada, consume una gran cantidad de agua, más de la que la propia botella contiene: de entre dos a cuatro litros por litro de producto, sin contar el agua necesaria para la producción de los insumos como el azúcar, entre otros. También demanda una buena cantidad de energía (unos 3.2 a 4 MJ por botella de un litro). Genera, además, una enorme cantidad de residuos: gases de efecto invernadero; sustancias tóxicas como oxido de etileno, benceno y xilenos que son liberadas a la atmósfera y a las fuentes de agua como producto de la producción de botellas de PET, así como una enorme cantidad de basura post-consumo; esto es, botellas PET que en su gran mayoría no son recicladas, aunque la industria precise en sus empaques que se trata de material “reciclable”, lo que es muy diferente (La Jornada de Oriente. “El negocio del agua embotellada y sus impactos socio-ambientales” Consultado en: <http://www.lajornadadeoriente.com.mx/2013/11/19/el-negocio-del-agua-embotellada-y-sus-impactos-socio-ambientales>). Derivado de lo anteriormente expuesto, surge la siguiente *pregunta de investigación*: ¿Cuáles son los factores que influyen en el proceso

de decisión de compra del consumidor de agua envasada y permitan el fortalecimiento de la industria purificadora en Morelia, Michoacán? El *objetivo* de esta investigación consiste en: identificar los factores que influyen en el proceso de decisión de compra del consumidor de agua envasada y permitan el fortalecimiento de la industria purificadora en Morelia, Michoacán. Se formuló la siguiente *hipótesis*: La clase social, los grupos sociales, la familia y el entorno político son los factores que influyen en el proceso de decisión de compra en el consumidor de agua potable envasada y permitan el fortalecimiento de la industria purificadora en Morelia, Michoacán. El horizonte espacial de esta investigación corresponde a la ciudad de Morelia, Michoacán. La investigación se realizó en el año de 2012.

REVISIÓN LITERARIA

El desarrollo de la perspectiva teórica es un proceso y un producto. Un proceso de inmersión en el conocimiento existente y disponible que puede estar vinculado con nuestro planteamiento del problema, y un producto (marco teórico) que a su vez es parte de un producto mayor: el reporte de investigación (Yedigis y Weinbach, 2005, citado por Hernández et al 2006). Se revisó la teoría del Marketing y del Comportamiento del consumidor. El Marketing es el proceso de planear y ejecutar el concepto, el precio, la promoción, y la distribución de las ideas, bienes y servicios con el fin de crear intercambios que satisfagan los objetos particulares y de la organización. (Keller, 2009). El marketing es la filosofía apropiada para hacer negocios. Dicho de manera más sencilla, el concepto de marketing plantea que una organización debe satisfacer las necesidades y deseos de los consumidores para obtener utilidades (Peter y Olson, 2006).

En cuanto al Comportamiento del consumidor, para detectar las necesidades insatisfechas del consumidor, las empresas tuvieron que emprender una extensiva investigación de marketing. Al hacerlo descubrieron que los consumidores son individuos muy complicados y que están sujetos a gran variedad de necesidades. Psicológicas y sociales muy alejadas de sus necesidades de supervivencia. (Sánchez, 2008) dice que la Investigación de Marketing es la función que vincula al consumidor, cliente y público al comercializador a través de la información, la cual es utilizada para identificar y definir oportunidades de mercado y problemas, generar, redefinir y evaluar las acciones de marketing, dirigir los comportamientos de marketing y mejorar la comprensión del marketing como proceso. El estudio del comportamiento del consumidor está enfocado en la forma en que los individuos toman decisiones para gastar sus recursos disponibles (tiempo, dinero y esfuerzo) en artículos relacionados con el consumo. Esto incluye lo que compra, porque lo compra, donde lo compra, con qué frecuencia lo compra y cuan a menudo lo usa. El campo del comportamiento del consumidor es el estudio de personas, grupos u organizaciones y los procesos que siguen para seleccionar, conseguir, usar y disponer de productos, servicios, experiencias o ideas para satisfacer necesidades y los impactos que estos procesos tienen en el consumidor y la sociedad. La figura siguiente muestra las influencias del comportamiento del consumidor. En la figura 1, se muestra el respaldo teórico de la presente investigación. Muestra aspectos biológicos, sociales y psicológicos del comportamiento del consumidor.

Figura 1. Influencia En El Comportamiento Del Consumidor

DISEÑO DE INVESTIGACIÓN

El diseño de la investigación tiene como propósito responder a las preguntas de investigación planteadas y cumplir con los objetivos de la investigación, por lo tanto se deben tomar en cuenta diversos factores.

El objetivo de cualquier investigación en términos generales, es agregar algo nuevo a los conocimientos humanos. Según Litton (1971), el vocablo investigar viene del latín *investigare* que quiere decir desarrollar actividades con el objeto de registrar, indagar o descubrir la verdad. La presente investigación científica tiene un diseño descriptivo, hipotético deductivo-inductivo y también de carácter cuantitativo-cualitativo, con predominancia cualitativa. Es descriptivo, como su nombre lo indica, porque describe y/o especifica características del objeto de estudio y el fenómeno. Es hipotético deductivo-inductivo porque se propone una hipótesis como consecuencia de las inferencias y del conjunto de datos empíricos o de principios y leyes más generales.

Trabajo De Campo: Una vez definida la unidad de análisis, se debe delimitar la población. En palabras de Selltiz et al. (1980), citado en Hernández (2006) menciona que una población es el conjunto de todos los casos que concuerdan con una serie de especificaciones. En esta investigación se considera como universo de estudio los habitantes de Morelia, Michoacán, Caso específico: alumnos de la Facultad de Contaduría y Ciencias Administrativas de la Universidad Michoacana de San Nicolás de Hidalgo.

La muestra se tomara de dicha población y para su determinación se utiliza el Sistema de Cálculo para un Tamaño de Muestra por el muestreo aleatorio simple para proporciones resultando 358. Para esta investigación se determinó como instrumento una encuesta, esta técnica se aplica en general para satisfacer necesidades de campos muy diversos (Castañeda et al, 2002). Se utilizó la escala desarrollada por Rensis Likert. Se utilizó el paquete estadístico Statistical Pack Social Science (SPSS) en donde servirá para realizar la estadística descriptiva de la investigación y consta de 13 ítems, los cuales permiten medir las variables de la investigación, así como sus dimensiones e indicadores. La confiabilidad del instrumento de medición que se ha aplicado, ha sido a través del método del Alfa de Cronbach, el cual requiere una sola administración del instrumento de medición y produce valores que oscilan entre 1 y 0. Simplemente se aplica la medición y se calcula el coeficiente.

En la presente investigación en resultado fue de: 0.714

RESULTADOS

Enseguida se presentan datos los resultados detallados en función de los datos generados en forma analítica. Los resultados muestran el proceso de de decisión de actitud de compra de los consumidores de agua envasada. El trabajo de campo de concentra en los alumnos de la FCCA-UMSNH, ya que representan a los usuarios que más consumen el producto. El primer ítem determinó el sexo de la población objeto de estudio. El dato generado demuestra que, el sexo femenino es del 52.5%, ligeramente un poco más alto que el sexo masculino. La Facultad de Contaduría y Ciencias Administrativas ofrece tres carreras: Licenciados en Contaduría, Administración e Informática Administrativa. Los datos revelan que la población de alumnos se encuentra concentrada en primer lugar en la carrera de administración, seguido muy de cerca por contaduría. La población de la carrera de informática administrativa solamente representa el 15%.

El siguiente ítem, se refiere a determinar la distribución de alumnos en el grado que cursan la carrera, encontrando que la población más alta se ubica en el cuarto semestre y las más bajas en octavo y décimo. Hasta aquí, se mostraron datos relevantes sobre la población objeto de estudio, en cuanto a su identificación y características de su profesión y nivel de estudios. Esto, con el objetivo de identificarlos con las variables de estudio para obtener información relevante para la investigación. Enseguida se muestran los resultados respecto a: Marcas de agua que se comercializan, contenido (expresado en Litros), Frecuencia de compra,

Gasto semanal y atributo de producto. En primer lugar, es importante destacar la preferencia de compra respecto a las marcas de agua que se comercializan en el mercado. Se tomo como base los datos secundarios obtenidos en la investigación documental, con la finalidad de contrastarla con la obtenida con los datos primarios en una situación específica del estudio. También para conocer la situación competitiva en el mercado de agua embotellada o envasada.

Tabla 1: Elige La Marca De Agua Que Prefiere Comprar

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	SANTORINI	131	36.6	36.6	36.6
	BONAFONT	116	32.4	32.4	69.0
	CIEL	89	24.9	24.9	93.9
	EPURA	10	2.8	2.8	96.6
	OTRA	12	3.4	3.4	100.0
	Total	358	100.0	100.0	

Los datos evidencian el liderazgo en ventas de la marca “Santorini”, seguido muy de cerca de las marcas “Bonafont” y “Ciel”. En la grafica siguiente se puede apreciar mejor el resultado. Otro aspecto importante es el contenido de agua que eligen cotidianamente, ya que eso determina además especificar el tipo de mercado de consumo de agua embotellada o envasada. Se puede apreciar claramente, una fuerte tendencia hacia la preferencia del consumidor de la presentación de 1LT. Vemos como la intención de compra se reduce a cantidad de contenido. También es importante en el estudio, la frecuencia con que compran agua embotellada o envasada. Se tomo como referencia de tiempo, una semana. El resultado arroja como nivel más alto de 3 a 4 veces.

Tabla 2: Elige La Presentación Del Envase De Agua Que Prefiere Comprar.

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	600 ML	94	26.3	26.3	26.3
	1 LT	179	50.0	50.0	76.3
	1.5 LTS	64	17.9	17.9	94.1
	5 LTS	7	2.0	2.0	96.1
	OTROS	14	3.9	3.9	100.0
	Total	358	100.0	100.0	

Tabla 3: Elige La Frecuencia Con Que Compra Agua Envasada En La Semana.

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	DE 1-2	136	38.0	38.0	38.0
	DE 3-4	148	41.3	41.3	79.3
	DE 5-6	50	14.0	14.0	93.3
	DE 7-8	19	5.3	5.3	98.6
	DE 9 EN ADELANTE	5	1.4	1.4	100.0
	Total	358	100.0	100.0	

Otro aspecto importante de esta investigación, tiene especial importancia en cuanto al precio del producto. Esto es de importancia mayor, ya que tiene que ver con el “costo beneficio” que adquieren los consumidores respecto al consumo de agua embotellada, envasada, de garrafón y la alternativa de utilizar un “filtro casero”.

Tabla 4. Elige El Gasto Que Realizas A La Semana En Agua Envasada

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	DE \$ 6.00 A 15.00	102	28.5	28.5	28.5
	DE \$ 16.00 A 32.00	128	35.8	35.8	64.2
	DE \$ 33.00 A 42.00	64	17.9	17.9	82.1
	DE \$ 43.00 A 55.00	42	11.7	11.7	93.9
	DE \$ 56.00 EN ADELANTE	22	6.1	6.1	100.0
	Total	358	100.0	100.0	

Un aspecto de especial relevancia, se relaciona con los atributos que contiene el producto y encontrar el que obtiene la mayor y menor preferencia por los consumidores, con el objetivo de determinar las estrategias de mercado para fortalecer la industria de agua.

Tabla 5. Elige el Atributo de Mayor Preponderancia Por el Cuál Prefiere el Agua Que Compra

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	PRESENTACIÓN	35	9.8	9.8	9.8
	SABOR	78	21.8	21.8	31.6
	PRECIO	41	11.5	11.5	43.0
	CALIDAD	143	39.9	39.9	83.0
	DISPONIBILIDAD EN LAS	61	17.0	17.0	100.0
	Total	358	100.0	100.0	

Se muestra como atributo más importante la calidad, seguida sabor. Resulta relevante también en los resultados, que la presentación del producto no representa un atributo que lo consideren con mayor relevancia. A continuación se presenta la escala de actitudes respecto a los factores culturales como la clase social, los grupos sociales, la familia y el entorno político. El primer aspecto se relaciona con la influencia que tiene el nivel cultural en el proceso de decisión de compra del consumidor.

Tabla 6. Considera Que Su Nivel Cultural Influye En Su Decisión De Compra De Agua Envasada

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	TOTALMENTE EN DESACUERDO	42	11.7	11.7	11.7
	DESACUERDO	82	22.9	22.9	34.6
	INDIFERENTE	73	20.4	20.4	55.0
	DE ACUERDO	143	39.9	39.9	95.0
	TOTALMENTE DE ACUERDO	18	5.0	5.0	100.0
	Total	358	100.0	100.0	

Los resultados obtenidos señalan que los consumidores se muestran estar de acuerdo con la afirmación.

En cuanto al factor relativo a la clase social, como factor de influencia en el consumidor para comprar agua envasada se obtuvieron los siguientes resultados:

Tabla 7. Considera Que La Clase Social A La Que Pertenece, Influye En Su Decisión De Compra De Agua Envasada

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	TOTALMENTE DESACUERDO	51	14.2	14.2	14.2
	DESACUERDO	75	20.9	20.9	35.2
	INDIFERENTE	103	28.8	28.8	64.0
	DE ACUERDO	94	26.3	26.3	90.2
	TOTALMENTE DE ACUERDO	35	9.8	9.8	100.0
	Total	358	100.0	100.0	

Por otra parte tenemos el factor relacionado al grupo social, el cuál es relevante conocer su nivel de influencia en el proceso de decisión de compra. Los resultados del factor muestran una media de 2.92, lo cual no es significativo para medir el factor. Otro aspecto importante a considerar en este factor lo compone la familia, que resulta importante conocer la influencia que tiene en el proceso de decisión de compra del consumidor. Por último se considera si es el entorno político el que tiene influencia, como parte de las

variables a medir, los resultados se muestran a continuación. También se realizaron otros análisis comparativos de los resultados. La tabla siguiente muestra la relación que existe entre marca de agua y contenido. Encontramos que la marca “Bonafont” tiene mayor preferencia de consumo de la presentación de 1LT, seguido de “Santorini”. En el cuadro siguiente, se compara la frecuencia de compra con el gasto de agua semanal y nos da como resultado más alto: de 3 a 4 veces con de \$16:00 a \$32:00. Lo cual da validez y confiabilidad a los datos obtenidos y sirve para determinar la estrategia de ventas de agua envasada.

Tabla 8 Considera Que El Grupo Social Al que Pertenece Influye En Su Decisión De Compra De Agua Envasada

CONCLUSIONES

Por medio de la investigación que se realizó se pueden conocer las diversas opiniones de los consumidores acerca de los factores que influyen en el proceso de decisión de compra de agua envasada para fortalecer la industria de agua envasada en Morelia, Michoacán. En relación con las variables, los resultados respecto a: Marcas de agua que se comercializan, contenido (expresado en Litros), Frecuencia de compra, Gasto semanal y atributo de producto. Los datos muestran que la marca más vendida es “Santorini” (producto de Pepsi Morelia, Geusa de Occidente, S.A. DE C.V.), seguido “Bonafont” (pertenece a Grupo Danone) y “Ciel” (De Coca Cola México) Este dato es relevante para conocer la competencia del mercado que representa el 93.9%; dejando al resto de las industrias con una posición muy baja.

En cuanto al contenido, se obtuvo como dato, una fuerte tendencia hacia la preferencia del consumidor de la presentación de 1LT con un 50% y un 26.% de 600 Mlt. Vemos como la intención de compra se reduce la cantidad de contenido lo que determina además, especificar el tipo de mercado de consumo de agua embotellada o envasada de preferencia de los consumidores. Para la frecuencia de compra de agua embotellada o envasada, se tomo como referencia de tiempo, una semana. El resultado arroja como nivel más alto de 3 a 4 veces que representa el 41.34% En cuanto al gasto semanal y al precio del producto, es de importancia mayor, ya que tiene que ver con el “costo beneficio” que adquieren los consumidores respecto al consumo de agua embotellada, envasada, de garrafón. La tendencia destinar el gasto de agua a un rango de entre \$6:00 a \$32:00 pesos semanales representa el 64.3%. En referencia al atributo de producto, se considero la presentación, el sabor, el precio, la calidad y la disponibilidad en las tiendas. Es determinante encontrar el atributo que obtiene mayor y menor preferencia por los consumidores, con el objetivo de determinar las estrategias de mercado para fortalecer la industria de agua. Se encontró que el más importante es la calidad con un resultado del 40%, seguida sabor con 21.80% .

En cuanto a los resultados de los factores culturales que influyen sobre el comportamiento del consumidor en su proceso de decisión de compra de agua envasada; como la clase social, los grupos sociales, la familia y el entorno político. Los resultados son los siguientes: El primer aspecto se relaciona con la influencia que tiene el nivel cultural en el proceso de decisión de compra del consumidor. El resultado obtenido da una media de 3.04 de entre 1 y 5. Por lo que se considera “Alta” para efectos del estudio. En cuanto a la clase social se obtuvo una media de 2.96 que se interpreta como “regularmente importante” En cuanto a la influencia de la “familia”, encontramos que también se obtuvo un resultado de 2.97 que se interpreta de igual manera como “regular”. En lo que respecta al “entorno político” dio como resultado una media de 2.29 que representa el resultado más bajo, por lo que se establece que no es de ninguna importancia para el estudio. Por lo tanto, se concluye que el nivel cultural es el que más influye para la decisión de compra del consumidor. Con lo cual se alcanzo el objetivo de Identificar el factor que influyen en el consumidor en el proceso de decisión de compra de agua potable envasada y permitan el desarrollo de la industria purificadora en Morelia, Michoacán. Los resultados de la investigación se han descrito en los apartados anteriores que contienen los niveles alcanzados por cada una de las variables en escala de Likert. La información cualitativa obtenida en los cuestionarios fue aportada con seguridad y sin inconvenientes. Las herramientas estadísticas que se utilizaron fue la distribución de frecuencias, porque se indujo que fueron

las adecuadas para el tipo de información que se recogió y que permitieron sistematizarla de una manera sencilla y así facilitar su análisis y obtención de resultados. En la revisión bibliográfica se observó que existen diferentes conceptos, enfoques, y criterios para determinar las causas que afectan el comportamiento del consumidor.

MEZCAL MICHOACANO: DE SU ORIGEN A SUS ESTRATEGIAS DE COMERCIALIZACIÓN. UNA APROXIMACIÓN

Virginia Hernández Silva, Universidad Michoacana de San Nicolás de Hidalgo
Yenisey Castro García, Universidad Michoacana de San Nicolás de Hidalgo

RESUMEN

El mezcal mexicano es una bebida alcohólica hecha de la planta de agave que se cultiva en diversas partes del país, y cuya historia se remonta desde hace 400 años. Su producción se da principalmente en las empresas familiares o micro empresas. Michoacán fue el último de seis estados en incorporarse a la denominación de origen (DO) tratando de dar un impulso estratégico a la industria del agave-mezcal como una actividad estratégica económica del estado. Derivado de que varios agentes interactúan en forma desarticulada en la industria, y existe muy poca investigación científica formal sobre este ramo de industria del estado, esta investigación cuenta con varios procesos de análisis. Este es un primer acercamiento a la industria mezcalera Michoacana, para analizar la estrategia implantada de la DO, realmente ha ayuda a los productores de agave. Este trabajo considera las relaciones entre empresas pequeñas y medianas (Pymes). Los resultados permitieron la obtención de información relacionada con la industria; la identificación de las áreas de oportunidad de los agentes de la cadena; y la evaluación del potencial y restricciones de la cadena de suministro del agave-mezcal del estado de Michoacán. Identificando problemas de capacitación y exceso de proceso administrativos relativos al proceso de comercialización.

MICHOACAN MEZCAL: ORIGEN AND COMERCIALIZATION

ABSTRACT

Mezcal a traditional beverage of Mexico, is part of the national cultural identity, regional and local product is considered an ethnic and nostalgia in the domestic market and markets abroad Mexican migrants. In Mexico, Mezcal is an alcoholic drink made from the agave plant, which is cultivated in various parts of the country. Michoacan was the last of six states to join the denomination of origin (DO) in the country, trying to have an impact on the mezcal industry as a strategic state activity. Since multiple agents interact in this industry, this research uses several analysis processes and is focus is related with the mescal cultivated and processed in Michoacan. This research is the first fromal study of Michoacan's mezcal industry and tries to identify if this strategic move with Michoacan (DO) has accomplished its objective. This paper considers the relationship between small and medium companies (Pymes). The results obtained information related to the industry identifying areas of opportunity for mezcal producers and evaluating the supply chain of agave--potentials and constraints. The results revealed that this strategic move has not been as positive as expected, due to its high trade costs and excessive administrative burden

GEL: Mezcal, Michoacan, Pymes, Nostalgia Market

INTRODUCCIÓN

El mezcal ya ocupa un lugar importante en el gusto de los consumidores, no sólo en México sino a nivel internacional. Tan sólo en los últimos 9 años, la producción de esta bebida típica mexicana se incrementó en más de 360 por ciento, al pasar de 433 mil a 2 millones de litros al año, mientras que en ese mismo

periodo las exportaciones crecieron en 245 por ciento, de 214 mil a 739 mil litros al cierre de 2013, lo que habla de un auge en el consumo en esta bebida, que llega a cotizarse hasta en 500 euros en el viejo continente. A finales del 2012 se le otorgó a algunos municipios de Michoacán la denominación de origen del mezcal, de tal suerte la bebida que data con más de 400 años de historia en el estado, dejó de ser nombrada simplemente como doble destilado de agave para ser reconocida como mezcal e incursionar en nuevos mercados nacionales e internacionales en los que no podía competir debido a que carecía de tal denominación. Con esto, la entidad forma parte del Corredor del Mezcal que se extiende desde Oaxaca en el Sur, Michoacán en el Oeste hasta el Norte en Tamaulipas, lo que es una forma de limitar en qué lugares se puede producir la bebida y los puntos en donde está prohibida su elaboración. Con esta estrategia competitiva se pretende ayudar a los productores de mezcal a que mejoren la comercialización de sus productos y con ello mejoren su calidad de vida. Cabe destacar que varios municipios que recibieron esta ventaja competitiva cuentan con porcentajes muy altos de pobreza entre sus pobladores.

La producción artesanal del mezcal, al igual que el resto de las artesanías, se caracteriza por ser un negocio familiar; ya que tanto el jefe de familia, como su cónyuge, hijos y parientes cercanos dedican parte de su tiempo a producir y vender la bebida (Bailón C, 1980). De ser una agroindustria de capital familiar, nacional y local, centrado fundamentalmente en el estado de Oaxaca y otras entidades como Michoacán, según lo marca la Denominación de Origen (DO). La propiedad incluye desde la producción, envasado y distribución, hasta las marcas y, en buena medida, parte del “paisaje agavero”. En la actualidad en México se está teniendo un auge en la producción, venta y exportación del mezcal para lo cual se han tomado medidas estratégicas para impulsar su venta nacional e internacional, tal fue el caso de Michoacán que recientemente obtuvo su DO para algunos municipios del estado.

Para que el mezcal michoacano pueda competir con mezcales que llevan en el mercado nacional e internacional por más tiempo que el michoacano, como lo es el mezcal de Oaxaca, este deberá evaluar sus capacidades internas y externas esto con la finalidad de aprovechar la estrategia competitiva de la denominación de origen. En la actualidad no existe literatura que aborde este tipo de investigaciones y sin embargo si existe una inquietud por parte de los mezcaleros productores de la zona de la cañada por conocer y evaluar su productividad. El aporte que resultara de esta investigación contribuirá a la productividad de los mezcaleros, que repercutirá directamente a su economía y por ende a la competitividad del estado. Esta investigación proveerá ricos aportes en este tipo de literatura

Parte de los objetivos planteados dentro de esta investigación es conocer el estado que guarda de la industria mezcalera de Michoacán después de que se le otorgo la denominación de origen ya que el contar con esta legislación implica varios conocimientos técnicos, administrativos y legales y quizá lejos de ser una ventaja podría ser lo contrario. Al conocer la productividad de este sector se tiene como objetivo específico generar conocimiento sobre este sector ya que no existe literatura formal que aborde este tipo de investigaciones y ver la posibilidad de proporcionar un modelo de negocio. Debido a los mercados globalizados las actitudes conformistas de las empresas ya no tienen lugar. La conducta de los nuevos empresarios debe dirigirse a los factores que persiguen el éxito: El desarrollo de su propia tecnología, a diferenciar sus productos, al logro de prestigio de marcas, relaciones y servicios a los clientes. Y la medición de la productividad es uno de los factores más importantes a medir y por el cual se puede comenzar a estudiar un sector. Aunque existe mucha y variada metodología que mide la productividad, la presente investigación utilizará la propuesta metodología aportada por De la Paz Hernandez et al. (2003) y Pedraza (2006) y que contempla los siguientes índices buscando obtener claras y precisas dimensiones para su medición: Gestión administrativa, Materiales y suministros, desarrollo tecnológico, capital de trabajo, factores externos y productividad (desempeño y eficiencia del negocio). El presente trabajo está dividido de la siguiente manera: En primera sección se encuentra la introducción, después se abordan los aspectos teóricos sobre la productividad, a continuación se hace mención sobre la industria mezcalera en México y el mundo y aterrizamos con la situación actual en Michoacán y sus conclusiones

Aspectos Metodológicos

Productividad

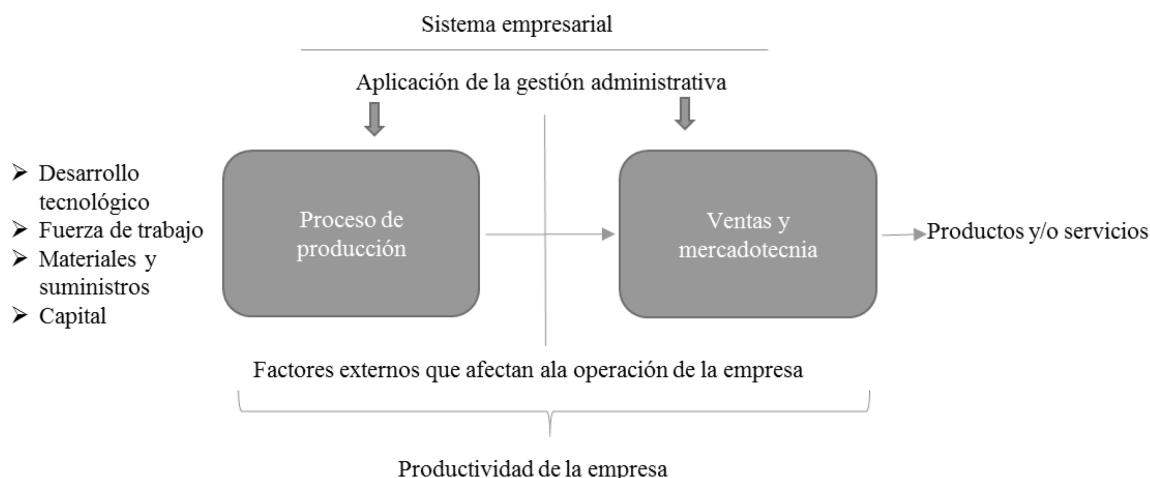

La productividad es uno de los factores más importantes dentro de la industria de un país, para ser competitivo frente a la influencia de la globalización comercial y para mejorar su nivel tecnológico (Pedraza R., 2006). La finalidad de medir la productividad deriva de la necesidad de realizar comparaciones con otros países, sectores productivos, en el ámbito industrial o la comparación con otras empresas. En la mayoría de los países se acostumbra medir la productividad por medio del trabajo y de acuerdo al capital. Aunque existes diversos enfoques para mediar la productividad, sobresalen los de los números índices, de funciones de producción, de razones financieras, de rentabilidad, de insumo de producto y de costos unitarios. Es conveniente mencionar que existe dos conceptos básicos en la literatura económica y administrativa: la productividad laboral y la productividad total de los factores (PFT) Existen varios métodos para medir la productividad, casi podría dividirse según el campo al que se aplique; esto es; los usados para medirla a escala internacional, está utilizada debido a la competencia internacional que tienen las empresas por los precios y calidad, haciéndose necesario mejorar la productividad y con esto compararse con la competencia. Otros métodos que miden la productividad en el ámbito nacional y el sector industrial, estos atienden a indicadores de productividad parcial, principalmente los de la productividad del trabajo, siendo las medidas de productividad que se utilizan en la mayoría de los países. Por otra parte, los economistas utilizan los números índices para medir la productividad nacional como lo es el método de Slow que considera que la tasa de cambio tecnológico es igual a la tasa de crecimiento del producto menos la tasa de crecimiento de los insumos primarios ponderados por su participación en el producto, lo cual varía en el tiempo (Hernández L, 1993).

Algunos métodos para medir la productividad a nivel empresa según David Summanth 2005, aún prevalece confusión y ambigüedad con respecto a este concepto. Las ventajas de obtener la medida de la productividad en las empresas rondan en torno a la necesidad de que el negocio sepa a qué nivel de productividad debe operar y qué nivel tiene respecto a otras empresas del mismo ramo. Podemos observar un modelo sencillo respecto a la evaluación de la productividad que es el financiero propuesto por Mercado (1997), en el cual consiste en aplicar veintidós razones financieras con las cuales se da una imagen integral de las empresas desde un enfoque monetario. Con esto se puede definir las características de la condición financiera de la empresa. Existen diversos enfoques, situaciones económicas y criterios para determinar la productividad. Y también no hay una aceptación universal de cuáles son las posibles causas que originan y modifican la productividad de una empresa. De acuerdo a la metodología propuesta por De la Paz Hernández et al. (2003) y Pedraza (2006) mencionan que las causas que originan la productividad se pueden clasificar en dos grandes categorías: La primera está compuesta por los factores internos que son aquellos que la empresa puede controlar y la segunda integrada por los factores externos a la empresa u organización y sobre los cuales no tiene ningún control pero depende en cierta medida de ellos y que influyen en su productividad. Concluyen que los factores que mayormente afectan a la productividad, entre otros, son la Gestión administrativa, esta se ve envuelta tanto en el subsistema de producción como en el subsistema de mercadotecnia, después al subsistema de producción lo afectan los siguientes factores: Materiales y suministros, desarrollo tecnológico, capital y fuerza de trabajo. Los factores externos afectan a ambos subsistemas y todos en su conjunto a la productividad. Por ende medir estos factores contribuirá a la productividad de la empresa.

Retomando la idea de que las nuevas tendencias del pensamiento económico señalan que el nuevo factor de la producción es el conocimiento y solo a través del conjunto de experiencias es posible producir riqueza (Toffler & Toffler, 1997). Si este enfoque lo aplicamos a la figura 1, se deduce que si no existieran experiencias acumuladas, no existirían los nuevos materiales ni serían más a menor precio y no habría equipos

y maquinarias para la producción, sería nulo el desarrollo tecnológico y los trabajadores desconocerían la forma de realizar sus actividades. Por ende cuando trabajamos con este estudio, cuando se trabaja con cada uno de los factores mencionados, se considera que no se deja de lado el factor conocimiento.

Figura 1: Modelo de los Principales Factores Que Influyen en la Productividad

Mercado de la Nostalgia

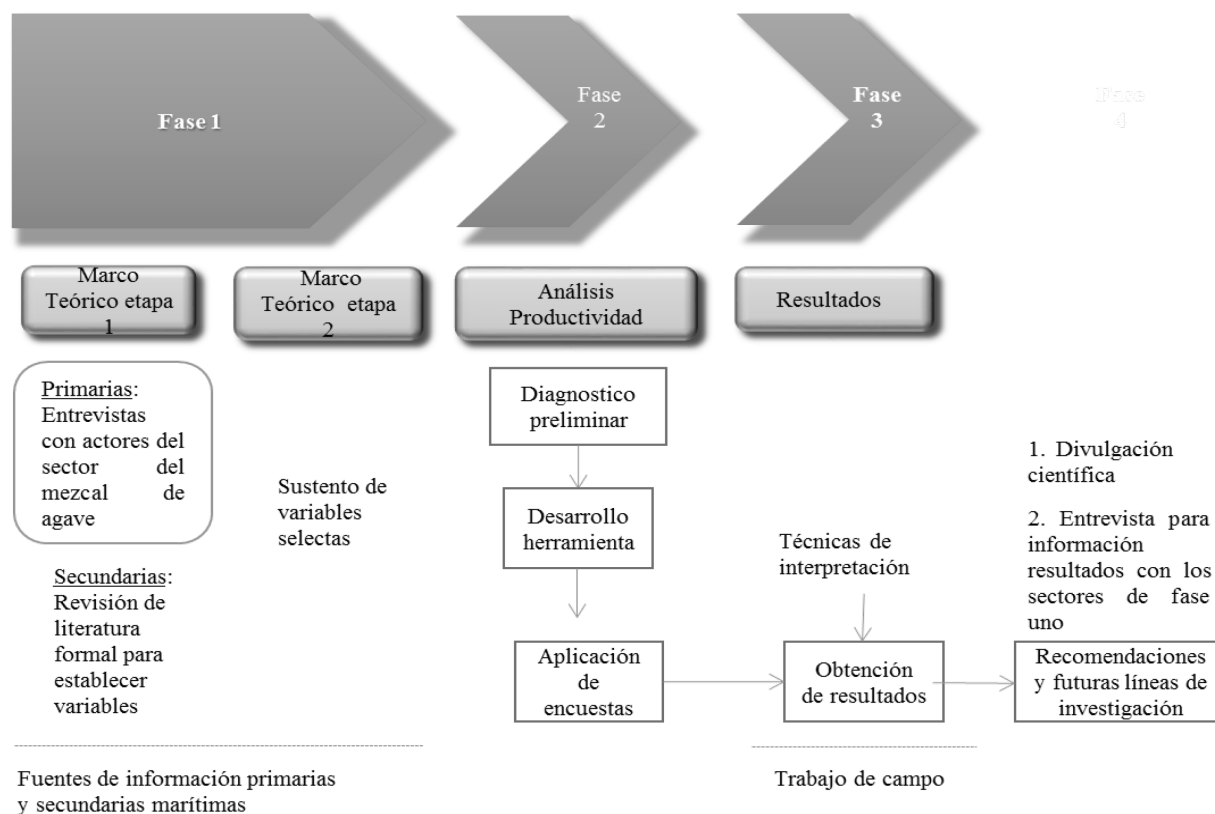

¿Cuáles son los productos étnicos y de la nostalgia? Los productos étnicos y de la nostalgia destacan por ser mercancías cuya tendencia cuenta con la característica de orientarse y dirigirse a mercados altamente diferenciados. Aún cuando deben cumplir con normas sanitarias y fitosanitarias –hasta fitozoosanitarias-, escapan a lo que pudiera entenderse como una estandarización a escala internacional en cuanto a normas de calidad; mercancías que, por su naturaleza, no requieren desarrollar innovaciones tecnológicas sofisticadas, menos aún costosas. (Olmedo, 2007) Lo interesante en este caso, habría que replantearlo en función de los mercados objetivo o de aquellos nichos de mercado que desean atacarse y ser atendidos. Se puede comentar que se han detectado mercancías de esta naturaleza de diversos sectores económicos que son –y pueden ser- producto del intercambio de México con los Estados Unidos (EU) y Canadá, nuestros socios comerciales en el Tratado de Libre Comercio de América del Norte (TLCAN). Entre ellas destacan productos de los sectores de alimentos y bebidas, muebles, artesanías, vestuario pero también música, iconografía, festividades de diversa naturaleza (populares, religiosas, otras) y, aún más allá, sobre todo en el rubro de los productos de la nostalgia no étnicos, muebles, detergentes, jabones, y hasta refrescos de empresas y marcas transnacionales elaboradas en México con azúcar de caña en lugar de la fructosa derivada del maíz amarillo, que ofrece un sabor y gusto diferentes a los fabricados en los Estados Unidos; igualmente escobas de mijo, sombreros, trajes de quinceañeras, servicios de salones de fiestas para festejos de quinceañeras, profesionales que preparan los bailes para este tipo de festejos, como si estuvieran en México (Olmedo, 2007).

Diseño de la Investigación

Como se ha mencionado previamente esta investigación tendrá varias fases para lograr el proceso metodológicos para poder medir la productividad del sector mezcalero michoacano (ver figura 2); el primer paso y abordado dentro de este documento, pretende mostrar lo detectado con el sector del mezcal michoacano a través de fuentes primarias y secundarias en la entidad, dentro de las fuentes primarias se realizarán entrevista con el sector mezcalero, esto incluyo reuniones con asociaciones mezcaleras,

productores independientes, y autoridades gubernamentales con la finalidad de establecer el panorama general de las variables sujetas de estudio. Dentro de las fuentes secundarias revisadas se abordó toda la literatura, tanto formal e informal sobre el tema, para obtener el sustento teórico metodológico de las variables sujetas de estudio, detectando la escasa o nula investigación formal sobre el mezcal michoacano y su comercialización después de otorgarle su DO en el 2013 e incluso previo de esta medida estrategia del estado.

El Mezcal En México

El mezcal es un destilado de la planta de agave, de la cual sólo se utilizan unas cuantas variedades de las 136 que existen en México. En Oaxaca la mayor producción de mezcal es de agave espadín, o agave silvestre Tobalá. En un intento por comparar al mezcal con el tequila, algunos expertos entusiastas dicen que el “Mezcal es al Tequila como el Armagnac es al Cognac”. El Tequila es un destilado de agave, de una variedad de agave diferente a las usadas para producir mezcal, producido en una región del centro de México (Martínez G., 2008) La mayoría de los productores de mezcal aún utilizan los antiguos y tradicionales métodos para cocer el agave en hornos bajo tierra con leña, fermentar en tinas de madera de manera natural, y destilar en ollas de cobre prácticamente tal como los españoles las trajeron a México.8 Por a la escasez del tequila, el mezcal ha tomado una nuev fuerza en el mercado, aunque en México no es bien aceptado por que se le identifica como una bebida de campesinos, de mala calidad y fácil de adulterar; que fue cierto en una época. Sin embargo, las exigencias comerciales han hecho que la producción se industrialice, pero artesanal y orgánicamente, lo cual en el extranjero es bien recibido, además de que hoy existe mucha regulación para la producción de dicho producto, como las certificaciones del Consejo Mexicano Regulador de la Calidad del Mezcal (COMERCAM) creado en 1997 Por muchos años, el mezcal,

una sustancia del destilado del maguey, fue considerado una bebida de segunda. Al día de hoy la venta de mezcal toma vuelo, “El mezcal es la única gran bebida espirituosa en el mundo que todavía no tiene una estructura comercial”, comenta Ainsley Cole, fundadora de Craft Distillers en Estados Unidos. “La situación es como con el coñac en Francia en el siglo XVIII, cuando sólo había campesinos produciéndolo para ellos mismos”. (Jong & Lopez, 2011). En 1995 el mezcal obtuvo la Denominación de Origen. Bajo el estricto cumplimiento de la Norma Oficial Mexicana quedando registrados como productores exclusivos de mezcal los estados de Oaxaca, Guerrero, Guanajuato, San Luis Potosí, Zacatecas, Durango y Tamaulipas. (Financiera Rural, 2013) Y en 2013 se unió a ellos algunos municipios del estado de Michoacán.

Aprovechando el Mercado de Nostalgia

Los flujos migratorios que han existido siempre, particularmente hacia las zonas urbanas nacionales latinoamericanas, y sobre todo los que se dirigen hacia los Estados Unidos, fundamentalmente, se tornaron más activos a raíz de las cada vez menores oportunidades de empleo en América Latina y a los salarios incapaces de permitir la reproducción de las familias y las personas con una retribución capaz de cubrir sus necesidades fundamentales (Olmedo, 2007). De este modo, la población de origen hispano en los Estados Unidos ha ido creciendo con tal ritmo, que hoy constituye la primera minoría étnica en ese país. En este sentido, nuestros migrantes, sea en su calidad de legales o bien de ilegales, conforman un mercado con un ritmo de crecimiento por arriba de lo que representa el crecimiento de la misma economía estadounidense, aún actualmente en condiciones recesivas (Olmedo, 2007). Michoacán se precia de ser de los principales estados con migrantes en los Estados Unidos. Por tal motivo se pretende impulsar el mezcal como bebida de nostalgia. A partir de la denominación de origen la producción y exportación de este bien se ha visto exponencialmente incrementada. Se observa que una tercera parte de la producción se destina al mercado externo, las exportaciones se dirigen a más de 30 economías pero Estados Unidos concentra más del 60% (Iglesias, 2014). La venta del mezcal tanto nacional como internacional ha ido en aumento a excepción del año 2009 que se vio afectado por la caída económica mundial en 2008 ver gráfica 1.

Grafica 1: Crecimiento y Exportación del Mezcal

Fuente: SAGARPA, Secretaria de Economía, Consejo Regulador de la Calidad del Mezcal, El Financiero Sin embargo los estados con mayor crecimiento comercial respecto a la venta del mezcal son Oaxaca y Zacatecas. Esto debido a que cuentan con mayor tiempo trabajando con la denominación de origen. Sin embargo Michoacán no figuran dentro de estas cifras

RESULTADOS MEZCAL MICHOACANO

Luego de más de 10 años de gestiones por parte de los productores de mezcal michoacano, el director nacional del Instituto Nacional de Propiedad Industrial firmó la autorización de la incorporación de

Michoacán a la ampliación de la denominación de origen del mezcal de esta entidad. De esta manera el 22 de Noviembre de 2012, apareció en el Diario Oficial de la Federación los municipios por los cuales se les otorgaba la denominación de origen. Con la finalidad de por fin incursionar en nuevos mercados nacionales e internacionales en los que no podía competir debido a que carecía de tal denominación.

Esta medida beneficia a los productores de la Tierra Caliente y representa la posibilidad de generar mayores fuentes de empleo y de proteger legalmente al destilado. La entidad cuenta en promedio con 1 mil 200 hectáreas de agave mezcalero que producen anualmente 230 mil litros y sostienen 10 mil empleos en 29 municipios (Rosiles, 2012). De acuerdo con el estudio realizado por la CONEVAL, en 2012, varios de los municipios que entraron a la reglamentación de la denominación de origen se encuentran con mayor población en pobreza, como lo es el caso de Tzitzio que cuenta con un 85% de su población en pobreza. Al buscar tener la denominación de origen se pretendía ayudar a los productores de mezcal a generar mayores ingresos al vender sus productos. Las investigaciones preliminares muestran productores de mezcal de pequeñas comunidades no cuentan en ocasiones con fábrica propia si no que le piden prestada a alguien más debido a la cuestión económica. Los productores que han querido comercializar nacionalmente se han topado con grandes listas de requisitos ante la Secretaría de Hacienda y Crédito público y con tramitología esto es gran cantidad de trámites para generar un marbete. Al contar con la estandarización de proceso de acuerdo a la DO los productores tienen que realizar gastos altos para cumplir con la normatividad esto es el registro de marbetes con el costo de \$1 peso mexicano, y la mayoría de los productores carecen del conocimiento, pericia y falta de recurso para cumplir con la norma.

CONCLUSIONES

Aunque el crecimiento de la producción y sus utilidades de la industria del mezcal han sido determinados por el decreto de denominación de origen desde el impulso del mezcal certificado en 1994, los impactos de esta política estratégica y competencia de estado, han derivado en distorsiones del sector industrial mezcalero, pues en medianos plazos se han concentrado la producción en ciertos territorios, específicamente oaxaqueños y determinados por un pequeño grupo de productores. El mercado de nostalgia respecto se vislumbra prometedor para que la estrategia comercial de la denominación de origen para el mezcal Michoacano sea aprovechada al máximo, sin embargo existen aún varias barreras administrativas y gubernamentales por vencer antes de llegar al punto cumbre del aprovechamiento de esta estrategia comercial. Este trabajo genera nuevas líneas de investigación para continuar revisando costos y procesos (según DO) para conocer el estado de la productividad de los mezcaleros de Michoacán y verificar que toda la tramitología y costos sean al final un beneficio y no un detrimento en la comercialización.

Ramón Heredia Martínez, Universidad Tecnológica de Torreón

RESUMEN

La gestión de la innovación permite ser competitivos y colocarse a la vanguardia en productos y servicios que se ofrecen, otorgando un mayor ingreso y desarrollo en las organizaciones. Para identificar las variables que la propician, se seleccionó el Consejo de Ciencia y Tecnología (CONACYT), como entidad pública y de investigación. El objetivo principal de este trabajo de investigación es Identificar los factores que estimulan, el capital intelectual e innovación en los centros de investigación, y cómo se gestiona la transferencia de conocimiento al sector productivo y a las universidades. El método cuantitativo se aplicaron 51 encuestas a cinco diferentes centros de investigación pública utilizando el software SPSS 15 para el análisis de datos Concluyendo que: la gestión de innovación es el resultado de la interacción entre las variables generadas por los valores, la cultura organizacional, el liderazgo, la visión de la empresa, el compromiso de cada uno de los integrantes de la organización, entre otras; las cuales no pueden actuar separadamente, tienen que estar en sincronía con el mercado, la tecnología, las necesidades actuales y futuras del cliente, encausadas por un liderazgo comprometido con la gestión de la innovación.

PALABRAS CLAVE: Gestión de la innovación, Tecnología, Transferencia tecnológica

TECHNOLOGICAL INNOVATION AND CAPITAL INTELLECTUAL IN RESEARCH CENTRES AND THEIR LINKS WITH UNIVERSITIES AND THE PRODUCTIVE SECTOR

ABSTRACT

Innovation management allows you to be competitive and are positioned at the forefront of products and services offered, giving a greater income and development in organizations. To identify the variables that lead to it, the Council of science and technology (CONACYT), as a public entity and research was selected. The main objective of this research is to identify the factors that stimulate, intellectual capital and innovation in research centres, and is handled the transfer of knowledge to the productive sector and the universities. The quantitative method 51 surveys were applied to five different centers of public research using SPSS 15 software for data analysis concluding that: innovation management is the result of the interaction between the variables generated by the values, organizational culture, leadership, the company's vision, the commitment of each of the members of the Organization, among others; which they can not act separately, they must be in sync with the market, the technology, the current and future needs of the client, indicted by a leadership committed to innovation management

INTRODUCCIÓN

Los centros del Consejo Nacional de Ciencia y Tecnología (CONACYT) en México requieren enfocar sus esfuerzos en lograr un bienestar social para su población, una de las herramientas de mayor impacto es elevar la innovación, la productividad y la investigación, para dejar de ser un país que solamente exportador de materias primas, e importar la tecnología de los países desarrollados. Los 27 centros de investigación que dependen del CONACYT son el pilar para el desarrollo del país, además de estar alineados al plan nacional de desarrollo 2013-2018

Pregunta principal ¿Cuáles son los factores que estimulan el capital intelectual e innovación en los centros de investigación y cómo se gestiona la transferencia de conocimiento al sector productivo y a las universidades? . Objetivo principal: Identificar los factores que estimulan, el capital intelectual e innovación en los centros de investigación, y la manera de gestionar la transferencia de conocimiento al sector productivo y a las universidades. Objetivos específicos:

1 Identificar cuáles son las variables organizacionales que influyen en la organización para fomentar la innovación y el capital intelectual. 2 Identificar cuáles son las variables que influyen en la organización para fomentar el capital intelectual. 3 Identificar cuáles son las variables que influyen en la organización para fomentar la innovación. 4 Identificar cuáles son las variables que influyen en la organización para fomentar la transferencia del conocimiento a universidades. 5 Identificar cuáles son las variables que influyen en la organización para fomentar la transferencia del conocimiento a empresas.

Hipótesis estadística de trabajo a comprobar:

H1 Los centros de investigación pública al estimular el capital intelectual y la innovación requieren fortalecer las siguientes variables organizacionales 1.1 clima laboral, 1.2 la pertinencia, 1.3 la satisfacción de 1.4 el fomenta y la creatividad 1.5 una formación adecuada y 1.6 liderazgo innovador

H2 Los centros de investigación pública al estimular a su personal para el desarrollo del capital intelectual requieren fortalecer las siguientes variables técnicas: 2.1 Investigación básica, 2.2 Investigación aplicada 2.3 Desarrollo tecnológico 2.4 2.5 Estado del arte Vigilancia tecnológica 2.8 Estudios de factibilidad, 2.9 Realización de ingeniería inversa, 2.10 Gestión de propiedad intelectual,

H3 Los centros de investigación pública al estimular a su personal para el desarrollo del innovación requieren fortalecer las siguientes variables técnicas: 2.6 Búsqueda de patentes 2.7 Redacción de patentes y Reivindicaciones, .11 Vinculación con universidades, 2.12 Vinculación con el sector industrial

H4 Los centros de investigación pública para lograr la transferencia del conocimiento al estimular a universidades requieren fortalecer las siguientes variables técnicas: 3.1 La competencia técnica Objetivos divergentes, 3.3 Barreras culturales, 3.4 Problemas relativos a los derechos de propiedad intelectual, 3.6 Dificultades de coordinación, 3.8 Problemas relativos a la confidencialidad, 3.11 Problemas relativos a los derechos de propiedad intelectual, 3.12 Problemas de atribución de responsabilidades

H5 Los centros de investigación pública para lograr la transferencia del conocimiento en las empresas requieren fortalecer las siguientes variables técnicas: 3.5 Barreras culturales, 3.7 Dificultades de coordinación, 3.9 Problemas relativos a la confidencialidad, 3.10 Problemas relativos a los derechos de propiedad, 3.12 Problemas de atribución de responsabilidades. Enseguida pasaremos a presentar el estado del arte que respalda esta tesis.

Esta investigación está integrada por las siguientes secciones: La revisión literaria que nos permite conocer el estado del arte, y poder evaluar y comparar varios puntos de vista acerca del tema, centrándose en modelos de capital intelectual e innovación, posteriormente la metodología cuantitativa es la que se emplea, *Software SPSS15.0* identifican variables, se establece la muestra, las unidades de investigación, y la aplicación de las encuestas para su interpretación, finalmente se tiene la sección de resultados y conclusiones en donde se obtiene las variables que contribuyen a que el capital intelectual, la innovación y la vinculación permita fortalecer el centro de investigación.

REVISIÓN LITERARIA

Manual de Frascati (2002). Las actividades de innovación tecnológica son el conjunto de etapas científicas, tecnológicas, organizativas, financieras y comerciales, incluyendo las inversiones en nuevos conocimientos, que llevan o que intenta llevar a mejoras, una implementación de productos y procesos nuevos o mejorados. Por otro lado los autores Nonaka y Takeuchi (1995), establecen que la innovación consiste en un continuo proceso de aprendizaje por el cual las empresas generan el nuevo conocimiento tecnológico. Así mismo Drucker (2005) define la innovación como la búsqueda organizada y sistemática con el objeto de cambio de las oportunidades que existen en el ambiente. Por otro lado los autores López M. et al. (2007), mencionan que la innovación es un proceso que genera nuevos conocimientos y en ocasiones, genera nuevas tecnologías susceptibles de ser aplicadas a productos, procesos de producción y de gestión. La tecnología se define como un conjunto de técnicas industriales susceptibles a ser aplicadas a un proceso productivo.

De acuerdo al El Manual de Oslo, 3ª Edición pasaremos a describir los conceptos de Innovación y sus tipos: Innovación como la introducción de un nuevo, o significativamente mejorado, producto (bien o servicio), de un proceso, de un nuevo método de comercialización o de un nuevo método organizativo, en las prácticas internas a la empresa, la organización del lugar de trabajo o las relaciones exteriores. La innovación es el principal impulsor del crecimiento y la creación de riqueza, el aumento en la competitividad, la mayor participación en los mercados globales y redes de producción, mejoras en la calidad de vida de los ciudadanos y para enfrentar los retos globales, ver tabla 1 .

¿Qué es una innovación? La innovación distingue a la vez un proceso y su resultado. Como proceso, caracteriza “una transformación de los procesos industriales en ejecución para concebir, realizar y distribuir los productos y los servicios” Como resultado, designa el producto (objeto o servicio) que es introducido sobre el mercado. Es en estos sentidos que contemplamos la innovación. Aunque hubieran utilizado terminologías diferentes, en la inmensa mayoría de las clasificaciones de las innovaciones ver tabla 2.2

Modelo a contrastar “Intellectus” con la realidad que vive un Centro Público de Investigación.

Una vez que se revisa la literatura se considera el modelo Intellectus. Como el modelo que más elementos tiene en concordancia con la realidad que vive el Centro Público de Investigación a continuación se describe el modelo y las variables que complementan las entrevistas a profundidad en la tabla tres se observa sus bloques de capital. El Modelo Intellectus presenta un conjunto de rasgos distintivos que lo diferencian claramente de otros modelos conocidos y utilizados en las mejores prácticas observadas.

Centros de investigación en México.

El Sistema de Centros CONACYT es un conjunto de 27 instituciones de investigación. Según sus objetivos y especialidades se agrupan en tres grandes áreas: 10 de ellas en ciencias exactas y naturales, 8 en ciencias sociales y humanidades, 8 más se especializan en desarrollo e innovación tecnológica, y uno en el financiamiento de estudios de posgrado. Objetivo de conformidad con las directrices emanadas del

Programa de Ciencia y Tecnología 2001-2006, los objetivos de los Centros Públicos CONACYT son: 1. Divulgar en la sociedad la ciencia y tecnología 2. Fomentar la tecnología local y adaptarla a la tecnología 3. Fomentar la tecnología local y adaptarla a la tecnología extranjera. 4 Innovar en la generación, desarrollo, asimilación y aplicación del conocimiento de ciencia y tecnología 5. Vincular la ciencia y tecnología en la sociedad y el sector productivo para atender problemas. 6. Crear y desarrollar mecanismos e incentivos que propicien la contribución del sector privado en el desarrollo científico y tecnológico. 7. Incorporar estudiantes en actividades científicas, tecnológicas y de vinculación para fortalecer su formación. 8. Fortalecer la capacidad institucional para la investigación científica, humanística y tecnológica. 9 Fomentar y promover la cultura científica, humanística y tecnológica de la sociedad mexicana. Fuente: (CONACYT, 2014)

Tabla 2.1: Modelos principales de Capital Intelectual

Autores	Definición
(Thomas STEWART, 1991)	“El Capital Intelectual es todo aquello que no se pueda tocar pero que puede hacer ganar dinero a la empresa”.
Jonson 1996	“El Capital Intelectual se esconde dentro de un concepto contable, tradicional, llamado Goodwill. La diferencia es que tradicionalmente el Goodwill recalca activos poco usuales pero reales, tales como las marcas de las fábricas. En comparación el Capital Intelectual busca activos todavía menos tangibles, tales como la capacidad de una empresa para aprender y adaptarse”.
Annie Brooking 1996	“Con el término de Capital Intelectual se hace referencia a la combinación de activos inmateriales que permiten funcionar a la empresa”.
Leif Edvinsson Sullivan 1996	“El Capital Intelectual es aquel conocimiento que puede ser convertido en beneficio en el futuro y que se encuentra formado por recursos tales como las ideas, los inventos, las tecnologías, los programas informáticos, los diseños y los procesos”.
Leif Edvinsson Michael Malone 1997	“La posesión de conocimiento, experiencia aplicada, tecnología organizacional, relaciones con clientes y destrezas profesionales que dan una ventaja competitiva en el mercado”.
Bradley 1997	“El Capital Intelectual consiste en la capacidad para transformar el conocimiento y los activos intangibles en recursos que crean riqueza tanto en la empresas como en los países”
Sveiby 1997	“El Capital Intelectual está constituido por todos aquellos conocimientos tácitos o explícitos que generan valor económico para la empresa”.
Ross y Ross 1997	“El Capital Intelectual es la suma del conocimientos de sus miembros y de la interpretación práctica de ese conocimiento, es decir, de sus marcas, patentes y trámites”.
Stewart 1998	“El Capital Intelectual está constituido de materia gris: conocimientos, información, propiedad intelectual, experiencia material que puede utilizarse para crear riquezas”.
Malhotra 2000	“El Capital Intelectual representa al colectivo de los activos intangibles que pueden ser identificados y medidos”.
Roos et al 2001	“El Capital Intelectual de una empresa es la suma del conocimiento de sus miembros y de la interpretación práctica del mismo”.
Nevado Peña López Ruiz 2002	“ es el conjunto de activos de la empresa que, aunque no estén reflejados en los estados contables, generan o generarán valor para la misma en el futuro, como consecuencia de aspectos relacionados con el capital humano y con otros estructurales como, la capacidad de innovación, las relaciones con los clientes, la calidad de los procesos, productos y servicios, el capital cultural y comunicacional permite a una empresa aprovechar mejor las oportunidades que otras, dando lugar a la generación de beneficios futuros”.
Batista Canino Melián González Sánchez Medina 2002	“El Capital Intelectual es la combinación de activos inmateriales o intangibles, incluyéndose el conocimiento del personal, la capacidad para aprender y adaptarse, las relaciones con los clientes y los proveedores, las marcas, los nombres de los productos, los procesos internos, y la capacidad de I+D, etc, de una organización, que aunque no están reflejados en los estados contables tradicionales, generan o generarán valor en el futuro y sobre los cuales se podrá sustentar una ventaja competitiva sostenida”.
Bueno Campos E. 2003	Acumulación de conocimiento que crea valor o riqueza cognitiva poseída por una organización, compuesta por un conjunto de activos intangibles (intelectuales) o recursos y capacidades basados en conocimiento, que cuando se ponen en acción, según determinada estrategia, en combinación con el capital físico o tangible, es capaz de producir bienes y servicios y de generar ventajas competitivas esenciales en el mercado para la organización.
Mario L. Bermudez 2008	Conjunto de Conocimientos científicos, tecnológicos, artístico y comercial aplicable para la generación de riqueza social del que dispone un individuo, organización o comunidad.

Fuente: Fuente elaboración Dra. Norma Maricela Ramos Salinas. En esta tabla se explica los diferentes enfoques del desarrollo de la innovación Adaptado de Ziamou (1999); García y Calantone (2002); Miller y Miller (2012).

2.2 : Modelos principales de Innovación dimensiones y definiciones

Autores	Dimensiones	Definiciones
Robertson (1971)	Cambio en las costumbres de consumo.	<i>Innovaciones continuas</i> : muy débil modificación de los modos de consumo. • <i>Innovaciones semicontinuas</i> : modificación un poco más importante de los modos de consumo. • <i>Innovaciones discontinuas</i> : rotura profunda en los modos de consumo.
Booz, Allen y Hamilton (1982)	Novedad para la empresa vs. Novedad para el mercado.	<i>Productos "nuevos para el mundo" (new-to-the-world)</i> : productos que crean nuevas categorías. • <i>Nuevas líneas de productos</i> : productos que no son nuevos para el mercado, pero que son para la empresa. • <i>Extensiones de gamas</i> : nuevos productos que son incluidos en líneas preexistentes de productos. • <i>Mejoramientos de productos existentes</i> : fortalecimiento de las realizaciones de un producto y un mejoramiento de su imagen. • <i>Nuevos posicionamientos</i> : nuevas aplicaciones de productos existentes. • <i>Reducciones de los costos</i> : productos que, a calidad igual, son menos costosos que productos existentes.
Gobeli y Brown (1987)		<i>Innovaciones incrementales</i> : débil contenido tecnológico y débil beneficio adicional para el consumidor. • <i>Innovaciones tecnológicas</i> : utilización de una tecnología innovadora sin grandes cambios en los beneficios. • <i>Innovaciones en términos de aplicaciones</i> : aumento sustancial de los beneficios sin cambios tecnológicos. • <i>Innovaciones radicales</i> : utilización de una tecnología innovadora con un aumento importante de los beneficios.
Kleinschmidt y Cooper (1991)		• <i>Productos totalmente nuevos</i> : productos radicalmente nuevos para la empresa y para los consumidores. • <i>Rotura tecnológica</i> : utilización de una tecnología innovadora sin grandes cambios para los consumidores. • <i>Rotura para el mercado</i> : novedad de los beneficios con la utilización de una tecnología existente.
Chandy y Tellis (1998)		• <i>Innovaciones incrementales</i> : débil contenido tecnológico y débil modificación de los beneficios para el consumidor. • <i>Rotura tecnológica</i> : utilización de una tecnología innovadora sin grandes cambios al nivel de los beneficios. • <i>Rotura para el mercado</i> : aumento sustancial de los beneficios con la utilización de una tecnología existente. • <i>Innovación radical</i> : utilización de una tecnología innovadora con un aumento
García y Calantone (2002)	Dos discontinuidades (tecnológico vs. para el mercado) por dos perspectivas (macro vs. micro).	• <i>Innovaciones radicales</i> : rotura sobre las cuatro dimensiones (dos discontinuidades por dos perspectivas económicas). • <i>Innovaciones completamente nuevas</i> : discontinuidad al nivel macroeconómico. • <i>Innovaciones incrementales</i> : cambios al nivel de la actividad de la empresa o de las prácticas de consumo.
Miller y Miller (2012)	Esta clasificación en gran parte ha sido utilizada por el equipo de ARI en la Universidad de Toledo.	• <i>Innovaciones disruptivas</i> : innovaciones de sostenimiento, que pueden ser el uno o el otro (por ejemplo, transformacional), pero no necesariamente disruptiva continua. • <i>Innovación arquitectónica</i> : tecnologías existentes con nuevos modos. • <i>Innovación radical</i> : la creación de las nuevas tecnologías que hacen nuevas cosas posibles. • <i>Innovación incremental</i> : la fabricación de mejoras a tecnologías existentes. • <i>Innovación modular</i> : la creación de nuevas tecnologías para solucionar problemas existentes.

Fuente: Fuente elaboración Dra. Norma Maricela Ramos Salinas. En esta tabla se explica los diferentes enfoques del desarrollo de la innovación Adaptado de Ziamou (1999); García y Calantone (2002); Miller y Miller (2012).

METODOLOGÍA

¿Por qué es importante el problema de investigación? Porque la gestión del capital intelectual e innovación nos permite ser más competitivos y colocarnos a la vanguardia en productos y servicios que ofrecemos otorgándonos un mayor ingreso y desarrollo. ¿Por qué debe investigarse? Para determinar las variables y los indicadores que nos permitirán desarrollar la gestión del capital intelectual y la innovación en Centro Publico de Investigación y darles seguimiento puntal de tal forma que se establezcan como una cultura en la empresa. Tipo y diseño de estudio. La presente la investigación desarrolla un estudio de caso, utilizando el método cuantitativo en donde lo fenomenológico busca conocer, describir e interpretar cómo perciben los individuos o actores el mundo social a través de su experiencia (Hernández R., Fernández, C. & Baptista P. 2006). Población y muestra. Se realizaron 51 encuestas en cuatro centros de investigación las encuestas se aplicaron a colaboradores que han tenido vinculación con las universidades y empresas y han participado en fondos de Innovación de Conacyt o cualquier otro programa del gobierno federal o estatal que promueva la transferencia del conocimiento a través de la vinculación lo cual nos reduce significativamente la muestra

CONCLUSIONES

En base a la validación de las hipótesis planteadas en esta tesis y las variables aceptadas, podemos señalar que los centros de investigación pública gestionan un ambiente de trabajo que les permita a sus empleados desarrollar un sentimiento de pertenencia en la organización y ofrecerles una formación para generar la Innovación y el capital intelectual. Por otro lado para la generación de capital intelectual es necesario formar

en el personal las competencias técnicas a trabajar en desarrollos tecnológicos y facilitarles metodologías para que pueden proteger a estos a través de Diseños, modelos, marcas, franquicias, derechos de para el desarrollo del tema de la innovación, una fortaleza a desarrollar será la vigilancia tecnológica a través de búsquedas de patentes en las principales oficinas del mundo (OEP, JPO, USPTO, IMPI). Para la transferencia del conocimiento con las universidades es necesario minimizar las siguientes barreras primero, que este claramente estipulado lo relativo a los derechos de propiedad intelectual, y para las dificultades de coordinación generar una matriz de comunicación es donde se establezca los responsables y el alcance de cada integrante de la universidad y el centro de investigación. Para la transferencia del conocimiento con las empresas es necesario minimizar las siguientes barreras primero, que este claramente estipulado en un convenio de confidencialidad la protección del desarrollo tecnológico de la empresa y las metodologías tecnológicas del centro de investigación, lo relativo a las dificultades de coordinación con la empresa generar una matriz de comunicación es donde se establece a los responsable y el alcance de cada integrante de la empresa y el centro de investigación.

RESUMEN

El modelo MIASA, es una aproximación teórica para explicar los factores críticos que pueden estar comprometiendo el nivel de competitividad del sector acuícola en el Departamento de Bolívar. Su configuración está estructurada de la siguiente forma: Inicialmente se abordara la base de comprensión y explicación de la conducta competitiva del sector estaría demarcada por las dimensiones del Macro-ambiente y del Micro-ambiente, dimensiones desde donde se configuran las distintas fuerzas tanto del entorno como de la empresa misma del sector como unidad económica productiva que requiere ser sostenible y competitiva. Seguidamente el documento aborda a través del modelo combinar elementos de competitividad sectorial y territorial pero teniendo en cuenta, que la verdadera ventaja competitiva surge desde las entrañas mismas de cada empresa y sus sistema organizativo, de aquí que el modelo busca encarar los elementos constitutivos de la competitividad meso económica del sector con los elementos constitutivos de la competitividad de la empresa desde el punto de vista de su estructura organizacional, de aquí que también se consideran los elementos del marco teórico de la complejidad y las capacidades dinámicas de la organización y finalmente, se orienta a formar capacidades estratégicas para la creación de valor, no solo de orden económico, sino también valor para el conjunto de Stakeholder que lo comprometen, orientando la acción desde la responsabilidad empresarial y los elementos básicos del valor socialmente compartido que desde el sector puede ser creado a partir de un eficaz sistema de incentivos a la producción acuícola como una forma de responder a las necesidades globales de la seguridad alimenticia no solo del país y sus regiones, sino también en el aporte a la seguridad alimenticia global como parte de los objetivos del milenio.

ABSTRACT

The Miasa model, is a theoretical approach to explain the critical factors that may be compromising the competitiveness of the aquaculture sector in the Department of Bolívar. Its configuration is structured as follows: Initially the bases of understanding and explanation of the competitive behavior of the sector would be demarcated by the dimensions of the macro-environment and micro-environment, dimensions where the different forces of both the environment are configured as the same company and the sector as a productive economic unit that needs to be sustainable and competitive. Then the document tries to combine elements of sectorial and territorial competitiveness but considering that true competitive advantage arises from the bowels of each company and its organizational system, for that reason the model follows to confront the constituent elements of the meso economic competitiveness of the sector with the constituent elements of competitiveness of the enterprise from the view of its organizational structure, that's why also consider the theoretical framework of complexity and dynamic capabilities of the organization and finally aims to develop strategic capabilities to create value, not only economic, but also value for all Stakeholder who commit, directing the action from corporate responsibility and the basic elements of value socially shared that the sector can be created from an effective system of incentives for aquaculture production as a way to

respond to global food security need; not only the country and its regions but also in contributing to global food security as part of the objectives of millennium...

INTRODUCCION

La empresa acuícola se configura económicamente como una unidad de negocios, sin embargo, su configuración organizacional es compleja, se enfrenta a variables micro ambientales y macro ambientales que le incorporan elementos de incertidumbre tanto a sus expectativas económicas como de tipo organizacional. Parte de estos eslabones de complejidad lo constituyen los componentes identificados dentro del mapa general de conocimientos que requiere la empresa, entre ellos los que tienen que ver con el desarrollo de la técnica, la tecnología y la investigación; otro componente tiene que ver con los elementos de cultura, la semántica de la empresa y su formación de identidad como agente económico.

REVISION LITERARIA

El modelo, una aproximación desde sus condiciones micro ambientales

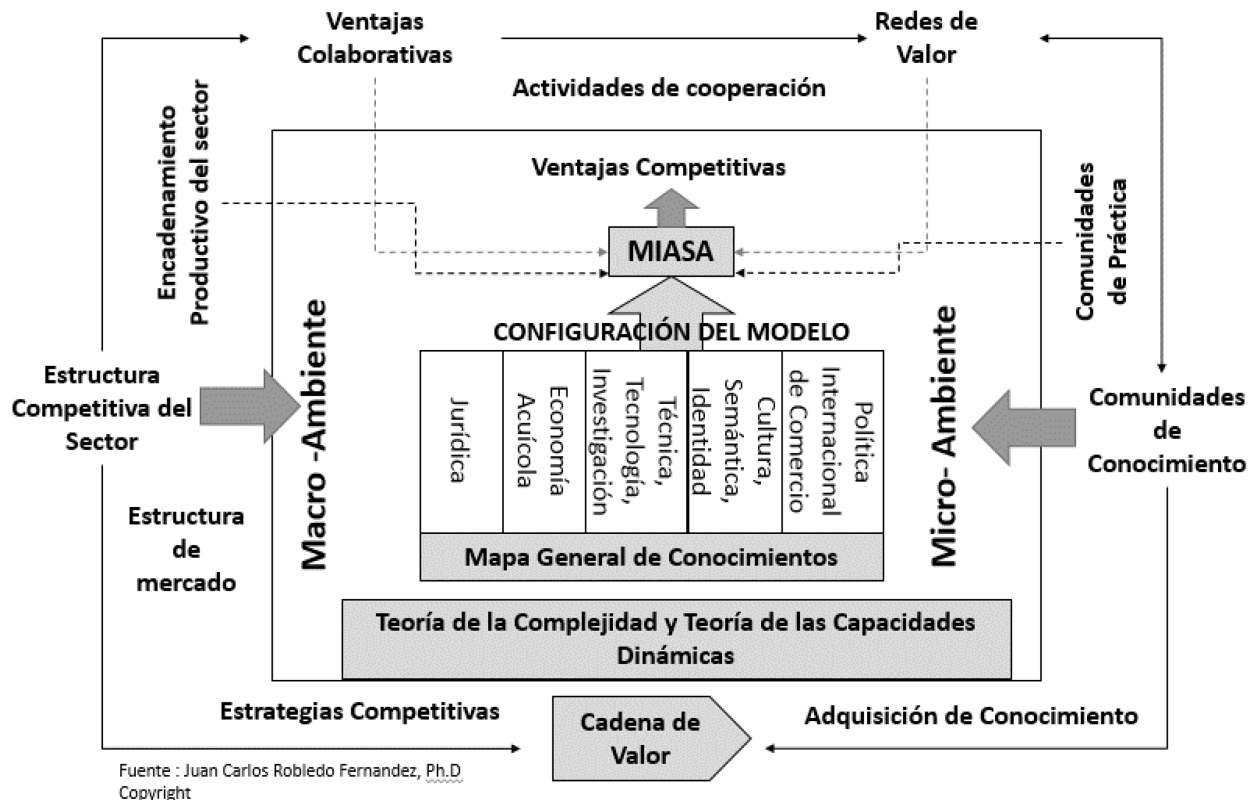

De otra parte, como unidad económica se constituye explícita o implícitamente en su cadena de valor (Porter, 1980). Como tal, desde cada uno de sus actividades de apoyo y actividades básicas la empresa acuícola determina la mejor combinación de sus recursos y capacidades con el fin de crear el valor necesario para su sostenibilidad y competitividad. Sin embargo, la cadena de valor como categoría de análisis no tiene el suficiente poder de explicación de la formación de la ventaja competitiva desde las entrañas mismas de la empresa, para ello se requiere comprender los comportamientos complejos del sistema y la generación de las capacidades dinámicas de la empresa (Teece, et.al, 1997) que le permitan enfrentar los elementos de incertidumbre y además les permita diseñar una estrategia basada en la capacidad de anticipación y la capacidad desplazamiento de una posición competitiva inferior a una posición competitiva superior dentro de su propio sector económico.

Desde la configuración de la Cadena de Valor, la empresa acuícola, puede sin lugar a dudas diseñar los procesos funcionales que comprometen su Core Business, desde aquí, al empresa configura generalmente sus estrategias y sus tácticas, en especial incorpora estrategias competitivas basadas en costos. Sin embargo, el sector, dado el ambiente competitivo a nivel nacional e internacional requiere desarrollar la capacidad de innovación en producto, en proceso, en organización que le permita mayor alcance a nivel de mercados tanto del orden nacional como internacional. De tal manera, que la cadena de valor se convierte en una primera fuente de reflexión para establecer procesos y actividades de innovación desde el nivel intra-empresarial.

Por otra parte, es menester resaltar, que el ambiente competitivo de cualquier sector hoy de la producción está cada vez más inmerso en una competencia basada en conocimiento, esto implica, que para incorporar elementos de innovación de alto valor a las organizaciones y dentro del sector mismo, se requiere que se incorpore a la cadena de valor los componentes del conocimiento organizacional productivo que puedan ser bajados desde las comunidades del conocimiento existentes y que permanentemente mantienen el estado del arte del conocimiento económicamente productivo. De aquí que, la capacidad de innovación abierta puede ser potenciada desde las entrañas de la empresa, a través de sistemas de gestión de conocimiento movido por comunidades de práctica que se conectan a las comunidades del conocimiento, esto sin lugar a duda permitirá en todo caso mantener actualizado el sistema técnico, tecnológico y de investigación del

sector y la empresa con el fin de ganar las capacidades dinámicas de absorción, adaptación e innovación basadas en conocimiento.

Modelo conceptual de innovación abierta para el sector Acuícola - MIASA

De aquí que, el modelo MIASA se conecta no solo al propósito de las ventajas competitivas como se han venido concibiendo en los últimos 30 años desde la teoría de Porter, sino que ahora, requiere pensarse la estrategia competitiva en transición a las estrategias colaborativas desde las redes de valor que se traduzcan en ventajas colaborativas mediadas por la cooperación inter-empresarial, trans-empresarial e intra-empresarial conectando a la empresa a la Institucionalidad que actúa desde el Macro-ambiente.

En síntesis, el Micro-ambiente está constituido por una filosofía de competitividad empresarial basada en el hecho de que hoy se encuentra el sector productivo inmerso en los desafíos de una economía del conocimiento que exige de toda unidad económica plantearse estrategias basadas en conocimiento, esto de otra parte compromete el trabajo organizacional de las empresas para posicionar una identidad y una semántica sectorial, por aquello que para el caso del sector acuícola pueda significar esta economía para el desarrollo de una región, un sector, un país o un grupo de países. La lectura de estas posibilidades tienen su oportunidad en la capacidad que se tenga desde el sector y cada empresa en él para decodificar los códigos culturales no solo del mercado de consumo acuícola sino del componente de oferta y estructura cultural que demarca sus patrones axiológicos y ontológicos constitutivos de capacidad de acción de las unidades productivas acuícolas.

EL MODELO, UNA APROXIMACIÓN DESDE SUS CONDICIONES MACRO-AMBIENTALES

El sector acuícola conformado por unidades de negocio constituyentes de una cadena productiva tensionada por las estructuras de mercado, la forma como esté establecido el encadenamiento productivo del sector, sumándose a estas tensiones, la de tipo institucional como las que provienen de medidas gubernamentales que se ven traducidas en la política económica que impere en el país, de aquí se desprenden los eslabones comprometidos en el modelo MIASA, que tienen que ver con lo Jurídico, con la Política Internacional de Comercio con la Política económica para el sector acuícola.

Desde el mapa general de conocimiento para el sector, la Política Internacional de Comercio que desarrolla Colombia se hace necesario comprenderla con el propósito de poder configurar macro estrategias que sean coherentes con por ejemplo los tratados de libre comercio (TLC). Colombia ha venido desarrollando una estrategia de internacionalización de su economía, ésta, se ha venido traduciendo en la firma de tratados de libre comercio que buscan en su naturaleza generar un mayor intercambio internacional. Sin embargo, los TLC no solo son un desafío para la economía colombiana, también son un llamado a la reflexión para comprender como se pueden diseñar mejores modelos de competitividad territorial en el que los distintos sectores de la producción puedan encontrar un lugar y un marco regulatorio apropiado para desarrollar sus respectivas estrategias empresariales.

En el caso específico del sector acuícola, la estructura competitiva está determinada por las estructuras mimas del mercado en los respectivos niveles de su desarrollo productivo. Ese así, como en este sector se pueden encontrar unidades de negocio tipo artesanal y familiar, hasta grandes compañías con mayor alcance técnico y tecnológico. El sector acuícola como cualquier otro sector hace parte y en si mismos constituye el encadenamiento productivo en el cual se establecen las distintas cadenas de valor de las unidades económicas que en él se desempeñan. Es menester de la política territorial que se emana de los distintos niveles de gobierno, facilitar los mecanismos a través de los cuales, las empresas en este sistema de Clúster puedan desarrollar las ventajas colaborativas que a través de la cooperación se incorporan para la creación de redes de valor para cada uno de los negocios que se integran en el territorio competitivo de la región. Por tanto, el eslabón de la Economía Acuícola dentro del mapa general de conocimientos, invita a la reflexión y acción continua para configurar la huella productiva, aquella que permita identificar los eslabones de la cadena productiva desde donde pueden provenir aportes importantes para la estrategia de innovación abierta para el sector y para las empresas inmersas en él. Es de comprender que tanto las ventajas colaborativas como las redes de valor se convierten así en un driver que conduce a la creación de ventajas competitivas apalancadas no solo en el conocimiento sino también en la capacidad de innovación abierta vía cooperación internacional y nacional.

LOS CUERPOS ACADÉMICOS Y SU RELACIÓN CON LA GESTIÓN DEL CONOCIMIENTO EN LA UNIVERSIDAD JUÁREZ AUTÓNOMA DE TABASCO

RESUMEN

La Gestión del Conocimiento (GC) actualmente es una necesidad en todas las organizaciones que compiten entre sí en entornos muy competitivos. El convertir el conocimiento en un recurso productivo, es lo que diferencia una organización de otra; en este contexto se utilizará a los cuerpos académicos de la Universidad Juárez Autónoma de Tabasco para impulsar la transferencia y Gestión del Conocimiento. Los Cuerpos Académicos han ido cambiando poco a poco hacia un posicionamiento en el ámbito local, estatal y nacional, debido a que son generadores del conocimiento y han asumido un papel muy importante como indicadores en las Universidades Públicas ya que la calidad de la educación en los cuerpos académicos se contempla como un profesor bien formado, desarrollando líneas de conocimiento que tengan vinculación con la problemática del país, estado o municipio. El objetivo de esta investigación es analizar el desempeño de los cuerpos académicos en el periodo 2004-2013 y su relación con la Gestión del Conocimiento. Esta es una investigación longitudinal descriptiva de tipo documental de fuentes secundarias.

PALABRAS CLAVE: Gestión del conocimiento, Cuerpos Académicos, equipos de trabajo

ACADEMIC BODIES AND THEIR RELATIONSHIP TO KNOWLEDGE MANAGEMENT IN UNIVERSIDAD JUÁREZ AUTÓNOMA DE TABASCO

ABSTRACT

Knowledge management is currently a need in all organizations competing in highly competitive environments. The turn knowledge into a productive resource, is what sets one organization from another; in this connection to academic bodies of the Universidad Juárez Autónoma de Tabasco will be used to promote transfer and knowledge management. Academic Bodies have been changing gradually towards a position in the local, state and national level, because they are generators of knowledge and have assumed an important role as indicators in public universities and that the quality of education in the academic bodies is seen as a well-trained teacher, developing lines of knowledge they have links with the problems of the country, state or municipality. The objective of this research is to analyze the performance of the academic staff in the period 2004-2013 and its relation to Knowledge Management. This is a longitudinal descriptive documentary research of secondary sources.

KEYWORDS: Knowledge Management, Academic Bodies, work teams

INTRODUCCIÓN

En México, una de las políticas más recientes ha sido el impulso a la creación de cuerpos académicos en las instituciones públicas de educación superior con la finalidad de promover las nuevas formas de producción y aplicación del conocimiento a través del trabajo en equipo y los cuerpos académicos fueron creados, principalmente, para fortalecer las tareas de producción y la aplicación del conocimiento ya que su tarea fundamental es la producción de conocimiento (Bajo y Martínez, 2006).

García y Cordero (2008) comentan que la economía contemporánea ha obligado a un constante intercambio de datos e información, lo que supone la interacción entre individuos y grupos en búsqueda de una visión compartida vinculada a una distribución equitativa de conocimiento que promueva conocimiento organizativo y es precisamente que los equipos de trabajo se presentan con una forma organizativa favorecedora para gestionar el conocimiento dentro de una organización, en ellos se distribuye el trabajo en base a las competencias, existe un alto nivel de compromiso de cada integrante, se estimula el desarrollo de nuevas competencias y experiencias de aprendizaje y la autoevaluación es indispensable para garantizar el aprovechamiento de la masa de conocimiento acumulado presente en la organización.

REVISIÓN LITERARIA

En las Universidades Públicas Estatales e instituciones afines de acuerdo con el Secretaría de Educación Pública (2013a, citado en el Diario Oficial, 2013), los Cuerpos Académicos (CA) son grupos de profesores de tiempo completo que comparten una o varias Líneas de Generación y Aplicación Innovadora del Conocimiento (LGAC) (investigación o estudio) en temas disciplinares o multidisciplinares y un conjunto de objetivos y metas académicos. Adicionalmente sus integrantes atienden Programas Educativos (PE) en varios niveles para el cumplimiento cabal de las funciones institucionales. Y el objetivo principal del Programa de Mejoramiento del Profesorado (PROMEP, ahora conocido como PRODEP), en las universidades es lograr la superación del profesorado y la consolidación de los Cuerpos Académicos de las instituciones de educación superior (IES) para que se pueda elevar la calidad de la educación en el país. Para alcanzar este objetivo la Secretaría de Educación Pública (SEP), a través de la Subsecretaría de Educación Superior (SES) ha emprendido en el marco del PRODEP (Programa para el desarrollo profesional docente) varias acciones enfocadas a promover que los profesores de tiempo completo se integren en Cuerpos Académicos y con ello sustentar la formación de profesionales de buena calidad, responsables y competitivos y con esto se logra que exista una buena gestión del conocimiento en las universidades.

Un Cuerpo Académico debe entenderse como una pequeña comunidad científica que produce y aplica conocimiento mediante el desarrollo de una o varias líneas de investigación, y el trabajo en las mismas funciona como el elemento aglutinador de dicho equipo (López 2010).

De acuerdo con Magaña y Aquino (2010, citando a Castañeda, 2010, y SEP, 2011) desde 1996 hasta la actualidad este programa ha generado una serie de cambios en las Instituciones de Educación Superior Públicas (IES) lo que ha tenido una nueva perspectiva de trabajo, estructura, terminología, hasta el desarrollo de procesos y prácticas, que se han traducido en una nueva cultura de la vida universitaria ya que desde su creación ha ocurrido diversos procesos y negociaciones, pasando por la habilitación de profesores con posgrados, la aprobación de los Programas Integrales de Fortalecimiento Institucional (PIFI), dando como resultado la determinación del presupuesto a las instituciones, la contratación de nuevos profesores por medio del programa, incidir en los indicadores de las evaluaciones externas para la certificación de programas educativos, cuya premisa principal es que a través de estas estrategias, se promoverá el desarrollo y el mantenimiento de las IES, y es precisamente donde radica la importancia de realización de una planeación estratégica, pues su adaptación, y crecimiento al entorno cambiante depende en gran medida, de

visualizar su desarrollo en el mediano y largo plazo de las entidades a fin de obtener los recursos necesarios que permitan garantizar la consecución de las metas institucionales.

Una de las finalidades de los cuerpos académicos es la formación de equipos de trabajo, los cuales según Bajo y Martínez (2006), citando a Maldonado (2005) insisten en que en la academia lo que debe prevalecer para una mayor calidad en el trabajo son las comunidades epistémicas, que consisten en grupos de expertos encaminados a resolver problemas, las cuales tienen siete características:

- 1) Tener una agenda común, en la cual los integrantes tienen puntos coincidentes en la agenda de investigación;
- 2) Conformación de redes, relaciones formales e informales que se establecen entre los diferentes actores;
- 3) Creencias y valores compartidos, se mantienen juntos por propósitos comunes, comparten normas y creencias sin necesidad de tener lazos familiares o políticos;
- 4) Tener un tamaño compacto, son relativamente pequeñas, pero lo que importa es el prestigio académico y su habilidad de influir en el campo disciplinario;
- 5) Dar mayor peso a las relaciones informales que formales, lo fuerte está constituido por las relaciones entre los actores, más que por los convenios establecidos entre las instituciones;
- 6) Tener prestigio y credenciales académicas, ya que los méritos académicos son el capital más importante con que cuenta la comunidad epistémica y que permite distinguirse de otras redes y grupos;
- 7) Que exista una diversidad profesional, es decir que se atraviesen las fronteras profesionales.

Otras características de los Cuerpos Académicos, según Martínez, Rico y Preciado (2006) son que además de participar activamente en redes académicas con sus pares en el país y en el extranjero, para vincularse con empresas y organismos que aprovechan los recursos humanos con el conocimiento generado por el mismo, su tamaño varía desde tres profesores hasta el máximo que permita la comunicación eficaz y cotidiana entre sus miembros, cultivan líneas de generación y/o aplicación innovadora del conocimiento específico, compartido y temáticamente afines, la afinidad entre ellos puede darse porque pertenecen a la misma especialidad o enfoque dentro del campo disciplinario, o bien, si son interdisciplinarias porque tienen el mismo objetivo o problema por resolver.

La Gestión del Conocimiento y los Cuerpos Académicos

García y Cordero (2010) comentan que la llamada “sociedad del conocimiento”, enunciada por Drucker, está compuestas por un conjunto de información, inteligencia y experiencia práctica que, si es adecuadamente gestionado, es la base de las cualidades diferenciadoras de las organizaciones de hoy y debido a esto, la posibilidad de no sólo adquirir información sino de transformarla en conocimiento para compartirlo e integrarlo a las prácticas cotidianas de la organización, constituye la capacidad organizativa más importante para enfrentar el entorno que caracteriza la dinámica organizacional, lo cual requiere la instauración de condiciones de gestión adecuadas que posibiliten la integración de manera consciente, de prácticas cotidianas orientadas a fomentar factores e instrumentos que faciliten la generación, transferencia, integración y utilización del conocimiento. Los esfuerzos organizativos que permiten gestionar los procesos y actividades asociadas al conocimiento se ha denominado “gestión del conocimiento”.

La gestión del conocimiento implementado en las Instituciones de Educación Superior (IES) como una estrategia de enseñanza y de aprendizaje está enfocada hacia en el logro de las competencias de los programas curriculares, pero al incorporar la evaluación a la gestión del conocimiento, como una estrategia de enseñanza-aprendizaje, se logra realizar los ajustes necesarios para su implementación, mientras que la evaluación necesariamente debe enfocarse en el proceso de gestión del conocimiento como estrategia metodológica; por ello, el enfoque sobre el cual se sustenta la evaluación es cualitativo (Chahuán-Jiménez, 2009).

A las universidades actualmente se les exige hoy formar a sus estudiantes en y para la vida; formar a las nuevas generaciones en un contexto de transformaciones tecnológicas y económicas, con procesos que se extienden a todas las etapas de la vida. Se le exige formar en los valores de colaboración, solidaridad, tolerancia, aceptación y convivencia., es así como la gestión del conocimiento y el aprendizaje para la vida son dos demandas que la sociedad del conocimiento plantea en las organizaciones. En las instituciones escolares y los profesionales de la educación se deben y se pueden transformar en su índole, sus funciones, su estructura y su organización para integrarse a las dinámicas de la sociedad del conocimiento; que la gestión del conocimiento es un constitutivo necesario de la movilización y dinamización de las organizaciones escolares y sus actores, mandos medios, directivos, profesores, alumnos y familias para realizar la transformación institucional que consiste, principalmente, en transitar de una organización estructurada para enseñar a una centrada en el aprendizaje, que aprende gestionando conocimiento (Minakata, 2009).

En cuanto al campo de la gestión del conocimiento, la convocatoria de proyectos sectoriales de investigación básica del Consejo Nacional de Ciencia y Tecnología observa como uno de los factores de impacto el seguimiento de consolidación de los Cuerpos Académicos o grupos de investigación científica involucrados, demostrando la existencia de trabajo en equipo y consolidación de resultados esperados de esta interacción y, en su caso, su integración en redes de cooperación e intercambio académico. Teniendo como un requisito indispensable que deberán atender los programas de posgrado, el cual constituye el parámetro de contar con un núcleo académico básico para tener profesores con una formación académica y experiencia demostrable en investigación o trabajo profesional, evidenciada a través de una trayectoria relevante y una producción académica en alguna de las áreas del conocimiento asociadas al programa, estos están integrados por profesores de tiempo completo y tiempo parcial según las características del programa, que cuenten con distinciones académicas como es la pertenencia al Sistema Nacional de Investigadores (SNI) o a otros organismos académicos o profesionales como son colegios, academias, asociaciones profesionales, ya sea con reconocimiento local, regional, nacional e internacional. Además, de que se deben de organizar en academias, colegios, cuerpos académicos, que participen en el programa y de sus formas de operación individual y colegiada, así como que también lleven a cabo actividades académicas y de gestión complementarias, como participación en jurados de examen, en comités evaluadores de proyectos y becas y formar parte de foros de planeación de la ciencia y la tecnología (López, 2010).

De acuerdo con López (2010) un cuerpo académico en consolidación presenta las siguientes características: más de la mitad de sus integrantes tiene la máxima habilitación y cuentan con productos de generación o aplicación innovadora del conocimiento, la mayoría de ellos tiene el perfil PRODEP (Programa para el desarrollo profesional docente), participan conjuntamente en líneas de generación o aplicación innovadora del conocimiento bien definidas, tienen experiencia en docencia y en formación de recursos humanos y colaboran con otros cuerpos académicos; mientras que los cuerpos académicos consolidados: la mayoría de sus integrantes tienen la máxima habilitación académica que los capacita para generar o aplicar innovadoramente el conocimiento de manera independiente, tienen un gran experiencia en docencia y en formación de recursos humanos, tienen perfil PRODEP y un alto compromiso con la institución, colaboran entre sí y su producción es evidencia de ello. Tienen una intensa actividad académica que se manifiesta en congresos, seminarios, mesas y talleres de trabajo, con una intensa vida colegiada, y sostienen una intensa participación en redes de intercambio académico con sus pares en el país y en el extranjero, así como con organismos e instituciones nacionales y del extranjero.

La solidez de las instituciones de la Educación Superior, su capacidad para cumplir con eficacia los propósitos institucionales, sólo puede concebirse de acuerdo con Fresán (2004) mediante el fortalecimiento de la calidad y participación de sus cuerpos académicos; Éstos, se organizan bajo estructuras y formas variadas ya que pueden encontrarse en diferentes estados de consolidación; intervienen en la toma decisiones institucionales en diferentes ámbitos y tienen una gran autonomía para organizar y distribuir su tiempo y sus recursos. La autora comenta que los cuerpos académicos también se ven afectados por fuerzas

que hace que se disgreguen como puede ser que sean irrelevantes a la lealtad de la universidad, resistentes a la evaluación externa, desatención de oportunidades de cohesión con intensa participación de evento, desconocimiento del liderazgo académico, búsqueda de reconocimiento por parte de otras IES, capacidad muy pobre de involucramiento; cabe mencionar que de acuerdo con Acosta (2006) durante el transcurso de la implementación de las políticas de estímulos, los profesores han establecido estrategias para acceder a los recursos asociados a los programas, lo que ha generado prácticas de simulación, cooperación y productivismo para acumular puntos, de acuerdo a los indicadores propuestos por los propios programas ya que la acumulación de capital académico es insuficiente para transitar por los programas de estímulos, y lo que se observa es una tendencia creciente hacia un productivismo cuya gestión corre a cargo de los propios individuos sin embargo hay que reconocer que su impacto en las instituciones es importante en cuanto al ambiente académico, constituyendo una fuerza motora en el desarrollo de la Institución, ya que contribuyen al logro de los objetivos institucionales y en la investigación su impacto es importante en la solución de la problemática tanto local como regional.

Para poder desarrollar ese conocimiento y que se convierta en un arma competitiva, es necesario contar con una infraestructura que provea de información, lo que significa una organización abierta a la participación y la cooperación, donde la negociación y el crecimiento sean los ejes centrales del compartir diario, lo que se verá en organizaciones donde se diagnostican los recursos disponibles, se valora la capacidad de cada quien y se emplean los elementos tecnológicos al máximo y es a través de una buena planificación y administración de líneas de investigación, que estén compenetrados con los objetivos organizacionales y los requerimientos del entorno, para poder conformar una verdadera comunidad del conocimiento y para poder lograrlo se requiere también de ambientes educativos innovadores enriquecidos con las nuevas tecnologías, que permiten el acceso a información muy novedosa (Fuenmayor, Perozo y Naváez, 2007).

Importancia de los Equipos de Trabajo

El debate que acompaña a la gestión del conocimiento trae asociado casi por necesidad la discusión acerca del papel de los equipos de trabajo en organizaciones donde se trabaje con base en la gestión de ese recurso. La formación de los equipos de trabajo directamente relacionada con la misma esencia de la gestión del conocimiento: la necesidad de compartir conocimientos y colaborar entre los empleados de una organización para potenciar el resultado final. No es casual que el auge de los equipos de trabajo coincida con la difusión de estudios acerca de experiencias empresariales sobre gestión del conocimiento a finales de los ochenta y, sobre todo, a principios de la década siguiente. Por consiguiente se propone que los equipos de trabajo sean parte de la esencia misma del conocimiento, contribuyendo a la realización de los objetivos que se vayan planteando (García y Cordero, 2010).

La formación de equipos de trabajo está directamente relacionada con la esencia de la gestión del conocimiento debido a la necesidad de compartir conocimientos y colaborar entre los empleados de una organización para potenciar el resultado final y contribuyen a la realización de los objetivos de las organizaciones ya que el trabajar en equipo se justifica por razones de seguridad, autoestima, de beneficios mutuos y de sociabilidad, además de que se argumenta la posibilidad de reunir habilidades más allá de las que un individuo puede adquirir, creando una mayor sinergia, compromiso y desarrollo de los trabajadores, con lo cual se genera aprendizaje organizacional y se incrementa la creatividad. De la misma forma un equipo de trabajo genera una sinergia positiva debido a un esfuerzo coordinado y la suma de sus esfuerzos individuales dan como resultado un nivel de desempeño mayor que la suma total de los insumos individuales transformando grupos en equipos eficaces y productivos (García y Cordero, 2008).

Generación De Líneas De Investigación

Fuenmayor, Perozo, y Narvaéz, (2007, citando a Chacín y Briceño, 1995, Hurtado, 2003) afirman que La generación de las líneas de investigación no está referida a fórmulas ni a requisitos exigidos, porque son

subsistemas estratégicos organizativos y se producen gracias al compromiso y visión compartida de los entes involucrados en la actividad investigativa, con el fin de buscar las posibles soluciones a los problemas que se le plantean a la sociedad en momentos de profundos cambios, además de que las líneas de investigación pueden surgir por varias razones como: resultado de una situación coyuntural, consecuencia de análisis de tipo regional, o por solicitud de organizaciones sociales, que proponen una metodología específica para diseñar y organizar las líneas de investigación.

La Universidad Juárez Autónoma De Tabasco y Los Cuerpos Académicos

La Universidad Juárez Autónoma de Tabasco (UJAT) como Institución de Educación Superior Pública, tiene la misión de contribuir de manera significativa al desarrollo del país, con particular interés en el Estado de Tabasco. Esta tarea se realiza mediante la formación de profesionales que posean un amplio y riguroso dominio disciplinar; capacidad de percepción y respuesta a las necesidades reales de la región y el país así como con individuos dispuestos a participar con ética y responsabilidad en la transformación y el desarrollo social (UJAT, 2013). Esta universidad está conformada por 11 Divisiones Académicas, ubicadas en 5 municipios del Estado de Tabasco; como una Institución de Educación Superior se suma a las políticas educativas nacionales, incorporando la figura de los cuerpos académicos que le están permitiendo elevar la eficiencia del personal académico. La UJAT como parte de las universidades que firmaron un convenio con Promep (Programa de Mejoramiento al Profesorado, ahora Prodep) en 1997, ya había iniciado la estructuración de sus cuerpos académicos, llevándose a cabo diversos intentos por construirlos; al principio se dividieron en cuerpos disciplinarios y cuerpos académicos y en primera instancia se incluyeron profesores de tiempo completo y medio tiempo, con licenciatura, maestría hasta el doctorado, pero los grupos colegiados eran muy numerosos y no se podían organizar y hacer trabajos en común y es en el año 2003 cuando la UJAT realiza una profunda reestructuración de sus cuerpos académicos que da como resultado a los cuerpos académicos que actualmente existen. (Garza y Minami, 2013).

Los estándares de desempeño de la UJAT promovidos desde la coordinación externa, con programas que inciden directamente en la dinámica organizacional e institucional como el Prodep han significado la labor docente incorporando nuevas prácticas y actividades como tutorías, investigación, gestión académica y difusión de los resultados de investigación sin embargo existen limitantes, delimitadas por la cultura organizacional de la UJAT como en cada División Académica. Algunas debilidades de los cuerpos académicos es el número de integrantes que conforman los grupos, el número limitado de profesores con grado de doctor, las relaciones humanas existentes entre ellos, la falta de acceso a los recursos económicos para el desarrollo de las investigaciones no igual para todos y la falta de intereses en común dentro de los cuerpos; sin embargo tienen retos actuales los cuerpos académicos como es el mejorar las relaciones humanas en el interior de los mismos, su integración a partir de intereses comunes, el incremento de productividad en investigación, su reestructuración y definir líneas de generación y aplicación de conocimientos que realmente fortalezcan los programas educativos y se vinculen con la problemática social (Rosas, Aquino y Chang, 2013).

A inicios del año 2004 se tenían registrados 73 cuerpos académicos con 163 líneas de generación del conocimiento, integrados por 646 participantes; dichos cuerpos académicos solamente 2 se encontraban en grado de consolidación y la mayoría en grado de en formación, teniendo como finalidad que los cuerpos académicos se consoliden para que puedan aumentar el impacto y la vinculación de los resultados de las investigaciones en desarrollo tecnológico y social del Estado de Tabasco (UJAT, 2004).

METODOLOGÍA

Esta investigación presenta un enfoque de tipo cualitativa con un alcance descriptivo transeccional ya que para la obtención de la información se realizó investigación documental con fuentes secundarias. Cuyo

objetivo fue analizar a los Cuerpos Académicos (CA) en la Universidad Juárez Autónoma de Tabasco y su relación con la gestión del conocimiento.

Población: Se analizaron los 59 Cuerpos Académicos de las 11 Divisiones que conforman a la Universidad Juárez Autónoma de Tabasco.

RESULTADOS

La universidad está conformada por un total de 2473 profesores de los cuales son 1222 de asignatura, 157 de medio tiempo y 1094 de tiempo completo; del total de profesores 258 tienen el grado académico de doctorado, 1169 maestría, 27 especialidad y 1019 licenciatura (UJAT, 2013). La universidad tiene 1094 profesores de tiempo completo de los cuales 239 se encuentran formando los cuerpos académicos, los cuales son los líderes en la gestión del conocimiento esto es un 21% del profesorado se dedica a la investigación, aunque también hay profesores que se encuentran haciendo investigación de manera independiente, sin estar en ningún cuerpo académico.

Después de realizar un análisis documental, se llegó a los siguientes resultados por Divisiones Académicas de los cuerpos académicos primero se realizó un análisis de la evolución histórica de los cuerpos académicos del 2004 al 2013 (ver tabla 1).

Tabla 1. Evolución Histórica del grado de consolidación de los CA de la UJAT 2004-2013.

Grado	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013
CAEF	74	60	56	53	50	30	40	43	31	25
CAEC	2	2	10	13	13	19	21	22	23	26
CAC	0	0	0	0	3	3	3	4	8	8
Total	76	62	66	66	66	52	64	69	62	59

Fuente: UJAT (2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012 y 2013).

Actualmente existen 59 cuerpos académicos, de los cuales 8, se encuentran en el grado de consolidados (CAC), 24 en consolidación (CAEC) y 27 en formación (CAEF) reconocidos por el PRODEP (ver tabla 2).

CONCLUSIONES

El trabajo en equipo implica el conocimiento de los integrantes del mismo y esto ocurre a largo plazo, en el caso de las universidades, en los cuerpos académicos, además de que debe de existir un clima laboral adecuado para que sus integrantes estén dispuestos a trabajar y poner a disposición del equipo sus conocimientos y modelos que permitan generar, transferir y utilizar esos conocimientos ya que los equipos de trabajo tienen una función importantísima en la gestión del conocimiento, como entes de creación y transferencia del mismo, así como el trabajo de equipos colaborativos y multidisciplinario es indispensable en el proceso de obtención de registro de un cuerpo académico ante PRODEP, ya que su evaluación depende tanto del trabajo individual de cada uno de los profesores de tiempo completo y sus colaboradores, teniendo un reto muy fuerte que requiere de un esfuerzo significativo por parte de todos sus miembros ya que esto impacta de manera importante en los indicadores de la universidad y en su gestión a nivel nacional, debido a que los cuerpos académicos son generadores de líneas de conocimiento que deben de estar ligadas a la problemática en este caso del Estado de Tabasco para así poder ayudar al gobierno a resolver problemas económicos y que exista una vinculación real entre estado- universidad y sociedad impactando de manera positiva a los tres.

Tabla 2. Cuerpos Académicos en la Universidad Juárez Autónoma de Tabasco

Divisiones Académicas	Cuerpos Académicos Consolidados	Cuerpos Académicos en Consolidación	Cuerpos Académicos en Formación	Total
División Académica De Ciencias Agropecuarias	1	3	2	6
División Académica de Ciencias Básicas	1	3	1	5
División Académica de Ciencias Biológicas	3	4	2	9

División Académica de Ingeniería y Arquitectura	1	5	2	8
División Académica Multidisciplinaria de Comalcalco	0	0	1	1
División Académica Multidisciplinaria de los Ríos	0	0	2	2
Total				59

Fuente: Elaboración propia basada en UJAT (2013).

Esto indica que la Universidad ha ido avanzando en la forma de generación y transferencia del conocimiento ya que los cuerpos académicos al ir pasando de un grado otro, indica que existe una creación, generación y transferencia del conocimiento.

Como conclusión final se puede afirmar que a la UJAT le hace falta que se desarrolle más investigación ya que aproximadamente un 21% del profesorado forma parte de los cuerpos académicos, que son los que están trabajando en proyectos y generando conocimiento. Y para recalcar su importancia en la comunidad académica y dar una mayor calidad en el trabajo de investigación, teniendo un concepto de comunidades epistémicas, López (2010) afirma que los cuerpos académicos deben de tener las siguientes características: a) una agenda común, donde cada uno de sus integrantes mantiene puntos coincidentes con el área de investigación general del colectivo; b) participan a través de redes, de relaciones informales y formales establecidas entre los diferentes actores; c) sus miembros comparten un sistema de creencias y valores que los cohesionan y hacen que definan propósitos comunes; además, se resguardan en normas y creencias sin necesidad de tener lazos familiares o políticos; d) estas comunidades se distinguen por su estructura compacta como resultado de que son relativamente pequeñas, ya que lo importante es el logro de prestigio académico y el fortalecimiento de su habilidad para influir en el campo disciplinario; e) en su integración prevalecen, en mayor medida, las relaciones informales que las formales, lo central está constituido por las relaciones entre miembros, por su nivel de afinidad más que por los convenios establecidos entre las instituciones; f) se proponen lograr prestigio y credenciales académicas, tanto la reputación como sus méritos académicos son el capital más importante con que cuenta la comunidad epistémica, divisas en las cuales fincan su diferenciación de otras redes y grupos académicos, y g) hacen acopio de una diversidad profesional, este tipo de comunidad no puede ser atendida con la misma definición de una profesión, sino que atraviesa las fronteras que definen a ésta

ANALISIS Y BAREMACION DE LA BATERIA DE EVALUACION DEL PENSAMIENTO CREATIVO VP-FA- 14

Victor Hugo Pérez Ferreyra, Universidad Michoacana de San Nicolás de Hidalgo
Fernando Ávila Carreón, Universidad Michoacana de San Nicolás de Hidalgo
Germán Aníbal Narváez Vasquez, Instituto Tecnológico de Monterrey

RESUMEN

El objetivo del presente artículo es mostrar la Batería de Evaluación del Pensamiento Creativo VP-FA-14, la cual, es un instrumento creado para la Comisión Federal de Electricidad, dentro del Proyecto de Creatividad e Innovación 2013-2015 de la Subgerencia de Distribución perteneciente a la División Centro Occidente en México. El Proyecto nace a raíz de la necesidad de poder comenzar a adaptarse a los nuevos cambios estructurales, que devienen fomentados por la reforma energética, la cual se ha aprobado y puesto en marcha en México. Por lo anterior, el primer objetivo que se planteo, fue conocer si los trabajadores de Subgerencia de Distribución eran creativos y en qué medida. Así, se procedió a crear un instrumento de medición adecuado, único, claro y conciso que pudiese lograr tal fin. La batería, se implemento en un población objeto de estudio, la cual se conforme de directivos de primer y segundo nivel de dicha Subgerencia, los resultados mostraron que la Batería es un instrumento válido para evaluar la creatividad tanto figurativa como verbal de manera sencilla, rápida y fehaciente. El artículo está compuesto de tres apartados, en el primero, se hace una pequeña sistematización de los diferentes postulados del constructo creativo; en un segundo, se hace referencia a los diferentes instrumentos de evaluación creativa y en el tercero se desarrolla de manera sistemática la Batería de Evaluación del Pensamiento Creativo VP-FA-14 y sus resultados; para finalizar con unas breves conclusiones.

ANALYSIS AND TABULATION BATTERY EVALUATION OF CREATIVITY THINKING VP-FA-14

ABSTRAC

The aim of this paper is to show the battery VP Creative Thinking Assessment-FA-14, which is an instrument created for the Federal Electricity Commission, within the Project Creativity and Innovation 2013-2015 of Distribution Management the Central Western Division in Mexico. Project Creativity and Innovation 2013-2015, created as a result of the need to begin to adapt to the new structural changes, which become encouraged by the energy reform, which has been approved and launched in Mexico. Therefore, the first objective was raised, was to know whether workers Distribution Management were creative and to what extent. So, we proceeded to create a suitable instrument, unique, clear and concise measure that could achieve this goal. The battery was implemented on a target population, which managers settle for first and second level of the Assistant Manager, the results showed that the Assessment Battery VP of Creative Thinking-FA-14 is a valid instrument for assessing both figuratively and verbal creativity in a simple, fast and reliable way. The article consists of three sections, the first, a small systematize the different assumptions made creative construct; a second reference to the various existing instruments of assessing the creative and the third develops systematically Assessment Battery Creative Thinking VP-FA-14 and their results; to end with brief conclusions.

KEYWORDS: Creativity, Innovations, Evaluation, Instruments

INTRODUCCIÓN

Las diversas capacidades creadoras e innovadoras en el ser humano son elementos intrínsecos a su naturaleza. La creatividad, está situada entre las más complejas conductas humanas y debe ser considerada como un constructo de carácter multidimensional y multidisciplinario, que representa la interacción o confluencia de múltiples variables, por lo que su evaluación parece no ser una empresa sencilla, debido entre otras cuestiones, a la complejidad de este fenómeno y los múltiples factores que lo condicionan. Sin embargo, como exponen Pérez y Ávila, 2014a y Pérez y Ávila 2014b desde diversas perspectivas teóricas y metodológicas se han construido instrumentos y procedimientos destinados a la evaluación y medición de la creatividad los diversos intentos por cuantificar el proceso creativo, mediante el uso de baterías de pensamiento divergente, siguen siendo la principal línea del estudio Psicométrico de la creatividad.

La Batería de Evaluación del Pensamiento Creativo VP-FA-14 es un instrumento cuya finalidad es la apreciación de las competencias creativas a través de la evaluación de las diversas capacidades individuales, tanto verbales como figurativas. La batería mide de forma fehaciente, las cinco dimensiones que componen el constructo creativo, como son la Fluidez, Flexibilidad, Elaboración, Originalidad y Sensibilidad, de forma fácil y sencilla. Su aplicación es muy práctica, ya que puede ser utilizada tanto de manera individual como grupal y en múltiples entornos, tanto empresariales como educativos, este instrumento ha sido probado en los trabajadores de la Comisión Federal de Electricidad y ha demostrado tener un alto grado de validez de contenido, de constructo y de criterio.

Antecedentes

La Batería de Evaluación del Pensamiento Creativo VP-FA-14 es un instrumento creado para la Comisión Federal de Electricidad, dentro del Proyecto de Creatividad e Innovación 2013-2015 de la Subgerencia de Distribución perteneciente a la División Centro Occidente en México. El Proyecto de Creatividad e Innovación 2013-2015, nace a raíz de la necesidad de poder comenzar a adaptarse a los nuevos cambios estructurales, que devienen fomentados por la reforma energética, la cual se ha aprobado y puesto en marcha en México. El objetivo primordial del proyecto es lograr satisfacer a un cliente, que ya no va ser totalmente cautivo, sino, el mismo buscara una mejor calidad en el servicio a un menor costo, de tal manera, que la Subgerencia de Distribución, debe buscar dar respuesta en el menor tiempo posible, logrando una mejora sustancial en todos sus indicadores.

En ese sentido, se sabe del avance exponencial en el conocimiento impacta directamente en la eficiencia de los procesos y servicios, es así, que otro objetivo del proyecto, es captar todo el potencial innovador del recurso humano de la empresa y, ponerlo dentro sistema de gestión de conocimiento, a fin de que pueda desarrollarse innovaciones tanto tecnológicas como organizacionales y estas mismas, se vean reflejadas en el desarrollo de nuevos productos, servicios y soluciones de alto valor agregado que aporten ventajas competitivas diferenciadoras, todo esto, siempre apegado al marco normativo que rige la institución. Por lo anterior, conocemos que no se puede generar innovación sin creatividad, por lo que, el primer objetivo que se planteo, fue conocer si los trabajadores de Subgerencia de Distribución eran creativos y en qué medida. Así, se procedió en un primer momento, a crear un instrumento de medición adecuado, único, claro y conciso que pudiese lograr tal fin.

Fundamentos Teóricos del Constructo Creativo.

El primero trabajos en sistematizar los estudios entorno al constructo creativo fueron postulados de Galton (1869), este tomo como referencia el parámetros psicofísicos, a partir de los cuales pretendía obtener una

medida objetiva de la inteligencia, y estableció los principios a lo que denominaba “Genio”, a este le siguieron múltiples trabajos sobre esa línea, hasta 1920, cuando el enfoque de los estudios psicológicos se caracterizan por incluir pruebas más complejas, destinadas a explorar procesos mentales de orden superior, tales como la memoria, las imágenes mentales, la comprensión o el juicio sobre la inteligencia, investigadores como los de (Binet y Simon, 1905). Pero no es hasta mediados del Siglo XX cuando Guilford (1950) como presidente de la American Psychological Association (APA) enfatiza el gran significado que tiene el talento creativo para la industria, la ciencia, las artes y la educación; haciendo un postulado creciente de la necesidad de generar más investigaciones en torno a este concepto, apuesta por emprender una investigación empírica sobre la creatividad y, partiendo de sus estudios sobre la inteligencia, entiende este constructo como la combinación del pensamiento convergente y divergente, el mismo profesor, señala que el temperamento y la motivación ayudan a identificar a los individuos con mayor perfil creativo, distinguiendo entre rasgos permanentes y facultades que están en mayor o menor medida en cada individuo.

Conceptualización del Término Creativo

El concepto de creatividad es diferente según el contexto en que se desarrolle, y no tiene un sólo y único significado, ya que según el ámbito donde se aplique o la disciplina donde se implemente puede variar. Hay algunas demarcaciones para el uso del vocablo, pero esas mismas son vagas y muchas veces confusas, teniendo muchos sinónimos que en ocasiones llegan a confundirse, por lo que se debe tener paciencia para llegar a una definición más exacta y efectiva (Monreal, 2000; Corbalán, J.; Martínez, F. y Donolo, D., 2003). Por ello, Young (1985) se refiere a la creatividad como un “*término honorífico*” dadas las enormes dificultades para encontrar y establecer una definición universalmente aceptada; dificultades que en su mayoría proceden de la palpable tendencia social a considerar la creatividad como un constructo de carácter unidimensional.

Otros autores señalan, que la creatividad es cualquier actividad que lleve a la producción de algo nuevo, puede ser una invención técnica, un nuevo descubrimiento en ciencia o una nueva realización artística (Haan y Havighurst, 1961). Por su lado, Spearman (1931) en su obra “*Creative Mind*”, utilizó el concepto de “*transferencia*” como principio generador de la creatividad., para él, el pensamiento creador es una serie de transferencias y relaciones que llegan a desembocar en una solución novedosos. Tal y como afirma Amabile (1983), la creatividad existe en tanto estén presentes las: 1) Destrezas en el campo. 2) Destrezas para la creatividad. 3) Características específicas de motivación a la tarea. Por otro lado, Mihaly Csikszentmihalyi (1998), habla de la creatividad, pero el mismo, no la trata exclusivamente como un proceso mental, ni hace justicia al fenómeno de la creatividad como un todo psicológico. Para él, la creatividad no se produce solamente en la abstracción mental de las personas, sino, en la interacción entre esta abstracción personal del individuo y un contexto sociocultural. Entonces, la creatividad nace de la interacción de un complejo sistema desarrollado por tres elementos: a) Una cultura que contiene reglas simbólicas, al cual denomina dominio, b) Una persona que aporta novedad al campo simbólico y c) Un ámbito de expertos que reconocen y validan la innovación. Por último a título personal y ateniendo los diferentes puntos de vista de los diversos autores, podríamos definir el término creatividad, como: *Una actitud y aptitud que todos los individuos poseemos, en mayor o menor medida, para producir ideas, soluciones y productos nuevos y de calidad y que estos requiere la aprobación del contexto sociocultural para que logren ser vistos como una innovación.*

La Evaluación Creativa y Sus Instrumentos.

Los diversos tests de Pensamiento Divergente, requieren personas que produzcan numerosas respuestas a un estímulo determinado, opuestos a los tests más denominados objetivos, donde tratan de valorar la conducta global del individuo. Es decir su objetivo es medir los rasgos generales de personalidad y clasificarlos en función de una nosología concreta, para esto piden una respuesta correcta. Este énfasis en

la fluidez, al que también se refiere como ideación, se ve como un factor clave de los procesos creativos, pero está visto que no es el único componente del constructo creativo. Entre los tests de Pensamiento Divergente que siguen teniendo un amplio uso en la investigación de la creatividad y en educación están: 1) Estructura de la Inteligencia (*Structure of the Intellect — SOI*) (tests de producción divergente) de Paul Guilford. 2) Test de Pensamiento Creativo (*Tests of Creative Thinking — TTCT*) de Paul Torrance. 3) Test de Wallack y Kogan. 4) Test de Getzels y Jackson. 5) Test de Asociaciones Remotas de Saffron Mednick. 6) Test CREA de Corbalán, F.J., Martínez, F., Alonso, C., Donolo, D., Tejerina, M., Limiñana, R.M. Podemos decir que, mientras que las pruebas de la fiabilidad de test como el SOI de Guilford, el TTCT de Paul Torrance, el Test de Asociaciones Remotas de Wallach y Kogan, el de Getzels y Jackson y otros similares son bastante convincentes (Cline, Richards y Abe, 1962 ; Hoepfner y Hemenway, 1973), la validez predictiva y discriminante de los tests de pensamiento divergente no recibe un apoyo tan unánime (Cooper, 1991; Rosen, 1985).

Diversos Test de Aptitudes Creativas

También existen numerosos test de aptitudes creativas, fundamentados en los criterios de fluidez, flexibilidad, originalidad y elaboración desarrollados por Guilford, entre otros están: 1) *Test de Creatividad* de Martínez Beltrán (1976). 2) *Test de Creatividad Escolar* de Fernández Pózar (1976). 3) Test de Ricardo Marín (1995).

Batería de Evaluación del Pensamiento Creativo VP-FA-14

La Batería de Evaluación del Pensamiento Creativo VP-FA-14, se construyó pensando en un instrumento que pueda medir la creatividad de los trabajadores de la Comisión Federal de Electricidad, de forma válida y confiable, basándose, en lograr captar y cuantificar de una manera espontánea las diversas capacidades de los individuos. El instrumento, está dividido en siete ejercicios, dos de carácter figurativos y cinco con características verbales, cada uno de ellos es independiente tanto en la forma y cuantía de su evaluación, no obstante, todos los ejercicios suman en su conjunto para tener el indicador final. Cada ejercicio tiene un nombre que lo distingue y cuenta con determinado tiempo para su ejecución (Véase, tabla 1)

Así mismo, cada uno de los ejercicios miden diferentes variables, es así, que el ejercicio uno, Encuentra las diferencias, mide la sensibilidad del individuo; el dos, Cuestiona la imagen, mide la Fluidez, la Flexibilidad, la Originalidad, la Elaboración y la Sensibilidad; el tres, Relación de palabras, mide la Flexibilidad, la Originalidad y la Elaboración; el cuatro, Usos del objeto, mide la Fluidez, la Flexibilidad y la Originalidad; el cinco, Componer un dibujo a partir de una figura, miden la Flexibilidad, la Originalidad y la Elaboración; el seis, Composición del cuento, mide la Fluidez, la Flexibilidad, la Originalidad y la Elaboración y el siete, Continuar el dibujo, mide la Flexibilidad, la Originalidad y la Elaboración.

Mecánica de Uso de la Batería de Evaluación del Pensamiento Creativo VP-FA-14.

El instrumento que se construyó en este proyecto, fue diseñado por un amplio grupo multidisciplinario, compuesto por Ingenieros, Psicólogos, Administradores, Físicos Matemáticos y Diseñadores Gráficos. Esta batería está dividida en siete apartados, correspondientes a las dos dimensiones de la creatividad que evalúa: la Verbal y la Figurativa. En cada uno de los apartados, el individuo debía de hacer una serie de actividades que el cuadernillo de evaluación creativa señalaba (Véase, tabla 3).

Indicadores y Variables

A partir de una revisión de los diversos instrumentos de evaluación creativa existentes, Pérez y Ávila (2014) exponen que existe un marcado consenso sobre que son la Fluidez, la Flexibilidad, la Originalidad, la

Elaboración y la Sensibilidad, son las variables más utilizadas por diversas baterías de evaluación (Véase, tabla 2).

Tabla 1: Nombres, Capacidad y Tiempos de los Ejercicios

N°	Nombre	Capacidad	Tiempo
1	Encuentra las diferencias.	Verbal	5 min
2	Cuestiona la imagen.	Verbal	5 min
3	Relación de palabras.	Verbal	5 min
4	Usos del objeto.	Verbal	5 min
5	Componer un dibujo a partir de una figura.	Figurativa	10 min
6	Composición del cuento.	Verbal	9 min
7	Continuar el dibujo.	Figurativa	8 min

Tabla 2: Variables y Su Respectiva Conceptualización

Variabes	Conceptualización
Fluidez	Es la habilidad que poseen los individuos en cuanto a la actividad creadora y productiva, es decir, aumentar el número de ideas generadas en determinado tiempo, tomando en cuenta los aspectos ideacionales, asociativos y expresivos. Además, de la riqueza en cuanto al lenguaje verbal o de la expresión figurativa.
Flexibilidad	Es la habilidad que tienen los individuos, en cuanto a la capacidad para adaptarse a nuevas y variadas situaciones que requieran reinventar y encontrar ideas alternativas ante determinadas situaciones, utilizando para su conveniencia diferentes enfoques en los intentos que sean necesarios.
Originalidad	Es la habilidad que caracteriza, posibilita y desarrolla en los individuos, aquellos aspectos únicos y novedosos que promueven la singularidad u originalidad, es decir, la capacidad de idear situaciones nuevas, ideales y diferentes, caracterizadas por la sorpresa que genera en el espectador o receptor.
Elaboración	Es la habilidad que incrementa la capacidad en los individuos para la mejora de una idea o producto, en cuanto a la generación detallada y precisa de la idea creadora.
Sensibilidad	Es la habilidad que tiene los individuos para aumentar aquellas respuestas afectivas y emotivas relacionadas tanto con el entorno externo, como el interno. Es decir, la capacidad de empatía en cuanto a nivel emocional, así como a nivel de razonamiento de la problemática presentada en el ambiente.

Tabla 3: Actividades del Cuadernillo de Evaluación Creativa

Encuentra Las Diferencias.
En la siguiente imagen encuentra las 12 diferencias. Conforme las vayas encontrando, enciérralas con un círculo, trata de hacerlo lo más remarcado posible.
Cuestiona la imagen. Observa con detenimiento la pintura que se muestra en la siguiente página. A continuación, en la parte de abajo de esta página, escribe todas las preguntas que se te ocurran en relación a esa imagen. Trata de pensar en preguntas únicas y que raramente se les ocurren a las personas.
Relación de palabras. Escribe las situaciones u oraciones que se te ocurran, cualesquiera que sean, en las que relaciones las siguientes dos palabras. De igual manera, relaciona las dos palabras que se encuentran en la siguiente página.
Usos del objeto. A continuación, observa el siguiente objeto, y escribe los diversos usos que puede tener el mismo. Puede ser cualquier uso que se te ocurra.
Componer un dibujo a partir de una figura. Observa el trozo de papel, en forma de rombo que se te ha proporcionado, e imagina algo que puedas dibujar y del que formará parte el trozo de papel. Pégallo sobre esta página en el lugar donde desees hacer tu dibujo. Con el lápiz añade todos los de elementos que se te ocurran para complementar tu dibujo. Intenta hacer algo original. Al finalizar, ponle un título y escríbelo en la parte de abajo, para que puedas ilustrar la historia que quisiste representar por medio de tu dibujo.
Composición del cuento. Lee con atención el siguiente cuento, piensa de qué otra manera podría terminar. Este final alternativo que se te haya ocurrido, escríbelo al finalizar el cuento original y, por último, ponle un título.
Continuar el dibujo. Las siguientes imágenes están sin terminar, continúa con el dibujo conforme creas que debe continuar, pueden ser objetos, personas, imágenes, etc. Cada dibujo debe contar una historia y los trazos hechos son la parte más importante del dibujo. Hazlo lo más interesante que puedas. Al finalizar, escribe en la parte inferior del cuadro el título del dibujo terminado.

CODIFICACIÓN DE RESULTADOS

El porcentaje de valoración de los resultados que se obtiene de la aplicación de la Batería de Evaluación del Pensamiento Creativo VP-FA-14 se realiza de acuerdo a la siguiente tabla de especificaciones, tomando como máximo de la evaluación 70 puntos, que se sumaran por el numero de evaluadores que se hayan empleado (Véase, tabla 4).

Tabla 4: Hoja de Evaluación VP-FA-14

Hoja de Evaluacion Maximos y Minimos Posibles									
Variables	Actividades							Maximos	*3
	1	2	3	4	5	6	7		
Fluidez		2	3	3		2		10	30
Flexibilidad		2		3	3	3	3	14	42
Originalidad		2	4	4	4	3	4	21	63
Elaboracion		2	3		3	2	3	13	39
Sensibilidad	10	2						12	36
Totales	10	10	10	10	10	10	10	70	210

METODOLOGÍA Y TIPO DE ESTUDIO

Este trabajo de investigación fue de carácter descriptivo, correlacional y factorial que exploró la dimensionalidad de la Batería del Pensamiento Creativo VP-FA-14 para entregar evidencias de validez de constructo respecto al número de factores o dimensiones que subyacen en el mismo.

Población Objetivo

Se determino que para saber los niveles de creatividad existente en los trabajadores de la Comisión Federal de Electricidad, debían ser aquellos que por su responsabilidad tienen que estar tomando decisiones de carácter estratégico para resolver o mejorar todos los aspectos organizativos de la institución; por lo que, se determino que los participantes del estudio correspondieran a 13 directivos de primer y segundo nivel, de la Subgerencia de Distribución perteneciente a la División Centro Occidente en México.

Validación y Confiabilidad de la Batería de Evaluación del Pensamiento Creativo VP-FA-14.

Validez con respecto al contenido: Utilizando el juicio de diferentes expertos se buscó establecer que el contenido de la batería tenía consistencia. Los expertos mostraron acuerdo en que incluir los siete reactivos en la batería recogía un mayor espectro de las diferentes variables en las que se podría expresar la creatividad. Así mismo, propusieron modificaciones de forma y tiempo a algunos reactivos de la prueba.

Validez con respecto al constructo confiabilidad: El método de confiabilidad más utilizado en psicometría es el Alfa de Cronbach. Se trata de un índice de consistencia interna que toma valores entre 0 y 1, que mide la homogeneidad de las actividades promediando todas las correlaciones entre todos los ítems para ver que, efectivamente, se parecen y en cuanto a los resultados el alfa de Cronbach, por debajo de 0,5 muestra un nivel de fiabilidad no aceptable; si tomara un valor entre 0,5 y 0,6 se podría considerar como un nivel pobre; si se situara entre 0,6 y 0,7 se estaría ante un nivel débil; entre 0,7 y 0,8 haría referencia a un nivel aceptable; en el intervalo 0,8 y 0,9 se podría calificar como de un nivel bueno, y si tomara un valor superior a 0,9 sería excelente. Para nuestro caso, del total de los 13 trabajadores seleccionados y una vez desagregados los datos y mediante el procesamiento de los mismos, nos arrojo que nuestro instrumento tiene una fiabilidad EXCELENTE, ya que el intervalo se situó en de 0,939 .

Acción y análisis de datos: En lo referido al procesamiento y análisis de datos, de acuerdo a Pérez (2001) se realizó con el programa IBM SPSS Statistics 20 para Windows, para alcanzar el objetivo de nuestro estudio, se aplicaron los módulos y técnicas pertinentes.

RESULTADOS

La batería de Evaluación del Pensamiento Creativo VP-FA-14 está compuesta por cinco dimensiones, Fluidez, Flexibilidad, Originalidad, Elaboración y Sensibilidad, el puntaje total de la misma es de 70 puntos por evaluador, este factor ponderaría el nivel de creatividad del individuo, en la Tabla 5 podemos observar el nivel de correlación existentes, el cual se elabora con el coeficiente de Spearman, ya que como señala el capítulo 17 del Manual del SSPS, las variables no paramétricas tiende a ser mejor sistematizadas por este coeficiente y una vez ejecutado el análisis de los datos, nos damos cuenta que la variable Fluidez está más relacionada con la Elaboración, con una significancia de .685 y está con la Originalidad con .818, siendo estos los valores correlacionados más altos de todos; por su parte, la Flexibilidad tiene una mayor relación con la Originalidad con .691 y Sensibilidad con Elaboración con .611. En lo que respecta a la menor correlación entre variables, tenemos a Flexibilidad con solo .073 y .338 de significancia para flexibilidad y Sensibilidad respectivamente.

Una vez introducidas las diferentes variables tanto independientes como dependientes, nos encontramos que existe una clara relación entre la creatividad y sus cinco dimensiones, Fluidez, Flexibilidad, Originalidad, Elaboración y Sensibilidad, tal y como se muestra en la tabla 6, siendo la Fluidez la más significativa con .298 lo que nos da entender como la capacidad del individuo para comunicarse y asociar ideas es el principal canal para ser creativo. En segundo lugar está la Elaboración con .281, seguido de la Flexibilidad .245, esto pone de manifiesto que son los detalles y las diferentes formas de solución lo que promueve la creatividad más que la originalidad .230, por último, cabe hacer mención que la dimensión que estuvo muy por debajo de todas, fue la Sensibilidad .118, esto nos condiciona a creer que la capacidad de poder observar o captar el entorno no es muy importante para ser creativo.

Por lo tanto, la Creatividad de los trabajadores de la Subgerencia de Distribución de la División Centro Occidente en México, puede ser definida por la siguiente ecuación:

$$C = .298\beta_1 + .245\beta_2 + .230\beta_3 + .281\beta_4 + .118\beta_5$$

DISCUSIÓN

Los resultados muestran la Batería de Evaluación del Pensamiento Creativo VP-FA-14 es un instrumento válido para evaluar la creatividad de los trabajadores de la Comisión Federal de Electricidad, mediante diferentes dimensiones; como señalan Hogan (2003) y Gregory (2001) un instrumento de medición debe contar con validez de contenido, de constructo y de criterio. Para nuestro caso, los expertos establecieron que las dimensiones comprendidas en el instrumento eran áreas importantes donde se expresa la conducta creativa, y en la validez de contenido todos los indicadores son consistentes con cada una de las dimensiones medidas. Para la validez de constructo, observamos que los puntajes de las cinco variables muestran una correlación positiva alta entre sí, lo que habla de que miden el mismo constructo creativo, no obstante, no dejan de tener relativa independencia cada una de ellas, lo que permite afirmar que miden dimensiones relativamente diferentes. La Batería en sus cinco dimensiones permite tener una medida clara y concisa de los individuos que son más creativos de los que no, lo que evidencia la validez concurrente. Por último, es de hacer notar que al estar el valor del Alpha de Cronbach por encima de .9 se trata de un instrumento con una excelente confiabilidad.

a. Variable Dependiente: Creatividad

CONCLUSIONES

Una vez concluido el presente trabajo y en base a los resultados obtenidos podemos establecer que: La Batería de Evaluación del Pensamiento Creativo VP-FA-14 cuenta con todas las condiciones necesarias que hacen posible su utilización en todos los trabajadores de la Comisión Federal de Electricidad. Como expusimos, el constructo creativo debe de evaluarse de una manera multidimensional y desde un enfoque multidisciplinario, por lo que se concluye que este instrumento puede ser utilizado como parte integral del Proyecto Creatividad e Innovación de la Subgerencia de Distribución 2013-2015, siendo necesario aplicar la Batería a trabajadores de otras áreas de la empresa, para continuar estableciendo las propiedades de la misma, utilizando los nuevos datos para crear una base de gente con alto potencial innovador.

VALORES Y DILEMAS ÉTICOS EN ENTES TERRITORIALES: CASO LA GUAJIRA COLOMBIANA

Olivia Isabel Rangel Luquez, Universidad de La Guajira

Marelis Alvarado Mejía, Universidad de La Guajira

Wilmar Sierra Toncel, Universidad de La Guajira

Ángela Nair Ortiz Rojas, Universidad de La Guajira

RESUMEN

Los entes territoriales juegan un papel importante en la dinámica económica de las instituciones públicas, por el rol que desempeñan en la competitividad de las regiones; por tanto las actuaciones de estos deben estar regidas por conductas que conlleven a una transparencia en su actuación. Desde esta perspectiva esta investigación tuvo como objetivo analizar los valores y dilemas éticos en los entes territoriales en La Guajira Colombiana con el propósito de conocer la actuación de los funcionarios públicos en su gestión. Metodológicamente se abordó desde la perspectiva de los estudios de casos descriptivos. Los resultados evidenciaron una falta de valores en los funcionarios que conllevan a dilemas éticos en las instituciones por la falta de transparencia.

PALABRAS CLAVE: Ética, valores, dilemas éticos, entes territoriales.

DILEMMAS ETHICAL VALUES AND REGIONAL AUTHORITIES IN: IF COLOMBIANA THE GUAJIRA

Local authorities play an important role in the economic dynamics of public institutions, by the role they play in the competitiveness of the regions; therefore these actions should be governed by behaviors that lead to transparency in its actions. From this perspective, this study aimed to analyze the values and ethical dilemmas in local authorities in La Guajira Colombia in order to know the performance of public officials in their management. Methodologically it is approached from the perspective of descriptive case studies. The results showed a lack of values that lead officials to ethical dilemmas in institutions for lack of transparency.

KEYWORDS: Ethics, ethical dilemmas, territorial entities.

INTRODUCCIÓN

Hay una sed de ética en las sociedades, donde la opinión pública reclama comportamientos éticos de los líderes en temas cruciales como el diseño de políticas públicas, económicas y sociales y que la asignación de recursos sean orientados por criterios éticos. Contrariamente a ese sentir, las visiones económicas predominantes tienden a desvincular ética y economía sugiriendo que son dos mundos diferentes con sus propias leyes, y que la ética es un tema para el reino del espíritu, marginando los valores morales y conllevando a un vacío ético en el que se han precipitado varias sociedades en el mundo. La idea de que los valores no importan en la vía económica práctica, ha facilitado la instalación de prácticas corruptas que han causado enormes daños y conllevado a dilemas éticos. Por ello es imprescindible volver a reanalizar la

relación entre ambas, y que la ética no solo no es ajena a la economía sino que debería orientarla y regularla. Así, entre otros aspectos, es necesario un código ético que regule las actuaciones de la gestión pública.

De esta manera, es imperativo recuperar la estrecha relación que debería haber entre valores éticos y comportamientos económicos. Ello significa poner en el centro de la agenda pública temas como la coherencia de las políticas económicas con los valores éticos, la responsabilidad social de la empresa privada, la eticidad en la función pública, el fortalecimiento de las organizaciones voluntarias y el desarrollo de la solidaridad en general. Todos los actores sociales deberían colaborar para que la ética volviera, tanto para erradicar la corrupción como para motivar actitudes éticas positivas.

En este sentido, la ética aplicada a la función pública, se ha convertido en el eje central de la administración pública, tanto en la prestación de los servicios como en la elaboración de productos, es decir, las tareas y actividades que realizan los servidores públicos están orientados a la satisfacción de la pluralidad de intereses de los miembros de la comunidad política, por lo tanto es un poderoso mecanismo de control de las arbitrariedades y anti valores practicados en el uso del poder público y factor esencial para la creación y el mantenimiento de la confianza en la administración y sus instituciones, también se convierte en un instrumento clave para elevar la calidad de la política y la gestión pública gracias a la conducta honesta, eficiente e íntegra de los servidores públicos; desde ese punto de vista la excelencia de los asuntos de la gestión pública se podrá alcanzar si se cuenta con servidores con sólidos criterios de conducta ética.

En concomitancia con lo anterior, la ética pública implica necesariamente una relación con el ejercicio de la política como elemento de regulación y diseño de las directrices y políticas públicas, por lo que su campo de acción, no se limita únicamente a los funcionarios públicos, dado que un buen gobierno, para ser considerado como tal, requiere no sólo de funcionarios responsables, sino también de alta gerencia política responsables, puesto que son éstos quienes gozan del máximo margen de autonomía en las decisiones y de éstas decisiones, depende a su vez la actuación de los funcionarios.

En ese orden de ideas, si los servidores públicos y los diseñadores de las políticas públicas a través de las normas, no crean conciencia de la necesidad de su actuación transparente en el servicio público, es probable que este fenómeno este afectando el desempeño de la gestión pública y contribuyendo al afloramiento de elementos societales de crisis de valores, lo que implicaría que nuestra sociedad estaría inducida a una gran contaminación social de no existir una condena social y judicialización de tales comportamientos, de allí la importancia de abordar desde la academia la temática de la ética y el desempeño gerencial, como una nueva forma de pensar e imaginar las transformaciones y los cambios que llevan consigo estos fenómenos globalizantes y que por lo demás tocan elementos que invitan a repensar el momento en que actuamos frente a la necesidad de adoptar nuevas y mejores formas de organizaciones y de procedimiento en la conducción de las organizaciones públicas, frente a las acusaciones de ineficiencia, negligencia o irresponsabilidad social que se evidencia actualmente.

En Colombia, a pesar de la implementación de programas como el Código de Buen Gobierno, Gobierno en Línea y Código de Ética en todas las entidades públicas, como referentes para regular la actuación de los funcionarios públicos, son múltiples los dilemas éticos que enfrentan los profesionales en el cumplimiento de su labor y que sugieren una toma de decisión fundamentada en los conocimientos, habilidades y en la experiencia, pero donde la ética y la moral de los funcionarios no posibilita que esta se soporte en valores, principios y argumentos éticos. Al respecto Lawrence Kohlberg citado por Aguirre (2009) señala que el estudio de los dilemas morales o situaciones hipotéticas en la toma de decisiones de una persona, enriquece el conocimiento sobre la forma de cómo ocurre el desarrollo moral, apoyando la asociación entre madurez cognitiva y madurez moral.

En ese sentido se convierte el estudio de la ética en la gestión pública en el departamento de la Guajira, casi en un imperativo para garantizarle a la sociedad, que la ciencia está cumpliendo su papel de transformador

social, hacia las buenas prácticas de gobierno público tales como: gestión ética, participación ciudadana en la gestión y el control de lo público, rendición cuentas, eficiencia, eficacia y efectividad de los recursos públicos, transparencia en los procesos administrativos, contratación pública, negociación y consenso colectivo, de ese modo se contribuye al cambio actitudinal por la construcción de confianza, como resultado de una conciencia de rentabilidad social de la ética en la gestión pública, que genera desarrollo social y económico de los países y del mundo.

Desde esta perspectiva, el propósito del estudio estuvo orientado a analizar los valores y dilemas éticos en los entes territoriales del departamento de La Guajira, para lo cual se tuvo la necesidad de abordar inicialmente la situación problemática que ha conllevado la falta de ética en los funcionarios públicos de esta región. En donde para entender el estado del arte, la investigación se fundamentó en varios autores con el fin de tener una mirada de la ética, los valores y dilemas éticos bastante amplia. Seguidamente se propuso una metodología para poder abordar el objetivo de la investigación y finalmente se presentan los resultados encontrados, conclusiones y recomendaciones.

REVISIÓN LITERARIA

La búsqueda de códigos de conducta de alcance internacional, ha cobrado importancia en los últimos años, como una de las herramientas de gestión ética, así, su importancia se ha incrementado como consecuencia de la velocidad, con que se producen los cambios, a raíz de la capacidad que ha adquirido el ser humano a partir del desarrollo científico y del dominio tecnológico, por lo tanto su estudio, praxis y reflexiones están a la orden del día. De esta manera, la ética ha sido estudiada a través de diferentes disciplinas a lo largo de varios siglos, debido a su importancia para los individuos y para la sociedad.

Al respecto, Cortina (2000), refiere que la ética es teoría filosófica de la acción y su tarea es dar razón filosófica de la moral. Por ello, pasar de la moral a la ética implica un cambio en el nivel reflexivo, Por su lado, Guédez (2006), argumenta que la ética es todo el proceso reflexivo de los principios que permiten decidir, actuar y evaluar los impactos que partan de todo el proceso. En el mismo sentido, Etkin (1993), afirma que la ética, es el fundamento cuyos valores esenciales deben organizar la vida social y son tales como la libertad y la dignidad humana, así como también conceptos morales como el bien común lo bueno, lo equitativo y lo justo. En este sentido, se mira la ética como el conjunto de principios y deberes que debe guiar la conducta de una persona, sustentados en la conciencia de la propia dignidad y de sus responsabilidades y en el respeto y solidaridad hacia las demás personas; reflejando así, el carácter de los individuos y sociedades a través de sus decisiones y acciones.

En cuanto a la ética pública, Bayona y otros (2004) plantean que los comportamientos éticos son conductas personales, pero también la organización y el contexto social y político en que se producen tienen un valor determinante. De modo que las normas administrativas pueden estimular las virtudes positivas o, por el contrario, favorecer el envejecimiento de las personas. En tal sentido, la ética pública exige, normas de organización que favorezcan los valores positivos e impidan o dificulten los comportamientos indeseables, de modo que esta, aun teniendo su base antropológica en la conciencia de cada servidor público, se desarrolla en el ser de una organización cuyas reglas de funcionamiento estimulan u obligan a seguir pautas de conducta determinadas.

Al respecto, Gonzales (2003) refiere que es un hecho prácticamente universal que las instituciones públicas han caído en el descrédito, la inmoralidad de muchos funcionarios corruptos que se enriquecen robando el erario público, que sobornan y se dejan sobornar, que utilizan el cargo para obtener beneficios públicos; lo cual ha hecho que la sociedad pierda confianza en las instituciones del estado. En algunos países, como el nuestro, la corrupción es tan profunda y generalizada que pareciera destinado al fracaso, cualquier intento de controlarla y acabar con ella. De esta manera, se debe tener presente que lo que legitima las actividades de la Administración Pública es el bienestar general de los ciudadanos, el interés público, que es el mismo

bien común, quienes ocupan cargos públicos deben tener presente esto en sus actuaciones, en este sentido, el reconocimiento del interés general como norte de todo cargo público exige fomentar un conjunto de hábitos o actitudes que todo funcionario público debería apropiarse.

Al hablar de la ética, es necesario es necesario mostrar su configuración afectiva que modela el comportamiento de los miembros de una organización, representada por los valores. Al respecto, Cortina (2005) argumenta que los valores son un componente de la vida humana, no son un aditamento que, de vez en cuando añadimos, tienen que ver con lo que realmente nos va a las personas, son cualidades de las cosas, las acciones, las personas que nos atraen porque nos ayudan a hacer un mundo habitable. Por su parte, Escobar (2000), al hablar de valores, asegura que estos son directrices para la conducta, son los que le dan a la vida humana, tanto individual como social, su sentido y finalidad, de tal manera, que no puede concebirse la vida humana, sin ideales, ya que explicar, justificar la vida implica recurrir a una valoración. Mientras para Hernández (2006), son propuestas acerca de lo que significa humanamente vivir bien, pues el hombre no solo se enfrenta al mundo para conocerlo y modificarlo, sino también para hacerlo objeto de valoración.

En cuanto a los valores en la Gestión Pública, estos se refieren a obtener mejores resultados en la gestión, dado que cuando el servidor público posee valores éticos se torna más prudente, mantiene el dominio sobre sí mismo, cumple con las obligaciones propias de su condición en cualquier ocasión y ante cualquier circunstancia. Al respecto, Bautista (2006) refiere que en relación con su orientación normativa la gestión pública parece incorporar una mayor preocupación por temas como la democracia y la responsabilidad, o por valores como los de equidad, consistencia, o igualdad; temas y valores que son más relevantes en el sector público que en el ámbito privado o empresarial. Sin embargo, el principal reto que afronta la ética pública no sólo es, el establecimiento de los valores, sino su interiorización en las personas. Es decir, es posible saber cuáles son los valores éticos deseables, pero lo difícil es cómo plasmar esos valores en la práctica diaria. El reto consiste entonces, en encontrar la forma de concienciar al servidor público sobre la importancia de mejorar su actitud por el bien del servicio público.

Para Soto y Cárdenas (2007), dentro de los valores más importantes está la honestidad, la cual requiere de la rectitud y sinceridad con la información demandada por la comunidad. Mientras para Morales (2007) ser honesto es ser real, acorde con la evidencia presentada por el mundo y sus diversos fenómenos, es ser genuino, auténtico, objetivo. En el mismo orden de ideas, Rodríguez (2008) señala que son comportamientos que muestran la integridad de los gerentes, reflejada en su incapacidad de engañar o apropiarse de lo que no les pertenece, su dedicación a cumplir sus labores; la coherencia entre lo que piensan, dicen y hacen, y el rechazo a la corrupción. De esta manera, la honestidad no consiste solo en franqueza, sino en asumir que la verdad es solo una y no depende de personas o consensos sino de lo presentado por el mundo real como innegable e imprescindible de reconocer.

También reconoce la justicia, vista como la concepción que cada época y civilización tienen del bien común, es un valor determinado por la sociedad por la necesidad de mantener la armonía entre sus integrantes. Manifiesta, Soto y Cárdenas (2007), que se debe poner especial atención en tratar de actuar justamente tanto en otorgar oportunidades en el interior de la empresa como frente a todos aquellos grupos que tienen relación directa o indirecta con el quehacer de la organización. En este sentido, Escobar (2005) conceptúa que la justicia constituye el principio normativo fundamental de la vida comunitaria, contribuye a dirimir los conflictos originados al fragor de la convivencia humana. Otro valor indispensable en la gestión pública es la equidad, considerada por (Lolas, 2001), como la distribución de poder en la sociedad. Mientras para el individuo, su consideración y aceptación es parte de una ética básica de mínimos que posibilita la convivencia, mas no asegura la realización plena de los ideales que las doctrinas específicas prometen a sus seguidores. Si bien cada individuo por separado no puede lograr o garantizar la equidad, valor que se realiza y perfecciona en el colectivo, puede no obstante reconocer y estimular su manifestación.

De esta manera, el concepto de equidad tiene importantes implicaciones para las políticas públicas, pues se traducen en una asignación diferencial de recursos. Tomando como criterio de asignación la necesidad, esto significa entregar recursos equivalentes para iguales niveles de necesidad y recursos diferentes para distintos niveles de necesidad. Así esta tiene un poder redistributivo y por eso muchas veces encuentra obstáculos. Sin embargo, quienes piensan limitar la acción pública y expandir la acción del mercado, han valorado la equidad como mecanismo para satisfacer las necesidades de quienes tienen una privación severa de recursos financieros. También se puede mencionar la Responsabilidad, como una cualidad, graduable, de la cosa que hay que responder. Es cierto que en un principio la relación empresa-gerente consideraba la responsabilidad sólo desde las actividades técnicas, pero nuestro contexto le ha asignado al término un carácter plural, dado el incremento del conocimiento gerencial y de las responsabilidades sociales que la empresa asume. Rodríguez y Bustamante (2008).

Otro de los valores que no puede faltar es la confianza, por lo importante que es la confianza que los ciudadanos depositan en las instituciones políticas para la democracia, estableciendo con los gobiernos y las instituciones que los representan una relación de mayor o menor confianza, condicionando la legitimidad y estabilidad de los gobiernos democráticos (Bianco, 1994; Citrin y Levi y Stoker, 2000). La confianza es tanto un recurso para los ciudadanos como para los gobiernos e instituciones. Para los ciudadanos, la confianza reduce la complejidad de la elección y permite que ellos relajen la constante necesidad de monitorear y controlar a las instituciones gubernamentales. Para los gobiernos, la confianza es beneficiosa porque les brinda la certeza de que serán obedecidos, reduciendo la necesidad del uso de la fuerza o la coerción. En este sentido la confianza es, para los gobiernos, una fuente de poder (Bianco, 1998; Citrin y Muste, 1999).

De esta forma, la confianza se convierte en un concepto asociado a las expectativas en los resultados evacuados por las instituciones, y a la capacidad de los ciudadanos para delegar decisiones en esas instituciones sin la necesidad de vigilarlas o controlarlas permanentemente (Hardin, 1999 y 2001; Buendía y Somuano, 2003). De acuerdo a esto, la confianza bien puede entenderse como una variable explicativa de las actitudes hacia la democracia y, posteriormente, de los niveles de participación electoral.

La falta de valores en la actuación de los funcionarios públicos ha conllevado a dilemas éticos dentro de las instituciones. Al respecto Soto y Cárdenas (2007), señalan que los dilemas éticos representan un conflicto entre el desempeño económico de la organización y su desempeño social, lo que muchas veces dificulta el proceso de toma de decisiones de la organización, así mismo, manifiesta Cortina (2003), que los dilemas éticos son aquellas situaciones en que actuamos con incertidumbre, son los casos en que enfrentamos la disyuntiva de tener que optar por un valor en desmedro de otro. Mientras, Daft (2006) Señala que este surge cuando cada opción o comportamiento alterno parece indeseable a causa de una consecuencia ética potencialmente negativa. No puede identificarse con claridad lo que es correcto e incorrecto, en ese mismo orden, los dilemas generan ciertas dudas en lo que bien puede que moralmente debe actuar y lo que moralmente como persona sienta que deba actuar.

Dichos dilemas pueden conllevar a la opacidad en la gestión de los funcionarios públicos, para Elkin (1993), la opacidad se define como los actos, eventos, sucesos o acontecimientos que se apartan de los códigos de conducta de las convenciones sociales y culturales acerca de lo bueno, lo justo y lo legítimo. Así también, Arroyo (2007), define la opacidad como el ensimismamiento que envuelve a las organizaciones en una capsula, impidiendo que interactúen con sus públicos. Sin embargo, manifiesta Giraud (2006), que la opacidad ha sido denunciada de modo constante por los sociólogos y los que gestionan como un factor de fracaso en los procesos de cambio que se refieren a las organizaciones.

Mientras que si estos son asumidos dentro de su actuación puede conllevar a la transparencia de sus gestiones administrativas. Según Guédez (2006), la transparencia es la capacidad para decir la verdad en todas las circunstancias y en el marco de todos los roles, manifiesta la honestidad de gestión, considerando

en destacar el uso de máscaras y el rechazo de subterfugios que alteren o adulteren aquello que se cree o se quiere. Así mismo, Seijo (2006), señala que la transparencia se ha constituido en un valor imprescindible para garantizar un desempeño libre de zonas grises y eliminar la corrupción del marco empresarial. Igualmente, Arboleya y Otros (2000), señalan que la transparencia tiene que ver con la calidad de transparente, es decir, claro evidente, que se comprende sin duda ni ambigüedad. No apunta a establecer cómo deben ser las cosas, sino que sean vistas y percibidas tal como son. Una organización es transparente es aquella que deja ver con claridad su grado de eficiencia o si su accionar responde o no a la moral. La transparencia marca el camino que se debe transitar para conseguir niveles de valores

METODOLOGÍA

La presente investigación se tipifica como descriptiva correlacional y de campo, con diseño no experimental. La unidad de análisis fueron los entes territoriales del departamento de La Guajira, dentro de los cuales se estudiaron las quince alcaldías y la gobernación del departamento de La Guajira.

Para efectos del este estudio se utilizó la técnica del censo poblacional, abordada por medio de un cuestionario para la recolección de datos, con preguntas y respuestas múltiples tipo Likert, sustentados por los hechos y aspectos que interesan a la investigación, para luego ser contestados por la población objeto de estudio, permitiendo de esta manera hacer un rápida tabulación y análisis de la información. La técnica de recolección de información para abordar los valores y los dilemas éticos, fue la encuesta estructurada, que contó con la validez de cinco expertos.

RESULTADOS

A continuación se muestran los resultados obtenidos en la encuesta aplicada

Tabla 1: Estadígrafos de las dimensiones e indicadores

	ESTADÍGRAFOS	MEDI A	MEDIAN A	MOD A	DESV ESTANDA R	CATEGORÍA
DIMENSIÓN	VALORES ÉTICOS	2,32	1,96	1,96	0,82	Baja
INDICADORES	Honestidad	2,2	2,0	2	0,72	Baja
	Justicia	2,2	2,0	2	0,85	Baja
	Equidad	2,5	2,0	2	0,69	Moderada
	Responsabilidad	2,5	2,0	2	0,96	Moderada
	Confianza	2,3	2,0	2	1,01	Baja

Fuente: elaboración propia

El análisis del indicador Honestidad, arrojó que el 82.33% de los encuestados calificó de forma desfavorable la honestidad de los directivos con un puntaje promedio de 2.2, ubicada en el baremo en la categoría baja; una mediana de 2.0, indicando que el 50% de los encuestados calificó el comportamiento por encima de 2.0 y el restante por debajo. Se obtuvo una moda de 2.0 lo que indicó que la puntuación que más se repitió en la frecuencia de datos fue de 2.00 y una desviación estándar de 0.72, lo cual mostró una dispersión baja de los datos y una desviación de 0.72 unidades con respecto a la media.

Del mismo modo, en cuanto al indicador Justicia se evidenció que el 79.67% de los encuestados calificó de forma desfavorable la Justicia impartida por los directivos con un puntaje promedio de 2.2, ubicada en el baremo en la categoría baja; una mediana de 2.0, indicando que el 50% de los encuestados calificó el comportamiento por encima de 2.0 y el restante por debajo. Se obtuvo una moda de 2.0 lo que indicó que la puntuación que más se repitió en la frecuencia de datos fue de 2.00 y una desviación estándar de 0.85, lo cual mostró una dispersión baja de los datos y una desviación de 0.85 unidades con respecto a la media.

De igual forma, se evidenció que el 85% de los encuestados calificó de forma favorable la Equidad administrada por los directivos con un puntaje promedio de 2.5, ubicada en el baremo en la categoría moderada; una mediana de 2.0, indicando que el 50% de los encuestados calificó el comportamiento por encima de 2.0 y el restante por debajo. Se obtuvo una moda de 2.0 lo que indicó que la puntuación que más se repitió en la frecuencia de datos fue de 2.00 y una desviación estándar de 0.69, lo cual mostró una dispersión baja de los datos y una desviación de 0.69 unidades con respecto a la media.

En lo que respecta al indicador Responsabilidad el 90% de los encuestados calificó de forma desfavorable la Responsabilidad asumida por los directivos con un puntaje promedio de 2.5, ubicada en el baremo en la categoría moderada; una mediana de 2.0, indicando que el 50% de los encuestados calificó el comportamiento por encima de 2.0 y el restante por debajo. Se obtuvo una moda de 2.0 lo que indicó que la puntuación que más se repitió en la frecuencia de datos fue de 2.00 y una desviación estándar de 0.96, lo cual mostró una dispersión baja de los datos y una desviación de 0.96 unidades

En cuanto al indicador Confianza el 79% de los encuestados calificó de forma desfavorable la confianza que se tiene de los directivos con un puntaje promedio de 2.3, ubicada en el baremo en la categoría moderada; una mediana de 2.0, indicando que el 50% de los encuestados calificó el comportamiento por encima de 2.0 y el restante por debajo. Se obtuvo una moda de 2.0 lo que indicó que la puntuación que más se repitió en la frecuencia de datos fue de 2.00 y una desviación estándar de 1.01, lo cual mostró una dispersión baja de los datos y una desviación de 1.01 unidades.

Por otro lado, en cuanto a la dimensión Dilemas éticos, el 75% de los encuestados calificó de forma desfavorable los dilemas éticos que se tiene de los directivos con un puntaje promedio de 2.85, ubicada en el baremo en la categoría moderada; una mediana de 3.00, indicando que el 50% de los encuestados calificó el comportamiento por encima de 3.00 y el restante por debajo. Se obtuvo una moda de 3.87 lo que indicó que fue la puntuación que más se repitió en la frecuencia de datos y una desviación estándar de 0.96, lo cual mostró una dispersión baja de los datos y una desviación de 0.96 unidades con respecto a la media.

En este sentido, en cuanto al indicador Transparencia, el 75% de los encuestados calificó de forma desfavorable los dilemas éticos que se tiene de los directivos con un puntaje promedio de 2.65, ubicada en el baremo en la categoría moderada; una mediana de 2.5, indicando que el 50% de los encuestados calificó el comportamiento por encima de 3.00 y el restante por debajo. Se obtuvo una moda de 2.00 lo que indicó que fue la puntuación que más se repitió en la frecuencia de datos y una desviación estándar de 0.90, lo cual mostró una dispersión baja de los datos y una desviación de 0.90 unidades con respecto a la media.

Así mismo, en cuanto al indicador Opacidad, el 75% de los encuestados calificó de forma desfavorable los dilemas éticos que se tiene de los directivos con un puntaje promedio de 3.05, ubicada en el baremo en la categoría moderada; una mediana de 3.05, indicando que el 50% de los encuestados calificó el comportamiento por encima de 3.00 y el restante por debajo. Se obtuvo una moda de 4.00 lo que indicó que fue la puntuación que más se repitió en la frecuencia de datos y una desviación estándar de 1.08, lo cual mostró una dispersión baja de los datos y una desviación de 1.08 unidades con respecto a la media.

CONCLUSIONES

De acuerdo a los resultados encontrados se pudo concluir que existe un conflicto de valores estructurales y complejos, dado por la ausencia de valores en los funcionarios que están a cargo de los entes territoriales por un lado y por el otro a la presencia de dilemas éticos como consecuencia de las practicas clientelistas y al predominio del interés particular sobre el interés colectivos. Lo anterior se reflejo en la desfavorabilidad que obtuvieron los indicadores de honestidad, al arrojar un 82.33% de desfavorabilidad. Del mismo modo, la Justicia con un 79.67% desfavorable. Igualmente, la responsabilidad obtuvo un 90% de desfavorabilidad, con un puntaje promedio de 2.5, ubicada en el baremo en la categoría moderada. En cuanto la confianza el 79% lo calificó de forma desfavorable, con un puntaje promedio de 2.3, ubicada en el baremo en la categoría moderada. Mientras que solo la equidad fue calificada de forma favorable en un 85% con un puntaje promedio de 2.5, ubicada en el baremo en la categoría moderada.

Lo que evidencia la necesidad de que los servidores públicos cuenten con una formación en valores, que les permita dejar de lado sus intereses personales y sus prácticas basadas en antivalores que generan el incumplimiento de objetivos en los programas de gobierno y desvían los recurso asignados para servicios básicos de la población, por lo tanto la ética es condición fundamental para mejorar el desarrollo humano, dado que esta permite resolver conflictos y ofrecer resultados con equidad y justicia al satisfacer los intereses contribuyendo al bien social.

En referencia a la dimensión dilemas éticos, el 75% de los encuestados calificó de forma desfavorable los dilemas éticos que se tiene de los directivos con un puntaje promedio de 2.85, ubicada en el baremo en la categoría moderada. En este sentido, esto como reflejo de sus indicadores de transparencia, que obtuvo un 75% de desfavorabilidad, con un puntaje promedio de 2.65, ubicada en el baremo en la categoría moderada. Así mismo, el indicador opacidad, el 75% lo calificó de forma desfavorable con un puntaje promedio de 3.05, ubicada en el baremo en la categoría moderada.

De esta manera, la ética de la gestión pública debe plantearse como un agente activo que estimule a los ciudadanos a participar social y responsablemente en la vida pública, contribuyendo en la búsqueda de ese bien común, esta situación obliga a los políticos a rendir cuenta de su actuación y crea exigencias éticas de solidaridad entre los ciudadanos y funcionarios públicos.

Edgar Bonilla Blanchar, Universidad de La Guajira
Gelvis Melo Freile, Universidad de La Guajira

RESUMEN

El presente estudio forma parte de un proyecto de investigación denominada competencias investigativas en el proceso de formación profesional de los estudiantes de la Universidad de La Guajira, busca determinar las habilidades para la construcción del conocimiento. El tipo de investigación fue definida como no experimental, explicativa, de campo y transeccional. La población está conformada por 956 docentes y 9.783 estudiantes de los diferentes programas de la Universidad de La Guajira, de los cuales se tomó una muestra representativa. La técnica utilizada es la encuesta auto-administrada, aplicada a la muestra extraída de la población objeto de estudio. Para ello fue diseñado un instrumento con preguntas en escala de Likert, validado mediante el concurso de expertos en la temática. El procesamiento de la información es realizada mediante el Software SPSS 22.0. Como resultado de este primer avance se evidenció que los estudiantes se manifiestan de forma positiva y muy positiva sobre el dominio de las competencias investigativas básicas en cuanto a las capacidades cognitivas, destrezas motrices y habilidades comunicativas.

PALABRAS CLAVES: competencias investigativas, capacidades cognoscitivas, destrezas motrices, construcción del conocimiento y habilidades comunicativas

INVESTIGATIVE COMPETENCES: ABILITIES DEVELOPMENT FOR THE CONSTRUCTION OF KNOWLEDGE IN VOCATIONAL TRAINING

ABSTRACT

This study is part of a research project called investigative competences in the process of training of students at the University of La Guajira, seeks to determine the skills to knowledge construction. The research was defined as experimental, explanatory, and transactional field. The population consists of 956 teachers and 9,783 students in the various programs of the University of La Guajira, of which a representative sample was taken. The technique used is the self-administered survey, applied to the sample from the population under study. This instrument was designed with Likert scale questions, validated by competition experts in the subject. The information processing is performed by software SPSS 22.0. As a result of this first step was evident that students showed a positive attitude and very positive about the mastery of basic investigative competences in terms of cognitive abilities, motor abilities and communication skills.

KEYWORDS: investigative competences, cognitive capacities, motor abilities, knowledge building and communicative abilities

JEL: I21, I23, L86

INTRODUCCIÓN

Para introducirnos en el tema de competencias investigativas, es fundamental definir inicialmente el término competencias. Según De Zubiria (2006), representan un conocimiento implícito parcialmente innato y formal que se expresa en un saber hacer, además de ser un conocimiento especializado y específico. De ese modo se habla de aprendizaje. Aprender implica adquirir nuevos conocimientos y esto conduce a que haya un cambio de conducta.

Desde esta perspectiva, Rizo (2004) establece la importancia de que los docentes manejen competencias investigativas para transferirlas en forma eficaz a sus estudiantes. Plantea además, que pensar la investigación supone una aproximación a los conocimientos teóricos fundamentados en la praxis investigativa, así mismo, señala la necesidad de darle un sentido reflexivo y asumirla como un proceso en continua construcción y reconstrucción. En este sentido, sugiere enseñar a investigar investigando, desde la práctica, tomando en consideración los niveles pedagógico, epistemológico y comunicativo.

Es preciso señalar, que la Universidad de La Guajira ha avanzado en la implementación de acciones para mejorar el desempeño investigativo de los estudiantes desde las asignaturas de metodología de investigación hasta los trabajos que implementan docentes de asignaturas afines, buscando incentivar esa dinámica en los procesos académicos. Sin embargo, se presentan manifestaciones, improvisaciones y deficiencias que atentan contra el desarrollo de las competencias investigativas como habilidad de la actividad científica en estudiantes.

El presente estudio propone identificar las competencias investigativas básicas que poseen los estudiantes de pregrado de la Universidad de La Guajira, en aras de dar respuesta de manera sistemática a las necesidades integradoras de las actividades científicas en las acciones formativas de los programas académicos. Se estructuró de la siguiente manera: revisión literaria para referenciar el marco teórico, explicación de la metodología aplicada, mostrando en detalle el análisis e interpretación de los resultados, sobre los cuales se realizaron las conclusiones y finalmente se mostraron las referencias bibliográficas y biográficas.

REVISIÓN DE LITERATURA

Es importante resaltar el reto que enfrentan las instituciones educativas con los avances acelerados de la ciencia y la tecnología, lo cual trae consigo un alto crecimiento de la información, suceso que exige un gran compromiso en los ámbitos académicos, puesto que contamos con ella en cualquier momento pero su manejo y control debe estar orientado hacia los beneficios de la humanidad. Para ello se requiere la formación y capacitación continua de los estudiantes centrándose en las competencias investigativas.

En ese sentido, Blanco (2009) menciona las competencias desde el mundo de la educación y expresa que en las escuelas y universidades el concepto parece responder a la misma idea básica, pero se acepta que su demostración se lleve a cabo en situaciones de evaluación educativa.

Es preciso señalar que la UNESCO (2005), en su documento “*Como promover el interés por la cultura científica*” propone que una educación dirigida hacia una cultura científica básica debería contener: Conocimientos de la ciencia; aplicaciones del conocimiento científico (situaciones reales y simuladas); habilidades y tácticas de la ciencia (familiarización con los procedimientos de la ciencia y el uso de aparatos e instrumentos); resolución de problemas (aplicación de habilidades, tácticas y conocimientos científicos a investigaciones reales); interacción con la tecnología; estudio de la naturaleza de la ciencia y la práctica científica.

Por otra parte González (2007), señala dos clases mayores de competencias: Las competencias básicas y las competencias avanzadas. Dentro de la segunda incluye tres clases de competencias: Las competencias profesionales, que se ubican en contextos específicos de actuación profesional; las competencias investigativas, que se aplican al desempeño en un campo específico del saber científico y tecnológico; y las competencias comunicativas discursivas, dentro de las cuales pueden encontrarse las lectoescriturales.

Con base en lo anterior, la autora define “competencias investigativas como aquella que le permite al ser humano la construcción del conocimiento científico y tecnológico sobre la realidad, con el propósito de solucionar eficientemente problemas importantes y prioritarios del contexto de actuación específico”. El ejercicio de la competencia investigativa, exige que los estudiantes apliquen una serie de conocimientos, valoraciones y acciones que para efecto de esta investigación pueden relacionarse como sigue:

Capacidades cognoscitivas

Según Levy (2007), la cognición es principalmente social, ya que el conocimiento individual y aun la identidad personal, se adquieren de otras personas y se comparte con ellas. El conocimiento depende de conceptos y creencias construidos por otros.

Esta relación social es señalada por Hernández (2007) cuando menciona que el ser humano está expuesto constantemente a una serie de estímulos, sucesos, circunstancias y situaciones que le aportan información; algunos llegan directamente a los sentidos, otros proceden de la memoria, otros por el lenguaje, o bien por las relaciones que mantenemos con los demás. De una u otra forma, todos estos estímulos son procesados por un aparato que se encarga de la información, llámese aparato psíquico, aparato mental, alma, procesos superiores o cognición. Básicamente nos estamos refiriendo a la operación que nuestra mente realiza.

Otra conceptualización es aportada por Norman (cp Hernández, 2007) quien expresa que la cognición es un conjunto de actividades a través de las cuales toda la información es tratada por un aparato psíquico que las recibe, selecciona, transforma y organiza, construyendo representaciones de la realidad y elaborando conocimiento.

En acuerdo a las teorías anteriormente citadas, González (2007) conceptúa que la cognición representa los procesos intelectivos y creativos propios del investigador que le permitirán construir conocimientos nuevos de los ya existentes. Además afirma que es la base de conocimientos sobre la investigación educativa y sobre los saberes específicos involucrados en el área del saber específico en que se desempeña.

Destrezas motrices para la investigación

Para Casado (2001), los factores que influyen sobre los destrezas e intereses de los individuos los desarrollan en forma adecuada durante la formación profesional, contribuyendo de forma adecuada con el desarrollo de sus destrezas para el diseño de la investigación, la estadística y la redacción especializada, así como también las destrezas computacionales y las destrezas prácticas para la investigación.

Por su parte González, Amazurrutia & Maass (2007), expresan que en cualquier disciplina, las destrezas de investigación y redacción ayudan a ganar autonomía. Además hoy más que nunca la sociedad necesita personas con mentes críticas, personas que puedan hacer sus propias preguntas y encontrar sus propias respuestas. Toda investigación es un proceso incierto; por ello es un quehacer difícil y desafiante.

Es importante mencionar entonces que se requieren de destrezas para enfrentarse a los cambios que han provocado la globalización y la nueva sociedad del conocimiento. Pero es muy trascendental contar con el apoyo y orientación de investigadores expertos, ya que la colaboración representa una destreza dentro del área de oportunidades para el desarrollo y crecimiento profesional de un investigador.

Habilidades para la comunicación científica

Dempsey (cp Medina, 2009) expresa que más allá de las destrezas o el conocimiento de la tecnología, las competencias de creatividad, tolerancia, apreciación de la diversidad y las destrezas sociales son necesarias en las habilidades de comunicación. La misma autora señala que la tecnología es muy importante, pero debe ir unida a la capacidad de transferir el conocimiento e implementar los resultados de una investigación hacia productos o servicios para maximizar su uso.

Es importante resaltar el papel que juegan las redes sociales en las habilidades de comunicación. Sobre el tema González, Amazurrutia & Maass (2007) conceptúan que éstas son definidas como el conjunto de individuos vinculados a trabajar por un fin común; personas con las mismas necesidades que se organizan para potenciar sus recursos y crear alternativas para la solución de problemas. Tienen como objetivo el intercambio dinámico entre personas, grupos o instituciones.

Por otra parte resaltan que los medios tienen eficacia cuando logran reunir tres elementos en los comunicantes que reciben la señal; los soportes materiales, la estructura cognitiva y la disposición de biotiempos dedicados a consumir las señales o flujos de información e imágenes.

En ese sentido, las habilidades de los individuos para la difusión y comunicación científica proceden cuando se ofrecen elementos que prueben la validez de la opinión de los investigadores a través de la redacción de un informe escrito que transmita los resultados de un estudio de tal manera que la comunidad científica interesada en el tema comprendan la importancia de publicar y compartir los conocimientos con la sociedad.

Los autores consideran que las competencias investigativas son habilidades de la actividad científica de los estudiantes, relacionadas con las capacidades cognitivas, representadas en procesos intelectivos y creativos que les llevará a la construcción del conocimiento, utilizando las destrezas motrices en el manejo de la información y la comunicación. Todo ello les permitirá formular estudios y promover proyectos y programas de investigación con alta relevancia social.

METODOLOGÍA

Con base en los objetivos planteados y las teorías que soportan el presente estudio referido a las competencias investigativas como habilidades en la actividad científica de los estudiantes de pregrado de la universidad de La Guajira, esta investigación se considera no experimental, explicativa, de campo y transeccional.

Este estudio tiene en cuenta dos poblaciones finitas conformadas por 956 docentes y 9.783 estudiantes de los diferentes programas de la Universidad de La Guajira, de las cuales se extrajo una muestra representativa para su análisis. El proceso se llevó a cabo mediante la técnica de encuestas aplicadas a los docentes y estudiantes, desarrollada sobre la base de un instrumento diseñado con preguntas en escala de Likert. Este fue validado por pares expertos en las variables y dimensiones de estudio, con el propósito de verificar la pertinencia y coherencia con las preguntas y objetivos de investigación. En este primer avance de la investigación se tomó una muestra de estudiantes de los diferentes programas de la Universidad de La Guajira para determinar su nivel de competencias investigativas básicas para la construcción del conocimiento durante su formación profesional.

La información obtenida en la investigación es procesada mediante la aplicación del Software SPSS 22.0, el cual permitió cruzar los datos de los indicadores con sus respectivos ítems, luego con las dimensiones de una manera rápida y precisa, arrojando la media, desviación estándar y las frecuencias absolutas. Luego de la obtención de los resultados se diseñaron las tablas de estadística descriptiva y gráficas que representan

los porcentajes de las respuestas para cada indicador y por cada dimensión.

RESULTADOS

En la literatura científica parece existir consenso sobre las competencias investigativas que deben poseer los estudiantes de educación superior que les permitan dar respuesta de manera sistemática a las actividades del proceso de investigación científica, desarrolladas en sus acciones formativas de los programas académicos.

Tabla 1. Capacidades investigativas básicas en los estudiantes

Alternativas	Capacidades cognitivas		Destrezas motrices		Habilidades para la comunicación	
	Fr	%	Fr	%	Fr	%
Muy de acuerdo	44	23,2	64	24,1	33	14,5
De acuerdo	105	55,3	126	47,4	114	50,0
Ni acuerdo ni desacuerdo	31	16,3	50	18,8	51	22,4
En desacuerdo	9	4,7	22	8,2	28	12,2
Muy en desacuerdo	1	0,5	4	1,5	2	0,9
Total	190	100,0	266	100,0	228	100,0
Promedio indicador		3,96		3,84		3,65
Desviación estándar		0,80		0,93		0,91
Mediana		4,00		4,00		4,00
Moda		4,00		4,00		4,00

Fuente: Elaboración propia (2014). Esta tabla evidencia que el 78,5% de los estudiantes está muy de acuerdo y de acuerdo en poseer capacidades cognitivas para el proceso de investigación, el 71,5% en tener destrezas motrices y el 64,5% poseen habilidades para la comunicación.

Capacidades cognitivas de los estudiantes

Al analizar las respuestas sobre el tema se desprende que los estudiantes manifiestan tener capacidades cognitivas para el proceso de investigación desarrollado en su etapa formativa. La media es de 3,9, ubicándose en una categoría alta. En este sentido se detectó que el 78,5% de los encuestados tiene una posición positiva o muy positiva sobre este aspecto; un 16,3% está indeciso y apenas un 5,2% tiene una posición negativa o contraria. Estas posiciones indican que los estudiantes que cursan programas de pregrado aprovechan los estímulos, sucesos, circunstancias y situaciones que le aportan información para un mejor desempeño en su proceso de formación y tienen la capacidad de recolectar, seleccionar, organizar y transformar información para la descripción de un hecho, contexto o realidad, esto por supuesto les permite la producción de nuevos conocimientos.

Así mismo, se desprende de las respuestas que está en capacidad de controvertir y participar en debates, discusiones y conversatorios encaminados a la solución de problemas que tengan que ver con temas de su perfil, esto le hace poseedor de mente crítica, que lo convierte en una persona capaz de hacer sus propias preguntas y encontrar sus propias respuestas.

Destrezas motrices de los estudiantes

Los resultados muestran una media de 3,8, ubicándose en una categoría alta. La concepción manifiesta en sus respuestas sobre las destrezas motrices, en su mayoría (71,5%) es positiva o muy positiva, denotando con ello que están en capacidad de manejar la estadística descriptiva para el análisis e interpretación de la información, capacidades tecnológicas y computacionales para la búsqueda de información, digitación y manejo de programas, necesarios en el ejercicio del proceso investigativo, lo que les permite mantener

contacto con otras personas, para compartir experiencias, potenciar sus conocimientos y crear alternativas para la solución de problemas. Un 18,8% manifiesta indecisión y solo un 9,7% se manifiesta en forma negativa, debido a que si bien mantienen contacto con personas a través de su participación en redes sociales no hace intercambio sobre aspectos de la investigación, sino sobre temas cotidianos.

Habilidades comunicativas

Sobre las habilidades para la comunicación los resultados arrojan una media de 3,6, situándola en la categoría alta. Los encuestados expresan de forma positiva o muy positiva que poseen habilidades para la comunicación (64,5%), indicando con ello que pueden redactar ensayos, artículos científicos e informes finales resultados del ejercicio de la investigación, que tiene la capacidad de transferir conocimiento e implementar resultados de una investigación hacia productos o servicios para maximizar su uso; manejan con propiedad el lenguaje general, técnico y gráfico, lo que les permite diseñar una comunicación libre y clara para transmitir los resultados de una investigación en un panel o póster, y que están en capacidad de participar en eventos académicos presentando ponencias, resultado de investigaciones en el aula. No obstante, hay un 22,4% indeciso y solo un 13,1% se expresa de forma negativa o muy negativa sobre el asunto.

CONCLUSIONES

Los estudiantes de pregrado de la Universidad de La Guajira poseen capacidades cognitivas que les facultan para cumplir funciones y tareas específicas en un proceso de investigación, aprovechando los estímulos, sucesos, circunstancias y situaciones que le aportan información para su desempeño en su proceso de formación y tienen la capacidad de recolectar, seleccionar, organizar y transformar información para la descripción de un hecho, contexto o realidad, encaminado a la producción de nuevos conocimientos.

Por otro lado, se evidenció, que en su mayoría los estudiantes poseen altas destrezas motrices, en el manejo de la estadística descriptiva; capacidades tecnológicas y computacionales para la búsqueda de información, digitación y manejo de programas, lo que les permite mantener contacto con otras personas para compartir experiencias, potenciar sus conocimientos y crear alternativas para la solución de problemas.

Finalmente, sobre las habilidades comunicativas se determinó que los estudiantes poseen niveles positivos en redacción de ensayos, artículos científicos e informes finales, destrezas que les permitirán resolver problemas, dar soluciones innovadoras, emprender proyectos y programas de investigación, así mismo, están en capacidad de participar en eventos académicos presentando ponencias, resultado de investigaciones en el aula.

BIOGRAFÍA

Esmerlis Camargo Torres es Contadora Pública e Ingeniera Industrial, especialista en Gerencia en Finanzas, Magister en Informática Educativa y Doctora en Ciencias Gerenciales de la Universidad Dr. Rafael Beloso Chacín en Maracaibo Venezuela, Instructora del Sena Regional Guajira, adscrita al Centro Industrial y de Energías Alternativas. Docente catedrática e investigadora de la Universidad de La Guajira en Colombia.

Edgar Enrique Bonilla Blanchar, Administrador de Empresas, de la Universidad del Atlántico; Especialista en Planificación Territorial, de la Universidad del Magdalena; Magister en Políticas Públicas, del IESA y Doctor en Ciencias Gerenciales, de la Universidad Dr. Rafael Beloso Chacín en Maracaibo, Venezuela. Docente Investigador, adscrito a la Facultad de Ciencias Económicas y Administrativas de la Universidad de La Guajira en Colombia.

Gelvis Manuel Melo Freile es Ingeniero Industrial de la Universidad de La Guajira, Técnico en Mantenimiento para Equipo Pesado para Minería y Magister Scientiarum en Ingeniería de Control y Automatización de Procesos de la Universidad Dr. Rafael Beloso Chacín en Maracaibo Venezuela. Docente investigador, en el área de automatización industrial e ingeniería económica. Adscrito a la Facultad de ingeniería de la Universidad de La Guajira en Colombia.

RESPONSABILIDAD SOCIAL DE CHEVRON, TEXAS, EN EL DEPARTAMENTO DE LA GUAJIRA, COLOMBIA

Noralbis Cardeño Portela, Universidad de La Guajira
Edwin Cardeño Portela, Universidad de La Guajira
Marlenis Ucros Brito, Universidad de La Guajira

RESUMEN

La investigación tiene como objeto determinar la Responsabilidad Social de la empresa Chevron, Texas en el Departamento de La Guajira. Sus bases teóricas se sustentaron en: Robbins (2005) Guedez (2008), Navarro (2008) Cox (2009) entre otros. El estudio se enmarca en el enfoque cuantitativo, de tipo descriptivo, y de campo. Se trabajara con dos poblaciones la primera por los clientes internos y personal Administrativos de Chevron, se utilizara el censo poblacional, La segunda integrada por las comunidades de la zona de influencia de la explotación del gas, y se calculara una muestra, para recolectar la información se utilizaran dos cuestionarios cada uno con preguntas de selección múltiple, los resultados se analizaran a través de la estadística descriptiva. Las premisas propuestas son: La empresa realiza acciones de responsabilidad social con sus clientes internos contratados directamente generando bienestar, sin embargo subcontrata personal con los cuales no tiene las mismas responsabilidades, así mismo invierte en acciones de responsabilidad social con las comunidades a través de proyectos de emprendimiento, salud, y educación, tendiente a mejorar su calidad de vida.

PALABRAS CLAVES: Responsabilidad Social, Bienestar, calidad de vida

JEL: I3, I31,

ABSTRACT

The research aims to determine the social responsibility of Chevron, Texas in the Department of La Guajira. Its theoretical foundations were based on: Robbins (2005), Guedez (2008), Navarro (2008), Cox (2009) among others. The study was based on the quantitative approach, descriptive, and field. It worked the first two populations by internal customers and administrative staff Chevron, the population census was used, the second consists of the communities of the area of influence of the exploitation of gas, and a sample was calculated, to collect information two questionnaires each with multiple-choice questions are used, the results were analyzed by descriptive statistics. The premises proposed are: The company carries out social responsibility to its internal customers contracted directly generating welfare, however staff subcontracts which does not have the same responsibilities, also invests in social responsibility to the communities through projects entrepreneurship, health, and education, aimed at improving their quality of life

KEYWORDS: Social Responsibility

INTRODUCCION

La responsabilidad social es el grado de obligaciones que la organización asume a través de acciones que protejan y mejoran el bienestar de la sociedad, a medida que trata de alcanzar sus propios objetivos. Se refiere al grado de eficiencia y eficacia de una organización para asumir sus responsabilidades sociales.

En este sentido, una organización socialmente responsable es aquella que cumple las siguientes obligaciones: Área Funcional Económica: Se refiere al desempeño de la organización en actividades como producción de bienes y servicios necesarios para las personas, creación de empleo para la sociedad, pago

de buenos salarios y seguridad en el trabajo, Esta medida de responsabilidad social proporciona el índice de la contribución económica de la organización a la sociedad.

Por lo tanto el Área de calidad de vida: se refiere a la contribución de la organización al mejoramiento de la calidad de vida de la sociedad, o la reducción de la contaminación ambiental, producción de bienes de alta calidad, relaciones con los empleados y clientes. En este sentido, incorporar objetivos sociales en sus procesos de planeación, implica la aplicación de normas comparativas de otras organizaciones en sus programas sociales, presenta informes a los miembros organizacionales y a los socios.

En Colombia la empresa Chevron se desempeña como el mayor productor de gas natural, busca satisfacer las necesidades energéticas del país, a través de Ecopetrol y la Asociación Guajira, produce suficiente gas natural para abastecer aproximadamente el 60% de la demanda nacional. Sus actividades se concentra en tres campos de gas natural – Ballena y Riohacha, ambos en tierra y la plataformas costa afuera de chuchupa A y chuchupa B, así mismo la producción del campo Ballena alimenta el gasoducto binacional entre Colombia y Venezuela.

Es importante destacar que chevron tiene un programa de protección al medio ambiente para reducir impactos negativos y facilitar la alineación con la norma ISO 14001. Así mismo desarrolla algunas acciones de responsabilidad social, apoyando proyectos de emprendimiento en las comunidades donde tiene su influencia, favorece la educación con un programa para mejorar las destrezas matemáticas y lectura en 15 escuelas del occidente de Venezuela.

En este orden de ideas, patrocinó a los vendedores de gasolina con mil millones de pesos en convenio con la cámara de comercio para que realicen reconversión laboral, incluye capacitación e ideas de negocio, financiación sin embargo no se observa ningún cambio, después de terminar el programa se ha incrementado las ventas de gasolina.

De igual manera se realizó un convenio entre Chevron los municipio de Riohacha y Manaure con una inversión de mil millones de pesos para financiar iniciativas, creación y fortalecimiento de empresas que contribuyan al mejoramiento y competitividad de la cadena de valor en el sector turismo; otra prioridad es vender a la Guajira como destino turístico.

En este orden de ideas responde con los compromisos adquiridos con sus empleados, los considera clave en el éxito de la compañía, cumple con sus obligaciones salariales, prestaciones sociales, tiene un plan de capacitación para desarrollar las competencias y alcanzar las metas de la organización, cabe destacar que Chevron sub contrata parte de su personal con agencias que no siempre cumplen con sus obligaciones lo cual genera insatisfacción en los empleados porque hacen los mismos trabajos de los empleados directo de Chevron y no reciben los mismos beneficios.

Por todo lo anterior se plantea el siguiente interrogante:

¿Cuál es la responsabilidad social de chevron, texas, en el departamento de la guajira?

Para dar respuesta al interrogante se plantea el Objetivo General, Determinar la responsabilidad social de Chevron, Texas, en el Departamento de La Guajira Colombia.

Así mismo se elaboran los siguientes Objetivos Específicos:

Identificar las normas de acción contenidas en la filosofía de gestión que le permiten el cumplimiento de la responsabilidad social.

Identificar las acciones de sensibilidad social puestas en práctica en Chevron, que le permite la atención de su responsabilidad social.

Analizar la percepción que tienen los grupos de interés en las acciones de responsabilidad social de chevron, Texas.

REVISION LITERARIA

Antes de abordar el concepto de responsabilidad social, es necesario precisar algunas consideraciones teóricas para ubicar la variable independiente "responsabilidad social" dentro del marco conceptual de esta investigación.

Para Guedez, V. (2008). Es la capacidad de responder por lo que se hace o se deja de hacer, así como por las correspondientes consecuencias que proceden de lo que se hizo o no se hizo. Responsabilidad equivale a responder, a los demás y responder a sí mismo frente a los demás, es poder responder por todo a todos, todo el tiempo y en todo lugar.

Igualmente, De la Cuesta, M. (2012), la señala como la actitud responsable de las empresas con todos los grupos de interés: consumidores, proveedores, accionistas, directivos, empleados, estado, comunidad y medio ambiente. En este sentido, no solo se trata de tener presente el cuidado del medio ambiente, a través de sólidas políticas, sino también de generar un adecuado ambiente de trabajo, de vincularse con la comunidad, de respetar los derechos humanos, así como de trabajar con apego a la ética y los valores.

Para Cox J. & Dupret M. (2009), la conciencia de una Responsabilidad Social Corporativa parte del reconocimiento que la empresa no es solamente una institución que se dedica a vender productos o servicios para obtener ganancias, sino que dependiendo y nutriéndose de su entorno (interno como externo), ella influye necesariamente sobre este. Según Carlos Arturo Ángel, presidente de la Asociación Nacional De Industriales (Colombia)", en los discursos tradicionales sobre la responsabilidad social del empresario, suele afirmarse que la empresa debe ser un ente de naturaleza social con una misión de servicio a la comunidad y con gran sentido solidaridad y preocupación por el bienestar colectivo.

Lo anterior significa que debe ocuparse no sólo de su crecimiento económico sino también del bienestar comunitario. En la ética empresarial que originada de esta concepción, las utilidades constituyen una justa retribución al capital, contribuyendo así al desarrollo de la sociedad a través de la justa remuneración del trabajo.

Así mismo, se fundamenta dicha ética en la necesidad de que la acción de la empresa trascienda para poder realizar su función social." De acuerdo a esta perspectiva, Caravedo (2004) estima que la Responsabilidad Social de la empresa es una visión y filosofía empresarial que sostienen que ésta puede y debe jugar un rol más allá de hacer utilidades o ganancias. Es también una conciencia de que lo que las empresas producen tiene impactos directos e indirectos dentro y fuera de la compañía.

En este sentido, la empresa socialmente responsable aquella que se preocupa del bienestar de quienes trabajan en ella (salud, educación, remuneración del personal), además aquella que demuestra la solidaridad con su entorno (clientes, proveedores y la comunidad entre otros). A través de la generalización de políticas empresariales efectivas en materia social, la empresa moderna dejaría de ser un ente egocéntrico para convertirse en un agente ciudadano dinámico y responsable.

Para Chiavenato (2002), la responsabilidad social es el grado de obligaciones que la organización asume a través de acciones que protejan y mejoran el bienestar de la sociedad, a medida que trata de alcanzar sus propios objetivos. Se refiere al grado de eficiencia y eficacia de una organización para asumir sus responsabilidades sociales. En este sentido, para el autor, una organización socialmente responsable es aquella que cumple las siguientes obligaciones:

Área Funcional Económica: Se refiere al desempeño de la organización en actividades como producción de bienes y servicios necesarios para las personas, creación de empleo para la sociedad, pago de buenos salarios y seguridad en el trabajo, Esta medida de responsabilidad social proporciona el índice de la contribución económica de la organización a la sociedad.

Área de calidad de vida: se refiere a la contribución de la organización al mejoramiento de la calidad de vida de la sociedad, o la reducción de la contaminación ambiental, producción de bienes de alta calidad, relaciones con los empleados y clientes.

En este sentido, incorporar objetivos sociales en sus procesos de planeación, implica la aplicación de normas comparativas de otras organizaciones en sus programas sociales, presenta informes a los miembros organizacionales y a los socios.

METODOLOGIA

El estudio está situado en el enfoque cuantitativo, que permite examinar los datos de manera científica, con ayuda de la estadística, el tipo es descriptivo, y de campo, se aplicará un instrumento estructurado con respuesta múltiple, el cual es aplicado a los clientes internos (36) de Chevron, Texas y (8) comunidades aledañas.

RESULTADOS

Se presenta la información aportada por los empleados de Chevron , Texaco, en el Departamento La Guajira, las respuestas fueron expresadas en valores de frecuencia absolutas, y porcentuales para cada dimensión e indicadores, además de las medidas de tendencia central (media aritmética), mediana, moda y dispersión en tablas elaboradas para tal fin. Es importante destacar, que todo el proceso de análisis se realizó con la finalidad de reflejar con la mayor objetividad las respuestas obtenidas del instrumento aplicado. Para medir el primer objetivo, las normas de acción contenidas en la filosofía de gestión que le permiten el cumplimiento de la responsabilidad social.

Tabla 1: Filosofía de Gestión

Fuente: Cardeño, Cardeño, Ucros (2014)

Los resultados obtenidos del indicador misión, la media aritmética 3.43, mediana es 3.40, y la moda 4.00 que lo ubica en la categoría de moderado, lo anterior permite inferir que el Personal Administrativo considera que no están seguro si los documentos filosóficos que guían a Chevron contienen acciones de responsabilidad social

Mientras que el indicador visión, la aritmética 3.30, mediana 3.30, y la moda 4.0 se ubicó en la categoría Moderado, esto significa que la mayoría de los encuestados no se encuentran seguro si la visión contemple políticas claras de responsabilidad social.

Los resultados del indicador valores, la media aritmética 2.72, mediana 3.00 y la moda 4.00, se ubica en la categoría moderado, según baremo de interpretación pre-establecido, lo cual significa que el personal administrativo, no están seguros que los valores contemplen claramente las acciones de responsabilidad social

Por otro lado, el indicador objetivos, muestra la media aritmética 3.10, mediana 3,38 y la moda 4.00 situado en la categoría moderado, lo cual indica según baremo, que la mayoría de los encuestados no están seguros que los objetivos de los documentos que guían a Chevron, contemplen normas de acciones que permitan el cumplimiento de la responsabilidad social.

Fuente: Cardeño, Cardeño, Ucros (2014)

Para el análisis de la Dimensión Acciones Sensibilidad Social, igualmente se analizaron los resultados de sus indicadores: Higiene y Seguridad, Salud, Ambiente de Trabajo, Remuneración, Capacitación, los cuales deben ser revisados de manera específica, dada su pertinencia y relevancia en esta investigación.

El indicador Higiene y Seguridad, la media aritmética 3.77, la mediana tiene un puntaje de 4.01, la moda un puntaje de 4, los resultados se sitúan en la categoría alto, lo cual indica que la mayoría de los encuestados se encuentran seguro del buen estado de las instalaciones físicas, además contratan personal capacitado para la prevención de accidentes.

Para medir el indicador Salud, la media aritmética 3.58, la mediana y la moda tienen una calificación de 4, situándose en categoría alto. Los resultados alcanzados permiten inferir que los encuestados afirmaron estar de acuerdo de tener planes de asistencia médica para el personal, cuentan con un área de atención en salud para los empleados en caso de urgencias, no contrata personal capacitado en salud ocupacional.

Así mismo, se analizaron las respuestas del indicador Ambiente de Trabajo, se califica, la media aritmética 3.67, la mediana 4.10, la moda 4, Se ubica en categoría Alto, lo que indica que la mayoría de los encuestados están de acuerdo que la empresa estimula la armonía entre los compañeros, así mismo reconocen que cuentan con una temperatura confortable, además manifiestan poseer mobiliario cómodo para el desempeño laboral.

Para medir el indicador Remuneración, muestra la media aritmética 3,49, la mediana y la moda 4,0 se ubica en categoría Alto. Lo anterior permite inferir que Chevron, incrementa el salario anualmente al personal, los salarios están bien remunerados de acuerdo a la oferta del mercado, cumple con las prestaciones sociales, así mismo ofrece incentivos al personal destacado los fines de año.

En cuanto al indicador Capacitación, la media aritmética 3,78, mediana 4.20, moda 4,00, se ubica en la categoría alto. Los resultados alcanzados permiten inferir que los encuestados afirman que se ofrecen cursos de capacitación periódicamente, se apoya con parte de la matrícula a los empleados que deseen seguir capacitándose.

Tabla 3. Acciones Externas

Alternativas	Proyectos Sociales		Inversiones		Desarrollo		Ofrecimiento de Trabajo		Apoyo Económico	
	Fa	%	Fa	%	Fa	%	Fa	%	Fa	%

Promedio Dim.	2,54									

Fuente: Cardeño, Cardeño, Ucros (2014)

La tabla 3. Muestra el indicador proyectos sociales, la media aritmética es 2,27, la mediana y la moda 2.00, ubicándose en categoría bajo, Los resultados permiten afirmar que las comunidades perciben que Chevron no contribuye con el desarrollo económico en el ámbito de creación de negocios, de igual manera no invierte suficiente recursos en proyectos para la solución de problemas de las comunidades.

La evaluación del indicador Inversiones se mide la mediana y moda 2, mientras que la media aritmética es de 2,37 categoría bajo, lo cual permite inferir que los encuestados consideran que Chevron, no realizan estudios de impacto social y/o proyectos que solucionen las necesidades de las comunidades, no se financian proyectos sociales, por lo tanto se contribuye muy poco en el desarrollo económico de las poblaciones.

Para evaluar indicador Desarrollo, se mide mediante la mediana y la moda 2, mientras que la media aritmética se ubica en 2,08 situándose en la categoría bajo, lo que permite inferir que los encuestados consideran que la Chevron no participa con el sector público en el desarrollo de programas sociales y ambientales.

Para la evaluación del indicador Ofrecimientos de Trabajo, los resultados de la mediana y la moda 4, mientras que la media aritmética es de 3,40 situándose en categoría moderada, según interpretación del baremo. Se destaca que los encuestados consideran que la empresa ofrece plazas de trabajo en cargos de celador en las comunidades, en cargos directivos medios y en los últimos años se ha tenido en cuenta a los nativos de La Guajira.

En cuanto al indicador Apoyo Económico la mediana y la moda 2, mientras que la media aritmética es 2.37 situándose en la categoría bajo, según baremo pre-establecido. Lo anterior permite inferir que la empresa financia algunos proyectos de inversión social, los cuales no son suficientes para mejorar la calidad de vida de las comunidades.

CONCLUSIONES

La empresa Chevron, Texas, en Colombia realiza algunas acciones de responsabilidad social en las comunidades donde realiza la explotación del gas, sin embargo no son suficientes para mejorar la calidad de vida de las poblaciones, los proyectos implementados no han generado cambios estructurales en las comunidades. Se requiere un mayor compromiso con las comunidades y se debe tener en cuenta a las entidades públicas para hacerlas participe en la inversión.

De igual manera responde con sus obligaciones adquiridas a los clientes internos contratados directamente, ofrece puestos de trabajos a los nativos del Departamento de La Guajira, los empleados consideran que las instalaciones físicas son cómodas, reciben capacitación periódica y se tiene un buen ambiente de trabajo, cabe destacar que existen empleados subcontratados los cuales no reciben los mismos beneficios laborales.

RESUMEN

El uso de las Tecnología de Información y Comunicación (TIC) permite los cambios en la práctica pedagógica, que ayudan al estudiante a entender con claridad los nuevos conocimientos por adquirir desechando así los métodos tradicionales. Los docentes deben usar cada vez más las tecnologías, ya que las TIC estarán presentes en el proceso de enseñanza-aprendizaje, siempre pensando en una educación virtual proactiva, integradora, de responsabilidad, participación e inclusión sociocultural. Por ello el objetivo general es analizar el impacto del uso de las TIC en los estudiantes de la Facultad de Ciencias Económicas, se encuentra enmarcado en el enfoque cuantitativo, el tipo de investigación es descriptiva, y de campo, se aplicará un instrumento estructurado con respuesta múltiple, la población 2.057 y la muestra 335 sujetos de investigación.

PALABRAS CLAVES: TIC, Cambios Tecnológicos, Práctica Pedagógica

ABSTRACT

The use of Information and Communication Technology (ICT) allows changes in teaching practice, which help the student understand clearly acquire new knowledge and discarding the traditional methods. Teachers must increasingly use technologies, and ICT will be present in the process of teaching and learning, always thinking of a proactive, integrated virtual education, accountability, participation and socio-cultural inclusion. Therefore, the overall objective is to analyze the impact of ICT on students of the Faculty of Economic Sciences, is framed in the quantitative approach, the research is descriptive and field, a structured response instrument shall apply multiple, population 2,057 and the sample 335 research subjects.

KEYWORDS: ICT, Technological Changes, Educational Practice

INTRODUCCION

Las Tecnología de Información y Comunicación (TIC) tienen mucha importancia en cualquier aspecto de la vida cotidiana, tanto laboral, académico como profesional. Las personas que no tienen a su alcance estos recursos tecnológicos, o no puedan acceder a ellos serán relegados de los nuevos procesos de desarrollo, quedándose al margen del avance global. Así mismo los estudiantes que no logren adquirir las capacidades para poder utilizar las nuevas tecnologías serán excluidos en la nueva era digital.

Las TIC en la actualidad se han convertido en un medio indispensable para desarrollarse en el entorno educativo, teniendo en cuenta que le permite al estudiante intercambiar información, trabajar de manera

colaborativa con sus docentes y compañeros, en red ayuda a aclarar dudas, afianzar su conocimiento, desarrollar sus competencias.

En la universidad de la Guajira, los estudiantes de la Facultad de Ciencias Económicas y Administrativas, (FACEYA) tienen un rango de edad entre los 16 hasta los 50 años, algunos trabajan, otros dependen económicamente de sus padres, casi todos utilizan las TIC en su vida cotidiana, se percibe que poseen habilidades para usar la tecnología, disponen de telefonía móvil, en su mayoría con internet, se observan en los pasillos y aulas de clase enviando mensaje, revisando correos electrónico, en redes como Facebook, twitter, entre otros; sin embargo son pocos los que utilizan las Tic en su proceso de enseñanza aprendizaje, que le permita obtener unas excelentes notas.

En este orden de ideas cabe destacar que los estudiantes utilizan el word, Excel, y el power point, para cumplir con sus actividades académicas, así mismo la universidad cuenta con recursos didácticos como son computadores, con internet en el campo universitario, salas de audiovisuales, video – bean, los cuales no son suficientes para el número de estudiante.

De igual manera algunos docentes no establecen en sus clases el uso de herramientas de apoyo TIC. Sin embargo reconocen que son una herramienta muy útil para su quehacer, consideran que las páginas web sirven de apoyo para incluir información relevante en el desarrollo de dichas asignaturas, siendo así ayuda importante para que el estudiante organice de manera personal su estudio y avances adecuadamente en los contenidos temáticos, utilizan el internet como fuente de consulta, los chat, correos, videos, software entre otros.

Por todo lo anterior se plantea el siguiente interrogante:

¿Cuál es el impacto del uso de las tic en los estudiantes de la facultad de ciencias económicas y administrativas de la universidad de la guajira Colombia?

Para dar respuesta al interrogante se plantea el Objetivo General: Determinar el impacto de uso de las Tic en los estudiantes de la Facultad de Ciencias Económicas y Administrativas de la Universidad de La Guajira Colombia.

A continuación se plantean los objetivos específicos: 1) Identificar las características de los estudiantes de Faceya, 2) Analizar las herramientas Tic, con que cuentan los estudiantes de Faceya, 3) Identificar los motivos que tienen los estudiantes de Faceya para usar las Tic en el proceso de enseñanza.

REVISION LITERARIA

El presente estudio se encuentra sustentado con la teoría Tecnología de Información y Comunicación (TIC), El uso de recursos TIC como medios didácticos contribuye a la fácil asimilación de contenidos por medio de recursos ya sea de información, de colaboración o de aprendizaje. Tal como lo confirma Duarte (2008), describe que la mayoría de maestros consideran de gran ayuda el uso de las TIC en el proceso de enseñanza - aprendizaje, ya que la mayoría de estudiantes cuentan con un correo electrónico, una computadora y esto viene a facilitar el acceso a información que podemos consultar en el internet, ya que en la web se encuentra varios espacios educativos, los cuales son de buen uso para los estudiantes.

Simultáneamente Gallardo, (2010) hace referencia sobre las TIC como recurso de comunicación y por tal razón expresa que hoy en día los estudiantes de educación del nivel universitario están involucrados en el manejo de muchas herramientas tecnológicas ya que en la vida diaria utilizamos el internet tanto para comunicarnos como para buscar información. Por esto es que los docentes deben aceptar propuestas nuevas que puedan ayudar al proceso de construcción del conocimiento a partir de los espacios virtuales que se

pueden presentar en la educación porque en el mundo actualizado que vivimos los cambios son constantes y esto ayuda al desarrollo de la educación

Existen diversas situaciones sobre el uso de las TIC, y entre ellas se tienen que pueden ser implementadas como un recurso alterno. Duarte J. (2008) indica que los recursos TIC de colaboración vienen a ser una alternativa para la educación ya que permite tanto al estudiante como al docente el aprovechamiento del medio sin importar el contexto, es decir, a través de estos recursos el docente tiene o adquiere la facilidad de transmitir los contenidos de una temática hasta lugares ajenos un aula de clase. En otras palabras estos recursos no limitan al proceso educativo a un aula de clases, sino más bien se presenta como una oportunidad para aquellas personas que por algunos motivos no puede asistir a un aula de clase pero tienen la necesidad de adquirir conocimientos.

METODOLOGIA

El estudio está situado en el enfoque cuantitativo, que permite examinar los datos de manera científica, con ayuda de la estadística, el tipo es descriptivo, transeccional, el diseño no experimental y de campo, se aplicará un instrumento estructurado con respuesta múltiple, el cual será aplicado a los estudiantes del programa de contaduría de la Facultad de Ciencias Económicas y Administrativas.

RESULTADOS

La mayoría de los estudiantes poseen habilidades para utilizar la tecnología, lo cual permite incrementar el interés y la motivación con el fin de interactuar en la red. Las respuestas fueron expresadas en valores porcentuales para cada indicador. Como se muestra a continuación:

Tabla 1. Genero

Genero		FR
Masculino	6	46,2
Femenino	7	53,8
TOTAL	13	100,0

El 46% de los encuestados son hombres, mientras que un 53.8% son mujeres.

Tabla 2. Edad

Edad		FR
17 - 22	8	61,5
23 -27	4	30,8
28 - 32	0	-
33 - +	1	7,7
TOTAL	13	100,0

El 61.5% de los estudiantes la edad oscila entre 17 y 22 años, mientras que el 30.8 tiene edad entre 23-27 años, el 7.7% restante tiene más de 33 años.

Tabla 3. Procedencia de los ingresos, según género

Categoría	Masculino		Femenino	
	FA	FR	FA	FR
Padres	2	33,3	5	71,4
Beca	0	-	0	-
Trabaja	3	50,0	1	14,3
Otro	1	16,7	1	14,3
TOTAL	6	100	7	100

Dependen económicamente de los padres, las mujeres en un 71.4%, y los hombres en un 33.3%; de igual manera el 50% de los hombres trabaja, mientras que un 14.3% son mujeres, dependen de otros ingresos el 16.7% son hombres, un 14.3% son mujeres.

4. Habilidad en el uso de las Tic, según género

Categoría	Masculino		Femenino	
	FA	FR	FA	FR
Poco	4	66,7	2	28,6
Mucho	2	33,3	4	57,1
Muy hábil		-	1	14,3
TOTAL	6	100,0	7	100,0

Los encuestados afirmaron que un 66.7% de los hombres utilizan muy poco las Tic, seguido de un 28.6% mujeres, así mismo los hombres afirmaron mucho en un 33.3% las mujeres un 14.3%.

Tabla 5. Consulta bibliotecas virtuales para el estudio

Categoría	Masculino		Femenino	
	FA	FR	FA	FR
Nunca	3	50,0	2	28,6
Casi siempre	3	50,0	5	71,4
Siempre		-		-
TOTAL	6	100,0	7	100,0

El 50% de los hombres manifestaron que nunca consultan bibliotecas virtuales para el estudio, el 50% restantes manifestó casi siempre, mientras que el 28.6% de las mujeres afirmó nunca, seguido de un 71.4% casi siempre.

Tabla 6. Consulta bases de datos para estudios

Categoría	Masculino		Femenino	
	FA	FR	FA	FR
Nunca	3	50,0	3	42,9
Casi siempre	3	50,0	4	57,1
Siempre		-		-
TOTAL	6	100,0	7	100,0

Los encuestados consultan bases de datos on line para el estudio, el 50% de los hombres dijeron nunca, el 50% restante manifestó casi siempre, mientras que el 42.9% de las mujeres nunca, seguido de un 57.1% casi siempre.

Tabla 7. Medios virtuales utiliza para comunicarse con sus compañeros de estudio y profesores

Categoría	Masculino		Femenino	
	FA	FR	FA	FR
Foros		-		-
Chats	4	66,7	6	85,7
Páginas web	2	33,3	1	14,3
Todas las anteriores		-		-
TOTAL	6	100,0	7	100,0

Los estudiantes manifestaron que un 66.7% de los hombres utilizan el chat para comunicarse con sus compañeros y profesores, mientras que el 33.3% utiliza páginas web, así mismo un 85.7% de las mujeres utilizan el chat, seguido del 14.3% páginas web.

Tabla 8. Medios de información utilizados para su proceso de aprendizaje

Categoría	Masculino		Femenino	
	FA	FR	FA	FR
1. Internet	4	66,7	3	42,9
2. Televisión		-		-
3. Cable		-		-
4. Celular		-		-
5. Todas las anteriores	2	33,3	4	57,1
TOTAL	6	100,0	7	100,0

El 66.7% de los hombres utilizan el internet para su proceso de aprendizaje, seguido del 33.3%, todas las anteriores, mientras que las mujeres un 42.9% utilizan el internet, seguido de un 57.1% todas las anteriores.

Tabla 9. Programas utilizados

Categoría	Masculino		Femenino	
	FA	FR	FA	FR
1. Word	1	16,7	1	14,3
2. Excel		-	1	14,3
3. Power Point		-		-
4. Todas las anteriores	5	83,3	5	71,4
TOTAL	6	100,0	7	100,0

Los encuestados manifestaron un 16.7% de los hombres utilizan el Word, seguido de todas las anteriores con un 83.3%, de igual manera las mujeres afirmaron un 14.3% utilizan el Word, seguido de un 14.3% Excel, todas las anteriores 71.4%.

Tabla 10. Manejo del video beam para su proceso aprendizaje

Categoría	Masculino		Femenino	
	FA	FR	FA	FR
1. SI	5	83,3	6	85,7
2. NO	1	16,7	1	14,3
TOTAL	6	100,0	7	100,0

Los estudiantes manifestaron un 83.3% de los hombres si saben utilizar el video beam, seguido de un el 16.7% no lo utilizan, de igual manera el 85.7% de las mujeres contestaron afirmativo, seguido de un 14.3% negativo.

Tabla 11. Fines del uso de internet

Categoría	Masculino		Femenino	
	FA	FR	FA	FR
1. Educativo	5	83,3	7	100,0
2. Ocio	1	16,7	0	-
TOTAL	6	100,0	7	100,0

El 83.3% de los hombres manifestaron que usan el internet con fines educativo, seguido de un 16.7% para el ocio, mientras que el 100% de las mujeres afirman utilizan para fines educativo.

Tabla 12. Tecnologías utilizadas por los docentes para impartir las clases

Categoría	Masculino		Femenino	
	FA	FR	FA	FR
1. Tutoriales	1	16,7	1	14,3
2. Videos		-	3	42,9
3. Conferencias	1	16,7		-
4. Todas las anteriores	3	50,0	2	28,6
5. Otros	1	16,7	1	14,3
TOTAL	6	100,0	7	100,0

Los encuestados manifestaron que los docentes utilizan tecnologías para impartir las clases, el 16.7% tutoriales, otro 16.7% conferencias, seguido de un 50% todas las anteriores, un 16.7% otros, así mismo las mujeres afirman un 14.3% tutoriales, el 42.9% utiliza videos, un 28.6% todas las anteriores, el 14.3% restante otros.

Tabla 13. Lugares donde utilizan la red

Categoría	Masculino		Femenino	
	FA	FR	FA	FR
1. Casa	5	83,3	6	85,7
2. Universidad	1	16,7	1	14,3
3. Café internet	0	-		-
TOTAL	6	100,0	7	100,0

Los estudiantes afirman un 83.3% de los hombres utilizan la red de la casa, seguido del 16.7% de la universidad, así mismo el 85.7% de las mujeres manifiestan en la casa, un 14.3% en la universidad.

Tabla 14. Disponibilidad de móvil con internet.

Categoría	Masculino		Femenino	
	FA	FR	FA	FR
1. SI	4	66,7	4	57,1
2. NO	2	33,3	3	42,9
TOTAL	6	100,0	7	100,0

El 66.7% de los hombres manifiestan tienen móvil con internet, el 33.3% restante no tiene, mientras que las mujeres un 57.1% tienen móvil con internet, el 42.9% no tiene.

CONCLUSIONES

La mayoría de los estudiantes tienen edades entre los 17 a los 22 años, la procedencia de los ingresos las mujeres dependen en su mayoría de los padres, mientras que los hombres trabajan.

Cabe resaltar que los hombres utilizan muy poco las tecnologías, mientras que las mujeres creen la utilizan mucho. Los estudiantes consultan las bibliotecas virtuales para el estudio, del mismo modo examinan bases de datos on line, así mismo utilizan el chat para comunicarse con sus compañeros y docentes.

En este orden de ideas utilizan para su proceso de aprendizaje el internet, el Word, y el Excel, en menor medida el power point. Los estudiantes manejan el video beam para su proceso de aprendizaje. De igual manera utilizan el internet con fines educativos.

La mayoría de los estudiantes poseen móvil con internet, la mayoría de ellos manifestaron que el lugar donde utilizan la red es su casa, seguido desde la universidad, así mismo consideran que usan el internet para fines educativo.

LAS REGALÍAS MINERAS Y SU INCIDENCIA EN LAS N.B.I DE LAS TRES PRINCIPALES COMUNAS EN EL MUNICIPIO DE RIOHACHA – LA GUAJIRA (COLOMBIA)

Yolmis Nicolás Rojano Alvarado, Universidad de La Guajira, Colombia
Darcy Luz Mendoza, Universidad de La Guajira, Colombia
Edwin Salas Solano, Universidad de La Guajira, Colombia

RESUMEN

El presente artículo muestra los resultados obtenidos en una investigación dirigida a determinar la incidencia de las inversiones por concepto de las regalías mineras en las N.B.I (Necesidades Básicas Insatisfechas) en tres de las principales comunas del Municipio de Riohacha, Capital del Departamento de La Guajira. El tipo de investigación es descriptiva, puesto que se trabaja sobre realidades de hecho, se registra, analiza e interpreta la situación problema que se viene presentando en el Municipio de Riohacha con la inversión de las regalías derivadas de la explotación de los recursos naturales no renovables (Carbón, gas natural, sal) en las necesidades Básicas Insatisfechas (NBI) tomando como objeto de estudio la percepción de los habitantes de las principales comunas del Municipio. Dentro de los principales hallazgos se determina la existencia de una clara discrepancia entre la información que manejan los organismos de control de orden local regional y nacional frente a la percepción de la comunidad, según los datos aportados en los instrumentos aplicados es concluyente el mal uso de estos recursos, frente a la percepción de la comunidad.

PALABRAS CLAVE: Regalías, Necesidades básicas, Agua potable, saneamiento básico, inversión.

MINING ROYALTIES AND ITS IMPLICATIONS FOR THE THREE MAIN NBI TOWNS IN THE MUNICIPALITY OF RIOHACHA - GUAJIRA (COLOMBIA)

ABSTRACT

This article presents the results of an investigation to determine the impact of investments in respect of mining royalties in the Unsatisfied Basic Needs in three main municipalities of Riohacha Municipality, capital of the Department of La Guajira.. The research is descriptive, since it works on realities in fact, the problem situation that has been occurring in the municipality of Riohacha with the investment of the royalties from the exploitation of non-renewable natural resources (coal, natural gas, salt) on basic needs (UBN) of the Municipality, is recorded, analyzed and interpreted. Among the main findings is determined that there is a clear discrepancy between the information handled by local, regional and national control agencies versus the perception of community, according to data provided in the instruments applied is made conclusive misuse of these resources.

JEL: F11

KEY WORDS: Royalties, Basic needs, drinking water, basic sanitation, investment.

INTRODUCCIÓN

Hablar de necesidades básicas insatisfechas, es hablar necesariamente de la pobreza y desigualdad en el acceso a los servicios públicos en que se encuentra inmersa alguna población determinada. Para Maslow, en su postulado de la jerarquía de las necesidades humanas “las necesidades básicas, son necesidades fisiológicas básicas del ser y sirven para mantener la homeostasis referente a la supervivencia”, necesidad de respirar, hidratarse, alimentarse (Maslow, A Theory of Human Motivation, 1943).

Según la declaración de las (Naciones Unidas, 1995), la pobreza absoluta es "una condición caracterizada por la privación severa de las necesidades básicas humanas, tales como alimento, agua potable, facilidades sanitarias, salud, refugio, educación e información. Esta depende no solo del ingreso sino también del acceso a los servicios".

La medición de la pobreza según la metodología de las necesidades básicas insatisfechas NBI, es el método más extendido en América Latina, este define a los pobres como aquellas personas que tienen carencias, privaciones o necesidades básicas insatisfechas, sobre todo en materia de servicios públicos: vivienda, saneamiento básico, y educación. La metodología de NBI busca determinar, con ayuda de algunos indicadores simples, si las necesidades básicas de la población se encuentran cubiertas. Los grupos que no alcancen un umbral mínimo fijado, son clasificados como pobres.

Los indicadores simples seleccionados, son: Viviendas inadecuadas, hogares con hacinamiento crítico, viviendas con servicios inadecuados, hogares con alta dependencia económica y hogares con niños en edad escolar (7-12 años) que no asisten a la escuela. Se estima que el 80% de las enfermedades y más de un tercio de los fallecimientos en los países en desarrollo se deben a enfermedades asociadas con la prestación de servicios públicos entre ellos fundamentalmente el consumo de agua contaminada, falta de coberturas y mala prestación del servicio de alcantarillado el mal uso que, en promedio hasta la décima parte del tiempo productivo de cada persona se pierde a causa de enfermedades relacionadas con ésta.

En Colombia a pesar de los grandes esfuerzos sin precedentes del decenio anterior, estos no han sido suficientes, pues en la actualidad una persona de cada tres carece de agua potable en cantidad y calidad, imprescindibles para la salud y la dignidad. Adicionalmente, se reconoce que los residuos líquidos son causas del deterioro de las fuentes hídricas, que el uso de tecnologías apropiadas y la construcción de estaciones de depuración de aguas residuales podrían ser importantes factores de progreso de la humanidad

Según el censo realizado por el DANE en el año 2011, el índice de necesidades básicas insatisfechas en el municipio de Riohacha supera la media nacional con un 64%, con tendencia a ser progresivo si se tiene en cuenta que indicadores de la red de solidaridad social en el municipio, informa que en los últimos años alrededor de 22.000 personas de diferentes orígenes y causas han tomado como domicilio la ciudad por culpa del desplazamiento.

En el presente documento se realizara un análisis sobre la incidencia de los recursos provenientes de regalías mineras en las necesidades básicas Insatisfechas (NBI) en tres de las principales comunas en el municipio de Riohacha, departamento de La Guajira. Así mismo un análisis sobre los actos legislativos destinados a controlar la inversión en regalías, pues a pesar que se ha legislado para controlar las inversiones provenientes de las regalías mineras y que las leyes 141 de 1994 como la ley 756 del 2002 definen de una manera técnica como se deben invertir la regalías mineras, los resultados de estas inversiones no se reflejan en la calidad de vida de los habitantes de la Ciudad de Riohacha, los documentos y la historia nos dice que hasta el año 2005 se habían invertido en el Departamento de la Guajira por conceptos de regalías mineras un total de 1.000 millones de dólares una buena razón para pensar que las condiciones de vida de los Guajiros serían las mejores del país puesto que estos recursos por ley son dirigidos con prioridad al

saneamiento ambiental y para los destinados a la construcción y ampliación de la estructura de servicios de salud, Educación, Electricidad, Agua potable Alcantarillado y demás servicios públicos básicos esenciales.

REVISION LITERARIA

Las regalías en Colombia -Para abordar de manera objetiva el tema de regalías mineras en Colombia es necesario hablar de dos momentos importantes, el antes y el después del acto legislativo 05 de Noviembre de 2011, por medio del cual "Se constituye el Sistema General de Regalías, se modifican los artículos 360 y 361 de la Constitución Política y se dictan otras disposiciones sobre el Régimen de Regalías y Compensaciones.

Antes de la sanción del acto legislativo 05 de 2011. -La historia reciente de las regalías en Colombia se inicia con la Constitución Política de 1991, cuyo Art. 360 dispone una "contraprestación económica a título de regalía" por la explotación de un recurso natural no renovable y el derecho de los Departamentos o Municipios en donde se encuentran dichas explotaciones, así como los puertos por donde se transporten esos recursos o productos derivados de los mismos a participar en tales regalías.

Para los recursos provenientes de las regalías no asignados a los Departamentos y Municipios involucrados directamente, el Art. 361 previó la creación de un fondo nacional a fin de aplicarlos a los demás entes territoriales con fines de promoción de la minería, preservación del medio ambiente y financiación de proyectos regionales de inversión. En aplicación de lo anterior, la Ley 141 de 1994 o Ley de Regalías creó el Fondo Nacional de Regalías (FNR) y reguló el derecho del Estado a percibir regalías, su liquidación y distribución.

Hasta la promulgación de la Ley 141 la explotación de la mayoría de los minerales estaba exenta de regalías y para los que no lo estaban, éstas tenían el carácter de "impuestos específicos". Cuyos orígenes se remontan a las legislaciones española y romana y que fueron suprimidos por esta ley. Para la empresa privada, las regalías representan ahora un cargo.

El proyecto de investigación sobre actividades de desarrollo comunitario de empresas mineras y de explotación de recursos naturales en América Latina y el Caribe constató que, en el caso colombiano, las comunidades tienen dos percepciones sobre el uso de las regalías.

Para algunas, estos recursos "llegan pero no se invierten, porque simplemente se desvanecen". Para otras, las inversiones no son visibles todavía y creen que el problema radica en que las administraciones ignoran a las comunidades y no les brindan informes de su gestión.

En este contexto, las comunidades reclaman que sean las empresas mineras las encargadas de administrar la inversión de las regalías, con supervisión del Estado. El proyecto recomienda fortalecer los mecanismos de seguimiento, control y denuncia sobre la inversión y la administración de las regalías mineras en todos los niveles y sugiere estudiar las propuestas de involucrar a las empresas en la inversión y administración de las regalías.

Una de ellas es ampliar incentivos que permitan la deducción de las regalías que deben pagar las empresas, a cambio de inversiones importantes en procesos de desarrollo local.

Destinación de las regalías-Los recursos que reciben las entidades territoriales por concepto de regalías tienen como propósito cubrir las necesidades básicas de la población. Por tal efecto, las asignaciones son orientadas principalmente a la inversión en proyectos que permitan que más colombianos tengan acceso a los servicios de Educación básica, salud, agua potable y alcantarillado.

La ley de regalías establece la destinación específica que los Departamentos productores y los Municipios productores y portuarios deben darle a su participación de las regalías por la explotación de recursos naturales no renovables. Ley 756 de 2002, artículo 13, Ley 756 de 2002, artículo 14, Decreto 1747 de, 1995, artículo 2)

Ley 715 del 2001, título III

En el Decreto 1747 de 1995 se establecen los niveles mínimos de cubrimiento de los servicios básicos que deben ser alcanzados por los Departamentos y Municipios, con la participación de las regalías.

Estas coberturas mínimas son:

Mortalidad infantil:	1%
Salud de la población:	100%
Educación básica:	90%
Agua potable:	70%
Alcantarillado:	70%

Coberturas mínimas regalías directas.

Mortalidad infantil.-Se busca que la mortalidad en la niñez no supere el 10 por mil. Se mide como el número de niños que fallecen antes de cumplir un año, por cada mil niños nacidos vivos durante un año.

Es importante antes de emprender planes de inversión, identificar claramente cuáles son los principales factores que la originan, los recursos propios y provenientes del sistema general de participaciones destinados por Municipios y Departamentos, y las acciones de la Nación especialmente en materia de suministros de vacunas (artículo 14, Decreto 1747 de, 1995, artículo 2)

Los Departamentos y Municipios fácilmente logran disminuir la mortalidad de sus niños, especialmente de los pobres al ampliar la cobertura de los servicios de acueducto, alcantarillado y aseo.

Cobertura en salud de la Población Pobre.- Su cobertura se alcanza cuando se logra el 100%. Se refiere a la ampliación de la cobertura en aseguramiento o afiliación al régimen de Subsidiado de la población clasificada en los niveles I y II del SISBEN, de acuerdo con los criterios de priorización de beneficiarios de subsidios establecidos en el artículo 7° del acuerdo 244 del Consejo Nacional de Seguridad Social en Salud. La ampliación de la cobertura de la población pobre mediante subsidios a la demanda debe garantizar la continuidad de los recursos como mínimo por cinco (5) años. Los Departamentos requieren de la aprobación de un plan de transformación de subsidios de la oferta a la demanda.

Educación básica- Su cobertura se alcanza cuando el 90% de los niños en edad escolar estén matriculados y asistan a instituciones educativas que cuenten con Infraestructura y medios pedagógicos adecuados y brinden mínimo 1 año de preescolar, 5 años de educación básica primaria y 4 de básica secundarios.

Los Departamentos y Municipios certificados pueden contratar el servicio público educativo de al menos el ciclo completo de la educación básica.

Construcción, mantenimiento y adecuación de establecimientos educativos; Mientras no generen gastos permanentes en el sistema general de participaciones.

Contratar servicios de transporte, cuando las condiciones Geográficas los requieran para ampliar o mantener la asistencia de niños pobres.

Restaurantes Escolares.

Dotación pedagógica de los establecimientos educativos: mobiliario, Textos, bibliotecas, Materiales didácticos y Audiovisuales. Agua potable o Acueducto Es la distribución municipal de agua apta para el consumo Humano (Decreto 475 de 1998, las regalías en Colombia, una herramienta para el fortalecimiento del Control social, pg 41, Acosta, A. (2011). LA reforma al régimen de Regalías y su impacto en las finanzas territoriales. Impregon S,A.) Se busca el cubrimiento de la población con agua potable para por lo menos el 70% de los habitantes urbanos y rurales de la entidad territorial. No se alcanza solo con las conexiones de acueducto. Si por ejemplo si solo se tiene el servicio la mitad del tiempo, entonces la cobertura se reduce a la mitad. Igualmente si el agua no es apta para el consumo Humano, la cobertura de agua es de cero por ciento (las regalías en Colombia, una herramienta para el fortalecimiento del Control social, pg 41).

Alcantarillado -Es la recolección municipal de residuos, Principalmente Líquidos por medio de tuberías y conductos. Incluye actividades tales como de transporte, tratamiento y disposición Final de los residuos.

Otras inversiones de los Departamentos -Los Departamentos deben destinar el 90% de sus regalías a proyectos de inversión. Los recursos no destinados a alcanzar y mantener las coberturas mínimas de mortalidad infantil, salud de la población pobre, Educación básica, Agua potable y alcantarillado se pueden utilizar para financiar proyectos prioritarios contemplados en el plan de desarrollo del Departamento o de sus Municipios, la prioridad o prioridades contempla o fija el plan de desarrollo respectivo.

Otras inversiones de los Municipios -Los Municipios deben destinar el 90% de sus regalías a proyectos de inversión. Los recursos no destinados a alcanzar y mantener las coberturas mínimas de mortalidad infantil, Salud de la Población pobre, educación Básica, Agua Potable y alcantarillado se pueden utilizar para financiar los siguientes proyectos:

Después del acto legislativo 05 de 2011- El acto legislativo 05 sancionado por el presidente de la república en julio de 2011, constituyo el nuevo sistema de regalías y modifíco sustancialmente los artículos 360 y 361 de la constitución política colombiana, el acto legislativo en referencia pretende concentrar todos los recursos provenientes de las regalías (tanto directas como las indirectas), en una sola bolsa, para luego redistribuirlas “con base en los criterios de pobreza, eficiencia, población y equidad regional (Acosta, A. (2011). LA reforma al régimen de Regalías y su impacto en las finanzas territoriales. Impregon S,A) el artículo en referencia quedando de la siguiente forma:

Artículo 361. Los ingresos del Sistema General de Regalías se destinarán al financiamiento de proyectos para el desarrollo social, económico y ambiental de las entidades territoriales; al ahorro para su pasivo pensional; para inversiones físicas en educación, para inversiones en ciencia, tecnología e innovación; para la generación de ahorro público; para la fiscalización de la exploración y explotación de los yacimientos y conocimiento y cartografía geológica del subsuelo; y para aumentar la competitividad general de la economía buscando mejorar las condiciones sociales de la población.

Los departamentos, municipios y distritos en cuyo territorio se adelanten explotaciones de recursos naturales no renovables, así como los municipios y distritos con puertos marítimos y fluviales por donde se transporten dichos recursos o productos derivados de los mismos, tendrán derecho a participar en las regalías y compensaciones, así como a ejecutar directamente estos recursos. Se crearon a su vez cuatro fondos con el objeto de cumplir los objetivos y fines del sistema General de regalías:

Fondos de Ciencia, Tecnología e Innovación tendrá como finalidad la financiación de proyectos regionales acordados entre las entidades territoriales y el Gobierno Nacional.

Fondo de Desarrollo Regional, tendrá como finalidad la financiación de proyectos regionales acordados entre las entidades territoriales y el Gobierno Nacional. Fondo de Compensación Regional, Los recursos del Fondo de Compensación Regional se destinarán a la financiación de proyectos de impacto regional o local de desarrollo en las entidades territoriales más pobres del país, de acuerdo con criterios de Necesidades Básicas Insatisfechas (NBI), población y desempleo, y con prioridad en las zonas costeras, fronterizas y de periferia. La duración del Fondo de Compensación Regional será de treinta (30) años, contados a partir de la entrada en vigencia de la ley a la que se refiere el inciso 2o del artículo anterior. Transcurrido este período, estos recursos se destinarán al Fondo de Desarrollo Regional.

Fondo de Ahorro y Estabilización, Los recursos del Fondo de Ahorro y Estabilización, así como sus rendimientos, serán administrados por el Banco de la República en los términos que establezca el Gobierno Nacional. En los períodos de desahorro, la distribución de estos recursos entre los demás componentes del Sistema se regirá por los criterios que defina la ley a la que se refiere el inciso 2o del artículo anterior. En caso de que los recursos destinados anualmente al Fondo de Ahorro y Estabilización excedan del treinta por ciento (30%) de los ingresos anuales del Sistema General de Regalías, tal excedente se distribuirá entre los demás componentes del Sistema, conforme a los términos y condiciones que defina la ley a la que se refiere el inciso 2o del artículo anterior.

Destinación de los ingresos del sistema general de regalías-Los ingresos del Sistema General de Regalías se distribuirán así: un porcentaje equivalente al 10% para el Fondo de Ciencia, Tecnología e Innovación; un 10% para ahorro pensional territorial, y hasta un 30% para el Fondo de Ahorro y Estabilización. Los recursos restantes se distribuirán en un porcentaje equivalente al 20% para las asignaciones directas de que trata el inciso 2o del presente artículo, y un 80% para los Fondos de Compensación Regional, y de Desarrollo Regional. Del total de los recursos destinados a estos dos últimos Fondos, se destinará un porcentaje equivalente al 60% para el Fondo de Compensación Regional y un 40% para el Fondo de Desarrollo Regional.

De los ingresos del Sistema General de Regalías, se destinará un porcentaje del 2% para fiscalización de la exploración y explotación de los yacimientos, y el conocimiento y cartografía, geológica del subsuelo. Este porcentaje se descontará en forma proporcional del total de los ingresos del Sistema General de Regalías distribuidos en el inciso anterior. Las funciones aquí establecidas serán realizadas por el Ministerio de Minas y Energía o por la entidad a quien este delegue.

El control del sistema de regalías -El mismo acto legislativo en su parágrafo No 3 crea el Sistema de Monitoreo, Seguimiento, Control y Evaluación de las Regalías, cuyo objeto será velar por el uso eficiente y eficaz de los recursos del Sistema General de Regalías, fortaleciendo la transparencia, la participación ciudadana y el Buen Gobierno.

El SMSC se encargará de regular la imposición de medidas preventivas, correctivas y sancionatorias por el inadecuado uso de los recursos del Sistema General de Regalías. Dentro de estas medidas podrán aplicarse a los Departamentos, Municipios y/o Distritos y demás ejecutores la suspensión de giros, cancelación de proyectos y/o el reintegro de recursos.

Definirá, igualmente, el porcentaje anual de los recursos de Sistema General de Regalías destinado a su funcionamiento y al del Sistema de Monitoreo, Seguimiento, Control y Evaluación de las Regalías. Este porcentaje se descontará en forma proporcional del total de los ingresos del Sistema General de Regalías.

METODOLOGIA

Desde la perspectiva metodológica, esta investigación constituye un estudio de tipo descriptivo-documental, puesto que se trabaja sobre realidades de hecho, se registra, se analiza e interpreta la situación

problema que se viene presentando en el Municipio de Riohacha, con la inversión de las regalías derivadas de la explotación de los recursos Naturales no renovables.

Es importante destacar que para efecto del análisis que demuestre la incidencia de los recursos de regalías en las Necesidades básicas insatisfechas en el municipio de Riohacha, se tendrá en cuenta la metodología de medición de la Pobreza denominada NBI.

La medición de la pobreza según la metodología de las necesidades básicas insatisfechas NBI, define a los pobres como aquellas personas que tienen carencias, privaciones o necesidades básicas insatisfechas, sobre todo en materia de servicios públicos: vivienda, saneamiento básico, y educación. La metodología de NBI busca determinar, con ayuda de algunos indicadores simples, si las necesidades básicas de la población se encuentran cubiertas. Los grupos que no alcancen un umbral mínimo fijado, son clasificados como pobres.

Los indicadores simples seleccionados, son: Viviendas inadecuadas, hogares con hacinamiento crítico, viviendas con servicios inadecuados, hogares con alta dependencia económica y hogares con niños en edad escolar (7-12 años) que no asisten a la escuela.

Dado que cada uno de los indicadores se refiere a necesidades básicas de diferente tipo, a partir de ellos se constituye uno compuesto, que clasifica como pobre o con NBI aquellos hogares que estén, al menos, en una de las situaciones de carencia expresada por los indicadores simples y en situación de miseria los hogares que tengan dos o más de los indicadores simples de necesidades básicas insatisfechas por lo tanto tomaremos para nuestro estudio como necesidad de análisis en la población a encuestar, las viviendas con servicios inadecuados.

Población y muestra-La población beneficiada por esta investigación sería la población en general del Municipio de Riohacha, personas Jurídicas como las empresas explotadoras de los recursos naturales y quienes son las que realizan el aporte en regalías para su inversión en el Departamento.

Muestra-Se tomó una muestra Aleatoria de 261 Hogares de la población Riohachera, distribuidas en las 3 principales comunas con que cuenta la ciudad, esta población entrevistada contaba con las siguientes características:

Población Adulta Urbana, los encuestados ninguno compartía el mismo domicilio.

La población entrevistada Representa 261 hogares de la población urbana representadas en las comunas en estudio del Municipio de Riohacha

Diseño muestral de la población. Para determinar el tamaño de la muestra de las viviendas a encuestar en la ciudad de Riohacha, se usara la siguiente ecuación:

$$n = \frac{Z^2 * p * q}{E^2} \quad (1)$$

La corrección para muestras grandes se hará a través de la ecuación 2:

$$n_o = \frac{n}{1 + \frac{n}{N}}$$

Dónde:

Para un nivel de confianza de 95%, Z= 1.96

p = probabilidad de ocurrencia

f = Probabilidad de fracaso

E = error esperado

n_o = Tamaño de la muestra corregida

N = tamaño de la población muestral

El tamaño de la población corresponde al número de viviendas de la ciudad de Riohacha, que según el Plan de Ordenamiento territorial se proyectaron 17,763 para el año 2005 (ALCALDÍA MUNICIPAL DE RIOHACHA, Plan de ordenamiento territorial 2001-2009, Datos de los investigadores.). El tamaño de la muestra obtenido fue de 261 sin corrección y previamente corregida arroja un total de 241. Para mayor confiabilidad se realizaron las 261 encuestas.

El nivel de confianza fue definido en un 95%; como no se tenía certeza de la probabilidad de ocurrencia del evento, esto es que haya un uso eficiente del agua en las comunas de la ciudad de Riohacha, se define la probabilidad de éxito y de fracaso en 50%.

El margen de error esperado se define en 4%, considerado como bajo. Las encuestas fueron distribuidas en toda la ciudad proporcional al número de viviendas por comunas tal como se presenta en la Tabla 5. Las viviendas a encuestar fueron seleccionadas con la técnica del azar, teniendo en cuenta de encuestar al jefe de la familia o en su defecto a una persona mayor de edad que viviera permanentemente en la casa sin tener en cuenta su raza, creencia u origen.

Tabla 4. Número de encuestas aplicadas en cada comuna.

No de comuna	Nombre comunas	No de viviendas	No de encuestas
1	Centro Histórico	2.452	87
2	Cooperativo	1.855	67
3	Nuestra señora de los Remedios	2.990	107
Total		7.297	261

Fuente: ALCALDÍA MUNICIPAL DE RIOHACHA, Plan de ordenamiento territorial 2001-2009, Datos de los investigadores.

RESULTADOS

La presente investigación se basó fundamentalmente en revisiones documentales, bibliografías y consultas realizadas a las personas afectadas directa o indirectamente relacionadas con el saneamiento básico en el Municipio de Riohacha, en donde se determinaron los siguientes hallazgos:

A pesar de los enormes recursos existentes provenientes de las regalías minerales en el Departamento de la Guajira, y específicamente en el municipio de Riohacha, destinados por ley al mejoramiento del saneamiento básico ambiental, en el caso, acueducto y alcantarillado, existe una clara discrepancia en cuanto a la información suministrada por los entes gubernamentales, de control y la percepción de la comunidad y el registro fotográfico aportado.

los avances descritos por los organismos gubernamentales en referencia a los servicios básicos de agua potable y Alcantarillado en este informe no se corresponden con la realidad que se acontece en la Capital del Departamento de la Guajira.

La percepción de la comunidad sobre la inversión de las regalías en saneamiento básico ambiental como consta en el documento de la encuesta es concluyente del mal uso dado a las mismas, aunque no exista un denuncia formal sobre este hecho y mucho menos un fallo definitorio del mismo.

Es evidente la ineficiencia del uso del recurso económico, los últimos años de aporte de las regalías suman la astronómica cifra de más de un billón de pesos corrientes, y aun no funciona en el área urbana y mucho menos en la rural el acueducto y el alcantarillado, no funcionan ni en frecuencia de suministro que promedia no más de tres días a la semana, una presión de servicio que no alcanza las áreas de uso social, una mala calidad certificada por la misma secretaria departamental de salud y su laboratorio de aguas y un alcantarillado insuficiente y con emisario al mar sin tratamiento previo a su vertimiento final.

CONCLUSIONES Y DISCUSIÓN

Con el análisis y el estudio realizado a las inversiones por concepto de las regalías generadas por la explotación de los recursos mineros en el Municipio de Riohacha se logró determinar que: Los recursos provenientes de las regalías mineras no son infinitos, puesto que están relacionados con las reservas de recursos mineros con que cuenta el Departamento y las cuales están estimadas para 35 años, Los aportes históricos realizados por concepto de regalías mineras indican que el Departamento ha recibido más de 1000 millones de dólares en los últimos años, los cuales no se notan al momento de Analizar los beneficios de estos dineros, cifras estadísticas del observatorio del caribe colombiano y del DANE señalan que al año 2011, el 64,3 % de la población Guajira (unas 562.316 personas) vive por debajo de la línea de pobreza, superando considerablemente la media nacional que registra un promedio de 37,2%; y el 35,87 % (313.690 personas), por debajo de la línea de pobreza extrema, el NBI Compuesto supera el 65.23%, una miseria del 47,10%, vivienda inadecuada el 46,26%, Hacinamiento crítico del 46,60%, inasistencia escolar del 15,97%, desnutrición aguda en menores de 5 años del 2%, desnutrición crónica en niños menores de 5 años del 28%, la tasa de Mortalidad infantil es del 32%, las causas más frecuentes de defunción son las enfermedades infesto intestinales y las infusiones respiratorias según los expertos generadas por la falta de prevención y control en salud y reflejada más notoriamente en la deficiencia de los servicios públicos principalmente de agua potable, con necesidades mayores para el 60% de la población (indicador superior al promedio nacional del 20%).

Si se considera que el agua es clave para mejorar la calidad de vida. No tenerla o administrarla mal, afecta la salud, la equidad social, el trabajo y la producción. Las coberturas de acueducto y alcantarillado que muestra el Municipio según los informes del gobierno oficial aportan datos de coberturas nominales satisfactorios del 69,4% del acueducto y 54% de alcantarillado al año 2009, y cada año desde el año 2000 al 2009 han tenido una evolución incremental según los informes oficiales lo cual no es cierto. ya que si solo se realizaran los ajustes legales de calidad y continuidad, estas cifras se acercarían al 0%. Pero si aún más se confrontan con la información suministrada por la comunidad en la encuesta adjunta y los soportes fotográficos también adjuntos, se puede constatar, un problema no resuelto, un manejo ineficiente de un recurso que claramente definido esta como agotable.

En cuanto al emisario final, y tal como consta en el documento, se define una laguna de oxidación para el tratamiento de aguas servidas, según información oficial, elemento que no existe y sobre los terrenos descritos, existe un litigio jurídico sobre quien es el propietario, con el agravante que hace por lo menos 10 años se desembolsaron recursos para la construcción de la laguna de oxidación y a la fecha no se ha iniciado tal construcción, es evidente que las aguas servidas no sufren ningún proceso de tratamiento y su emisario final siguen siendo las aguas del mar caribe.

Los indicadores estadísticos de enfermedades asociadas con la mala calidad del agua siguen en aumento , la revisión de las diez primeras causas de morbimortalidad del departamento y del municipio, muestran una

prevalencia de enfermedades relacionadas no exclusiva, pero si con una fuerte relación directa entre los componentes de multicausalidad de las condiciones de saneamiento básico . si miramos que las enfermedades gastrointestinales, infecciones respiratorias, niveles de desnutrición.

La vigilancia realizada por los órganos de Control no refleja los resultados que demuestren la eficiencia del manejo de los recursos, no coinciden con el desarrollo o mejoramiento de la calidad de vida de la población Riohachera.

Como lo se puede apreciar en las encuestas realizadas la cobertura del agua potable no abastece el 70% de la población, el servicio de agua Potable no es constante, se puede contar con él una vez a la semana y únicamente para quehaceres domesticas puesto que no es apta para el consumo, es decir no hay cobertura del agua potable, Los más afectados por la falta de estos servicios indispensables son la población rural y los desplazados que viven en las zonas marginales de la ciudad.

EL ÍNDICE DE DESARROLLO HUMANO EN LA RUTA MUTIS – COLOMBIA – 2008 A 2012 -RESULTADOS PRELIMINARES

Alfonso Trujillo Saavedra, Universidad del Tolima
Oscar Hernán López Montoya, Universidad del Tolima
Enrique Antonio Ramirez Ramirez, Universidad del Tolima

RESUMEN

Esta investigación busca conocer el estado de los tres indicadores que componen el Índice de Desarrollo Humano del Programa de las Naciones Unidas para el Desarrollo en los tres municipios del Departamento del Tolima que fueron parte de la histórica investigación realizada por el sabio español José Celestino Mutis entre 1760 Y 1790. Estos son vida larga y saludable, educación y nivel de vida digno. Conociendo estos indicadores se pretende diseñar propuestas que permitan mejorar el estado de estas tres poblaciones, en otros tiempos exitosas y de próspero desarrollo, pero que el paso del tiempo y el abandono de los gobiernos de turno, llevaron a una situación económica y social lamentable.

PALABRAS CLAVE: Índice de Desarrollo Humano, Larga Vida, Educación, Nivel de Vida

HUMAN DEVELOPMENT INDEX IN MUTIS – COLOMBIA: PERIOD 2008-2012

ABSTRACT

This research aims to know the status of the three indicators that make up the Human Development Index of United Nations Development Programme in the three municipalities of the department of Tolima who were part of the historical research by the Spanish Jesuit scholar José Celestino Mutis between 1760 and 1790. These are long and healthy life, education index and a decent standard of living. Knowing these indicators is intended to design proposals to improve the status of these three populations in other times successful and with a prosperous development, but when passing the time and neglect of successive governments, led to an unfortunate economic and social situation.

INTRODUCCIÓN

El Índice de Desarrollo Humano (IDH) se ha convertido en un importante indicador en el cual se basan los gobiernos e instituciones del mundo para determinar sus políticas de mejoramiento del desarrollo humano, Pnud(2012), Salas-Bourgoin(2014), Princioli(2011) entendido este concepto, según el Programa, como el proceso mediante el cual se optimizan las condiciones de vida de las personas y se genera un entorno de respeto de derechos humano o, según el Pnud(2012), aquel que sitúa a las personas en el centro del desarrollo, trata de la promoción del desarrollo potencial de las personas, del aumento de sus posibilidades y del disfrute de la libertad para vivir la vida que valoran. Se calcula desde 1990 por el PNUD, basado en la metodología que sugirió el economista pakistaní Mahbub ul Haq.

Cada componente del indicador se expresa entre 0 y 1, siendo este último el más alto y, desde 2010, toma como base de ingreso mínimo USD\$100.00, mínimo indicador de educación 0 y una esperanza de vida mínima de 20 años. Para el año 2014, Noruega ha sido clasificada como el país de desarrollo humano más alto, con 0,944, liderando este indicador desde 2007, y Níger con 0,002, el de menor valor. Colombia, el país de referencia, presenta un valor de 0,711 y se ubica en lugar 98, nivel alto del ranking, mientras que en el 2013 se ubicaba en el puesto 91, paradójicamente con mejor índice, de 0,719.

Los tres municipios a que hace referencia este documento, Honda, Mariquita y Ambalema, fueron durante el siglo XIX y parte del XX prósperos escenarios comerciales por los que fluían grandes cantidades de productos y materias primas entre el norte, sur, centro, oriente y occidente del país. Fue el eje de producción de productos como el tabaco, añil, algodón y otros más de gran importancia para la época. Pero esa continua bonanza de más de 100 años, se apagó lentamente y transformo las poblaciones en poco importantes centros de comercio, generando una caída en el nivel de vida de sus habitantes, quienes hoy ven disminuidos sus ingresos económicos, con las naturales consecuencias en su nivel de vida.

Es aquí donde conocer el índice y su comportamiento para cada municipio se vuelve importante para analizarlo y, en un trabajo conjunto que involucre a la sociedad, el gobierno y el sector empresarial, se determine qué pasos y políticas se deben implementar para mejorar esas condiciones de vida.

REVISIÓN DE LITERATURA

Son frecuentes los estudios que se hacen en todo el mundo, en busca de determinar la posición de determinados países y regiones, en cuanto al comportamiento del IDH. Tanto instituciones como investigadores abordan el tema, en busca de aportar conocimiento en la materia, pero casi siempre hacia casos específicos, excepto los que aborda el PNUD, que parte del reporte mundial anual y se desglosa por países. También hay otros indicadores relacionados, como el Índice de pobreza multidimensional (IPM o MPI), el Índice de desarrollo humano relativo al género (IDG, elaborado a partir de 1996) y el Índice de potenciación de género (IPG, elaborado a partir de 1996).

Cuando Maslow (1943) habló de “necesidades humanas” en su Teoría de la Motivación Humana, se vio la necesidad de estudiar esta gran variable, que se ha ido descomponiendo en diferentes subvariables (mencionadas en el párrafo anterior), en la medida que el mundo ha evolucionado y se hace imperioso detectar otras situaciones que afectan, no solo las organizaciones, sino también a la sociedad, que finalmente es el componente más importante de todo proceso en el que este inmerso el ser humano. Así lo confirman Colvin y Rutland (2008) al afirmar que a media que el hombre satisface sus necesidades surgen otras que cambian o modifican el comportamiento del mismo; considerando que solo cuando una necesidad está “razonablemente” satisfecha, se disparará una nueva necesidad.

Sen (1981) en su ensayo Pobreza y hambruna demostró que el hambre no es consecuencia de la falta de alimentos, sino de desigualdades en los mecanismos de distribución de alimentos, lo cual se podría comparar con la situación de regiones como la de nuestro caso, en las cuales es la falta de mecanismos de ayuda lo que genera el problema, o sea, no falta trabajo, falta generar oportunidades que debe crear el conjunto gobierno – empresa. Los informes anuales del Pnud(2013), citan un favorable comportamiento de los indicadores objeto de este trabajo en todo el mundo, e incluso que “ningún país sobre el cual había datos disponibles tuvo un valor del IDH más bajo en 2012 que en 2000”, según el reporte, parecería que nuestros observados no participan de esta bonanza.

De otro lado, la Gobernación del Departamento del Tolima, ente territorial superior de los tres municipios en referencia, y sus Planes de Desarrollo 2008-2011 y 2012-2015 ha identificado la necesidad de lograr mayor competitividad económica regional, para lo cual plantea opciones productivas en agroindustria, turismo y un clúster textil, opciones que deben reflejarse en oportunidades de mejoramiento para toda la

región. Lamentablemente estos estudios cambian de fecha de publicación y otros datos menores, pero no se traducen en acción.

METODOLOGÍA

El método es deductivo y el tipo de estudio es descriptivo. Se aplicarán metodologías cuantitativa y cualitativa, ya que se parte de la toma de información estadística, poblacional y número de personas que se benefician de un determinado proceso, etc., para establecer los indicadores sugeridos por el IDH, continuar con su análisis y determinar el estado de la región, así como proponer posibles soluciones a la problemática existentes en ella. Mediante trabajo de campo, se recolectará la mayor información posible sobre la situación de cada variable a analizar, se encuestarán los principales protagonistas de cada municipio, líderes comunales, habitantes, gobernantes, mediante encuestas estructuradas, las que arrojarán los datos a tabular y analizar. Para calcular el componente relacionado con la salud se deben recolectar datos sobre la esperanza de vida al nacer, (número de años que viviría un recién nacido si las pautas de mortalidad imperantes en el momento de su nacimiento seguirían siendo las mismas a lo largo de toda su vida). El cálculo del indicador educación incluye la combinación y ponderación de tres datos: alfabetización de adultos, tasa neta combinada de matriculación (inicial primaria y secundaria) y años promedio de escolaridad. Finalmente el indicador salud se obtiene del análisis de cobertura y acceso a servicios en el área en la región.

La población aproximada de los tres municipios es de 55.000 habitantes en 2012; se analizarán cifras para el periodo 2008 a 2012, tomándose una muestra acorde a las características de esta (posiblemente calculando las diferentes variabilidades que presentan los diferentes indicadores), tomando como elemento de medida la fórmula que sugiere el PNUD en la estructura de su trabajo, el cual, como ya se mencionó, determina un valor que ubica a cada actor analizado en una posición.

RESULTADOS ESPERADOS

A partir de la tabulación de los datos de población, nivel de escolaridad, situación de salud, etc., se obtendrán diferentes cifras que se procesarán en la fórmula sugerida por el PNUD, las cuales arrojarán un índice que señalará el estado de cada ítem en el municipio, posibilitando ubicarlo en un ranking dentro del país, con lo cual se podrán establecer realidades y necesidades de estos, para acudir a instancias oficiales y privadas que generen proyectos y políticas de solución de corto y largo plazo, según el caso.

Por ejemplo, en salud, la implementación de programas especiales en materias específicas, como atención de enfermedades tropicales, prevención de otras, etc. En el caso calidad de vida, generar programas de atención a la tercera edad, programas de bienestar y muchos más. En el tema educación, mejorar la cobertura de esta, aumentar la oferta profesoral, atender casos de deserción, etc.

CONCLUSIONES

En tiempos de globalización, cuando los gobiernos y organismos multilaterales han tomado conciencia sobre la necesidad de repartir los beneficios de esta, entendiendo que esto generará una convivencia armónica que reeditarán mayor productividad y competitividad para las economías, es necesario que se analicen profunda y constantemente todos los indicadores que señalen aquellas regiones necesitadas de apoyo, dadas diferentes circunstancias, lo cual le otorga un gran valor a lo que este estudio genere, partiendo de una recolección válida y organizada de la información requerida, su procesamiento, análisis y posterior socialización para generar esas estrategias requeridas.

Una visita preliminar a los sitios objeto de este proyecto de investigación arroja una sensación de desesperanza entre la gente, que no siente la llegada de la mano del gobierno o empresarios que procuren

ese cambio, pero también ha generado la esperanza de ver que algo se hace para ver ese otro mundo, alejado de las posibilidades desarrollistas que involucran a los grandes, no a los chicos.

Una de los mejores conclusiones a las que puede llegar este estudio, sería la de entender que estos se deben replicar en otras regiones del mundo, labor que no debe limitarse al informe y la conferencia de socialización de resultados y excelente publicación de los organismos que trabajan en los indicadores, que siempre muestran a Noruega, por ejemplo, en el primer lugar y a la República Democrática de Congo disputando con Níger los peores resultados, mientras la población no encuentra el resultado transformado en apoyo.
